

## **M Factory 221**

### [Chapter 221: This is also possible!](#)

In the sun, the brand-new mechanical giants neatly listed the team.

They stood quietly, the streamlined cockpit was slightly lifted, and the integrated large curved glass in the cockpit added a touch of sci-fi trend.

They were wearing red satin on their chest and huge red silk flowers at both ends.

The excitement of the music gradually ceased, just as the live guests and the audience in the studio opened wide their eyes.

The music is ringing again!

"Dangdeng ..."

"Don't wait for Dangdeng, Dangdeng, Dangdeng, etc..."

Twenty-one Mechanical Colossus Type I, which were grouped into a triangular formation, moved.

They collectively leaned over the cold body of steel, and the two robotic arms were lifted behind them.

The two arms rotated, accompanied by the click of mechanical sound.

The tools originally fixed on the mechanical arm fell off the tool rack.

And two huge hydraulic claws were locked in the mechanical arm.

When the mechanical arm with two hydraulic claws was locked and re-crossed in front of the steel body.

An eye-popping scene happened...

Twenty-one Mechanical Colossus Type I pulled off the red satin hanging on the body of the steel.

Revealing the bright nameplate of the cover, and also clamped the big red flowers at both ends of the red silk in the mechanical grasp.

"hiss....."

There was a sound of exclamation in the guests' seat.

The LOGO of the Monster Heavy Industry shined in the sun.

The exquisite monster carving style and the sculpt of the giant hammer, and the wrench was more beautiful than the artwork.

The accompaniment music that everyone was familiar with continues.

Twenty-one Mechanical Colossus Type I up and erected the right arm grabbed the safflower, and pointed to all the guests on the scene.

"Don't wait for Dangdeng, Dangdeng, Dangdeng, etc..."

The Mechanical Colossus Type I, pointing the right arm towards the audience, with the rhythm, shaking like a wave.

"I planted a seed, and at last, I cultivate the fruit."

When the first internationally popular classic song, a classic song widely circulated in the world, was sung, the audience in the guest room and in the official website life have completely stared.

The music continues!

With the accompaniment, singing:

"Become a candle burning themselves just to illuminate, give me everything first as long as you are happy ...".

Twenty-one mechanical giants, each holding a large satin flower, grabbed the cockpit position and squatted under the steel body.

The dancers twisted around and twisted around.

The Mechanical Colossus Type I can't twist like a snake waist, but the master artisan skillfully simulates the waist shaking effect by controlling the Mechanical Colossus Type I.

Moving forward in a small range, braking, backward, braking, and the jitter caused by inertia in the process to perfectly simulate the waist shake effect.

The audience at the guest Gallery could not restrain their emotions.

They covered their mouths with excitement, and their arms shook uncontrollably with the music, along with the Mechanical Colossus Type I.

Many of the guests on the scene are BOSS-level figures.

They are trying their best to restrain their bodies and try their best to let them not dance with this warm atmosphere.

No, they are big bosses...

"Don't wait for Dangdeng, Dangdeng, Dangdeng, etc..."

"Boom!"

Twenty-one Mechanical Colossus Type I, holding the high arm and clapping.

"Boom!"

Again, pure steel collides with iron.

This shot was a shocking shot, and the sweat of the crowd stood on end.

Twenty-one Mechanical Colossus Type I shot the palm and even waved to the crowd.

While dancing, beckoning ...

Finally, one of the guests could not help it, and his blood boiled with the Mechanical Colossus Type I.

He stood up and roared, "Red little faces warm my heart, light the fire of my life, fire, and fire!"

"You are my little star, like the most beautiful cloud on the horizon!"

Responding to his place, it is a piece of dancing music, a huge steel body that dances, and is the majority of the audience in the boiling guest gallery.

The audiences were totally hey-hey!

Under the awning, their shouts seem to soar up towards the sky!

As for Lao, Tzu can't control his body: "I want to twist with the music."

"Boom!"

Every time the Mechanical Colossus Type I beats, the audience of the guest seats will use all their strength to clap.

Twenty-one Mechanical Colossus Type I did the lead dance, which was passed to the entire guests' area, and the unique mechanical movement in the live broadcasting room.

It was another kind of accompaniment.

It doesn't matter if you can't jump, just clap your hands and follow the rhythm.

In their eyes, the Mechanical Colossus Type I is no longer a machine, as if it were a living metal life.

Twenty-one dancers lined up to dance together, showing more profound significance than a hundred Wei Mi supermodels dancing.

The bosses of those construction companies are even more blushing and thick-necked.

If not for the huge size of the Mechanical Colossus Type I, they must rush to hold the giant claws of the Mechanical Colossus Type I and jump with them.

[The layman looks at the excitement, and the insider looks at the doorway.] Chinese proverb.

According to the standard of mechanical engineering equipment, the Mechanical Colossus Type I shows infinite possibilities.

Twenty-one units are unmanned at the same time.

The manufacturer who dares to play like this is not mad but has absolute confidence in his mechanical performance and stability.

Obviously, the behemoth heavy work is the second type.

The precision of the twenty-one Mechanical Colossus Type I was so high that people were gesticulating.

With the music danced for so long, the formation was still neat.

The larger the machine, the greater the difference of its individual parameters.

For a simple example, two excavators lift the manipulator arm to its highest level and then pull the descending rod at the same time.

The mechanical arms of these two excavators can't land at the same time.

The error in this can't be distinguished by the human eye, but if it is measured by the instrument, the time error will be found, usually between more or less 0.05 to 0.08 seconds.

The reason for this difference is the difference in the accuracy of the moving parts inside.

There is a little difference in one action.

If the ordinary mechanical performance is performed, when a hundred actions come down, the difference accumulates more and more, and the scene becomes a pot of boiling porridge.

The Mechanical Colossus Type I, even after two minutes, did more than one hundred moves, the formation is still neat.

What does this mean?

It shows that the parts of the Mechanical Colossus Type I are highly uniform in size, which represents the life of the Mechanical Colossus Type I and far exceeds other engineering machinery on the market.

Why are foreign mechanical products generally half or twice as expensive as domestic ones, and still very popular?

Because of the good quality, the failure rate is low when working.

Ok.....

An example of the time difference mentioned above is foreign goods taken.

These bosses, who were still waiting, or who only planned to order one, have been thoroughly conquered.

They are going to smash pots and sell iron.

In the live broadcasting room on the official website, the atmosphere was warmer than the guest seats.

"I am going crazy!"

"God, I obviously want to come here and see why I am going to kneel down before the screen of the Mechanical Colossus Type I?"

"Shocking! Thoroughly shocking, this linkage technology, and the way the arm moves, not to mention the domestic. One of the well-known foreign manufacturers of engineering equipment counts as one, and they guarantee that they will not even dare to try."

"If you work with this kind of equipment, the efficiency is not going to go up to heaven?"

"I am the boss of Kyushu Construction Company. I can't do it. I'm going to ask my beautiful secretary to book a ticket."

#### [Chapter 222: Educated leader](#)

In the forum, the hundreds of thousands of spectators who had been brought Doudou had completely forgotten her.

They are all talking about the Mechanical Colossus Type I, and the content of the discussion is called the domineering.

All of them are young people, and they are cold and ugly to see the domestic machinery in the science fiction movie.

They felt that they can finally raise their eyebrows and breathe.

An arise curtain, and someone said, "that Caterpillar is what and Komatsu is what?"

As long as this video is forwarded to foreign websites, those foreigners who despise domestic industrial machinery all day can absolutely be scared the bile.

Subsequently, a user in the forum with the ID of [Qianlong River] published a post.

The post is called --- the expression pack you want!

There is also a network disk download connection, and the download volume broke through 30,000 in just five minutes.

This is a freshly baked Mechanical Colossus Type I expression pack.

The following comments are simply smashed, and a page can be brushed in a few seconds.

These people are all in the show expression pack.

The Mechanical Colossus Type I salute, swaying, and clapping with the mechanical arm, in front of the guests' seat to do the seductive gesture.

Each expression pack is also equipped with text, and the salute is accompanied by [the boss is good!]

With the mechanical claws facing the guests, with [Little handsome, come play!]

Then the expression pack went crazy, and the young people brought by Doudou just downloaded them and distributed in groups over there.

People asked her which movie it was.

They were very fright to let those people go to Doudou.

.....

Some people are happy, others are sad!

The entire team of Zhongyun City, because of some unspeakable reasons, spoiled the first impression.

How to remedy it, it was immediately put on the agenda.

They have six hours.

The first day of the inspection team's trip was the first stop to inspect the spiritual and civilized outlook of the staff of the Municipal Party Committee and briefly review the urban and industrial construction plan of Zhongyun.

That was to say, from now on, until 8 pm, the inspection team's itinerary will be arranged by the Zhongyun Municipal Committee.

From tomorrow, the inspection team will be dispersed to various places in Zhongyun City for independent review and evaluation.

By the end of the session, there was not much they can do on this side, the level of civilization of the broad masses of citizens, and the appearance of the city is the key.

but.....

Even if the latter two levels can be passed, they can't pass the mental outlook of their leadership team.

Because Gao Fengming was very professional and pointed out professionally that there were a lot of fraudulent situations in the promotional film produced by the Propaganda Department of the Municipal Committee.

This is, it was a very small misunderstanding, the Mechanical Colossus Type I, in fact, actually a pearl of their industrial technology in Zhongyun City!

The two mayors carefully established in the car, as long as Gao Fengming team leader, really understand the Mechanical Colossus Type I, then this small misunderstanding can be dispelled.

It is a pity that this is at The Urban Health Inspection of Civilization, not of an Industrial and Technology inspection.

The two mayors are naturally unwilling to cover up the situation and go to Gao Fengming team leader.

How to introduce the Mechanical Colossus Type I?

It is best to let Gao Fengming team leader see by chance and see the real power of the Mechanical Colossus Type I.

Therefore, the afternoon trip should be slightly modified.

The first stop to visit the sewage treatment station plans to change, but to visit the environmental sanitation of the industrial park.

Monster Heavy Factory held a Mechanical Colossus Type I product launch today, the two mayors know.

The Park Authority has representatives to attend, and the URA has also gone to several people to visit the Mechanical Colossus Type I.

According to the news they sent back, the exhibition site was going crazy.

There are twenty-one Mechanical Colossus Type I dancing, and small apples dancing.

As long as they are on the development zone, the two mayors believe that Gao Fengming, the team leader, will probably be interested in seeing the huge poster.

Then the beautiful misunderstanding will disappear.

Mayor Xia Yuming, while quietly said in the ear of the secretary, explained to arrange the visits on the other side of the park, where some suffering was accompanied by the high Gao Fengming group leader.

From the beginning of his departure from the airport, Gao Fengming's team leader looked extraordinarily cold and serious.

When a group of people visited the office of the convenience, the leader of Gao Fengming asked the operator about the handling of complaints and suggestions made by some people, he smiled slightly.

The Vice Mayor, Mr. Wu Shunyun, had some shortage of obstacles in his heart.

When Gao Fengming's team leader met those grassroots personnel, he became very well at talking.

When facing these people, he was serious enough to make people felt frightened.

After a while, the members of the inspection team finally proposed to take a turn in Zhongyun City and get familiar with the environment.

Five minutes later, the team ran towards the development zone.

The two mayors deliberately changed their itinerary temporarily, and even they spent a lot of money, and the strong ionized sewage treatment equipment rented from the Monster Heavy Factory did not make the first stop.

In order to be able to hurry up, let the team pass there before the end of the event in front of the park exhibition hall.

At the product show of the Mechanical Colossus Type I, there were staff members who kept reporting the news.

In the car, the two mayors who received the report from Xindi were happy.

There was a strong construction capability of the Mechanical Colossus Type I, and the staff also sent a small video.

In the video, two Mechanical Colossus Type I stood face to face, one with a large thick steel plate holding the city gate, and the other with two broken mountain hammers, which launched a fatal blow to the thick steel plate.

"Boom!" "Boom!" "Boom!"

Every time a huge blow, Wu Shunyun holds the right hand of the mobile phone and can't help but shake it.

The steel plate deforms rapidly, and in the gap between the strikes, there is a loud cheer from the guests' table.

"It's too late, we are all signal-controlled, all green lights." Mayor Xia Yuming finally breathed a sigh of relief.

however.....

When the team turned out of the main road and drove into the new color road, the CMB car of the front inspection team suddenly lit the right turn signal and then turned into the parking lot next to the color bridge.

"What's happening here?"

"Color Street is a tourist attraction. The inspection team should not wait for two days to check it separately?"

Vice Mayor Wu Shunyun also could not understand.

If you don't understand it, you have to get off the car.

After driving into the parking lot together, Gao Fengming, the team leader, got off the car with the inspection team.

"I want to look at the color-clothing bridge first, that twenty-four female ladies figure."

Gao Fengming team leader rushed to the two mayors and nodded:

"Painting is also my hobby,"

I have studied the techniques of Tang Liuru and Qiu Ying for a few years. "

What can the two mayors say? He just stayed in the street for one night, and they had to pinch their noses to do so.

The pedestrians walked toward the Caiyi Bridge and became one of the main cultural cards in Zhongyun City.

The sanitary environment of Caiyi Street is naturally good.

The dust on the ground could not be wiped out. The pedestrians and vendors in the past, aiming at this group of "visitors," became polite and civilized.

The hair was a bit mottled, but the grandmother who walked but was very stable plans to cross the road, and immediately, several people rushed over to help her.

No way, who are the two mayors who showed up on TV every other day?

"Why? Not yet." before reached the bridge, the leader of Gao Fengming team leader suddenly collapsed.

His eyes fixed on the curb on the side of the road and even issued three words.

#### [Chapter 223: Interesting Technique](#)

.

On both sides of the road of Caiyi Street are embossed roadstones of ladies' maps paved by the Urban Construction Bureau.

The maids in these beliefs are different. When you count them carefully, you will find that there are twenty-four different patterns.

However, no matter which piece of kerbstones is selected, you will be found a picture of a lady that jumps over the stone, with soft and graceful lines, as if she were active.

These pictures of ladies and women are Qiu Ying's style of painting, and Qiu Ying's Meticulous Brushwork techniques are most carefully carved.

The more he looked at it, the more the team leader Gao Fengming felt that these reliefs are incredible.

It seems that the eyes of these maids are full of sparkling water, and they are looking forward to the people.

At first glance, the pictures of Ladies Marcinski was a long landscape map, which has been disappearing at the end of the field of vision.

It's really beautiful all the way, not to mention the leader of Gao Fengming, the curiosity of the entire inspection team, all hooked up by these unusually beautiful curbs.

They squatted on the ground one by one, even curiously touching them with their hands.

"Very good, a good slender combination of ladies and girls figure flowing through the clouds."

Gao Fengming team leader rushed to the two leading mayors in Zhongyun City and raised his thumbs.

His face was still solemn and serious, and he turned the front of the line to say:

"It took at least hundreds of thousands of kerbstones to pave the whole road with such artwork kerbstones. You Zhongyun City's finance seems very rich."

Le Zhengdong, Director of the Urban Construction Bureau, was also accompanying them.

The roadside stone paving was the responsibility of the Urban Construction Bureau. Of course, he had the most say.

When he heard Gao Fengming's team leader and raised these kerbstones to the ranks of art, and seriously questioned their extravagance, the director Le Zhengdong thought that the opportunity had finally come.

"The high leader, these curbs are not as expensive as you think, it is only one-third more expensive than the ordinary curbs."

Director Le Zhengdong knew what he is thinking, the more knowledgeable, the more he would think that these stone carvings are incredible, and the price was definitely expensive.

"City culture and urban science and technology construction have always been the development theme of our Zhongyun City."

"These curbs are the embossed curbs that we have created according to the traditional culture of Zhongyun City with innovative technology."

"Innovative technology means?" Gao Fengming's face finally eased.

This gave the two mayors a sigh of relief in their hearts.

Lost in the east, Receive the mulberry. The team leader Gao Fengming hobby painting, this is something that nobody expected.

It is exactly because of this that the embossed curbs on both sides of the road can shine brightly and bring back a game for them.

Director Le Zhengdong took a deep breath, and his next explanation was very important.

"By traditional means, we want to carve exquisite patterns on the rocks. I am afraid we can only carve only by hand."

"Leader Gao, hand-carved this beautiful picture of ladies, even if we can afford to pay the price, we can't find so many masters of sculpture!"

"Good ... all the masters of stone carving, at the same time are masters of Chinese painting.

But the masters for Chinese painting, it was difficult to paint on the rock with a chisel."

The expression on the face of Gao Fengming's team leader eased a few points, some said:

"This A fine degree of stone carving, relying on hand-carving, can only be done by real masters."

"What technology do you use, carving, or mold?"

Leader Gao Fengming was very interested in squatting down, gently touching the lines above, the hard touch, and the texture of the surface of the material told him that this is not artificial stone.

Only cement, gravel, gypsum, resin, artificial stone stirred by these materials can be injected into the mold to cast texture.

Artificial stone materials are too fragile, and under the wind and rain, cracks will occur in a few years, and the mold can't do such a subtle level.

"This is a natural stone, it seems to be engraving technology."

Gao Fengming team leader stood up again and made an expression that was audible.

The situation is developing in a good direction.

The two mayors have drawn a thumbs up and indicated that the Secretary of the Urban Construction Bureau is cheering!

The kerbstone is a gift prepared by the Urban Construction Bureau for this city inspection.

For it, Le Zhengdong has made a lot of effort.

"The high leader is wise, we did use engraving technology."

"This kind of equipment is called [metal fast engraving machine], its engraving precision is very high, and the spindle speed is up to 40,000 revolutions per minute."

Le Zhengdong confidently said:

"This is the production of a technology company in Zhongyun City. Now we are in Zhongyun City. As long as it is a large advertising company, every one of us has at least one such device."

"At high speeds, accuracy can also be guaranteed. This seems to be two absolutely contradictory concepts. I am very interested in this kind of equipment."

Gao Fengming's team leader showed a smile that excited several people beside him.

"City culture, urban characteristics, urban science and technology. These three points are the three essential elements for building a modern and civilized city."

"This kind of kerbstones, if the cost is really so cheap. It can be promoted in the main roads of major cities and tourist attractions."

"At night, can we visit the manufacturer of this kerbstones?"

"Certainly!" Le Zhengdong was so excited that he be light and fluttering:

"Warmly welcome the presence of Gao Zhengdong."

When the motorcade was back on its way, the two mayors received a piece of bad news.

The activities on the other side of the exhibition hall are over.

Now a large group of people is interested in buying the Mechanical Colossus Type I, waving their checks and bank cards in their hands, and surrounding the sales area.

Sixty Mechanical Colossus Type I was ordered to be sold out. It is said that there are still people who want to drive a sports car from the field to the place.

In the middle of the road, they will transfer five million deposits to the company account of the giant beast.

Fortunately, there is also a metal, fast engraving machine. The two mayors once again chanted: "The lost east, the mulberry."

At the show...

If Ye Qing reacted quickly, and quickly let the employees hide the brand of [the second one or eight percent], today made a big loss.

Sixty giants I was robbed, and the sixty heavy trucks originally leased by Ye Qing were also intended to drag at least half of the Mechanical Colossus Type I back.

Now, all the heavy trucks are contracted, and they are going to go home with the Mechanical Colossus Type I.

Sixty vehicles, all costs, and taxes were cut, and Ye Qing earned 420 million Yuan.

Before he started the construction of the factory, he bought a lot of metal to make the Mechanical Colossus Type I, and the mining area that is about to be launched. He has already spent a lot of money.

Now in a blink of an eye, 400 million Yuan came in.

These 60 Mechanical Colossus Type I will be sold out. In the future, the assembly shop of the Mechanical Colossus Type I can produce up to 20 vehicles a day, and sell it for a net profit of 1.4 billion Yuan per day.

Just in Ye Qing's fantasy, when the Mechanical Colossus Type I produced every day can be sold, a phone call pulls Ye Qing back to reality.

"Mr. Ye ~ Ye Laodi, come on, let's see if Zhongyun can pass the censorship, and we have to ask for your help!"

#### [Chapter 224: Make their way](#)

Ten minutes later, the team of the inspection team turned into the development zone.

Regular inspections by the superiors will result in temporary traffic control on the roads that the team cross.

Traffic police are on duty at all intersections.

One minute before the arrival of the convoy, pedestrians, and vehicles are temporarily stopped from crossing the road.

Today is different, only the signal lights on the road remain all green, how many vehicles on the road.

The urban hygienic and civilized environment is a comprehensive category with a very wide range.

Especially the civilization, it is easy to reflect through the old drivers on the road.

Therefore, in the middle of the cloud, even if they are reluctant, they can't control the roads.

The two sides of the road are full of traffic police so that the inspection team is running alone.

Fortunately, on the way, even if there is no traffic police, the old drivers are very eye-catching.

Seeing that most of the team fell behind, not overtaking the police car.

Honestly follow the police car to open the lane, the pleasure of the green lights on the whole line.

The oncoming vehicles are disciplinarian, at first sight of the situation.

The team is five minutes away from the exhibition hall on the side of the development zone.

A hurricane Lamborghini, flying on the road.

The owner of the Lamborghini, which is worth more than 4 million Yuan, is the vice president of Liangjiang Gonghu Metal Art Engineering Co., Ltd. of Liangjiang City.

He is Xiao Xin.

He is twenty-eight years old this year, and he is a rich second generation.

At the same time, he is also a loyal customer of the mechanical engineering chairs, one at home and one at the company office.

He bought another one last week, originally intended to ask someone to remove the base and install it in his other off-road vehicle when the car seat is the same.

As a result, after the base was removed, the operation panel of the mechanical engineering chair always reminded that the equipment was damaged and could not work.

Today, he often visits the website of the Monster Heavy Factory, which is actually broadcasting a new product launch conference.

- Mechanical Colossus Type I!

Originally he did not intend to buy it, because this thing is really too expensive, and there is no way to go out with it for a ride.

However, a small thing.

Behind the Mechanical Colossus Type I, people are dropping performance, let Xiao Xin keenly aware of a business opportunity that no one else found!

Who said the Mechanical Colossus Type I, Can only be used to engage in engineering construction?

He bought one back, painted it with his company's slogan and LOGO, toured in the city of Liangjiang, and danced the classical square dance.

This advertising effect is better than inviting ten stars.

And his family company is doing metal art engineering.

The statues of streets, the art sculptures on the square, and the landmark buildings of the city all belong to the metal art project.

The Mechanical Colossus Type I can also use two mechanical arms that are more flexible than humans to make gold with large metal hooks.

On-site telephone consultation, he called five times before getting through the network.

As soon as the phone was connected, Xiao Xin asked the company account number of Monster Heavy Factory and proudly transferred five million advance payments.

The distance between Liangjiang City and Zhongyun City is not too far.

Xiao Xin drives his Lamborghini and runs all the way to Zhongyun with the maximum highway speed limit.

According to the navigation tips, there are still three kilometers.

When arriving at this destination, Xiao Xin found that this road turned out to be a green light and a straight green light.

The development zone has a maximum speed limit of one hundred miles.

There are many cars in front of each other, and the speed is only seventy miles.

The Lamborghini roared up at a speed of one hundred at the hour.

At one hundred and eleven miles per hours was easier for the Lamborghini to roll than drinking water, and without making too much noise, and Xiao Xin left the inspection team behind him.

When Xiao Xin saw the exhibition hall and the venue of the exhibition, he turned to the lights and prepared to make a beautiful turn.

A Steyr heavy truck was carrying the Mechanical Colossus Type I emerged from the corner.

There were no traffic lights here, and the hurricane Lamborghini was as flat as the washbasin and was blocked by green on both sides of the road.

When the driver looked around for the engine roaring sound source, he saw a black and smashed thing on the green side and frightened and quickly deflected the direction.

This bias, a left-hand driveway, the heavy truck honked its horn in the left lane.

quack quack --- quack ---

On the road, there was a sound of a metal rubbing made the scalp numb.

This normal heavy truck had friction with the heavy truck carrying the Mechanical Colossus Type I.

On the arm of the Mechanical Colossus Type I, the locking mechanism is a mechanical claw, which is a mechanical claw with a cold metal luster.

The scissors cut the pocket and cut the oncoming heavy truck and the fixed steel cable on the carriage.

The Lamborghini quickly stopped, and the truck loaded with cargo also hurriedly braked.

The Lamborghini brakes are only seventeen meters apart, and the brakes of the normal heavy truck are almost 100 meters away.

When it is completely stopped at the center of the road, the high-sanding steel pipes loaded in the carriage roll down the ground like rain.

Booming bang ...

Fortunately, there are no cars on both sides.

These 50-centimeter-diameter sand pipes have been tumbling violently, after landing they completely blocking the road, and several bounces hit the roadside streetlights.

The co-driver, a middle-aged man with a Hermes handbag on his arm, of the truck carrying the heavy Mechanical Colossus Type I.

He rushed to see the truck driver and found that he was not injured, and he came to the Lamborghini with a lingering fear.

"How do you drive this car?" The confused man screamed at Xiao Xin, who lowered the window: "Is this a great hurricane?"

.....

Two minutes later, the team of the inspection team arrived.

The two-way six-lane road was traversed by the heavy truck carrying the sand pumping steel pipes.

The sand pumping steel pipes were scattered everywhere, and the street lamp was also smashed down on one side.

That is, in those two minutes, there were no fewer than thirty cars blocked up here.

The traffic policemen inside the police car in front of the inspection team were almost scared.

At the crucial moment, the road was actually blocked but fortunately, at first glance, it's good to look at the past, it was only common for goods to slip and no one was injured.

The inspection team stopped collectively, followed by the old elders to take the ride, and all stopped.

"Call the accident group ... Call the accident group, an accident occurred in the development zone avenue. Please immediately dispatch engineering vehicles to make access roads."

After reporting the situation on the radio, the two traffic policemen held their hats and ran forward.

Gao Fengming leader and the inspection team also got off the cars.

Subsequently, Gao Fengming's team leader stared the accident with big eyes, and some people of them looked at the accident with perplexity.

At the back of the heavy truck, another heavy truck was also stopped.

The heavy truck was loaded with a steel machine that it had a crush on in the airport lobby and was criticized for his falsification.

This steel machine, with two huge mechanical claws that he had never seen before, was clasped together on the ground with the palms of his hands.

Inside the mechanical giant claw, is a matte black Lamborghini, which is firmly locked in by the giant mechanical claws and can't move.

Outside the steel cage, a young man with a face overwhelmed is looking at his Lamborghini.

His Hurricane Lamborghini was painted by the Mechanical Colossus Type I in the ground.

"I depend on what you are doing?" Two traffic policemen ran over and shouted.

#### [Chapter 225: Javelin](#)

If you don't speculate, you can do it!

Xiao Xin said that he did not exceed the speed limit and that he did not break the rules.

This accident was not his own fault.

The co-driver' boss thinks it is common sense was to slow down in turns, and Xiao Xin's speed is too fast, so he was eager to rush the steering wheel.

Because of this Lamborghini, his Mechanical Colossus Type I was scraped off the paint.

The oncoming heavy truck also suffered his goods slipped, and now the driver is urging them to pay compensation for him.

"That's your business. It's none of my business."

Seeing that Xiao Xin has the intention of evaded his responsibilities.

Just from the manufacture's technician, Liu Guosi, who learned the basic operation of the Mechanical Colossus Type I, did not say that he will climb to the cockpit of the giant god I and buckled the Lamborghini with the steel mechanical claws.

It's so sweet, the sense of control is too strong!

Liu Guosi laughed loudly. The owner of Lamborghini car didn't know what to do, so he didn't feel too happy.

"You... You are waiting for me." Xiao Xin left a ruthless remark and ran away, making Liu Guosi feel more and more happy.

Two traffic policemen arrived in a hurry to the scene, so that Liu Guosi, who was complacent, completely calmed down.

As soon as he got down from the cockpit of the Mechanical Colossus Type I and found that the face was serious, or doubtful, or an angry figure staring at him.

Just a slight sweep, Liu Guosi has a feeling of soft legs.

He is a native of Zhongyun.

Of course, he knows the two mayors. Also, the two chiefs who stood behind the mayors are familiar with him.

But the two mayors, standing at a time behind a group of people...

"This is the inspection team staying in Zhongyun City!"

Liu Guosi felt that he had done a lot of harm ...

Without looking at the faces of the two mayors, is it worse than the car owner of Lamborghini just now?

The truck driver who was smashed by the fish in the pond went to the traffic policemen.

At this time, the road is blocked like canned sardines, and people saw a mighty novelty new steel machine that uses steel claws to fasten a Lamborghini inside.

Many private car owners came to the scene, one by one excited eyes, took out their mobile phones and pointed there.

Who is this kind big of Transformers blockbuster?

Hurry up the circle of friends to micro-blog.

"This gentleman, the mechanical equipment behind you is yours?"

After confirming that no one was injured, the team leader Gao Fengming went around the steel pipe and wondered.

"What do you do to hold this car?"

"I... I..." Liu Guosi suddenly turned around and said loudly:

"I am protecting these two cars!"

"Just now, two of our trucks had a scrape, and the steel tubes of the truck are rolling down toward the ground."

Liu Guosi said more and more excited, clapping his chest and explaining:

"When I looked at his foreign license plate, I was in a hurry. If these steel pipes hit his car, did not this foreign tourist leave an unpleasant memory of Zhongyun City?"

"I immediately jumped to the Mechanical Colossus Type I, and took the risk of a device being smashed, and put this Lamborghini in my arms to protect it."

The two traffic policemen grinned their mouths and stretched their necks to see the Mechanical Colossus Type I.

They looked at Liu Guosi, who was full of ghost stories.

The driver who just pulled the steel pipes has already talked about it 1510 words.

How did they get out of his mouth? And how he become a good citizen who acted bravely and righteously?

Most of the inspection teams would not believe this myth, but the leader Gao Fengming was somewhat embarrassed.

Previously, he criticized the device for falsification, but the real Mechanical Colossus Type I was placed in front of him.

Gao Fengming's team leader was shocked.

This Mechanical Colossus Type I with open arms was evaluated with his gaze.

It is definitely better than any mechanical equipment and workmanship he has ever seen.

The two robotic arms are full of unspeakable steel aesthetics.

"What is this about?" Gao Fengming's team leader said to himself.

Bangling ...

A wheeled Mechanical Colossus Type I came from the exhibition hall, Xiao Xin was sitting in the cockpit, and Lao Tzu was coming in a domineering manner.

There was no fear of road congestion.

The Mechanical Colossus Type I, who dared to paint the ground firmly, stopped in front of him.

What calmed him down was the same two pairs of traffic police gaze and a group of obvious and extraordinary inspection teams.

"Hey, what's the situation inside?"

The two traffic policemen's communicators sounded a colleague's voice:

"We can't get in inside, the car is blocked for hundreds of meters, we are asking people to come back, ready to divert traffic and prepare to ease traffic."

"Quickly, the whole inspection team is blocked in. First, let them bypass the traffic flow in the north and South sections, and the vehicles behind them let them turn around and slowly give off in the back sections."

Another Mechanical Colossus Type I has come over.

Leader Gao Fengming felt more doubtful.

Is this mass-produced equipment?

To answer him, it is the master who controls the Mechanical Colossus Type I, raises high his mechanical arm.

He came to ease traffic!

When the Master Craftsman controls the Mechanical Colossus Type I, Xiao Xin, who has been blinking over where he is, everyone has discovered that this Mechanical Colossus Type I is somewhat different.

"what!"

"Oh, my God!"

"This... what is this?"

Encircle around to see the busy private car owners, one by one, open their mouths, there like falling clouds at a loss.

This equipment they had never seen before actually flew up...

Or it is jumping up.

When it was blocked in front of it, when a Steyr heavy truck was crossed there, the Mechanical Colossus Type I supported it with his arms and lifted it up.

The straight and stout steel mechanical arm is forked firmly in a stable triangle fork.

After the chassis is lifted over the flat, heavy truck, the arms are directly swayed, and the entire body is swayed over the heavy truck.

This is a wheeled Mechanical Colossus Type I.

After landing, it is a "boom ..."

Huge hydraulic shock absorber rebound sound.

The expression of Gao Fengming's group leader seems to be grasped by the Mechanical Colossus Type I.

How can this be?

A heavy-duty sand-pumping steel pipe, half-meter diameter and thick-walled were taken by Mechanical Colossus Type I in the mechanical claw.

Even more incredible things happened.

This Mechanical Colossus Type I grabbed the thick-walled sand-splitting steel pipe and began to swing around and danced.

"Call ~ call ~ call ~ call ~."

Thousands of pounds, in the hands of the Mechanical Colossus Type I stunned.

Thousands of pounds, in the hands of the Mechanical Colossus Type, I rested up.

Turn the stick!

The signature action of the Monkey King was made by the Mechanical Colossus Type I, and it was absolutely shocking.

"Whoop"

The rapidly rotating jack steel tube suddenly stopped, and was thrown by the Mechanical Colossus Type I, and steadily plunged into the river ditch under the roadbed.

"Whoop", "Whoop", "Whoop", "Whoop"...

The Mechanical Colossus Type I was changed to become a javelin thrower.

Within two minutes, all the thick-walled sand pipes scattered all over the ground were nailed into the river ditch under the roadbed.

The road was emptied out for the boss!

The thick-walled sand-pumping steel pipes that were nailed into the river ditch were just as neat as the soldiers in the army.

Everyone on the scene forgot to breathe and thought as if they had been fired an atomic bomb.

The group leader Gao Fengming became a patient with severe Alzheimer's disease, and the retina was dull.

#### [Chapter 226: Rescue Tools](#)

Originally, at least two cranes were needed, and ten workers at first to divert traffic and then set up the work area, sweating and waving for an hour or two.

It was finished in two minutes by the Mechanical Colossus Type I.

This is related to the top driving skills of the master laborers, but it's useless to have more master laborers without the Mechanical Colossus Type I.

The dumped street lamp, which was also a headache, was switched off the switch of the distribution box.

The Mechanical Colossus Type I replaced the tool directly, cut it off like sugarcane and inserted it under the roadbed.

The driver whose heavy truck was smashed and was caught like the pond fish stared at the Mechanical Colossus Type I and yelled at the policeman next to him:

"He has to pull out the pipes..."

"The crane truck was blocked in the back. After the road is cleared, we will let it come and hang them at no cost."

Two traffic policemen were equally eyeful: "It's important to clear the corridor now."

"Bang bang, bang."

The Mechanical Colossus Type I rushed the driver to hook, and patted the heavy truck's b\*\*t gently, indicating that he could go.

"Moving up, quickly everyone does not take pictures and video, and quickly get on his car and follow the directions of the traffic to free the traffic."

Only then did the two traffic policemen recover and rush to the intersection to direct the traffic.

The traffic flow of the traffic was slowly staggered under the command of two traffic policemen.

But Gao Fengming's team leader was reluctant to get on the car.

The neatly arranged sand-pumping steel pipes in the River Ditch and the base of the street lamp with a smooth and mirror-like break made his heart roll up.

Originally thought to be a gourd, the result was a dragon.

More the construction professionals and urban science scientists will be concerned, more we will have awe in the industry!

Next, to all the private owners' car, one by one an expression of surprise, that is also time to see the science fiction blockbuster.

They feel shocked, but they don't understand the original meaning of it.

Seeing the fraud, the team leader Gao Fengming was very angry.

Now, Gao Fengming's team leader is in a mess.

This is an innovative industrial technology that breaks the traditional mechanical structure, and this equipment will undoubtedly shine in the construction field.

There are also rescue areas!

If every fire brigade has a piece of rescue equipment like this.

How many lives will that save?

Looking back now, the Mechanical Colossus Type I on the promotional film, a whole set of movements in the film are impossible to do it now.

Passive hands and feet are the material!

This should be something that the construction team assisted in the shooting.

Now the Mechanical Colossus Type I has proven to be extraordinary.

"Monster Heavy Factory?"

The team leader Gao Fengming turned around and unnaturally asked the two mayors next to him:

"This is a Sino-foreign joint venture, or..."

"This is a purely domestic enterprise, just in our Zhongyun City, and it is a company that produces metal fast engraving machines."

The two mayors hate to be able to hold the driver's kiss, without this congestion, how is the high leader?

Will it completely reverse his previous image of the promo?

.....

Ye Qing is shopping. At 6 p.m., the inspection team staying in Zhongyun will come to Longxi Beach to visit the production of the kerbstone.

The kerbstone leaves have long been dry, and there is no mechanical make-up to make stones.

Others want to make stone carvings, buy the fast engraving machine directly, and then use the polishing machine to throw it again after processing.

This can make up for the lack of precision of the sales version of the engraving machine, and the slowness is much slower, but it can be compensated by the quantity.

To be honest, Ye Qing does not like to be visited and inspected.

A large group of people messed up, yelling and screaming, after a lap, they patted their a\*\* and left without buying anything.

A large group of people was in a mess.

After yelling and screaming for a look, they patted their bu\*\*s and went away without buying anything.

Nevertheless, after N years of mixing up in Zhongyun City, the title of the National Health civilized city has not been confused.

This inspection team, Ye Qing, to some extent, should help out.

This has nothing to do with political investment.

Ye Qing is just doing his best for his hometown city.

So the inspection team came, and Ye Qing planned to hand-deliver a meaningful souvenir.

Gifts can't be expensive.

They have to be liked.

After hearing the ingenious master report, saying that there are many women in the inspection team, Ye Qing had a plan in mind.

At five o'clock in the afternoon, Ye Qing, who came back from the shopping, assembled two master artisans, and started the first processing procedure of the gift.

Two master artisans also purposely tidied up a warehouse and came out.

They rediscovered the roadside stones which they had arranged in some corner.

They washed the dust with water and put it in front of the metal rapid engraving machine.

For this reason, who knows if this visit will please the group leader, Ye Qing does not know, but he will certainly be able to please all female members.

At 5:50, Ye Qing took two metal experts to welcome the arrival of the inspection team on the newly built main road.

The inspection team has already entered the Longxitan area.

Looking far away, Gao Fengming team leader and other members have already seen a piece of the factory building that is located on the beach and has a modern feel.

Monster Heavy Industry!

Gao Fengming's team leader was thinking about this name all the way. He was simply circling around the park, and he couldn't wait to go to the behemoth heavy work.

Because of this name, he was given too many surprises.

The kerbstone and the Mechanical Colossus Type I, on the way, the vice mayor Wu Shunyun also euphemistically revealed.

Originally at this point, I went to visit the high-tech chemical sewage treatment station, where the chemical sewage treatment equipment, also comes from the Monster Heavy Industry.

When the team turned into Longxitan, Mr. Ye, who had been waiting for a long time, was leading two professional bodyguards who looked like corporate executives and who seemed to despise any small people, standing in the middle of the road.

The team stopped at the parking space of the transit warehouse.

There was no accident.

The high-definition team leader and the team members were shocked by the row of single-arm robots.

"I want to apologize to you!"

When Ye Qing and the inspection team made the first face-to-face, Gao Fengming's team leader uttered a sentence that made everyone suspect that the ear was out of order.

"At the airport, I pointed out arbitrarily in front of all the people, the Mechanical Colossus Type I is a fake product."

When Gao Fengming and Ye Qing shook hands, he said:

"I misunderstood the behemoth heavy work, also misunderstood the leadership team of Zhongyun City."

"In fact, there is a company of Mr. Ye, and Zhongyun City can make a big splash in urban technology!"

Mayor Xia Yuming and Vice Mayor Wu Shunyun immediately have almost had a heart attack.

So they looked at each other, and they almost fainted.

The high-level apology of the high-level leader really gives them a feeling of joy to keep their eyes open.

If there are people next to them, they will kindly give Ye Qing a big hug and thank Ye Qing for his outstanding contribution to Zhongyun City.

Now they can't hug, and it is not good to do it.

They turned their backs and sneaked into the leaves and quietly raise their thumbs towards Ye Qing.

"It's very kind of you to..." Ye Qing was also confused.

For didn't say to Gao Fengming to visit him? Why do you apologize?

"This is the leader of Gao Fengming, this is the deputy leader Wu Qianyan, this is He Xiao examiner, this is..."

Wu Shunyun quickly introduced the two people to each other.

"Is it you?" When shaking hands with the deputy leader, Ye Qing was extremely surprised.

The young deputy leader of the squatting body was not the morning, he came to the foreign tourists who had eaten and sipped at the press conference...

[Chapter 227: Is this the end!](#)

"Hello, Mr. Ye." Wu Qianyan had already recognized Ye Qing, and the courteousness of the morning also left a deep impression on her.

But she did not think that this polite young man would have such amazing achievements.

"Inside, please!" Ye Qing stepped aside and invited the group to visit him.

Team Leader Gao Fengming was full of expectations and nodded, keeping up with Ye Qing's footsteps.

Among all buildings, the Mechanical Colossus Type I assembly workshop is the largest.

On the road, Gao Fengming, the team leader, pointed to the assembly shop.

Is there a production base of the Mechanical Colossus Type I?

Ye Qing answered, and he asked Ye Qing again, the single-arm manipulator in the transit warehouse, why no worker was operating it?

After entering the tall courtyard, team leader Gao Fengming asked why had not seen many workers.

Because Ye Qing was afraid that Gao Fengming will doubt that when all the hard-working and skillful masters are coming out.

They look so alike.

"Many workers are off work, and the manual processing link, I concentrated in the company, where there are thousands of employees."

Ye Qing thought that he should say 100,000 why...

"The factory at Longxitan is only highly automated and can be managed by very few workers."

Originally planned to visit the kerbstone production work, Ye Qing first station, but he took them to the small factory that originally produced the mechanical engineering chair.

Since the assembly line of the mechanical engineering chair was made, it has been changed into a laboratory-like non-standard product production workshop.

Walking into it is like walking into the ocean of machinery.

High-energy laser cutting equipment, ultra-high pressure waterjet, pulse plasma welder, five-axis center with a tool magazine, human-like motion robot arm, etc.

These are just the heads of the high-definition team, barely recognizable, and more, he has never seen, some exquisite shapes, and unfamiliar equipment that is difficult to imagine complex mechanical structures.

The inspection team and the two mayors, as if like Grandpa Liu Wei came of the Grand View Garden, all of them were full of curiosity and questions in their minds, but it was difficult to ask and touch them because of their faces.

"I introduce you to a piece of equipment!"

Ye Qing walked to a machine with a triangular column and a silver-white mercury mirror metal in the center.

The triangular column is two meters high, engraved with an inexplicable totem pattern, which will be the inexplicable science fiction.

"What is this?"

Gao Fengming team leader can no longer resist the curiosity of the heart, he loves the industry, hate not to be able to soak in here for two days and not to leave, he will appreciate this place.

"3D holographic modeler."

"This instrument automatically scans the contours of objects standing in the center and models them with coordinate points."

"I saw similar equipment at the film industry exhibition in Los Angeles."

Gao Fengming team leader said, his hand couldn't help but touched the column:

"But that needs to be built in a specially built darkroom. Many holographic cameras in the darkroom are used to photograph objects."

"There are also scanning equipment like the column, but the effect of scanning it is seriously distorted."

"That kind of equipment is only suitable for use in movies. You don't know Mr. Ye..."

"My computer can also be used in film technology."

Ye Qing said with a smile:

"The urban science fiction film starring Xu Ninggong [she from the aliens] is responsible for industrial technical support by our giant beast."

"This movie will be released, I will definitely contribute a movie ticket."

Gao Fengming's eyes are soldered on this device:

"I am sorry, it looks too sci-fi, I can... ?"

Ye Qing made a request for action.

This is what a three-dimensional holographic modeler, clearly a sci-fi prop used in the movie that Xu Ninggong filmed before.

Originally, there were four columns.

The artists in the crew estimated that they were dozing off, and the grass was drawn into three pillars.

This sci-fi prop has been left here.

Now its console has been quietly modified by the master artisan.

Gao Fengming team leader nodded to Ye Qing, and his eyes were all eager to try.

When he stood on the metal platform, Ye Qing walked to the console and arbitrarily fiddled a few buttons, then said:

"The high leader can put a posture he likes."

Team leader Gao Fengming crossed his arms...

Ye Qing pressed the 3D camera hidden in the console and shot the button.

At the same time, this nominal 3D holographic modeler was also activated.

The three columns followed by a fan-shaped green light curtain, which was very soft, like the sunbathing on the high-definition leader.

The column then rotates, and the radar sweeps two turns.

The three-dimensional model that team leader Gao Fengming expects is not displayed on display, which makes him somewhat confused.

Ye Qing mysteriously smiled and invited the deputy leader Wu Qianyan, to come and experience.

Wu Qianyan, who has long black hair, has stood up and made a very lady's sideways gaze.

After all the members of the group had experienced it, the two mayors and the accompanying directors ran up with shy faces, and a funny expression was always given to them by Ye.

All done, Ye Qing poured these character models into the U disk, handed them to the metal experts next to him, and then took them to the temporary curb stone processing workshop.

The metal fast engraving machine does not have much technical content and is simple to display.

It's just a few kerbstones on the ground that didn't come in handy...

Used to show the performance, it is a plate-sized, green body, under the light, sparkling green and jade.

"Jade?" Gao Fengming's eyes were straight, and the palm-sized jade was the most delicate and green-like jade he had ever seen.

The two mayors are also stunned, and all the women in the inspection team are stunned, this...this...

The answer to this is the wild rotation of the metal fast engraving machine.

The surface of the jade is disintegrating at a rapid speed, and the green stone powder is flying.

A beautiful woman with long hair, arched eyebrows, and a beautiful face looks staring at the portrait which is stripped from the jade a little.

"This is not..."

Looking at the lively deputy mayor Wu Shunyun, the ghosts are in the green jade, and the deputy leader Wu Qianyan quickly looked.

That's right!

On this green emerald, the beautiful face of Wu Qianyan is vividly carved, or the action face she made on the 3D holographic modeler.

In the eyes of the deputy leader Wu Qianyan, fear and incomprehension are changing rapidly.

Green to the heartbreaking jade, for any woman, is a deadly poison, not to mention the jade, but also carved her lifelike face?

But what is her identity?

She is a member of the group that has been transferred to Zhongyun City for a comprehensive environmental and civilized assessment.

Now on a piece of jade worth tens of millions, her face has been engraved.

Carved and sculpt, the piece of jade is golden.

This ancient poem fully describes a perfect emerald, the value of how high.

"Mr. Ye, you, you..." team leader Gao Fengming incredibly staring at Ye Qing.

Visit and participate with the emerald worth millions!

The face of the deputy head of the inspection team was also engraved with top-level engraving equipment.

This naked, undisguised behavior!

The two mayors were almost scared and squatted on the floor, and their hearts were finished, and they were completely finished.

In the face of the emotional changes of the team members, Ye Qing smiled.

so funny!

"Everyone!"

"This is the use of aluminum hydroxide, greenstone powder, quartz powder, unsaturated polyester resin, cobalt isocyanate or cobalt alkanoate, potassium ketone peroxide, artificially fired by powder metallurgy. jade."

Ye Qing opened the container box next to it, revealing the inside, and engraved the emerald shape of Wu Qianyan's face, exactly the same hundred pieces of green jade.

"Powder metallurgy technology cost less than ten Yuan, everyone has a share."

Powder metallurgy technology?

Powder metallurgy technology!

This answer allowed the team members to be completely metalized by powder and turned into jade-like petrochemical.

The two mayors from Hell to Heaven, hate not to hold Ye Qing.

Oh, my God!

The behemoth heavy work is a good sculptural show, completely revealing what everyone is called industry.

Three-dimensional holographic modeler technology, powder metallurgy technology, top-level engraving technology, show the best!

Seeing the deputy leader dancing thousands of candles, the expression changed from the original fear to the unspeakable surprise and unbelievable.

The two mayors, their mouths slightly tilted up and watched Ye Qing.

Ye Qing also curled up his mouth and looked at them.

[Chapter 228: Big Order](#)

The yearning for good things is human nature.

The artificial jade fired by powder metallurgy technology can only be judged by the truly knowledgeable jade experts.

Many ordinary consumers have never seen the top jade stone, and naturally, they can't tell the difference between true and false.

Gao Fengming's long forehead even had some sweat, and he had just been shocked.

Now the answer is revealed, and he admires or not.

What is more, admirable is sculpture technology.

In the previous three-dimensional holographic modeling instrument, the leader Gao Fengming still wondered what kind of data would be collected.

Compared with foreign technology, is it good or bad?

This question, the magical ability of sculpture, has already told him the answer.

Three-dimensional acquisition and automatic sculpture, in exchange for those foreign companies, to ensure that the last carved statue, even men and women can't distinguish.

"Clap - clap - clap"

Leader Gao Fengming took the lead in applause.

The women in the inspection team looked forward to their jade.

Their eyes were pasted with cement and firmly adhered to the finished artificial jade carvings.

"What about mine? Ye Zong, you go on with the next jade sculpture! "

There are already women who can't help being reserved.

Without letting them wait too long, the pieces of exquisite jade carving were freshly coming.

Even the two mayors and several directors got one jade.

This gift is perfect!

All the women in the inspection team have been completely fascinated by the pictures and carvings in their hands.

Afterward, they visited the assembly workshop of Mechanical Colossus Type I, and most of the men in the inspection team were captured.

In the original assembly shop, dozens of monster workers were required to operate inside.

Now Ye Qing is only more natural in order to make the staff configuration, only six, and two metal experts who look closest to the average person.

This move is superfluous because the male members of the group have not paid much more attention elsewhere.

The highly automated one-armed robots on the assembly line are obviously more attractive to them than the jade.

This is the real industry, The cornerstone of human civilization.

Starting from a bare chassis, the automatic robot, at a speed that humans never reach, processes it into a unique Mechanical Colossus Type I.

"This equipment, in addition to the wind in the field of engineering and construction. It can also shine in the field of rescue."

Gao Fengming leader looked up and looked at the towering robotic arms that seemed to have no end, giving the highest evaluation:

"In the afternoon development District Avenue, its ability to deal with accidents quickly, left a deep impression on me."

"Comrades, imagine. If it is not cleaning the steel pipe but is breaking down the steel because of the accident and save the people trapped in the cars because of the accident?"

"How much precious time does it to save the wounded?"

"We can't let the great domestic enterprise such as Monster Heavy Industry rely on itself to open up the market and compete with foreign old industrial companies."

"We must take another attitude and take practical actions to create better domestic enterprises. Creating a broader development space."

"Zhongyun City is the first stop of our inspection team. Two days later we will go to Xitong City, then Huaiyuan City, Gangneung City..."

"Every time we go to a city, our inspection team will strongly recommend to the local government. Mechanical Colossus Type I, produced by Behemoth Heavy Industries, recommends that they introduce this new rescue equipment for firefighting."

"We Zhongyun City, including all fire stations in the subordinate counties, will be the first city in China, equipped with the Mechanical Colossus Type I as a rescue equipment city."

The two mayors also followed the chest to ensure that they would add another seven Mechanical Colossus Type I order.

"..."

This is the time that Ye Qing is blurred eyes!

Initially, he said that when people checked it, they patted their backs and left.

Now they are clapping their hands and send a large number of orders.

In so many cities across the country, a city has ordered one more.

As for the cities at the county level, except for the more developed coastal areas, there are only a few, and the wealthy counties can be equipped with the Mechanical Colossus Type I.

It doesn't matter.

Local finances can't afford it, and there are countless construction companies.

Rescue is needed.

The local government directly spends money to rent nearby, and those construction companies can still make a good name.

At eight o'clock in the evening, the evening news of Zhongyun City broadcasted exclusive news that was hidden for several days.

The evening news host was Wu Xiaoya, after the content of the health and civilized city was finished, news that made the audience in front of countless TV sets, and the news was tense.

On the construction site of the South Railway Station, an engineering truck loaded with concrete failed over into the foundation pit.

Even if the hosts don't render too much attention, the audience could find that the concrete was spreading rapidly toward the cab.

Dozens of workers were holding hands and blocking the cabin with clothes.

Without any background music and explanations, only the workers shouted loudly.

Their efforts were futile, and the intensive steel cage became the biggest obstacle.

Just as the audience began to blink, they began to exclaim, thinking that it was going to be finished, and steel machinery full of sci-fi rushed over.

The sound of the fast break in the speaker, the steel mesh was cut off instantly, and the concrete beam was cut and broken.

The audience did not think about what was going on, and the truck was held high in the air.

The on-site workers shouted loudly and awakened the audience in front of the TV.

Many people couldn't help but stand up and clap their hands with the workers.

Today, two heavy trucks collided on the Development Zone Avenue, the information of the two heavy trucks who collided, was also broadcast to the front information in the TV.

This machine full of power and sci-fi beauty once again ignited the audience's attention in an unimaginable way.

Then the vice mayor Wu Shunyun's speech on the stage said that Zhongyun City had ordered a total of 12 mechanical giants for construction and rescue.

This brand-new equipment will shine in two areas.

This night, the two mayors, finally, can sleep well.

The entire team of Zhongyun City also remembered [The Behemoth Heavy Industry] and its founder, Ye Qing!

Early the next morning, the lazy sun just emerged from the horizon.

The bay of Longxitan is incredibly clear, and occasionally a few seagulls pass over the sparkling water to find the lost fish and shrimps that have come to this place.

Ye Qing, while breathing the fresh sea breeze, grabbed the steel structure brackets in the yard and made several sets of pull-ups.

Activity activities muscles, Ye Qing, returned to the office, took off the mobile phone of the monster factory to study.

Now the ranking of the monster factory in the province has been squeezed to 153, and the honorary value is more than 900,000.

The factory can be ranked in the top 150 manufacturing industries in Jiangnan Province, which can't be described as strong.

Last year, China's GDP was 67 trillion yuan, and Jiangnan's GDP was exactly 10 percent of this figure.

The companies that are in front of the monster factory are all giants with a scale of more than 20 billion.

Ye Qing's real estate is estimated at 5 billion.

Fortunately, all of them are high-tech industrial equipment, which made it possible to reduce the gap between these monsters and the factory.

The sales at the product show today have already made Ye Qing net more than 400 million Yuan.

The Mechanical Colossus Type, I of sales, has also been on track, no accidents in the future, the three products of the giant beast heavy work, the net profit of one day is about 100 million Yuan.

Money!

It is not possible to increase the ranking of the monster factory. Only by investing in real estate does the factory rise in the rankings.

Lying on the Golden Mountain to enjoy, not Ye Qing style.

The three products are on the right track, and now Ye Qing wants to develop a new development plan.

#### [Chapter 229: Subsea Construction](#)

The following focuses on building the refinery in the mining area to achieve self-sufficiency in steel.

The production of the Mechanical Colossus Type I requires a lot of steel.

Ye Qing has already finished the five Mechanical Colossus Type X, and the construction of the mining area has been completed.

These five Mechanical Colossus Type X will become a thorough mining monster, together with the angry miners, will extract the entire mining area at the bottom.

The main plant of the refinery has been built.

It has been busy with the Mechanical Colossus Type I production line and has no time to manufacture refinery equipment.

It is now possible to start all work, as well as the reefs in the Longxitan Bay.

It is also necessary to clean up and build large docks.

With the sales of the Mechanical Colossus Type I, land transportation can't meet transportation needs.

Especially for those foreign customers, he can only export by sea.

When Ye Qing clears a waterway in the bay, the ocean freighter could drive straight here.

Clearing the reefs on the seabed, Ye Qing intends to let the Lord Chariot go out.

This kind of thing is quietly done at night, and it is still low-key during the day.

Taking advantage of leisure time, Ye Qing continued to look at the fourth stage of black technology in the monster factory to see if he could choose another one as the next development point.

[Gianli forging machine], [super hard alloy technology], [simulation flight technology], [full-motion assembly platform technology], [strong ionization industrial wastewater treatment technology].

These five kinds of black technology, strong ionization has been developed by Ye Qing but currently does not have the possibility of mass production, the giant forging machine is not just needed.

The simulation flight technology also did not find any practical value.

Ye Qing could not build a mechanical bird to be a toy.

Before energy breakthroughs, propellers and jet engines will always be the best flight power.

The full-motion assembly platform is a piece of fully automatic production equipment that integrates the production function of the assembly line.

It is different from the huge body in the pipeline.

According to the size of the drawing, its volume is only the size of the container.

As long as the part is ready like a magazine, it can be fully automated and does not require any human intervention.

Its maximum manufacturable product size is two cubic meters, and one equipment is equal to a full load of a production line.

This can be included in the manufacturing plan.

At that time they can be responsible for the mechanical engineering chairs and the production of metal engraving machines to liberate the monsters on these two production lines.

But not too much can be built, and overcapacity often means waste.

Super hard alloy technology!

It is more suitable for making highly wear-resistant materials or protective materials.

Super-hard alloys, and nickel-titanium gold memory alloys, are all special alloys.

The properties of nickel-titanium gold memory alloys are soft and cannot be applied to some mechanical parts that require deformation resistance.

Super-hard alloy is the other extreme, and it is its nature that it is not bent.

Moreover, it can only be manufactured by powder metallurgy technology. When it is made, it is challenging to re-process it.

Ye Qing looked at its metal formula in the mobile phone of the monster factory.

Tungsten, cobalt, bismuth, titanium, nickel, five metal components, metal powder with a grain size of 0.1 microns is required for powder metallurgy.

Several metals are not too rare, it is a price issue.

However, the electric furnace that needs to be used for sintering is somewhat special and requires the monsters to make it themselves.

- Microwave sintering furnace!

The special frequency band microwave released by the magnetron is coupled with the fine metal structure in the material to generate heat.

Conventional electric furnace sintering, the appearance of the sintered parts and the internal temperature will be very different.

Which is caused by the uneven heat transfer, the general problem of sintering metal is not large, but it is not good for firing super hard alloy.

Microwave sintering furnaces do not have this problem, and the heat generated by them can be distributed very evenly inside and outside the sintered part.

At present, super-hard metals are the easiest to manufacture and most urgent.

In the mining area where the mining machinery is built.

In order to obtain a higher purity iron powder, it is necessary to use a piece of harder crushing equipment to crush and grind the ore.

Broken parts, naturally made of super-hard alloys are best.

When super-hard alloys come out, Ye Qing also plans to transform Lagonda to create a shell with more advanced technology.

The more money you have, the more you are afraid of death.

This sentence is not entirely correct.

It should be said that people who have a good yearning for life do not want to make any accidents.

Before Lagonda was safe enough, Ye Qing would use two kinds of metal to mix and build the outer casing.

The cab part is made of super-hard alloy, and the nickel-titanium memory alloy is used to buffer the energy.

This way, even if the fully loaded muck is turned over, don't try to crush the cockpit.

The development plan was formulated, and Ye Qing shouted to the masters and metal experts.

"How many tons of steel are consumed every day in the factory?"

"According to the construction of the construction site, it consumes 300 tons of steel every day."

The Master Craftsman gave the data without thinking.

"That is to build a piece of sorting equipment with a daily capacity of 1000 tons to meet the needs of the factory steel."

Ye Qing transferred the three-dimensional drawings of the mining area from the computer, referring to the screen:

"A factory is responsible for mineral processing, and a factory is responsible for coarse Refining. Technically, you have to check, how long does it take to manufacture the equipment?"

"Three days, the magnetron in the microwave sintering furnace can be manufactured. So there is no technical problem in the manufacture of super-hard alloys, and the dressing equipment is dry-selected, making it simpler to manufacture."

"Then act now, and once the steel is self-sufficient, we can have the money to build more facilities."

"Good boss."

.....

When the moonlight falls on the surface of the sea, there is only a mechanical roar in the entire Longxitan, and the waves slam the shore reef.

The Lord Chariot that had not appeared for a long time was controlled by Ye Qing and drove from the underground base to the seaside.

The average water depth of Longxitan is more than 40 meters.

If it is not a sea-bottom reef with a strange bottom, it will definitely be one of the busiest deep-sea ports in Zhongyun.

In the process of purifying the water quality of Longxitan, Ye Qing specially recorded the distribution of all reefs in the bay.

Each reef is numbered, with a total of 197 reefs.

A U-shaped channel has also been marked on the drawings by Ye Qing.

As long as the Lord Chariot's is controlled and 73 reefs are destroyed, the port construction can be started here.

The Lord Chariot has evolved a streamlined shell, and the matches the multi-function robotic arms at both ends, making it look a bit like a lobster.

Ye Qing gently pushed the virtual arrow keys, and the Lord Chariot's turned into a diving athlete and plunged into the clear sea.

After walking through a shoal of the seabed, the image of the Lord Chariot's came back, and Ye Qing suddenly stood up in surprise.

Under the strong light, the seabed is alive.

A group of squid fled quickly, and several crabs under the sand were drilled out to escape the Lord Chariot.

There is also a round head, black-skinned squid swimming in front of the Lord Chariot.

Where there is squid, the water quality must be clean and incomparable.

Because squid likes to be clean and shelter from any polluted waters, it is one of the purest aquatic creatures in the world.

Drive away these rare marine lives, the Lord Chariot erected a multi-functional robotic arm, standardizing the nearest reef in front.

#### [Chapter 230: Single Arm Manipulator](#)

This is the No 1 reef, which is only 30 centimeters from the sea level at the time of the ebb.

Its foundation has a diameter of four meters.

The more it goes up, the thinner it is.

Now the Lord's Chariot has to break it completely.

Clicking on the extension function of the main chariot, the operation interface of the monster factory immediately pops up a row of refit options with icons.

A total of twelve refit functions, all of which are industrial process types, Ye Qing, selected one.

"Do you choose a high-frequency cutter?"

Ye Qing is right.

"Consumption of 1,000 gold coins, left arm high frequency cutting knife construction..."

This is the first time that Ye Qing has carried out the transformation function of the Lord's Chariot.

To tell the truth, this function is not worth the candle.

The principle of high-frequency cutting knives is similar to that of reciprocating chainsaws, which are designed to destroy the structure of objects by high-frequency motion.

It should be no stranger to see the third brother performing machine cutting pig video.

It is a wire saw.

It takes only one second to break a foundation.

It is a pity that after the transformation the Lord's Chariot can only cut, and If you want to go back to the original multi-functional processing arm, you have to dig half of the gold coins.

Not now that Ye Qing has more money in his hands, he must choose to use his robotic arm to slowly squat.

Ye Qing stared at the scene happened, originally thought that this structure is the master of precision of the monster factory - blue light coverage.

No.

Instead, the multi-function robot quickly turns, and the outer casing retracts into the forearm, exposing the inside of the rolled part.

The gears flew, the electric light flashed, and the handle was without any modification, but the simplest black metal long knife stretched out.

The long knife did not open the edge, but the long sword was doing high-frequency vibration around, and this vibration caused the surrounding seawater to boil immediately.

As soon as the high-frequency cutting knives touched the reef near the sea surface, the mottled surface of the reef immediately fell apart.

The high-frequency vibrating blade is like a hot knife cutting cream.

After slowly traversing the reef, the upper part of the reef is planted towards the bottom of the sea.

The reef is divided by five cutting knives.

The short column of reefs planted on the bottom of the sea was also broken into two by the Lord's Chariot.

This will turn the reef into a habitat for marine life, and the coral will also rely on the rock to multiply.

The first reef has been cut, and the fourth reef has been cut.

The fourth reef can no longer be described as a block, it has to be described as a seat.

It grows from the bottom of the sea more than 30 meters deep, and the thickest place is more than ten meters in diameter, which is completely a mountain.

The high-frequency cutting knife is only two meters long, and there is no way to control the Lord's Chariot from the top.

It cut it for almost two hours before completely cut the reef down.

"..."

Ye Qing hated couldn't turn the main chariot into a nuclear submarine.

Now the Lord's Chariot is only as big as a truck, and it is not enough to cut the big reefs.

One bite, Ye Qing successively removed the reefs of the 11th and 17th and swept the reef near the factory.

It is already early in the morning, Ye Qing is preparing to transfer the Lord's Chariot, and then tearing down a small reef then sleep.

The cell-phone rang suddenly.

Ye Qing was shocked. Who calls?

When he picked up the phone, Ye Qing almost thought he was dazzled.

It's a coincidence to call him!

Qiao Yi is the master of precision, one of the earliest monster workers recruited by Ye Qing.

He is also a half manager of Longxi Beach factory.

Ye Qing asked him to control the work for the monsters factory at any time.

"Boss, there is an abnormality in the transit warehouse."

In one sentence, Qiao Yi mentioned the facts to Ye Qing.

"I will immediately pass."

Directly recalled the Lord's Chariot, Ye Qing pushed the office door and walked quickly toward the transfer warehouse.

Since Qiao Yi has said that there is an abnormality, there must be.

On the barren hills, the high-power searchlights are as white as the factory.

In the silent transit warehouse, Qiao Yi stood by the No. 46 single-arm manipulator.

"What is the situation?"

Ye Qing took the data eye, looked around for a circle, and found an abnormal situation.

"Just a single-armed manipulator on the 46th, it's moving irregularly."

"The Mechanical Colossus Type I in the assembly shop, the tires need to be replenished, and I worked hard with the trucks to pick up the goods in the transit warehouse."

"Then I found the No. 46 single-arm manipulator in random movement."

"I have seen the total control indoor monitoring video."

"The branch office is controlled indoors, and there is no one."

"Our mechanical products have not yet reached the date of aging failure, so there must be abnormal conditions."

As it happens, no ordinary person sees things that are difficult to understand and falls into a state of panic.

"Take me to watch the video."

Ye Qing was a little dignified.

The single-arm manipulator on the transfer warehouse side, unlike the mechanical engineering chair, has automatic protection.

In order to protect the safety of the user, the movement angle of the mechanical engineering chair is limited to the human body's tolerable range.

For example: In the official website forum, customers uploaded a variety of sports programs.

If someone is malicious, upload the program that allows the mechanical engineering chair to fold in half.

In the operation of the mechanical engineering chair, it will only fold to a safe angle to the human body, and the speed will not be too unbearable.

Rotation, vibration is also.

The safety device cannot be removed, and it is machined in one piece.

The single-arm robot has no safety device, and it is only responsible for loading and unloading cargo.

If it is abnormal during loading and unloading, it is likely to cause harm to vehicles and personnel.

Ye Qing and the master of precision quickly walked to the general control room next to the warehouse.

There is a monitoring console for the transit warehouse.

A monitoring camera for the company's single-arm robotic operating room, and a power control switch.

There are up to 220 high-definition night vision cameras on the transfer warehouse side.

The installation of so many cameras is due to the manipulation of the single-arm robot and has always been the responsibility of the company's employees.

They carry out cargo loading and unloading work through a camera mounted on the robot arm.

This kind of thing that has no technical content and requires a lot of people, Ye Qing naturally will not let the monsters do it.

"What happened a few minutes ago?"

Ye Qing opened the company's operating room and played back the surveillance video on the side of the single-arm manipulator.

"Five minutes ago."

Ye Qing nodded and adjusted the time of video playback on both sides to ten minutes ago.

The picture shows that the company's operating room in the city center, the door is locked, there is no one inside.

The same is true for the transfer warehouse.

Five minutes later, the operating room is still empty.

On the side of the transfer warehouse, the work indicator of the No. 46 single-arm manipulator suddenly turned on.

Then ...

As the patients of Parkinson's, it keeps shaking irregularly.

Ye Qing looks more dignified.

The single-armed robot No. 46 has been shaking, and Ye Qing shooked his head from time to time.

When the monster laborer and the master of precision drove the truck here, the master of precision noticed the abnormality and jumped out of the car to check the time.

The No. 46 single-arm manipulator seemed to have discovered something and stopped any movement in an instant.

Ye Qing immediately called the network manager to count, and the phone rang ten times.

He was confused and connected.

"Get up at once and come to the company."

When Ye Qing finished his telephone call, he found Qiao Er and asked him to watch the single-arm manipulators in real time.

"Come on, come with me to the downtown company."

Ye Qing said to Qiao Yi beside him.
