

M Factory 271

[Chapter 271: Rain](#)

Liang Wenjing wanted to play a trick on her little cousin, but she was absent-minded.

So, she took a deep breath, and she also learned from her cousin and began to look carefully at the man at the bow of the ship.

It was a slightly flamboyant figure and according to the understanding of Liang Wenjing, that man had no sense of a businessman at all, she feels that.

The career is often a man's lifelong dependence, for the cause, and some men are willing to become humble and kneeling and some are willing to become unscrupulous or calculating.

He did not have these characteristics.

In addition to an approachable person, he also has self-confidence, accompanied by the unique age-specific publicity.

In her eyes, this man gives her another feeling.

It seems that if Ye Qing changes his clothing to a long shirt, he must be worthy and the green shirt stirring comments.

"Goo Doudou"

Not at ease Doudou, which was not placed on the rudder, accidentally bumped the painting of the boat of another canoe.

Ye Qing squatted and tugged at the carved wooden railings and struggled to regain his balance, and it took a lot of effort to rebalance and put the atmosphere that had just condensed out to the canoe.

Looking around with a small mouth, it means Ye Qing is not intentional.

"I'm sorry, my two friends."

Ye Qing was teased by Liang Wenjing, and the two men on the boat shouted.

On the opposite side of the boat should be a couple, the boating guys have already rushed to stand up and prepare the theory.

As soon as Ye Qing saw the situation, he was still sitting in his article of white clothing.

He looked at the fairy-like Doudou in the rain, the expression immediately came to a three hundred and sixty-degree transformation.

"Ha ... ha ... Shy children, but we also blame you for did not pay attention."

The young man scratched his head, someone looked at Ye Qing's girlfriend with a guilty eye.

When the boat left, Liang Wenjing picked up the map in its pocket and innocently asked Ye Qing and her cousin where they were.

No one can answer this question.

Ye Qing looked at the small bridge next to the water, and there was a hand-made sauce workshop that could not find a name on the map.

"No matter what, let's go ashore and turn around, and we will navigate back later."

Ye Qing took over the rudder and docked the canoe at Qingshi Pier.

This should be a river that has not been commercialized.

Because there is no shop at all, except for a sauce shop and a small shop with no signboards, nothing else can be found.

Ye Qing led the two people.

Wandering around on the bluestone pavement.

Fortunately, the scenery here is very pleasant.

There are many stone benches full of history, small things like ancient wells.

They play while walking, cross several bridges, and go around an alley.

A pond full of lotus flowers appears in front of the three people.

The pond is connected to the waterway, and a 15-meter-long white painted raft is parked on the side.

There are two antique wine tables in the raft, the wine cellars of the bamboo roots stand on the shore and can even smell the faint smell of wine.

A man with a bronzed color is kneeling at the bow of the boat, picking the lotus leaf with a special bamboo raft.

Ye Qing came to the party and asked him if he had any food onboard.

"Yes!"

The man picked up a fishing rod with a hemp rope from the side, and there was a fish in it.

"The scorpion is the squid fish from the Baili Dianshan Lake and the scorpionfish with grass shrimp and crab. The vegetables are all specialties of Dianshan Lake, and they are now fried."

With a touch of scent, Ye Qing clearly heard the sound of swallowing.

The raft was painted.

He and the owner of the ship chatted to learn his long raft was quite famous in Jinxi Town.

He relied on a handful of ancestral fishing crafts and private kitchens.

Even some of the county's bosses entertained guests and liked them.

Bring here to taste the characteristic lake taste of Dianshan Lake.

Today, because of the rain, no reservation was made.

The owner of the boat drove the boat home.

As a result, he met Ye Qing, a group of stray tourists.

Playing with the original ecology is equal to playing with money these days.

I'm afraid thousands of wild squid will have to be brought to the table when they are flushed into the basket.

If ordinary tourists come to ask, the owner of the boat must say that the drawing boat is not open for business to the outside world.

A seemingly ordinary water town flavor, it is necessary to collect thousands of people.

If you encounter unknown tourists, they may be able to take photos and upload them to the Internet, giving Jinxi Town the title of a tourist who likes to slaughter.

In front of this difference, the shipowner even ignores the fact that his body is worth more than the raft, and he must look at Ye Qing.

A man with a lot of capital, a woman standing next to him.

This capital is not only money but also other aspects.

The owner of the fishing ship took in the guests for over seven or eight years of guests.

He had never seen any fairy before and was willing to put down a worthless man who had nothing to do with it.

The three guests were invited to sit down, and the owner rushed to the blue brick courtyard with a door open to the pond.

When the boat started, there were two helpers in the kitchen behind the solid wood counter, the wife and daughter of the owner.

Do not look at the big and rough owner of the ship, the girl really has a true quite aura.

Typically, the girl in the south of the Jiangnan River, she is a beautiful girl with a slim body and a jasper egg face.

Of course, slightly...

The people are beautiful.

In this environment, if the evil spirits come, there will be too many ideas.

The five big three thick ship owners will definitely use the fish cutter in their hands to let the bastard who dare to be light and beautiful.

And see what is called the Baili Dianshan Lake waves.

"Three guests, what do you want to eat at noon?"

The little girl holds the menu and a pot of home-made rice wine:

“We can prepare for the number of people here, don’t worry about too much to eat.”

Ye Qing looked up and smiled.

"Then, each dish is slightly prepared."

After a while, the raft swayed into the endless Dianshan Lake.

The shipowner stood at the stern and cast a net.

Every time the net went down, he would harvest a few fresh fish and then he would choose one from them and the rest would be thrown into the lake again.

If you have a knowledgeable old hacker sitting here, you will certainly be able to cheer for the owner.

It is not because of the act of release, but the fish that he chose from them, all according to the age of the fish.

The best one.

After the raft passed through a sandbar, the owner jumped onto the sandbar and picked some of the most delicious wild vegetables in the season.

Steamed scented flowers, white water lake knives, oily herring, garlic scallions, savory crabs, crispy fried white, and lotus roots...

A taste of the lake is served on the table, and the fish knife is the first-class treatment, with a variety of aquatic wild vegetables, you can feel the pleasure of the smell.

"The craft is good."

Ye Qing praised it.

From these exquisite dishes, it is not difficult to see the owner’s rigorous cooking style and meticulously perfect cooking.

The taste is also very good, even the lotus roots picked are refreshing and delicious.

The lotus leaves that were previously picked also have other magical effects.

The three different species of fish are washed from small to large into the belly of the fish and then wrapped in lotus leaves and placed in a charcoal fire.

The lotus leaf opened that scent, and the scent almost made Ye Qing unable to hold it.

People beautiful ... delicious fish ... Jingmei, as well as the accompaniment of the rustling of the sand.

Ye Qing will not even drive the car after a while, drinking a cup of rice wine in the belly.

Drunk and drunk, the Master Craftsman was recruited as a driver.

A slight blinking follows closely with taking tweezers, and the face is red, and the same cup of rice wine entrance, it seems that there is no fear of the drunk, someone will do something.

A soft ringtone that broke the picturesque scene.

It's a ringtone.

Ye Qing burp and get out his tongue, saying it was called by Liu Yun, the director of Taiwan.

"Are you on your way back?"

"No... No, the camera and the artist may not go back tomorrow. I will go back by car at two in the afternoon."

There is some enthusiasm for the ride, and he is blushing.

"Don't come back. The cloud is now under heavy rain."

Liu Yun, the director of the station, is exhausted and very thoughtful.

Ye Qing's phone also rang, and the company's sales manager.

Kong Tao, brought the same news, saying that the rainstorm outside is now the same as the fire hydrant.

Kong Tao was worried and told Ye Qing that he could see the foundation pit of the construction site was flooded halfway through the office window.

Do you want to let the employees go to the rescue?

Ye Qing looks as usual.

When the Tianfeng Building the tallest building in Zhongyun, was built.

The foundation pit was in crisis because it was similar to chewing.

But that is the foundation pit of others' homes.

The base of the building is fixed with steel plates early, and the lower knife will not collapse.

The pile foundation has not started to be hit yet.

What can it do if it is fully flooded?

When the rain stops, pump out the water.

Just before the chemical company that dared to talk about sewage in Longxi, the monsters deliberately built a super-strong UHV pump.

[Chapter 272: Atmosphere in the car](#)

The only effect of rain is construction is blocked.

Ye Qing checked the local weather forecast of Zhongyun with a mobile phone. The above shows heavy rain.

As a result, many people in the circle of friends finally began to contemplate carefully the shocking natural landscape without advertising.

Jinxi Town has a general rainfall here, sitting in the boat, quite a bit of rain.

A pot of wine went down, the girl of the owner's house walked up with another pot.

She also used a sleek knife, bowed her head and peeled the green apples in the tray neatly.

Cut them into pieces of pulp the size of a copper coin to lower the green apples in the fruit bowl.

Drinking wine in the boundless beauty, the boats are quietly, and Ye Qing has circled several spots from Dianshan Lake and finally swayed into the ancient town of Jinxi.

The boats were docked on the bluestone pier with a lot of sensational feelings. Ye Qing remembered the small boat hired before was still in a corner he did not know.

The big thick man, sneaked in with two mud-sealed wine jars to come to the guests.

Listening to Ye Qing said that they also rented a small picture boat. Even if he doesn't care, he knew the address of the hand-made sauce mill. He took the money from him first and sent back the boat.

"In the jar are my pickled drunk crabs, all of them are two or more female crabs."

The man smiled and said: "If the little brother comes in the fall, you can taste the best golden oyster in our Dianshan Lake."

"This kind of squid is not a top-notch delicious on weekdays. As soon as the late autumn, the yellow line behind the female squid will slowly turn into a gold thread and catch it. The taste is so a delicious one!"

There is a business card on the jar, and Ye Qing thanked that until the late autumn, there is a chance to taste it.

Ye Qing asked for a trip and Liang Wenjing waiting here, let the driver drive the car over.

They all drank a lot of wine. Rice wine is easy to get on their heads. If you look at people with duplicate images in your head now, you will naturally not wonder why you don't make a phone call, but go and shout for the driver.

Ye Qing thought of nothing found a secluded place, confirmed that there was no camera around and summoned Niu Yi the Monster Labor.

A few minutes later, the Lagonda slowly drove into the dock.

Liang Wenjing also opened the car, let Ye Qing they go first, she first looked for a tea house to sit.

The owner politely stood on the pier and waved his farewell. As soon as he saw Niu Yi opened the door. The eyeballs almost straightened.

The height of one meter and ninety-five, the owner has not seen it. Not long ago, there was a familiar boss. The players of the Shanghai basketball team came here to eat and talk about the endorsement. The good guy had two meters.

But not very useful!

The owner of the boat has learned some skills of the fist and foot. He is the master strong man waiting for leisure. He asked himself about the basketball player, which also made him fierce.

But in front of this three hundred pounds, full of explosive muscles in the human form of King Kong, then he is not rivals.

The Lagonda roared and opened the rain curtain, heading towards Zhongyun.

In the territory of Zhongyun, torrential rain that has never been seen in a few years is raging in China.

There are no pedestrians on the street, accompanied by heavy rain and strong winds.

The urban drainage system has not kept up with the rhythm. In the construction site opposite the Blue Sky Building. The rainwater coming from all directions only takes less than half an hour to submerge the whole foundation pit.

The stalkers hiding in the Skyhawk building next door, laughing at eyebrows and eyes.

The foundation pit was gone, and the civil air defense project was gone. There was only one ocean.

Four Mechanical Colossus Type X, this time can only stop at the concrete floor of the square.

Let the supporting steel under the civil air defense project bubble in the water.

After several days of construction work of the Mechanical Colossus Type X.

One-third of the area under the civil air defense project has been supported by giant I-shaped steel frames.

They really want to see the rain clear, and then all the steel frames below are rusted.

"The civil air defense project is more than 200,000 tons. I really don't understand them. They use steel frames to support the civil air defense projects."

"Our engineers are also pondering this all day."

The young man who was called the blue brother by the next person, some wondered: "Since the behemoth is heavy, it is not a waste of money to replace the underground weight-bearing soil with a steel frame. But not all of us can see it. They are obviously wasting money."

"When all steel frames are installed, they should be visible."

"I don't know when this heavy rain will stop. When the time comes, there is a big loss in the heavy work of the Monster Industrial Building. The construction projects of our company have been ravaged."

The time under this heavy rain is somewhat confusing.

The weather forecast originally predicted a large range of rainfall, with heavy rainfall in some areas. The site of heavy rainfall was originally estimated at sea, did not want to move forward, the medium cloud into a local area.

However, an hour has passed, and the rainfall has only slightly weakened.

The road area water can already reach people's calves. The urban management and the district Zhongyun's road administration people have all taken to the streets, and the road covers of the low-lying areas with more serious water have been removed halfway, and warning signs have been set up.

On the highway, a silver-white, Lagonda with extremely strong defense performance is coming from the rain.

Then...

The Lagonda got off in high-speed, and when he planned to go to the city, Doudou, who had nowhere to go, was immediately stopped by Ye Qing.

The water on the road is too deep, and Ye Qing does not want to let the Lagonda take risks.

Ye Qing made a phone call to the master, let him send the second Mercedes-AMG G65.

This guy is purely designed for outdoor cross-country, not to mention the water in the area, it is no problem to cross a small river of one meter deep.

At this moment, he was a little overwhelmed, and he fell asleep in the back seat with a blushing face.

The interior temperature system was controlled by the human body to feel the most comfortable twenty-four degrees, and the body was covered with a soft silk quilt.

When waiting for the second Mercedes-AMG G65, Ye Qing sat next Doudou and gazed at her face with the eyes of an artwork.

It is a kind of easy drink to get on the face. This time, not only the white face is blushing, but even the ear roots are hidden under the hair and the slender neck is a little reddish.

It was raining outside, but the car was quiet as night, only the rain fell on the skylight and the glass.

Sitting on the soft leather backseat, the brain is a little dizzy.

It seems that there is a faintness at the moment and it seems that there is a faint, delightful taste at the moment.

For some reason, Ye Qing does not know why he remembered an idiom.

- Blow bombs can break!

Give me a kiss. I do not know if it will break?

After the idea was born in the mind, it has been circling.

But what if he kisses her, what should she do?

The premonition of the girl in that aspect is almost the same as that of the active phased array radar. After waking up, she is 100% able to foresee that Ye Qing secretly kissed her.

That scene, Ye Qing did not dare to imagine.

He is not a veteran of love, and at this moment, it is a bit too thick.

But.....

In this situation, Ye Qing had another voice in his mind telling him that if he didn't kiss, his mouth wouldn't be innocent long?

[Chapter 273 : Xiaoping Lake](#)

In this way, the gods have been fighting for a long time to maintain a very comfortable very warm sleeping position.

The slender eyelashes gently rubbed.

When she opened her sleepy eyes, she just saw Ye Qing sitting on the side, gently tossing a coin with her thumb and putting it in her hand.

She smiled shyly and asked:

"What Ye was doing?"

Ye Qing looked at her and said:

"I am thinking about the central main pile foundation of the building. Which kind of metal will be used as the steel frame?"

"The HRB 400 low-alloy steel bar on the market is considered to be the best of the steel properties and is often used as beam-and-column steel."

"But its resistance to stretching and a cold bending does not meet my requirements. I am considering whether to use chrome-manganese alloy steel or tungsten-chromium alloy steel..."

"After the quenching and tempering treatment, the two alloy plates of steel are resistant. The pull limit and the cold bend limit far exceed the low alloy steel bars on the market."

"There are advantages and disadvantages of both, and I don't know who to choose..."

"What did you choose?"

"The number side is selected from chrome-manganese alloy steel, and the flower side is selected from tungsten-chromium alloy steel."

After that, Ye Qing slowly opened the palm of his hand, and the coin was in the number side.

"I chose chrome-manganese alloy steel."

Ye Qing put away the coin, and his heart was sighing.

In fact, the number side represented a kiss.

A hard-liner Mercedes - AMG G 65 rushed from the heavy rain.

After he moves into the Mercedes - AMG G 65, Ye Qing first took Doudou home.

Then he returned to Longxitan to check whether the factory will be affected by the rainstorm.

You remember that when the last heavy rain occurred, Ye Qing also takes her to her home.

But the rainstorm compared with today, can't be called heavy rain.

Along the way, Ye Qing felt like he was on a boat.

The deepest part of the stagnant water is close to half a meter.

The water level of the river in the city also rises.

Occasionally, several unlucky cars are anchored in the water, and the car has been on Huanhai Avenue before it completely gets rid of the water.

Affected by the torrential rain, the mining area temporarily stopped mining absolutely, and the four angry miners also discreetly climb into the sorting warehouse to avoid being flooded by the backing rainwater.

Facing the sea, this torrential rain will last for another ten days, and Ye Qing doesn't want to flood the factory.

It's just there are some low-lying areas, and the water can't be ignored.

Ye Qing deliberately went to the entrance of the underground base to check it.

There were two entrances.

Close to the sea, the largest, after being expanded by the angry miners.

The Mechanical Colossus Type X can be allowed to pass.

The entrance here is closed most of the time, with steel electric iron doors and rock camouflage on the outside.

The back of the door is as dry as usual, with no rainwater infiltration.

The second exit was opened on the factory side of the mountain.

The same camouflage technique and the seal were equally strict.

"The ore has been soaked in water; will it have an impact?"

The underground base is no problem, and Ye Qing is worried about the mining area.

"For more than five hours, the water will slowly penetrate into the ore. The ore humidity will exceed 3%, which will affect the sorting effect of the magnetic separator."

The Master Metal Expert nodded.

"Then take the water out."

Ten minutes later, a Type I mechanical colossus was carrying a supercharged UHV pipeline system originally used to treat wastewater from sewer pipes, despite heavy rains.

Fix the equipment, this artifact eating drought for a while, has been reactivated.

"Buzz..."

The compressor and the high-powered water pump are screaming at a rapid rate, and the frequency is denser than the raindrops falling from the sky.

The supercharged pressure gauge slowly jumped from zero to twenty, and a white-water column followed the sky.

With an exaggerated flow rate more than the city's main drain, and shot toward the sea.

What is the effect of the increase of 20 MPa?

At this flow rate, if there is a brick structure in front of the water column, the house is not much harder than the paper paste.

However, ...

In the worst rainstorm in the past five years, the need for drainage is far more than a company to Ye Qing.

Rainfall is too long, and the range of impact is too great.

The surrounding cities are all raining, which is the largest rainfall in Zhongyun.

Numerous stagnant waters poured into the Blue River, and several cities in the upper reaches plundered.

At this time, the Blue River water level has risen quietly by one meter.

This is nothing.

Zhongyun built the dam in the early time on the edge of the Blue River.

The river must rise to two meters to flow over the dam.

In other words, the power of nature, human beings are not yet able to confront for the time being.

The cities in the plains have encountered the hustle and bustle of the city, and the river really has to flow over the dam.

It's just an urban river, and it's not one of the three largest rivers in the world.

However, at the Xiaoping Lake in the lower reaches of the Blue River, the Pulanda Water Resort is at a critical juncture.

Here is Zhongyun City's real estate giant Qi Yuan Jiang, investing billions of Yuan to create the most top resort in Zhongyun City.

Previously, the reception team, Pulanda Water Resort received a high evaluation.

Last week the Pulanda Water Resort opened. The water resort's wooden house was ordered in just half a day.

Many foreign tourists came here, want to experience the reputation of the Pulanda Water Resort.

Did not let these tourists disappoint, since the Xiaoping Lake, filtered by the strong ionization sewage evolution equipment. The lake here is more clear, and some Wenqing tourists can send ten Weibo and 20 friends circle to praise the Pulanda Water Resort.

There is a total of forty-eight independent water huts, and there are only three vacancies today huts.

Others leave in tourists.

There are also a young couple of foreign tourists coming from an old couple of the United States.

Since they lived in yesterday, the waiters did not know how many times they had listened to Rigold.

Today, now.

All the praises disappeared collectively and the rest were only complaints, complaints and ridicule.

Because the river water from the upper reaches of the Blue River and the water in Zhongyun City, the blue river was raised by one meter.

Xiaoping Lake, which borders the Blue River, is naturally raised by one meter.

Now the lake has flown over the pillars of the wooden house, and it has passed all the wooden walkways that connect the shore.

The water level is 30 centimeters higher, and the lake will flood into the resort wooden house.

Real estate giant Qi Yuan Jiang was almost hit in a hurry.

What if the lake flooded into the resort?

Once the forty-eight wooden houses are soaked in water, not only the various technological and life types of equipment in them will be ravaged, but even the that have been at great cost will.

The Pulanda Water Resort is a world-class luxury resort service, not a dirty roadside messy hotel. For 50 Yuan a night.

The more expensive things, the more they are expensive at night.

The interior of the wooden house, even if it only floods once, will inevitably cost a lot of money and replaces it with the same alternative.

The size of the wooden house is designed by the designer of the company.

The rain is not stopped.

Qi Yuan Jiang can't pursue the designer.

Has he considered the rising factor of the river?

Now the wooden house is full of tourists, and most of these tourists don't want to leave.

They are watching the lively mentality and waiting for the lake to flood into the wooden house.

Maybe this will get considerable compensation!

He has no time, and he has to save himself.

How to save himself?

It seems that using sandbags to pile up the entrances of all the water wooden houses is the best choice.

In doing so, although it will make tourists angry, it is also stronger than the interior decoration inside.

He can do this, and Qi Yuan Jiang did it early.

These waters wooden houses, except for the panoramic glass on the roof, are made of long-lasting eucalyptus wood that has been treated by special techniques for a long time.

It retains a touch of musk, which has the effect of repelling mosquitoes and smells for a long time.

It makes people feel uncomfortable.

At the beginning of the design, considering the faint musk into the room, a small hole for ventilation is opened around the wooden house.

Once the flooding is sure to occur, and the good eucalyptus is blistered for a long time.

It will take a long time to rot and stink.

There is only one way to go.

Xiaoping Lake is connected to the Blue River, and the Blue River has river protection.

As long as the two sides of the river are blocked, a sealed dam can be formed to stop the river from continuing to flow into Xiaoping Lake.

This plan seems to be crazy, and it has not been possible to change it in the past.

But now, Qi Yuan Jiang knows where the hope of Ye Qing is.

There is a construction site in the city center, and there are four steel behemoths on the site.

[Chapter 274: Please ask the Mechanical Colossus Type X to get out of the horse](#)

There is a construction site in the city center, and there are four steel behemoths on the site.

Xiaoping Lake is more than 40 meters wide at the junction of the Blue River and Xiaoping Lake.

At this moment, the rainstorm has decreased relatively at the beginning, and the water level of the river has lessened more slowly.

But the water level of 30 centimeters, it is impossible to rise up in two hours.

On the weekdays, the giant real estate.

Qi Yuan Jiang, who is still in high esteem and good condition, is still worried about the weather.

He directly put the umbrella into the car, shoot the driver's arm like a slot machine.

Let him go to the Monster Heavy Factory Company as fast as possible.

On the way, Qi Yuan Jiang called the design department of the group and said the first sentence:

"Lao Ni, do you make your resignation report or tomorrow morning, I directly to the personnel meeting to dismiss you?"

"Qi Yuan Jiang Chairman, I made a mistake?... What's wrong?"

"You are right, the wrong thing is me who blindly promotes you to the chief designer."

Qi Yuan Jiang looked iron face and suppressed his anger:

"You really should come back to the field, come to the Pulanda Water Resort here. Look, there is still 30 centimeters of water level, the company's water huts will be fully flooded."

"Now the wooden houses are full of tourists and there are a couple of foreigners, including an old couple from the United States who spend the whole day basking in the Facebook. We're going to lose ourselves all over the world, do you know it?"

"Come here and tell me why the elevation of the water level of the Blue River was not taken into account in the original design?"

"Chairman, I went to the Water Conservancy Bureau to read the water records of the Blue River over the years. After a total of ten years, I did not find that the water level rose more than one meter."

"Because the Blue River connects to the sea, the extra water level flows directly into the sea."

"Then tell me, why can it rise to one meter now?"

When Mercedes-Benz opened to the bottom of the Blue-Sky Building, the designer called and explained he had asked about the situation at the Water Conservancy Bureau.

It is not only at the Blue River that the rain falls, at the origin of the Blue River, more than a hundred kilometers away is the largest lake of Zhongyun it is also in the middle of the clouds or also pours heavy rain

The accumulated water from the entire lake has already crowded the Blue River and can't be discharged in time.

Although the rainfall was not a decade, the range of rainfall was unheard of.

"I forgot it, Lao Ni."

Qi Yuan Jiang was grateful to see the opposite side, four Mechanical Colossus Type X, quietly bathed in heavy rain.

The rain splashed on the outline of its steel body and it seemed that the Mechanical Colossus Type X were painted with a layer of invisible shadow, which made people feel uneasy and lookup.

"Thanks to the previous URA matchmaking, we have purchased a full set of mechanical engineering chairs and alloy landscape trees in the wooden house."

The gas field brought by the four giant gods X-type makes the Blue River a lot of peace.

Coupled with the previous relationship, Qi Yuan Jiang felt that he was at half the hope of being saved.

Pushing the door open, Qi Yuan Jiang rushes his legs and ran to the Blue-Sky Building.

Inside the company, sales manager Kong Tao, network manager Ji Ke, propaganda manager Yang Baihe, the three people are merging together to discuss what kind of decoration style their office should be made after the construction of the giant Monster Heavy Industrial Building?

As the company's first group of veterans, but also from scratch helping them to set up the entire company framework, enjoy the benefits of self-designed office style, is not too much.

Ye Qing asked them to submit the plan as soon as possible so that they should be handed over to the chronicle studio for design.

At this time, they are discussing with enthusiasm, and a middle-aged man likes at some wolf ran in.

"Halt and stand there, who are you looking for, do you have an appointment?"

The two security guards left and right in front of Qi Yuan Jiang.

Qi Yuan Jiang's eyes wide open, and he is surprised by whether if he has made a mistake.

For the first time, he enjoyed this kind of treatment and slightly calmed down his feelings.

Ji Ke and Yang Baihe talked to each other from decor design to buying a house.

Because of Kong Tao, the sales manager in Shanghai who can't afford to buy a house.

Ye Qing told them that yesterday after he had just finished working, he had gone to a garden of products for seeing the house at Zhongyun and that the big house of 180 square meters needed only more than 3 million Yuan.

"In Shanghai, I have saved enough money for four years, two million Yuan."

Kong Tao's face was full of righteousness and indignation:

"The result is not enough for a set of good grounds for the first payment."

"Now one step in place, I only want to find my parents to borrow half a million. Maybe I will be able to collect all the money for the garden."

Qi Yuan Jiang rushed in the office:

"Ye Qing, may I ask Ye Qing?"

"You are?"

Kong Tao, of the sales manager, certainly won't take people by appearance. In fact, Qi Yuan Jiang is just a little embarrassed by the rain.

The temperament of his body is different from ordinary people.

"I am Qi Yuan Jiang, is Ye always there?"

A minute later, many employees of the company could see that Zhongyun City's real-estate pride, Qi Yuan Jiang, stood in the window with a phone, like they had come to the company for an interview.

Oh, nervous, it seems that this phone call can determine his fate.

A strong sense of honor rose in the hearts of the employees.

The great boss of Qi Yuan Jiang is not the first one, nor the last one.

When receiving a call from Qi Yuan Jiang, Ye Qing still stood in the ore sorting warehouse to enjoy the sky column.

"Mr. Ye, Mr. Ye, you have to help me."

Qi Yuan Jiang nervously trembled to the voice:

"I am Qi Yuan Jiang. I was just recently installed at the Xiaoping Lake Water Resort. You remember me?"

"How can I forget the name of Mr. Qi Yuan Jiang?"

Ye Qing is speechless, remembering it is natural to remember.

Qi Yuan Jiang is a member of Zhongyun's top richest circle and this time why smothering?

Qi Yuan Jiang took a deep breath and described the desperate situation he met with the fastest speed.

Qi Yuan Jiang is very well mixed in the circle of Zhongyun Real Estate.

He is well aware of the news in this circle.

To be honest, many real estate bosses in Zhongyun are waiting to see the Monster Industrial Building.

Of course, he thinks that Ye Qing does not like the people in their circle.

Qi Yuan Jiang did not send someone to "learn" next to him, which is why he dared to look at Ye Qing with boldface.

Having said that, he is nervously waiting for an answer.

"Mr. Qi Yuan Jiang, the Mechanical Colossus Type X, can't be sent to you to fill the gap in the Blue River."

"Ah?"

Standing at the mouth of the window, Qi Yuan Jiang, instantly felt the sky has collapsed.

"Because the Mechanical Colossus Type X, can't get to your side."

Ye Qing wants to help, and he and Qi Yuan Jiang are not competitors.

"Now it is daytime, going to Xiaoping Lake will inevitably lead to traffic jams."

Ye Qing said calmly:

"It is not anxious to dismantle the giant Mechanical Colossus Type X. And it is not the Mechanical Colossus Type X expertise to block the river."

"I want to help, but I can't help..."

Qi Yuan Jiang lost his mind in an instant and looked at the window.

Outside the window, the four giants, the same saviors, is quietly parked below.

[Chapter 275: Tourists from the Old Beauty](#)

The connection between Xiaoping Lake and Blue River is more than 400 meters wide.

The Mechanical Colossus Type X's bucket can carry 70 tons.

The most important thing is it has two buckets to plug the gap of Xiaoping Lake, which is an hour or two.

Without this, Qi Yuan Jiang calmed down, realized that it was impossible to invite the Mechanical Colossus Type X to Xiaoping Lake immediately.

Losing money, Qi Yuan Jiang can bite his teeth and resist.

The more important is the reputation of Pulanda Water Resort, which has just been erected by word of mouth and will soon be launched abroad.

Known as world-class service, the Pulanda Water Resort which no one can forget will be online news on Facebook tomorrow.

The downpour can flood the resort, and he is ingenious designing with a panoramic transparent glass ceiling, and the rainstorm simulates a fountain.

"Hello..."

"Hello?"

Ye Qing shouted the phone:

"Mr. Qi Yuan Jiang, Mr. Qi Yuan Jiang?"

"I... I am."

Qi Yuan Jiang had some desperate responses.

"Mr. Qi Yuan Jiang you can go back to the Pulanda Water Resort first."

"I will go right away..."

Qi Yuan Jiang tried to inhale, trying to keep his mood from changing.

The pig Lao Ni would not be discriminated against.

The hot tea served by the staff next to him had not been drunk yet.

"My team should go to Xiaoping Lake earlier than you. After all, the factory is closer to you."

"Ok..."

"Ah?"

Qi Yuan Jiang almost broke the sound:

"What did Mr. Ye say?... Your team?"

"My team will help you close the gap."

Ye Qing was not surprised by Qi Yuan Jiang's reaction:

"Even without the last cooperation if Mr. Qi Yuan Jiang will encounter difficulties. As long as I can help, I will not stand idly by."

Qi Yuan Jiang turned and trotting. He turned to the managers and shouted:

"In the future, everyone will go to Yipin Bie Yuan to buy a house. I will give the internal price, which is 500,000 Yuan cheaper than the sales office."

Go in a sprint to the Mercedes-Benz, Qi Yuan Jiang madly shot the front seat, signaling the driver to return immediately at Pulanda Water Resort.

Along the way, Qi Yuan Jiang leaned against the seat, and the mood was abnormal.

The Mechanical Colossus Type X is the savior in his mind, and the savior did not come.

The very bold Ye Qing, who did not ask for anything, sent another team to the past.

What exactly is the team of Ye Qing, will it be a dredger?

It is not difficult to solve the answer in the heart of Qi Yuan Jiang.

In heavy rain, the speed of Mercedes-Benz will not be much faster than the truck.

When he arrived at the Pulanda Water Resort, he could see four heavy trucks roaring and driving ahead of him.

Qi Yuan Jiang is dumbfounded.

Among them are two heavy-duty trucks carrying two Mechanical Colossus Type I

What can do these two giant Mechanical Colossus Type I?

Qi Yuan Jiang Real Estate Group just ordered the same Mechanical Colossus Type I last week.

It is not impossible for it to dig up the soil to close the gap in the Blue River, but time is urgent at all.

Qi Yuan Jiang knows too much about the giant Mechanical Colossus Type I.

That's why he can't feel his mind when he sees the two trucks in front of him.

The front two heavy trucks installed something that he could not see clearly.

The Blue River can only see the Xiaoping Lake next to it and has not passed the wooden house deck.

The tourists in the wooden house ran out of the way.

They hid under the glasshouse and took the mobile phone.

There is also a ladder, as long as the lake rises another five centimeters, the lake can flood into the wooden house.

The price of the Pulanda Water Resort is staggering.

And the tourists who are able to come here are either super-rich themselves either son of the old super-rich, which is not good enough to offend.

They want to take pictures.

The staff of the resort can only stand far in a dry and be anxious.

The most worrying thing happened.

The old couple from the United States.

This time they were very professionally at the bottom of the glass eaves, set up a tripods stable bracket, install a network camera, logging into the wall-crossing software, and sound to broadcast live on Facebook.

Solo music is as good as the crowded music, perhaps the best saying to describe their actions.

"Beth, are not you going to China for a vacation with your boyfriend, are you free to upload videos for us today?"

"Beth, are you at the lake, so clear the lake? Oh, my house, your house will be drowned."

"Is there a place as clear as Lake Sharplen in Cathaysia?"

"I heard the network in China is restricted. I can't log in to our website. How did you do it?"

I saw my friends sending out short messages one by one.

The international friend named Beth smiled very incomprehensibly.

The scenery in China is beautiful again, and that is another country.

If anything makes him unhappy, then don't blame Beth for using it as an international joke to attract friends and tourists.

"My dear friends, I am in Zhongyun City in China."

"You are not mistaken, behind me is one of the best water resorts in China."

"Now I want to broadcast live to everyone. This resort, known as a world-class resort, is drowned by its own scenic lake."

"Oh, too, it seems that the operators of the scenic spots are not going to give up. They seem to be fighting against nature."

A foreign boy with a blond hair and freckles on his cheeks danced in front of the webcam:

"Partners let us first come and enjoy together, and the Chinese are ready to use human power to fight against nature!"

"You saw the four trucks in the distance didn't. They planned to block all the dams on the riverside."

Beth's friends, they all said that this is so funny and with the things carried on the four trucks.

How could it be possible to block more than 400 meters of the river?

"I bet five dollars. They are doomed to failure."

"I bet ten dollars. The operators of this group of resorts must have seen more Hollywood blockbusters."

The four trucks were divided into two groups, along the edge of Xiaoping Lake and slowly drove down to the river.

Beth is professionally aiming the webcam at the trucks on both sides of the river.

The river raised the ground half a meter, left and right two Mechanical Colossus Type I caterpillars, roaring and drove down from the flatbed trailer.

They lifted the robotic arm at the same time, and then, from another truck's body.

They picked up a shield-shaped steel plate with an amazing length and a streamlined body.

At the bottom of the shield plate, two arcs, just right, merge into a sharp-pointed corner.

Standing on the edge of the river, the giant Mechanical Colossus Type I, raised a shield-shaped iron plate with a special length of 12 meters.

So, all of Beth's friends are stunned.

"my God!"

"This... what is this?"

Jokes here, the resort operators, Hollywood blockbusters, have seen more of them, but they did not want to see a big movie.

Even more incredible things happened.

This giant Mechanical Colossus Type I, grasping the thick-walled steel plate, like a buckle cap, vigorously buckled the streamlined steel plate into the gap of the river.

The still calm river was immediately flooded with mud.

Everyone can understand this.

It turns out that the two giant gods I are going to put some streamlined steel plates into the riverbed, like the dam, blocking the Blue River.

[Chapter 276: Unimaginable Flood Control Wall](#)

The first flood wall was driven into the mud, followed by the second.

The second flood wall was not driven in front of the first block but on the side.

That is to say, the Mechanical Colossus Type I plan to lay two flood-proof walls, which makes The Tianjiang River feel overwhelmed. His ideal filling material is the soil that can be seen everywhere.

Now, these shield-like flood walls have been driven into the mud.

At the junction of Xiaoping Lake and the Blue River, the water depth is more than three meters. Below is the soft silt, and there is no rock layer.

The floodwall has been driven into the mud and leveled with the river.

Only the gap is more than four hundred meters long. The wingspan of the Mechanical Colossus Type I is only 12 meters. How to press in into the mud all the flood walls?

This is also a thing that Yan Yuanjiang does not understand. Using the fill method, you can fill a soil slope for mechanical walking, use a flood wall...

And so on?

Yan Yuanjiang blinked his eyes and two rows of flood control walls. Could it be that the Mechanical Colossus Type I wanted to walk on two rows of flood control walls?

Even with this idea, Yan Yuanjiang feels crazy.

When the third part of the flood wall was laid, he reached the limit of the extension of the Mechanical Colossus Type I arm. When Yan Yuanjiang was considering hiring a cargo ship urgently. The two Mechanical Colossus Type I did not even let steps to adjust their posture and pilot to measure the spacing between the two floodwalls.

It was so straight, like walking on the ground, and walked to the side of the flood control wall at the gap.

The two mechanical arms abut against the flood wall, and the giant Mechanical Colossus Type I was set up.

The two crawlers rested on the edge of the two flood control walls. Then the mechanical arm reversed and supported the tail so that it could not be thrilling. Two flood-proof walls are less than five centimeters thick.

"Qianlong ~ Qianlong ~"

Under gravity pressure, the lower flood wall actually fell down again.

This sinking almost calmed down the tourists in the wooden house and the heart of the Blue River.

It's too thrilling.

This is more exciting than the tightrope if there is a tightrope for safety.

The tens of tons of giant Mechanical Colossus Type I is so across the water, does God know if the floodwall below will be skewed?

The 12-meter flood wall has a depth of about six and a half meters.

The density of the silt is low. If the vertical angle of the flood wall deviates slightly, it will gradually tilt toward both sides under the action of gravity.

The consequence of the skew is naturally that the giant Mechanical Colossus Type I fall into the rolling Blue River.

This may not happen. Soon the fourth flood wall was laid, followed by the fifth and sixth.

The tourists were whispering and their eyes were surprised.

Beth, the old woman from the old United States, opened his mouth wide and was in a state of bewilderment.

.

This script is wrong!

Shouldn't the wooden house be flooded, does not she made a big international joke?

The webcam faithfully recorded the giant Mechanical Colossus Type I's every move, not only Beth was shocked, but the foreign viewers who wanted to see jokes through the camera also wanted to shout God one by one.

What's the situation with this kind of equipment she's never seen before?

How can it be as flexible as transformed Diamond, that in less than 20 minutes, the gap water should be completely cut off?

It is.

The bottom of the river at the junction of Xiaoping Lake and the Blue River. It lacks a rigid load-bearing layer to support it.

A few tens of tons of the giant Mechanical Colossus Type I, moving back and forth on the top, to the installation of the floodwall, without leaving a gap.

It is also inevitable that the floodwall will be pressed into a deeper mud layer.

The floodwall fell by one meter and was flooded by the Blue River.

Now the water level of Xiaoping Lake has surpassed the first step, and it is about to be level with the water level in the wooden house. Maybe after another five minutes, the Blue River will flood into the house.

This is a bit embarrassing, the height of the flood wall of the two Mechanical Colossus Type I, there is no high floor of the wooden house.

"This... what should I do?" Yan Yuanjiang stood by the lake with an umbrella.

Looking at hope like a beautiful soap bubble, the feeling of cracking is terrible. At this moment, Yan Yuanjiang wished he could not become Marshal Tianpeng and lay down in Xiaoping Lake and drank down half of the water level in one breath.

"This kind of flood wall, I have seen in Germany. It is only the mud of this river is very deep. The resort operators have found a flood wall of more than ten meters high, and they have not hit the bottom."

The Facebook page of Beth, some people commented: "The equipment is really advanced, but the time is too short. They can't accurately predict the depth of the mud."

"I changed my impression on China. This kind of work efficiency. To change our workers, it is estimated to take a shotgun. Top behind the forehead, in order to catch up. "

" Originally, I wanted to watch, but now I want them to be able to block the river because of their equipment and technology. I have the feeling of watching a sci-fi blockbuster. "

The tourists in the wooden house also made a sound of regret.

The Mechanical Colossus Type II completely conquered them thoroughly with technology. If it could successfully block the Blue River, it would be more wonderful than the river flooding into the house.

"Let's go back to the shore, and the house will be flooded soon." A tourist gently said in the ear of his female partner.

"They... Is it like connecting wires? The woman pointed to the rain curtain and said with some uncertainty.

In the rain curtain, a dark ground cable was pulled out of the tool rack of Mechanical Colossus Type I by hard work and connected to the first flood wall.

The cable connection should be designed underwater. When the cable connection is completed, Mechanical Colossus Type I diesel generator set will roar along with it.

Yan Yuanjiang clenched his fists and screamed at the full throat.

Inside the flood wall, a silver-white metal baffle rises!

All the floodgates in the first row were raised, and they broke out of the water like a steel wall.

No one thought that those dark floodplains still hide the baffles that can be raised. They are the same width as the bottom floodwall, and they are firmly attached when they break out of the water.

After flying around for a week, countless eyeballs re-inserted into the orbit.

Beth's expression was even more amazing than seeing Transformers. His audiences were even more amazed at how it could have been and how amazing it might be.

"Quick and fast~" Yan Yuanjiang excitedly went straight to the shore control room to run: "Quickly open the fountain in the lake and hit the water on the shore."

After two minutes, the fountain opened, and numerous fine water drops sprinkled to the shore.

As time goes by, the water level in Xiaoping Lake is lowering the water level at a speed that is difficult to distinguish with the naked eye.

"Boss, it's a miracle." The staff in the control room were almost incoherent: "If it weren't for Monster Heavy Industries, the word of mouth on the whole time we would have lost all our reputation this time."

"But also the loss of a lot of money," Yan Yuanjiang face excited: "If it is not the Monster Heavy Industries work, there is such a flood wall, we are completely finished."

The rainstorm continued until 7 o'clock in the evening and gradually turned into light rain.

On the blue river side of the flood control wall, the water level and the Xiaoping Lake, the highest time drop reached 60 cm.

When the rain became smaller, the tourists in the wooden house rushed to the river one by one.

The mobile phone flash is flashing here as an awards party, and domestic tourists are recruiting their friends to come.

[Chapter 277: Bartering](#)

After the torrent of rain, the next day, the sunshine with fresh air shining on the earth.

The water level of the Blue River, after a night of rushing into the sea, finally fell back to normal.

Later, people in Zhongyun City found that in addition to the road still filled with stagnant water, the air seemed to bring a bit of chill, with a little bit of autumn taste.

Ye Qing changed her short sleeves to long sleeves today.

Early in the morning, the UHV pipe network system drained the water in the pit for the last time, and then packaged the heavy truck, and transported it to the construction site of the Blue Sky Building to drain the water in the foundation pit.

The stagnant water is not a white row, Ye Qing and the Master Craftsman deliberately discuss it and come up with a good idea to use the stagnant water to make money.

In the morning, Ye Qing received two calls.

The first one was Zhongyun Real Estate's proud son, Yan Yuanjiang.

Yan Yuanjiang thanked in the phone for a full half an hour.

In addition to the constant gratitude, Yan Yuanjiang still wants to send Ye Qing a gift.

The rescue yesterday afternoon not only made Yan Yuanjiang avoid the loss of over 100 million Yuan but it also successfully saved the reputation of the resort that was going to plummet.

This big gift is really big.

A one-piece garden and indoor pool villa, covering an area of more than 600 square meters, with a market price of 30 million Yuan.

Two sets of one-piece boutiques in the hardcover duplex room, the price of seven million.

Yipin Bieyuan is located on the edge of the city center, a veritable high-end residential area.

Especially in the area of villas around the artificial lake in the center, the poorest households in the villa zone are richer than the five wealthiest assets in many residential areas combined.

This gift Ye Qing received in Yipin Bianyuan the high-end community developed by Yan Yuanjiang himself.

The gift is sent without a face, and he does not have to spend too much.

Ye Qing intends to leave this villa to his parents, and now the Longxitan factory is his main night event venue.

After the construction of the Monster Heavy Industry is completed, he follows the idea to build his own private technology home.

Another phone call is also a bullish character in a certain field of Zhongyun.

He is Li Huaxing, the leader of Zhongyun's manufacturing industry.

Now the leader of the manufacturing industry has been picked up by Ye Qing.

Last year, Huaxing Heavy Industry paid taxes of 2.2 billion Yuan.

Now that the Monster Heavy Factory have been working hard for less than half a year, Ye Qing has paid 1.5 billion Yuan in taxes.

In addition to the factory-work who has not yet stopped.

The rest of the technical work has an annual rate that completely exceeds in taxes Huaxing Heavy Industry.

They all say their peers are enemies, but Huaxing Heavy Industries has no overlap with Big Monster Heavy Industries in business.

Whether it is a mechanical engineering chair, a giant god I, an engraving machine or a flood wall, they can't make it, and no similar products are introduced into the market.

There is no business conflict, and naturally, they will not look at each other badly.

In fact, Li Huaxing is very pleased to see Big Beast Heavy Industries because there are technical problems here, he can also ask to consult Monster Heavy Industries.

This time he called, not because he had encountered a problem with industrial technology, but because he had purchased three Mechanical Colossus Type I last time.

The three giant gods I, who traveled by sea to Nigeria in Africa, participated in the copper mining work.

The general cargo ship started from Zhongyun, and it usually took several months of long navigation to arrive in Africa.

Tankers are the slowest, bulk carriers are in the center and container ships are the fastest.

Thanks to the sharp drop in crude oil prices in the past two years.

Shipping companies that had dared to run at economic speeds as well as they could have done.

Every one drives his or her horsepower to reach his or her destination as soon as possible and uses efficiency to create more revenue.

The Mechanical Colossus Type I is taken in the container ship of the Yuantong Shipping Group.

This new type of vessel, launched for less than a year and sailing at top speed, arrives in Nigeria in just ten days.

Li Huaxing told Ye Qing that the three Mechanical Colossus Type I had arrived in the copper mining area to participate in the mining work.

The workers responsible for mining there were directly affected by these three devices and were caught in the surprise.

They are going to order ten more Mechanical Colossus Type I, and if they can, they want to build another batch of matching tools for mining Mechanical Colossus Type I.

Nigeria is a third world country with a poor and chaotic situation, and its infrastructure is also seriously lacking.

The copper mine that was originally used to offset the debt was blacked out three times and five times, and the voltage was still seriously unstable.

As a result, the Mechanical Colossus Type I arrived there, and the engineers realized it was of great value outside the mining.

- Power generation!

The Mechanical Colossus Type I relied on diesel generators.

On the first night of the Mechanical Colossus Type I the engineers connected the cables to the generators, so the whole site finally experienced a modern civilized life.

The mine has its own generator, but it can only maintain simple lighting.

As a result, the Mechanical Colossus Type I, let the air conditioner and water heater that have been installed for a long time run.

The workers, like the New Year, also celebrated with dumplings.

The only advantage of Nigeria maybe that oil is cheap.

The Mechanical Colossus Type I, mines during the day and generate electricity at night. The workers simply loved them.

Ordering another ten, Li Huaxing asks Ye Qing with some embarrassment if he is lacking copper?

"The finished T4 copper or copper-rich ores are available."

Li Huaxing said on the phone:

"In industrial production, copper is the third-largest metal in addition to iron and aluminum. If you trade with copper, we all Can get benefits."

Ye Qing sank for three seconds, choose to use copper-rich ore to settle.

Copper consumption in Monster Heavy Industry is second only to iron, and the price of copper products...

Let's just say that when the monsters connected the power to the metal melting center, they spent more than seven million.

Among them, the transformer is only a few hundred thousand Yuan and the rest of the money is basically spent on the cable.

Now in the limonite area. There is a complete set of ore refining equipment, which can be smelted to obtain a large number of high-purity coppers by simply making a washing machine.

The most important thing is to settle the copper mine, and the refined copper is worth far more than the value of cash settlement.

The quality of copper mines in Nigeria is as famous as their poverty, and choosing copper mines isn't it a good deal.

"Thirty thousand tons of copper ore of 25 grade can be loaded into bulk carriers the day after tomorrow."

Li Huaxing, who saved a liquidity fund, laughed.

"I'll send someone to your company to sign a contract in the afternoon. If you always need copper in the future, you can buy it directly from me."

"To Mr. Ye Qing, how long do we have to get the ten Mechanical Colossus Type I?"

"After a month and a half!"

Ye Qing finished and added a small sentence:

"If the fare increase is 10% It can be shipped the next day."

"How can I feel like buying a car in a 4S shop? ..."

Li Huaxing was speechless:

" Then add it, I really wait for a month and a half, Nigeria side cannot rush me to death."

Li Huaxing cooperated with Futai Group to develop a copper mine in Nigeria, and Li Huaxing provided mining equipment, accounting for 40% of mining rights.

Now that the first batch of copper mines have just been mined, they will catch up with Ye Qing, a bronze behemoth.

Li Huaxing is not too happy.

On Ye Qing's side, there are more than ten orders for the Mechanical Colossus Type I.

The order of the Mechanical Colossus Type I, if not an expedited, will have a one-week delivery float, leaving those expedited customers to jump.

[Chapter 278: Rainwater also has its value](#)

If there are still so many orders received next month, Ye Qing will put the Mechanical Colossus Type I up and raise the price.

This is called market regulation, and price fluctuations are caused by changes in supply and demand.

This is in line with the laws of the economy, and whether it is black or not, it has nothing to do with the price increase.

Ok ...

Ye Qing, who has already made all the balances in his pockets, to build a building, he thinks so about it.

At 10 o'clock in the morning, the water on the main road of Zhongyun City was gradually drained.

In the city center, a pit of 18,000 square meters has become a lake.

After the morning precipitation, the rain in the foundation pit is quite clear. Nearby the property of the Blue Sky Building, a water pipe was taken to pump the water, and the floor in the parking lot of the building was washed.

"Then you'd better pick up more water pipes."

"What?"

"Because we have to start draining the water in the pit, you won't be able to get water in the afternoon." The Master Craftsman did not show off anything, just to state the facts.

"It's not good, it's used, it's useless if you do not need it you do not have to." The two homemade pipes smoked as they tried to hide disbelief on their faces as they dispersed the smoke.

Even if a civil air defense project is hidden in the foundation pit, there will be at least 10,000 tons of accumulated water deposited inside, and the water will be evacuated for several hours. Don't say they don't believe it.

Even if the pupils used to putting water in the swimming pool and filling water with math problems come, they can't believe it.

Just as the material pipe connected the pump, the UHV pipe network system was transported.

Followed by a Mechanical Colossus Type I, there is no tool in the tool holder, but a thick UHV wire water pipe with a thick wrist.

Two property management units together with the stalking personnel, in the coffee shop of the building, looked at each other inexplicably the huge pumping equipment that no one had ever seen.

It is natural to use a water pump for drainage, but there is no shadow of this pump in front of this equipment. It is like a submarine with a huge streamlined water tank and a thick pipe like a torpedo.

The installation of this UHV pipe network system alone allowed Mechanical Colossus Type I to be installed for an hour.

This is an urban area, and the drained water can not be discharged at will. The Master Craftsman will connect the twenty drainage pipes and connect them to nearby wells.

The pump of the Blue Sky Building has been working for an hour, and the two property pipes are simply standing next to each other. Some look like the bustle, watching the pipes like spider webs.

"Do you want to rush on the facade of your building?" The Master Craftsman stepped over and pointed to the outer wall of the thirty-third-floor building next door: "You see there are many old stains on your outer wall, and it can't be washed away by the rain."

"The accumulation of water in these foundation pits is not a waste."

The two owner men pipes looked at each other and felt like they were listening to the Bible the heavenly book.

The Blue Sky Building was built seven years ago. Outside the building, it is not an integrated glass curtain wall, but a network structure similar to a residential area with much marble floating walls.

Seven years of the wind and rain, the outer sky of the Blue Sky Building has long been very old, especially the connection between the stone wall and the glass deposited too many stains.

As long as it is not a building with an all-glass curtain wall structure, there is such a common problem.

Now the technician on the site told them that when the construction site is pumping water, can it help them clean the outer wall?

"Free?"

"The first wall is free. You have to think that the cleaning is clean. If you want to wash the remaining three sides, you have to pay for it." The Master Craftsman is following the trick: "I decided to wash. I will let people adjust some neutral detergent pumps." Into the water tower."

The Blue Sky Building is one hundred and forty-seven meters high. This height is in the eye of the object. If the ladder high-pressure water gun is not used, the water flow cannot reach a height of more than 50 meters.

However, people have proposed to help clean the entire wall for free, and whether he can hit it. Anyway, Bill Gates can't refuse this good thing.

Two objects, the chicken nodded like a bowl of glutinous rice.

The Master Craftsman turned his head and revealed a sly smile on his cheeks.

Now his boss Ye Qing is seriously short of money. When it comes to employees, it is natural to worry about the boss.

The industrial cleaner used to clean the stone stains has been bought with the pipeline for a long time. What adjustments are made?

A Mechanical Colossus Type X came over and started the diesel generator set to supply power to the UHV pipe network system. Another Mechanical Colossus Type I with a high-pressure steel wire hose with a thick wrist is fixed in the mechanical claw.

At the end of the water pipe, it is an adjustable metal nozzle. At first glance, it looks like a large cleaning gun.

When the Mechanical Colossus Type I was carrying a long high-pressure water pipe and came to the bottom of the Blue Sky Building. The property management manager of the building also ran out to see the excitement.

The fifteen barrels of stone industry cleaning agent has been added to the water tower. Everything is ready, and the master will start with a walkie-talkie notification.

The Mechanical Colossus Type X and UHV pipe network system starts at the same time, instantly resounding mechanical roar sound so that the management of the Blue Sky Building fiercely slammed their ears.

Twenty seconds later, a pale green water column was shot straight out by the cleaning gun of the Mechanical Colossus Type I.

The sound of the water from the water column made people feel horrible. Like a javelin, it flew in the paradise of the Blue Sky Building.

The well was opened near the foundation pit, and the warning sign was set up beside the well. And there was also an influx of water at an alarming flow rate.

Nigh to the building, those pale green water columns swept back and forth from top to bottom as a wiper.

The more it pours down, the deeper the color of the water column becomes and in the end it slowly becomes a dark brown with a lot of stains.

"This... How much pressure does this require?" The property management manager covered his ears and pouted his head with his head and looked at the top of the Blue Sky Building.

The Mechanical Colossus Type I continue to spray the cleaning agent. When the lower position is sprayed, another robot arm is used to adjust the water flow speed of the water gun to prevent the cleaning agent from breaking the glass.

Ten minutes later, the entire building wall was sprayed with a layer of a light green cleaner.

The cleaning agent injected into the high-pressure water pressure is just used, and the water flow from the water gun is gradually clear.

The clear water flows into the exterior of the building, and the cleaning agents that discolor due to the dissolution of the stains are immediately flushed.

It's not a simple cleaning. Several person mouths are so grinning that they can wipe out bird droppings all over the sky.

A robotic arm lifts the water gun to counter the enormous impact of the water flow. Another robotic arm, which is now flying up and down, is constantly rotating the water gun adjustable device at a dazzling speed.

No one figured out how the driver inside did it, letting the water flow on the marble and the glass with the right difference between the two constituents.

The extremely hard marble can withstand more powerful water impacts. The glass has a weak bearing capacity, but the high gloss of the glass allows it to be easily cleaned.

The water flow seems to be an invisible eraser, and the place where it is washed away by the cleaning agent has all become completely new and makes people feel particularly pleasing.

When the building was thoroughly cleaned. Not to mention a little property management, even the building's shop owners also came out.

Surprising and praising each other, the appearance of the cleaned building has given them a sense of time and space that has just returned to the building for seven years.

Bright and clean!

It is also because of the incomparable brightness that it is even more so that the other three sides of the building are as dirty as the oil spilled.

This visual difference can simply drive a large number of people with OCD.

A good feeling is surrounded by property management. There is no doubt that if it makes the other three faces of the building look new, will be happy and pleasing.

This year's property management fees do not want to ensure a dime does not want to collect.

This year's Property Management Fees want to make sure to collect any penny.

This is not because they are worried. They have not looked at the shop owners, who they have already surrounded them. Why did you stop cleaning work? Do you want to confuse the eagerness to try your eyes?

"Oh ..." The property management manager smiled and walked to the Master Craftsman, and swallowed and asked: "In addition... the cleaning price of the three sides of the building is... how much."

"Wait!" A middle-aged man in suit and leather clothes rushed out of nowhere. He brazenly squeezed between the two. "I'm the property management manager of Times Building behind you. We also need to clean the building. Our outer surface area is 370,000 square meters. Look at master..."

[Chapter 279: Concealed Construction](#)

The employees of Tianying Building, Times Building, Baolong International Shopping Mall, and several building constructions nearby to Blue Sky Building ran over.

If the Master Craftsman did not come, the Blue Sky Building would not be completely new.

This will give others a comparison of these similar commercial centers.

Can we compare the youthfulness twenty-eight-year-old girl with an elder man with a white head?

How do you compare for the Blue Sky Building with the other buildings?

Only these nearby four commercial centers will enjoy a high-tech beauty treatment.

Farther away from the buildings, there were four less bright and new buildings around the Blue Sky Building.

"There is no water."

The Master Craftsman patted the shoulders of the employees sent by their companies and motioned them to collect money from the managers of these buildings.

Lines of property managers, a look of how it is possible.

Yesterday's torrential rain turned the foundation pit into a vast ocean.

Not to mention a piece of pumping equipment, ten units of pumping the next day.

It is impossible to hang the foundation pit water.

It's easy to verify this, just look through the construction wall.

As a result, the foundation pit is empty!

"Well... that's big, so we supply water ourselves?"

"Wait for another rainstorm later."

The Master Craftsman smiled and refused this very profitable proposal.

This set of equipment only has a lot of hard work or Master Craftsman to play with it.

If others operate with it, high-pressure water flow can break the glass and it is the end.

When they pump water, they make some extra money, which they hope it will be not worthless, it was not worth the candle?

At two o'clock in the afternoon, the four Mechanical Colossus Type X re-entered into the foundation pit and began earthmoving operations.

On the other side of the factory, a huge metal frame of 22 meters high was continuously transported by heavy-duty trucks.

It is an unimaginable huge project to hollow out all the soil under the civil air defense project and replace it with a tall metal frame.

If the project is done by ordinary construction companies, it will take time and money which makes them lose a lot of money.

The cost for Ye Qing's is equally huge, not to mention the fuel that the Mechanical Colossus Type X needs to consume every day.

The cost of hiring a construction waste transportation company and producing such a huge metal frame makes Ye Qing very powerless.

If not, these support frames are assembled, the upper and lower bottom plates and the intermediate support surface have other uses, and Ye Qing needs to pay more.

Before the rainstorm, the support frame was completed by a third.

The four Mechanical Colossus Type X directly began to dig into the center of the foundation pit with a bucket of 70 tons of soil without any stop.

At four o'clock in the tomorrow morning, the center of the pit was cleaned out of a 10-meter-diameter underground space.

The Mechanical Colossus Type X-shaped metal frame was used to secure a steel chamber.

When the mighty dumping team was carrying the dirt away.

Two heavy trucks, driven by the hard-working Monsters Laborers, become at the site.

Ye Qing drove from his Mercedes-Benz G65 himself his car his padded team and snuck into the construction site.

The lighting of the entire site was dimmed.

"Boss, the center of the foundation pit has been excavated, and all the surrounding areas are supported by metal frames and construction can be carried out."

"It's hard."

Ye Qing opened the door halfway and replaced the newly bought pair of rain boots with the dim light in the car:

"When I go down, you will unload the alloy plates on the two heavy cards and use the Mechanical Colossus Type X-shaped forging into a pipe of eight meters in diameter."

The Master Craftsman nodded and then walked toward the Mechanical Colossus Type X.

After changing the rain boots, Ye Qing walked shallowly on the gentle slope path and explored the bottom of the foundation pit.

The foundation pit has been constructed, which is 35 meters deep from the ground.

Among them, the civil air defense project is 13 meters and the metal frame is 22 meters.

Fortunately, there are more than one hundred meters from the rock layer, and there is no shallow groundwater belt.

The Mechanical Colossus Type X can ensure the normal construction of the foundation pit bottom, as long as the network diversion canal is planned at the bottom of the foundation pit.

They drained water is diverted to the special excavated storage pit at the side, and the water is discharged by the water pump to ensure the normal construction of the bottom of the foundation pit.

The more you go down; the ground is muddier.

When entering the bottom of the civil air defense project, Ye Qing seemed to walk into a steel jungle that was outside the stars.

The 22-meter-high steel jungle, with the bottom pressed by gravity, and rows of steel wall supports has been firmly caught in the soil.

Walking here, just turn a little two laps, and people with a strong sense of direction will not be able to distinguish between the southeast and the north.

Fortunately, the monsters installed orange lighting on the top, followed by the arrow.

Ye Qing progressing slowly toward the center of the pit to explore the hidden steel chamber.

The truck travels quietly into the passage of the civil air defense project.

Above the ground, a sheet of thick-walled alloy steel plate with a length of 25 meters was forged into a circle by the Mechanical Colossus Type X.

A heavy truck, quietly driving into the channel of the civil defense project.

When the heavy truck disappeared in the intricate passage, the two steel gates driven by motors installed were closed slowly.

The heavy truck eventually stayed next to an emergency food storage room with a sturdy anti-riot door.

Where not only the heavy truck but also the drainage system in the morning and the Mechanical Colossus Type X, which cleaned the building, stopped there.

The giant laborer who has worked hard jump off the truck and climb into the Mechanical Colossus Type X.

In the dim light, the Mechanical Colossus Type X roared, put the mechanical claws into the rear equipment track.

And then locked two black carbide cutting wheels made of a hard alloy from the heavy truck.

Yes, the giant laborer is planning to cut the food storage room in front of it with a cutting wheel to make room for construction.

If you have a super-human perspective, you will find that under the one-meter-thick steel plate concrete in the food storage room.

It is just the secret room built by the monsters with steel walls.

This is the most central part of the foundation pit.

The food storage room stands in other warehouses and cutting off its concrete wall will not destroy the load-bearing structure of civil air defense project.

Cutting has begun!

The hard alloy wheel, instantaneously from static to dynamic, the sound of breaking through the rapid rotation seems to be able to split the eardrum of the person.

As soon as the rotating wheel was close to the concrete wall and was cleaned, it was followed by a dust storm.

"Buzz and Buzz"

The broken concrete dust is sputtered out like water, and finally, after a few minutes later dust storm is scattered in the air.

Along with the huge noise generated by the cutting, the black carbide wheel was quickly inserted into the concrete wall.

When the steel plate was cut into the inner lining, the dust storm turned into a fire and rain, and the strong metal burnt taste spread.

This is a violent cut that ordinary workers simply dare not try.

The giant labor does not seem to care.

Whether the high temperature will burn the cutting wheel because it does not take cooling measures.

Nor does it matter.

The higher the coefficient of friction, the higher the temperature will be.

When the alloy wheel of the right arm cut for a long time, the temperature rises to the level of 1500 degrees.

And the giant armor is operated by the Mechanical Colossus Type X, and the left arm is replaced to continue cutting.

Cemented carbide can maintain structural strength at 1650 degrees.

It is not necessary for the Monster laborer to pursue this limit.

Anyway, replacing the mechanical arm cutting will take less than two seconds.

[Chapter 280: 100 meters underground](#)

Even after one meter thick, the concrete blocks covered with a sheet steel concrete barrier are blocked.

Ye Qing, who is located at the bottom, can still hear the humming cut sound from the top of his head.

Fortunately, this noise has been reduced to an acceptable range and as long as it is twenty meters away, it will never be heard again.

This night, maybe it is a night worth remembering for Ye Qing.

Because Ye Qing is at the center of the foundation pit, and is also the center of the future Monster Heavy Industrial Building, officially launched the construction of the underground private industrial base.

This kind of top hidden base, which only exists in science fiction films makes countless men dream of, will be established by Ye Qing little by little.

Deep underground 100 meters, it has an all-alloy steel sealing frame, and a secret building with concrete pouring.

Architectural shape, Ye Qing plans to use inverted triangles.

The last layer will be bordered by rock layers, and hard alloys will be used to create a sturdy sanctuary.

In Ye Qing's vision, this underground private industrial base will have the world's top industrial technology processing technology even if he wants steel war clothes, as long as there are drawings can be made.

There is a 50,000 square meter at the top of the head, and the blessings of the civil air defense project are covered. Ye Qing can start construction in the center of the foundation pit without knowing it.

With the help of the Monster Factory, Ye Qing has full confidence to achieve this ideal.

"Well, let's start!" Standing in the secret room a dense room completely surrounded by a huge steel wall, empty leaves in the hands, Ye Qing takes a deep breath.

That's right, there is no Mechanical Colossus Type I, no equipment. So, he is alone.

A pure black mobile phone made of unknown cold metal was picked up by Ye Qing from his pocket.

Entering the Monster Factory Recruitment Column, Ye Qing leans against the corner of the empty steel chamber and presses the call option of the angry miner.

The invisible white mist instantly enveloped the entire secret room. In the white mist, a six-meter-long body, claws and horns seem to use alloys to create a horror monster slowly revealing the figure.

The angry miners stood up with the hind legs covered with gray-black scales.

On the high head, a pair of turbid yellow eyelids stared at Ye Qing.

In its pupils, no beast meets the ferocity of food, only submission.

"Dive down, a depth of 100 meters." Ye Qing pointed to the muddy ground under his feet.

"Ang ~"

The angry miner screamed and lifted his forelimbs and slammed into the muddy ground.

Ye Qing ran out, and the angry miner became a groundhog at this moment. The exit of the chamber was separated by a second, and a large piece of soil flew out from the inside.

The sound of rustling is endless, and it takes only five minutes for the time to bury the earth.

The angry miners also disappeared, and only one large pit appeared inside the secret room.

Ten minutes later, within the passage made up of huge steel walls, the Mechanical Colossus Type X roaring sounds, it is held in the alloy pipe forging into a circle appearing in front of Ye Qing.

A bucket clears the dirt excavated by the angry miners and then another arm, which is inserted into the steel chamber with a pipe of eight meters in diameter, presses the alloy pipe into the newly excavated vertical cave.

After the same time passed, the Mechanical Colossus Type X was coming again, cleaning up the dirt while pressing the second pipe into the cave excavated by the angry miners.

A magnetic self-propelled welding robot worth five hundred Yuan was recruited by Ye Qing from the prop's mall.

This welding robot is about the size of a refrigerator that can be attached to steel at any angle using an electromagnetic crawler. Just after the appearance, Ye Qing took off his own remote-control operator, controlled to move inside the alloy pipe, and welded the joints of the two pipes.

"Zizi ~ Zizi~" welding sound and dazzling white light flashing, angry miners frequently reach out, with large claws to hold a large piece of soil.

When the Mechanical Colossus Type X third came, it also transported a large crane with a slide rail.

The rail crane can lift 20 tons of cargo, and the Mechanical Colossus Type X directly lifts the rail crane high above the alloy steel support plate. Ye Qing controls the self-propelled welding robot, climbs along the steel wall to the side of the rail crane, and welds against the joint with a welding gun.

The rail crane was welded, and the angry miners were unable to transport the dirt outside because the height was not enough.

Connect the crane to the cable of the illuminator so that the hoist can lower the bucket, lift the dirt in the cave. And move it to the outside to discard it through the rails.

This is a miracle. Who can imagine that Ye Qing walked alone into the center of the foundation pit. And then it took less than an hour to build a set of top-level efficiency drillers?

In order to build a pile foundation for others, the drills of the crawler-type rotary excavator must be used to dig the ground one by one.

Each time the auger bit is drilled half a meter deep, it has to be lifted out to empty the dirt inside the drill bit.

Speaking light, but the spiral drill bit from the rotation, to lift the soil to empty the process is extremely slow. Can't be described by the speed of the turtle.

As for the drill hole with a diameter of eight meters at a time, no rotary excavator on the market can do it.

Special equipment must be ordered from the top machinery manufacturers to dig a little.

Whether it is a common rotary excavator in the market or a separate custom, it is impossible to drill into the work under the civil air defense project. Because the drill pipe of the rotary digging machine increases with depth. It will not be long before it will fall into an awkward situation. Because of the lack of height.

At the bottom of the foundation pit, the secret construction is in full swing.

In the next Blue-Sky Building, the stalkers who were assigned by the construction companies and real-estate developers to learn the experience were all squinting and yawning on the sofa.

The Mechanical Colossus Type X is more powerful and hey, for a few days. Regardless of day and night, staring at it, you will also see nausea.

The fresh energy of the first day has already passed, and these stalking doors have not been discovered. Today's construction site is different from the past.

The number of vehicles entering and leaving the site was too numerous, and they felt the only change was the Mercedes-Benz G65.

More and more, the stalkers have even closed eyes to sleep.

The Mechanical Colossus Type X constantly excavated the soil at the bottom of the civil air defense project, giving the best cover for the construction of underground industrial bases. After all, no one wouldn't be able to measure the weight of the earth excavated by the Mechanical Colossus Type X.

No one can't measure the exact weight, and the human defense works to block all the relevant lines of sight.

As the sky gradually brightened, the first phase of construction inside the civil air defense project gradually came to an end.

The giant force that Ye Qing drove the Mechanical Colossus Type X rotation work, and has cut this independent food storage room into a piece of standard concrete stone.

Wait until the last raised concrete bar is cut, the Mechanical Colossus Type X switch the mechanical claws. Carry the rest of the equipment inside the car, and then put the stone bar code in the car.
