

M Factory 311

[Chapter 311: All](#)

Qiao Pingxu usually claims to be the boldest of all workers in the mining area.

When he was young, he was a militia, and before he was sent to work in Africa by the company, he also participated in three months of military training.

Qiao Pingxu was six years old of working experience in Africa long before the construction of the mine.

There are fifty-three countries in Africa, seven of which are stuck in long-term turmoil and are too lazy to broadcast news.

Part of the area is chaotic. The conflicts are occurring, and more than half of the residents are not guaranteed.

Nigeria counts one. Qiao Pingxu has been working here for a few months and has been honed to have a hard nerve. He saw no less than five major incidents with gunfire and small conflicts.

However, when you really participated in it, you knew the war was so horrible.

On weekdays when he goes out, the Glock was a more diligent carry-on than his cell phone.

Now that the Glock was thrown aside at will. The fighters who have stumped upside down and around, and didn't even have to jump on their legs. Fully demonstrated the achievements of the Glock.

"King... Master Jin, you have killed someone." Qiao Pingxu ran off to the car in a daunting manner, panicked and throw off the Glock and wrapped it with a magazine.

After wrapping it by the magazine, Qiao Pingxu seemed to feel a little secure.

"Isn't you telling me that after leaving the city, the local law is a piece of waste paper?" The Master Metal Expert turned his head casually and asked, "Why, if others come to ambush us, we can't fight back?"

"Yes, these people damn it." Qiao Pingxu raised his gun and aimed at the truck with the others: "I... I'm afraid Master Jin... you will have a burden after you kill."

"Psychological burden?" Asked the Master Metal Expert confused: "What's that?"

The road was exceptionally quiet, and only Qiao Pingxu's exclaimed voice spoke to the Master Metal Expert.

It seemed as if there was a chance there is an armed man boldly stretched out his weapon.

He didn't even dare to reveal his head. As long as he pulled the trigger in the approximate direction, forcing them to find a shelter to hide. The remaining people could get a chance to fire.

The idea was good, but when he had just raised his muzzle.

The Master Metal Expert moved instantly, no need to aim, not to shoot against the shoulder to ease the impact.

With a flick of his wrist, almost no one else could see what was going on, a scream came from the truck.

A bullet penetrated his wrist.

Inside the truck compartment, an indescribable atmosphere of fear gathered on the faces of the only six armed men remaining.

They were soaked with cold sweat, and only one person counterattacked, but the horror was beyond the speed at which human beings could reflect their limits, and the precise marksmanship that could be called the finger of death gave them another hundred reasons to do not dare shoot at them.

Whoever goes out dies, just with a Glock has become a killer, now in hands of that guy, it was used as a more powerful assault rifle...

The atmosphere on both sides was completely different. On the metal expert's side, eight soldiers had already burst into tears.

These are the tears of rebirth, and these are the tears of ushering the savior.

On the side of the abandoned truck used to block the road, they picked up three rocket launchers without their owners.

The beaches were lined up at a safe distance, and the truck was standard-welded with steel rods.

Don't look at the AK bullet hitting the steel plate, and it can only create a coin-sized shallow pit. But in front of the rocket launcher, two more steel plates are not much stronger than paper paste.

"Throw your weapon and get off!"

A few minutes ago, what the group said to them was returned intact.

"We give you ten seconds to consider, otherwise the rocket will not have long eyes." The three who carried the rocket launcher on their shoulders had laughing noses, not eyebrows.

"Get out," the metal expert said coldly.

The eight soldiers immediately listened to the voice of the metal expert with the same respect as the edict.

It's a pity they don't understand.

Qiao Pingxu wiped away her tears and helped translate it again.

Three rockets dragging orange flames whistled and flew out.

The truck was almost blown up into the sky, and it was just moved, revealing a gap for the vehicles to pass through.

The three off-road vehicles receded along the gap and then circled the hill far away.

Returning to the highway again. The shocked Qiao Pingxu looked at the Master Metal Expert beside him, and the tears of the rest of his life came out after the disaster.

The Master Metal Expert was still sitting there quietly, as tidy as when he had just got off the plane.

If he did not see it with his own eyes, who can believe this gentle engineer has several times more ability than members of special forces?

The bullets flying, just that kind of cruel battlefield like environment, the most eye-catching is his demeanor.

A cold, ruthless and confident.

All these qualities came together. Qiao Pingxu thought for a long time in his mind. And the Master Metal Expert did not match with any kind of soldiers he had previously contacted.

Perhaps it is the legendary retiree who has no secret number and is the best among the secret team?

Qiao Pingxu didn't know much about this, anyway, he felt that Master Metal Expert must have an unusual past.

"Master Jin, thank you so much. I will remember your life-saving grace all my lifetime."

"You're welcome." The metal expert lightly dusted his collar: "the price of the ore sold to us is a little cheaper."

"Master Jin, I don't have to say anything. Later, I will leave you the best purity of the ore produced."

The three off-road vehicles drove to the airport with enough horsepower. Until they entered the city, there was a team of heavily armed policemen, slowly moving in the direction where they came.

With this speed, when they arrived at the scene, ten battles would be over.

The off-road vehicle was parked in front of the waiting hall. The eight soldiers got out of the car and hit the ground with their feet to greet him and then leaned before the metal expert.

"Warrior, if you come to Nigeria again, the eight of us will surely put out all our savings to entertain you." Qiao Pingxu helped translate.

After the international flight to China had taken off, Qiao Pingxu returned to the off-road vehicle.

To be on the safe side, they chose to return from another hidden road. On the way, Qiao Pingxu took out the phone, and his finger still pressed the number a little bit now.

"Chairman, just now when we sent Master Jin of Monsters Heavy Industry back to the airport, we were met with an ambush by armed men."

"What?" Li Huaxing, who was on the phone, jumped up directly from the bed. And there was no sleep at all in his eyes, and he said loudly: "Are you hurt?"

"No."

"The secretary told me before departure that General Mopu sent eight soldiers to escort you. It seems we have to thank General Mopu."

"Do you know who organized the ambush? They did it against our mine, or against General Mopu's men?"

"It wasn't the eight soldiers who repelled the ambush. In fact, the eight men lost their weapons and surrendered in the beginning." Qiao Pingxu smiled bitterly.

"To can force eight soldiers to surrender. The opponent must be far more powerful than yours." Li Huaxing exhaled deeply: "In addition to the eight soldiers on the car, you and the Master of the Monster Heavy Industry."

"Who could fight back the ambush?"

"Master Jin, he completely wiped out the ambush team equipped with heavy weapons."

[Chapter 312: Mass Production Status](#)

Ye Qing received the news that the Master Metal Expert was ambushed by armed men carrying heavy weapons on his way back to the Nigerian airport. Now, it was already the time to transfer the Master Metal Expert from the capital airport to "Zhong Yun" or "Shanghai."

Li Huaxing thought that the Master Metal Expert would call and tell him that he was not too embarrassed to disturb Ye Qing late at night.

Li Huaxing vowed that if he saw the master Jin in the future, he would put on his most sincere smile.

It's a joke, a cold-blooded killer who's up?

The key is this guy is a top-level mechanical engineer. Repairing firearms is easier than repairing toenails. The combination of these two will erupt unimaginable power.

What the Master Metal Expert is doing can be described as earth-shattering. But in Nigeria, this fact not to mention the headlines is good enough to occupy a corner in a local newspaper.

As for who's engaged in the rally, the local police don't want to control it, let alone dare to control it.

Just kidding, my eyebrows shot.

The seven people who were shot in the eyebrows and the weapons they carried with them, didn't even have shot.

All the bullets in the eyebrows came from the same weapon.

There will never be militants who take the loaded assault rifle to ambush people. Because, in the end, they will have suddenly their brains withdrawn from his place, letting one shot steer them to their end?

What this shows is self-evident!

A brief survey of the scene showed the police in Nigeria was so scared that even the financials of those militants did not dare to search for the money. The road was cleared and the throttle slipped.

The original Master Metal Expert, who passed the security check, flew to Shanghai City by plane.

Before boarding the plane to Shanghai City. The Master Metal Expert finally reluctantly made a phone call and reported to Ye Qing that he could reach Shanghai Airport in two hours.

If it weren't for Ye Qing's questioning whether the road was safe, the Master Metal Expert wouldn't even mention it.

Ye Qing admitted he was dumbfounded. Although he knew that the Master Metal Experts' fighting ability was extraordinary, he did not expect such an extraordinary situation.

What kind of fierce hard work is the fighting force is ten, which is temporarily the first humanoid monster?

Let the company driver go to the airport to pick up the Master Metal Expert. Ye Qing took the second product rendering that has been completed by himself and discussed the mass-production line equipment with Master Jing.

The domestic sales of mechanical engineering chairs have dropped significantly. Nowadays, there are only hundreds of daily sales. Fortunately, sales abroad have risen steadily, just to make up for the domestic decline.

There is still sufficient stock in the warehouse, and Ye Qing is going to suspend the production of mechanical engineering chairs first, freeing up monsters to produce new products.

The second product is a high-tech product improved by Ye Qing based on strongly ionized sewage treatment water equipment.

The most obvious change between the two is in the frequency, and the power of the strongly ionized sewage treatment equipment is amazing, and it can evolve sewage within two kilometers.

Today's products use low penetration and high ionization.

This way of working, of course, is naturally not to evolve sewage.

The working methods are different, and the manufacturing process of the ionization generator is also different. This time Ye Qing used copper-silver alloy to make the coil and the shell did not need expensive powder metallurgy technology.

Instead, a one-shot injection molding machine is used to inject synthetic plastic made in a special process into the mold.

If you want to make the product more accessible to the people, the natural price cannot be set too high.

As a matter of course, the production cost of products must be kept as low as possible.

The injection molding machine is not difficult, a constant temperature storage tank and a pressurized injection system. Mainly look at the mold, the higher the accuracy of the mold, the more high-end injection molded parts.

Ye qing would like to ask the mold manufacturing accuracy, who can surpass the Monster Heavy Industry?

A total of six injection molding machines were produced. Each injection molding machine has a set of mold plates that can produce twelve products at the same time.

When Master Jing and Ye Qing were discussing the production line, the six injection molding machines over there had already begun the production of housings.

The synthetic, plastic fluid heated by high temperature is blown into the mold under high pressure. After ten seconds, the synthetic plastic is cooled. The mold is automatically opened. The plastic clips responsible for reclaiming are used to remove the synthetic plastic parts.

Elegant black, rose gold, matte silver.

Three colors are available and organic minerals are added directly to the synthetic plastic for color matching. And also add antioxidants, so that the shell can be used for ten years without aging.

After a discussion of the coil production of the ionization generator, Ye Qing decided to adopt a very innovative and very bold method of mass production.

Handmade!

The coil of the ionization generator is extremely complicated, and it is not a traditional motor stator winding structure. It's an asymmetric polygon, only the size of a palm.

If an automatic winding machine is used, even a Master Craftsman must scratch his ears and cheeks. In the end, he can only design three machines according to the different steps and operate them in sequence.

It is a waste of time and an increase in electricity costs.

But with a pure manual winding, it can be done in one step.

This is a mass and purely manual production method, which sounds incredible. The manual has always been synonymous with backwardness and inefficiency. An electric loom has a workload of one hundred times the speed of manual weaving.

In the modern industry of China, it took decades of hard work to finally upgrade the industrial chain to the level of mechanical automation.

Now, Monster Heavy Industry has to go back again, using manual work, and mass production?

It sounds like fate, but it's all possible in the Monster Heavy Industry.

Because Monster Heavy Industry has just manufactured a robot prototype because manual production is not done by humans, but a robot that is more flexible than humans.

Just like giving the robot a set of correct electrical signal control instructions just like operating a machine tool, it can completely imitate human hands. Quickly wraps around the most standard ionization generator coil.

How fast is the robot's hand speed?

After strengthening the materials and motors, the robot can start a group of horsepower. It only takes one minute to complete the coil that ordinary people need to take a day to wind it.

It's okay to have one hundred of this stuff, and Ye Qing has to like his wit again...

Busy regardless of day or night, Ye Qing has been busy designing production lines for new products for four days. Fortunately, the production of robots requires only a slight change in the production line of mechanical engineering chairs.

On the fourth day, Ye Qing went to [Xin Chuang Future] Co., Ltd. in Dongguan City, and the employees of the company who made production line purchases returned to Shanghai by train.

They also brought back two sets of magnetic induction production lines and a digital processing system that was reprogrammed and adjusted according to Ye Qing's requirements.

It usually takes a technician working during a week or two to assemble the debugged production line. And it only took a day for the monsters to set it up.

No commissioning is required, and the material can be produced directly after it is in place.

These two production lines are in place, indicating the second product can finally enter the mass production and stocking state.

After employees' day and night tests, according to the feedback report. They changed back and forth more than fifty times. And the light names were replaced with the third-generation robots of the prototype.

It also follows the finalization and enters the mass production and stock update.

There are two types of robots, industrial robots, and home robots.

[Chapter 313: If Sales Is Empty](#)

There was a lot of attracted attention in China's population, with the approaching of the release date of the film "She from the Alien."

Basically, the posters at the entrances of the major cities were painted with the interstellar spacecraft that fell from the sky.

Ye Qing had also followed the promotion, he had been letting the company's employees on the official website, there were two new products that will shock the online news.

As soon as the robot's web news was finished, the network department began to produce the second.

There were two types of robots, industrial and domestic, and the name was also been officially changed to the commercial name after the stereotype.

[Explorer 1], [Guardian 1].

The explorer is for industrial use, and the guardian is for home use.

The improved robots; The industrial type still uses the alloy operating suite with strengthens the joints and stability, and the home type is improved into a wearable made of soft composite materials.

After replacing the VR camera and VR display, the robot's operability is greatly improved.

Even ordinary and new people to the machine can easily point the robot hand at objects. The industrial version adds strength feedback, while the home version limits the strength and strength of the robot's arms to ordinary people.

And the robot hand is wrapped with a softer synthetic material, which can avoid the embarrassment of novices crushing eggs or glass.

Two kinds of robots with different uses have detailed HD pictures on their websites.

As soon as this news came out, Ye Qing thought he could get some praise. But in the end, he was almost questioned throughout.

"Robot? According to the official website news, this kind of robot must be controlled by human hands. There does not seem to be any intelligent software driver. What he can do, we can do the same. I think it is not as practical as mechanical engineering chairs were loved by the majority of users. "

"I said, what's the matter with Monster Heavy Industry? I cannot learn from Huawei, Xiaomi, or even Apple, and produce some products that are close to life?"

"Although there is no price, according to mechanical engineering chairs, this robot will never be cheap. Poor people like me must not be able to afford it."

"If this kind of robot can really perfectly simulate human hand movements. It will definitely shine in industry and medicine. But in the family, if you have money to buy it, you can hire a nanny."

"This robot is certainly not cheap. Even the giants of network terminal equipment manufacturing, such as Huawei, have followed the introduction of low-priced mobile phones. Monster Heavy Industry products are good, but the price..."

At present, the official website of Monsters Heavy Industry had about 20,000 daily active members.

Most of these people are customers of mechanical engineering chairs. In addition to communicating some fun control programs, they also talked about economic and current affairs in the forum.

After all, the eighty-eight thousand engineering chairs that could be bought were themselves reserved by local tyrants well-informed. When these tyrants get together, they naturally have many common topics.

They have always believed this kind of robot that Monster Heavy Industry is about to launch is another type of Titan 1. It was only suitable for industrial use. It is not used in family life.

After all, in the consciousness of these users. The robot must have a high degree of intelligence, such as the ability to bring tea and water by itself and clean them for a living.

It is better to do everything for yourself than to do it yourself.

Is it a protector?

Just the name makes them feel inappropriate, and it is better to call it by the remote-control robot.

Although the first product impressed them. Then, when the second product news was published, they were collectively confused.

[Ionization Purifier].

Although this product had a name, it is the working method and the three different colors of high-definition pictures did not let the users still did not know exactly what it does.

Slightly larger than an Apple 7p, with streamlined beautiful lines and a two-inch LCD display panel.

As an innovative product that Ye Qing has defined. The answer was always revealed at the last minute. As being on the market, it was even more sought after than the iPhone.

Like many technology companies, it played a trick called marketing.

"Ionization purifier? I guess it is a water purifier that can use ionization to absorb impurities in water."

"How do you purify water with this appearance? I guess it's air purification equipment. Haze is more common in big cities now. My wife suffers from asthma. Every autumn, she will have difficulty breathing because of poor air. The air purifiers produced by the company have little effect. The Monster Heavy Industry will produce air purifiers. I will definitely put a few in the home. "

"One hundred percent is an air purifier. Ionization can turn fine dust into charged particles and move in the direction of opposite magnetic poles. However, products with similar technologies have appeared on the market. And more are gimmicks, which are not practical."

In the office, Ye Qing used its mobile phone to brush the official website for most of the day. When he saw this group of users guessing and discussing the function of the second product, the corner of his mouth rises slightly, showing a satisfied smile.

Within five days, two new products launched by Monster Heavy Industry will meet with users.

Ye Qing had conceived that after watching the product demonstration, the ionization purifier will surely make them fall into a crazy buying force.

Before going on the market, the two products also need to obtain sales licenses, 3c certification, and Internet access certificates.

The certification of the ionization purifier was well obtained. It was sent to the testing agency to detect that the ionizing magnetic field generated when it works will not cause harm to the human body.

The industrial robot its verification was done without any obstacles for use. Home robots need to be rigorously tested for their safety.

In other cities, safety testing may take a month or two to get a certificate. In Shanghai, as the first heavy taxpayer and has made a lot of contributions to the Monster Heavy Factory, it deserves to enjoy the privilege of expediting these certifications.

The first application of 3c certification is more complicated. It is necessary to register the factory name first and entrust the agency to inspect the factory. After that, the application will be much smoother, especially if it has already been obtained; including patent applications, product certification has been carried out from the moment the project was just approved. Two days later, the network information laboratory, mechanical laboratory, industrial and commercial bureau, and quality supervision bureau of Shanghai University jointly issued a product inspection report.

Detection and confirmation: [Guardian Type 1] mobile network access technology, because of its innovative use of unbreakable hardware encryption technology, can pass network security certification.

Structural certification is no problem. The safety structure designed by the ingenious Master Craftsman made a group of engineers in the mechanical laboratory almost were dumbfounded at his structure.

The certification was obtained. On the day when the product goes online. It was expected that the machine will be able to stock 10,000 units and the ionization purifier may be stocked by 100,000 units.

When the sale runs out, funds for upgrading the monster factory's fifth stage will be available.

[Chapter 314: The Big Scene Arrives](#)

Ye Qing had faced little pressure, the sales of robots were not accurate, and the ionizer was iron nails.

The next day, changes were made to the construction site of the Blue-Sky Building.

After a month of preparatory work, her cousin Liang Wenjing finally had set up the building's construction team.

There were thousands of people and countless mechanical equipment.

Today, workers' living areas have been set up on the construction site. They have built for all workers, insulating cardboard houses. In addition to the necessary living facilities, there are also medical offices and security rooms.

Now that all the piles in the foundation pit have been poured, civil air defense works will be moved tomorrow.

The support column has been poured to the bottom of the civil air defense project, exposing the strong and thick alloy steel bone.

There were four Mechanical Colossus Type X at the top, and circular holes were cut with cutting wheels.

The Mechanical Colossus Type X would have been cutting holes that could pass through the support column, and then the support column will pass through the middle of the air defense project to become the support column of the building.

In the afternoon of the same day, Shanghai TV came with two interview cars and temporarily rented a private box in the nearby Blue-Sky Building for high-level overhead photography.

There was a total of six cameras and two hosts.

Yu Fei and Wu Xiaoya are also Ye Qing's friends. They came to host and live broadcast the shocking scene.

- Mobile Civil Air Defense Engineering.

Since the huge of the Monster Heavy Industry Building was erected on the construction site. Shanghai TV had come to visit by themselves and promised they could take pictures of the civil air defense works. Shanghai TV had a lot of publicity on the live broadcast and also invited A civil engineer from Hailong Construction Group to serve as a live guest.

Hailong Construction Group is also one of Shanghai's largest, large construction groups. Five years ago, Hailong Construction Group had opened the Nanshan Longjun Community, and there was an old building on the site during the Republic of China.

This three-floors brick building is well-known locally because it is the former residence of patriotic businessman Mr. Zhang Qinglao. He had donated two schools, a pier, and seven bridges to his hometown during his lifetime.

The old building itself was also very distinctive, and the Shanghai government has kept it.

Hailong Construction Group purchased this plot of land and relocated the three-story brick site by 300 meters.

The relocation project was lively, live broadcast on the TV station and hundreds of people were watching on the spot, making Hailong Construction show its face fiercely.

It was this civil engineer who was in charge of the migration at the beginning. After all, no professional was present at the scene. And he hoped that the moderators who did not understand the concrete numbering of concrete would not make the audience laugh.

In addition to Shanghai TV Station, another group of people had set up cameras in the Blue-Sky Building.

They were the tracking staff sent by the major construction companies. After a month of tracking, they will finally usher in the final moment.

Although the reporter was also shot, he was an amateur after all and did not focus his real attention on what they want.

After a day of preparation, whether it is Shanghai TV Station or those who have been waiting for a month, they are all of them ready.

They clenched their palms and waited the next day waiting when the Monster Heavy Industry to realize this feat that seemed impossible to ordinary people.

In the eyes of ordinary people, this is a lively scene comparable to the Mid-Autumn Festival Lantern Festival.

The next morning, a civil air defense project move was scheduled at 10 noon's, and many citizens had gathered around to watch at 8:30.

The workers especially demolished the construction wall temporarily, and only pulled up the isolation zone, so as to facilitate the passages of the citizens.

On the side of the old department store, there was originally a large square that could be used for civic activities. Now dozens of people in the square have slowly expanded into hundreds.

There were more and more people, almost half of them did not want to watch the news on TV. After all, liking to watch liveliness is a common problem among people all over the world. Now in the construction site, there was again a camera and a news interview vehicle. Even people who have not heard of the news know there will be a big scene soon.

There were really big scenes. The four Mechanical Colossus Type X here will be enough to draw attention.

When they learned from their side that the Monster Heavy Industry would move this air defense project to make room for the building, it was a completely surprising expression.

Time reached nine-thirty, and two or three thousand people had gathered in the square.

This is the most prosperous street in Shanghai. The traffic is similar to the stars in the night sky and even the nearby buildings are full of people.

At this time, in the Shanghai TV station, the young bald host Xiao Song, who was talking slowly, was sitting in the live broadcast room.

Next to him is a civil engineer at Hailong Construction Group.

His name is Yuan Qing Xiao. He graduated from the Department of Civil Engineering of Fudan University and obtained a doctorate degree. In 1991, he also visited the Department of Civil Engineering of the Technical University of Braunschweig, Germany, as a visiting scholar. Now he not only works for Hailong Construction but also serves as a researcher of the China Engineering Construction Standardization Association and a member of the pile foundation academic committee of the China Civil Engineering Society.

Yuan Qing Xiao is 50 years old and has a straight face with narrow eyes, which makes people laugh awkwardly.

At 9:30, the live broadcast officially started.

"Dear viewers in front of the TV, everyone is welcome to watch this special live program" Mobile Civil Air Defense Engineering. "I am the host Xiao Song."

The young bald host, Xu Xu introduced: "Presumably we Shanghainese people will have such a place in memory."

"He was a paradise when we were kids. There are shops for toys and flowers, and various snacks can be bought there."

"It was built in the 1980s, a department store in the minds of many residents."

"Unfortunately, today, it can no longer meet our increasingly diversified shopping needs. Last month, the department store in everyone's memory was demolished and blasted off. We were preparing to build other types of commercial buildings. "

The host Xiao Song turned his voice and raised the volume: "It was because of the demolition that we saw it, and it was hidden at the bottom of the building..."

A three-dimensional rendering of a civil air defense project appears on the large screen behind him.

Host Xiao Song, referring to the teleprompter, began to introduce the background of the civil air defense project and the difficulty of construction.

Finally, after he explained to the audience that when all the companies were unwilling to take over. Monster Heavy Industry decisively shot and was preparing to build a new Shanghai highest skyscraper. The cameraman turned the lens to Dr. Yuan Qiangxiao.

"Dr. Yuan, can you explain to us why this civil air defense project cannot be dismantled?"

Facing the camera to do a live broadcast, this feeling made Yuan Qiangxiao flutter a little.

"Because after the demolition, there was a defensive fortress capable of resisting nuclear explosions. This is not an underground prevention and control shelter for ordinary high-rise buildings. Naturally, it cannot be removed."

"It's just not easy to dismantle."

"I'll tell you something. Six months ago, Chengdong Hospital demolished an old building and rebuilt the parking lot. There is a magnetic resonance examination room in the old building."

"This old building was demolished by the excavators in only two days. But to demolish that magnetic resonance examination room, it took two excavators working for a week to demolish it."

"Because of the magnetic resonance examination room, a one-meter thick concrete needs to be built to shield the magnetic field."

"It took so long to demolish a 30-square-meter magnetic resonance examination room. So, for how many days should the civil air defense project be demolished?"

"So, Monster Heavy Industry is facing the dilemma of wanting to dismantle without technology."

"As for how to move it, I personally look at it professionally, I think this is simply impossible."

[Chapter 315: Civil Air Defense Works Moved](#)

"As for how to move it, I personally look at it professionally and find it impossible."

"When we moved that building in the Republic of China, it took for us one month to cut the bottom of the building and reinforce it.

"If you want to move it three hundred meters, you have to lay a three-hundred-meter track and use a hydraulic press to push it over."

"But moving 250,000 tons of civil air defense projects cannot be realized from the current technology point of view. Yuan Qing Xiao raised his tone and said," according to their opening on the civil air defense project, they always chose the hardest way to move it. Move the civil air defense project from top to bottom. "

"There are more than twenty minutes to start, and we will wait and see."

"I'm also curious." The host turned his eyes to the big screen behind him and smiled: "Let's connect the host in front of the line and let him present the scene to us."

"Hello, host." Yu Fei, one of Zhongdan TV's heads of Huadan, stood in the square near the construction site and smiled.

"I think everyone is curious about how this 250,000-ton civil air defense project will be moved."

"Now we have learned from the scene that the civil air defense project will choose to move down to the third-floor underground. While the Monster Industrial Building has five floors underground."

"Let's come to the bottom of civil air defense engineering and see if we can unravel the mystery of how to move it."

Along the excavated ramp, Yu Fei and the cameraman carefully descended into the foundation pit, which was 22 meters deep.

At this point, even the host and Yuan Qing Xiao were shocked by the turned images.

The huge steel wall rising from the ground, the steel walls crisscross, I did not know how long, shimmering with a cold luster like metal.

Standing in front of these magnificent steel walls will give people a feeling of being very small and shocked.

Among these steel walls, there are other straight columns standing up. If you see one of the twelve main support columns, you will definitely think that it can even be easily lifted mountains.

"I... Oh my God, this... Is this the pillar that supports the building?" The young bald host his tongue was sort of knotted, said buzzingly: "Dr. Yuan... Is it necessary to build such a magnificent column before building a building? "

Yuan Qing Xiao said that if we follow the method of the Monster Heavy Industry. With this method, the price in Shanghai must not rise to 50,000 Yuan a square?

Out of prudence, Yuan Qing Xiao, while surging the tone and agitating in his heart. He took another serious look at the bottom of the civil air defense project to see if there were any mechanical power units such as hydraulic machines and jacks.

Doing translational thrust on a building is far more energy-efficient than up and down thrust.

But this civil air defense project can only move up and down because there is no space to move it left or right.

And these pillars all have a feature. At about the negative three levels, there will be a circle of flat surfaces made of silver-gray metal. According to his professional vision, when the civil air defense project would come up with the third sub-floor, it will just get stuck on these extra metal pillars.

The civil air defense project weighs 250,000 tons, and there are more than 600 pillars. On average, each pillar only bears 400 tons.

There is no problem in supporting the weight of the pillar. But the bottom of the civil air defense project can absolutely not bear its own weight in such a small area.

As a simple example, the contact area of a chopstick makes it difficult to lift a piece of pastry.

"Ha ha ~" Yuan Qing Xiao wanted to point out this obvious omission, and the camera shot the upper part of the civil air defense project.

There was a huge alloy dome, apparently made of alloy sheet metal, welded together. The margin of the dome is also the margin of civil air defense engineering.

This result made Yuan Qing Xiao for a long time stunned without saying a word.

What else can he say, lift up the air defense project with an alloy sheet of 15,000 square meters? It is equivalent to placing an iron plate under the cake. What can he say in front of this kind of Shanghai-style pen? Where Jia does not fake white jade to make horses for Tang Jin, what else can he say?

Find topics without words, for example, but he has not found any mechanical power equipment so far.

The shocking steel walls that support civil air defense engineering are also a whole.

"I think... Monster Heavy Industry is joking with us." Yuan Qing Xiao touched his nose, and his voice was a bit ridiculous: "They want to move the civil defense project to the third-floor underground but without any mechanical power equipment."

Among the teachers of the Department of Mechanical Engineering at Shanghai University, those students who had been assigned homework by Professor Cai Chenning were staring at each other.

They guessed all kinds of possibilities and designed various schemes, and never expected that it would be a scene where only enough support columns were cut.

"That doctor is so low-level that it makes me laugh awkwardly."

"What doctor? Maybe it's a nursery for money."

These students have special worship for Ye Qing and Monster Heavy Industry. How can they get used to people saying he didn't do well on TV?

The time slipped by in guessing and discussing.

When the hand was pointing at ten. The audience in front of the TV, the citizens in the square, all stopped discussions by accident.

It seems...

The long-awaited scene is about to begin.

"Dr. Yuan, do you guess that Monster Heavy Industry can smoothly move the civil defense engineering to the third-floor underground?"

"No, absolutely not." Yuan Qing Xiao shook his head: "I said it under my responsibly."

"Then suppose the civil air defense project has really moved to the third-floor underground, can the Monster Heavy Building be built successfully?" The host continued to ask questions.

"It's really three floors underground, and the weight of the building has also been transferred to the support columns. The ground buildings are directly connected to the support columns."

"Only can the building be unbuilt smoothly, but the Monster Heavy Industry is also equivalent to an extra-strong and strong permanent fortress that can withstand nuclear shock waves."

"The problem is Monster Heavy Industries cannot move this air defense project, or that cannot move it today."

"Boom ~ Boom ~"

Just at the point where Yuan Qing Xiao spoke, the TV staff responsible for interviewing on the spot suddenly found that the rocker camera frame suddenly shook.

There was a thunderous day on the peaceful construction site, and the voice was so loud that even the earth was shaking.

The sound came from inside the foundation pit, and it was magnificent.

"The civil air defense project moved!"

"Oh my God, everyone, look at that. The civil air defense project on the construction site is moving, it is sinking."

"Dr. Yuan ~ Dr. Yuan ~" the host stuttered and yelled: "can you explained to me how the giant beast did it?"

"This is unscientific, why does it move?" Dr. Yuan felt his face was redder than a soldering iron.

The 250,000-ton air defense project, sinking slowly into the ground, was filmed by countless cameras and mobile phones.

At this moment, the audience at the scene were stunned and looked at each other.

Why does the civil air defense project move?

Obviously, there was no mechanical equipment or signs.

The crowd was shocked and fixed most deeply at the scene held their breath and even forgot to shout.

This is an indescribable and shocking picture. Under the sun, it was entangled in the foundation pit, and the 250,000-ton civil air defense project slowly subsided.

The civil air defense engineering did not sink so quickly, but when it sinks a distance of a fist, it also causes a huge shock.

Except for Ye Qing and the monsters, no one knows why the civil defense project will sink.

It seems like no one knows, in fact, those shocking steel walls are two billion flood wall orders from Liangjiang City.

The massive flood prevention wall that can surround Begonia Island supports a civil and trivial air defense project.

The flood wall is installed with upper and lower pallets, and then ejected to the maximum distance, and when they are retracted by the hydraulic system. The civil defense engineering can be accurately lowered in height.

[Chapter 316: Commencement Celebration Dinner](#)

The flood control wall of Liangjiang City needed still one week to be delivered, and Ye Qing needed to spend this week on the construction site to test the product performance.

As to say, this incidental test completely will be shocked, everyone.

But now let's spoke of the civil air defense project and its displacement.

The stalkers in the building next door almost stared at the retina full open.

They have been looking at the huge vertical and horizontal steel walls used to support the civil air defense project for a whole month, but they have not seen any clue.

They felt it was really a supporting wall in the ordinary sense, at best it was a beautiful supporting wall.

But today, these innumerable steel walls are slowly falling in a shocking attitude.

Negative one meter!

Negative three meters!

Minus five meters...

The civil air defense project slowly moved towards the depth of the foundation pit.

The mechanical Colossus Type X's X-shaped support column precisely passes through the holes drilled in the civil air defense project.

Ten minutes later, when the 250,000-ton civil air defense project had reached the supporting ring composed of 633 supporting columns, a sound of rolling steel collision and thunder spread from the foundation pit. The thunder and lightning swept a thousand steps, and everyone in the nearby building could feel the eardrums buzzing.

The thousands of people standing on the square, one by one grinned their teeth and they plugged their ears.

"My God, do you see how this air defense project went down?" Someone yelled, "why did it just go down?"

"I didn't see it. I thought I'd come to see hundreds of experts with blue caps. And then I would spend the whole afternoon before I can start installing the machine or something? "

"Although I don't understand why it sinks, it's really exciting. It's more exciting than watching Hollywood blockbusters."

Compared with the crowd at the scene, the audience sitting in front of the TV can clearly see the entire process of the decline of civil air defense engineering.

The six cameras are all-round, not only for aerial photography. There is also a camera erected in the foundation pit, which perfectly records the magical decline of the crisscrossed steel walls.

All the residents nearby came out. How can they enjoy watching TV?

"Dr. Yuan, Dr. Yuan?" The host Xiao Song shouted vigorously beside Yuan Qing Xiao, who was still out of the world and dazed.

"Dr. Yuan, could you tell us why this civil air defense project sinks magically?"

"Uh-huh ~ This is really amazing, I think... this..." Yuan Qing Xiao stuttered for a long time and didn't know what to say.

The director made a wink, and the host Xiao Song said very cooperatively: "Let's interview the audience and ask them what they think?"

Standing in the office of the Blue-sky Building, Ye Qing looked down at the civil air defense project which was supported by pillars and lifted. He was in a high mood and excited.

Some other employees in the company were also stood quietly at the window and looked at the construction site below. Everyone was equally excited.

For the project of civil air defense, the most difficult was done, the civil air defense project was cleverly transported three stories down, saving a lot of money.

Most of the support columns pass through the middle of the wall, which not only does not affect its structure but because of the existence of the support columns, the structure becomes more solid.

In the next step, workers will rectify the inside to make space use more reasonable, and then install modern ventilation and lighting systems.

When the supporting walls, which serve as flood control walls, are removed. The second and fourth basement floors will be constructed simultaneously. And the bottom of the foundation pit will be poured with a four-meter thick floor.

In the central main support column, the entrance to the underground base has been temporarily locked by the monsters with an alloy cover.

If they want to get in and out, they can pass through the middle of the civil air defense project, a secret passage hidden in the warehouse and connected to the central main support column.

The explosion-proof door of the warehouse has been replaced with a more sturdy hard alloy door and a door lock with a purely mechanical structure. Unless it was bombarded with more than two hollow-loaded rockets. So, don't try to open the explosion-proof door.

To celebrate this event, that night, Ye Qing held a building start dinner at the Sheraton Hotel.

Ye Qing invited Bai Douer, Yu Fei and Wu Xiaoya, who presided over the meeting in the morning.

The several managers in his company, Liang Wenjing, who is responsible for the main construction task of the building and his team's main person, as well as the supervision company responsible for building quality supervision.

There was nothing fancied at the banquet, and it was simply eating and drinking. Of course, he will settle in the construction site tomorrow. Ye Qing did not forget the workers responsible for the construction of the building.

He will give each company's employees a red envelope and new daily necessities.

It was twenty minutes since the party began. Ye Qing and the guests at the wine table raised two glasses together, then slipped out first and ran toward the door.

He has been waiting for a long time Bai Douer, she was finished filming the food show in the afternoon. She would drive back from Longji County, more than 300 kilometers away.

Just on the phone, she said she had passed the Caiyi Bridge. Ye Qing estimated the time and guessed she was almost there.

The weather was getting colder and colder, Ye Qing gathered her lower collar and looked up at the dark night sky aimlessly.

There was an airplane flashing with navigation lights, passing slowly in the night.

When the Monster Industrial Building will be completed, standing in any corner of the city, you can admire the building that pierces the clouds that fill the sky and Ye Qing will buy a private helicopter.

Perhaps by the time when the building will be completed, the monster factory already will have advanced industrial technology for making aircraft.

The telephone ringing interrupted Ye Qing's thoughts. After answering the call, Ye Qing continued to look at the sky: "Hey ~ Did you come to the hotel? I'll wait for you at the door."

"Hello ~ Do you guys answer the phone and don't look at the number?" A familiar, slightly ridiculous laugh came from the phone: "My classmate Ye, am I..."

"Did a good thing that bothered you to call me?"

"Huh?"

Ye Qing froze and did not respond.

He thought Xu Ninggong was going for a ride in China. After all, the two had just called by phone.

"What and what, I hosted a start-up dinner at the Sheraton Hotel, and I invited Bai Douer to attend."

"Wow ~ then why don't you invite me?" Xu Ninggong changed his poor voice with a little grievance.

Ye Qing said with a smile: "why do you want to be invited? Didn't you still post the news in the circle of friends yesterday, saying that because the new movie was released, you were busy becoming a dog?"

"The movie premieres tomorrow night and I want to give you a few movie tickets." Xu Ninggong snorted.

"I happen to be coming to Sheraton. You are waiting for me at the door. I will give you movie tickets."

Xu Ninggong is running all over the country this week and busy with new movie promotion activities.

The movie will be released tomorrow. The premiere is set in Shanghai, an international metropolis. Because the filming is in Shanghai, the Sheraton Hotel kept its long-term guest room. She will stay one night and depart away from Shanghai tomorrow.

After waiting five minutes, Ye Qing looked at a white GMC RV.

"Hey ~" Wearing a cashmere jacket, Xu Ninggong, who was wearing a navy-blue evening dress got out of the car and waved with Ye Qing.

"Did you have dinner?" Ye Qing nodded his head at her.

"Do you think I had dinner?" Xu Ninggong clenches his mouth.

"Then go to my side to deal with the meal." Ye Qing issued an invitation to her.

A Haval off-road vehicle with the Shanghai TV LOGO sticker on the front of the car slowly stopped beside the welcome station.

A girl in a sky-blue wool sweater pushed the door of the car. Like water, her hair dangled in front of her eyes. Even if she only glanced at her, she could close her eyes and clearly outline her beautiful face in her heart.

[Chapter 317: A bold move](#)

Xu Ninggong took out the movie ticket from his handbag, and it looks like there were ten tickets whiles looking at their thickness.

Bai Douer coming to the welcoming table saw some of the incidents of the two people, and the orange lights gave her a beautiful layer of the veil.

Ye Qing also saw Bai Douer at the same time, after all, he came out to wait for her.

"At eight hours tomorrow night, Hengdian Studios movie tickets, do you have time to come and watch it?" Xu Ninggong proudly raised Ye Qing's movie tickets: "Ten days ago, the movie tickets were snatched out. Even as I am the leading actor, I cannot get too many internal tickets."

Ye Qing nodded, turning his eyes behind Xu Ninggong.

Xu Ninggong turned back inquisitively and froze when she saw her.

Looking at each other, Xu Ninggong smiled and stretched out her hand: "Hello, we meet again."

"Hello, Xu Ninggong." She sighed softly. Even if she didn't like Xu Ninggong. She had to admit that the superstar's temperament, in reality, was far better than that in the movie.

Standing with her, she felt like a little girl who hadn't grown up and seemed to be nowhere near her.

When seated, she and Xu Ninggong sat beside Ye Qing each one from one side.

Although there was no strange behavior, the male compatriots at the banquet hall looked at Ye Qing with strange eyes and seemed to be complaining. It was really good?

Ye Qing also felt it was not very good. For example, when Ye Qing was alone, the group only raised two toasts symbolically. At this time, he didn't know what evil wind was going on. One by one, they come here alone to took toast with him.

Respected and respectful, along with the two ladies around him. After a bold man got up, the toast couldn't stop.

Ye Qing was in a good mood today, and he was drinking such small wine glasses.

The wine of Xu Ninggong and Bai Douer was also blocked by Ye Qing.

After three rounds of drinking, Ye Qing felt that it would not be a good thing to go on like this. He simply held up the wine glass and stood up. Holding the wine glass and surrounded by the audience:
"Tomorrow is the main moment of our Monster Heavy Industrial Building. And I have to rely on you for your help."

"Come... let's toast together."

After the audience drank, Ye Qing announced that a new science fiction movie will be projected tomorrow on the cinema screen. This film was invested by Monster Heavy Industry and continued to raise his glass.

Maybe it felt like this, and Ye Qing was likely to get drunk. Bai Douer and Xu Ninggong stood up together, and they proposed everyone should have some entertainment, singing, and dancing.

Xu Ninggong, the singer woman, is here. This proposal made everyone applaud.

The audio-visual equipment in the banquet hall was one of the top imported brands in the audio industry, Berlin Voice, and no one proposed who would sing first.

Of course, Xu Ninggong could only be the first one to sing. She went up, and no one wanted to go up.

Yang Baihe, the manager of the propaganda department, and the two girls beside her quietly said something. She stepped up to the stage and passed by Ye Qing, and quietly made Ye Qing's eyes difficult to understand.

The answer was soon revealed. When the lights dimmed, Yang Baihe stood on the stage and sang a very classic "Scarborough Market."

This song has a soothing tempo and is perfect for dancing.

Sure enough, the two girls from the Dance Club of Shanghai University laughed and pulled up the two classmates and colleagues next to each other. And began to dance gently with the music.

The atmosphere was so good. The remaining male compatriots of the company, as long as they are a little bit courageous, each one had sent an invitation to his favorite candidate woman.

Xu Ninggong didn't go too far and Bai Douer felt that dancing with Ye Qing was the more appropriate.

Ye Qing got up and grabbed her little hand, and drank some wine. The flushed cheek did not refuse, but the flush was better than red.

"Haha ~ I'm not very good at dancing." Ye Qing had no reason to be nervous. He shook his head at Bai Douer and said shyly he was not good at it.

Sometimes, you don't need knowing how to dance. As long as two people have a tacit understanding with each other, they can naturally fit into this atmosphere.

Gently holding on to the soft and slender waist, looking at the beautiful face close by, and looking at her happy eyes.

Ye Qing felt that at this time, it seemed more suitable to kiss her instead of dancing.

It seemed...

The light was getting darker. Leaning against Ye Qing's chest and she felt he was heavy, the gentle music sound gradually disappeared, and there was no talking sound around them.

Maybe they were off the court. After all, neither of them was able to dance. They just hit other people because they didn't control their pace.

The music was getting smaller and smaller, and they couldn't hear it at the end.

A feeling that made her feel so daring rose from her heart.

It seems that the dim light, and the factors far away from the crowd, finally got up the courage to do what she wanted to do.

Ye Qing was still secretly keeping the smooth dance steps of a pair of subordinates next to her. He was unprepared at all and did not reflect it. A pair of warm and soft lips were put on his cheeks.

The touch stayed for only a few seconds, and it seemed to leave with a touch of panic, leaving only a slight residual temperature.

Ye Qing was stunned, and it took a long time to reflect what Bai Douer had done.

There were a few apparently depressing surprises inhalations, and the singing on the stage not far away also paused for a few seconds.

Afterward, the song was accompanied with obvious pride.

Opening his eyes, the heart almost beat by the huge dizziness stopped beating.

Where is the music disappearing?

What's out there in the crowd?

All these are hallucinations produced by her too intoxicated. She and Ye Qing are in the middle of the crowd, under the soft light, at the focus of everybody's vision!

The blush quickly covered her cheeks, and she could not escape the white neck and became brighter than the peach.

.....

At 11 o'clock in the evening, Ye Qing got up and returned to Longxitan Factory.

As a bodyguard. If you are curious, you can't help but ask Ye Qing, why keep rubbing his cheeks and lips along the way?

It was just a matter of rubbing. How can the smug smile on his face get stronger and stronger?

It's a pity that Juli has no curiosity, and even if Ye Qing laughs happily in the back seat, he remains indifferent.

When the Laguna drove into the brightly lit factory, Ye Qing was still thinking about what is happened and finally sent these events away to go upstairs.

In fact, nothing to forget that was, in the corridor, Ye Qing held the wall coolly with one hand and blocked Bai Douer against his chest.

In the case of retreat, Bai Douer leaned against the wall tightly and closed his eyes at the command of heaven.

"Ahaha ~ Ahaha ~" When the car stopped, Ye Qing proudly walked into the transit warehouse.

This is a huge steel warehouse with I-beams as beams and columns, and 5 MM double-layer low-alloy steel plates as walls.

The steel beams are neatly lined with star-like lights, and under the white light, they are [Explorer 1] and [Guardian 1] robots that can't be seen at a glance.

They have a streamlined housing and two robotic arms condensing the most advanced industrial technology hang down beside them.

If the wheeled chassis is replaced with a mechanical leg, the scene is definitely more shocking.

Ionizing purifiers are also placed in the warehouse. Looking at two new products that have reached the expected number of stocks, Ye Qing expects: "I hope you will not let me down. When the new product launch begins, it will surprise everyone."

[Chapter 318: National Premiere](#)

In the early morning of the next morning, in the Chenguang Science and Technology Center of Shanghai City, a venue layout work involving 50 employees of Monsters Heavy Industry was underway.

Chenguang Technology Center was an electronic technology entrepreneurial park on the west side of Shanghai City. There was a park that was established eight years ago in Shanghai City, specializing in attracting foreign investment in new electronic technology enterprises. The technology center was established five years ago, and it had Shanghai's largest LED splicing wall and holographic projection equipment.

The small product launches were naturally the best held indoors.

In order to make full use of the holographic projection equipment, the employees of the company had been co-operating with Phantom Technology Co., Ltd. to design the projection animation of the exhibition as soon as the product was finalized.

The science and technology center could accommodate thousands of people at the same time, and the exhibition was easy to set up. After all, the hardware conditions here were good enough. The employees

of Monsters Heavy Industry only had been needing to add some service aspects and the layout of the advertising wall.

The whole process had been going smoothly, but there was some embarrassment encountered in inviting guests.

The more natural people at the conference, the better. In addition to issuing invitations to mechanical engineering chair customers in several nearby cities and companies with business dealings.

Invitation letters were also sent to five TV stations and more than 20 mainstream online media.

The main customer group of Monster Heavy Industries was positioned for young and middle-aged customers. These people liked to get first-hand news from the Internet.

Therefore, this press conference, network media was the main force.

The embarrassment was here. In addition to the fast arrival of Shanghai TV Station, it had also provided professional video signals for free and broadcasts to the official website of Monster Heavy Industry. Of the remaining four TV stations and 20 online media, most of them had been said euphemistically that during the National Day holiday, there were too many movies and entertainment news waiting for them to interview, and they may not be invited.

However, for Ye Qing's sincere invitation, they send two reporters.

But the reporter had been to be paid three times as much as the usual market price. And after the end, Ye Qing had to give a big red envelope must to the reporter.

"Boss, we have just received a reply from Ant Technology Network." Yang Lily, the manager of the publicity department, contacted Ye Qing via an internal phone call. I'm sorry it doesn't match the style of our website."

"How many online media have accepted the invitation now?"

"Four online media have agreed to the invitation and said they will open a special promotion page for us."

"But these four are all very demanding." Yang Lily said while pursing her lips: "Those large-scale online media sites require us to pay three times the cost of the car and the reporter. So, we must pay for them and give a big red envelope before they can come to the interview. "

This news also made Ye Qing feel very speechless and took a decision for not sent out an invitation to the media and not making a decision today.

The company employees started to contact the media last week, but they did not give a clear answer. The press conference is scheduled to be held tomorrow evening at 8 o'clock. When the company contacted them to confirm whether it was necessary to set up an interview seat for them, they reluctantly gave the answer.

It is not difficult to understand that in the field of machinery, Monster Heavy Industry was very famous. For example, after receiving invitations, the four media did not make any requests but instead offered to open special topics.

But those large media thought about the golden week of National Day entertainment and leisure. Most believed that a new product release conference in a factory specializing in machinery was not worth sending a reporter for a special interview.

For example, groups such as Liu Gong and Wu Chai wanted to hold new product launch conferences, and most of these large media were reluctant to go to interviews exclusively.

It's a good feeling without style.

Users prefer to watch some news about smart technology and entertainment gossip, but about the new products in machinery, just reprint the news from their official website.

It may also blame these editors may also be not informed or not well informed and do not know that Monster Heavy Industry was the new movie equipment provider of Xu Ningong.

At this time, Yang Lily received another call and sent it to her boss. Ye Qing heard it clearly.

The other person introduced himself as the news editor of Kai Mao.

The fans speak very well: "I know the Monster Heavy Industry and your kind of mechanical engineering chair product is great. But this time, our editor is very demanding for your product."

"We can discuss your introduction to the robot. According to the product introduction materials sent, it doesn't have any intelligent technology at all."

"Would you like that?"

"The reporter interviewed 50,000 Yuan, the homepage news scrolled 100,000 Yuan, and the special introduction is one million Yuan?"

Ye Qing asked Yang Lily to hang up the phone, regardless of whether these large portal news sites would come.

Ye Qing knew that car and reporter fees for reporters were a common market. If they took care of him, Ye Qing would be happy to give three times the car and reporter fees, including a red envelope.

But just as the editor-in-chief of Kai Mao, other websites sent reporters, just perfunctory, and then went back to a very humble news connection.

Ye Qing thought just to give a good reception to the four website reporters who had taken the initiative to give special topics and let them with the rest.

In the evening, Ye Qing finished dinner, and slowly walked towards Hengdian Studio.

Tonight, is the day of the national premiere of "She from the Alien." It's a pity that Xu Ningong still had a shooting mission and cannot accompany Ye Qing to watch the movie.

The movie will be held at 8 o'clock, and Ye Qing strolled on the street. When he was free, he sent a few messages to Bai Douer. When he got to the Hengdian cinema, it was exactly 7:30.

Ye Qing nodded with satisfaction.

This is what it looks like in a movie. In the huge Hengdian Cinema, three of the six screening halls are dedicated to "She from the alien".

There is a circle of people around the ticket counter. They keep asking, when can I buy the latest "She from the alien" show? Wwww. 68mn?

There were no less than two hundred people gathered in the waiting hall to chat. There was a circle of people around the ticket counter, and there was constantly asking, can I buy a ticket for the latest "She from the alien" show, when is it the latest show?

"It's not too late for you. There's a midnight show at 12 o'clock." The conductor could not help waving.

"Buy ~ Anyway, what are you afraid of during the National Day holiday?"

Compared to "She from the Alien", the other blockbuster film released today also has a much worse treatment.

This is an action film in the Republic of China. Several stars starred in the same movie. The movies that can be shown on the National Day golden stage are either for big productions or for big stars.

In the three screening venues, the movie was about to start and there were still empty seats for sale, although it is the corner location.

At 7.50, the audience officially entered.

Positioned in the center of the fourth row, after Ye Qing took the big cup of Coke and sat down, there were little couples sitting right and left.

"Wen Wen, I grabbed the movie tickets online on the Internet for two days. It all stems from my love for you." The young man who looked like most at a junior high school student, holding the ticket stub, looked forward to the affectionate section from the girl sitting on Ye Qing's side.

"All right, Ajie, concentrate on watching the movie." The girl made a hissing motion: "don't be brilliant, it's all in the propaganda film. In order to see the film, we both have no money to open a room in the evening."

Ye Qing, holding a glass of Coke, almost choked himself.

[Chapter 319: Will Not Disappoint the Audience](#)

April 21, 2020

The girl next to Ye Qing glared at him and seemed to be saying uncle, how strange was your reaction?

Ye Qing ignored her and waited quietly for the movie.

Most of the audience who can come here to watch the premiere was the lucky ones who have spent a long time in line or had used their mobile phones to get their tickets for a long time.

People worry that the greater the expectations, the greater the disappointment after the movie.

"I'm so nervous. Will the promotional film and the movie be two versions? Do you feel like watching a cartoon after watching the movie?"

"Whether the national science fiction blockbusters will rise, it depends on tonight, and I am witness to it!"

"Hundreds of brothers in my game group wait for me to watch the movie and go back to give them a report!"

The lights were dim, and on the front screen, a fast-moving golden dragon suddenly passed by.

Along with the music, the golden dragon flickered onto the red seal.

The movie started, everyone stopped discussing and watched the big screen with expectation. Ye Qing was also a bit nervous, after all, he thought it was not good.

The audience thought it was good, and the subsequent projections were full, and they won the countless box office.

An interstellar spacecraft comes down from the sky!

When the huge hull pierced the clouds, a strong metal tremor came to their ears. In the cockpit, Xu Ninggong stood unstable her face was anxious. And her hands quickly operated on the console full of science fiction screens and buttons.

Slightly... Squeeze...

The huge spacecraft began to tilt, and the camera flew out, toward the earth that was getting closer and closer.

Be there?

Watching in a movie theater and watching at home using a mobile phone and a computer are two different perceptions.

More realistic pictures and more exciting sound effects. The most surprising thing is the lens of the movie. Audiences have never seen this kind of flying lens.

As the spacecraft bombarded the ground, the entire auditorium was full of cries, and it seemed to have just experienced a thrilling flight.

There was another dramatic shock. After landing, the spaceship seemed to have some energy inside to break out of the body which constantly shaking.

This was the rhythm in which the spacecraft's curved engine was about to explode. Those who had not seen the promotional video had even covered their eyes and were ready to scream at any time.

The action was fun. The eight tentacles were more flexible than the eight-level fitter to repair the mechanical spider. They stumble into the power room.

Its eyes were chaotic, and the steel teeth trembled, making a squeaking sound that clearly felt scary. When it raced against time to remove several key energy connection points of the curved engine, saving the entire spacecraft.

All the audience couldn't help screaming, clapping and clapping.

In just a few minutes, the audience was brought in by the immersive movie screen.

Half an hour later, the heroine became familiar with the earth's human. She quietly tampered with the university, added herself, and experienced college life.

In college, the heroine thoroughly demonstrated what she was from an alien.

On the first day of school, because of her beautiful appearance, she was picked up by a rich woman who drove a BMW in the college. As a result, the heroine spent more than one thousand Yuan from the car scrapping market to buy a scrap Santana, just using the technology and equipment inside the spacecraft to transform the scrap Santana into a concept supercar.

When making the concept supercar, several details made the eyes of blind viewers worse.

The first detail was to repair with the spider and scan the scrap Santana with both eyes.

A green laser flashed, and Santana's three-dimensional digital model immediately had appeared on the side display. The heroine could freely zoom in and out of the model by hand and she could perfectly show all details in the Santana engine.

This was not the kind of dazzling stuff in any sci-fi movie that was only drawn with simple graphics software.

This was perfect to even the engine piston ring, and a gasket can be compared to a sketch out of the shock digital model.

These digital models moved. Under the adjustment of the spacecraft's supercomputer, the originally deformed car shelled gradually became a perfect line. Together, these lines were a dynamic supercar coveted by countless male audiences.

There was no doubt that these three-dimensional model technologies are provided by Monster Heavy Industry.

The second detail was the process of repairing the Santana. By repairing it, the spiders had to look for some parts inside the spacecraft.

It seems that the car shell that could be thrown into the furnace for refining was removed by three silver-white mechanical arms that quickly protruded from above the worktable. They grasped the metal plate and folded the metal plate into a concept ultra-thin like a paper crane Running profile.

Everything on the screen, if it was computer CG production, it is easy to understand.

Maybe not.

Viewers have long been supported by countless Hollywood sci-fi blockbusters. Of course, they could distinguish these sci-fi types of machinery and equipment, and none of them was virtual.

Watching a scrap Santana, it was dismantled by robots, then bent into another shape, and reinstalled in the frame.

The audience all showed unimaginable expressions. It seemed that they were not watching science fiction movies, but special editions of alien technology that I love to invent.

The supercar shell is completely processed and painted. A hot laser beam shined on the front of the car.

During the beam walking, a piece had appeared many times, but the audience did not feel that the monster logo was suddenly formed.

The next day when the heroine drove in the super run with the monster logo printed on it, the eyes of the students and teachers in the school seemed to have become the indigenous people who had just entered the city in a primitive forest.

Then...

The audience in the screening hall blew up. I didn't know what they were cheering on. Anyway, howling there. I thought this plot was particularly enjoyable.

The same scene happened across China.

Whenever the movie "She from the Alien" is released, it becomes a sea of surprises.

After the one-hour, forty-five-minute movies, the audience who left the cinema couldn't hold back their excitement.

They yelled loudly, exhausted their strength, and told everyone who might hear.

Domestically produced science fiction movies could finally get rid of all the garbage these synonym films produced in Hollywood.

They had been waiting for a long time and have carefully watched the promotional videos over and over again, praying that their dreams will not be broken.

"She from the Alien" did not disappoint them.

The monster logo that seemed to have magical powers did not disappoint them. An hour and forty-five-minute movie, wherever it appears, there must be amazing sci-fi products.

Finally, the subtitles fall, and the ending egg. Are you telling the audience, who will create this technological visual feast?

"Ye Qing Palace!"

"Monster Heavy Industry!"

"Monster Heavy Industry!"

These words became a sign of excitement among the audience.

It was full at midnight, and it was full at two in the morning.

On the Internet, the three words of Monster Heavy Industry suddenly became the second most searched in just four hours.

The first is "She from the Alien." In the major forums, new posts are almost the content of these two keywords.

[Chapter 320: The Field is Full](#)

The screening hall was full at midnight, and it was full at two in the morning.

Almost anyone who had watched the movie had to use the most exciting language to describe the movie in social circles. Since the promotional video could only reflect the wonderful five minutes inside the film. "She from the Alien" film was simply shocking and exciting.

Everyone knew that blockbusters burned money, and above all in a qualified science fiction movie, mainly in such a film where the special effects CGI time, took the majority. But most viewers didn't have a very obvious concept of special effects burning money.

Let's put it this way, the domestic film special effects production team is always charging per second when producing special effects CGI that can only be called a blockbuster in China.

Simpler, it was needed twenty thousand to thirty thousand Yuan to do a one-second sequence. If it was a complex picture, especially CGI related to monster humans, the price was higher. And the audience joked saying that domestic sci-fi movies are special effects of fifty cents, which is quite correct.

In order to save costs, many crews use existing models already available abroad or reduce the fidelity of CGI special effects to save prices. But those are all based on the false. If there is a monster to shoot, there is no need for a dime of CGI special effects fee. And in the end, they take shots, they did not have to worry about how to save time and money.

The biggest difference between the two is the gap in visual experience brought about during movie viewing. No matter how realistic the CGI effects are, it is hard to escape the eyes of the audience. Especially when interacting with people, the coordinate points are not handled well. So, the actor becomes acting against the air, which can see the embarrassment of the audience.

The live shooting, it is true in itself. Whether it's light, shadow, color, interaction, everything looks so natural.

By the next morning, all major movie theaters chose to make the addition. The filming could be started at 7 am, and the time of entering and exiting was reduced to 15 minutes.

The advantage of the National Day golden week is that they don't have to go to work. Even at 4 a.m., they can grit their teeth to watch the film.

At 6.40 in the morning, the sun has not yet fully risen, the breeze is blowing. And the coolness of Wanda Studios in Shanghai City has begun to gather more than 500 people. They are waiting anxiously and lamely. It's the crowd stamping their feet and covering their heads with the clothes.

An Audi slowly parked in an underground parking lot. A well-known Sina Weibo film critic, Qiao Shengan, with more than five million followers, held a movie ticket and got on the elevator in a huff. Seriously, as a professional film critic and the most successful film critic in China. He shouldn't have been coming in line to watch the movie in the cold wind so early. There should be an appointment with three or five friends, and the movie distributor will personally provide a screening room for the private venue.

Okay ~

It's the National Day golden week, and all the auditoriums have been vacated to "She from the alien", Qiao Shengan can only take tickets to watch the movie. Before the movie was released, Qiao Shengan

had reprinted the promotional video on Weibo. In the beginning, he commented that the promo for this movie was wonderful. But according to the domestic situation, most of the movie content and the promo requested two special effects teams.

Qiao Shengan did not say that the movie was not good, he said that domestic movies still have a long way to go. Director Ding Yin and Tian Hou Xu Ningong did not have to rush to prove themselves. They could first shoot some martial and good arts themes at home, wait until the level of domestic special effects has improved, and then shoot this alien science fiction theme that was not easy to hit the pot.

Before the original movie was released, Qiao Shengan's words were supported by a lot of fans. But from eight o'clock last night, more and more people who have watched the movie "She from the alien". Let him quickly delete its critic from the Weibo and apologize to the entire supporters.

Last night, Qiao Shengan was brushing the action film full of stars of the Republic of China but did not expect that Weibo was almost exploded by the supporter of "She from the alien." After reading those comments, Qiao Sheng was anxious and almost dropped his phone. It was only early in the morning; he came to the cinema with a sigh of anger and prepared to use a stabbing film review. To leave those who were supportive of "She from the alien" and push him to apologize shut up.

Twenty minutes later the movie started.

The shocking spacecraft forced the landing scene. Because of the previous promotional video, Qiao Shengan was shocked and shocked. But anyway, there is mental preparation.

However, when the first of the film that is. The heroine changed the concept of superseding by scrap Santana. Qiao Shengan's cold attitude couldn't hold up any more, he was completely immersed in the world created by this film. He was stabbed and forgotten by him long ago.

After transforming the supercar, the heroine went on to college, and she studied bioengineering. As a result of the huge gap in civilization, the heroine always said some nonsense that was very neurotic to the professor accidentally.

The heroine was very silly and naive in order to get a diploma. To help her improve her level of study because she slept as an excuse. The heroine was tricked into a medical cabin full of inexplicable sense of science fiction, and the gene analyzer was used to reconstruct the complete her human gene map.

Fortunately, the hero had seen through her little trick and hides this genetic map that can make all the countries in the world crazy.

The peaceful life was broken because of the hero's trick. He used a mechanical repair spider to open a car repair shop, but when he was repairing a car driven by a foreigner, the foreigner discovered one doubtful clue. They are a large arms quantity with a military background.

After a secret investigation, the police felt there is something wrong with that dry lake where the hero and heroine lived in. A team of well-equipped and heavily armed special operations squadrons quietly invaded by commercial freighters. Then arrived in an advanced armored assault vehicle disguised as two civilian vans, they came here, and they were ready to investigate and incidentally take away mechanical maintenance spiders.

The most part of the film started with this. It was located on the edge of the sweet potato field, and the security robot disguised as a scarecrow was the first to discover them. The laser beam swept over the assault vehicle with the truck's shell covered by the extraterrestrial detection spectrum.

"This is a secret military base. If you are not busy, please leave immediately." In the moonlight, wearing a bag of urea fertilizer, wearing a broken hat, wearing rainproof rubber shoes, the robot slowly walked to the front of two trucks.

The audience laughed directly, Qiao Shengan also laughed. The robot in front of them is definitely the most grounded one they have ever seen. Because the actor thinks of camouflage, he uses his own fertilizer pocket and tailors to disguise himself as a scarecrow.

The response from foreign special warfare squads was extremely direct, and the assault rifle with the muffler installed made a blast.

"Ding Ding Ding ~ Ding Ding Ding ~"

Thirty metal sparks exploded, and the guard robot whose urea fertilizer pocket was broken slowly raised its head. And took off the hat in the eyes of the special battle team.

The angled, diamond-shaped faces outlined by silver-white metal are exposed in front of the special operations team. On the metal skull, a pair of cold green light green electronic eyes. Quietly watching the two trucks, just like advanced intelligent life, looking at a group of carbon-based monkeys.

"Why... what?" The fighters were disturbed and frightened.

A bold member smashed a grenade in the past, the roaring explosion sound. And the firelight rushed from the guard robot, and those things used to disguise were completely broken, revealing its true body.

It has the condensing and texture of metal, like a dark golden robot streamlined body cast by Bai Alchemy. Metallic muscles are as shiny as mirrors without any damage. Qiao Shengan covered his mouth and shouted in disbelief. This... this robot is not even a computer CGI production.
