

## **M Factory 381**

### **Chapter 381: Ordinary Iron Ruler**

The longer Ye Qing and the monsters collaborate, the unique insight they have on the machinery industry. Unlike Professor Cai Chenning, who is limited by traditional technological thinking. For that after finishing the call, Ye Qing used his brain a little and came up with several unique display solutions. But there should only be one type to display that needed to be displayed, so Ye Qing should pick a seemingly simplest, but most unsolvable industrial topic to give a lesson to the Japanese University of Science and Technology.

The next day, before leaving the company, Ye Qing called a Master Craftsman to come to the office and he placed a simple hand-drawn sketch in front of him.

"According to the above requirements, can you make it?" Ye Qing rarely used the tone of doubt, which shows that the "gift" designed by Ye Qing represents what kind of industrial height.

After careful reading, the Master Craftsman nodded and said: "It can be made, but it will take time."

"Two days."

What would take two days for the Master Craftsman to do it?

It is an iron ruler, not an iron ruler with scales. It is a seemingly ordinary iron ruler that strikes at the waist in ancient times. It's even simpler. The iron rule of the sensor has a handle by which it hooks quickly. This is exactly a long bar.

In the factory, this kind of rule like a scrap can be seen everywhere. But its only use is to resell the scrap in the furnace.

Now Ye Qing wants to make a ruler like this, there is no mistake when the gift is given?

The same goes for the nut delivered by the Japanese University of Science and Technology. Many nuts are in the scrapyards of the auto repair shop, but it was difficult to produce a suitable screw for this nut for Shanghai University for three days.

The meaning of this iron ruler is the same, it is the most ordinary appearance. But it has extraordinary nuances.

At eight o'clock in the morning, the heavy rain that just ended, and the air is blown by the cold wind brought chills which made people feel a little cold. Ye Qing walked into the company and found that some female employees even brought a down jacket to work.

"Mr. Ye is always good." When the staff saw Ye Qing walking at a steady pace, they immediately got up to say hello.

Nodding, Ye Qing returned to his office and he found an antique tea table made of rosewood in the corner. The tea table was full of variety, just invite anyone, and the person would be shocked by the quality of the superior tea service. He opened the drawer under the tea table, and under his eyes, there were neatly arranged purple sand square pots. Even if the teapot was unopened, he could vaguely smell a misty tea aroma. Compared with coffee, tasting tea seems to reflect the taste of life.

Of course, Ye Qing was not a very particularly tasting person, either at the coffee or tea tasting or both. So, he directly called Yun Shi asked her to come to the office, and then notified several managers to report to the meeting room for a day's work.

In the work report, the company's affairs are all fine. It's just that sales manager Kong Tao told Ye Qing when reporting the product sales that employees counted two sales of the robot after 12 o'clock last night and found the industrial version of the explorer robot fell more than 100 units from the previous day.

The explorer robot costs 800,000 yuan. In addition to increasing battery capacity and more power, the internal structure is no different from the home version. Its price is mainly expensive in materials, and its industrial uses are faced with various complex and dangerous situations, such as highly toxic, highly corrosive high temperature, high cold and other environments where humans cannot survive, where the robots can be sent in to operate. The harsh environment naturally requires a strong shell to resist.

The shell of the industrial version of the robot is completely sintered by the Master Metal Experts using powder metallurgy technology, and the cost of light is hundreds of thousands. Nothing compares to the home version of the robot, which has been suspected after its launch.

The sales volume of the industrial version of the robot is very stable thanks to a good reputation that has accumulated. The previous daily sales volume was 500 units, which was very stable. Why did it fall a hundred units yesterday?

This is equivalent to a sudden drop of 20% in sales. But the Monster Heavy Factory didn't receive a serious product defect report similar to Nautilus 7.

The market cannot be saturated because the industrial version of the robot has been on the market for less than a month.

"Usually, product orders will become less and less after 9 pm. We will count again from 9 pm. If the sales volume has not picked up, it means something happened that we don't yet understand."

Kong Tao put down the sales statistics table in his hand and was somewhat worried: "Industrial robots are actually connected to family robots. If something goes wrong with industrial robots, then family models may have the same problem."

"Wait until the statistical results come out tonight, if it continues falling we will send employees to those companies that have purchased industrial robots to return to investigate the situation." Ye Qing nodded in agreement with Kong Tao.

Although the sales of the two robots were less than the fraction of the ionization purifier, their prices were high, they could bring 500 million Yuan of pure profits to Ye Qing every day. Ye Qing didn't want them to have problems, because the money factor would affect the company's reputation.

When Ye Qing went back to the office again, Yun Shi was already waiting outside the door. Probably because of staying up late last night, its fair-skinned skin was hung with two dark circles and while standing there waiting for him, she breathed a few breaths. Seeing that the boss seemed to be in trouble, she rubbed her eyes and didn't dare to say hello.

"Looks like you haven't slept all night and worked overtime last night?" he pushed open the wooden door and invited her to enter.

She subconsciously made up a reason: "Ah~ No, last night... I watched a few episodes of Korean drama." In fact, she actually flashed last night thinking of a new program algorithm in the dormitory using her hands. The computer scrutinized all night.

It's just like playing a game, once you put it in, it's gone. Yun Shi's hobbies in programming are more fascinating than the strongest king's treatment of League of Legends.

"Don't you know you are going to work today?"

Ye Qing's sympathetic expression suddenly became serious and stretched his face: "What is the difference between your current state and absenteeism?"

Yun Shi was nervous at three tense and looked at Ye Qing seven minutes at a loss. She never expected his own breath would suffer such serious criticism. She should fight... A few hustles, what is it? She thought in her heart that sometimes the work was tiring and it was normal for employees to breathe time to times. She had seen it many times.

"The next time I find out that you are not in your heart, I will directly deduct your salary." Ye Qing glared at her and had a very bossy style of President: "Come in, those tea sets and tea leaves you mentioned, the purchasing department has already got it."

When Yun Shi took advantage of Ye Qing's entrance, she narrowed her mouth grievously.

Those young CEOs in idol dramas should not be very considerate to their subordinates when they meet this situation. Should they just give them half a day of paid vacation to make up for their sleep?

She considered him a friend, but it turned out to be a bad capitalist and would only squeeze employees.

## **Chapter 382: Someone knocks on the door**

However, this is not the super long dragon in Ye Qing's office, and the atmosphere is unbeautiful.

When making the tea, Yun Shi deliberately chose Mingjing's specialty Longjing the famous national tea which is known as national tea, which can be purchased at tea shops all over the country. But not in many tea shops. You can buy a pound of parallel products for only a few tens of Yuan. This is a treasure picked from the eighteen mother trees in the Longjing of West Lake, which were grafted on the tea tree. Even in the high-yield year with favorable weather conditions, its price is more than 100,000 wicked yuan a pound.

West Lake Longjing tea has always been ranked as the top ten famous tea in China, and the eighteen mother trees in Longjing are the mothers of all Longjing tea trees. In ancient times, the emperor personally picked their leaves tea, so they were called eighteen Yuqian and the super-long Longjing which was grafted from the mother tree once, is already the best Longjing available on the market. More ever, the real mother tree has only two yields per year. If you want to buy the Longjing tea, I'm afraid you can only wait for the annual tea Fair to announce the auction share of ten grams and twenty grams for many competitors.

This was still the purchasing department of the company, which bought it at half-price from the oldest tea shop in Shanghai, the treasure shop of the town. Because there are only two pitiful portions in the teapot Yun Shi cooked only one-tenth.

Either way, she was convinced Ye Qing shouldn't just drink it in one sip at a time like kung fu tea. He should not drink it from a glass but from a cup to taste it. In fact, Yun Shi has never seen a real premium Longjing, but since it was written on the teapot it should be true.

Longjing, which was cheaper than gold, was cooked well and has a pleasant scent. So, her serious president surely asked her to give him a cup.

Ye Qing gently took a sip, gave an arbitrary comment: "Huh~ It's not bad, there is a feeling of fragrant lips and teeth... Right, how is your English?"

"Everyone can become a university teacher, OK." Of course, Yun Shi said this in her heart.

"No problem with normal communication. The percentage of international students in our schools accounts for 7%. Almost everyone can communicate and talk in English." Yun Shi puffed out euphemistically. When she just delivered tea, she saw Ye Qing reading English materials on the computer.

It is just that the president's English is average, and the word dictionary must be opened while reading the information.

"Then you come to help me translate this information. The content is not too much. I will give you half a day. If you encounter a professional word that you don't know, you can look up the dictionary." Ye Qing placed a notebook on the sofa and gestured her to come.

"After the translation, don't go to work in the afternoon and go back to the dorm to rest."

Sure enough, Yun Shi heard she didn't have to go to work in the afternoon and immediately became energetic. When she ran to the sofa, she saw the English information on the display, and her expression was more energetic.

English is not like Chinese. After mastering a few thousand commonly used words, you can read various professional materials at will. Even if you don't understand professional terms, you can even guess according to the literal meaning. English is good, the words between different works let the layman who read it absolutely have the feeling of reading the book of heaven. Sometimes some words are too cumbersome, and abbreviations are used in the writing process, and laymen must turn over to the dictionary.

This is a paper about the balance of humanoid robots. Looking at the mark. It comes from a well-known paid literature website in Laomei. In the materials, the main aspects are electronic and process control.

Ye Qing was sipping tea while watching Yun Shi's translations there. She did not even need to look up the dictionary. She looked very serious at work. After finishing a cup of tea, he found she didn't even have a pause in her fingers. He couldn't help but give her a label not only for her serious work but also for her strong business ability.

Just at the door, would it be too arbitrary to criticize her?

Ye Qing got his hair rubbed when he took out his mobile phone and brushed the circle of friends leisurely because when he consulted the WeChat, he saw some very familiar picture in the circle of friends. The picture was from a student of Ye Qing's Department of Mechanical Engineering named Tang Jiedi. After graduation, he chose to stay at the university to study postgraduate. If it weren't for this activity, he would post, Ye Qing even forgot that there was this friend in his circle of friends.

That was a close-up view of a nut, a partially enlarged view of the nut.

This nut was a gift from the Japanese University of Science and Technology. Tang Jie used a series of helplessness, sorrow, and backwardness to describe his mood. He also said that if he hadn't learned at the Department of Mechanical Engineering, his face would be swollen by the people of the Japanese University of Science and Technology.

Ye Qing went to the intra-school forum again. Sure enough, 90% of the forums were posts related to the Japanese University of Science and Technology delegation.

A post titled "A Lost Game" attracted Ye Qing's attention. The post has not been posted for a long time, and it said that at 8 o'clock this morning when the Japanese University of Science and Technology visited the school [Precision Measurement Joint Laboratory], the Shanghai University side, some proudly introduced a laser interferometer for the Japanese University of Science and Technology. And then what happened?

The laser interferometer is currently the world's most extreme measuring device for detecting the length of objects.

We all know, the more you want to measure the limit data the more the environment around the instrument must be strict. When the length of an object is accurate to nanometers, even if a car passes by outside the laboratory, the data on the instrument may be changed. Therefore, the laser interferometer in the laboratory must be placed on a stable platform to eliminate external vibration.

Below the nanometer is the femtometer. To accurately, test the results below the nanometer, the laser interferometer and the detected object must be placed in a vacuum environment to eliminate the problem of slight refraction of the laser in the air.

The laser interferometer in the laboratory is a proud domestic device. Although there is no vacuum cover, the high-precision and stable platform below is also made in China, and it is built by China University.

However, after visiting the Shanghai University laboratory, the Japanese University of Science and Technology students laughed one after another. Speaking of this laser interferometer, not only were they using their country's Japanese product for optical lenses, but there is also a gap in accuracy.

A laser interferometer is only the size of an old camera.

Originally, on the right-side science and technology side of Shanghai University, the problem of arrogance broke out again which was taken seriously. On the other hand, the Japanese Institute of Science and Technology students said they had also brought their laser interferometer with them to compare the accuracy with that of Shanghai University.

In this ratio, Shanghai University is completely defeated. Because the one produced by the Japanese was not only smaller in size, but also has a measurement accuracy that is an order of magnitude higher than that of Shanghai.

The comments below the post brushed more than a dozen pages and Ye Qing turned two pages, almost all of them sighed and sighed, humiliating the department of mechanical engineering to the grandma's house.

With a smile, Ye Qing turned off the forum, called the Master Craftsman Ye Qiao, and asked if the screw was made.

"Five have been made, boss, do you want to continue?"

"I'm dizzy, don't make anymore. This day, I'm going to make these polytechnic people stop laughing.

Ye Qing smiled and hung up the phone, but couldn't help thinking of what a wonderful expression would be when they would see the screw screwed into the nut over the afternoon.

The nut stands for the Japan University of Science and Technology, and the screw stands for Shanghai University.

"Haha~"

But in a flash, Ye Qing couldn't laugh. Because when he looked up he found that Yun Shi, who had worked hard and he made her feel very responsible, was lying on the sofa unconsciously and fell asleep sweetly on the pillow...

"This guy can't be praised." Ye Qing stood up and took a blanket and gently draped her. It seemed a little bit bad to stay here again. So, he was going to go to the new office area upstairs.

"Doo~"

Outside the office, someone was knocking on the door.

### **Chapter 383: Fellowship**

"Doo~"

Outside the office, someone was knocking lightly on the door.

"Please come in." Ye Qing coughed twice and ran to the desk awkwardly and sat down.

In the office of the young president, a younger girl fell asleep. Although there was nothing, if Ye Qing was still standing next to it, it wasn't a reason for bad thought?

The office door was gently pushed open. It was a young girl carrying a backpack, wearing khaki sportswear, and a white hat. Ye Qing was a little surprised, he thought which manager was?

The hat suppressed her face, but he could still judge the girl from her slim and light posture, no matter where she went it was a beautiful landscape. She looked like a pink lotus curling up a beautiful arc.

Seeing Ye Qing sitting there, the girl took a step taking off her hat, blinked her eyes in ethereal beauty then walked to the desk by the diameter and hugged him from behind. If there were only him in the

office, he would be very happy and enjoy it. Just... There was still another person in the office, a somewhat awkward Bai Dour, who seemed to have focused her attention on him and did not observe the girl with silver-gray hair on the sofa in the corner.

Ye Qing did not expect that Bai Dour would come today.

Bai Dour was doing [Jiangnan Shangwei] this food show. For the past two months, she had been shooting and shooting in nearby cities. Recently, the chance of chatting with him has become very few. However, Ye Qing still knew the news that this food show is about to be completed. He didn't expect her to go back very early...

"Brother Ye, don't you think I have it?" Bai Dour shyly touched Ye Qing's cheek slightly.

It is said that the sixth sense of women is very spiritual, which is true.

When gently hugging him from the back, and touching it, Bai Dour felt that Ye Qing's body was tightening. This tension, which should not have appeared, appeared on it. Somewhat bizarre, looking around the office while unbuttoning the backpack, and when she was going to take out her carefully prepared gift from it. Her beautiful eyes suddenly froze. Very innocent, surprised, she stared the sofa on it a girl covered with a cashmere blanket lying on the sofa lazily and sleeping. This was a girl who looks younger than her. She had a beautiful white face in the silver-gray hair, and the hair is scattered randomly on her face. Even as a girl, Bai Dour has a feeling of being surprised. Her eyelashes curled up and down, she couldn't hide the accident in her eyes. He really couldn't blame her for thinking too much.

For men, the two most important rooms are always the study and the office. The more successful a man is, the more so he is. The door closed, it's his private world. Almost all decisions and thinking are done here. If you don't have permission, you can push the door to enter here. Even his wife will make him unhappy.

A beautiful young girl resting in Ye Qing's office?

Whether in ancient or modern times, a young girl, resting in the man's most room, is sufficiently imaginative.

"This is an employee in the company. I asked her to help me translate a foreign-language material." Ye Qing also knew the scene at this time was indeed suspicious. Of course, what is true, he couldn't hide her from entering the office or pretending to be going out the door.

"Then... why did she fall asleep?" A faint blush reflected on her cheek. Since the last time, the two have kissed, although there has not been a verbal confirmation of the boyfriend and girlfriend. But for such a kiss, of course, only the boyfriend and girlfriend can do it.

Just in front of another girl, she kissed Ye Qing's cheek...

"She worked in the night shift last night and translated the information this morning, so she fell asleep on the sofa, and I didn't have the intention to wake her up." Ye Qing pretended to cross the topic as if he had accidentally found it: "Hey! Your backpack What's in it?"

"Some delicious food brought from Guangling City. There are gifts." Bai Dour believed Ye Qing's words. If something really happened, he wouldn't disregard it when she just knocked on the door and said: "come in."

It's just there were outsiders here, and the atmosphere became strange, it seemed that they couldn't say anything.

"Tonight... In order to celebrate the successful completion of the [Jiangnan Shangwei] program, our program team is going holding a celebration party at Li Baolong." Bai Dour turned her head from time to time to look at the young girl sleeping on the sofa, seeming to be afraid of her leisurely Wake-up.

"Brother Ye... Do you have time at night?"

Li Baolong is a large-scale entertainment club in Shanghai. Ye Qing went there once when he was in school. The environment inside is very good, suitable for young people gathering.

If someone invited Ye Qing, he would definitely not go, because there would be many strangers and he would feel uncomfortable. But after all the invitation came from Bai Dour, so he had no reason to refuse.

"It's OK..."

Hearing Ye Qing's promise, she went round and round: "Brother Ye, can you bring some single employees from the company?"

"Single employees?" Ye Qing couldn't turn around.

"We have many colleagues on the stage, who are single. For example, you know Wu Xiaoya and Yu Fei, as well as the girls in other columns. Wu Xiaoya and Yu Fei always asked me to introduce them and I always said no. They said that elder brother Ye had many employees here, and many of them must be single. "

"This is to engage in a fraternity!" Ye Qing agreed: "No problem, I promise to bring a bachelor in the evening to join in the fun."

"So, I'll go back to the stage first, without disturbing Brother Ye's work." Bai Dour once again glanced at the position of the sofa with a guilty conscience, and then closed the glittering eyes, as if waiting for something.

Ye Qing laughed intriguingly and picked up the key on the desk: "I'll give you."

An hour later, he returned to the company. And notify the company's managers and the heads of various branches, and there will be a social meeting with many single girls on Shanghai TV station in the evening, singles can sign up to participate.

Ye Qing thought there were only a few people signing up, and as a result, there were dozens of them almost all singles came to sign up.

"Kong Tao? Why did you come to join in the excitement?" Ye Qing stared at him and ran to the sales manager: "I remember you said at the meeting the last time that you didn't want to fall in love yet, and you should focus on your work. "

Kong Tao, who had been in his thirties, touched the back of his head with embarrassment: "Boss, I don't have the right person to talk about the scene. Boss, I don't know if those hosts will come..."

The hosts in Shanghai TV station are all young people, and most of them are women.

I have to say that Director Liu Yun is a very capable woman. In just a few years, the ratings of Shanghai TV were doubled, not to mention many young and unique hosts were discovered.

The number of people exceeded expectations. Ye Qing had to call Bai Dour and ask her if she could call other departments, preferably those single hosts.

### **Chapter 385: I'm Old, I'll Change You**

The students of the robot society collectively looked at Kobayashi with the expression "how can you be so shameless"?

As long as they didn't understand things, they couldn't easily guess. They came to China nothing more than trying to make Shanghai University lose face in front of all the teachers and students of the Japanese school. When the Japanese University of Science and Technology team entered the campus had actually presented a nut to the Shanghai University in front of the students. On its side, the University of Shanghai couldn't get a screw for the nut for a while and say today that they have become bind by a nut and a screw and that they can help each other.

Professor Cai Chenning thought a bit and approved of Kobayashi's request. Now, in the school forum, there are feelings of loss and reluctance everywhere because a little earlier, on the internal forum, Professor Cai Chenning said that the nut that represented their most important technology high had been smashed by them in front of administrators and students of the Department of Mechanical Engineering.

"After dinner in the evening, you can go to the multimedia center of the Science and Technology Building to watch the grand occasion on the spot. Really, isn't your mechanical engineering department desperately proclaiming that the screw can't be made? Is it the nut from Japan?"

"I'm from the Department of Mechanical Engineering. To tell the truth, we really can't make that screw. But if our university can't make it, it doesn't mean we can't make it elsewhere. I heard our principal personally invited Mr. Ye at the dinner table and when President Ye looked at the nut he had only said one thing to come and get the screw tomorrow."

"Is it Mr. Ye from the Monster Heavy Industry? It seems authoritative to say he will come and bring the screw with him!"

"You guys upstairs...I'm a student of the dance department. It's just a screw. Can't you buy it online?"

The multimedia center can accommodate nearly a thousand people. After eating from the cafeteria, the students rushed towards the multimedia center. The remaining students couldn't grab a place and simply went back to the dormitory to hold a mobile phone and watch live video.

Internet technology has advanced rapidly this year, and any mobile phone can broadcast live. The students of the computer club simply set up their cameras and opened a room in the beta live broadcast room to broadcast the powder.

At 7:30 in the evening, in the multimedia center. Looking at the crowd of people in the audience, even the corridor was full of people.

Professor Cai Chenning presided over the event without any nonsense. After seeing the students were full, he directly announced the start of the event. Sitting at the guest seat, Kobayashi quietly showed a breathless smile in the corner of his mouth.

"Professor Kobayashi, please check first. Is this nut the one you gave that day?"

As the camera moved closer, both the students on and off the field saw Professor Cai Chenning, wearing anti-static gloves, pinching a nut in his fingers which seem ordinary.

"It must be. Of course, your school doesn't work on the nut." Kobayashi laughed, saying with confidence, but took the nut in his hand and recognized it carefully. Of course, what he prepared meticulously can be recognized.

After confirming, Kobayashi picked up the microphone and used his blunt Chinese to start speaking: "Before this activity to solidify the friendship between the two universities, I would like to take the liberty to ask Professor Cai if the screw prepared by your school has used a piece of foreign equipment or technology?"

This made the young classmates unhappy. "We can use whatever we want and make the screw to hit your face."

Compared with the students in the more restrained multimedia center, the students who watched the live broadcast on their mobile phones did not behave as gentlemen.

"Yes or not, what does it matter?" Professor Cai Chenning asked back.

"That's there?" Kobayashi, who prides herself on understanding Chinese culture, laughed: "It doesn't matter, we know that China has a big gap in materials science and intensive studies from us... Have you made the screw?"

"Can we start? Is your school wrong, or are we not going to make it."

"Come on, because if you can screw it on, you'll know we have no bad intentions." Kobayashi looked at the student Tanaka sitting next to him, and the two smiled with pride.

Professor Cai Chenning nodded and took something out of his pocket.

Many people were stunned for a while because the screw was packed in a plastic bag. When Professor Cai Chenning took out the screw, some students who had no idea were even more surprised.

"Why is this screw smooth?"

These doubtful people were soon surrounded by science students. Then everyone held their breath together to see if Professor Cai Chenning could screw the screw into the nut?

Ye Qing gave a total of five screws and told him that any one of these five screws could be screwed in successfully.

Professor Cai Chenning wore some glasses with shaking, took out a screw, and under the attention of the camera and held the nut in one hand and the screw in the other.

The more precise the thread, the more the nut and screw are required to maintain a horizontal line.

"Click"

The microphone clearly stated that the sound of the two colliding together was transmitted. This time, not only the students in the multimedia center but also the students in the dormitory watching on the mobile phone, took a breath.

Professor Cai tried setting the screw at a horizontal angle and gently turned it towards the inside of the nut.

"Sizzle - sizzle - sizzle"

The steel sound entered the live broadcast room!

Cai Chenning's body was shaking: "what happens to me? More than 20,000 people here watch me screwing the screw in the nut, am I sick or..."

The body of steel has been damned by the administrator.

"Roll in."

After the mute had been over, the room manager sent another empty screen. Twenty seconds later, the screw in Professor Cai's hand has been successfully unaligned with the thread. This caused the students of Shanghai University to feel their hearts beaten hard.

The Japanese University of Technology had a stronger smile. This nut had no screw.

Of course, not because it cannot be made, but because the cost is too high and it is too time-consuming to do it. The technical difficulty of the screw is the same as that of the nut. Just to start the industrial mother machine to the thread, it will cost a lot of money, because diamond coating technology is more luxurious. If you can't screw it in for a long time, it means the screw quality is unqualified.

Many people have entered the live broadcast room one after another because there were more than 20,000 people watching online at Shanghai University. This number was enough to push the direct room to the first page. There was just that person on the podium which looks very strange. A guy who looks like an old man taking a screw and his forehead slightly sweating?

All of them asked questions without exception.

"Professeur Cai, it doesn't matter if you fail. We still have three days to leave, and you still have time." Kobayashi looked at the scene, and his pair of eyes eagerly awaited the professor's defeat and laughed involuntarily: "But Professeur Cai if you can make a second screw, it's best to experiment first, and don't blindly think it's successful."

"Failed?"

"What's the matter? It takes so long to screw a screw?"

"Ah~ I estimate it is not a fail. Maybe I haven't done a good job in the metal plating process."

"Quiet please!" Professor Cai Chenning suddenly shouted at the microphone.

The students in the audience immediately booed to stop the discussion.

"Please, Xie Tongtao. I think I'm old and my hands are no more flexible than when I was young. "

### **Chapter 386: Gifts to You**

"OK, Professor." Xie Tongtao, who was beside Professor Cai Chenning stood up.

This was a fairly mature male with dark skin and black stains on his hands that seem to remain soaked in oil for a long time. He looked more like a worker.

He was the only disciple brought by Professor Cai Chenning, and who was studying for a doctorate.

He was 28 years old this year and is in his final year to get his doctorate. He has published three professional articles on science fiction. Before we get down to basics, it must be said that Xie Tongtao was responsible for tackling key issues.

Unlike doctoral titles like law or business administration, mechanical engineering doctors must have excellent professional knowledge and strong hands-on skills.

Xie Tongtao did not take the nut and the screw first but took a pair of anti-static gloves to himself, and then took these two pieces, representing one of the most difficult metal parts in the industrial field.

Maybe everyone had a similar experience. When screwing a screw, it seems difficult to align the screw with the nut at first. The more compact it is, the more the screw is. That is because the distance between the threads is too small, it is difficult to find the correct insertion position.

"Click"

In the multimedia center and the live broadcast room, clear metal contact sound came again.

"It's useless to say. This nut is from die-casting die to the integral cutting. And then to the great industrial machine, to carve the thread to the (quldu) level in a clean workshop. In the room, the nano-diamond coating is carried out by ion-body vapor deposition, which takes ten days in total to make it."

"This technology is the most cutting-edge technology."

"It can't go out..."

"Wait~ how is this possible?" Kobayashi's original proud voice suddenly increased eight pitches. Even the students' necks seemed to have increased eightfold as they watched Xie Tongtao with wide-open eyes, holding the nut firmly in his hand.

"Sizzle - sizzle - sizzle"

In the video, the screw seemed to find the organization, and it seemed to go through thousands of times and finally successfully found the hole. The screw was no longer at the aimless turbulence as before but screwed straight, very rhythmically as the fingers rotated in a circle the screw went toward the nut.

Five laps ~ Ten laps ~ Twenty laps ~

The sizzle turned into a very rhythmic rustle.

After about two minutes, the screw was all screwed into the nut. Xie Tongtao sent the connected screw and nut to Kobayashi and asked him to check whether it was tightened. After receiving this thing, Kobayashi's face became worse and worse during the careful inspection.

"Perfect! The screw and the nut are firmly inlaid together, seamlessly."

The scene was silent for five seconds, and then there was a bang, and all the students stood up and applauded.

"What!"

"Successful, did you see this, the screw was successfully screwed in."

"Haha~ I guess the reason is the professor is old and has poor eyesight. You see, as soon as Dr. Yun shot, he succeeded in less than ten seconds."

"Professor Kobayashi laughed at his brother, and it still took three days to talk about great Japanese industrial technology. Everyone can see, Mr. Ye who is the president of the Monster Heavy Industry was so domineering. Last night the principal invited him to dinner, and he asked Professor Cai to come the next day to take the screw."

"Really, the principal invited Mr. Ye to dinner. How do you know?"

"Because I was there. At that time, Mr. Ye looked at all the ten students who were worked too hard and called us for dinner. As a result, when Professor Cai took out the nut at the dinner table Mr. Ye put it in its pocket without looking at it, saying that it would be done tomorrow. And Mr. Ye will come to our school to study postgraduates, so this screw was made by our school students, which is much more powerful than the Japanese Institute of Science and Technology to find foreign aid."

"Monster Heavy Industry is overbearing!"

In the original quiet unmanned live broadcast room exploded immediately after Dr. Xie Tongtao successfully screwed in the screw.

And more than 20,000 people brushed the barrage together to express their excitement. Furthermore, the students who have fish balls keep brushing small gifts.

Iron Body 1 entered the live broadcast room: "You wake up, it's just a screw, not the original." The banned Lao Tseu who just said: "Why are you all barrage now?"

Iron Body 1 has been banned by the administrator.

"Silly bird~ Ten thousand of you, can't make that screw in a lifetime, and watch us we win the glory for the country."

"Professor Kobayashi, why do you look so bad?" Professor Cai Chenning narrowed his eyes and looked at Kobayashi beside him with a smile.

"No... it's impossible, it doesn't make sense, you can make a screw in such a short time. It took us ten days to make the nut." Kobayashi, this crazy man, who I couldn't accept, said in a word: "This, absolutely, right, no, can, can."

Professor Cai Chenning nodded: "It is indeed impossible to make the screw."

Kobayashi's eyes blinked wildly, and then he saw Professor Cai's left hand patting the podium.

"We did not make one screw, but five." Professor Cai Chenning slowly removed his right hand to show the four screws.

"..." Kobayashi and the student Tanaka beside him seemed to be jammed with a broken transmitter and made a loud noise.

The camera captured all of this. The student responsible for the camera zoomed on the four remaining screws and immediately pointed the camera on the Japan University of Science and Technology and gave a long close-up. Their faces were uglier than losing all their deposits. They just returned and said complacently, it took them ten days to make the nut. As a result, Shanghai University made five screws with a slap. They wished they could dig into the crack in the ground. As a result, Dr. Xie Tongtao next to him picked up four screws one by one and turned them one by one in the nut, and on the side of the Japan University of Science and Technology, each face was as red as a dye tank.

At Shanghai University, the students were quiet again. Only when Xie Tongtao screwed a screw in and out and replaced the next one that he continued the roar.

When the four screws were all tightened, even the students in the dormitory stood up and applauded.

"Professor Kobayashi." Professor Cai Chenning shrugged his shoulders: "As the saying goes, it is unrude, your school came from afar, and gave us such a gift with great pains. We at Shanghai University naturally need to send a gift to your school to show our sincerity. The day after tomorrow... It is still at this time and in this place, we will give your school a gift."

"Wh... what gift?" Kobayashi's teeth were trembling, and Professor Cai's winning ticket was holding his expression, making him smell a very dangerous feeling.

"A gift that will make your school unforgettable. What is the specific? Let me keep it secret and undisclosed it in advance. Isn't it a surprise?"

The students in the auditorium burst into laughter.

"Surprise for Japan University of Science and Technology!"

"Let Japan University of Science and Technology, see what we know."

"It must be our general manager Ye, who made the five screws in one day which will give the gift. I don't know what thing will take him almost three days to do it and give it as a gift. What would it be?"

"Mr. Ye Qing will come getting the screws tomorrow, and the day after tomorrow will be an unforgettable day to Japan University of technology."

**Chapter 387: Continued decline in sales**

At 8 o'clock in the evening, a group of gold bachelors left out the company, led by Ye Qing, headed towards the Li Baolong Entertainment Club which was only two streets away from the Blue-Sky Building. They went to the entertainment venue Hi Pei, and they will naturally and inevitably drink alcohol. Coupled with the close distance, Ye Qing simply took them on foot. Whoever thought of them this way, the rate of turning back was super high. These guys, all dressed in a very elegant way look so energetic. Coupled with the party in charge which will be cultivated by the self-confidence temperament. Along the way, many young men, like seeing star idols, firmly formed Ye Qing's gang. Their eyes were completely digested and seemed to be glued with special cement, and they could not be shaken when the rock drill came.

"Boss, before coming, I counted the sales volume of today's industrial version of the robot." Kong Tao today wore a coffee-colored trench coat with his calm and restrained temperament, making him a very old fan: "Yesterday it fell by 100 units. Today's sales did not pick up, but it fell by more than 30 units than before."

"So, there seems to be a problem with our product. Since we have not received the defect report of the product, it means the problem has appeared elsewhere." Ye Qing walked ahead and said in a deep voice: "According to previous statistics, the customers who buy our products are mainly concentrated in the chemical sector. You send a few employees on business trips to those chemical plants that have purchased our products and those who haven't purchased the products in the field. Investigate and find out the cause of the problem."

Kong Tao nodded and said he would let employees do it tomorrow morning.

Going to the brightly lit door of the Li Baolong Entertainment Club, Ye Qing remembered Gangjie Chemical, who had helped him to weld the underwater pipes.

Then Ye Qing called Rong Wei, the boss of Gangjie Chemical, and asked him how the industrial robot worked.

"Mr. Ye, do you still do the product return visit report yourself?" On the phone, the boss Rong Wei smiled happily: "Report for Mr. Ye, the industrial robots worked very well. Now the factory holds fire drills and emergency treatment. First One thing is to lift the robot out. During the weekdays, some dangerous jobs are also done by robots. Of course, ~ there are still defects. For example, its crawler self-propelled chassis, when passing obstacles, it is a test of the operator's skills, and the battery working time is too short. It doesn't matter, these defects can't cover up its advantages. Now we have bought four industrial robots in our factory. As long as the operators are trained, they can do countless functions."

After a few words of courtesy, Ye Qing hung up the phone. This is really strange. On the one hand, the robots responded enthusiastically, on the one hand, the sales of robots fell sharply... Some of the main sales declines were too abrupt. Perhaps when the employees will visit the field tomorrow, the results will be obtained.

Seeing the guests coming under the Arc de Triomphe, Qi Qi bent down to welcome them, Ye Qing put away his thoughts. Everyone has been busy recently, and he planned to take everyone to relax and talk. There were fifteen or sixteen people over there, except for two male colleagues, the rest were young girls.

The room is set to one of the largest private rooms in Li Bao Long, with a small dance floor, which can accommodate 30 to 40 people.

When Ye Qing and his group went to the elevator to go to the sixth floor, Doudou and a group of young girls were already waiting in the corridor, next to the open door of the box, and a man in a purple suit stood at the door constantly explaining all the time. "The time is set at 8 o'clock, and you are here at seven-fifty for a ride."

It was just as the group was led to the corridor by the reception lady, a manager rushed over and whispered a few words to her. Then she ran away, leaving the manager.

"I'm very sorry. When you booked a room in the afternoon, the front desk just changed teams. She didn't know if this private room has been reserved. Would you like us to change it for you?" Originally, this was just a trivial matter. But the manager told them: "There were only two private rooms of this size, and the other was booked as early as the day before yesterday."

To change it, it can only be changed to the smaller one.

"You open the door to do business, at least you have to be honest." Wang Jin, the driver of the program group, said angrily: "It is not because the others are so big and you don't want to offend them, you give the room that we have reserved for these guys?"

"Does it feel like bullying because of the number of girls on our side?"

The man in the suit with the manager's nameplate on his chest was embarrassed: "I'm really sorry, it was really caused by employee negligence. This room has been booked by Brother Xiaolu. He is here tonight to celebrate his birthday. It's really embarrassing, if I change the room for you, you can stay for about 20 people. I will save you the private room fee, and you can drink beer at will."

"We will have more than a dozen friends to come later, do you think it's enough to stay with us?"

"How about..." The manager collapsed in a helpless gesture: "There is a singer on the opposite side. Would you like to have a look over there?"

"Why does it matter, how does it matter." The driver Wang Jin stomped.

"Why do we?" Wang Jin's artist girlfriend gently pulled his arm and whispered, "That little deer brother is not a good person at all..."

The rest of the girls had expressions on their faces that they didn't want to go to another place.

These girls were all good babies. They usually see these people who have a strong breath like rivers and lakes. They hate going around. But how dare they deal with this older brother guy?

"Go around~ Should we change places?"

At this moment, the elevator door opened, and Ye Qing walked out with a group of people.

"No need to change." The manager who acted as the god gate was opened was stunned by the voice: "Huh~ let your little deer change rooms."

The girls next to them shook their heads subconsciously and took two steps back. Including the manager, everyone turned their eyes together. Pay attention to the group that was filled with the workplace elite and looked confident.

Li Baolong's manager smiled and shook his head after the smile: "I don't have the courage, why don't you tell Brother Xiaolu later?"

"Brother Ye!" Bai Dour waved her hand round.

Li Baolong's manager smiled confidently. This group of people at first glance is the kind of white-collar class with a smooth career. Although some are envious of their style, this white-collar was the scariest to deal with people around the world.

"Just tell them the room has been robbed by the best rich second-generation deer brother of this generation, oh no, it was booked in advance, and they will surely leave out."

There were even a few young guys with glasses who looked gentle and gentle. This kind of person was a technical otaku, and it was best to not be a fool with him...

This group of girls seemed to have found the backbone of their heart, and Wu Xiaoya and Yu Fei, whom Ye Qing knew, even ran to him and chatted about what had just happened.

Looking at the two girls who were complaining, and they also pointed at him. Li Baolong, who had already judged it was not good enough to offend his heart, touched his nose and sighed.

"I'm a good gentleman. I'm generous with my money. You are the elite in the workplace!"

"Sorry, sir, you can choose to change rooms or go somewhere else..."

"Uh...?" The manager Li Baolong said nothing else. Because the young man who looked like a leading goose appeared before him, a sturdy man wearing a pure black fur collar leather jacket and stepping on combat boots. He was an elite worker.

Suddenly, Li Baolong's manager, with a ruthless arm, was pulled away and hit the wall. When he hit it, he thought there was something wrong with the plot, he thought so.

"I will only give you ten seconds to let that little deer come in and you apologize." The security captain Wu Yuexiang shook his fur collar, and then made an invitation to Ye Qing and Doudou.

### **Chapter 388: Happy Birthday**

There were dozens of people who wanted to play well in places where the price of drinks was several times higher and spent at least tens of thousands of Yuan. For that in the room, Kong Tao smiled at the pitiful box princesses and said: "Hennessy cognac, Louis XIII, Grange, and Le Bouleau, three bottles of each. As regards to Carlsberg beer, two bottles per person. Hennessy needs to be blended with soda water, and red wine needs to wake up first. Look at the fruits, just keep them fresh. You also need fresh milk and oolong tea. The dried fruits should be baked in the oven first."

If you want to have fun, such as ordering some high-end drinks, the price is even more outrageous. Let them come to the column group, and it is estimated that the funds for a quarter have to be smashed into it.

"Boss, do you think there is anything to add?" Kong Tao asked quietly.

Ye Qing, who was sitting next to Bai Dour, nodded and motioned he was agreed. Before coming, he especially wanted to go with Bai Dour to make AA. but now, he is here in charge of the room.

"Thank you princess and please hurry up. Excuse us for the disturbance. We can do our own songs ourselves, don't disturb yourself for this princess."

"Okay...Okay." This princess, who was very familiar with the atmosphere, didn't dare to say anything more.

Because her manager who was pushed by a cool looking man inside, still hid in the lounge to pack ice bags. And they snatched the room from the little deer brother. Not only did they snatch the room of the little deer brother. They also said the words, within ten minutes, and the little deer brother must also come here to personally apologize to them.

This group of guests, no matter what aspect it looks, he looked like a white-collar elite. It stands to reason that such people were the most sensible and the most ones unwilling to cause trouble, and the princess was looking forward to it with heart. Because in case he dared to provoke Ye Qing, it will be got a big deal and the little deer would be taught a lesson without mercy.

No one likes arrogant people. Except for pushing away the manager, all of them were polite, and there was no such kind of behavior that was very tasteless.

And for the drinks they ordered. It was the first time for the princess of the private room she met such a customer who didn't even ask her about the price of the drinks and just ordered drinks, as long as they were expensive drinks.

Compared with the others, the princess in the box naturally faces Ye Qing and them.

"I can't imagine what these people are."

On the side of Shanghai TV station girls, their eyes have changed about Ye Qing. He was so handsome, he was even more handsome than the hero in the drama.

Although he didn't do anything, a group of men with different styles and distinct temperaments centered on him, and they even supported the extraordinary Ye Qing. Especially its sentence, "I only give you ten minutes." They hadn't even seen each other before and were afraid of the frightening little deer brother.

On Ye Qing's side, the sense of presence didn't seem to weigh a lot.

On the roadside of Li Baolong, a Porsche convertible and two Wranglers, a BMW Series five, slammed the throttle and rushed to the underground parking lot. When the doors opened, a young man dressed in a black trench coat got out of the car followed by a dozen men and women with bold manners and frivolous eyes came out. The manager who was waiting at the front of the elevator, after seeing this group of people, he immediately greeted him warmly and called Brother Xiaolu.

"Where is the ghost from the other party who dare to ask Zhang Lufei to apologize to him?" The young man took out a pure gold Dunhill lighter and ignited a cigarette and took a huff and put a puff. "I haven't even heard of his name, and it seems the level of mixed land is also limited."

The group of men and women who followed Zhang Lufei were also wearing famous brands. This year, there were no longer any grassroots heroes playing the world.

Come out and mix up, do you still have money?

Don't talk about whether you can play or not. The more you can play, the faster you can squat. Money matters. Those who are brave and ruthless still praise you as a master.

"Haha. Today, my birthday, I don't have much to do with them, everyone will be slapped and apologize to me."

After talking, Zhang Lufei swaggered into the elevator.

On the sixth floor, the box princess took advantage of the delivery of drinks, quietly told Ye Qing the little deer was coming to make trouble.

Ye Qing looked at the time, and the time had passed six minutes. It seemed that the group came very quickly. Ye Qing gestured to Wu Yuexiang and Zhang Haoxuan: "You two go out dealing with it, don't disturb the interest in the room, the girls probably don't like to watch this."

The two security captains immediately got up and went out to meet the little deer brother.

Ye Qing obviously underestimated the curiosity of these girls. Under the great sense of security provided by Ye Qing, one by one, they were like curious kittens, pretending to go to the bathroom, and then quietly observing outside through the glass on the door of the room.

The restroom was at the entrance, and then the girls who quietly looked out across the glass saw that more than a dozen men and women came towards the side of the corridor.

They walked like crabs and looked like birds seeing prey, they didn't look like good people at first glance.

"There are four minutes left. During these four minutes, you can do whatever you feel you can show in your strength." Wu Yuexiang clenched his fists: "After four minutes, please use the most heartfelt Attitude, to apologize to the gentleman inside."

The leading Zhang Lufei grinned wide and stared at Wu Yuexiang like a ghost.

"Where are you mixing, I guess you must not know who I am?" Zhang Lufei's nose was all crooked: "My name is Zhang Lufei, and I will give you a minute to inquire..."

Wu Yuexiang, the captain of the security team, flicked his leather jacket and kicked Zhang Lufei and threw him two meters away.

"Fuck you\*!" The males in the crowd immediately exploded, and the female face went to Zhang Lufei in horror, while the males charged one by one in the corridor.

More than ten seconds later, Wu Yuexiang and Zhang Haoxuan reintroduced two high-tech fighting batons developed by the Master Craftsmen into the nylon sleeves around their waists and said to the people lying on the ground as dead pigs.

"You still have three minutes."

"Brother Wu Yuexiang, why don't you tell them where going?" Zhang Haoxuan, the deputy captain, sighed and said lazily: "It's really unfun to play with this bunch of idiots."

"As you say, I forgot it." Wu Yuexiang scratched his head and pushed open the door.

Hidden behind the door, the few girls who were watching the bustling were elated, and then they ran back describing what had just happened at the door to their companions.

Two minutes later, Zhang Lufei, who was pale was pulled in by the deputy captain Zhang Haoxuan by his collar.

"I'm sorry... I'm sorry, Mr. Ye, you are a great person." Zhang Lufei clutched his belly, quail shivering, all the madness, and blindness completely turned into boundless fear.

Ye Qing glanced at him: "All right, go out and don't disturb our interest."

Zhang Lufei was on the verge of amnesty and ran off with a roll. When he ran to the door, Ye Qing's voice came from behind him. "Bye brother Lu, I heard it is your birthday today...Happy birthday."

"Thanks...Thanks...Mr. Ye's blessings." Zhang Lufei turned his head back, holding back an ugly smile.

Seeing this scene, the girls in Shanghai TV station, one by one, covered their mouths and "giggle - giggle - giggle" - laughing constantly.

The only two male bodyguards who looked at Ye Qing's eyes were completely satisfied.

### **Chapter 389: Another Robo**

Stimulated by alcohol, the girls of Shanghai TV Station, who were in awe of Ye Qing became happy again. Coupled with people of the same age, Ye Qing was cool too cool, but not in his mood because tonight one round pushed the atmosphere in the room to the highest level.

Then a shareholder of Li Baolong and several managers holding two bottles of vintage-looking red wine entered the room tremblingly. They came apologizing to Ye Qing. After all, they lied to the front desk. They made a mistake and didn't find out that the room was booked long ago.

All the people who could open entertainment venues are elites. When they went in to apologize, the shareholder was inexplicably sad and inexplicable, saying: "All of this was caused by the ignorant manager below, because he was also blindfolded in the drum and that guy was also shaken by the father of Zhang Lufei, a shareholder in Li Baolong. It's said that his father has opened a finance company mainly for loans. He has a little money in hand, and his foundation is not very clean. He became a shareholder of Li Baolong, and his son who didn't learn well was involved in the affairs of the company all the time. And several other shareholders who also have little money and relationships felt the catastrophe, one by one asked me to compensate them."

Ye Qing naturally doesn't account for such trivial matters, so he says nothing, and this matter has passed. Furthermore, Li Baolong's shareholder and the managers lost a glass of apology wine in a fit of depression and happily ran away, and also waived the cost of the box, with a 50% discount on the wine.

In fact, this shareholder's son wanted to drink alcohol for free, but the price of Ye Qing's liquor was really amazing...

No one disturbed them, and even Ye Qing joined the lively atmosphere and sang a song that was quite popular at the university [I didn't see you for a long time.]. He had put a hand on his shoulder, and his eyes were like the peach blossoms on the branches after the rain. He just sang a song and the applause next to him is the same as the concert and this made him blush a little bit. After all, his singing couldn't be more pleasant, and it was even worse in front of Shanghai TV girls and the people on both sides coaxed and asked Ye Qing to sing again. But the phone rang and saved him on the spot.

The phone was from Rong Wei, the boss of Gangjie Chemical. Ye Qing motioned to everyone to continue playing, and then went to the door to answer outside.

"Mr. Ye, I have something to tell you." Rong Wei asked: "Just after hanging up with you, one of my partners in Anhui Province called me. This partner is in the petrochemical industry, he called to recommend me an industrial robot!"

"Industrial robot?" Outside in the corridor, Ye Qing was puzzled and asked: "Is the industrial robot launched by our company?"

"No." Rong Wei said in a strange tone: "It's an industrial robot called [Almighty]. The partner said that this robot seems to have been out for a few days. The machine tool dealer came recommending it. The price was very cheap, it was 500,000 Yuan. And the function was very comprehensive, in terms of intelligence and working time, it was better than the explorer launched by your company."

"Omnipotent? Which company produces it, how does this product look?"

Ye Qing's doubts turned into surprises. In the industrial system nowadays, robots are usually manipulators fixed in place and resemble machine tools. The industrial version of the explorer robot launched by the Monster Heavy Industry cannot be said to be an epoch-making product, but Ye Qing could guarantee that it was the robot with the best sense of movement on the market and the perfect simulation of human hands.

Now, silently, another company has launched an all-around type and in terms of intelligence and working time, is it better than the explorer?

Well, the explorer was unintelligent at all, just add an Android program and you can finish exploding Ye Qing's side.

"I'm also very surprised. It stands to reason that there is this robot. The industry most suitable for it must be our chemical industry. But I never heard of this product from the equipment dealer or the machine tool dealer." Rong Wei thought about it and recalled: "He told me before that it was a domestic robot, and I thought he would recommend your explorer. But after listening to the results, I realized it was not. I didn't ask too many details, so I called to tell you the news. That's it~ I'll ask you clearly to order another one by the way, and give it to you for research."

"Thank you, Boss Rong, order it. I will give you an explorer to exchange it with you." Ye Qing thanked and hung up the phone to search online. As a result, there was no news about the all-around robot on the Internet. Standing outside the corridor for about ten minutes, suddenly the phone rang again.

"Mr. Ye, I have ordered one. Now I will let the factory driver set off, and I should be able to get that robot back at noon tomorrow. The all-inclusive electronic version of the introduction manual, I also got it, and I transfer it to your mailbox?"

Ye Qing used his mobile phone to log in to the mailbox and read this carefully. Some product introductions like posters.

All-round robot:

The top industrial technology from Amano Heavy Industries, the new intelligent mechanical technology, the five-level industrial waterproof standard, and the dynamic encrypted remote connection.

This robot can independently complete multiple hazardous environments and replace manual operation steps. The innovative three-claw precision gripping mechanism can position the gripping accuracy to 0.002 mm and has a variety of gripping mechanism replacement components to meet multiple work requirements.

Anti-fog camera...

Harmful gas warning devices...

Voltage detection device...

Automatic return device...

The more Ye Qing stared, the more he stared. This is a robot, clearly a mobile toolbox.

The text introduces the product picture below, which makes Ye Qing more surprised.

This is an orange-yellow industrial robot with a triangular crawler chassis and an upper body that resembles a giant i-shaped structure. The end of its two mechanical arms is not a bionic structure like the monster heavy industry, but a three-claw structure with a disc. It's just like the claws of the game hall. The head is a sci-fi-shaped oblate, and the two big cameras in front make Ye Qing think this guy seems familiar... After thinking for a while, Ye Qing patted his head. This guy is very much like a robot in a cartoon. The robot's name is Wali.

There is a sense of frankness, and the sense of science fiction is insufficient, but the overall appearance of the mechanical industry is very sufficient. If this product is really like the introduction, then Ye Qing could already confirm this all-round robot was the main factor causing the decline of the explorer robot sales.

In the first paragraph of the introduction, there was such a sentence.

Top industrial technology from Amano Heavy Industries...

Ye Qing was no stranger to Amano Heavy Industries. In Liangjiang City, they secretly took a trip and poured corundum into the Mechanical Colossus Type I to try to destroy its demonstration. Unexpectedly, they did not say anything but also launched a robot.

From the introduction point of view, there were many shadows of the Mechanical Colossus Type I in this robot, but there were also some local innovations. For example, the three-claw precision gripping the mechanism can position the gripping accuracy to 0.002 mm.

Seeing the disc with the fixed gripping mechanism, Ye Qing understood. This is the inspiration from the machine's three-jaw chuck. They can't be as flexible as the human fingers of the explorer, simply in the context of accuracy. In addition, many auxiliary functions have been added to the core mechanical structure, Ye Qing could still clearly see it was the Mechanical Colossus Type I set.

"No wonder..." Ye Qing said no wonder, Amano Heavy Industry, which is backed by the leader of the industrial robot industry has not moved since. It turned out to be a big move.

It seems that only when the robot ordered by Rong Wei helps arrive tomorrow, Ye Qing can accurately figure out what the level of this industrial robot is.

### **Chapter 390: Researching Robots**

Everyone had fun until ten o'clock in the evening. After that, Ye Qing asked Juli to work as a driver to send Bai Dour at her home and he summoned several managers to start a video conference.

At the meeting, Ye Qing asked them to arrange an employee's business trip tomorrow, focusing on investigating the market of all-round robots. By the way, he should go to Asoshima City where Amano Heavy Industries is located, in the name of the dealer to find out the specifics of this robot.

"Boss, I just asked a few industrial equipment dealers in Shanghai City. Only two of them said they had heard of the omnipotent robot. It seems to be a new product just launched a few days ago, but no salesperson sells this product. Where some agents came to their home to recommend this product."

"There is not even a product introduction manual, which is not in line with common sense. Usually, a new product of a large company must be distributed to distributors around the world before it is sold. Amano Heavy Industries does this as if it deliberately wants to avoid our city of Shanghai."

"Analyzed from limited data, this should be the case."

"Go to other provinces tomorrow and purchase two more omnipotent robots, then come back." Ye Qing nodded and ended the video conference.

The next morning, Ye Qing didn't go to the company but in the non-standard product workshop of the factory, waiting for Rong Wei to send the omnipotent robot to the door. The company dispatched more than ten employees early in the morning who rushed to nearby provinces and cities to collect more news about the omnipotent robot and to send it in the afternoon to the factory where it will be expected.

It seems it is destined to be a sleepless night for Ye Qing that day. Researching the omnipotent robot was only part of it. In the evening, the last batch of five-axis machining centers ordered by Ye Qing would be delivered to the door. It was the most exciting time in the monster factory when it upgrades to the fifth stage. So, Ye Qing is waiting for the robots here, or rather he waited for those five-axis machining centers would be delivered to the door.

In the non-standard product workshop, only one Master Craftsman was busy. Ye Qing was sitting on a mechanical engineering chair and playing with a mobile phone. As a result, the Master Craftsman came from behind and gently patted Ye Qing's shoulder and handed a pair of dark black sunglasses.

"What do you do with my glasses?" Ye Qing said strangely.

"Boss, the iron ruler you want has been made, and now you have to do the final step of lettering." Master Jin pointed to a huge machine with a pure white shell and dark green glass observation window behind him: "I am going to use the maximum power Laser engraving; you should wear protective glasses."

Ye Qing took out the data glasses directly from the inside pocket, it could automatically reduce the too strong visible light so that his eyes were always in the most comfortable state. And when the Master Craftsman carefully put a pure black iron rule into that rare-quality solid laser engraving machine, and the vacuum device evacuated the air from the work area, a horrible white light that could not be described in words has instantly hit on a pure black iron ruler.

After the light is scattered and blocked by the glass protective cover, the entire workshop is turned into a sea of orange light and after half a minute the pure white laser stopped working. So, when the iron ruler which had been heated to fiery red shape was cooled again and turned into black, the pure white laser was turned on again.

I don't know how long it took, Ye Qing who was playing with his mobile phone, was interrupted by the sound of the intercom next to him.

"Boss, there is a truck outside the factory applying for entry. They said they were workers from Gangjie Chemical, and they came to send a piece of equipment."

"Let them go to the transfer warehouse to unload and send the driver an explorer robot by the way." Ye Qing stood up, ready to go to the transfer warehouse to pick up the goods in person.

Back in the non-standard product workshop again, Ye Qing has extra hard labor to do. Carrying a huge wooden frame, the wooden frame fastened with an iron sheet was pulled away by Juli drudgery, revealing the orange engineering plastic packaging box inside. An abstract mountain stamping logo appears on the outsourcing box. Many people who were in contact with the industrial assembly line were familiar with this mountain logo. Because it was the famous Anqi Heavy Industry logo.

This is like Li Kui and Li Gui. Amano Heavy Industries was a joint venture company founded by the well-known An Qi Heavy Industry and domestic Tianli Group. So, the logo design of the Tianli Heavy industry is very similar to that of the Anqi Heavy Industry.

After opening the orange engineering plastic packaging box, which was displayed in front of Ye Qing's eyes, it was a beautiful robot with tightly seamed joints and a metal paint process on the exterior. He lightly tapped the lower shell with a metal rod and a uniform and crisp metal sound echoed. This showed that the shell was made of light alloy steel, which has a certain metal aluminum composition. He moved the robot to the ground.

It turned out after half a day of reading the instruction and studying its control equipment. Ye Qing found it was also wearable, made of engineering plastics, and aviation aluminum. But the hand was

different from the five fingers of the Monster Heavy Industry that could sense the trajectory of movement. This was designed as a thumb and middle-finger index finger, corresponding to the robot's three-claw grasping structure.

In fact, as early as the introduction of the mechanical engineering chair, Ye Qing had considered the possibility of the product being counterfeited or borrowed from technology. But this worry was not great, because even if others copy it, its cost would be unacceptably high.

The black technology of the bionic mechanical arm lies in a complete set of power output structure which can smoothly simulate the trajectory of human movement, unlike the mainstream robots on the market which have a clear "tap-tap" mechanical sense when moving and the same stiffness as the strap.

In theory, as long as it is a mechanical product, there is the possibility that it will be copied by the hoist. Even for the Pearl Aero Engine in the industrial crown. But why the Aero engines which are all made up of metallic parts, and currently there is no such thing in the world and the shape of the metal part made by a certain company cannot be made by other companies since it can be counterfeited. Why is aero engine technology only available to a few countries in the world?

Two points; one material and two structures.

The most important blade of the engine is often discussed on the Internet. This is what looks like a plowing machine blade that is everywhere in the countryside and relies on a tractor to power. It has stumped 99% of the world's top industrial equipment manufacturers.

To withstand high temperatures, high strength, and the most difficult to single crystal, these are not mentioned just look its shape. It looks like a simple blade with a complex hollow air channel inside for cooling.

What is the complexity of this air channel?

The three-dimensional honeycomb structure can ensure that when the blades rotate at high speed, and the overall structural strength will not be affected by the internal air channel. So, what can be done in theory, and what can be done in practice are two concepts.

The same is true of several products produced by Monster Heavy Industry, from the first generation of relatively simple mechanical engineering chairs to the explorer robots that currently require accuracy against the sky. Its internal structure is so complex that the mechanical engineer can see it, so he can't even feel the mood to draw drawings. Anyway, it's impossible to make a qualified product after painting. So, why waste so much effort?

Ye Qing has already applied for a patent but for mechanical products, with a slight modification, others can legally avoid the patent restrictions.

Now that Ye Qing saw this robot with his own eyes, even the operating equipment was imitated, and the selling price was lower than that of Monster Heavy Industry. In addition to being angry, he had to admire the strength of the Amano Heavy Industry.

"Prepare the camera record, and I want to operate the robot."
