

## **M Factory 421**

### **Chapter 421: Competitor“s**

Wu Weiling left, after giving her phone number to Ye Qing who also gave her his phone number so that in the future when she can come to Shanghai she will come as a guest.

One hour later, Ye Qing went to a Boeing 737 and flew to Shanghai City. Suddenly changing from the Gulfstream G 750 to the Boeing 737, which had dominated the market for decades, Ye Qing felt like he was used to driving a Lagonda and now he is riding a donkey cart. Fortunately, he was not the kind of poor and delicate person. He didn't care about oil pollution when he is engaged in mechanical production, let alone sit in first class.

There were eight seats in the first-class cabin of which only three are occupied, Ye Qing and two business elites, whose hair was as shiny as a cow's lick, and they sat in front of him and they kept talking to the phone while grabbing their Hermès bags. The stewardess urged those several times to hang up their phone, and the two men reluctantly hung up them.

To be regarded as a business elite, at least the personal qualities must be good, or the surface image must be maintained.

After hanging up the phone, they gathered together to discuss in a low voice. The sound was unconsidered to disturb the other passengers, but Ye Qing hoped that their voices would be louder so that he could hear clearly because these two were discussing something that had troubled Monster Heavy Industries for several days.

"Manager Zhang, in Jiangnan Province, where I am in charge, sales reached 500 units in only three days. How about sales in Anhui province where you are in charge?"

"Haha... 700!" Some bald Manager Zhang lowered his proud laugh: "Since the promo video appeared last days, customers who are coming to order almighty robots now do phone calls non-stop... This month's sales bonus could be at least one million... There was much difference, thanks to that promotional video. I heard the promotional video was produced by An Qi Heavy Industries with equipment and technology, and Amano Heavy Industries contributed funds to film with actors... Now a large number of unidentified onlookers on the Internet are shouting the mighty domestic products. Crush the world."

The other manager sighed in a low voice: "For me, the mighty domestic products depend on Monster Heavy Industries. The robot we sell is obviously an explorer who imitates them."

"Yeah... Who made An Qi's sales network? It's too powerful. I heard that the foreign market was even more outrageous. A large number of small freshmen in Europe are calling for all-round robots to be forcibly dispatched to all dangerous industrial production to protect workers' visibility... It is not all promo pieces to be trouble, almost all made into a Hollywood blockbuster, I heard of this movie, there is a great wish to be nominated for an Academy Award for the best short film."

"I'm on the phone specifically for... I saved this short video, and I just played the short video when I ran the business. There were no doubts."

"That..." Ye Qing, who was sitting in the back row gently knocked on their seats and saw the two managers throwing doubts. After looking around, he smiled embarrassedly: "Could you please lend me a look at that promotional video. The plane is about to take off, and the mobile phone cannot be connected to the internet."

"Of course." Manager Zhang agreed, not only handed the mobile phone but also attached it with a business card with exquisite workmanship.

As for business, the better you get to know more quality customers.

This curious young man was going out with a bodyguard, and he had a good background.

Saying thank you, and Ye Qing carefully watched the promotional video saved on the phone. Before entering the country, the company managers told him this promotional video was very powerful and of course, he would be very interested.

The short film lasts for three minutes. At the beginning of the screen, the big mountain logo of Amano Heavy Industries appears on the screen.

"My God is Almighty."

"This... is the first day I woke up."

After the dark picture, it was the first angle of view of the robot which gave a shaking feeling of opening the eyes. A large-scale chemical factory appeared in front of Ye Qing's eyes. The morning sun, busy workers preparing to go to work were scattered all over the factory's pipelines and various reactors. This robot followed the flow of people, and it was easy to bring the audience into it, in this busy chemical factory.

"What's my task?"

The robot muttered to itself and walked into a pure white square factory building. The workers here were laboriously putting on sealed protective clothing. When passing the changing mirrors, the robot stopped and looked at itself in the mirrors. Some like the Wali robot in cartoons were also instantly separated from the bloated workers wearing sealed protective suits next to them.

The picture turned again, and the all-around robot came to a white laboratory. Entering here was like walking into one of the most dangerous biochemical castles in the world. There was a red flammable and explosive gas logo, a yellow warning triangle with a skull, and a toxic cadmium warning. There were also a variety of storage bottles with no-touch signs that say that corrosive liquids are strictly prohibited. A worker wearing protective clothing and an isolation mask was opening the storage bottle and pouring corrosive liquid into the glassware.

"My task is to learn."

The robot continued to mutter to itself and then learned the worker's movements, pouring the corrosive liquid into the vessel and an unexpected thing happened in front of Ye Qing. This robot, who he did not expect it, demonstrated its ability with skillful and fast completion of tasks.

It was slower. The liquid that was originally scheduled to be 100 ml was poured out a few more ml. During this process, some corrosive liquid splashed on it. Then it was dismissed by the old workers and waved to send it to the next job.

The next job was the synthesis of harmful gases. This robot was still slow and it was rejected by skilled old workers. The only bright spot should be that in the ventilation room, a lot of harmful gas was sprayed on the face of the robot, and it was indifferent, then the third post and the fourth.

Without exception, the robot was completely rejected. In the end, the robot was very humane and made a sad shaking head.

It was hidden by the snow and was sent to a corner of the workshop, silently watching the busy workers, silently cleaning for a living day after day, cleaning the waste liquid pool.

By shooting the picture from the first perspective, the audience can easily be brought into the sad mood of the robot. The kind of loss of working hard, but not to do anything awkward, was like the job hunting experience of many young people today.

Day after day, the robot became more and more proficient, but he was still doing the hardest and most tiring dirty work. The camera flashed quickly. On an ordinary day, the robot opened its eyes as usual and looked at the busy workers while sweeping the floor.

"Warning..."

Suddenly, the first angle of view turned into a dazzling red.

"The hydrogen sulfide content in the air has been detected to reach 0.2%, which has exceeded the safety threshold."

"Warning... Warning..."

The robot dropped the vacuum cleaner, ran to the source of the harmful gas leak, and reported it to the workers nearby. However, workers in protective clothing did not take it seriously, saying they have rich experience and they could deal with this gas leak and the robot was driven away again, but the amount of hydrogen sulfide in the air was increasing.

Based on experience, the old worker who did not follow the operating specifications to destroy the production materials this time confidently carried out remedial measures. As a result, an inconspicuous safety valve flew off, shattering its isolation mask. Hydrogen sulfide gas quickly leaked, and the old worker who fell into a severe panic fell on the ground with his mask before he ran a few steps and the alarm bells in the workshop were overwhelming. This flammable and highly toxic gas quickly reacted with the electric sparks generated by the charged equipment, causing a detonation reaction to blow up the entire ventilation equipment room.

The workers ran away in horror, and the entire factory responded quickly. The director and leaders gathered together, and the factory fire brigade was ready to go. But no one dared to rush in because through the monitoring and observation in the laboratory, the fire was burning inside, and the worker who was thrown down by the poisonous gas without following the operating specifications was lying motionless on the ground.

In addition to the fire, small explosions also occur from time to time. Workers reported in more horror that the laboratory not only had dangerous goods such as hydrogen sulfide but also stored organophosphate compounds. This was a very toxic thing, once leaked; the entire factory would be destroyed.

The director of the factory was about to order the entire factory to evacuate. But in the surveillance picture, the worker who was motionless was missing. The all-round robot appeared in the center of the monitoring screen. Colorful flames sprayed thinly on its body, and the highly corrosive liquid on the ground was happily corroding everything it encountered spread to the robot, but it turned into clear water not even smoke.

The screen once again switched to the robot's first perspective which wandered through the fire and explosions, closing one device after another and breaking open the cabinets of various chemical fire extinguishing devices. All dangerous goods were also transferred out by it. The figure of the old worker who was overwhelmed by poison gas also flashed across the screen.

The fire burned for half an hour, and the all-rounder also tossed in it for half an hour. All kinds of unexpected handling programs that were learned silently on weekdays were also implemented by it. What borax mixed with calcium oxide, to absorb strong corrosive acid. Holding the burning material cylinder, throw it into the waste liquid treatment pool and extinguish all kinds of terrifying chemical flames with liquid hydrogen.

In the monitoring room, the director and the workers were stunned and excited. Not only was the factory director feeling surging when watching, but even Ye Qing holding the mobile phone was also feeling surging when watching.

The three-minute promotional video really felt like watching a Hollywood blockbuster. Using the first point of view, it cleverly led the audience toward the robot. From the very beginning, it tried very hard, but it couldn't do anything well, and the disappointment was hit everywhere.

The last effort to conquer the tide, not only swept away this feeling of loss but also the robot that people brought in became a hero. If he was in a movie theater, Ye Qing would believe that young people who have just stepped into society must jump up for joy.

Even if it was a competitor, Ye Qing had to admit the shooting level of this promotional film had reached the limit that he could hardly surpass.

## **Chapter 422: The tempered crystal**

"Gentleman, this thing isn't it shocking?"

The manager Zhang in the front seat picked up the phone and grinned: "I am the agent of the all-around robot. If you are interested, you can contact me."

Ye Qing was not here. The topic continued, acknowledging that the all-around robot promotional video was made well, but it is limited to this. Explorer robot could do better than this. It's just that the two robots now lacked an opportunity to compete on the same stage and had not been tested in actual combat. So, how could outsiders be sure which one is better?

Amano Heavy Industries' all-around type was cheap, with many additional electronic functions, and publicity was in place. Naturally, its sales would continue to rise.

Ye Qing had a headache! The location of the other party's promotional video was too good, and he felt that they also shot one of what it was said before and he was a little too optimistic but this promo was really hard to surpass.

At 3 pm, the plane landed at Shanghai Airport. It was the working hours in the Monster Heavy Industry. During this time, Ye Qing didn't bother the managers to come to pick up it from the plane. Of course, he was not alone.

In the waiting hall of the airport, Bai Douer dressed in a pure white windbreaker stood outside the passage, looking forward to it. With her pure face, watching the passengers walk out of the corridor. Almost every passenger couldn't help but turn their eyes towards her because she was amazing with her silky hair. When Ye Qing appeared on the scene, he brought a buff that foreigners were not allowed to bring into the country.

Who would let the coolies walk behind him unsmilingly?

The passengers who walked out of the aisles were all the little tender rods that were used to staying in the greenhouse. How could they dare to get close to the muscles that are even more exaggerated than Schwarzenegger's huge hard work?

Bai Douer kept waving when she saw a tall man in the crowd: "Big brother Ye!"

Ye Qing could obviously feel the sour hum from the nostrils of the men around him. With a triumphant smile, he walked toward her and put his arms around her slender waist: "You didn't say that you would not be able to pick up me at the plane, I just asked the driver to take me back."

"In the next two weeks, the TV station will be busy remedying the variety show [escape from the secret room]. As soon as I finished shooting the food show and I just had no task and before I was transferred to the program group to help with the preparations, I came to see you. The TV station will take me back later. In the next two weeks, I have to work late every day, and am afraid I don't have time to see you..."

Ye Qing walked in the crowd with his arms around his waist, and her skin was as tender as jelly, turning pink because of her shyness.

"If you don't tell me, I will forget. Before I went abroad, I had met Xu Luoyu who was participating in your program at the station. I heard her say that the shooting venue in the studio had mechanical failures and injuries. Now it's done. Isn't it?"

"It can't be fixed. I heard the maker say unless the whole secret room is dismantled." The little bird took Ye Qing's arm, and passers-by were still looking at them as well as Ye Qing with Bai Douer, which made her very embarrassed. She just moved her eyes to the ground, looked at the tips of her high heels, which were hanging down there, and swayed here and there: "The director's plan is to use his shooting skills to camouflage this episode. The star guest will use the next episode. Yu Fei also injured Xu Luoyu along with her. Her foot was sprained, and the director let I will host instead of her first."

"From the first episode of Xu Ning Palace, I think you are more seductive to host." Ye Qing quietly squeezed the willow waist and said with a smile: "I didn't expect this wish would realize so soon." and he couldn't help but squeeze again her bamboo waist with an indescribable touch.

Bai Douer's complexion was even redder as if she had applied a good layer of rouge. When she walked out of the airport, she saw a Lagonda and Mercedes parked there. Not only did she feel that her cheeks were so hot, but her heart also became hot. Because the bad Ye Qing would like to make her a few short tricks in the car!

.....

Time was an unpredictable thing because this guy was always fast and slow. For example, when he returned to Longxitan factory in the early days of the Lantern Festival, he always felt that it was only a short time before it was dark. Recalling the lingering fragrance between his fingers, Ye Qing, who was sitting in the car, couldn't help smiling triumphantly.

She has to work overtime for two weeks, which is 14 days. Then one day later, his private jet will arrive, it was at the agreed time...

"Haha..."

"Wait a minute, the ace pilot of the private jet and the gorgeous, flower-pretty stewardess seemed to have no problem." Ye Qing suddenly thought of something, a key question.

The stewardess was easy to hire, no matter from major aviation universities or airlines, it could choose carefully at will. Pilots could be more troublesome. Commercial airliner pilots needed at least several years of training before they can obtain a flying license. Pilots were the treasures of major airlines because the selection of personnel was demanding and training is long. Both domestic and foreign airlines liked to recruit retired military aircraft pilots, and then spend a lot of money to train them to obtain commercial airliner pilot licenses. In this way, they couldn't drive the plane directly. They should sit up with the captain as a deputy captain and experience several years.

Ye Qing understood that a high salary could dig into an airplane pilot, but no matter how powerful a pilot was, it seemed that the monsters didn't feel relieved to fly the airplane.

To let the monsters acquire the license for commercial airliners. The first thing they should master is English, which is the common language for communication between aircraft and ground towers. If they didn't use it fluently and if they didn't master these professional English when they leave abroad, they might not even be able to touch the track. If monsters couldn't learn English, they couldn't get a driver's license if they did not know English.

After thinking about it, Ye Qing decided to recruit two drivers first, and then let the Master Metal Expert also go to the cockpit and learn driving skills. Then he will become a mechanic by sitting in the cockpit. The task of recruiting pilots and flight attendants was naturally handed over to the company. In addition, it was necessary to report to the air traffic control department to rent long-term venues at the airport, which was also handed over to the company.

Ye Qing saw the Longxitan factory after a few days away again. In the brightly lit factory, dozens of brand-new machines have been re-established. The high seas port site also had two types of X

mechanical Colossi which were backed by dazzling spotlights, it was the chaos. Entering the office, he first called the Master Craftsman and asked him to go to Shanghai TV station to help see if the secret room over there was worth repairing.

"Don't slaughter them this time." Ye Qing touched his chin: "Well, repair it if it is worth repairing. I will send the materials."

After explaining to the Master Craftsman, Ye Qing saw that he was all set to have the opportunity to recruit Electrocrystalline and inside the office, a white mist rose. Like an electric crystal made of lightning, stayed motionless in the white mist, Ye Qing called it and he didn't move. Detouring in front of the sparkling electric crystal, Ye Qing tapped his forehead lightly with his fingers: "Hey, what's wrong with you Tianjin?"

The Electrocrystalline still remained motionless, and his diamond-like eyes drooped down.

Ye Qing scratched his head and thought: "Is it hungry?" What natural single crystal mineral body is in the factory, whose he should first use it to supplement the physical strength of the Electrocrystalline.

"I don't want to care about you and am angry."

Electrocrystalline silently turned his head and pointed the hazy back of his head at Ye Qing.

"Why are you... why are you angry?" Ye Qing with a waterfall in sweat: "Tianjin, you have to understand those ordinary people will be very curious when you are seen by them."

"I didn't say hello to you last time because of an emergency. So, I sent you back to the monster factory." Ye Qing moved forward to it.

"Anyway, I am angry, unless you buy me a cell phone."

### **Chapter 423: Boss, I want to buy this**

When Tianjin said this sentence, "Anyway, I'm angry unless you buy me a cell phone."

Ye Qing has thought this requirement would be easily met. So, he opened the shopping website without saying a word, showed a dazzling array of mobile-phone pictures, and let Tianjin choose one at random.

The Electrocrystalline, which was one meter high and has pointed ears, immediately came to his energy, jumped onto the chair, and looked up at the monitor at a 45-degree angle. In the end, Tianjin chose a Huawei large-screen mobile phone. Maybe it felt a mobile phone was too simple. Ye Qing also let it choose desktop and laptop computers.

The ability of Tianjin to learn was very high and in order to make Tianjin grow to the expert level as soon as possible, Ye Qing picked up the phone to call Qiu Yi the purchasing manager of the company to purchase the mobile phone and asked it to go to the bookstore to buy all kinds of books related to electronic information and coming back to bring them to him, because he wanted to read them. He didn't mention Tianjin.

Ye Qing registered the paid information sites on the Internet in one go. After writing the Electrocrystalline account password, he let it teach itself.

After a while, sitting at the desk, Ye Qing thinking and taking his chin with his wrist, after turning on the computer and finding the high definition version of the robot's full promotional video, and he was ready to watch the video again. The result was, he was taken aback by the number of times it was played. More than two million! This was the number of clicks from Tencent Video, and the video had only been online for less than two days. The following comments were also brainstorming applause throughout the article, saying what domestic products were mighty. So, he saw his blood boiled, and so on.

In the past, these seemingly tall promotional videos were all shot by foreigners. However, the background and characters in this promo were all China's own. Ordinary people, of course, wouldn't understand that was a joint venture with technical support by companies.

After watching the high-definition video again, Ye Qing had to admit it was difficult for him to shoot a promotional film that surpassed Amano Heavy Industries. But now, let Amano Heavy Industries take the lead and seize the opportunity and call on the explorers to become famous. They can make an industrial version, and it is only natural for them to wait until they have fully grasped the core technology in the robotic arm, reduce production costs, and launch a home version that tests more flexibility.

The robot of Monster Heavy Industry could perfectly simulate the movements of both arms and mechanical joints were one of the core technologies. The universal joints, similar to human joints, each could accurately locate two hundred and forty nodes to move. Now, Amano Heavy Industries, with its strong technical support, has been able to produce 96-node universal joints. When they conquer the node to more than one hundred and fifty, they will have the conditions for full competition with Monster Heavy Industries.

Solving the problem is actually simple. Let customers realize the products of the Monster Heavy Industry were better, so they can buy the products from here.

Ye Qing picked up the phone and was about to call director Ding Yin. He wanted to ask him if he could help to shoot a better promotional film.

Before the number was dialed, Tianjin, who was in a chair playing with the computer, jumped out of his chair and ran up to him and gently, pulled the corner of his clothes.

"Boss, I want to buy a digital tablet. It is said on the Internet that it is better to use software to make pictures with a digital tablet."

Ye Qing nodded and said he would buy it for him immediately.

When Ye Qing managed to join Ding Yin, and because of an urban sci-fi movie that won huge box office and fame, the director quickly accepted his request for what he wanted to do and told him: "just say it."

"Did Director Ding watch the promotional video released by Amano Heavy Industries?" Ye Qing gave a brief introduction to the robot products of the two companies and asked him how to start if Monster Heavy Industries also shoots a robot promotional video?

"I've seen it, and this promotional film is not popular on the Internet. From a professional point of view, this promotional film is very unqualified but even so, it can grasp the hearts of young people."

"I remember Mr. Ye also launched robot products. It was not long after the movie was released. When the movie was first made, the robot props you provided were better than the clumsy robots they announced in the film."

"It's just..." Ding led the acting to change his tune: "Mr. Ye, I think it is difficult for us to surpass Amano Heavy Industries in response to just shooting a promotional video."

"This is a domestic robot in the eyes of the audience in the true sense. It's a promotional film, and the shot is great. It has the first advantage. We got the first national hit in the film industry, but it's a science-fiction movie, not that kind of real product promotion movie. I think we must change our way to think. We don't have to shoot a promotional video. We must shoot something else."

"What about filming?" Ye Qing asked suspiciously.

"In this way, President Ye, give me two days to think about it." Ding Yin said with interest: "Of course I am good at shooting robots, which are challenging things."

When Ye Qing hung up the phone, turned his head and found that Tianjin jumped beside him again and his two pointed ears kept shaking.

"Boss, it is said on the Internet that the rapid development of electronic components is inseparable from the credit of the placement machine. If you want to make complex electronic components, you must have a placement machine. Can you buy me one?"

"You are self-motivated, of course, and I have to support you." Ye Qing smiled and touched its sharp ears like a genie: "I will order it for you now."

After ordering the digital board and a small placement machine, nothing after half an hour, Tianjin came back and forth.

"Boss, it is said on the Internet that the technical content of chips is the highest. The manufacture of chips requires a single crystal growth furnace. Would you please buy me a single crystal growth furnace?"

"Ok, I will buy it!"

A small single crystal growth furnace, the crystal furnace was about hundreds of thousands. Seeing there were more and more things that Tianjin wanted to buy, Ye Qing simply told it his online shopping account and password.

"In the future, you can order anything you want to buy directly from the Internet and tell me what you can't buy online."

"Good boss." Tianjin ran away very happy.

With the online shopping authority, Tianjin did not find him again for the next few hours and by the end of the night, when Ye Qing was about to take a break, the mobile phone received a total of more than five million consumer bills.

Ye Qing comforted himself after putting the phone on silent: "Not bad."

Tianjin was a unique hero recruited by the most resources in Monster Factory history, with his magical stealth ability and talent learning ability made Ye Qing realize that after training, Monster Factory will also have a leader in electronic technology.

No matter how much the cost was spent in this process, it was worthwhile, not to mention that he was going to buy all industrial equipment, which was not a waste. But when he woke up the next day and watching the consumer text message reminding him that he pulled it up a dozen times, Ye Qing almost jumped out of the bed and he was ready for hemorrhage in his heart.

The online shopping account was tied to the top centurion black card in the business. Now, this Centurion Black Card has been maxed out by Tianjin! At first, there was a full balance of 100 million, and there was no shopping cap, so it maxed out. With so much money, even from the Silicon Valley of the United States, a large number of high-tech talents could be dug.

Before making a fortune, Ye Qing felt that whoever wanted to give him 100 million, except for morals, could not sell, and everything else could be sold. Now in one night, Electrocrystalline helped it consume 100 million...

#### **Chapter 424: He is as cold as a block of ice**

Logging in to his online shopping account with his mobile phone, Ye Qing discovered that there were no less than 20 million in the shopping list, which was the purchase of colorful natural gemstones and a lot of deals for broken diamonds and all the purchase tickets were in copies on his mobile phone. As a result, he had planned to teach Tianjin a lesson so that it would understand the boss's money was also earned with hard work. But when he walked into the office and saw it standing in front of the computer whose light had dimmed, he remembered suddenly that those gems and diamonds should be its nutrition.

Seeing Ye Qing standing at the door with a stick in his hand, Tianjin was stunned.

"Boss... Boss... What do you want to do?"

"Money... Save some flowers. "

After explaining it should not run around, Ye Qing had no choice but to go to the company, and on the way, he charged the card with another 100 million.

In other words, no matter how hard Tianjin spent, Ye Qing had the daily expenses of the factory and the company. Its consumption would probably enter a trough after buying all the experimental equipment.

Today factories and companies had consumed 1.7 billion. Among them, 350 million are funds for the planned acquisition of Landtop's mobile phone manufacturer. There were some funds deducted for the daily purchase of massive amounts of industrial raw materials and other necessary expenses. And there were 900 million Yuan used by Ye Qing to purchase related production equipment for Dream Display.

If he wanted to develop the mobile phone, he should first develop a mass production plan for the Dream Display. At the very least, the mobile phone he should make, even if it had the same performance as an ordinary mobile phone for charging, it could be a good gimmick with the world's best display.

In the dream display, there were three cores that are the most difficult; organic light-emitting diode coating, coated substrate, flexible ultra-thin glass.

In the beginning, the diode, it is easy to remind people of the commonly used type in the industry with two small wires, with a black lacquer round in the middle, similar to a capacitor. But what Ye Qing wanted to build was black technology diodes.

It was an ultra-thin coating made of various rare metals and minerals, with more than one layer. The coating was the bright color display layer, and the coated substrate was the carrier of the light-emitting diode. The flexible glass was related to the display effect of the dream display, and it was indispensable. Even the seemingly simplest glass required manufacturing technology beyond the world.

Nikon said that 0.15 mm flexible glass is their secret, and it is also the thinnest glass in the world.

Ye Qing needed flexible glass with a thickness of 0.1 mm to qualify. Obviously, Monster Heavy Industry should challenge another world number one in industrial manufacturing. The black technology drawings of Dream Display only gave Ye Qing various coating formulas and synthesis steps. And Ye Qing was told how to make 0.1 mm glass. It seemed that in the eyes of Monster Factory, this kind of glass is like tires used in making cars. You only need to indicate the size.

Is it possible to list a lot of technical instructions separately and tell you how to make a simple tire?

Since the Monster Factory thought it was feasible, it must be possible.

Facing the next challenge, Ye Qing was very motivated. Full of fighting spirit, he strode towards the company elevator.

There were many employees standing in the elevator. When they saw Ye Qing, they immediately squeezed around, leaving the center position for him saying: "Good morning Mr. Ye."

Letting the boss stand in the middle, this was one of the ways to show respect. But when they gave up their position, they discovered there was another employee in the center of the elevator did not respond. This employee, who became the focus of the moment, was Yun Shi with silver-gray hair, full of intelligence and tranquility.

Of course, Yun Shi didn't mean it. She was squinted her eyes and dozing off her head little by little. Under the curved eyebrows, there were two panda-like dark circles under the eyes. According to the degree of the dark circles, it was obvious she had been staying up all night these days.

The atmosphere in the elevator seemed to freeze all at once. A new colleague who had a good relationship with Yun Shi quickly touched her from behind. At this time, it was more appropriate to describe her as "Wandering in Heaven".

As the saying goes, "Success is one percent of talent, plus ninety-nine percent of effort."

Yun Shi's ability to become the country's top network technology expert relies on this kind of sleepless energy.

The new environment gave Yun Shi new inspiration. Soon after joining Monster Heavy Industry, her one percent of talent suddenly brought her a brand-new idea. This was a core concept related to the

dynamic image recognition processing program. In her vision, this program core has many extension possibilities, such as the recognition program for unmanned driving software.

Dynamic image recognition technology has always been the focus of research by major technology companies, and it was also one of the hottest topics in the programming world today.

Yun Shi spent a month in Monster Factory and had used her spare time from work designing this basic program to the present. Because when Ye Qing was in the work before, she was worried about going to bed too late. Because if in the morning he called her to make his tea or coffee, she scolded herself when she saw her drowsiness. While waiting for him to go abroad for the past few days, she found herself out of a critical period; she stayed awake every night and finally completed this core program.

The beauty of people is an advantage in many cases, such as during the day at work, if Yun Shi lied in front of her desk for a short moment there were always a few enthusiastic male colleagues around her to help her finish the work.

She, who hadn't slept all night, had already thought out her plan. After nine o'clock in the morning, she sneaked back to the dormitory to make up for the sleep, letting the enthusiastic male colleague help her ending the work, and waited until 2:30 in the afternoon to come to the company. In doing so, she was also very guilty and embarrassed.

But she, who loved programs, couldn't bear the suffering of being full of inspiration in her mind and had no time to turn them into reality.

For the inspiration, if you don't seize it at the opportunity, it will run away quietly!

The core programs and algorithms have all been completed. Yun Shi thought this was the last day, and then she wouldn't have to stay up all night like this.

Another part of the plan was she waited for Ye Qing to come back, and she would show up in front of the president, showing her best and gentlest side, to flatter her.

Alas...

Who allowed this rich layman to spend hundreds of millions to build a world-class server system?

To fully test the core of her program, it is necessary to use a large computer to perform complex calculations. Counting on her own computer, it wouldn't be counted as ten years. In the past, she used to pay for her own money and rented a commercial server for testing.

Now the money in her bank card can't be moved, and it was impossible to rent a world-class server like the one Monster Heavy Industries.

Whenever she heard those employees of the Network Department discussing how the servers under the new building were, Yun Shi's heart would feel sad that the treasure was covered in dust, Jinshan turned into copper, and the fairy married Li Kui.

She looked at the people in this department, what were they doing with it?

Process the data. Store the videos... and then it's gone!

As long as, as long as she was fond of her president, a silly ghost, as long as she could be transferred to the network department, Yun Shi would find the opportunity to take the initiative to watch the server on the night shift, then she quietly would put her own efforts into this world's top server and put it run.

A good horse with a good saddle was not counting as burying the name of the world's top server.

Yun Shi was a girl with a chivalrous heart. She intended waiting for the core of the program to be thoroughly tested, and then quietly authorize the core of the program to Monster Heavy Industries for free for two years to compensate for her behavior.

Because of her mixed position was too low, she just wandered beyond the world because she couldn't get the access to information about Ye Qing returning to China on business. Then someone pushed her shoulders quietly!

As soon as she opened her eyes, Yun Shi faced the ground; Ye Qing was as cold as a piece of ice...

#### **Chapter 425: Take you to play interesting things**

At this time, she is not a good employee in the eyes of any boss because no boss would like an employee who stayed up all day and affected her job; she was criticized by the president for staying up all night before.

"It's over... It's over..." Yun Shi felt an arrow in her heart, that all her best wishes would come to nothing, and her life was completely gloomy!

Sure enough... In the next moment, the president asked Yun Shi to visit his office in a very serious and cold voice.

"No... Don't dismiss me; I was wrong with the president." Like in a falling ice cave, Yun Shi kept begging for blessings from the gods and Buddha in the sky, making heavy steps, with great tension. She was like a little deer who couldn't find its home, she followed the boss.

Entering the office, Ye Qing slammed the door closed with a cold expression.

"Yun Shi, what is going on with you? Are you watching a Korean drama or come to work with me?"

Yun Shi's innocent expression on his face, coupled with two big panda eyes, directly made Ye Qing not angry.

"Last time you stayed up late, you told me you watch a Korean drama. How many days have passed since? You haven't finished watching it?" Ye Qing couldn't wait to knock her forehead with his hand: "Don't tell me, you are chasing Miss Mermaid from episode 247. Or do you want to be the first employee to be fired by me?"

"I... I..." Yun Shi was confused and her brain was blank.

The reason for watching Korean dramas had already been used, and Yun Shi blurted out: "Boss, I... I was playing League of Legends last night and thought it would be a holiday tomorrow..."

"You!" What else could Ye Qing say? For such a good employee at the stall, Ye Qing couldn't find any other reason besides firing her.

"You have been led to..."

Before he finished speaking, Ye Qing's phone had rung. This was simply a life-saving call, even if it was temporary, at least it gave her time to think about reasons to save her. If someone else made this call, Ye Qing would definitely not answer and let Yun Shi be expelled. Even if he felt reluctant, Ye Qing had to maintain the company's discipline. But this call came from Tianjin.

"Hello..." Ye Qing tried to calm down as much as possible and had to answer Tianjin's phone.

"Boss...I...I want to buy a set of silicon lithography equipment. The money in your card...is not enough."

"But you don't need to buy this first."

As if aware of Ye Qing's emotions, Tianjin was also cautious on the phone: "I encountered a problem. I asked some people online, but they couldn't answer it."

"What is the problem?"

"The computer's original code problem, boss, do you recognize a good programmer? I want to find a teacher."

Sure enough, Ye Qing couldn't answer the question of Tianjin.

A set of silicon lithography equipment, even if it was made domestically, could take hundreds of millions to get out. Since Tianjin said that he could not buy it temporarily, Ye Qing would naturally not mention it.

Save if you can...

As for the next mobile phone target, the factory would also launch lithography equipment.

It's just that Tianjin proved a teacher's desire to learn, which made Ye Qing a little bit difficult. These employees of the network department are better at teamwork and have good program masters too.

Wait... Ye Qing suddenly thought of a person, the Real Eye. His strength left a very deep impression on Ye Qing, ah if he could be allowed to guide Tianjin... He hadn't contacted him for a while, and Ye Qing knew the mailbox of this great god Real Eye. Now that it was important to expel Yun Shi, Ye Qing first told the memorable Tianjin his email address and asked it to contact him.

Ye Qing, who hung up and planned to expel Yun Shi, looked at her, dumbfounded.

Because she didn't know when she should sleep and then get up, Yun Shi standing in the same place, eyes red, sniffing and sobbing silently. Her tears slid from her eye sockets, and flowed down her cheeks and dripped onto the black work clothes.

Ye Qing pursed his lips and did not speak, and she lowered her head, her silent sobbing turned into a choking, and she wiped her tears with her hands in vain.

She had some grievances in her heart, and when she heard she was about to be kicked out, her heart suddenly lost his goal, her shelter, and the painful confusion that she couldn't make it home. The more she thought about it, the more she felt wrong.

In the beginning, she promised to help this guy deal with hackers, but now she had to stay in a strange city alone. This guy wanted to fire her!

Yun Shi cried pears like rain and felt as if she was in "The Injustice to Dou E that Touched Heaven and Earth" which was still wrong.

"Okay."

Ye Qing gave her a helpless look: "Last chance. All bonuses will be deducted this month, and I will tell you to stay up late during work, then there is no discussion. Wipe away your tears, go back to the dormitory to rest and come back to work in the afternoon."

Yun Shi had conscience; she kept sniffing even when she was feeling a little better. After keeping this mood for five minutes, she wiped away the tears. Out of the president's office, she bowed her head, walking toward the dormitory such as an injured deer.

As soon as she entered the elevator, Yun Shi suddenly felt that something was wrong. Her memory was very good, and now her mood calms down, she recalled the crucial call in the office just now. On the phone, her cold-hearted president suddenly became very gentle, and he wanted to help the person on the phone by introducing a teacher who was proficient in computer programs.

Yun Shi felt as if she had heard these four words and there was a mailbox.

At that time, she was still immersed in the gloomy and sad world. She didn't understand the specific mailbox size, but she felt she had not misheard the words of the Real Eye.

Who is the Real Eye?

Yun Shi raised her red eyes and looked at the mirror in the elevator. The silver-gray girl in the mirror with whom she saw pity is called the Real Eye in Reality.

It was very simple to verify she had not heard it wrong. She hurried back to the dormitory and then turned on the dependent laptop. The mailbox for contacting Monster Heavy Industry was an independent dedicated mailbox, which was very safe. Entering the mailbox, two new emails dated today, immediately attracted her attention. Seeing the familiar Id, she immediately tickled her teeth. It was really him.

Just now he was about to kick her out of the office, and he sent her an email in the blink of an eye. Look at the wording. This attitude was almost as bad as the Amazon Trench and the other as euphemistically as the Himalaya.

"Hello... Real Eye."

"Some presumptuous emails are sent to you. Please forgive me if I interrupt you."

"That's it. I have a child from a relative's family. He is very talented and interested in electronic information. If you are free, can you help me with advice, because I really can't find a qualified teacher to guide him..."

"If you want, please give me some guidance. The study fee can be paid by the hour."

The more she looked at it, the more she felt itchy. This guy was so embarrassed; he came to the door with a shy face and asked her to be a teacher. In the office before, he spoke so softly, and she wondered what the relationship was.

The second email came from a strange Id.

"Hello brother, my name is Tianjin, can you be my teacher?"

Humph...

"A child?" Yun Shi felt she was not sleepy anymore. She was full of interest in this "little relative" who had a close relationship with Ye Qing, and whose net name was Tianjin.

"Hello... Kid. I am Real Eye."

The kid named Tianjin quickly replied with a very simple procedural question in Yun Shi's eyes.

"This question is very simple. Children don't always learn these boring programs. Come, I will show you something more interesting."

#### **Chapter 426: Customers from afar**

Today, throughout the morning, discussions revolved mainly around the acquisition of Landtop Corporation and the recruitment of professionals in electronic technology, because the production of cell phones is the company's next goal.

A mobile phone had as many as hundreds of modular components. Whether it is Samsung or Apple, the mobile phone manufacturing process is to master several core technologies and then integrate these modules, instead of producing these module parts one by one.

The manufacturing of modules depended entirely on the supporting manufacturers of parts all over the world. From the camera to the battery, to the precision screws inside, there was a very mature supply market.

A good phone, except for powerful hardware, its reasonable design is the soul. It is essential to design and coordinate hundreds of module components so that they are fully coordinated with each other. It is the most basic not to design Samsung's frequently explosive mobile phones.

Landtop had complete production and assembly equipment, but their production scale was small, even when they were in full action, they could only produce 100,000 mobile phones in a quarter. It was also the kind of mobile phone that was free sent for charging...

"Landtop Company only has more than 400 employees. Now we have obtained information about their employees. According to the preliminary evaluation, there are 153 employees in the company, which meet our recruitment requirements. However, the distance between the two places is a little far, so we don't know how many employees intend to come here. Programmers and artists can take a little longer time to come, and the rest of the staff is willing to work here, so they will be temporarily arranged in warehousing and logistics."

Ye Qing had a brief look at the information of a small number of people. They were either highly educated or proficient in the operation of the equipment. Some were mobile-phone software programmers and artists.

The mobile phone project was still in the initial planning stage, and the equipment would be moved to the Longxitan factory after the equipment was bought, and ordinary employees wouldn't be taken over for the time being.

"We have negotiated the severance payment, which will be paid by Tao Jian, the boss of Landtop Company." Yu Huali, the manager of the personnel department, wrote down this plan: "boss, for the talents in electronic technology, I plan to look for between well-known mobile-phone companies through headhunting companies, because, for mobile phone manufacturing, we don't have much experience. Excavating these experienced talents can make us familiar with this industry more quickly."

"Here is the list of preliminary screening talents."

.....

Today's morning meeting was seemed to be moving towards the afternoon meeting. Because there were too many things to discuss at the meeting, the most complicated thing about acquiring a company was always the various procedures and documents, not the relocation of the factory.

When the leaders had a meeting, the employees at the bottom were usually happy, because, without the supervision of the leader, they felt they can work more relaxed. The employees were hoped that the meeting will be long; suddenly a customer who had traveled across the oceans in the company's customer reception area was somewhat unhappy.

He came from war-torn Nigeria, with the friendship of General Mopu and the ambition to expand Onitsha District. His name is Buzz, the chief logistics officer under General Mopu.

Backward Nigeria only produced mineral raw materials and crops. Even if you wanted to buy a piece of clothing, you could only buy colored coarse cloth hand-woven by local peasant women, which was as ridiculous as a sack.

Therefore, before Buzz had mixed up with General Mopu, he often flew to China's Global Commodity Trade Center to purchase large quantities of high-quality and inexpensive China's goods and sell them back to Nigeria.

Buzz, who has been mixed with General Mopu, was proficient in Chinese, and had many procurement channels in China; of course, he had become the envy of everyone's logistics supervisor.

This time, Buzz was in charge, but he deliberately delayed two days in Yiwu to purchase, before flying to Shanghai City to meet the mysterious and unpredictable President of Monster Heavy Industries.

If the Mechanical Colossus Type I left a deep impression on them, then the Master Metal Expert which had led a team to buy the diamond completely left them with tremendous excitement that subverted their outlook on life. With a heavy tank, he ignored any light fire attack and even wiped out hundreds of armed men in a short period of time. Even if the foreign mercenaries came, it wouldn't be possible, not to mention that the Monster Heavy Industry only sent one tank.

At the time, Jin Liuhai expert said this type of tank was not for sale, but both General Mopu and Buzz in charge hoped to meet the president of Monster Heavy Industries in person to see if they could seek more cooperation.

Buzz arrived late; he had taken a taxi for a long time and found the office building of Monster Heavy Industry. When he arrived at the company, Ye Qing had just entered the conference room and had a meeting with the managers.

Because there was no appointment, the receptionist had to ask him to wait in the client area first, and wait until the president finished the meeting before she could report it. Sitting on the sofa, he felt unusually nervous.

During this visit, he was also entrusted by General Mopu and brought a lot of local products and now he was sitting on the sofa alone, with two big black travel bags under his feet, like a hardship to go to the city to ask relatives to do things.

Buzz could come to China three to four times a year, and every time he went there, he feels the country is undergoing earth-shaking changes. Over ten years ago, he was able to find some sense of superiority from his status as a foreigner.

Now when walking in those big cities, foreign faces could be seen everywhere. He had seen it too many times at the airport. When the foreigners just land, they just shouted "Oh Mika... Oh Mika...", with a grinning mouth like an Ostrich egg.

Why are you surprised?

A municipal airport in China is bigger than any other Capital Airport in the hometown of many foreigners. Was it not surprising that there are more tall buildings than all the countries combined?

In the words of the bosses who did business with him, this was only a third-tier city, which was not ranked in China at all. Shouldn't you be surprised if you go to a first-tier city?

Buzz had also seen it on the street. A foreigner who had just arrived probably had heard the news of the serious backwardness and molested a little girl on the street. As a result, he was beaten like a pig by a group of angry lads, and the police came and pretended not to see anything funny.

So when he carried two big black bags and wanted to meet the chairman of Monster Heavy Industries, he was stopped by two security guards who were as strong as cows and were holding metal detectors before entering the door. They were polite, but their subordinates were unambiguous and checked the inside and out of the two big black bags.

He presented himself for the inspection in a very cooperative manner, which also made him feel he could not do otherwise, and he was, even more, looking forward to what kind of legend the president of Monster Heavy Industries would be.

"Mr. the President may take some time before he can announce the end of the meeting." The young receptionist, who has been here for the third time, walked up to Buzz with a sweet smile replaced the coffee mug that had been emptied on the coffee table. A strong Blue Mountain Coffee: "Drink it slowly. If you need anything, just call me."

Buzz quickly got up and expressed his thanks in Mandarin with a little Yiwu dialect. When he first arrived, he didn't dare to show off, and later he would count on this girl to help him inform Mr. Ye Qing.

At 10:30 noon, Ye Qing ended the meeting and went to the office.

Not long after returning to the office, the staff responsible for customer reception knocked in and reported there was a customer from Nigeria who wanted to see him.

"Nigeria?"

Ye Qing was looking at the consumption reminder of his online shopping account. Today, Tianjin went wrong, and the consumption was all 28, 48, 188, and 188.

Compared with yesterday, this is nine cows, a super small consumption of less than a dime. There were hundreds of Pens in total, and he didn't know what it bought online.

"Where is that customer, is he still in the company?"

"The boss in, he has been waiting for you for more than two hours."

"Let him come in." Ye Qing was very curious, and the only customer who could come on the Nigerian side was General Mopu's side.

Two minutes later, a middle-aged black man with a short haircut like the close-to-head haircut of Alabama, with two big black travel bags in his left and right hands, walked in with his head.

### **Chapter 427: I will also beat you**

The descendant of Caitlyn?

She was a sniper on the icefield-policewoman, the twilight of the Gods-Barbarian King, the rune page, gold coin growth card.

In the Longxitan factory, a one-meter high electric crystal with pointed ears was sitting in front of the computer, adding various local tyrant-level configurations to his League of Legend full hero account. Under the display, there was also a mobile phone. At this time, the content displayed on the mobile phone is a video explanation of the operation of the pro/e 3D graphics software on a certain fee-based information website.

Tianjin had two purposes, playing games while learning the operation knowledge of 3D graphics software. According to Real Eye his teacher, he took it to play with it.

Tianjin, which has never been in the game before, immediately became fascinated by this game that can control these monster heroes similar to it through the keyboard and mouse to knock down other players. His goal was clear! Winning the teacher who defeated it - the Real Eye.

In just a short morning, Tianjin fully realized that the teacher was knowledgeable and powerful. If he couldn't find an answer on the Internet, she would give the answer without thinking about it.

Playing games was also a kind of learning. Since the teacher taught it to play games, then defeat its teacher. Not only that but he would also have to beat the teacher in any professional field where he was good.

The Green is better than blue. Although Tianjin has never heard of this old saying, its strong heart could imprint it in the genes to let him understand that only by firmly mastering all knowledge more than its teacher, but he should keep a kind of respect for its teacher.

This is also what a qualified student must do.

"Hey... Tianjin, have you bought your skin yet? I have to go to bed at that time."

"Okay, let's do it." Today, the Master Craftsman Qiao made a chair especially for it, allowing him to sit in front of the computer in the most comfortable posture. The keyboard and mouse were also a bit too big for him. But it doesn't matter; the new mini keyboard and mouse that he bought this afternoon would be available.

The game started, this was the third game played by it. He just jumped into the Summoner's Canyon, and the Electrocrystalline was semi-transparent, and there were faintly flashing hands, and he flew and typed a line.

The invisible Electrocrystalline: "You lie down."

Tianjin learned this sentence from its teacher. Although he hasn't understood the meaning of this sentence yet, since the teacher said it every time, it was natural to learn it as well as he was a student.

In the company dormitory of the Blue Sky Building, shrunk in the bed, the sleepy Yun Shi, reluctantly, deleted the "you lie down" that had been input and was sent by pressing the enter key. Fortunately, she did not go out first, because as soon as Tianjin said this sentence, their teammates immediately started spraying.

"Lying on your head, the ice grabbed it. You think it takes too long to surrender, isn't it?"

"I checked the record of this guy. Before the qualifying, all the players were men and women. After the qualifying, all the heroes were fighting against the wild. The winning rate was very high. Results today's three sets all take the Middle Road; it is obviously the account number has just been purchased."

"I bet fifty cents, and he was the first to lie down."

This little guy with so fast hands.

In just one morning, Yun Shi scratched the retina of this kid named Tianjin. Not only did his terrifying gaming skills lengthen, but his ability to understand new things was also more than one level higher than her. As long as she said anything about any problem, he was able to figure it out and draw conclusions.

For example, in the last game, Tianjin asked her how to decompose the complex geometric figures in CAD into independent constituent features. Yun Shi told the answer to Tianjin that CAD is not the most professional in the three-dimensional drawing. Go to the next pro/e, use the tools inside, first convert the three-dimensional geometric figures into two-dimensional figures, and disassemble them one by one.

As a result, Tianjin really installed one, which was still the paid version. In less than a few minutes, a complex geometric figure was disassembled into a large number of seemingly messy line coordinates. Was it really a relative of the president's family?

Even its hobbies were so similar. These line coordinates even felt dizzy after being taught by Yun Shi, and he was able to reassemble these into another three-dimensional figure. It was very hard to imagine, was this knowledge the one child could master?

Tianjin continued to ask questions about software programs, electronics industry programs, and even advanced mathematics. In the electronics industry program, Yun Shi was not good at, but with her profound knowledge, she thought it is more than enough to teach a child.

When the game started, while he was proficient in manipulating the hero and being in the chatbox, he would occasionally ask Yun Shi about some program issues. After she was killed once, she asked Tianjin with black lines, how old are you?

Is it important to play games or to ask questions?

"Teacher, I am in elementary school, playing games, and studying at the same time. This will not delay."

"..." Yun Shi felt that teaching Tianjin to play games was probably a wrong decision. Because he always asked questions, and she answered it, and it seemed that she was not competent enough, and she couldn't play the game while answering it.

"Damn... Are you playing games or showing off the seemingly powerful expertise?" Yun Shi was speechless, but their teammates couldn't stand it anymore.

"When you go to primary school, you go to school well in school? Ask some inexplicable questions about the game. What the hell do you want to disturb us?"

"Quit the game."

"The game was launched."

"Haha... Since we ran we two, the game can't be finished. Go to bed happily and bye-bye Tianjin." The platinum rank of Yun Shi decisively quit the game.

Then Yun Shi received an email from Tianjin: "Teacher, you have to play at this game, you lie to me."

"I..." Yun Shi struggled for a long time, really not knowing how to reply. The child was naive and promised him to play a game, and it seems that others quit, and it could not be a reason for her not to play.

She was planning to grind her teeth to accompany Tianjin to play another game, suddenly, her inspiration flashed, and she thought of a brilliant idea.

She was not too keen on League of Legends and she only plays some matches when she was really bored. After the end of last season, in order to keep her rank, she wrote a robot software specifically for the League of Legends game. Speaking of this software, it could be regarded as the prototype of the dynamic image recognition software she was currently developing.

The software had the powerful functions of the automatic ranking, automatic selection of heroes according to teammates, control of heroes to kill and win towers and to replenish troops to grab heads. This robot software completely relied on the analysis of dynamic images to complete the hero's position and attack. It was different from the common on-hook plug-ins on the market. Not only did not need to

worry about the possibility of being blocked, but the software-controlled robots also had a platinum level alignment level and a gold level overall view.

Thinking of this, she immediately found the software and gave the information to Tianjin.

"Since you want to continue playing, then I will take you to play and give you an assignment to complete. I wrote a robot software, and you can choose to play with it, you can also choose to play against it. As long as you are in the game, privately message my Id, it will automatically create a room, and you play a decisive one-on-one battle."

"Didn't you just ask me about image recognition?" Yun Shi replied in a typing type: "When you defeat my robot with the same hero, I will give you the open-source code of this software."

"Inside, there is an answer you want."

"Teacher... Let's start, defeating you is my goal. Not only in the game, in the field of knowledge, I will also beat you."

.....

#### **Chapter 428: The idea is to be flexible**

After crossing the oceans, Buzz would finally meet the president of Monster Heavy Industries, had said hello in fluent Chinese to a handsome young man who was too young to imagine, with sharp eyes and a gentle smile sitting across from him. Such a young president held such wealth in a vast country. He was deeply moved, but he also admired the courage and even more the ambition of this young man.

The more Buzz visited China, the more he had admiration for this increasingly powerful country.

If the country is strong, the people are safe. Chinese businessmen go abroad doing business. Most of them make money with harmony and avoid war as the first safety factor. Dare to be like this young president, sending a company team to sweep all the way, breaking into the root of the war, and sending a strong man to do business. Buzz has never heard of it.

Not only Chinese, but even those jewelers in Europe and the United States who cannibalized people without spitting out bones also did not have the courage to do this.

"I'm sorry, General Mopu can't come to visit you in person. He still has to sit in the Onitsha District to wipe out the devastating forces." Buzz had made an apologetic etiquette and carried the black travel bag to the desk. The vendor had opened the zipper and introduced it to Ye Qing as if selling the local products.

"This is a gift prepared by General Mopu for you. They are all our African specialties. Maybe these things are well unknown in the outside world, but in the eyes of experts who understand African culture, these things are treasures that cannot be exchanged for gold especially."

Ye Qing had long been curious about the contents of his two packages. He had helped General Mopu smooth out several forces. This time he had sent someone to visit him, so how could he not bring good things. It's just because he wanted to save face, he couldn't ask questions. As the zipper had unzipped, he stood up looking at what was inside and said some kind words.

A simple wooden box without any decoration was taken out by Buzz. The brown wooden box was opened, and it contained twelve small and delicate glass bottles. He drew out one of the bottles. At the bottom of the 200ml bottle, there was a dark golden liquid, and with a light shake, the dark golden liquid swirled like waves in the bottle.

"This is olive oil called liquid gold." Buzz had smiled: "But that's just a description of ordinary olive oil. Among the twelve bottles, it is the oldest Osun-Osogbo olive grove in Nigeria. The mother fruit is the most precious olive oil in Africa. The oil yield of this fruit is very very low. Usually, the mother fruit of a tree can make such a small bottle. It is even in Nigeria, our country. It was also known as the queen's treasure bottle. Because before the nineteenth century, only the wife of the king was eligible to use this olive oil."

"Mr. Ye always can give it to his girlfriend. This is the most precious natural skincare product. "

Unexpectedly, the specialty of this humble wooden box was not small. Ye Qing was extremely satisfied with this gift, and it was a good thing that money couldn't buy it out of anywhere.

The second wooden box was opened, and inside were much long brown-red wood-like chopsticks. The surface of the wood had a rough texture, which looked a bit like bark.

"This is a Cameroonian herb that is a specialty of Southwest Africa, but Chinese people like calling them Cabinda Bark. Among the natural plant products, we sell for China, this Cabinda Bark accounts for a lot."

Speaking of this, Buzz was embarrassed. He smiled: "The locals like making tea with powder and China likes to make wine. It is only exported to China. In one hundred acres, one hundred acres are artificially planted on the Chinese plain. Not only is it ineffective, but also it hurts the body. Of the real Cameroonian herbs, there is only a brownish-red low tree grows on the plateau, which has the effect of being strong."

There was no doubt that the brown-red wooden strips in this box were The most authentic Cabinda bark.

Ye Qing didn't know what to say about this gift, so he had to accept it. Of course... its origin was not in Cabinda, but in Cameroon.

Another gift was a stone sculpture carved for a rough lion. This stone was extremely light and had a grayish-white color. As soon as Buzz took it out of the wooden box, light and nice fragrance had spread slowly in the office. Like the faint floral fragrance after the rain, and like the natural body fragrance of a girl after bathing.

There was no such aroma in the office, you might well think it was much different from the smell after the Fan-Pin ending.

This is the "gray amber" picked up by the fishermen from the beach. The grayish-white is the most precious." Buzz looked at Ye Qing's increasingly satisfied gaze and took out another gift from his bag. It was the only special product that was unpacked in a wooden box, but a small box polished with emeralds, in which there was a crystal bottle the size of eye drops.

When all the gifts were introduced, the formal atmosphere in the office was gone.

Ye Qing was very satisfied with the gifts prepared by General Mopu. He couldn't tell this guy knew his sense of taste well. Knowing that Ye Qing had too much money to spend, he especially collected a bunch of rare and special products that money could not buy.

When the gift was accepted, business exchanges would naturally take place.

Buzz, who was obsessed with the heavily armored vehicle body, couldn't wait to ask Ye Qing again whether he could export the armored vehicle that can withstand rocket attacks of General Pablo.

Now they had money, and diamonds have sold for 100 million dollars. The old rival's site could also be eaten smoothly, and there was abundant mineral output at that time. If there was this kind of tank, then the entire western region will be in the hands of General Mopu.

"Mr. Buzz, we at Monster Heavy Industries do not have the license to produce military vehicles." Ye Qing continued rubbing the gray lion against the new desk ornament with his hands, with an expression of regret: "Even if we get the production license for military vehicles, we must get government approval if we want to export it."

Buzz, who had long-term international trade experience, suddenly became anxious. There was a saying in China caught his heart.

Rules are dead, people are alive.

Since it could be un-exported and there was no production license qualification. A few days ago, how did the chariot that single-handedly rushed into the Onitsha district to buy diamonds popped out?

When Buzz came to China for the first time and had helped General Mopu, purchase a pickup truck, he had fully understood the essence of this sentence.

Pickup trucks are the most popular means of transportation for these poor people. It has good off-road performance, fast running, can pull goods, and maintenance is simple. Not only that, but only a welder can also transform the carriage into various weapon platforms.

It was just a modified product, which had very serious shortcomings.

Take their favorite tripod with a machine gun as an example. The bracket welded directly to the carriage cannot be removed once it is welded. When the Pickup truck in turbulence, with the machine-gun shooting, with the resonance it is very easy to remove the machine gun from the support.

Therefore, General Mopu instructed Buzz to come to China to see if he could find a pickup truck maker to make a pickup truck that directly supported the machine gun beam on the body beam and reserved the interface for the carrier armed. So with this simple request, Buzz went to China to find a pickup truck dealer. As a result, they looked at him with a nervous eye and said they had to change a whole bunch of assembly lines to do it.

Besides, if they would change it like that, it became a military vehicle. Do you understand the illegal?

When Buzz said that if it could be changed, he could order 80 vehicles, so Ye Qing quietly pulled him to the office.

"Why are you so straightforward?"

"Come on, tell me what kind of reserved opening, you will find someone to draw support for agricultural machinery."

"Hmm~ This kind of triangular reservation? Then this is for the installation of a water pump. We are in a drought in Africa and need to use the water pump to occupy the pickup to pump water everywhere. Add two thousand for each car. I will go directly to the repair shop to help you change it and even the pump would be equipped with it."

Thinking of this, Buzz discreetly blamed himself being too impulsive, why is he so straight-hearted?

"Mr. Ye... Mr. Ye..." Buzz calmed down and quickly changed his tone.

"We also want to order Mechanical Colossus Type I, which can be ordered by a quantity of ten. In addition, I also brought a copy of our existing metal mine materials in the western region. Look at the minerals you need. We can add them to these contract negotiations."

The order for ten Mechanical Colossus Type I did not change Ye Qing always in front of Buzz, but when this latest talked about the distribution of metal ore, he always showed interest.

"Chariots cannot be sold, and we do not produce such military vehicles." Ye Qing reiterated his position again.

"Then, since your side is going opening a mine, it happens that Monster Heavy Industries has developed new special alloy steel. Although the performance is incomparable, then I don't know which country's heavy tank is produced, but it will not be much worse. The ten of the Mechanical Colossus Type I can be purchased at a time and one or two of this chassis should be ordered as spare parts for replacement."

#### **Chapter 429: Tianjin's Laboratory**

When Buzz came to leave Shanghai, he was in a good mood. When he took a taxi to Shanghai Airport and left to take a plane, he hummed all the way: "Rules are dead, people are alive." He thought this sentence was the real essence of doing business.

Strong power chassis, plus defensive armor slightly inferior to that armored vehicle. Seemingly unrelated parts, after he goes back, they could assemble a tank according to the drawings. 'Oh no~ It's a mining engineering vehicle.'

He felt he was too straightforward. He was in the office before and still asked with confidence whether there were any superficial things like reserved weapon windows. For a total of 150 million orders, this order, in Buzz's view, was already their largest purchase ever in Onitsha District. But he looked at Ye Qing's expression without any waves.

It doesn't matter. Although their Onitsha District is poor, they are rich in mineral resources. And they are all high-quality minerals.

The purchase of ten Mechanical Colossus Type I this time was not only meant to please Monster Heavy Industries. It was more of General Mopu's plan to use these billion US dollars as an opportunity to vigorously develop the mining economy.

When the minerals are sold, there will be money naturally.

If you have money, you can continue investing in the exhibition, allowing the poor Onitsha District and even the entire western region to enter a virtuous economic cycle.

Before, in the office, the young president had stated that as long as the quality of the minerals they produced was good enough, Monster Heavy Industry could sign a long-term cooperation agreement to purchase metal minerals at prices on the international market. With this relationship, he and General Mopu were equal to a big reassurance.

Buzz was right.

Now that the Monster Heavy Industry enters Jinshan every day more and more, with revenue of 150 million Yuan, Ye Qing will not care about the profit after eliminating the cost. But the metal minerals from Nigeria were worthy of Ye Qing's attention.

Since the limonite ore was opened, the biggest steel consumption of the Monster Heavy Industry had been self-sufficient, but other metals still needed to be purchased.

High-quality metal minerals can bring better metal properties. If General Mopu could provide a large quantity of minerals steadily, Ye Qing didn't mind investing in a few metal smelters over there and directly importing finished metal plates.

At 3 o'clock in the afternoon, in the Longxitan factory, Ye Qing set the course for the Lord's Battleship in the Pacific for the last time, so that he could aim at Shanghai City and return. Tomorrow afternoon, the Lord's Battleship will be able to reach it.

The Lord's Battleship traveled close to the bottom of the sea. The monsters should choose a spot with obvious characteristics on the bottom of the high seas and record the latitude and longitude. This place was to be used to bury heavy munitions purchased from Nigeria. The corrosion-resistant sealed metal cabin has been built.

After that, Ye Qing was going to the office to use the drawing software to design the two nominal mining special trucks. However, after walking halfway, Master Qiao called and stopped him.

"Boss, your express." The Master Metal Expert held various packages that were higher than others.

"So much?!"

"These are all purchased by Tianjin, you send them to the office or I put them in the yard first. Boss, there's still behind." The Master Metal Expert who couldn't see his head shouted towards the back and two monster laborers pushing two flatbed trucks had emerged from the corner of the factory which clearly contained two containers. Looking at the neatly stacked express parcels, Ye Qing felt he might have broken about thousands of Yuan.

Pushing away from the Electrocrystalline's office, Ye Qing did not see Tianjin at the desk specially prepared for him: "I went to the inside room and looked all around, but he was no there. Where is the Electrocrystalline?"

Master Qiao put down the package and went around for looking and returned to report that Tianjin was in the non-standard product workshop opposite.

The non-standard product workshop was one of the oldest workshops. Ye Qing walked into it and found Tianjin was standing on the stainless steel workbench, holding tweezers in one hand and precision welding torch in the other, welding something. Looking closer, it seemed that Tianjin was welding the screen of a tablet computer.

Next to the workbench, there were also two Huawei mobile phones that were disassembled into parts, a microphone, a camera, a wireless network module, and a battery. These have all been disassembled.

There was a small five-axis machining center next to it. The main spindle in the glass cover was constantly moving to process the square silver-white aluminum alloy on the processing table.

"What are you doing?"

"I want to turn the tablet into a mobile phone." Tianjin was holding one, so small that Ye Qing couldn't see the tail plugs with multiple wires, and soldered the motherboard behind the screen: "I have two eyes and two hands, then I can play on two phones at the same time. I divide the screen of the tablet computer into two display areas and then connect the motherboards of the two phones to turn the tablet into two phones. With one element for two uses, the learning would be more efficient.

What else could Ye Qing say, if he had one-tenth energy of Tianjin, he might be staying on the campus of Tsinghua University, studying for a graduate degree.

Compared with the morning, the light on Tianjin was much dimmer. Ye Qing said distressed: "Pay attention to the combination of work and rest. Some of the things you buy online have already been sent. First, go and see if there are..."

Before Ye Qing finished speaking, Tianjin threw away the precision welding torch, jumped from the workbench more than one meter high to the ground, and ran like a sika deer. Facing the mountain of express parcels, of which he didn't know how to handle the paper cutter so he hurried to turn around, so Ye Qing called five monster laborers to help it unpack the parcels.

The natural single-crystal gems contained in the anti-collision metal boxes were first held in the hands of the Electrocrystalline. The colorful gems the size of pigeon eggs, shimmering in the sun, could make little stars appear in the eyes of the little girls, they were swallowed by Electrocrystalline, like jelly beans, "crack~" thrown into his mouth.

"Yeah~"

Tianjin's two pointed ears were about to fly, and the diamond-like eyes were narrowed into a slit. The expression was like tasting a jade liquid, and it was like the soul was sublimated.

"It has a pure aluminosilicate taste, with a little bit of chromium."

With his eyes closed, Tianjin threw another red tourmaline stone into his mouth, and its expression became even more intoxicated. In the translucent body, large-scale thunderstorm magic seemed to have been detonated. The dazzling arc made Ye Qing unable to look directly.

After swallowing five gems in a row, Tianjin stopped contentedly and continued to rush to the pile of packages to unpack the express.

Shaking his head, Ye Qing returned to the office and had used the drawing software to design the shape of the steel plates of the two special mining trucks. Anyway, he is still idle for the time being. It is better to hone his skills. He should focus on one thing, time passes quickly.

In the office, Ye Qing could not feel the passage of time. In addition to the soft sound of the waves hitting the reef in the ear, the Master Metal Expert's voice sounded three to five-time, "Tianjin, there is your express." "Who wants to drive the forklift over and help Tianjin get that piece of equipment."

I don't know how long it took, the energetic Tianjin pushed the door and ran in. It grabbed the corner of Ye Qing's clothes and shook it gently: "Boss, will you also prepare a laboratory for me? I want a very big laboratory. There is much equipment here, and I don't have a place where to put it..."

"For hundreds of millions of equipment piled in, I can prepare a factory for you." Ye Qing switched to the three-dimensional map of the factory, pointed to the ten new factories, and said with pride: "You can choose anyone."

"This is an assembly line factory, no...not suitable for a laboratory." Tianjin lowered his head quietly, looking at Ye Qing unscrupulously: "I... Want that kind of very professional laboratory, OK?"

"There is not enough space in the underground base. There are hundreds of five-axis centers." Ye Qing knocked on his head: "So, we have to build it because these are all factories."

This time, the electric crystal not only lowered his head but also dropped his ears.

"Yes!" Ye Qing knocked on the computer desk suddenly: "There is a place the same size as an underground base. It can be called "The most perfect laboratory"."

"Really, where is it?" Tianjin's ears stood up like an electric shock.

"Under our new building."

### **Chapter 430: Challenge the Limi**

The ninety-nine floors Monster Heavy Industrial Building is ranked first in Shanghai and second in Jiangnan Province, ranking twenty-fourth in the country. In Jiangnan Province, the 450-meter high Zifeng Building is just behind the provincial capital. Now, the reputation of the Monster Heavy Industrial Building was not obvious. That was because the height of the building had not exceeded 300 meters, which did not look spectacular enough. Waited to break three hundred meters, as the second tallest building in Jiangnan Province, it will inevitably be reported by the media.

Hearing that there was a great laboratory location, Tianjin kept pulling Ye Qing's corner clothes, begging Ye Qing to take it to see.

Ye Qing originally planned to keep the base under the building as a secret laboratory.

The unique Electrocrystalline could independently modify electronic products in just a few days. Waiting for it to learn for another year or half, maybe he could make the Mark suit of Iron Man.

It was very necessary to prepare an independent laboratory for him, which was also eliminating the cumbersome steps for Ye Qing to set up a secret laboratory.

Touching Tianjin's head, Ye Qing called a Master Metal Expert to make him responsible for preparing the team to transport all the equipment ordered by Tianjin into the civil air defense project. Then he had driven the car with Tianjin towards the Monster Industrial Building, which would sit in the passenger seat, and to prevent it from being seen. Ye Qing had deliberately let it wear his own coat like a cloak and put a hat on his head that was big for him.

When the Lagonda drove to the crossroads of the Blue Sky Building, a 17-story building that was already higher than the Sky Eagle Shopping Plaza on the opposite side stood in the center of a circle of orange construction walls. From the outside, the foundation of the building has been integrated with the surrounding concrete floor, and there was no trace of the original pit. The entrance of the civil air defense project was located on the square, which was also separated to become the passage for employees and vehicles of the warehouse.

The Lagonda drove in it directly, followed the maze of passages and turned around, and came to an empty hall with no one. Wang Yan had led Tianjin through the complex mechanical code explosion-proof door, then take the elevator placed inside the main beam of the building, and descend vertically to a depth of 100 meters underground. As the elevator door had opened, the Electrocrystalline that shook his head was stunned.

White underground space was exposed in front of it and Ye Qing and the dome over ten meters high was lined with incandescent lights like stars. In the center of this amazing space, there was a Z-shaped passage leading to the unknown underground. It was science fiction, mysterious, magnificent, and magnificent! The sight in front of them was a powerful industrial miracle that anyone would be amazed by. Even though he had been here many times, Ye Qing still felt excited.

"There are three floors above and below, with a total area of more than 100,000 square meters. The third-floor housed the life supports system and refuge floor." Ye Qing proudly introduced to Tianjin that this piece belongs only to his secret laboratory.

"Under the third floor, there is also a hidden underground river. I have already studied the direction of the underground river. If necessary, I can build an entrance close to the seaside with the underground river and set up large equipment there so that the Lord's Battleship could enter the laboratory. Are you satisfied with this laboratory?"

Tianjin's little head moved like a woodpecker.

Half an hour later, the Monster Laborers took the elevator to reach this magnificent underground building. They used carts to push in brand-new equipment.

The first batch of equipment to arrive was such as 3D printers, chemical vapor deposition cabinets, experimental centrifuges, and infrared spectrometers, vacuum coating machines, electronic test benches, and electron microscopes.

The laboratory mass production equipment and a wide variety of raw materials for the electronics industry and the high-value advanced equipment that even the Shanghai Electronic Laboratory did not have should wait for the distributors to transfer them and then send them by logistics.

Ye Qing was not idle either. In Monster Mall, he could now buy almost all small metal processing equipment. These are magical technologies with attributes he put them in the laboratory. It could also increase the scientific research strength of the laboratory.

A commercial server originally used by the company was also moved in, and the network was directly connected to the gigabit fiber in the computer room. In order to structure the laboratory as quickly as possible, Ye Qing also left two Electronic Messengers to make them assistants of Tianjin.

Knocking a ruby, Tianjin happily connected the mini keyboard and mouse to the server with excellent performance. The server had multi-threaded operation capability, even if ten screens were divided, it could run smoothly.

Of course, the Electrocrystalline did not use more than two monitors. One to continue to compete with the game robot and the other was enough to play instructional videos.

.....

When Ye Qing went back to the factory again, night had fallen. After finishing the unfinished vehicle shell drawings, he walked into the underground base under the barren mountain.

In the afternoon, express delivery and logistics delivered not only Tianjin's online shopping products but also a batch of equipment that he had ordered before going to Nigeria. There were raw materials for making dreamy displays, and some equipment that Monster Factory was not worth spending time producing.

The black technology of Dream Display provided several key technology production methods. The Master Metal Experts were now manufacturing coating production equipment for organic diodes in accordance with the information on the drawings. The Electronic messengers were not idle either, they produced electronic components for dream displays.

The parts that were not provided by technology, Ye Qing could only rely on him and the monsters to make them together. Such as 0.1 mm thick flexible glass and thinner and lighter coated substrates. Now that the monsters have built an experimental flexible glass production equipment, Ye Qing was going to see if he can get 0.1mm thick flexible glass.

Mobile phone glass over 0.3 mm could be manufactured using traditional float glass methods. The high-temperature molten glass was continuously introduced into the liquid tin pool from the mold. The tin liquid had a high density, and the glass could float on it, letting the melted glass automatically spread out under gravity and surface tension.

The melting point of tin is only 230 degrees, and the spread glass will gradually cool and harden. And finally, you obtain mobile-phone glass with uniform thickness and flat upper and lower surfaces. But if you want to make thinner and lighter cell phone glass, you cannot use float. Because the mobile-phone glass melts with good toughness requirements have a certain viscosity, it cannot be flattened to a thickness of less than 0.3 mm under the influence of its own gravity.

The time has come testing the accuracy of industrial manufacturing.

Based on the centrifugal glass method, the monsters produced a high-precision centrifuge that can spin two-meter diameter glass at a time.

Since natural gravity cannot make the glass spread flat to below 0.3 mm. Then use the centrifugal force generated by the rotation to increase the gravity of the glass and let it be stretched to a thinner state.

It has a height of more than five meters, a weight of thousands of tons, and a dual-platform speed of more than 50,000 revolutions per minute.

This equipment, let alone manufacturing, can scare to death a large number of manufacturers of centrifuges just by speaking out.

The maximum engine speed of the F1 car is only 20,000 rpm.

If you want to speed up to 50,000 rpm, you can reach it through a gearbox. But when it is running, do you still want precision?

Because of the precision error of the parts, the entire centrifuge can persist for ten seconds without falling apart, and the manufacturer can open champagne to celebrate.

When Ye Qing came to this centrifuge, a Master Craftsman and a Master Metal Expert were already waiting. In the next sintering furnace, a Master Metal Expert had sintered the molten glass according to the composition of the flexible glass.

"Let's get started. Let's challenge it, No. 1 in the world."
