

M Factory 441

Chapter 441: Where did the worker come from?

For the irresistible reasons, that was during the performance of the contract they encountered messy things that couldn't be solved by human resources, and the responsibility was not on them, because this contract had an exemption clause for irresistible factors, and it was impossible to encounter this clause being fulfilled.

"Your city does not meet our equipment installation conditions."

Engineer Bernard shook his head regretfully: "Here, it's too cold. We checked the weather in the next few days. And after research, we found the equipment cannot be installed."

"When we talked about the contract, didn't you say that the equipment can be operated outdoors at around zero degrees and you promised to ensure it can be installed in place."

Deputy Director Tong Xuanqiang hurriedly walked to the project and stared at him: "I have checked the weather in the next few days. It will neither rain and it won't go below minus five degrees. Could it be your equipment is a porcelain doll? And the weather is just a few degrees below zero. No more."

"Our equipment can operate normally in a sub-zero environment." The engineer Bernard couldn't hold back his face and said angrily: "I can only blame you for the humidity of the air here and the large temperature difference between morning and evening. Our holographic projection screen is deployed outside, and a thick layer of ice is about to form. Icing cannot be projected. The special interlayer of the projection screen may also change its volume due to the low temperature."

"We will refuse to perform the work the contract is not in accordance with the compelling factors of the contract. After deducting the shipping and service fees, the deposit will be refunded."

"How can you do this?" Deputy Director Tong Xuanqiang felt that all plans had been disrupted. The holographic projection was a key part of propaganda, and the people of the entire Four-common Cities were waiting for this event. Because when this holographic projection screen will stand tall, citizens can see it from afar. In addition, Ding Yin, the hottest director in the country, was in charge of the filming. Not only the residents of the Four-common Cities were waiting for it but also guests from all over the world.

The rhetoric of the Four-Common Cities was written on the leaflets and invitations. Now the German company told them they refused to install holographic equipment because of the high humidity and the glass had formed a thick layer of ice when left outside.

"Then install the screen on the last day, and it won't freeze anymore, go to the ladder truck to remove the ice!"

"Very wild idea," Engineer Bernard showed an arrogant smile: "The commissioning time is at least three days, and if the screen is uninstalled in advance. How do we commission dozens of projection equipment?"

"There are only nine sets of this equipment in the world, all of which are produced by our company. De-icing ladder truck? Is it a joke? Do you know this kind of projection screen, even when we install it, we must wear soft silicone gloves to prevent scratches on the glass surface?"

After speaking, the engineer Bernard cast a look at his companion, quit the temporary office, and called the headquarters to report the situation.

"You, you" Deputy Director Tong Xuanqiang rolled his eyes with anger.

"These foreigners are not here to do business and make money, obviously, they are here to be upper us. When they signed the contract, they promised to be good. Now they refuse to perform the contract because they encounter problems casually. Not to mention they wanted to be paid for liquidated damages, also to be paid for transportation and service costs here. These manufacturers had to be changed by domestic manufacturers, not to mention freezing, the magma would do everything possible to cope with it. But these other people are the world's leading manufacturers of holographic equipment if they wanted to achieve the most ideal holographic image effect."

Thinking of this, Tong Xuanqiang, the deputy director, sat back in his chair rather decadently.

"Hey... Mayor Xu... There is a problem on our side."

Deputy Director Tong Xuanqiang reported the situation encountered here in detail. After a few seconds of silence on the phone, a deep reply came.

"Try as far as possible, you can appropriately increase the deposit while discussing the work. The deposit will be refunded."

The more humid the air was, the more likely outdoor objects would freeze in winter. People in the Four Commons have long been accustomed to this phenomenon but did not expect this to become an irresistible factor.

Deputy Director Tong Xuanqiang was about to go out to find them, but Bernard came back after pushing the door. They were almost knocked on each other.

Tong Xuanqiang: "Can you think of a way?"

Bernard: "There is actually a solution."

The two spoke at the same time, and after a translation, Bernard smiled with a happy smile.

This kind of smile often appears in business exchanges, especially when the buyer and seller are unequal. Whenever this kind of smile appears, it means one party will be slaughtered.

"Considering you really need this kind of equipment, we discussed it with the headquarters. We think we can add a high-tech gas deicing system to maintain the normal operation of the projection screen."

Engineer Bernard sighed and kept rubbing his hands: "This system needs to be purchased from Germany and shipped by air at a cost of four million."

The deputy director Tong Xuanqiang was full of anger and there was no place for him. The other party was a well-known foreign company, even if he wanted to know what to do.

"What gas deicing costs four million?" Deputy Director Tong Xuanqiang gritted his teeth: "Isn't it possible to use domestic products? We purchase it at our own expense."

"Of course not, in the face of inclement weather, such an irresistible factor, we decided to take the risk and have done our utmost responsibility. How can we purchase equipment without quality assurance from your China?"

"Four million..."

Deputy Director Tong Xuanqiang was about to grit his teeth and agreed. The engineer of Monster Heavy Industries who had been sitting in a chair drinking tea stood up.

"A broken glass curtain can't be made well, and you still have the right to criticize China's products for lacking quality?"

The Master Craftsman laughed: "This is the funniest joke I have ever heard. A gas-breaking deicer dare to talk about high-tech, dare to ask for four million? Are you crazy?" The Master Craftsman walked up to the engineer Bernard with his hands in his back, his eyes full of mockery and contempt.

In the temporary office, everybody suddenly fell into an inexplicable silence. No one in the office expected that this ugly engineer from Monster Heavy Industries would be so hot-tempered during this meeting. So mercilessly, he severely criticized the engineer from Germany.

Although the scene was very embarrassing, many people felt quite happy in their hearts. What the gringo engineer said made them feel angry, let alone an old engineer in China who had worked his life for the industry? Wasn't this an insult?

Tong Xuanqiang, the deputy director, had his tongue drooping, and he was racking his brains to figure out how to return the scene. But this move was doomed to be futile, because the more powerful people in a certain professional field, the more proud they were.

This is called the arrogance brought about by talent, and the words of the Master Craftsman directly made Bernard the engineer who thought he was outstanding, his heart and liver would be mad. His eyes were puffed up, his face looked like a pig liver that had been frozen all night.

"Who are you, saying our SAX3D products are broken? Say we are crazy?"

Bernard said incoherently, and his fingers touched the delicate master: "Do you know how to use Google? You would trouble you to search for our company and search for our holographic technology. What is the ranking in the world? Where do you work?"

"Oh... Is self-confidence being created by making rags?" The Master Craftsman had used his nostrils to look at the desperate fellow, the breath that even the blind could feel thick.

"Let me tell you, and holographic technology is our first."

"If you want to be in the first place, you must prove it."

Chapter 442: Holographic Technology of Monster Heavy Industry.

"If you want to be in the first place, you must prove it?"

Bernard had felt there was something wrong with his ears. This was incredible, just like the Olympic shooting crown was stopped by a passerby, and the passer-by said that your marksmanship was ungood, and it was the first absurd feeling. He thought so anyway.

"Good, crooked ray, very good."

Bernard gave a thumb up, his expression looked like a lion whose spouse had been robbed: "Mr. Deputy Director since they can build the first holographic screen in China, I think you can cooperate with this worker. Anyway, your China product is famous for its low price. You can save much money."

"Mr. Bernard, hey... You guys..." Deputy Director Tong Xuanqiang felt his head would go to explode. Although Master Qiao's words had relieved it, Tong Xuanqiang felt he couldn't get angry at it, but such a major festival would take place in a few days.

"We have to fulfill the irresistible clause in the contract." Bernard snorted coldly and once again greeted the men, pushed the door away, and went out.

A qualified engineer is by no means simple, for example, he must master his own skills.

If he didn't know how to grasp the weaknesses of customers, if he didn't know how to take advantage of the situation to promote products, then he would not get a clue for a lifetime. Like him, he would sell a supporting system four million Yuan and earns a few hundred thousand commissions, so he could be well-off for one year and live in a big house for two years.

Bernard was sure the deputy director who had no idea would come after him. Tong Xuanqiang really wanted to follow it out but was stopped by the Master Craftsman Qiao.

"Holographic technology only." The Master Craftsman leaned at the door: "As much as they quote, we will quote as much as possible. It can also save you 4 million deicing equipment."

"Master Qiao, can you really make holographic projection equipment?" Tong Xuanqiang would definitely doubt if other domestic companies said this. But Monster Heavy Industry will soon become the largest industrial company in Jiangnan Province. How could the masters inside were joking on this subject?

Wanting to prove whether it could be made is easy Master Qiao called back to the company and then asked Tong Xuanqiang to wait patiently until the afternoon. Perhaps yesterday, or before yesterday, the Master Craftsman really couldn't say that.

When Master Qiao left today, a large-size flexible thin glass centrifuge had just been produced in the factory.

The original experimental equipment could only produce thin glass two meters in diameter. If it was cut for 5.5-inch mobile-phone screens, only 300 screens could be cut at a time, not only the production capacity, could not keep up, but also the waste of leftovers was very serious. The larger the diameter, the less material was wasted after cutting the glass that was formed at one time.

Therefore, the monsters worked together to produce a large centrifuge that could produce one round glass of 12 meters in diameter.

How big is this device?

Its single centrifugal table weighed 500 tons, and the total equipment weighed over 8,000 tons. The size of the equipment was similar to that of the most important 10,000-ton hydraulic press in the heavy industry or the 40,000-ton hydraulic press. The biggest hero who could build this giant in just a few days was the alloy metal smelting center in the underground base.

Large forgings were formed at one time for the smelting center, which only permit to produce a platform with a diameter of 12 meters. If it was not for the smelting center the size of this centrifuge will be more exaggerated.

.....

After waiting in the cold wind for half an hour, the engineer Bernard and his companions did not wait for the deputy chief more. Waiting like this was not good, so he greeted his companions and went to pack up in the middle of the stadium.

As he said, installing a holographic projection system required too much-complicated equipment. A holographic projector needed to be equipped with a set of independent computer hosts to process images, and they have to install 22 projectors.

After a long time at noon, Bernard finally couldn't sit still. He came making more money, and he really wanted to pat their buttocks away. But he was the first to have it. Seeing the last holographic projector placed in a special metal storage box, Bernard sent a message through an interpreter, saying he wanted to see the deputy director.

"Boom~ boom boom~"

Dozens of heavy black container trucks drove in along the stadium gate. The heavy trucks lined up in a row, and the loud motives completely covered Bernard's voice. When the heavy trucks drove along one side of the aisle and entered under the audience stage, one of the heavy trucks separated and drove toward Bernard.

The heavy truck stopped, and the deputy director, who hadn't shown up for a few hours, and the worker who had been blowing up the stage to the sky walked out of the office talking and laughing. The deputy chief said hello, and all the workers who had gone out of the trucks filled the stadium.

Following the instructions of the Master Craftsman, they opened the door of the container heavy trucks and lifted at once one-piece tall silver-white metal box.

Bernard had noticed the front of these metal boxes was printed with a monster logo that was shining brightly in the sun. This logo was not strange to him, and it was from the well-known heavy industry company logo in China. He didn't know much about this company, but the company's logo was so unique that anyone would never forget it when he saw it for the first time.

Then a metal box was opened, but there was a circle of people outside surrounding it. He could not see what was in the metal box. But he could tell from the firecracker-like laughter of the deputy chief that it must be a good thing. Then the Deputy Chief and the little old man walked towards him. Taking a deep breath, Bernard thought that he couldn't hold it anymore.

Then don't blame it for slaughtering it again on the glass deicing system. After all, he had been doing it for a long time, and he also had to calculate the working hours.

"Master Qiao, is this the holographic screen you are talking about?" Deputy Director Tong Xuanqiang walked to the heavy truck that was only a few steps away from Bernard and others. Without asking the workers to help, he couldn't wait to climb up and open the container door.

In the huge container, there was only a large-size glass that was so transparent that it did not exist, and it was fixed in the middle. This piece of glass, which was less than one centimeter thick, was not surrounded by any frame, only the bottom, with a silver-white streamlined metal support platform.

"Wait ~ what's the situation?"

Bernard was completely stunned this group of people actually came for real?

It was just what a holographic screen, and it didn't even have the necessary projection equipment.

"It's 7.5 meters high and 11.5 meters wide. It's a bit bigger than that of any 3D company's product." The Master Craftsman rushed to the side of the engineer Bernard with a tangled expression, raised his eyebrows, and said with a smile: "Key. We don't need a projector."

"So powerful!"

Looking at the work efficiency of Monster Heavy Industry, the deputy director's eyes almost couldn't hide his smile: "Master Qiao... Can you... Test it?"

Master Qiao waved his hand, and a dozen workers immediately came over to build a ramp for the container. Then they got into the container and carefully set the holographic screen to the ground.

There was no debugging, nor did any complicate supporting measures. The power cord was connected to the socket of the performance stage, and a young technician who looked very energetic had directly connected the holographic screen with a laptop computer and then connected to the promotional USB flash drive carried by the deputy director.

"It's ready to play."

"What? It's impossible." Bernard, who was almost silly, covered his mouth and exclaimed in his heart.

Holographic imaging technology is the most complicated technology in all playback systems. How could it be like watching a movie at home, inserting a USB flash drive, and then holding popcorn to enjoy watching?

Bernard did not believe it, as did the engineers who came with him.

This holographic screen with a silver-white metal base did not conform to the principle of holographic technology that he knew. He stared at the device, ready to see what moths it could release.

"Wait..."

Bernard suddenly realized that in the middle of the silver-white metal base, there was a familiar product logo. This logo was the same as the metal box logo neatly placed under the stands, a mighty monster with a hideous face.

Chapter 443: Do a simple action with me

Bernard was immersed in the impossible and disbelief, by soft music suddenly sounded in his ears. What's this?

Turning his head, he discovered everyone else was tilting their heads and grinning, looking at the screen dumbfounded. He quickly looked up and found he had come to another world.

The big screen covered his entire field of vision, and there was a swamp of a large wet lake where four rhymes of water flowed together, the green reeds were floating beside them, and the clear lake water echoed with squeaking pulp.

He felt as he was sitting on the bow of the painting boat, his eyes cast dimly into the distance, full of endless blue waves. An egret flew past his eyes. Uncontrollably he stretched out his hand, the egret slipped through his fingers.

Then the picture turned, a beautiful woman in green is sitting in the front of a painting boat, playing with a guzheng passionately. The wind gradually began picking up over the lake, and the breeze opened the folds of the girl's green clothes, and the waves of drizzle falling from the sky moistened her clothes making them messy.

The painting boat cut through the long waves and clear water, carrying Bernard, and flying towards the white bird soaring toward the weeping willow swaying far away.

Except for the Master Craftsman, everyone was intoxicated in poetic and infinite beauty.

The screen had disappeared from their eyes and the only thing that could make them realize this was just an illusory place, only the cold wind that swept across the stadium like a knife. The five-minute promotional video has ended.

When people woke up from the beautiful scenery created by this screen, Bernard suddenly squatted down with his face covered.

"How is this possible? How did you do it, obviously there isn't even a holographic projector?"

"Looking at your virtue, you think that your holographic picture is far from ours." The Master Craftsman walked up and patted this guy whose self-confidence has been greatly affected.

"How can I tell you? Technical things. I can only tell you that this screen is transparent, the picture is not the ultimate effect. If the active-matrix backplane into black, the picture effect will be better. Go back and think about it."

"Qiao ...Master." The deputy director also came over now. For unknown reasons, Tong Xuanqiang's expression was extremely complicated, like an internet-addicted teenager who couldn't distinguish between reality and fantasy.

"Huh?" The Master Craftsman looked at him suspiciously.

Deputy Director Tong Xuanqiang quietly pulled Master Qiao aside, pretending to be a mysterious whisper: "Master Qiao, do you know who made this promotional film?"

"You know, my boss's friend, the famous director. "

"No..."

Deputy Director Tong Xuanqiang suddenly sighed.

"... This promotional film is not the latest one. This is from your Four Commons TV station two years ago, you organized your own hands to film, and the shooting was only in an ordinary picture two-dimensional. The one filmed by Director Ding is a three-dimensional filming technique. The picture is more shocking than this. You haven't seen it. There are no flying fairies in this promotional film..."

"Oh, indeed." Master Qiao made a very flat response.

"... In order to prevent the accidental outflow of the film source, the film made by Director Ding is still stored in our computer room. No one is allowed to copy it."

Deputy director Tong Xuanqiang sighed.

"I can't even imagine what effect the film made by Ding will do when it will be played on your transparent holographic screen."

"So, you kick these gangsters out first, don't they want to fulfill the irresistible clause in the contract, let them do so. If they stay here. It will definitely interfere with our installation of the screen."

There was no difficulty in fulfilling the requirements of Master Qiao. Bernard and the other engineers did not need much explanation to persuade them and ran away like burning their ass. Judging from their appearance, most of them wanted to report back to the company as soon as possible. "Monster Heavy Industries was coming grabbing their jobs."

At three o'clock in the afternoon, this piece was bigger, the more effective holographic screen was erected.

Then the workers and Deputy Director Tong Xuanqiang had magically discovered that after the screen was erected, it was difficult to notice the existence of a transparent screen in mid-air no matter from which angle they looked at.

Tong Xuanqiang reported the good news to the mayor one by one. On the phone, he also described the shocking effect of this screen in the most magnificent language he could organize.

"Huh? Is the screen icing problem solved?" On the phone, Mayor Xu asked in surprise.

Tong Xuanqiang sharply patted his head, patronizing with excitement, forgetting the most important things, hurrying up to find Master Qiao, and had told him whether the screen would be affected by the thick layer of ice due to the low temperature at night.

"The principle of our product is different from that of the Gringo." The Master Craftsman had instructed the workers to take out all the Explorer Robots from the metal boxes without looking back: "Their product is an external light source, and the screen itself only Acting as a projection screen. Our one is self-illuminating, and there are multiple layers of nano-photonic coatings inside the glass. Since it is a self-illuminating, the screen will generate heat. There is heat, why are you afraid of freezing? "

"If you don't worry, keep the screen on."

The deputy director Tong Xuanqiang kept nodding, and then found the Electronic Messenger who was the guest technician, and asked him to turn on the screen.

Of course, the five-minute promo was nothing to watch. Tong Xuanqiang simply logged into his iQiyi member account and found a series of films and after made them playing half an hour. It was uncaredful of time, then stepped on the ladder to climb up the support frame, and touched the high-tech transparent screen with his hands. It was really warm, like a girl's body temperature, and felt warm and warm.

At six o'clock in the evening, the sky over the Four Commons was already plunged into endless darkness, in the stadium all the lights full brightness. The high-rise transparent display, from the beginning of the broadcast of TV dramas, which was the contents of the Fifth Congress of the Soviet merchants of the fourth Communist Party of China, which people didn't want to see more.

No way, Deputy Director Tong Xuanqiang didn't want this either. But when the TV series was shown, the thousands of young people transferred from various agencies and institutions at the bottom of the stage had not listened to the technicians training of Monster Heavy Industries but had collectively look up to watch the TV series.

Now that the content of the conference was played and there was only no sound on the screen, and no one wanted to watch it. They were training on how to operate the Explorer robot. They were training by instructions served by two young employees, Lu Feng and Xie Wenlin.

A black Audi A6L drove into the stadium quietly. The driver opened the door, and a man wearing a long cashmere trench coat with golden eyes got out of the car. His name was Xu Changde, and he was currently the mayor of the Four Commons City.

The situation of the students here has been reported to Mayor Xu in detail, robots, top-level holographic displays...

These contents were novel enough for anyone, not to mention these were related to the upcoming major festivals in the Four Commons.

So after Mayor Xu got off work, he had even pushed the dinner and quickly asked the driver to drive him over to watch the excitement. He was not disappointed, under the bright lights, in front of the stadium stage, and rows of mighty robots were lined up neatly.

"Ahem~" The technician Xie Wenlin standing on the stage had cleared his throat and said loudly to the microphone: "Now that everyone has understood the operating principles of the robot, let us start with the simplest actions and learn step by step. Listen to my password below. Everyone has it, salute!"

On the stage, Lu Feng, wearing an operating device, had raised his arm first, then thousands of staff members followed Lu Feng's action and raised their hands, and then a completely shocking scene had appeared.

Arranged neatly like soldiers, standing like loose robots, their electronic eyes had instantly glowed with a red light.

"Pop~pop~pop~pop~"

All the robots raised their hands to salute, and the momentum was like a rainbow, and the endless sound of mechanical movement had echoed over the stadium.

Mayor Xu, who was watching silently, suddenly felt a mountain of majestic steel breath, rushing to his face. He had felt his adrenaline was like a thermometer thrown into a pressure cooker in the shocking scene and the uncontrollable ecstasy. There was a word in his heart that was brewing yeast.

He wanted to shout loudly, vent his voice, and use the most classic line to release his emotions.

"Comrades..."

Bernard was immersed in the impossible and disbelief, by soft music suddenly sounded in his ears. What's this?

Turning his head, he discovered everyone else was tilting their heads and grinning, looking at the screen dumbfounded. He quickly looked up and found he had come to another world.

The big screen covered his entire field of vision, and There was a swamp of a large wet lake where four rhymes of water flowed together, the green reeds were floating beside them, and the clear lake water echoed with squeaking pulp.

He wanted to shout loudly, vent his voice, and use the most classic line to release his emotions.

"Comrades..."

Chapter 444: Gulf Navigation

Longxitan factory, in the newly built dream display production plant. The huge mountain-like machine was spinning rapidly, using centrifugal force to throw out pieces of the world's thinnest display glass; it was built into a dust-free workshop. In the workshop, the vacuum laser furnace used to vaporize diamonds and the five-axis platform used for plating were all rebuilt by the monsters and turned into a set of assembly line-like processing equipment. Some equipment has been uninstalled yet. When it was in place, the production plant of Dream Display could produce 100,000 5.5-inch standard screens a day.

That's right; Ye Qing was going making a big-screen mobile phone. Whether it was from the market trend or it was summarizing it according to his own habits.

Large-screen phones received the best market feedback. The picture was good, the pattern was big, and it looked very comfortable. But it also had shortcomings, and they were serious.

The oversized cell phone size made it almost impossible for users to operate with one hand. Quite a few people didn't like using both hands to hold the mobile phone because in many cases, people could lose work on the other hand.

There was also portability; men were not like girls when they go out. The girls liked carrying a bag and could hold the largest mobile phone. So for large-screen mobile phones, men could hardly find pockets to install them, especially in summer. For that reason, many users could give up buying mainstream 5.5-inch large-screen mobile phones because of the possibility of one-handed operation and portability.

According to market research, the best-feeling mobile phone is the Apple 5 series with a 4-inch screen.

Ye Qing had deliberately measured the body size of the 5 series mobile phones, which were 12.38 cm long and 5.86 cm wide. If it was made into a borderless phone, it would only have a screen on the front without any extra borders, only needed to increase the width slightly by one centimeter on the basis of Apple 5. It could take into account the advantages of large-screen mobile phones, the one-handed operation function of small-screen mobile phones, and the multiple advantages of portability. It would also have a sense of technology.

The benefits of borderless were endless, but there was no real borderless mobile phone in the world.

There were only ultra-narrow bezels, but they were also limited to the left and right sides, and the upper and lower borders were still very large.

Ye Qing thought that if he wanted to do it, he could make products that others hadn't done before so that he could have market competitiveness.

Faced with various technical difficulties, the Monster Heavy Factory had tried its best to overcome them one by one.

At the same time, the transparent screen provided to the Four Commons also had given Ye Qing a very good idea. Of course, this idea was not in mobile phones, but in technological life.

The dream display with transparent technology was very suitable to be used as window glass in the office. It did not need to be replaced; it could be directly attached to it. The glass window could show the scenery of any place, and the sense of technology should not be too strong.

Ye Qing had specially asked the monsters to cut out a batch of transparent fantasy displays according to the size of the glass in his office. When the Monster Industrial Building will be completed, Ye Qing will fit all the glass on the top floor to this transparent dream display.

At noon, in the originally quiet bay of Longxi Beach, there were bursts of low siren sounds. A two-thousand-ton flat-bottomed barge slowly approached the factory, following the channel marked by balls floating on the sea. This barge was affiliated to the Wanyuan Shipping Company. Only a small part of the port in Longxi Beach has been built, but it has initially possessed the capacity to berth cargo ships under 5,000 tons. This flat-bottomed barge was going to Longxi Beach to carry a batch of ocean cargo.

After the flat-bottomed barge stopped, it was pulled to the port by a Mechanical Colossus Type I. The wharf was a lot shorter than the hull, and the captain of the barge looked around for a long time and did not find a sign of a crane on the shore.

The captain was very curious. The name of the Monster Heavy Industry in Shanghai City had been spread all over the world. He didn't expect everyone to start building their own ports, but he didn't expect the port hadn't come in a hurry to install cranes.

This time, the Monster Heavy Industry had commissioned them to carry a batch of large-scale equipment to Nigeria. Now in the port, there were ten very peculiar double-arm excavators and five containers parked. Without the crane, that equipment couldn't fly up, right?

"Master, do you want to rent a large crane?" The captain, who was turned into jujube skin by the sea breeze, smiled and looked at the little old man in front of him while dispersing his cigarette's smoke: "I have a friend who drives a crane, a phone call, half an hour He will be able to get there within."

The delicate Master Craftsman's temper was very straightforward. If others were polite to him, he would be polite to others. If others were not polite, he would find the place right away.

"Thanks, but we have something better than a crane."

The captain looked around: "Where is it?" Then he looked at the mine in the distance, and a huge and horrifying device had crawled out making his pupils widen and the cigarette in his mouth slipped. The earth trembled under this device, and he found the size of its barge was as little as the steel behemoth roaring towards the harbor.

Several crew members on the barge ran out of the cockpit screaming because this giant beast came to the edge of the dock and stretched out a robot arm like a transformer to embrace their barge, embracing the barge with one hand and the other hand the little brother Mechanical Colossus Type I in the harbor, carrying it to the deck like a chicken.

Boum Boum Boum

In less than a minute, all of Type I mechanical colossi, one by one, were laid on deck under the vision of the captain and crew. The captain looked at the half-smoked cigarette, scratched his buzzing ears, and beckoned the crew to fix the equipment.

The Monster Heavy Industry was too terrible.

When the ship was sailing, the captain suddenly remembered that there seemed to be submerged reefs here originally, and local ships listed it as a restricted area. It now appears that most of the channel opened by this digging out of the reef came from the hands of Monster Heavy Industries.

The barge transported the equipment to Shanghai Port, where after customs declaration; the equipment will be transferred to a 10,000-ton ship.

In fact, it was also possible to choose land transportation, but the entry of this barge meant that Monster Heavy Industries already had the ability to ship. Not only could it be very convenient to import various metal minerals, but it also could transport all kinds of superlarge equipment.

Through the glass of the office, the bay of Longxi Beach offered a panoramic view. The barge carrying "General Mopu hope" also dragged the long waves and disappeared.

Ye Qing called and informed General Mopu that if there was no accident, the giant ship will arrive at Port Harcourt in Nigeria in half a month. He just ends the call with General Mopu on the satellite phone, and the mobile phone rang again. Looking at the number, it was from Xu Ningong.

"Hey, big star Xu, why you call me?"

"Of course I have something to do with your big boss." Xu Ningong was accompanied by a bit of noise of musical instruments and backing vocals as if they were rehearsing something.

"That...that..." Xu Ningong smiled embarrassedly: "I heard that in the Sikong City Stadium, that holographic screen was provided by you. You know, my first concert is just in Sikong City, and the venue was also selected at that stadium. Boss Ye, the ownership of that screen is in your hands. Can you lend me this holographic screen again when I have a concert?"

"What good will I do have then?" Ye Qing said with her amused.

"Oh, good or bad, people don't understand it." Xu Ningong said in a Hong Kong and Taiwanese accent.

"After serving you, just record a lossless version of the concert's songs for me." Ye Qing shivered.

"By the way, I heard that you also invited a mysterious guest to help out. Who did you invite?"

"Our world dance king, the winner of the international modern dance competition, the hero Lang Han."
Xu Ningong proudly said: "You have to keep me the secret."

Chapter 445: Ye Qing's mobile phone layman shape

Ye Qing had heard of the fame Lang Han anyway, he who didn't pay much attention to the artistic circle. It was a true dance master, but also a master who enjoyed a high reputation in the world.

So naturally, the mysterious guest was Lang Han, and he was the lead dancer of Xu Ningong. So needless to say, how popular would the new song be, when the mysterious guest would appear, even Ye Qing had begun looking forward to it.

Recently, busy designing and coordinating, he felt he was almost out of touch with the enjoyment of young people. On the day of the Crab Festival, he was going relaxing.

Before going to relax, he had to work harder. For two days, he was soaked in the Longxitan factory, busy perfecting and adjusting the production of dream monitors.

At the same time, the production line dismantled from LanTuo Electronics Co., Ltd. was also rearranged by the monsters in the new factory next door. All the licenses related to the production of mobile phones have also been handed over from the LanTuo Electronics Technology Company. Now the Monster Heavy Industries had the ability to produce smartphones, but they were just the kind of phones that could be sent for charging.

Today was also the day when the company's new department, the mobile phone R&D department was officially established. The office space of the mobile phone R&D Department was temporarily placed in the civil air defense project and would be moved in after the new building was completed.

The new department did not need adding much equipment, after all, the previous product research and development department had already purchased many cutting-edge electronic scientific research equipment on a large scale. What they really lacked was a direction.

The mobile phone sent to be recharged was called a Smartphone, and the Apple phone was also called a Smartphone. Ye Qing wanted to come up with a high-level plan to develop research and development direction for them. He had used these few days to design an ideal phone shape in his mind.

.....

It has been three days since Tao Liang had joined the Monster Heavy Industry. He was also the only employee in this period that was exempted from the test by Ye Qing and was appointed the technical director of the new department.

Even without the recommendation of his father, with his Ph.D. in electrical engineering from MIT, Tao Liang could easily find a position that satisfied him at Monster Heavy Industries. He had taken the initiative to join the mobile phone research and development department. After all, at MIT, he and his mentor, Mr. Pi Mingcheng, focused on researching new technologies in the mobile phone field.

Now he had researched results and successfully obtained his doctorate certificate. But the factory at home that was reserved for him to display his ambitions was sold. After a brief period of confusion, Tao Liang had chosen to join the larger platform of Monster Heavy Industries to show off his talents. Now the new department had two deputy managers, dozens of senior engineers, one technical director, and one chief technology officer.

When he first applied for a job, he was appointed to a senior technical position. Tao Liang was actually very nervous inside, worried that he could not shoulder the heavy responsibility. Because he had barely counted as a rich second generation, he had no worries about food and clothing during school, but he didn't have to find a job to work when he was a student like most students. He was also a full-time Ph.D.. It was the kind of polytechnic house that had no job and concentrates on research.

The Polytechnic Houses were similar to virgins in a sense. They all belong to the kind who has rich theoretical knowledge, and when the real swords and guns were on the battlefield, they had immediately become anxious to sweat.

Tao Liang couldn't speak out for this kind of anxiety, because in the new department, except for the chief technical officer, he was the largest. Because when the employees learned that he had a doctorate, from MIT, they thought of another person but when they passed him on their way they saw a little character like a girl who had just left the boudoir, with little stars in her eyes.

Tao Liang had believed that the CTO sent by the company would strongly support him because it showed his shyness because originally he expected this new support to complement the support that his mentor had given him. As a result, after gritting our teeth for three days, Tao Liang and other employees in the department finally established a good relationship. But during those three days, Tao Liang barely saw the chief technology officer. Even Xie Xingxiang, the deputy manager transferred from the company, didn't figure out where the chief technology officer is now. Not even the chief's name was known. He only knew his code name "Tianjin".

Tao Liang had thought that today the day of the official launch of the department, the president would come to officially announce it and he would be followed by the named Tianjin the chief technology officer. He and the other two deputy managers had been waiting for Tianjin since early in the morning, but only Ye Qing came.

The mobile phone R&D Department was located in a large warehouse with thousands of square meters. Now it has been renovated into a modern office area with white color as the main theme.

"Mr. Ye is good."

After Ye Qing walked in, Xie Xingxiang, the deputy manager, had immediately taken the lead and bent over to say hello. Most of the other new employees said similarly like the first time when they heard about Tao Liang's title.

The president of the Monster Heavy Industry was the youngest president among the 500 presidents of the largest companies in the country. Even though they have prepared well in their minds, they have not prepared well in their hearts for the younger CEO than their youngest technical director.

"Dear employees."

Ye Qing pressed his hands and was very satisfied with the surprise of this group of highly educated elite.

"Today is the first day of the official establishment of the new department. Among you, 28 employees have been chosen by companies of headhunting that we have charged to hire elites of large technology and mobile companies with high salaries. The remaining employees also have their own strengths."

"As for my purpose of bringing everyone together, you already have known it since the first day you joined the company. Perhaps everyone will have questions in their minds. Our company is a heavy industry company. Why are we interested in manufacturing mobile phones?"

"Because mobile phones are the world's most sold technology products." A new employee replied excitedly.

"Because it is challenging." Another employee wearing glasses added.

Ye Qing shook his head and pointed out one display products in the briefcase at the group of employees who looked confused. It was a very ordinary mobile phone. Some employees who had worked in a mobile phone company immediately recognized its model Blue Charm 3. It was a low-end phone that imitated Meizu mobile phones. It was produced by a domestic company called LanTuo. It had now lost its competitiveness in the highly competitive China market. Just... With sharp-eyed, they found that the screen of this phone seemed a little different.

"Because our Monster Heavy Industries Company had mastered superior screen technology." After that, Ye Qing threw it to Tao Liang, who was embarrassed on the opposite side, because this phone was his work.

The shock brought by the dream display lasted for dozens of minutes. The employees present were all amazed. It could be said that if this screen technology was sold to Apple, then the world's top ten mobile phone brands would be at least half dead.

Of course, a mobile phone couldn't compete with the top companies only by relying on the screen. They could rely on this screen to develop a brand-new excellent mobile phone, wasn't it the goal of their group?

"With screen technology, there must be a design worthy of this screen." Ye Qing once again signaled the crowd to calm down, and then took out a mobile phone model he designed from his bag.

This was a borderless phone. The full-size fantasy display occupied the entire front of the phone, and the diamond-coated screen was cut into a hexagonal angular design. The silver-gray metal on the side of the fuselage also had edges and corners and had multiple three-dimensional cutting surfaces.

This description may be unintuitive enough. After listening to the description, it may also feel that this phone was unbeautiful.

However, this six-sided and angular design was just based on the numerous square mobile phones on the market, and the horizontal frame of the upper and lower body was slightly raised from the middle. The extended edges and corners were very small.

It was these small edges and corners that immediately let the phone get rid of the boxy clumsiness. And these edges and corners were all chamfered, combined together, making this phone look very technological.

"Don't doubt whether we can build this kind of metal frame." Ye Qing held the concept model confidently: "Any material problem is not a problem in my eyes. You only need tackling its internal structure and operating system."

Chapter 446: Tao Liang has a hot pillow

Since the appearance of this mobile phone, dozens of employees across from Ye Qing had been breathing air-conditioning, rimless was this mobile phone! In a real sense, there was no design and no borderless, the surface was without any buttons and handsets. They were so surprised by Ye Qing's ambition that they could hardly breathe. The border sounded simple, but it was as difficult as climbing Mars.

The limitation mainly came from several aspects. The traditional mobile phone metallurgical screen itself required a certain frame thickness, and the frame circle couldn't display the picture. There was also no border, which meant there was no place for the front camera, earpiece, distance sensor, light sensor, buttons, and so on. If the phone was slightly bumped, the glass screen would be exposed to the risk of shattering.

But the borderless mobile phone was the most ideal form of mobile phone, and it was also the most compelling combat form. These technical issues were being studied frantically by major mobile phone vendors around the world and most of these employees had also been exposed to this kind of research topic. Only by studying this extremely challenging project could they be worthy of their high salaries.

After arranging the tasks and encouraging them, Ye Qing planned to go to the underground laboratory to see the mysterious CTO Tianjin. This chief technology officer was unique, and Ye Qing also counted on it to help overcome technical problems on the mobile phone.

"Mr. Ye... Mr. Ye..."

Seeing Ye Qing leaving, Tao Liang quickly followed in Ye Qing's footsteps, looking at his expression we could know he had something to say.

"What's the matter, Director Tao?"

Tao Liang subconsciously looked around and said mysteriously: "Mr. Ye, you know, I just got my degree certificate from MIT."

Ye Qing said: "Of course I knew. Your father had already let me through this message, and he said you were a full-time Ph.D. In terms of technology, it is much better than the average Ph.D., but you lack training."

"Mr. Ye, you also know that if you want to get a doctorate, you must have a decent study."

"I..." Fortunately, no one was around. Tao Liang scratched his head and smiled: "Actually, I can insist on getting the degree certificate, and I just wanted to revitalize the family business. I have been studying there for five years, and now I have several patents on relatively advanced mobile-phone technologies. It's a pity that my foolish father gave up his son. These patented technologies are in my hands and they are no longer useful. I wonder if Mr. Ye is interested in it."

"Oh... What kind of patented technology?" Ye Qing glanced at Tao Liang lightly and looked forward to it instantly.

He didn't see that Tao Liang still had a filial heart to repay his family. Ye Qing was of course interested, very interested. An MIT Ph.D.'s press box technology was still related to mobile phones.

Isn't this a hot pillow from doze?

Thinking of this, Ye Qing hurriedly pulled Tao Liang outside and invited him into his car to talk.

"Ultrasonic fingerprint recognition technology... Ultrasonic short-range recognition technology... Wireless speed charging technology..."

Every time Tao Liang said one, and Ye Qing's eyes became bigger. This was more than just dozing and sending hot pillows, and obviously sending a soft little fairy to sleep on.

The first two technologies are not unfamiliar to Ye Qing, who had paid much attention to the development of mobile-phone technology recently. These two technologies could be said to be the best match for making borderless phones. And technology companies were still having a headache in how to transplant these two technologies from the laboratory to mass production and Tao Liang had said this was his own patented technology, which meant that these two technologies were different from others.

As for wireless charging technology and fast charging technology, the current speculation is quite hot. But ordinary wireless charging technology was really not high-tech, Ye Qing could make it even with a coil and an electric soldering iron.

Tao Liang was a Ph.D., certainly would not come up with those low-end contact wireless charging technologies on the market.

The fact was also true. Tao Liang took out his mobile phone and gave Ye Qing the technical patent information. Ye Qing patted Tao Liang's shoulder appreciatively like a tiger.

"You didn't have this Doctorate for nothing, and the home money was not spent for nothing. I am very interested in these three technologies, but I don't know how you plan to deal with them."

When high-level technical talents were introduced to the company, most of their invention patents often went to the company. However, Tao Liang had joined the company three days ago, and these patents were applied for the company as early as when he was returning from the United States.

"A one-time buyout and equity cooperation will do and suffice." Tao Liang was happy and laughed happily. The president saw Liang's happy smile, leaving him a share in this part of the technology was very useful.

"For the specific price, Mr. Ye, you can verify the technical feasibility and analyze the market value before discussing it."

"I will hand it over to the CTO for verification immediately." Ye Qing took out his mobile phone and passed Tao Liang's information here: "If the verification has viable commercial value, I think I will choose a one-time buyout. Of course, I won't treat you badly in terms of price."

"Mr. Ye, of course, I can trust you. To tell you the truth, I dare not find someone to cooperate with a person coming from the United States, just in case the capitalists lose their conscience."

Tao Liang paused, and curiously said: "Mr. Ye, is the chief technology officer busy now? I haven't met him..."

"Uh... Ha... he's not very busy. It's just that this guy is homeless than you and has severe social phobia." Now it's Ye Qing's turn to scratch his head, and there was no way to put a hat on Tianjin: "Even contacts between him and me are all through online chat. But in terms of his expertise, you can rest assured. If you encounter problems in the future, you can ask him through the Internet."

"Well, the more extraordinary people in a certain field, the easier it is to have quirks that ordinary people can't understand." Tao Liang said with emotion: "Just like my mentor, Mr. Pi Mingcheng. He is a very famous Chinese professor at MIT, but behind the glamorous, how many people know my mentor has low-potency inhibition?"

"This is the kind of disease the male protagonist possessed, to tell you the truth after the prison escape he will become a lunatic if he has not become a genius. Fortunately, my mentor did not become the first. I also have a problem. As soon as I am in close contact with a girl, I cannot help but blush nervously and think several times before making a decision. The opportunity to withdraw the title of the wizard has been placed in front of me several times, but I could not take it... "

Fortunately, Ye Qing was not a genius, and he was thankful in his heart.

"Only in this way you can have more energy and devote you to scientific research." Ye Qing could only comfort him like this.

After the information was passed, Ye Qing patted him on the shoulder, encouraging him to work hard to get rid of the great wizard and become a good worker.

After saying goodbye to Tao Liang, Ye Qing hummed a small song triumphantly and walked toward the depths of the civil air defense project. If Tianjin would prove that this patent was feasible, the progress of the frameless mobile phone would immediately jump forward.

The most troublesome cost issue of other technology companies was not a problem in the face of the defying productivity of Monster Heavy Industries.

Chapter 447: News

When Ye Qing came to the underground laboratory, he found that the equipment here had been updated.

The most obvious change was that the control center built by Tianjin had changed from the original half-arc ordinary screen to an ultra-thin dream display, and then there was also the watcher. It should be called the Second Watchman now.

When Ye Qing saw it last time, he commented his shell was too bad; it was just an ordinary explorer robot and suggested that Tianjin change the shell. Perhaps Tianjin also had realized this; the brand-new Watchman No. 2 has a coolness that Ye Qing could not even think of.

The new head shape, the length of the limbs more in line with the human body.

This Watchman No. 2, which was fixed on the work frame, not only had sharp edges and corners on the skull but also had a perfect proportion of muscle armor. Its height had also been adjusted to 1.8 meters, with matt black muscle armor, making this Watchman No. 2 looked like a strong and cold mechanical life, which would launch fierce attacks on its prey at any time.

The appearance had been changed, and the internal structure had been changed greatly. The new lightweight sports material was equipped with a variety of sensors, and the robot could automatically adjust the body balance while walking.

At present, it was limited to walking freely on flat ground, but it was different from the clumsy concept products created by other technology companies. The upgraded version of Tianjin could walk on a flat and very close surface to the walking posture of a real person.

Tianjin was sitting in front of the dream monitor and used the computer to adjust the parameters of the Watchman No. 2.

Now Ye Qing was sure he had no dizziness, and the sitting Electrocrystalline was a bit bigger than the last time he saw it. When Tianjin stood up, the feeling of being bigger became more obvious. It seemed that Tianjin had grown ten centimeters higher in just a few days.

"Boss, those pure diamonds have added much energy to me, and I will naturally grow taller." The monster grew longer, but his voice did not change, it was still the ethereal electronic sound from before: "And now I can stay invisible for six minutes, one minute longer than before."

"Can you grow by simply eating gems?" If that is the case, Ye Qing won't mind using a truckload of various gems to supplement it.

"Knowledge has to keep up." Tianjin patted his semi-transparent hand: "Boss, don't worry, now that the doctoral students are in front of me, I can only teach them. I will soon become the world's most powerful electronic engineer, but when all human knowledge of electronics is completed, I will have to work hard on my own."

"The day after tomorrow I will send a Master Metal Expert to Nigeria to purchase diamonds, and I will leave you a kilo." Professional knowledge Ye Qing couldn't help too much, and he could only help him with his professional knowledge.

"By the way... I will send you some information; you can help me verify the technology inside."

Ye Qing connected his phone to Tianjin's private server, and after uploading the data, Tianjin happily ran to study.

Ye Qing looked curiously at the control interface of this Watchman No. 2. The interface was in English. Ye Qing looked at it for a while and found League of Legends was still open in the taskbar.

It seems that he hasn't played this game for almost a year, and Ye Qing looked at the familiar icon and thought of playing it for no reason. He just wanted to play, and was about to switch his account, and a QQ news pop-up popped up. Ye Qing saw this kind of new pop-up. When the mouse moved to the close button, he suddenly uttered a "Huh...", the first news on the homepage seemed to be related to him.

[The world's most luxurious private jet is online. The first local buyer to enjoy it is actually Chinese?].

Looking at this title, Ye Qing seemed to be talking to himself: "How capricious is the world of local tyrants?". He clicked on this news.

According to Gulfstream, the company's latest and most expensive flagship model, the G 750 private jet, four wealthy individuals placed orders for this device as soon as it was launched. Moreover, the real local tyrant was a Chinese man.

Rumor has it that to be the first to receive the plane, the local tyrant paid 10% more on the initial price of urgent work. According to the official Gulfstream website, the delivery date of the first plane has been set in six days.

At that time, friends at the Capital International Airport were able to see the luxury of the Gulfstream G 750: "Is the editor deliberately making suspense, or is its source undetailed?"

This news made Ye Qing secretly pleased. He couldn't rule out that he would be able to get news on the homepage if he bought a car casually.

"Little edit, that's enough from you. Even a countryman like me knows who bought it. The buyer is the president of Monster Heavy Industries."

"What I said upstairs is correct. My girlfriend is a flight attendant. The entire airline knows who this local tyrant is, because just buying a plane is not enough, and there are many procedures to go through. These procedures were commissioned by Monster Heavy Industries. It's the company that produces ionization purifiers? Fortunately, I was miserable by this company. My girlfriend wants me to send her an ionization purifier; otherwise, she will break up with me. Don't fight, I bought it. Besides, the one upstairs should be divided earlier."

The editor was confused. There are many well-informed netizens in the comments. Ye Qing smiled and clicked on the next news, which was related to Xu Ninggong.

[Who is the mysterious guest of Xu Ninggong's first concert?]

This news was under Ye Qing's eyes. It was a coincidence that the editor also deliberately played suspense. First, I will give a very grand introduction to Xu Ninggong's thirty-two concerts, and how popular Xu Ninggong is now. Then the conversation turned around, saying the mysterious guest of the first concert should be a male and also a popular singer, and there are a lot of speculations that make up the mystery.

Ye Qing somewhat underestimated the wisdom of these netizens. The top one in the comments below said that the mysterious guest is Lang Han. So Ye Qing estimated this netizen was a loyal fan of Xu Ninggong and Lang Han. He interacted with the two on Weibo and talked to them. It was very certain Lang Han was really the mysterious guest, and he had to admit the current netizens are too sophisticated. The editor didn't fool anyone and didn't say anything, and even flicked himself lame.

Being interrupted in this way, Ye Qing lost the thought of playing the game, so he simply followed Tao Liang's patent information. He watched for two hours with Tianjin, and together with two Electronic Messengers, and he had verified the three patented technologies provided by Tao Liang within these two hours.

Technology did not necessarily have to produce physical objects. In the eyes of insiders, as long as there were drawings and data, it is OK or not, with a little calculation could get the result.

The result of Tianjin verification was feasible, and Ye Qing had immediately notified the relevant department of the company to evaluate the patent price. The buyout price will also be negotiated by the company, and he will do as long as the final ruling is passed. There was nothing wrong at the moment. After saying hello to Tianjin, he returned to the Longxitan factory.

It was exactly ten o'clock; just on the way back, Ye Qing felt that the atmosphere was not quite right.

Chapter 448: Don't grab the headlines, line up

The atmosphere was a bit solemn. Before the Lagonda was out of the city center, he had encountered five police cars passing by. These police cars sounded their sirens one by one, in an extremely rare state of tension; they honked their sirens and ran through a red light.

Since the last time the national inspection team left, Ye Qing has never seen a big scene in Shanghai City again and even the violations and drunk driving that used to be severely cracked down in the past were invisible. What's wrong today, Ye Qing hadn't heard of any leading group coming to inspect?

At the last traffic light in the city center, Ye Qing lowered the window and looked around. As a result, a small Buick on the left turn lowered the window.

"Brother, don't wait to know... I'll tell you what's going on." The middle-aged man sitting on the co-pilot screamed.

"At three or four in the morning, the Daimeng Jewelry Company was stolen by a group of high-tech criminals and lost more than 30 million Yuan. All of their company's alarm equipment has been inspected, and the camera did not capture any pictures. The company went to work in the morning and found all the jewelry had been taken away. Now the entire Shanghai police have jumped their feet, and the streets are chaotic. I'm dizzy... Is there anything else?"

Ye Qing had stayed in the underground laboratory before, and the news was a bit blocked, and the Internet news, he did not see. He opened the local news official account in WeChat, and it turned out that the entire page was about the stolen case of the Daimeng Jewelry Company.

In the news content, each of these thieves was described as a spy in Mission Impossible, and it seemed that they even went to the bank vaults. This was really big headline news. Daimeng Jewelry is the largest jewelry company in Shanghai. There were more than 20 shops open, and it also had its own jewelry processing factory.

Ye Qing didn't expect it was bloody mildew, but judging from the existing information, this group of thieves had excellent skills.

Because of the particularity of the industry, jewelry companies often had to make great efforts to arrange security alarm facilities. The bigger the company, the more so, it wouldn't necessarily make the dazzling high-tech in the thief movies, but at the very least, infrared sensors and vibration sensors should be arranged.

These systems were not worth much money, that is, ordinary people living at home seldom contact this aspect. Being able to crack multiple sets of security systems, show the hands-on ability of this group of thieves was so strong.

When Ye Qing drove into Huanhai Avenue, he had encountered a police card for temporary inspection without an accident. The inspection of the car was much simpler. Observe your words and look at the trunk. Those trucks were in trouble. They stopped one by one on the side of the road, and the police carefully checked them as if they were looking for treasure.

When it was Lagonda's turn to pass the inspection, the police did not even check and waved letting him go. In Shanghai and had a Lagonda. Did the owner of this car is going to steal jewels, so ordinary citizens like them were going starve to death a thousand times.

.....

With such a major theft, not only Shanghai police blew up the pot. Even the city leaders were utterly devastated. At the emergency meeting, they even cursed the relatives of the gang of thieves.

There is no doubt that Shanghai City would be in the news, and it would be the headline of China tomorrow.

Just after picking back the laurels of the National Hygiene and Civilized City, this kind of affair has happened before the glory became hot. If they couldn't solve the case quickly, wasn't this glory a big joke?

In Guanzhou World Expo City, where the Daimeng Jewelry Processing Factory was located, police cars with lights on, parked a full horizontal line of cars. The security band surrounded the entire two-story factory building. The ground was full of police officers wearing white gloves, holding tweezers, and holding cameras collecting evidence and materials. A girl with slender legs wearing a brown slim-fitting jacket stood in the corner of this two-story building with her hands around her chest, looking at a collapsed hole in the corner silently. Many policemen who were transferred from the police stations of the various sub-bureaus spied on her at intervals while looking for suspicious physical evidence.

Zhang Zhitong was currently the Deputy Chief of the Technical Section of the Criminal Investigation Brigade of Shanghai City.

The technical department is mainly responsible for the extraction of evidence at the crime scene, various traces, documents, materials, biological identification. There are also simulation portraits, psychological tests, etc., which could help important departments to obtain clues to solve the case.

Zhang Zhitong was graduated with honors from the China Criminal Police Academy in the National Criminal Investigation Temple. At the same time, she was the only high-talented student who was admitted to Shanghai City and its subordinate counties. Of course, she was being listed as a key training, and no one was more suitable for criminal investigation technology than her.

She was Ye Qing's classmate. Last time they met, she was a second-level superintendent who did not hold a leading position in the Criminal Investigation Brigade. Now she has been promoted to the deputy chief of an important department.

The police had secretly taken aim at her, but it wasn't because she was a good messenger. Her director was better off, but who would like to look more?

Zhang Zhitong was really so beautiful and her legs were long. Even if her partners have female colleagues, they are all tough women. Didn't they have enough to see the legendary Zhang Zhitong as their own chief?

"Have you found any valuable clues outside?" Zhang Zhitong rubbed her temples with a headache and asked a police officer who had just hung up.

"We picked up all the cigarette butts with a radius of 20 meters, and turned over the trash can." The elderly police officer shook his head: "I have been working for more than 20 years, and I have never encountered such skilled thieves, it is estimated that these things we collected are all useless."

"The situation inside is not optimistic." Zhang Zhitong sighed: "I have been busy all morning, and now I can only determine that there are three suspects. Six of the road junction cameras in Expo City showed white screens from three to four in the morning. The same goes for the infrared cameras inside the factory, and there are even three burned out."

Nodding sympathetically, the police officer asked, "Section Chief Zhang, what do you think what this gang used to interfere with the work of the camera?"

"Laser irradiation." Zhang Zhitong firmly said: "In blind spots that cannot be captured by the camera, use a shelf to set up the laser to aim the camera to generate strong light and completely invalidate the light perception adjustment of the camera. The technology content of the technique is not too high. But if you want to avoid the camera's shooting, but also find the correct angle to shoot the lens, this requires very accurate position estimation."

"Look at this wall again." Zhang Zhitong pointed her finger to the back, which could accommodate the broken opening through which an adult was bent over.

"This is a concrete shear wall with a thickness of fifty centimeters, made of high-grade concrete and thick steel bars of the thumb. The broken steel bars and fragmented concrete blocks are clearly visible at the broken wall. The steel bars were cut by fire cutting, but I can't think of how this group of people broke through this wall in a short time."

"There were no traces of blasting in the hole, nor did it meet the traces of drilling or heavy objects. The concrete of this strength would take hours to break it even with a percussion drill, and it would also make many noises at the late night. It takes more than an hour for this group of people to break into the wall and leave the safe."

"The way to disassemble the safe is more peculiar. I can't find any similar cases in China, and it can't match the crime tools I know about it for the time being."

Chapter 449: Turn your eyes to the professional

As soon as this jewelry theft case occurred, the entire Shanghai City was in a sensation, and all police forces were mobilized because the quicker the case would be solved, the better the administrative efficiency of Shanghai City could be realized, and the rest of the young criminals would be greatly deterred.

Look... If this theft, this unheard-of high-tech crime of the jewelry Daimeng Jewelry has been solved, those who only knew how to use a hammer and wear a mask, still expected to challenge the ability of the Shanghai police, because the tool of committing crimes is not only the most important physical evidence in criminal cases but also one of the means of investigating suspects.

If the case dragged on for three to five months, not only would the city's image be damaged, but the entire Shanghai City stores that operated valuable commodities would be frightened.

Expo City center retrieved all surveillance videos in a radius of several kilometers and mobilized all forces and conducted detailed investigations on the videos.

This group of brave thieves could accurately find out the warehouse, paralyze all safety devices, should have stepped on a bit beforehand, or maybe there was a possibility of acquaintances had committed the crime.

If they had schemed on it beforehand, the videos had been definitely captured clues previously.

The collapsed hole was one meter in width and height, and Zhang Zhitong bent over and got in through the hole.

The scene inside was difficult to relate to the previous crime scene where ten bulls rushed through it in turn, because there was no sign of being turned over in any other room except the warehouse where the jewelry was stored.

The Daimeng Jewelry Processing Factory was an independent two-story factory building. Before entering Daimeng Jewelry Factory, detailed decoration work was carried out here.

The doors were a Class A electronic security door, from the entrance to each storage room, all of this kind of security doors. All windows were inlaid with strong anti-theft nets. At night when workers left work, the vibration alarm device would be turned on.

To prevent the security guard from stealing or being attacked by thieves, the boss of Daimeng Jewelry put the monitoring room in the company in the city, which means that there was no one in the factory at night.

Before leaving, get off work, and the boss of Daimeng Jewelry personally would check the jewelry warehousing work. The picture of the remote monitoring room last night was normal, and there was no shadow of a mouse. This defense had actually achieved the ultimate in a jewelry company of his size.

But he didn't expect this group of thieves would be more extreme than him, after breaking the gap from the outer wall closest to the warehouse. This group of thieves didn't make any extra investigations; it was not the kind of non-professional thieves who ransacked the cabinet. They went straight to the jewelry storeroom, using methods that the criminals' police had not understood, for the time being, opened a large hole in one side of the storeroom and ransacked all the safes inside.

When Zhang Zhitong walked into the jewelry storeroom, several technical criminal investigators were extracting fingerprints and footprints in the room. It is empty and open like a door to insurance, showing how ridiculous these safety precautions are.

On the front of each safe, there are two round holes the size of a coin, with traces of melting around the holes. It was these round holes the main reason for completely lost the contents of the huge safes.

A female policeman stood up, lowered her voice, and said to Zhang Zhitong: "Chief Zhang, I have a bad feeling. No outsider's fingerprints were extracted at the scene. They belonged to the owner of the jewelry company. There are no footprints either. The suspect probably put something on his shoes beforehand. They are so well prepared, so they had definitely made careful arrangements on the route of retreat and sale of stolen goods. We could catch them probably only by luck."

Zhang Zhitong didn't speak; she crouched down with her trousers, and carefully checked the two round holes in the safe.

About half a year ago, the warehouse gate of the Silver Palace Club left a very deep impression on her. Neither flame cutting nor plasma cutting can destroy the imported riot door.

These safes in front of her were traditional safes with mechanical code disks and key locks. According to the information provided by the manufacturer, their safes also had the ability to prevent flame cutting and Plasma cutting could not break it, but plasma cutting equipment, it's bigger than a safe, and it's impossible to move it in through the hole, so how did they open the safe with just two big round holes of coins size?

In the afternoon, Zhang Zhitong returned to the bureau and exchanged clues she had so far with other departments.

The transportation department had found nothing for the time being, but surveillance video had not found any abnormal personnel. In Wanbo City, there were mainly building materials companies, and there was not even a ghost shadow at three in the morning. The police visited everyone inside but did not obtain a valuable sighting report.

There was no gain in intelligence. The local jailbreakers and informants all shook their heads and said this group is too professional. They were not from the same world and couldn't mix with them.

The net police had gained the most. They found the reason why the alarm and internal monitoring failed. The external connection line was cut, and the suspects also used a laser to irradiate the camera to prevent video backup in the factory.

If thread cutting was unconsidered a technique, then what happened in the remote monitoring room in the urban area given all the police officers an ideological education class. The remote monitoring room of the factory was hacked as early as a week ago.

The suspects could not only observe everything that happened in the factory at will but also let the monitor put yesterday's screen playback on the night of the theft. No theft occurred yesterday, and they replayed the picture as usual.

The suspects could watch the factory monitoring at will, and naturally, they had all the layouts in the factory and the location of the monitoring. It is possible it was not an acquaintance who committed the crime, which suddenly complicated the whole case.

"It turns out that watching those spy and thief movies, I also laughed at those directors who were too brainy." A detective spat out a string of smoke rings bitterly: "The fucking reality is more bizarre than the movie. Look at this, this case is unbroken. . Promise that they will commit the crime again before long."

"Now all the major Internet news is coming out, we are the headlines, and countless Canadian media are calling to interview us."

"Chief Zhang, what do you think?" Director Zuo of the city bureau reignited a cigarette and coughed: "The provincial government replied. There is no similar case like this case in China. It is basically certain this group is the first one, on this type of theft."

"According to the information obtained at the scene, this group of suspects is professional and heinous. They have brains, knowledge, and the ability to act. The tools used for committing crimes are also things that we have never encountered before."

Zhang Zhitong kept turning the pen in his hand: "I think we should change our thinking. This group is probably not in the traditional sense, those criminals who are lawless and psychologically distorted. It's a group of people who have a strong ability to earn a living in society and certain economic conditions and master the skills related to industrial processing."

In Zhang Zhitong's beautiful eyes, two firm rays of light came out: "A layman, absolutely cannot break through two solid concrete walls in a short time, let alone break a safe with anti-cutting function. And the tools used here are definitely not ordinary."

"I suggest focusing on those machinery factories and investigating the machinery factories in the city."

Chapter 450: Strengthen Security

At 4:30 in the afternoon, Ye Qing was in the Longxitan office dealing with some technical problems and after setting a good target for the company's mobile-phone R & D department, the highly paid technicians had immediately sprinted make unremitting efforts towards the goal.

Of course, the factory should also cooperate during the sprint. For example, if the technicians designed a thinner motherboard, the monster's factory should determine whether it was able of manufacturing it. When it was manufactured, cost and mass production should also be considered.

"Dudu~Dudu~"

There was a knock on the door outside the office, and Ye Qing shouted: "Come in."

"Boss, outside the factory, there are a few policemen who want to see the person in charge of the factory." This was the report from the Master Craftsman.

"Police?" Ye Qing was very strange: "What are they doing?"

Strange to strange, Ye Qing would never let the monster drive them away: "Bring them here."

Two minutes later, three policemen with briefcases walked into the office.

Along the way, the three policemen have experienced too much shock. Especially on the parking lot, where hundreds of huge robots load goods, but they didn't expect that when they walked into the office, the shock would instantly become even greater.

In the tidy office, sit a young man with an aura. This young man had an unspeakable superior temperament, of course, and the three policemen were not shocked by him. The more shocked men were, the more they find this guy to be attractive. Behind him, those two windows were the source of their shock because, in terms of geographical location, the scenery outside these two windows should be the blue sea. But they saw the endless desert outside the windows. The strong wind rolled up the yellow sand, and a series of sand dunes was winding up and down on the ground. The low bushes became extremely hot in the scorching sun. It seemed that a flame could make it burn instantly. A few severely weathered bamboo shoots seemed to be silently telling the vicissitudes and sadness of time. Obviously, it was winter when the wind was blowing, and there was no temperature coming from outside the window. The three policemen felt as if they were walking in the desert, they were all warm. The location outside the window should be the sea, and the three policemen now have question marks in their minds.

"These are just some small technological means." Ye Qing smiled triumphantly and tapped twice on the phone. As a result, the scenery outside the window suddenly changed, becoming the snow-capped Himalayas and the snow flew like a knife, and the three policemen stared blankly.

"Excuse me... Are you Mr. Ye?" An older policeman rubbed his eyes vigorously.

Ye Qing nodded and invited them to sit on the sofa.

"That's it. Early this morning, there was a theft in the Daimeng Jewelry Factory." The policeman explained with a smile: "Mr. Ye, you know, the criminal gang's modus operandi is too professional. Two thick concrete blocks of walls and a few safes broke open in one hour. We suspect this is a theft caused by experienced workers who are skilled in industrial processing skills."

"So the upper hand-arranged for us to investigate the various factories in Shanghai City.". The policeman kept waving his hands and explained desperately: "Mr. Ye, you are the manufacturing leader of our Shanghai City. Let's go through the scene to ensure we will not disturb your production work."

Here is the situation... The addition of Electronic Messengers made the personnel structure of the Longxitan plant more diversified. Strong Monster laborers, little old man, Master Craftsman, ruthless man, Master Metal Expert, and young gentle Electrocrystalline. They were similar in height and weight but different in appearance. Except that Juli the Monster Laborer was a bit dazzling. The factory personnel in Longxitan were not much different from ordinary factories.

The policemen should really check or visited or something. By bringing the workers from the company over to make up the number and no one would doubt it. According to their descriptions, this group of culprits was indeed like technicians specializing in industrial processing.

Ye Qing asked them how they would investigate; did they need him calling the workers over?

"No, no need of calling the workers, Mr. Ye, and the assembly line in your factory will maybe stop working. The case happened yesterday; just give us a copy of the duty schedule of the technical workers. It would be better if Mr. Ye could ask the person in charge below to ask if any individual technical workers had abnormal behaviors in the past month after finishing work."

It was simple; Ye Qing had just handed in the company's technical worker's duty form. The monsters in the factory were naturally impossible to steal gold jewelry.

So, he made a phone call and asked the personnel manager to ask about the recent situation of the technical workers, and then asked him to pass the duty form over after printing it out and give it to the policemen.

The policemen thanked him again and again, saying Mr. Ye had lost his precious time, but Ye Qing didn't take it seriously because he should cooperate with the police. Anyway, it didn't matter to him.

However, what happened to the Daimeng Company sounded the alarm for Ye Qing. He felt very necessary to enhance the company's security measures.

For jewelry over thirty million Yuan, someone was willing to take risks. But 30 million, what counted here at Giant Monster Heavy Industries?

For the item of photoelectric ionization purifier, the Monster Heavy Industry should be shipping 300,000 pieces every day. The total value of these goods was 2.4 billion, and an average of 8,000 ionization purifiers would be shipped per truck. Then on the highway, this truck would be equipped with 64 million mobile treasuries. Wow, this cash transport truck could be worthwhile to be grabbed.

If there was a way to ship the ionization purifier abroad for sale, the guaranteed price could be doubled. When Ye Qing knew it, he was shocked.

On the way from the factory to the company, there were dozens of large treasuries going to and fro every day. The key to this was these "large treasuries" hadn't had any accidents. Ye Qing really wanted to thank China for the security situation and the gang of gangsters who had no eyes.

Maybe this was also related to the fixed route of the truck and the short distance. After leaving the factory, it was Huanhai Avenue and after a while, they will enter the city. The road is monitored all the way. This was not like gold jewelry, which could be carried in one pocket. Eight thousand ionization purifiers were piled up with a whole small container. Running away with these things, it was difficult to escape the police. The reason was this and Ye Qing didn't want to challenge it.

Ye Qing, with a lingering fear, had immediately called the Master Craftsman and asked him to use special alloy steel to build a hundred special transport containers for ionization purifiers. It was also necessary to install reliable safety measures, such as self-designed mechanical locks and internal satellite positioning. At the same time, the company should strengthen the rules and regulations of road transportation and formulate a more reasonable plan for the collocation of transportation personnel.

The courier company should also notify them to strengthen precautions. If the goods were stolen and robbed, although it was a matter of the express company and the insurance company, Ye Qing estimated that it would take three to five months to refund such a large amount of money.

Ye Qing picked up the phone and notified Yu Huali, the manager of the personnel department, to let him use the case of the Daimeng Jewelry Company as a wake-up call to immediately start the company's security enhancement work.

After the call got through, Yu Huali was stunned: "Boss, I'm about to call you."

"What's up?"

"The company... Something bad happened..."
