

M Factory 541

Chapter 541: Big boss of Ba Sucha.

When someone is sad, someone is happy.

For example, at this moment, Ba Sucha seated in the first class of an airplane with his mink fur coat in the cabin, his head combed back, a pearl chain thick like a thumb hanging from his neck with a dagger sword. Now, his face full of triumph.

.....

What does it mean to live on earth today?

.....

Ba Sucha's boss is naturally his old man, and his relationship is not bad. It turned out that Ba Sucha always thought he was a big boss. In Bashu Mansion, he couldn't cover the sky with one hand, but it was normal for him that he could call on wind and rain. He was in a good time to live a small life, but after getting to know the young president of Monster Heavy Industry, he knew he was the son of a village executive at best, and he was a young man from the village which had seeds and fertilizers in the village.

People have desires, or in other words, all have aspirations. Using his father's relationship, Ba Sucha made his debut in society from the age of nineteen and stood on the shoulders of giants that countless people can only admire. After working hard for seven or eight years, he has now reached a total of several hundred million assets in total.

It stands to reason that Ba Sucha should be happy, and his life is also chic. But Ba Sucha gradually realized that his career had experienced a bottleneck period. Although gold jewelry is a bowl of iron rice, there are too many people doing it, and he makes money too slow. The business he had built on a whim came to the side of China with a personalized version, the mobile phone, and due to encountering many imitations, the benefits got worse and worse. Bashu Mansion really couldn't satisfy his ambitions.

As the saying goes: "If you want to go further, you can't just look at the country."

Looking across the country, no business opportunities were found. There are a lot of young people with scary backgrounds. These people are not his brothers, and they are his competitors. After all, the market is so big, and there was no objection to it.

Ba Sucha has considered encompassing all the business opportunities that will arise within his company, Bashu Mansion, but if you want to do business outside of him, there is no way. In Ba Sucha's eyes, the eye-catching business must be a profitable business that everyone is jealous of. In the end, there would be no way to compete with it, so Ba Sucha had to come to China to learn from the experience.

This acquisition enabled him to obtain the agency right of the ionization purifier, and later met with the president of Monster Heavy Industry and shook hands with Ye Qing. This hand evidently had the purse of God's wealth.

In just a month, the scale of Ba Sucha's business changed, and the younger generation of the wealthy who originally saw him not being pleasing to them and threatened him that he would not. He should not allow himself to enter their circle, and whose status and superior to his, now arrive to call him brother.

Who is going to look for problems with the money? Obviously no one.

Now Ba Sucha holds the power of the ionization purifiers, when it comes to them, these second-generation rich people can only pour foreign cigarettes and wine into the Tao Teng Bar and Club, using their connections to smuggle them and together send scientific and technological wealth to European and American countries.

Ba Sucha has unlimited natural knowledge. It's not that no one is jealous of the power of the ionization purifier in their hand, but this power is given by Monster Heavy Industry, a big company in China, and he is the king of the state of Thailand, and they are not competitors for him.

.....

If you really can't afford to offend, then take yourself to make a fortune and practice in another camp. Get a taste of the huge profits brought in by countless big capitalists and the world's most coveted monopoly technology.

.....

Today, Ba Sucha has another plan to make a fortune, and Monster Heavy Industry just launched the Magic Crystal mobile phone, and all doubts are completely gone after physically touching this phone.

Ba Sucha started his business with gold jewelry and imitated cell phones. Of course, he is a person who knows the merchandise, so he has every confidence to help his big boss, Ye Qing, chase the Apple mobile phone out of the country.

However, the more confident Ba Sucha, the more guilty he felt, because the Big Boss Ye Qing who had allowed him to draw a great fortune, had assigned him a mission, but the mission Ye had entrusted to him escaped him, since half a month had passed without even the slightest success as if the thieves had disappeared as if they had evaporated into the world.

The Bashu Mansion branch in China is expected to get the spark of love by recovering the stolen rhodium from Linpu Precision Instrument Co. Ltd., this branch promised employees a reward at the end of the year if they recovered the stolen rhodium, but no one came selling rhodium at a low or high price. In this regard, he was somewhat helpless, so he could only use 12 points of effort to help Ye Qing, and that is by selling his Magic Crystal phone.

As soon as he thought of the Magic Crystal phone, Ba Sucha pulled the new phone out of his pocket and was ready to watch the downloaded movies on the airplane mode. Watching movies on the Magic Crystal mobile phone was simply a pleasure he never experienced in his life.

The plane's flight time was around five hours, and most regular cell phones don't have enough battery charge. But this is tested once the Magic Crystal phone's screen is on; this phone stays on for an hour and a half longer than the Apple 7.

The Magic Crystal cell phone battery is nothing special because The supplier is Desai Battery, a well-known cell phone battery supplier in China, but the outstanding screen technology of the Magic Crystal saves more power than the ordinary mobile phones.

Ba Sucha wanted to watch a movie with pleasure, but two minutes after he took out the Magic Crystal phone, a guy on the side sitting in the other row of the aisle turned his head and looked at him frequently. Besides, no one can be indifferent to be watched for a long time with just one pair of eyes.

“Hey ~ that’s too much!” Ba Sucha was watched with a little hairy head. He straightened up and pulled the elastic vest over his chest, revealing a patch of chest hair and a black tiger tattoo with a vicious look.

With such a tiger gaze on Ba Sucha’s chest, which was full of aura, this gentlemanly looking guy really showed a trace of fear. It had taken a long time before he finally gathered his courage and declared with a twist.

“Excuse me... Do you... Do you have a Magic Crystal phone?”

“Did you recognize it?” Ba Sucha immediately became happy. As it turned out, this guy was careful with his cell phone.

“I just watched its intro video on the Internet.” The guy smirked: “Is this phone easy to use? The internet says its screen technology is particularly powerful.”

“It’s not just amazing; it’s beyond the technology of this time.” Ba Sucha burst out laughing and tossed the Magic Crystal phone very generously: “How powerful it is? You see for yourself, and you can buy one immediately if you like it. I can’t afford to refuse if you wish.”

In less than a minute, Ba Sucha seriously regretted this decision after facing the other party with happy eyes, because this gentleman has now become even more daring than him.

“It’s my lucky day!”

“Shit!”

“Haha ~ it’s great, it’s an alien screen, and the image is going to explode.”

Fortunately... Ba Sucha didn’t throw the VR glasses at him, so he could only say that.

Ba Sucha comforted himself and then indulged in the visual feast brought by the Magic Crystal phone. The time went by too quickly, and when the plane landed at Bangkok International Airport, Ba Sucha had already watched two films without dressing up, one of which was watched with VR glasses.

Ba Sucha didn’t think it was enough to watch the shocking scene that really happened in front of him a hundred times when a Mercedes-Benz G 63 pulled up in front of him at the airport gate.

Ba Sucha got in and sat in his own car, happy to be returning to Thailand. His temper was quite different from the one before in front of Ye Qing. His watery eyes started getting confused, and he had a duller flavor.

“Did something happen in the company while I was away?”

A woman with a slightly dark complexion, but with very attractive features and an exceptional figure, sat next to Ba Sucha, opened a wooden cigar box, took out a cigar from the box, lit it with a match, then exhaled the smoke and passed it to Ba Sucha.

“Mr. San Pan from Nong Khai Province once came into the business. He wants to tell you about the Ionization Purifier Agency in Nong Khai Province.”

“Mr. Saiyu also came over once and said you had beaten his son and that you have to give him an explanation.”

“Tell him I gave his son a correction. Sooner or later he will have to thank me for doing this, and his son will someday make a big mistake.” Ba Sucha, who has been detained for much of the day on the plane, took a big puff of thick smoke, glanced at his white teeth, and said: “Is that all?”

The secretary nodded, looking him tenderly in her eyes. She loved this man who looks rude and crazy, but who is actually delicate in his heart and calm in his work.

The latter patted her on the shoulder and told her that he had worked hard for the past two days.

“Let’s go back to the business first and help me contact those cell phone dealers along the way. The Big Boss gave us another job, and I’ll help him do it beautifully.”

The secretary nodded again and pulled out her cell phone to contact the people, and she couldn’t help but be filled with endless curiosity about the Big Boss. This Big Boss is from China, eh? Thinking of the Chinese, the secretary also recalled a trivial matter during the two days that Ba Sucha was away.

“By the way, boss, yesterday the company got a call. Someone asked us in English if we need a precious metal like gold. I know the English accent of the Chinese, and he is a native from China when I heard it. That English word, I haven’t understood the word at first, so I checked. The word was rhodium metal.”

“What?” Ba Sucha suddenly bounced off the seat and kicked his head directly on the roof of the car.

“China? Rhodium?” Ba Sucha was so excited that the cigar in his mouth fell out.

Chapter 542: Two trading methods.

Their company did not care about the profits from the gold trade. When the other party comes to sell precious metals, the profit scale will definitely not be large, so why the secretary now saw her boss so horny, she never saw him so excited, isn’t it just a precious metal?

“Where are they? On the phone, what did they say? Tell me without missing a word.”

Ba Sucha grabbed the secretary’s shoulder with his hand, looking nervous, and under the secretary’s word-for-word explanation, he slowly understood what had happened.

Yesterday he was in China, and there was nothing major in the company, so the people who contacted the company naturally did not contact Ba Sucha, but yesterday afternoon, when the workers of the company were about to leave work, they received an international long-distance number with no specific attribution location on their external office numbers.

Because it was precious metals, the operator turned the call to the secretary. She was very familiar with China’s English accent and knew the other part was from China. In the words of the secretary, this person was fluent in English and had a good oral attitude. He was a very educated person.

Over the phone, the Chinese man, whom she could not know his exact age, asked about the precious metals market in Thailand. He said he owned a precious metals factory, but now the factory is unprofitable and he wanted to transfer a lot of precious metals because he still had a lot of foreign debt, the owner of the factory wanted to sell the precious metals quietly, so that the creditor would not know that he still has enough money to pay off the debt. Therefore, the boss said the price maybe 15% lower than the market in China.

The secretary did not understand the English word rhodium metal, but she understood it well below the Chinese market price. It's still precious metals, and the 15% price is very attractive, so she told them to call them when the boss comes back tomorrow.

"Did you tell them I went to China?"

Ba Sucha's gaze burst with emotion the secretary had never seen before.

With this kind of emotion, the secretary immediately realized the importance of the question when he shoved her a little; it seemed that if she did not answer well, she would lose her job from now on.

"Boss, how could I reveal your whereabouts by chance?" So as not to speak to you yet, go see the big boss. I said you weren't there, and they hung up the phone without asking for more."

Then the scene that the secretary had always dreamed of about it and couldn't believe it was going to appear, because she loved the boss, was finally appeared in the Iron Road style, and she was ecstatic. When he made her lifted her face and gave her a hard kiss.

"Go, go, go!"

Ba Sucha vigorously slapped the front seat, forcing his younger brother to return to the company immediately, and during the three-hour drive on the road, Ba Sucha made no less than ten phone calls to the company and asked them to prepare recording equipment as quickly as possible, to ensure that every phone is open and every phone is in service and that every call is recorded throughout, and whoever dares to miss a call telephone will not be able to receive a salary for the rest of his life, and will not be able to resign, and for anything done beautifully rewards at pleasure.

At three in the afternoon local time, a Mercedes-Benz all-terrain vehicle burst into the company gate. Ba Sucha rushed into the business in a hurry, unable to take a bite of the meal. At 3:30 p.m., he organized all his work with nervousness and order, sitting at the reception desk, waiting for the call to arrive.

The previous phone number has been verified by the phone service in Bangkok. It was an international Internet telephone company. He wanted to get more detailed information about this call, but he didn't have this technology and it was impossible to find anything. The call was at five o'clock, and there was a time difference between Thailand and China, meaning the person called at four o'clock in China.

At this point, Ba Sucha deliberately invited two golden Buddhas to his office, then continued to ask the golden Buddha to appear.

Yesterday, the operator was also replaced by a competent trustworthy man, as Ba Sucha feared that his psychological quality was sufficient. This trusted man was a born drama school, and Ba Sucha often pretended to be a pig and eat a tiger, and this trusted man played an important role.

In the office, there were only three people left; Ba Sucha, his trusted man, and his secretary.

When the first call rang, Ba Sucha almost felt his heart fly. It's a shame that this call did not come from China, and the other side spoke purely.

The second call...

The third call...

Ba Sucha's phone rang dozens of times, and he went from very nervous, calm, numb, cursing, then scolding his mother. Time passed slowly, and just as the pointer pointed to five o'clock the phone rang again. On the caller ID, a long list of phone numbers very similar to yesterday's number displayed impressively. By this time he was so nervous, he couldn't breathe, and he glanced firmly at his trusted man to answer the phone. The phone rang five times, and the trusted man grabbed the phone and casually said hello.

"Sawa Dika."

The other side took a deep breath and gave him a relieved look.

"Hello."

The other party replied in English: "I called yesterday. I am the boss of China Jinhu Metal Company. Your boss secretary asked me to call you back today."

"I see."

The tone of voice of the right man was somewhat impatient, waited seven or eight seconds before slowly saying: "I'll get his number in the notepad, you wait a moment."

This time, the wait caused Ba Sucha's heart rate to rise to 120, lest the other party impatiently hangs up the phone.

Finally, the trusted man who pretended to leaf through the notepad picked up the phone and answered in crappy English: "I found the number. I'll transfer the call to our boss's office."

"Okay." The other party's tone remained unchanged and seemed very patient.

The trusted man pressed the transfer button, and the busy tone will reappear on the phone side. The trusted man quickly got up and ran towards Ba Sucha.

"Bosses don't be nervous when you get that mice calling for a fortune on weekdays."

This is the most important task the trusted man explained. Ba Sucha naturally understood how he should act. After taking two deep breaths, he adjusted his mood and picked up the phone.

"Hello, I am Ba Sucha."

"Hello Mr. Sucha, I am Zhang Ming, the boss of China Jinhu Metal Company. Excuse me, your secretary; did you report yesterday's events?" The tone was still calm.

Ba Sucha let out a sigh and said casually: "She told me, you have precious metals that can be sold cheaply. Gold or Platinum? We don't want Silver."

“The Rhodium metal and your secretary may not have understood the word. Your business must be interested in this metal, right?”

“Yo ~ intelligence work is good. In fact, our Linpu Precision Instrument Company is discussing the plan to feed on Rhodium Metal. If you are less than ten kilograms, don’t waste my time. I’m uninterested in dealing with poor people.” Ba Sucha stepped into the role at that point, and his tone became calmer and calmer.

“Forty kilograms.”

“Haha ~ this is what we call good speaking.” Ba Sucha laughed: “The pricing right is mine. You only have the right to choose the type of transaction.”

“A formal transaction, a transaction that doesn’t ask who you are.”

“Which one do you want?”

Chapter 543: There are not enough diamonds.

“Which one do you want?”

Ba Sucha’s tone was like the President of the United States, and because of that choice, the other side fell silent for the first time, and when he calmed down he showed a cheerful smile. He had already learned the information about this group of thieves from the Shanghai police.

He did not choose to inform the Shanghai police. First, he didn’t want the Shanghai police instructing him on how to deal with this, plus he has his own way of dealing with issues. The second is it is not sure if the other party will continue to call. He will inform Ye Qing after he finishes the affair in style, and in this way, he lets Ye Qing understand that he is a reliable person who deserves his cooperation.

These bandits undoubtedly have highly educated and highly skilled talents. The more they are, the less they understand how to make these real desperados and businessmen walking in the gray zone, and in this way as long as Ba Sucha works in his own way, this group of thieves will definitely be caught in the end.

Because they are highly skilled and highly educated, they believe in their brain’s analysis the most. They will use their own way of collecting the information they want.

How many desperados can speak English fluently? Without forgetting to master the technique of bypassing the wall, and to come to the country to look for the literature concerning them, those who are brave and fearless, I’m afraid they don’t even know the name of the country’s capital.

On the Chinese website, the black Ba Sucha information existed only in a limited number of forums, and it is common to a large number of people by these netizens. And if they wanted to accurately capture this content, they had to enter its full name into the Chinese web’s local search engine website, and once the hurdles are broken, this information will be found. This group of high-tech thieves will carefully analyze the post time to determine if Ba Sucha is the right person they were looking for.

Originally, Ba Sucha often complained about his fame and notoriety, and about what happened to the hacking of the Internet. Now he considers this to be his pride. Otherwise, why did the big boss come to see him?

“Haha!” The other party’s silence lasted for about five seconds, and then the boss, whose name was Zhang Ming, was a little erratic: “What is the price of the regular transaction, and what is the second type of transaction?”

“Regular transactions are ten market percentage points lower than regular transactions. Irregular transaction, thirty points were less. Choose one.” Ba Sucha continued his hard posture.

This businessman named Zhang Ming was willing to sell 15 points lower at first, but Ba Sucha seemed to have his own work ethic, only 30 points.

“I owe a lot of foreign debt, so I want to sell it quietly, so it looks like I can only pick the second one?” Zhang Ming’s voice incarnation was a bit raised: “But thirty points is too high. The precious metals market has always been popular, I cannot accept that price.”

“There are eight types of precious metals, and their value goes up and down. The rules set by Ba Sucha cannot be changed. If you sell gold, I lower the first trade to eight pips, but what you’re selling is rhodium metal. If you don’t agree, then let’s talk about it. My time is precious. “

“May I ask, what’s the transaction method?” Of course, the other party didn’t hang up.

“Within the country, you decide the time, place, and currency you choose. The total price of foreign currency will be deducted by five points. Outside the country, you are only allowed to choose the country in which to exchange.”

“The details, you and I talking about.”

.....

As customers from surrounding provinces and cities received the latest Magic Crystal mobile phone this afternoon, there has been a wave trend to explode in online discussions of Magic Crystal phones, and Monster Heavy Industry has also opened a special cell phone section on its official website, detailing the hardware settings of the Magic Crystal cell phone.

Currently, the Magic Crystal phone is available in three colors, silver-gray, gloss black, and pearl white. Based on current sales data, most customers choose glossy black. Therefore, the next step is to adjust the production line of the phone case.

.....

In the factory office, when Ye Qing was designing a new factory to house more cell phone production lines, he received a call from Ba Sucha telling him the good news. The news of Ba Sucha delighted Ye Qing, who was not hopeful.

Over the phone, Ba Sucha had announced that he had already hit the jackpot, claiming that this group of thieves had definitely taken the hook, and had ordered a knowledgeable subordinate to communicate the specific details of the transaction with them. Shanghai police also took note and immediately sent a technical team overhead to try and track this network number.

“When you trade, you have to follow the provisions of the police. The other part is way more powerful than you think. Safety should be everyone’s priority.”

“Don’t worry, boss. None of these people can run away. If they dare to come into the country, I can deal with it without the police.”

After continuing to talk about the details of the meeting, Ye Qing hung up on the phone and felt better, because these thieves are not only the base of the worries of the whole of Jiangnan Province but also of Ye Qing’s worries.

The last time the city of Shanghai hosted a tea party for entrepreneurs, the bosses talked about this group of high-tech thieves, and all of them cringe and are scared. Whoever had valuables in the business, once targeted by this group, it is probably not worth moving their belongings to a bank vault.

Therefore, around the Spring Festival, the wolfdogs in the animal market of several companies were sold out, and the price kept rising. Is it not to prevent this group of thieves from stealing their property?

Although Ye Qing didn’t buy a wolfdog, that didn’t mean he wasn’t worried. The company’s security system was installed on two consecutive levels, and the freight transport vehicle was integrated into a CIT vehicle. In addition, there was also a scum who had already worked in the company and was part of this group of thieves. If this group is not taken in the following days, Ye Qing cannot relax.

Now that he feels happy, his creative thoughts become happier.

On the dream screen, there was a huge factory building, which slowly took shape in the drawing software. If the drawing of this factory would be placed in the panoramic view of the Longxitan factory, you would find that its scale is actually ten times the scale of the original factory. The east-west span of the power plant alone would reach 1.5 kilometers.

As the factory grew bigger and bigger, also made it more difficult for Ye Qing to do comprehensive planning, so he decided to design a big enough factory in one step and install all the phone portable production equipment in it. At that time, this factory is a production base for one product, and the original small factory will be fully modified to produce phone parts for the Magic Crystal, and the mobile phone assembly work can be started on more fully mobile assembly platforms.

.....

However, the diamonds used to cover the screen will not be available, and an additional purchase share will need to be added. After devising the plans, Ye Qing appealed to General Mopu in Nigeria, asking him what is the current production of high-quality diamonds in the mine?

“On average, 70 grams per day,” General Mopu is also Ye Qing’s former partner. When asked about the quantity, General Mopu said reluctantly: “In the two plots just seized, there is a small borehole, but the purity is very poor, not up to the requirements you want.”

Seventy grams, Ye Qing originally only needed broken diamonds.

Chapter 544: Test from Apple headquarters.

The Magic Cristal phone is coated with a layer of diamond film on both the front and back sides of its screen by the vapor deposition method, and it needed a diamond weight of 500 micrograms to do this action, and since General Mopu’s mine was producing 70 grams per day, with this way it could handle the coating of 140,000 cell phone screens per day.

Before the mobile phone hit the market, Ye Qing estimated that the number of 140,000 was enough for the initial consumption, but unexpectedly after the mobile phone went life, the praise was much stronger than expected, for this reason, cell phone production should be expanded as soon as possible, and the purchase of diamonds should also be expanded accordingly.

Getting the diamond at the source is much more affordable than buying it from China, and the quality is guaranteed.

"What about other mines?" Ye Qing asked, "Nigeria is one of the diamond-producing countries. You can buy rough diamonds and supply them to me at the standard of 500 grams per day."

"Mr. Ye, 500 grams. I think there should be a problem." General Mopu did not immediately accept this good thing which can bring him a lot of money: "You have to go through regular channels and have a 4C certificate to have diamonds. Seventy grams is good. Five hundred grams is hard to compensate for. Because we in Nigeria have several high-yielding diamond veins, which are on the blacklist of these European countries. Even if we come together, in the long run, these Europeans, who have issued certificates, will suck all our blood."

"Do you want to?... Let's try other negotiating methods," General Mopu's tone was full of temptation: "We go through irregular channels and do not issue certificates, so the price of diamonds can be half the price, and the quality diamonds are easier to guarantee."

"..."

Ye Qing was sweating in his heart because Ba Sucha had just used this movement, and it took him less than an hour to relate, and unexpectedly, he also encountered this kind of coincidence. In all fairness, Ye Qing did not want the large sum of US dollars to be stolen by a group of Europeans who would issue a certificate at will without any effort. Anyway, who allowed these people to control the global diamond trade market?

Without a certificate, diamonds cannot be transported by regular sea or air.

When General Mopu said his proposal, Ye Qing quickly calculated it in his heart. For the previous 70 grams of diamond imports, they cost him an additional \$15,000 per day for the certificate. At 500 grams, nearly a hundred thousand dollars a day, to throw at the enemy vampire group, but thinking of the growing demand for diamonds and the rising certificate fees in the future, Ye Qing felt bad comfortable with this approach and was very excited.

"How do you trade if you don't follow formal channels?"

Diamonds are not like bulk metals, easily obtained from supply channels. No one understands the technology of this raw material which is only used in the coating of dream screens. But he did not have a sure way to come from Africa through irregular channels.

This question was asked by General Mopu inexplicably. Because in his eyes, Ye Qing is a big boss with long hands and thinking eyes. The last time for this rare large diamond, the big boss sent straight in a high-tech armored vehicle he had never seen before.

"Can armored vehicles be sent in secret, let alone a pound of diamonds a day?"

"Your previous armored car ..." General Mopu inquired a little.

"So that's it. You will start buying diamonds right away. The purity is guaranteed, and the more weight the better. I will let you know the delivery method in a week." Ye Qing mentioned to General Mopu.

Then Ye Qing remembered he still had the Lord Battleship which is still available. This type of device was born simply for illegal transport. The last time he went to Nigeria, and Ye Qing spent most of his time sailing the sea, and in order to get him as far as possible, the monsters were in charge of watching if there were any ships and foreign battleships on the road. If he wasn't in a hurry, he could have kept him stealthy under the sea.

Whether it's an airplane or a large ship, they have automatic cruise control. The Lord Battleship also has this function and is the most advanced. As long as its route was defined in advance, it could automatically navigate to a predetermined depth, and automatically bypass any obstacle when it encountered one.

Even if it accidentally hit a nuclear submarine on the vast ocean floor, its programming could immediately bring it back to Monster Factory space.

"By the way, my ship is also free. Do you have any gear you want to buy, I'll take it."

In accordance with the principle of making a fortune, Ye Qing immediately stepped into the role of illegal transport.

"If they don't go through customs, like last time for the tank, and there is no need to use regular methods. I'll give you a 10% discount on the price."

"God praise you." General Mopu was suddenly very happy and immediately felt stunned. He was very happy to see the diamonds exchanged for advanced equipment. Is there a better deal in the world?

.....

"God, this is impossible!"

Almost at the same time, in the distant United States, at Apple's headquarters in Cupertino state, on the third floor of the basement, where security is tight and ordinary employees have no chance to enter. The research center throughout their life, a certain person called God. That person is Mr. Madison, the president of Apple in China.

Throughout the day and night, he and the technicians lived and ate in this enclosed space and were responsible for this dismantling operation. On this day and night, the world's top experts in mobile phone technology, only the Magic Crystal phone was in their eyes. The shock they received from this Magic Cristal phone lasted all day and night.

Very few cell phones are eligible to enter this research center and enjoy the benefits of step-by-step dismantling. The last time that got this treatment was the flagship Samsung launched last year.

No one knew the product if they didn't take it apart, they only knew about the virtual card after taking it apart.

At that time, it only took a few hours for the Samsung phone to be taken apart step by step. But... With the Magic Crystal phone in front of them, dozens of engineers worked hard for one day and one night, but they didn't completely take it apart. The reason is simple, the manufacturing technology of the Magic Crystal mobile phone was beyond the limits of their understanding. Then they couldn't take it anymore. They hadn't figured out how to handle this phone, so they had countless explosions and gave up.

Any cell phone can be quickly disassembled from the outside so that it is easy to disassemble and repair. The same goes for the Magic Crystal cell phone. Two precision screws are attached to the lower speaker and both sides of the charging port. After removing the two screws. The engineer can use the precision suction cup tool to remove the screen.

The shock came when they did the first step of disassembling the screen after removing the screen. This external screen integrated, touch screen, display screen, fingerprint recognition screen assembly. It turned out to be only 0.8 millimeters thick!

"God, this is impossible."

The screen thickness of the Apple 7 was already compressed to the limit, to two millimeters. Those two millimeters they were originally proud of having become the most ridiculous comparison. Then the shock reappeared when they wanted to dismantle the black tech screen that had come out at that time.

They searched the research center but found no tool that could take it apart without damaging the screen. They were stuck on this screen for a full six hours. Finally, the engineers used the electron microscope to use the most primitive method of taking a thin hot slide and gently disassembling it by hand. It took three hours to break it down. In the remaining three hours, a group of engineers performed a comprehensive test of the principle of electronic work on the structure of the four-layer screen which was broken down.

The latest test data caused Madison to withhold the report for ten minutes and could not say one word: "God, this is impossible!"

Chapter 545: We need to get warm in groups.

At the Apple Research Center laboratory, Madison had already had a glimpse of the fantastic performance of the Magic Crystal mobile phone when the scan report came out, and he realized that the cell phone in front of him represented the technological height of Monster Heavy Industry. A height they cannot imagine. Even if they cut the technical standard in half, the price of 6,388 Yuan will make it unprofitable.

Using the most popular resolution for comparison purposes, the Apple 7 display is 1,920 x 1,080. So what is the screen resolution of the Magic Crystal mobile phone?

It is only 768 x 4,320.

At present, the display of the popular mobile phone can be regarded as 2K resolution by Apple, when the 4K resolution mobile phone display is still scarce, the Magic Crystal mobile phone is directly upgraded to 8k.

Not only the sharpness but the Magic Crystal mobile phone screen is ahead of Apple 7 screen technology, in contrast, color saturation, refresh rate, and other data.

"Impossible, it is not in accordance with scientific principles," Madison was silent for a long time, and the first sentence he spoke was endless questioning: "Doesn't the screen have higher definition and higher brightness, and therefore more power consumption? 'energy. Why does the test result show that this screen still saves 20% more energy than our Apple 7?"

"Due to the different lighting principle," an engineer who played a pivotal role in the screen business, to confuse Madison said: "Our cell phone screen uses liquid crystal display solution. Magic Cristal mobile phone uses the organic optical material solution to three layers," the engineer drew an analogy with a painful expression and showed the president, that he could understand the technical gap more intuitively: "Boss, that seems unreasonable, but there are a lot of such examples in our lives. If our screen is at the top technical level of tungsten bulbs. Then the screen of the magic crystal cell phone is composed of fluorescent lamps more energy efficient, at the level of Led lighting technology. The latter is brighter and also more economical in terms of energy, the light source is also closer to natural light. "

This explanation was easy to understand, and Madison understood it instantly, and it showed him that they are two generations behind the Magic Crystal phone in screen making. He still had one question in mind and couldn't find an explanation for it in the test report.

If we say that the resolution, saturation, and power-saving technology of this screen can be scientifically proven. The final image cannot be proven by any scientific method, because it breaks the two-dimensional plane, misleads the eyes, and falsely makes people believe the three-dimensional image is true, and no one can resist the temptation of this display. At this point, the engineers are also lost.

Over time, except for the display. More and more black technology was exposed to these engineers while analyzing the Magic Cristal mobile phone. Top sealing technology for mobile telephony. Not to mention their seven-level fingerprint recognition technology, Cermet resonance earphone module technology.

If they insisted on finding a place where there is no black tech in the hardware of this phone, I'm afraid they could only choose one, on the camera and its processor, because Monster Heavy Industry used the 1300 megapixel camera from Sony.

The front camera is hidden under the screen. Techs haven't figured out yet, when the front camera is on and a small spot on the screen above the camera is covered, how does it automatically turn into clear glass? The rear cameras are hidden in the eyes of the monster, the monster logo. The dual camera design, like the front camera, is 1300 megapixels.

Different from the wide-angle and telephoto dual-camera design of the Apple 7 plus, the Magic Cristal's dual camera is ingenious, using two 1300 megapixel cameras to form a 3D viewfinder layout.

At first, Madison did not understand the purpose of this design, but when the engineer gently recalled that this method of the 3D viewfinder.

At first, Madison didn't understand the intent of this design, but when the engineer gently reminded him that this 3D viewfinder method was to take pictures after removing the anti-sky effect on this

monitor. Madison realized in an instant that not only was their Apple 7 going to be miserable, but Meitu phones were going to spread as well.

.....

Meitu mobile phone, sought after by countless Chinese girls, is also an American brand...

.....

System testing followed. The Magic Crystal mobile phone is the same price as the Apple mobile phone. If the hardware is to be forgotten, at least in the software, Madison believed that enough disadvantages can be found.

Magic Crystal mobile phone operating system is a new system developed by Monster Heavy Industry on the basis of Linux architecture. At the same time, in order to be compatible with Android programs, Monster Heavy Industry has also purchased a commercial license for Android 6.0 from Google. So the user could run Android programs, but the phone system is not Android. It sounds a bit of a paradox, but the Magic Crystal phone did it perfectly, and the operating-system test results shattered Madison's last hope.

Monster Heavy Industry used Qualcomm's new Snapdragon 821 processor. From the comparison of performance parameters, this processor is slightly worse than the A10 processor on Apple 7. However, with its operating system, the Magic Crystal mobile phone is at least 15% ahead of the Apple mobile phone. 'Apple in terms of the operation of applications.

Indeed, Magic Crystal phones are compatible with running Android programs, and expect them to become popular on a large scale.

Monster Heavy Industry has opened packages to major app companies and deployed apps so that they can open exclusive apps, and this lead could be further expanded.

There was also his storage space. The maximum size of the Apple 7 series is 256 GB, but it will cost an additional 1,600 Yuan. But the Magic Cristal cell phone is like a special case against them, and it made 288GB of storage space, without a dime more, and comes standard.

"There is not a single company that will release all the advanced technologies at once."

"There is no doubt that Monster Heavy Industry has the capacity to manufacture processors for cellphones. It also has the capacity to manufacture cameras and batteries."

One engineer said pessimistically: "Maybe we'll wait until Magic Crystal 2 or Magic Crystal S is listed and so will the end of Nokia."

Madison was speechless for a long time and finally left with a bunch of reports heading for Tim's office.

Two hours later, Apple boss Tim, with a serious face, dialed a number using the bulky landline in his office, which was clearly inconsistent with the technological style of the office.

"This is the office of the Presidential Secretary. Hello, Mr. Tim. May I ask what the problem is?"

“Please make an appointment for me. I need to meet Mr. President.” After hanging up, Chief Tim called Qualcomm in turn, Meitu, Google, etc., presidents of companies related to the mobile phone business.

The presidents of these high-tech companies have been inexplicably pessimistic about Tim.

And Tim, repeating just one sentence: "if we don't unite, and we just wait, it's gonna be as miserable as falling from heaven to hell."

.....

Chapter 546: The first flagship store opened.

The early spring morning sun hung lazily in the sky, and the seagulls that illuminated the blue sea awoke the green buds of the newly planted trees in the Longxitan plant.

West of the Longxitan factory, where there was a large, flattened wasteland, four Mechanical Colossus Type X buckets dug with incredible force, deep and vertical ravines on the hard, desert beaches.

The concrete road network has already been built extending in all directions. Heavy trucks slowly made the silver-white alloy I-beam as thick as a slide from inside the factory, several Mechanical Colossus Type I was unloaded on the side of the road. They were originally quite big compared to the Mechanical Colossus Type X on the job site, and they have the same huge physical difference as a cheetah and an elephant.

It was the construction site of the new cell phone production base, with construction technology from Monster Heavy Industry. Regardless of the price, a week later, a huge factory building with the highest ceiling in all of Jiangnan Province and which can be classified as one of the top three factory buildings, will rise from the ground and enter into the process of installing production equipment.

Machines roared on the deserted beach and the earth flew. The Longxitan Bay next door was beautiful and received the rippling blue waves, but soon a 50,000-ton class bulk carrier will shatter the tranquility of the bay, emerge from the bottom of the bay full of hills and reefs, and approach the seaport where the plant recently completed.

In the reef, there was a channel opened by the battleship the Lord's Chariot. In the port, two multifunctional harbor cranes with a height of over 100 meters stood at the seashore. Once the cargo ship is brought into the port by the tug, the crane's clamshell will immediately extend from the cargo warehouse and grab all of the metal ore. The conveyor belt has been connected to the metal smelter in the iron ore area, and the huge ore crusher is used to crush the ore into fine powder.

Everything is in order if you stand on top of a barren hill overlooking the whole factory. You will see that on the coast there were continuous ups and downs showing the advanced work progress of the industrial factory, which was teeming with the vitality of steel. Materials are continually swallowed, refined, polished, and turned into pieces of products in a technologically civilized society.

The size of the Longxitan plant is far more than what the soil shows.

In the invisible basement, an incalculable number of pieces of equipment processing equipment constantly circulated around the metal smelting center, and various metal products are being slaughtered. The various metal ingots melted in the mining area are sent mechanically to the furnace of

the melting center on a pro-rata basis. These metals are mixed into alloys, which are then forged into silver-white alloy plates. After several operations of quenching and plating, the alloy sheet is finally sent to the nearby stamping equipment, where it breaks into various metal shells.

Now, the metal melting center melts nickel-titanium memory alloys, and these alloys would eventually turn into the outer shell of the Magic Cristal mobile phone. For cell phone cases, stamping is only the first step. An assembly line dedicated to multi-faceted angle cutting and a metal electroplating bath needs to be dealt with more precisely, as Ye Qing put more productivity into the mobile phone for the first time.

Today, the daily productivity of Magic Crystal mobile phones has reached 200,000 units per day. After half a month, a brand-new integrated cell phone factory will be completed, with a daily production capacity of one million units per day. Today is the third day that the Magic Crystal mobile phone is on the market and online sales have just exceeded 500,000 units.

Today is also a day to remember. Early in the morning, after Ye Qing got up, he put on a very formal suit, because today is the day that the world's first Monster Heavy Industry flagship store officially opened.

It is ludicrous to say that the Monster Heavy Industry show has increasingly diverse products that many agents and distributors and online stores promote the company's products. But until today, Monster Heavy Industry did not have a flagship store for the brand that could concentrate all of its products. In fact, the plan to create a flagship store has already existed, and the first floor of the unfinished Monster Industrial Building is reserved for the flagship store.

Originally, the flagship store was slated to open with the completion of the building, but with the launch of the new mobile phone, more and more consumers learned about Monster Heavy Industry's mobile phone products, and where it is located in Physical stores. They want to see and experience the Magic Cristal phone with their own eyes.

After all, regardless of the quality and quantity of the online download, many ordinary consumers do not have the determination to spend 6,388 Yuan to buy an expensive cell phone after watching a few videos and flipping through a few messages.

The Magic Crystal phone does not have the reputation that Apple has had for many years. What if most of the content on the Internet was a navy hired by money?

Even for Apple mobile phones, offline physical store sales are more than online sales.

So Ye Qing decided to open the flagship store earlier than expected to give customers the opportunity to get in touch with the physical Magic Crystal phone, and the location of the flagship store was set in the unfinished Monster Industrial Building.

The boutique was designed by the Chronicle Studio, and the interior design of the building was carried out up to the 50th floor. There are about fifty floors from the first floor, except for the exterior wall decoration, and the interior has already been completely renovated.

Of course, the decoration of the flagship store was done a long time ago, and you just have to put the product and design the customer channel so that it opens normally.

The Monster Industrial Building faced south from the north, and the main entrance opens to the south, looking out over the factory and the sea in the distance. On the north side of the street, there was a pedestrian green rest area separated by a building wall and not yet completed, and the entrance to the flagship store on the first floor.

To make the flagship store look more like this, Ye Qing had deliberately asked the construction team to assemble a huge lone passageway at the entrance to the flagship store using heavy plates of silver and white alloy. In this way, when customers entered the flagship store, not only could they not see the suspended tower under construction above the building and the green protective net, but they also avoided the fear of seeing things that were fundamentally impossible to retrieve fall.

The metal alloy canal stretched to the side of the street, and it looked a bit odd, but the building can be completed in two months. Ye Qing wanted to rent a few stores outside to open a flagship store, but was concerned that it would be relocated after a few days of official opening after the decoration was completed.

.....

At Wuting Road on the north side of the Monster Industrial Building in downtown Shanghai, early in the morning, this place was full of young people waiting, because Monster Heavy Industry today announced the official opening of its flagship store, on its official website and official WeChat account. There were also media in the crowd carrying cameras and microphones and interviewing on the street.

“Excuse me, little brother, where are you from?” A little reporter raised the microphone and asked a person in the crowd, “Did you also come to get your phone?”

“I am from Qingdao, and I came by car at 5 am.”

“Of course I came here to get my cell phone.” the tall, thin young man said happily, “It’s just that this flagship store looks weird. It’s like getting on a ship. It’s a long way to go.”

“Excuse me, have you come to get your hands on the Magic Cristal phone?” The reporter interviewed another young girl.

“I am so excited to have been interviewed by a reporter. I was going to buy an Apple cell phone, but when I looked on the internet I found the Magic Crystal cell phone to be very good. I intend to compare the two phones. After all, the Magic Crystal cell phone is made by us. “

While waiting for the third to interview, the little reporter went to find someone to continue her interview.

At that time, the two security guards at the entrance to the passage learned through their headphones that President Ye Qing had arrived inside. They smiled at everyone and took off the isolation belt. There was no basket of flowers, and no ribbon cut, not like the opening of a movie theater. The world’s first Monster Heavy Industry flagship store opened very quietly.

Hundreds of young customers gathered on the sidewalk froze for a moment, then marveled, clapping and shouting with joy hurried into the passage.

Chapter 547: Rhinoceros Eyes.

Along the white channel, many dream posters on both sides, constantly showing product introductions. Of course, customers don't want to appreciate these very technological things, they go straight to the flagship store.

"Is it a robot standing at the entrance to the welcoming door?"

Hundreds of young consumers suddenly noticed the robot at the door welcoming guests, however, it has been a long time since Monster Heavy Industry exhibited the robot, videos of which many people have watched. Even though it was the first time they had met him, the novelty came back, and there weren't many surprises. Then they found the flagship store which was divided into two sections, with the industry booth on the left and the life technology booth on the right, and suddenly everyone rushed into the area of the technology of life.

Here white is the main tone and black is the accent.

The floor was white, the lighting was white, with black decorative lines, in addition to the company's related products, there were also many conceptual technology products for display in the life science and technology area. The thing that made people suspicious of life, was the robot that never lost the cloth chisel hammer, and equipped with a VR experience machine with a full-motion gaming platform.

Right now, hundreds of consumers seemed to have entered an unfamiliar, psychedelic technological space. The space used to display the Magic Cristal cell phone was overcrowded. Three cell phones of different colors were placed in the booth, and users could pick up and experience them at will.

Reporters and cameramen also walked around the area, filming news articles in the flagship store.

"Wait ~" A sharp-eyed reporter suddenly noticed the news, there was a couple there, who seemed to be uncomfortable with the cell phone.

"I said I wanted to buy an Apple cell phone, and you bring me here to see the machines produced in the country."

A couple of young people, a man, and a woman, who looked like a couple, stood in front of the cell phone booth, both are in their early twenties. The girl pointed to the Magic Crystal phone on the platform with her nails studded with rhinestones, and her expression was full of dissatisfaction: "What kind of phone looks better than the other, what effect does it have when you take it out to use it? You just have to buy me an Apple phone. You even know my aunt is sweeping the floor."

"But their prices are the same. You can look at the same 5.5-inch screen. This kind of phone, the Magic Cristal can be held in one hand. You don't need a bezel to see the difference, this phone. is the first in the world, can't you see how it smacks of technology?" The guy continued explaining gently: "Honey, you haven't watched the video online, that kind of cell phone has too many functions." After talking, the guy was going to show his girlfriend the phone sample from the storefront.

"I don't want it, and I want an Apple." The girl willingly pushed her boyfriend's arm away, with a cold expression.

The man was flattering and wanted to give her the phone. When the arm was touched in this way, the Magic Crystal phone naturally arched in the air, and then, in the horrified eyes of many people, "Kang Dang ~" hit the cold white ground and bounced back. The noisy crowd around them suddenly choked,

stopped the discussion, and looked this way with doubts whether the girl was sick or not. The journalist turning to the side showed a smile that could only be achieved by filming the best moment.

The puzzled eyes of many also understood the current situation. If she didn't want to buy it, she wouldn't buy it. But she threw the phone away suddenly and it flew a few yards away. She had to buy it now even if she didn't want to buy it, and she still had to buy a broken phone.

.....

The better the phone is, the more it cannot stand the fall.

.....

Since everyone thought they would take a look at the Magic Cristal phone first before buying it, they saw the treated metal body that fell off earlier, and it was without a protective cage, and they were all sure the screen cracked into snowflakes.

Sure enough, the boy didn't care to berate his girlfriend and hurried away from the crowd to pick up the Magic Crystal phone from the floor, but when he picked up this phone with a white metal body and the consumers next to it from him watched with excitement, a scene appeared that surprised everyone. The screen of this white phone is undamaged. He didn't even have a scratch.

The boy, incredulous, pointed the screen diagonally at the projector.

"Shit ~ this is kinda unbelievable."

"Don't you trust me, boy?"

Some consumers shouted it was impossible. How could the screen have been intact after falling to the ground from so high and so far?

The phone's screen is the most important, and it's intact, and the hapless man has carefully checked the phone's screen. In this search, a small pit was found in the vicinity.

"I buy it, and I bought it and it's over."

"A small hole is it possible that it can be done by a cell phone screen."

"The screen is unbroken, you should be grateful and break up with it by the way."

"Don't do that, I'm going to buy a cell phone. Yes."

A group of spectators patted her on the shoulder sympathetically and persuaded her not to break up with her, besides the cameraman on the side also faithfully recorded the scene.

As a result, the eyes of a group of people staring at this Magic Crystal phone grew bigger and bigger as if they were swollen. Because this soybean flower-sized metal pothole bounced back over time and slowly grew larger. Eventually, the two reconciled in the blink of an eye and there was no trace of grief left.

This scene stunned everyone and completely changed the perception of all cell phones. These people were eager to find out what kind of magical technology it is to keep cell phone cases intact.

But before calling the buying guide, there was a throbbing scream nearby, and everyone was taken aback. This girl's cry was louder than the sound of a dolphin. Even the cameraman was shocked, and many people couldn't help but cover their ears. The crowd and the cameraman rushed again to the source of the cry.

It was at the VR experience area. On the VR experience device equipped with a moving gaming platform, a girl clung to her boyfriend, her body shaking like straw.

"I, I'm going to fall..." The girl going through the experience had teeth chattering like a pickax, ignoring her condition, entangled her boyfriend like an octopus, and refusing to relax.

"Shit" ~

"It scared me, and neurotic, can virtual reality be more exciting than bungee jumping?"

The crowd looked with pity on the poor guy who was strangled and breathless. Boys are not as good as girls. See what they're looking for, a girlfriend who could also be single with them.

"AAAAh!" There were another piercing howl and another female voice.

Different from the horror of earlier, this cry contains too much surprise and joy, which makes one suspect that this girl has just won the first prize of the two-tone ball. What happened to him again? Couldn't he be a ghost she had seen today?

The crowd followed the sound again and ran, this time because of an automatic photo printer.

.....

Automatic photo printers can be found in restaurants in many cities. They are used to print photos for free to attract customers. Here in the flagship store, they are similar, but only photos taken with the Magic Crystal Phone are accepted for printing.

.....

They saw an ordinary-looking, dark-skinned girl, holding the Magic Crystal phone in one hand and the photo that had just been printed in the other. She was a little too exaggerated in her arousal, her lips pursing as if she was going crying in excitement the next moment.

Obviously, the problem was with the photo that was just printed. The crowd couldn't see the photo, but on the automatic photo printer's screen, there was still a magnified image of the newly printed photo, and incredible screams rang out, suspicious and cursed eyes constantly scanning the girl scanning back and forth with the automatic printer.

Oh, how fascinating the photo is? Obviously, it is a beautiful rubbing with an infinite three-dimensional effect, and the color and halo are matched to the most perfect state.

It was as if the best part of this girl had been accidentally captured. It was as if the lights and colors were unwittingly adjusted at the most appropriate time. Obviously, this girl was very ordinary, but in the preview of the photo, this girl made people feel very amazing.

It wasn't beautification; there was no beautification software that could have that kind of three-dimensional sense, only the halo and color adjustment.

Looking at the Magic Cristal phone in the girl's hand and looking at the automatic photo printer, the photocopier instructions only support Magic Cristal phones.

People were a little out of breath and realized that behind the Magic Cristal phone, in the monster's eyes two cameras were hidden, which was a little different.

After the halo phone nickname, Magic Cristal will soon have a few other nicknames.

"The shell-free material."

"Monster lash,"

Chapter 548: New prompt message.

Stuck in the crowd, Ye Qing tried to change a consumer's perspective and think seriously about the flagship store's shortcomings. It is the first flagship store of Monster Heavy Industry. In the days to come, it will be the perfect channel for consumers to get closer to Monster Heavy Industry, and it should be perfect and leave a good impression on consumers. Some journalists recognized him, but he had not agreed to do an interview.

At noon, security guards at the door of the flagship store stopped allowing ordinary tourists to enter the flagship store and only let in those with invitations; among them a representative of a phone dealer from across the country entered the flagship store with an invitation letter.

With the increasing scale of Monster Heavy Industry, relying solely on online sales can no longer meet the growing needs of consumers. Especially for mobile phones, offline sales and cooperative sales with major mobile operators will be the mainstream.

So today, Monster Heavy Industry invited these representatives to visit the flagship store to discuss the Magic Crystal mobile phone agency. This is also the reason why Ye Qing wore official clothes, which is rarely done by him because he did not like such kinds of activities. So he rarely spoke during the whole process, and the sales department was responsible for the introduction.

At the end of the event, Ye Qing immediately returned to his favorite hobby, he ran to the company office to quietly hide. He had looked at various performance reports, especially the little changes to the Monster Industrial Building on the other side, and that made him really happy. The more the days went by, the more the work in the building progressed, the greater the feeling of pride.

To date, nearly 700,000 Magic Crystal phones have been sold, which made him even happier.

In addition to ionization purifiers and mechanical engineering chairs, the market is full of high-tech cell phones, and every time a Magic Crystal phone is made, the manufacturing points at the Monster Heavy Industry factory will increase by two, in addition to the points earned by Ionization Purifiers and Mechanical Engineering Chairs.

The production cost of a mobile phone is 1,500 Yuan, including the free VR glasses and any remaining additional costs, which is about 2,000 Yuan. The total sales volume is 4.4 billion and the profit before tax is 3 billion.

In recent days, cell phones have increased the manufacturing industry index by 600,000 points. In addition to other products, they increased by one-tenth to over 11 million points.

At present, the Monster Heavy Industry is ranked 41st in the national ranking.

.....

There is a gap of 20 million manufacturing points between the Beishan Light Industry Group and the Tenth. This former industry group, the Beishan Light Industry Group, dates back to the founding of the People's Republic of China, but this gap is just like the gap between Alto and Audi. While Alto cannot catch up with Audi's technology, it is also a car and can solicit customers.

.....

It won't take long for Monster Heavy Industry to sell an additional 20 million cellphones and move to the sixth stage of the Monster Factory, and Ye Qing reviewed it based on the previous level of technological improvement. The sixth stage of black technology will certainly be in this era.

In the fifth stage, the dream display and black technological designs were purchased with gold coins. Although there are no similar products on the market, there are already stocks of similar technologies in the best research labs, but they lack ideas for solving the basic problems and cannot be commercialized. Of course, the technological reserves are much worse than those of black technological designs.

Regarding the sixth step, Ye Qing felt that it was about the technological gap between Alto and Audi.

.....

Big tech companies haven't lost their hopes.

At the thought, Ye Qing was full of energy. This kind of ambition, which has lasted for several years to catch up with these big companies has driven high-tech companies overseas for hundreds of years on the ground, is quite simply the biggest ambition and the greatest pleasure of the people, the people who run businesses and factories in their lives.

.....

The more high-tech things, the more they need the support of the whole industrial system.

The fifth stage of black technology, except the dream display, there are also large-scale motivational drawings, high purity metal melting engineering drawings, large-scale three-dimensional machine tool fabrication drawings, and electromagnetic shielding material engineering drawings.

These blueprints are all of the ultimate tech products that Stage 5 monsters can create.

Holding the system cell phone, Ye Qing looked with pleasure at the data in the exhibition, as well as several other black technology drawings of the fifth stage. He thought the Magic Crystal phone had the fastest money-making ability, so he saw it as the center of gravity of the level and thought about developing it fully.

“Dididi ~”

Just as Ye Qing was reading the information, a red reminder icon similar to a text message appeared on the phone system.

[You have new information.]

“.....”

“What is that?”

Ye Qing was directly shocked by the monster cell phone, as this type of phone was unconnected to the Internet and could never receive information.

With tension and excitement, Ye Qing clicked on the unread message.

United States sanctions.

Congratulations, thanks to your tireless efforts, Monster Heavy Factory is finally strong enough to attract national hostility.

Right now the United States has imposed sanctions on you.

Now, if you sell your products in the United States, you can earn double the additional crafting points. The reward lasts until the sanctions are lifted. Please take the opportunity and don't miss it.

“...”

Not what Ye Qing imagined, it was not a message from an unknown existence?

But the content of this message was curious enough.

At the same time, Ye Qing was a little curious, what is this sanction imposed by the United States?

The Magic Cristal mobile phone uses the American Qualcomm processor, but if this processor is sanctioned. Qualcomm demands to pay damages which are going to be painful.

“Nothing serious there are other chips on the market to choose from.”

Thinking about this, Ye Qing immediately called the company's legal department and asked if he had received any notification from the US official and the legal department replied no, but after about half an hour the fax was come.

At the same time, the Chinese State Administration for Industry and Commerce also called.

At 8 a.m. local time in the United States, the Department of Commerce announced three pieces of information. All three pieces of information, without exception, are all related to Monster Heavy Industry.

The ionization purifier, after a long evaluation of the medical device, reached the final conclusion yesterday. The product was unable to pass the exam by US medical institutions, and Monster Heavy Industry must make technical corrections to several report requirements before they can open the qualification for the second exam.

Monster Heavy Industry Mechanical Engineering Chair can damage human bones under certain operating conditions. The chair of mechanical engineering is now included in the category of medical products and equipment and will be reviewed again in accordance with standards relating to medical devices.

The Magic Crystal mobile phone is suspected of infringing two types of patented technologies submitted by Apple for registration in 2008. Apple's legal department will officially file a complaint against the Magic Crystal mobile phone.

"Anarchy, just anarchy."

Angry Ye Qing Directly Tore US Department of Commerce and Apple Faxed Documents to Shreds.

Chapter 549: Monster Heavy Industry is silent.

"Was mobile-phone technology registered in 2008?"

"I want to ask where is the recording of the 2008 phone?"

At the office, Ye Qing banged on the table, exhaling searing anger.

The American market is directly condemned to death for ionization purifiers. If changed according to the conditions of their report, Ionization Purifiers will also purify harmful substances from ghosts and become like a useless toys to use. The Mechanical Engineering Chair will be directly withdrawn from the market and will be not allowed to be re-registered until it has passed the medical device product review. If this exam passes, Ye Qing believes he can be the President of the United States.

Not to mention the Magic Crystal mobile phone. Apple has directly filed a complaint with Monster Heavy Industry in the intellectual property court, asking Monster Heavy Industry to cancel the ceramic metal vibration earphone technology of the Magic Crystal mobile phone because of a patent for the waterproof speaker technology, and even asked to compensate huge sums for a technical infringement. What a fairy fart, extraordinary. In the complaint letter, Apple even asked Monster Heavy Industry to compensate the US \$520 million in infringement.

When the news came out the next day, all internet users and the media were in turmoil. They were absolutely sure it was simply naked vandal hegemony. Ionization purifiers and mechanical engineering chairs have never reported accidents in China. Why Americans can have such accidents. Are their bones a little softer than the Chinese and their physiological structures are different?

As for the Magic Crystal mobile phone, ordinary people thought it was not good to use it in the United States. Seeing that the Magic Crystal mobile phone has the ability to threaten Apple's status, they immediately thought of a way to remove it.

.....

In the eyes of some professionals and technicians, patented technology is quite simply a nightmare, and even severely limits the development of science and technology.

.....

In fact, when foreign countries see that momentum is not good for them, they just say it's patented, which is the shortest way to cut the neck off. To say that there is patent infringement leads directly to the prohibition of the product and the payment of compensation.

Later, the Chinese State Administration for Industry and Commerce launched a trade investigation into the world's best engineering chair produced by Herman Miller and an American electronic beautiful instrument and declared that before the end investigation, these two products are temporarily not allowed to be sold in China.

This can be taken as an answer. For the Magic Cristal cell phone, the General Factory Administration was somewhat powerless. Last year, because of Huawei's products, which met a hegemonic ban in the US market, all cards in hand have been played for Huawei. For a while, there was no card to counterattack her.

It is unrealistic to ban Apple phones because the United States directly banned Magic Crystal phones from entering the market, because Apple's mobile phone is firmly established in China, there are very, very many people who worked around Apple, and there is no way to make such a measure.

Faced with this series of news of action at the national level, Internet users felt a little perplexed. Wasn't the young Monster Heavy Industry President invited by the President of the United States to visit his country specifically, and when he returned it only looked like he had just gotten into a fight with the president?

"Boss, like this kind of patent lawsuit, it is okay to fight for three or five years. If you want to delay, you can prepare a truck full of patent certification documents.

"I specifically instructed the US Patent Company to inquire about these patents, and indeed Apple in the year 2008 had registered these two technologies and had patented them. But that's completely different from our products. The layman knows. Their technology and they are far behind us."

"It is purely that Apple in conjunction with the US Department of Commerce has sanctioned our products and this lawsuit is malicious framing. With the exception of the US market, which is under suspension, this market has no effect on sales of the Magic Crystal mobile phone in other countries."

At today's morning meeting, two patent attorneys from the legal department also attended the meeting.

After finally calming down from the \$520 million infringement compensation lawsuit, Ye Qing said for now: "You will handle the lawsuit with the legal department, and I will accompany you if you wish. Anyway, your main goal is to get sales authorization for our Magic Crystal mobile phone in the US market. Even if the case is won, they can find countless reasons and will continue to block the sale of this phone in the US."

After the meeting, Ye Qing returned to the factory in a very bad mood.

It seems these aliens are too alert, and Monster Heavy Industry has just started rubbing them. They united and launched various restrictions on Monster Heavy Industry. Fortunately, the Chinese market is already strong enough to support Monster Factory's ascent to Stage Six.

Back at the factory, Ye Qing sat alone on top of the barren mountain above the underground base, blowing the cool sea breeze, watching the beautiful Longxitan Beach with blue waves crashing on the reef, silently considering what the counterattack will be. Then decided not to think about it, for now, deciding that this kind of method should not be done by oneself, so that others don't know who did it, so they should fight back with an open mind and let them know what fear is.

“Boss ~ Boss.”

Before Ye Qing had a thought in his mind, a Master Craftsman with a somewhat wobbly figure had climbed the barren mountain with his hands and feet, greeting Ye Qing.

“What is the problem?”

“The armored car and two pieces of equipment used to tear down the concrete walls that were ordered by General Mopu have been completed.”

“Hear, I'll be leading The Lord's Battleship into the Inner Harbor.” Ye Qing waved his hand to the Master Craftsman and pulled out the Monster Factory cell phone.

The inner harbor is a secret inner jetty that is in absenteeism, connecting the arid hills and the sea, specially designed to the size of the lord's battleship. After all, the appearance of the Lord's Battleship and is too sci-fi, because there are countless heavy trucks coming in and out of the factory every day and there are also huge ships on the sea, the Lord's Battleship can no longer swing and appear over the sea as before. Its pier is inside the arid mountain, slightly above sea level.

After Ye Qing had controlled the Lord's Battleship to park it, he continued to gaze at the sea and meditates. While thinking, a huge ship full of minerals, sounding a long whistle, slowly made its way to Longxitan Beach. At that time, the Lord's Battleship was also loaded with supplies and could travel to Nigeria, thousands of miles away.

Looking at this huge ship, Ye Qing bowed his head again. Then suddenly he stood up and patted his thigh. He didn't think of how to counterattack but came up with an idea that could get the Lord's Battleship to stand and gallop freely across the sea.

Thinking about this, Ye Qing immediately turned back to the office, opened the drawing software, and quickly sketched a large, tall yacht with smooth lines and an almost integrated deck and cabin.

Ye Qing felt his ability to design a product style reached the maximum level. No need for a reference, he was completely in his mind to understand the lines. An hour later, a large yacht with only one hull emerged.

Ye Qing's idea was very innovative: he planned to create a camouflage hull for the Lord's Battleship and let it sail the high seas wrapped in the hull of this large yacht. Whether this yacht, which no one has ever seen, will be supposed to be a ghost ship, is not Ye Qing's concern. After all, it only appears on the high seas. Entering territorial waters, it will continue to dive and let the shell float. If necessary, he could also throw it away.

.....

Sailing on an ocean-going yacht conforms to the style of many wealthy people who pursue adventurous spirits.

.....

The secret navigation to Nigeria was postponed until the next day. Today, the representative lawyer sent by Apple has already taken an international flight and arrived at the intellectual property court in Beijing, the capital of China, and officially submitted the Appeal documents to the court. On the Monster Heavy Industry side, a lawyer has been sent to fight Apple.

If they want to gain the content of the patents, there will be no result. In the end, there is no doubt that Apple will lose the lawsuit. At this point, the State Administration for Industry and Commerce has already obtained the vote result, and now Ye Qing has won the case. After he won the lawsuit, they continued to find reasons to prevent the launch of the Magic Crystal phone in the United States, but Ye Qing decided to attack them first.

There was a lot of talk outside the courtroom, but Monster Heavy Industry was unusually quiet. It seems that the sanctions carried out by the US government have fallen on someone very powerful.

The greater the silence, the more Internet users have the impression that Monster Heavy Industry is holding back. Because based on the situation, they knew that companies that wanted to sanction Monster Heavy Industry in the past were sanctioned by Monster Heavy Industry; the young president of Monster Heavy Industry is very decisive regardless of any unwritten rules. Whoever wants to oppress him will surely trigger an unexpected counterattack.

Countless media wanted to interview Ye Qing, but they were rejected without exception.

At the same time, at the bottom of the sea in the city of Shanghai, which is over a hundred meters deep, a shocking scene is staged that people do not recognize.

A large yacht with a modern appearance appeared from the bottom of the sea, like a submarine.

When it came out into territorial waters, the ghost yacht rose out of the water with a loud bang, swaying four rapid waves, and galloped out to sea.

Chapter 550: Will the second product be subject to sanction?

The ghost yacht galloped out to sea with no one in it, but in the Lord's Battleship Warehouse hidden inside, there was a Master Metal Expert on duty who is responsible for the final handing over of the cargo.

After recording the cruise route, Ye Qing turned and devoted himself to the great work of drawing.

At present, Monster Heavy Industry has entered a stable development trend. Monster Heavy Factory is fully committed to producing ghost phones and has also stepped up to cooperate with major operators to discuss the plan to promote contracted Magic Crystal phones.

At the same time, China's front-line TV channels and leading TV channels from Southeast Asian countries bid on ad time requests one by one, preparing to broadcast the ad on the Magic Cristal cell phone that was shot, starring Xu Ninggong.

Since the commercials are all golden time files, the time is 30 seconds, and the number of loops is not less than five times a day. With them on the Internet, more and more users who received Magic Cristal phones had video scenes broadcast.

Now that the reputation of the Magic Cristal mobile phone has completely exploded, almost anyone who wants to buy a new mobile phone will consider purchasing a Magic Cristal mobile phone.

At the same time, there were too many experienced electronics personnel who want to find flaws in the Magic Cristal cell phone to attract attention, but they could only find many new advantages.

It's not enough. In order to promote the Monster Heavy Industry factory to the sixth step as soon as possible, Ye Qing has mobilized the whole company to carry out the comprehensive promotion of the Magic Cristal mobile phone.

At the sixth stage, there is no doubt that Monster Heavy Industry will have a say on the technical side. The factory and the company will be heading towards a new goal, and Ye Qing has not been idle and prepared to design a new product.

In the dreamlike display, a strangely shaped boat was slowly outlined by lines. Seen from the perspective of a professional ship designer, this boat is completely a toy. It was only 3.5 meters long and two meters wide. The bow was flat, and the middle was deeply sunk like the belly of an arhat. There is no rudder or cabin, but it was just such a small boat, on its flat bow, a logo of the monster which represents the pride of Monster Heavy Industry, because it was not a boat, it was the inspiration for the final product that Ye Qing suddenly got while looking at the extremely clear bay of Longxitan Beach.

Longxitan Beach was polluted with chemical sewage for decades when Ye Qing first took possession. But a high-ionization industrial wastewater purifier turned it back into the prettiest bay and the clearest. Only one set of this purifier was built, because the magnetic induction element, one of the basic components inside, was not cost-effective and could not be mass-produced, and Ye Qing had to buy expensive magnetic resonance equipment in Germany to disassemble the parts. Now he has the Electronic Messengers, and there is no shortage of electronic components for the Monster Heavy Industry.

Ye Qing planned to use this time to manufacture the second generation of industrial high ionization wastewater purifiers in small batches. May the old president of the United States also want to try to sanction them?

And this little boat with Logo was only an auxiliary tool used to charge the second-generation purifier. The boat has no technology per se, but the second-generation sewage purifier has higher technological content than the Magic Cristal cell phone.

The hardest part is undoubtedly the palm-sized magnetic induction element. It consists of a layer of rare alloy materials, covering complex electronic components on a wafer-shaped semiconductor material. Using photolithography inside the wafer, several layers of large-scale integrated circuits are cut, like a processor, to analyze and process the collected electromagnetic signals.

Ye Qing threw the drawing of this electromagnetic induction element to Tianjin and asked him to make ten pieces according to the drawing and the next day, dozens of electromagnetic induction elements

had been built in the underground base, and these Elements of electromagnetic induction were carefully placed next to the Peregrine Falcon with all metallic skins ripped off.

Shifting the focus from factory production to mobile phones, those who are unable to do the hard work of electronic component production, have much fewer tasks, and they were shipped by Ye Qing one by one to another work, they were like virtuous weavers, sitting in front of a cup of coils of shimmering silver metal, winding them turn by turn, using their hands.

There were also a few giant workers surrounding the Peregrine Falcon, with blue-faced fangs and muscles three times as strong as Schwarzenegger. They have a specially shaped rivet gun and were planning to use the nickel-titanium memory alloy produced by Monster Heavy Industry next to them and riveted the pilgrim's skin. In addition to the skin, the Peregrine will also receive patterns and aerodynamic modifications. As to whether he can fly into stratospheric space after the transformation, Ye Qing isn't too sure, but it's enough to make sure he doesn't disintegrate.

On the second day, Tianjin supported by an Electronic Messenger sent ten more electromagnetic induction components that Ye Qing needed. However, these are only semi-finished products, and they will be sent to the factory for the final coating process.

The sensing element removed from magnetic resonance equipment imported from Germany had a gold-like coating on the surface. Ye Qing didn't know what method they used for the coating, but when they got to the factory, they directly used the gas depot.

.....

The coating is an alloy mixed with dozens of rare metals, these coatings with very stable physical and chemical properties, the higher the purity, the higher the sensitivity of the corresponding wastewater purifier.

.....

Let's make an analogy; if, in the coating, there was a particle of dust on this alloy film, this wastewater purifier will always confuse this dust with a polluting element in the wastewater when it is worked. As for the stupid idea of wearing a glove to wipe off dust, no need to think about it. It is not a question of omitting a particle of dust on a polluted cell phone, since this sensitive element is directly ignored. This sensitive element is disposed of directly when using the wastewater purifier.

Even though the monsters operated the coating, in the end, ten electromagnetic induction elements were discarded. When the final product was finished, it was more than twice as good as the German product.

Two days later, ten high ionization industrial wastewater purifiers were all assembled. So, Ye Qing asked Tianjin to find dozens of water purification companies on the Internet and break through their walls, and write specially concocted messages in English, and taking the major US forums. The content of the article changed the soup but didn't change the dressing. "It is a pride that Monster Heavy Industry has finally overcome a significant industrial treatment problem and can produce small-scale water purification equipment capable of purifying industrial wastewater."

Ye Qing also called Wu Shunyun, the deputy mayor of Shanghai city, and asked him where he placed the first-generation sewage purifier.

"It was placed directly in the wastewater treatment plant in the industrial park." When he spoke about this, Wu Shunyun, the deputy mayor praised, "Mr. Ye, your product has helped us in the city of Shanghai."

"Now we install sewer pipes one by one from all the factories in the city that need sewage treatment, and discharge them to the industrial sewage treatment plant in a unified way, then leave your equipment for centralized purification treatment. This wastewater treatment cost is much cheaper than their own wastewater treatment pools. At night, we can move the equipment to the city's river to purify its water."

"Since your device has been set up, the water quality of Shanghai city is improving day by day. The national water resources assessment this year absolutely cannot escape our city."

"Why..." Deputy Mayor Wu Shunyun changed the subject, to deep concern, "Mr. Ye, why are you suddenly asking this?"

Why can't he worry? They rented the sewage purifier. Now Ye Qing asked about it, maybe he wants to take it back...

"It's okay; we've produced the second generation of this product. The first generation is a bit late and needs to be updated."

"Okay!" Deputy Mayor Wu Shunyun said: "Okay," with the fastest degree: "When will he be changed? Is it today? Okay?"

"Yes, it happens that I have hired a team of professional photographers here to shoot advertisements for the Magic Cristal mobile phone product, and by the way, I will also shoot an advertisement for this sewage purifier to enter the USA market."
