

M Factory 581

Chapter 581: Reporter Bergman.

What will be the effect of inviting a group of foreign journalists to the door of the Monster Heavy Industry Company?

As reporters who have harnessed the power of public opinion, when they work together, they can completely turn white into black, especially when they were up against a private company like this, and especially a Chinese company, so they can fill their logs with commentary.

They said the Monster Heavy Industry trampled on human rights and detained a fellow reporter. And even if the Monster Heavy Industry came up with evidence to prove this person was a commercial spy who had invaded the factory, this group of journalists was not ready to accept the information given by this factory. They want the factory to give them this collected information and let the national spectators watch it.

Even though the Monster Heavy Industry exposed this bogus reporter in its entirety, until journalists report this part of the fact to viewers, overseas viewers will not know, and reporters will leave in the minds of viewers only the image "Monster Heavy Industry is a savage business and a trampling dictatorship human rights".

This will greatly affect the potential customer base of Monster Heavy Industry in Europe and the United States. Nevertheless, it turns out that many products of Monster Heavy Industry have been banned for sale in European and American countries, and these foreign journalists are allowed to speak about it.

With the use of fingers and mouth, journalists can make a lot of extra money. Moreover with this kind of good deed of destructive innocence, they will not miss a hundred orders.

As the initiator of all of this, the Watch Mirror Intelligence Organization has once called Monster Heavy Industry. The call was made by Laurel, the intelligence officer in Asia, and he was transferred first to the front desk and then to President Ye Qing's office.

The phone had rung dozens of times before it was connected, and Laurel went straight to the subject.

"Mr. Ye, I apologize to you. In order to save our mate, we need to take some small steps that are going to make you a little unpleasant. Of course, you just have to release our mate. Let him go immediately. And these reports will be unpublished on any news channel."

"Are you Laurel?" Ye Qing bent Erlang's legs and looked at the group of foreign reporters below with a very intriguing gaze.

At the moment, the bottom of the building has attracted a lot of passing people. Security captain Wu Yuexiang was leading a group of security guards to maintain order under the building. And the reporters, as if they had caught the thief, surrounded the security guards and asked.

"If you release our companion, not only will these reports not be made public, but we are also prepared to pay a ransom of one million dollars," Laurel said in fluent Chinese.

"What if I don't let him go?" Ye Qing blinked, his tone was very relaxed.

"I don't recommend doing this, and it's not worth it." Laurel's tone was also very relaxed: "I admit that you are very capable, but they are journalists from foreign media, who are more difficult to deal with than any enemy. If you still want to treat these journalists the same. I think they will spare no effort to create a brutal new image for you after they collect the money. By the way, Mr. Ye, you can take the liberty of asking. Why don't you choose to call the police or hand over our colleague to Guoan?"

"Probably because you look like flies, I can't let him go. Come straight to the point, and you despise our Monster Heavy Industry Company? ~ Also bring me a note to Zhang Yutian, I want him to go bankrupt and run away in a month."

"As you wish, Mr. Ye," Laurel laughed.

Half an hour later, there were two other foreign media at the entrance to the Blue Sky Building, one German and the other Spanish.

Passers-by did not congregate too much, as company security guards were responsible for maintaining order on the outskirts. In addition, people who passed by here often also knew about the situation of Monster Heavy Industry, and it is always surrounded by the media. Of course, they did not know that this time the media created problems.

"Why don't you let us in to interview?"

"We journalists have the right to interview freely. You are hindering the freedom of the press."

"The Monster Heavy Industry has disappointed me too much. A company that does not respect human rights, regardless of the quality of their products; it does not deserve to keep the attention of consumers."

Powerful security guards were at a complete disadvantage, as they could only use their bodies to stop reporters in a very passive manner, with no blind spots in the camera. But the other party had no such concerns. With small tactile gestures and constantly touching, it seems they want to anger the security guards.

Security guards could not do anything about it, because if a guard pushed a reporter, in post-video processing, their professional editors could cut it up into breaking news like an action movie. Also, it should be unforgotten that they have already prepared the original news of the day which was about to be released.

Some of the security guards looked at them with angry bull-like eyes, and they were about to move around with electric batons in their hands. Suddenly ~ the security guards put their fingers against the wireless headsets one by one, communicating something collectively. Is this going to be the big move?

The journalists were wide-eyed and eagerly awaiting him.

A man dressed in casual clothes with dangerous cheetah breath walked out the door. The man was carrying a metal suitcase in his hand, and the security guards all turned and looked at the man with their eyes.

"Mr. Jin." Team leader Wu Yuexiang walked over to the Master Metal Expert and nodded slightly.

"Well, we can start," the Master Metal Expert also nodded.

Team leader Wu Yuexiang turned his head and strangely smiled at reporters. That smile was dangerous.

"Who do you want to take the interview from?" Wu Yuexiang smiled as he walked over to the nearest reporter.

"I'm Bergman, a reporter from NBC News TV. We want to interview the president of your company," the reporter straightened his chest and said with an arrogant expression: "We have a clue that your company has detained one of our reporters for no reason."

"What? What are you talking about, speak louder?" Wu Yuexiang covered his ears with his hands and made headphones.

Wu Yuexiang slapped the reporter's face with a backhand.

"I told you to speak louder, couldn't you hear?"

Five interview cars stuck near the door, obstructing the view of irrelevant people, and dozens of reporters let their jaws drop in surprise. How dare he hit someone?

This man is mad; he dared to hit a foreign journalist. He must be crazy, or how else could the security captain give them big news?

Haha ~ A slap on the face of the NBC reporter, in exchange for international news, is worth more than anything. The reporters watched their photographers hold the camera, and they were full of surprises.

"Okay, the cruel face is finally revealed." The French International TV channel reporter arrested Wu Yuexiang with his finger: "Now, depending on how you deny, I want to call the police and seek justice for our colleagues..." he had said enough and before finishing his sentence, no words came out, Wu Yuexiang again with a backhand slapped the reporter from the French international television station, which immediately annoyed him.

"Who else wants to interview, line up for Lao Tzu one by one."

"You're done, we recorded the video earlier," a reporter yelled through clenched teeth.

Wu Yuexiang took two steps and slapped him again.

Shocked to the bottom, raging seas were cast into their hearts. This business is absolutely crazy. It is no longer something that money can solve. Their dignity as journalists are insulted.

"The video is posted on the Internet. I as a photographer had quickly edited the video a while ago ~ bad ~ it's black ~" The cameraman slapped the camera in panic: "The screen is black, just when the man hit the reporter."

"ah ~ I also have a black screen."

"Wait ~ how my machine ~"

"A cell phone, using a cell phone ~" a reporter hastily pulled out his cell phone, the result, the cell phone was dead and could be unconnected. One, two, three, and soon everyone had a black screen.

At that time, several overseas employees wearing vests also rushed out of the interview vehicle.

"What is the situation, all the equipment in the car suddenly became empty."

"Who else wants to interview?" Wu Yuexiang walked into the group of reporters who were in a hurry and asked aloud: "Who else?"

Chapter 582: Looking for a nuclear bomb (1).

The effect of the portable electromagnetic interference device is surprisingly good. This kind of jammer, which is modified from the principle of the strong ionization purifier, can instantaneously create interference with a field radius of one to 20 meters. Its power is not too much, but it happens that the integrated circuits of the electronic products inside this field short-circuit.

In less than two minutes, the journalists disappeared, and before leaving, they dared to shout in the distance: "Barbarians, you will be punished by the law."

"Come fight yet another time," Wu Yuexiang and the group of security guards laughed and added: "There is a police station at the crossroads."

The next day, the company and factory updated a set of electronic defense equipment. Although this equipment was unused for the first time, it did not have an official name. Now, Ye Qing has given it the name of "Electric Spike Defense System". Electric spurs are homophonic with electromagnetic but more aggressive than electromagnetic.

The invasion of the factory by a spy last night and the surrounding of the Blue Sky Building by reporters let Ye Qing realize the importance of the electric spur defense system, except for the layout of the building factory and company. As a result, in the future, when the reporters come, they will be at fault, since Ye Qing will be able to click and bypass all of these reporters' electronic devices.

At the same time, Ye Qing asked Tianjin to start collecting information from Amano Heavy Industry. He wanted Zhang Yutian to understand that since he wanted to be a fly, he had to be crushed to death by a fly swatter, and it was an electronic fly swatter.

At five in the afternoon, Ye Qing decided to release the hapless spy who had been held for nearly two days. The information that should be requested has been requested, and it's no longer worth keeping it locked up.

However, as a warning to the Mirror Intelligence Organization, Ye Qing decided to give Wayne Wright a gift, and then let him go back and tell his colleagues: "If there will be another invasion, then I'll catch it and give another extra gift."

"God! ~ You ~ what do you want to do?" screamed Wayne Wright who was fixed on a metal chair in the sealed room, struggling violently as if he had seen the devil and looked terrified.

Sitting at the metal table in front of him, the two men as strong as King Kong silently manipulated round steel pieces on the metal table.

"My God ~ you've been doing all the tricks on me, what else do you want to do to me?" Wayne Wright shivered between his teeth, and the round object on the metal table was evidently a large handcuff with a barbell weight. The two strong men used special tools to adjust it, constantly adjusting the mechanical structure inside.

Wayne Wright had not waited long, one of the two strong men had taken the heavy round steel ring, the other as a farmer grabbed his head as if he was pulling a weed, and the first man untied his hands, then held them and stuffed them into the steel ring.

As soon as Wayne Wright's hands were inserted, the steel ring was automatically magically locked, rendering his hands unable to play. It's not he didn't resist. As a spy with the most professional training, he had at least ten ways of getting out of the woods. It's a shame that in the face of absolute strength, all of its joint skills are useless.

With this heavy "yoke" weighing no less than fifteen kilograms, Wayne Wright was again blindfolded, and he was framed out of the room. Twenty minutes later, he was dumped on a deserted beach. His equipment was cleaned, but he was given a cheap cell phone.

Half an hour later, a black Honda hastily arrived. Seeing the chains on his hands, his comrades were taken aback for a while, and after studying them for a long time, they said, "This thing has no keyhole. Don't be afraid. First, at the agency, we will find a cutting machine to cut it for you."

"They... they said I have to cut my hands off to get rid of it?" Wayne Wright said suspiciously.

"What a joke, no matter how strong the metal is, there is a way to cut it, how could we be prepared to cut your hands off."

Returning from the company to the factory in Longxitan Beach, Ye Qing didn't care too much about these little things.

Now, the company's activities have been focused on promoting Magic Crystal mobile phones, so Ye Qing doesn't have to worry too much about the news. In the shortest possible time, the erection of the energy tower is his main task.

Returning from Antarctica so far, Ye Qing and the Monsters have designed a deep-sea researcher and given him the nickname "Squid". This deep-sea researcher is specially designed to find the nuclear bomb lost in the trench. It has a built-in pressure detector that can be specially designed according to the principle of heavy metal ionization induction in water. Once the qualified heavy metals are detected, it will frantically report their location to Ye Qing.

This advanced automatic search for nuclear bombs seemed very mysterious. In fact, the principle is broken, and it is very simple, whether it is a wastewater treatment with high ionization or an ionization purifier. The magnetic induction elements of the core can accurately analyze the surrounding harmful substances. Heavy metals are the top priority among harmful substances.

According to official information declassified by the United States, this nuclear bomb was carried by a Douglas A-4 Skyhawk attack aircraft based on an aircraft carrier, then the aircraft malfunctioned and crashed into the limitless sea.

In addition to the unique alloy material on the fighter plane and the engine material, there are also very high-density metals used to wrap the radioactive material inside nuclear bombs, which are the most common signal sources and are more obvious.

With a slight modification of the magnetic induction element, these clues can be used to accurately identify the location of the nuclear bomb within a radius of two kilometers in diameter. Of course, that was not enough!

The Lord Duan Battleship could only drag the Squid probe to search for the nuclear bomb at a depth of one kilometer. Now that the nuclear bomb fell deeper, he could no longer operate in a trench nearly three miles deep.

Ye Qing was also to build a deep-sea rescue vessel with a powerful lifting capacity of over 15,000 tons to support this plan.

For this reason, Ye Qing specifically asked the company to register a shipbuilding license and bought a large 70,000 tons engineering vessel from the Jiangnan Shipyard and bought it at 1.5 times its actual price and took it for modification.

This engineering ship was originally owned by an international port company in Australia. It had taken two years after placing the order before the ship was built. As a result, he had encountered the Monster Heavy Factory, a pure local tyrant. Under the gold bullet offensive, this international port company had changed the delivery order without thinking too much.

The hull part of this 70,000 tons engineering vessel has been built, it was originally planned to go to Zhenhua Heavy Industry to install cranes to dig the ground in the seabed. Now it has changed direction and will head straight to the factory in Longxitan Beach, where it will accept modern modifications.

At 11 o'clock in the evening, the factory at Longxitan Beach was brilliantly lit. The bay to the south was calm, the bright moon reflected off the calm sea, and the lights on the shore are like a white pearl spread over various gemstones.

The tranquility was quickly broken. First, during the night, two innumerable green beacons lit up over the bay. These beacons floated on the surface of the sea and are sorted at five-meter intervals to form a navigable channel path. It was the only safe channel dug by the Lord Battleship. Five minutes later, a brand new giant ship slowly approached the head of the bay with a long whistle.

Chapter 583: Looking for a nuclear bomb (2)

Every time you dive a mile deep; seawater exerts a pressure of one thousand tons per square meter on the object. At a depth of 5,000 meters, the pressure per square meter will reach 5,000 tons, and for reaching the maximum detection range, the Squid would have to dive into the deep sea and search near the bottom of the sea.

Assuming that the Douglas A-4 Skyhawk attack aircraft which was based on an aircraft carrier was present in a definite depth, if the Squid could not distinguish the specific outline of the nuclear bomb, the attack aircraft had to be hoisted as a whole, which was very likely.

Public information showed it was a nuclear bomb that could produce an explosive force equivalent to 500,000 tons. It was also the type of third-generation nuclear bomb produced in the United States. It was produced continuously from 1961 to 1965, and the total number of its production had reached 1,000 bombs.

In the last decades of history, this nuclear bomb has been corroded by seawater, buried in dust, and embedded in the wreckage of the aircraft.

The possibility of pulling the nuclear bomb out of the deep sea alone was very low, which meant that Ye Qing had only one choice, and that was to hoist the sunken attack plane in that deep sea as a whole. Considering the enormous pressure of the sea, there is no crane with a lifting capacity of 15,000 tonnes, which is completely absurd. It was also the reason why the United States abandoned the search for this nuclear bomb.

Not to mention industrial technology decades ago, if not decades later, the world's most powerful engineering vessel with the highest lifting capacity could lift only 12,000 tons. Today, this world record for industrial technology is broken by Monster Heavy Industry.

When this 70,000-ton bulk carrier consisting of a keel and a hull was moored at the quay, a huge engineering vessel particularly thickened, the temporary helmsman and crew left the factory and the ten Monster laborers who were waiting at the wharf immediately began the vigorous renovation project.

The shore crane tower was activated and five Titan I type equipped with magnetic bases and pieces of heavy alloy steel were hoisted onto the engineering ship's workbench. The Titan I will act as a large processing robot, whether for cutting or welding.

In the underground base, the metal smelting center, which represented the highest level of metallurgical technology, had also started forging higher performance modular alloy materials to strengthen the keel of this engineering vessel.

It may not be appropriate to use the term traditional keel to call this new brand advanced engineering vessel. Modern ships are built-in modules, which have long been separated from the traditional structure of keel ships. Now there are the longitudinal ones and the spars. In the double hull, there is a reinforcing rib at every certain distance. It can be said that the whole body is a keel, and its structural strength and anti-wave ability have been significantly improved.

This is not enough; Ye Qing had wanted to install lifting equipment with a lifting capacity of 15,000 tons on the engineering vessel. When this set of equipment operates at a full load, it will also be a test for the hull and will need to be upgraded and then upgraded. At the same time, in order to reduce the total weight of the ship. The boom of this lifting equipment will be made entirely of alloy material and will have a swivel lifting function.

Two days later, the hull transformation was complete, and Ye Qing was sitting in the cockpit of the Titan I with a shirtless Monster laborer and using high-strength alloy steel beams with a single over the five-ton body to build the boom. At the same time, in the underground base, Master Metal Experts and Master Craftsmen were also engaged in an industrial process, of which only a few large industrial countries can imitate 50% of this shocking technology.

A two-meter-long square titanium-alloy steel ingot was fixed on a five-stage central metal smelting forging table by a special device.

"Boom boom boom ~" The ground was shaking as if it were galloping by thousands of horses. This fiery red titanium alloy steel ingot was squeezed from the top of the head by a forging hammer capable of

exploding 20,000 tons of impact that struck five times per second. The degree of the beat made the heart tremble, and it was a non-stop forging. Every time he knocked, sparks splashed and the ground shook. With each hit, this titanium alloy steel ingot warped slightly at the bottom, and the metal cube gradually became a circle.

This was no ordinary metal forging; Ye Qing used a unique forging hammer that could freely change the angle. I can easily say it is difficult to complete an impossible feat. This forging was forged into a small ball to make the central hull of the Squid Deep-sea Searcher.

Half a month later, twelve Squid Deep-sea Searchers were made. At the same time, the crane ship named "Colossus" was also transformed. In more than half a month and a few days, the transformation of the enormous bulk carrier was completed. Even if it was told to aliens, it would be amazing to them, but he was truly born.

Everything is ready, and the plan to find the nuclear bomb has officially started.

Ye Qing arranged the business of the company and asked General Mopu of Nigeria to come up with a cooperation plan for the construction of a wharf.

Of course, the plan was wrong. Where could they afford to set up a branch of Monster Heavy Industry in this poor place in Nigeria? This was done in order to give the giant crane ship a reasonable reason to sail to the Pacific Ocean.

The weather will heat up more and more. Before the emergence, Ye Qing also specifically checked the marine weather forecast for this area of the sea. As a result of this investigation, the temperature there now averages 30 degrees. In the coming days, there will be heavy rains and thunderstorms.

The wind means there will be big waves, but that won't stop the Lord Duan Battleship from standing in front.

In the dark, Ye Qing drove the Lord Duan Battleship and set off with the Twelve Squids.

It was located in the waters of northwestern Japan, at the junction of the 6 plates of Asia and Europe and 1,500 kilometers from the city of Shanghai.

The camouflaged Lord Duan Battleship had sailed straight to the max, over five hours later the seawater under the Lord Duan Battleship had gradually changed color.

Under the searchlight's reflection, the color of the seawater became darker and darker as it moved towards the predetermined area. It was as if under the deep sea there was a huge beast with a huge mouth wide open, waiting to swallow the passing ships.

"Although I know it is because the sea below is the starting point of the Japanese trench and the water depth has exceeded four kilometers. It's really scary, no wonder a lot of people have a phobia of the deep sea," Ye Qing whispered to himself, trying not to stare at the opaque colors of the sea in front of him.

After confirming the detection area with a radius of 200 kilometers, after stopping the propeller, Ye Qing turned on the Lord Duan Battleship's radio to listen to the situation of ships in nearby waters.

The Colossus had already left the port of Longxi Beach in Shanghai, but it will take two days to arrive at the most perfect situation and until the moment it arrives there, Ye Qing will have already found the site where the nuclear bomb was located.

Ye Qing also gave the order to tune the public channel to the internal channel at the same time, preparing to release the Squid Deep-sea Searchers.

"This is the offshore oil tanker, Serena. Our location is latitude 29, longitude 31, and is traveling at 13 knots. Please help me. I'm asking for information on the ripples in the water here."

"Hello, this is the Uradake Uramiya Marine Dispatching. In the next two days, the wave height will be 4 meters, and the swell height will be 5 meters, and the current will be 1.5 knots. It flows northwest."

"Selina, your local water model is relatively bad. It is recommended you go to the nearest port for shelter."

"Too late, hundreds of thousands of miles to get there, this little wave is nothing ahead of us Serena."

"This is the Sapphire cruise ship. Our ship has a load of 9,000 tonnes. Please provide information on nearby ports. We are starting to have big waves in our area. I decided to go to the nearest port to avoid the waves.

"Sapphire, you have to hide from this wave. I am very sorry for your ship as one of the top ten luxury cruise ships in the world," in the radio, Captain Serena's strong curly English came.

"Hehe ~ what we're looking for is comfort. What do you know as a commodity? Oil?" The captain of the Sapphire cruise ship sneered.

These are the waters of northwestern Japan. It is one of the main routes from North America to Asia. After the radio had been on for a while, Ye Qing heard as many as ten ships chatting together.

At this time, the Lord Duan Battleship was on the sea, swaying up and down with the big waves. The open tailgate and two Juli's were working hard together to push the two flattened ends and the perfectly round Squid Deep-sea Searchers plunged into the waves one by one. There were twelve Squid Deep-sea Searchers in all on the high seas, each connected to the Lord Duan Battleship by a thin wire.

Subsequently, the Lord Duan Battleship took the twelve Squid Deep-sea Searchers with its branches around and plunged into the deep sea which seemed endless, and when it disappeared under the water where the waves were gradually increasing, a huge tanker over 300 meters long and 100,000 tons more majestic and magnificent than a city, cutting the waves, roared above it.

Chapter 584: Abnormal weather.

June 14, 2022

The waves above got bigger and bigger and the sky got brighter and brighter when in the sun it was blocked by dark clouds which obscured the sky, and the sky under the dark clouds got extremely dark.

The big waves crashing into the sea were five to six meters high, and when the waves hit the bow of the huge tanker, there was a huge bang sound, and then countless spray was blown up in the sky.

.....

Once descended to a depth of a thousand meters, there was silence on the side of the Lord Duan Battleship as in a dark sky in countryside in midwinter. There was no more light, no rippling waves, only darkness. By this point, the Lord Duan Battleship had reached maximum diving depth, and if it continues to dive, the hull will be damaged.

At the aft cargo warehouse of the Lord Duan Battleship, there were twelve threads slightly thicker than straws that stretched out into the darker seabed. The twelve Squid Deep-sea Searcher detectors lined up in a straight horizontal line and their radars scanned the seabed. They have their own electric propeller propulsion system, and the cables that connected them to the battleship lord can provide them with a continuous source of energy. In the circular equipment compartment in the middle, the equipment used to identify the material composition of the seabed continuously emitted circles of electromagnetic waves invisible to the naked eye.

The warehouse has been temporarily transformed into a control room. Two Electronic Messengers were seated in front of two computers, closely monitoring the data downloaded by the Squid Deep-sea Searchers. The keywords for the alarm are magnesium alloy, nickel base alloy on the fighter plane, and depleted uranium alloy on the nuclear bomb hull.

It is impossible for these alloys to arise in nature without human intervention.

The twelve Squid Deep-sea Searchers covered a search area two kilometers wide and 20 kilometers long with no dead ends. If the length of the released cable was unlimited, the search range could be longer.

"Didi ~"

"Detector N° 6 detected the presence of magnesium alloy just below."

The Electronic Messenger was indifferent to this signaling because the outline of the blurred object induced by the magnetic induction element showed that it was only a small fragment of the alloy. It could be the wreckage of a certain ship or it could be a coin that was thrown by a person. It is only when several conditions are indicated, or when a relatively complete outline of the object appears, that the computer sounds a severe alarm. You need at least 11 conditions. In addition to that, the Electronic Messenger could analyze the blurred outline of the seabed from the data that often makes people feel completely dizzy.

The bottom of the deep sea below was a slide-like slope. The more you move, the deeper the slope. Strangely shaped hills appeared on the seabed, and Squid Deep-sea Searchers occasionally detected a large quantity of carbon monoxide, hydrogen sulfide, sulfur dioxide, and so on.

It was a small volcano erupting under the sea, and anything could happen in the mysterious seabed.

In the cockpit, Ye Qing activated cruise mode and turned on all the spotlights of the Lord Duan Battleship.

The Americans had not determined the location of the crash, and decades later the location had become more ambiguous, only this sea area was shown in the data. Ye Qing decided to loosen the cables even more and stretch the radius to several hundred kilometers. As long as the nuclear bomb is there, it will not escape his palm.

A huge crimson squid passed the window. Perhaps from the light piercing his eyes, he immediately sprayed thick black ink on the Lord Duan Battleship. Ye Qing was taken aback. That kind of creature that suddenly rushed over almost made him believe he had seen a ghost.

.....

The search lasted three hours, and the deep sea was calm. However, in the sea above there were already turbulent waves and heavy rain.

Weather data downloaded from maritime satellites clearly underestimated the intensity of the storm.

According to real-time data returned by the weather monitoring station located in Tanegashima, the wind in this sea area reached the ninth level at this time, and the huge waves that were triggered were several tens of meters high. If the wind was on land, the ninth-level gale could already knock down large trees with fragile roots. It was panic on public maritime radio.

"This is the Serena. This is the Serena. Dispatch center immediately give me the location of the nearest sheltered port. We have a 100,000-ton load. Please find one harbor for us," Serena's call was mixed with the sound of the waves hitting the ship's deck and the roar of the wind.

"I'm the Sunset, damn it, you don't have a brain at the dispatch center, why is the wind two levels bigger than you expected?"

"Damn, we're a bulk container ship, and if the container is tilted in the sea what's going to happen?"

"Sunset? Why are you showing me this route? Hurry up and find me a place to shelter from the wind. Is there no other place to shelter me in this sea area? Our container ship cannot withstand the strong wind."

"This is the Bigelow, the waves hit our warehouse, please help me organize with a port. Immediately."

Heavy rain on the sea pours in, and dozens of ships collide with the big waves in this maritime area.

It is true freighters can withstand big waves of several tens of meters high. But it's the same as a person who is not going to starve after three days without eating. In this big situation, the structure of the ship and the full load of the cargo will be seriously threatened.

A large cruise ship with a white hull and a beautiful shape, with big waves and strong winds, he was having a hard time heading to the port of Miyadoradake Island, it was the Sapphire Princess', owned by the world's largest cruise line, Royal Caribbean Cruise Line. The Sapphire had a load of 9,000 tones and was launched in 2015. It has 217 luxury rooms. The ship contains almost everything that is available in the luxury social places of the world. Royal Caribbean Cruise Line is headquartered in the United States and the Sapphire ship under its umbrella carries over two hundred distinguished passengers from the United States. All across Alaska, Bristol Bay, the Bering Sea, and finally the Pacific Ocean, they arrived in Asia.

This is the famous Pacific travel route under the Norwegian-American shipping company Royal Caribbean Cruises Ltd., with a total itinerary of 42 days. Along the way, you can enjoy the changing seasons of spring, summer, autumn, and winter. Dance with the whales and enjoy the natural scenery of

tropical beaches and the world of snow. There are 217 luxury passenger cabins in the 'Sapphire Princess', mostly retired executives and women with children.

After all, the young and the rich seldom have time to stay on the ship for forty-two days. At this time, the Sapphire is no longer in the playful and carefree scene of the past. The water in the sun-drenched pool on the upper level swayed and the overflowing waves rolled down the rows of beach chairs.

Most tourists stayed in luxurious rooms comparable to presidential suites. They helped the rails next to the bed, all pale, with painful expressions, and some people with a poor physique had started to get seasick and vomit.

"Damn, the forecast of the local marine environment provided by Japan is way more ridiculous than the lips of politicians," Sapphire Captain Brady angrily jumped into the cockpit. The rotating round glass of the porthole spun abruptly, shaken by the rainwater hitting it. However, before Brady could see anything another huge wave came in, splashing the foredeck, mixed with rain, and misting the window again.

"How far do we need to reach the next port?"

"Sixty-seven nautical miles," the first officer cried anxiously.

"Damn, there's still a two-hour trip," Captain Brady grabbed the handrails, and a pale expression came: "When the storm passes, we'll be swamped with moans like the sea that all the benefits will evaporate."

"Damn, for all of Japan, rag forecast results from the wind seven, now wind nine, even more, a day ahead of forecast."

"Captain, I think the situation looks a little bad. From past experience, with nine winds waves only rolled six to seven meters, but the waves now have reached over ten meters for the wind of 7.5 we must beg God."

"I don't know if the ship's company lost over a million dollars this time around," Captain Brady replied.

"Boom ~"

Another huge wave has arrived. Captain Brady was about to swear when suddenly the whole cruise ship shook, and an unusual and violent shaking sound came from the bottom of the ship. The noise lasted for over ten seconds, and when the sound disappeared, everyone visibly felt the navigation was slowing down.

"Captain ~ it's the wheelhouse. It's not good, our fuel system is broken."

Chapter 585: Look, there's a nuclear bomb.

"Didi ~"

"Detector N° 3 has detected the presence of nickel-based alloys ahead."

The Lord Duan Battleship a thousand meters deep explored along the trench little by little. In its cargo hold, the two Electronic Messengers, who had been staring at the screen for three hours, weren't tired of watching the astronomical data return.

More than 20 minutes later, the Squid Deep-sea Searcher No. 9 returned a report of the presence of nickel-based alloys forward. This time the Electronic Messenger conveniently marked it on another computer as the outline of this nickel-based alloy fragment was slightly suspect.

As the search continued, more and more alarms went off in the cargo hold and the Electronic Messengers also noted that there was more and more location information of suspicious fragments on the e-card.

When the thirteenth fragment was marked, the electronic map already showed semicircular fragments scattered in the area.

If there was a flexible person who calculated based on the scattering of these piece fragments, he would likely laugh in ecstasy, confirming that the Douglas A-4 Skyhawk attack aircraft that was once based on the aircraft carrier is at the center of these fragments now. However, this phenomenon did not cause any wave in the eyes of the electronic messengers; only one of them got up and went towards the passage of the cockpit.

“Boss, the plane wreckage has been found.”

“What?” Ye Qing turned to him sharply: “Why didn’t I hear the siren alarm to confirm the presence of the wreckage?”

“The Squid has not yet found it, but depending on the location of the fragments of the wreckage, the location of the crash can be roughly estimated.”

Looking at the outlines of several pieces of debris mentioned by the Electronic Messenger, Ye Qing immediately transferred the Lord Duan Battleship over the indicated area where the twelve Squid Deep-sea Searchers were concentrated in this lost area in the deep sea.

“Didi ~”

“Detector N° 3 detected the presence of another piece of a nickel-based alloy in front of...”

“Didi ~”

“Detector N° 12 detected the presence of another piece of a nickel-based alloy in front of...”

“Didi ~”

“Detector N° 2 detected the presence of another piece of a nickel-based alloy in front of...”

Over time, more and more reports were coming in. Ye Qing’s adrenaline was also gradually increasing. When the stern alarm sounded throughout the Lord Duan Battleship, there were a total of four Squid Deep-sea Searchers who reported the presence of a magnesium alloy at the same time. The nickel-based alloy and the depleted-uranium alloy on the upper shell of the nuclear bomb were detected where the debris was scattered.

Ye Qing felt his thoughts had completely exploded and his heart was filled with unspeakable joy, “I found him, and I finally found him.”

Ye Qing seemed to him that everything was going well and that it did not take much time, but behind it, dozens of monsters spent more than half a month working hard and yet the best research equipment built by KONE was the technical backbone of all this work. Of course, there was also a little factor called 'Luck', because if he had no luck it would take him at least two days to search this whole sea area.

Looking at the screen, the red dot which continued to flash and surrounded by several green dots, the green dots represented the little Squid Deep-sea Searchers. Ye Qing immediately took control of one of these detectors, the Squid Deep-sea Searcher N° 1, which was equipped with a special camera and a powerful light. Ye Qing controlled it to turn on the equipment and dive to the wreckage site.

The water depth here was 5,000 meters, and the water pressure was terrible, and the light could only pass a few meters through the water and the image returned from the monitor was gray and white, and Ye Qing could see that a thick layer of volcanic ash has accumulated on the bottom of the sea. The terrain here is hilly and when the Squid Deep-sea Searcher rounded a low hill, it immediately spotted its target. It was a much lower hill, and from the outline, it stood out vaguely like a triangle.

When Ye Qing took control of the Squid Deep-sea Searcher and gently blew a piece of dust with his tail thruster and revealed the wreckage which was badly corroded and had taken on the same color as the volcanic ash, the mermaid sounded wildly and an oval-shaped depleted uranium alloy object was detected.

Facing this pile of debris, Ye Qing really couldn't tell where the nuclear bomb was hidden, and it seemed like he could only lift the whole thing.

The plane wreckage was badly corroded, but there was no need to worry about the nuclear bombshell. Not to mention soaking in seawater for decades. The shells of nuclear bombs made by mankind with the most advanced metallurgical technology do not have to worry about being corroded by seawater.

The bulk carrier will arrive soon, and Ye Qing took advantage of this time to operate the Squid Deep-sea Searcher to gradually blow dust on the wreckage.

According to public records, the pilot was already parachuted before the fighter plane crashed into the sea. In the end, the pilot died, Ye Qing did not know. Either way, he just doesn't have to worry about people in the plane wreckage.

.....

At 800 kilometers, a ship that appears to be forged from a single piece of metal, no matter from what angle you look at it, you will feel a huge ship full of iron and steel was riding the wind and waves and approaching the position of the Lord Duan Battleship carrying the Titan 1, with the world's first lifting capacity!

Its bow was shaped like a blunt hammer, with a giant door-like Monster Heavy Industry alloy logo encrusted on it. The hull had a counterweight water storage cabin and cargo warehouse, and aft of the ship a cable-stayed chain bridge also appears to have a high spire. From the engine to the crane, everything was done by monsters. In addition to the main boom, a variety of large engineering equipment was installed on the engineering ship.

In the cockpit, a Master Metal Expert stood in front of the rudder with a cold face and took the helm. The crew responsible for navigation according to maps and parameters is also made up of monsters. The whole ship is equipped with nine monsters, and one monster could perfectly do the work of five people. As for the crew qualification certificate ~ this kind of qualification certificate obtained through the back door is not worth mentioning.

“I call Colossus. This is the Miyamoradake dispatch center. Please report your location. You have requested your planned route will pass through our north-western sea area, down there is heavy rain and heavy waves ~ please change course. Or come to our port for shelter first, and set sail when the weather improves.”

The Electronic Messengers understand English. After all, electronic computers are all in English, but they all overlooked that appeal.

“Hey ~ Colossus, please respond if you hear us.”

Finally, annoyed by the call, the Electronic Messenger replied: “It’s a level 7.5 ocean wave, our bulk carrier is unaffected.”

“...”

There were a few seconds of silence on the dispatch desk, and then in the originally quiet public channel, there was a burst of excitement.

“I’m the ocean-going tanker Serena. Brother, at first I had the same idea as you. Now we’ve put aside the loss of the electrical system and are heading for the harbor for shelter.”

“I... This is the Sunset bulk carrier. Brother, listen to our advice. Take a detour and come and find a port for shelter. This sea area is absolute evil ~ besides, my brother, what kind of ship are you?”

“We are a foreign warship,” The electronic messenger was not cold. He responded warmly.

There was a burst of laughter on the radio.

“Who’s going to save us? It’s the Sapphire. We’ve lost a power system. We can’t resume the journey. We can’t resume the journey.”

Along with laughter, there was a sudden cry for help over the radio.

“What’s the situation? Sapphire, didn’t you go to the port for shelter first?”

“Ah ~” a cry came from Sapphire.

“This is the dispatch center, Sapphire; please report the location and situation immediately.”

Chapter 586: An emergency call from the White House.

The Saga Sapphire is a cruise ship built in 1981 for Hapag-Lloyd under the name Europa, is 150 meters long and 20 meters wide and is equipped with two gasoline engines with a total output of 12,000 horsepower, was in an unprecedented situation.

One of its two engines had suffered a major failure, causing the loss of power to the left propeller. If the weather was calm and the sea was calm too, the Sapphire could still run at full power with a single engine of fuel and slowly return to port on its own, but the huge waves coming towards it were higher than its waterline and faced with this strong wind and waves of such great height, it could only continue to turn in place.

It should be mentioned that in the Japan Trench area. Even though it is only 67 nautical miles from the port, the water depth below the Sapphire is over two miles. Its anchor of several hundred meters could only cry in secret as it watched the deep sea.

“This is the dispatch center. Please stay stable and try not to face the waves with the hull. We will do our best to find and send rescue forces.”

“Damn, you have to send a rescue team right now,” shouted Brady, the captain of the sapphire.

The coxswain on the side was tired and almost collapsed. The rudder of a half-man size was turned into a windmill by him, trying to maintain the ship’s position against the huge waves. There were already screams in the ship’s luxurious guest bedroom. The tourists here were all high society people and lived in the shade of clothes and temples all day long; did they experience that kind of turmoil there at home?

“Son, I’m in the seas of Japan. The Sapphire I travel on met a stormy day. Now it seems to be malfunctioning and it’s going around in circles. If anything happens to me, please take care of your mother and be strong. Do not be sad that I am leaving.”

“My dear, are you there? I’m on the Sapphire now. If you hear the message now and I don’t continue to contact you, then it’s likely I’ve had an accident. My account password is my birthday, and I have three accounts; they’re at Citigroup, Morgan, and Wells Fargo. Plus, I also have a stock account at Ruitong. There’s a lot of money in there ... well, there is a lot of money. Remember, Apple shares sell for \$ 150 a share, if I will go in heaven be happy.”

“Dad ~ I’m on sapphire with Claris, and we encountered heavy rain and strong winds. I’m so scared, now the cruise ship is also broken, and I don’t want to die. Dad, you’re asking my Uncle Lackey from the US Air Force stationed in Guam to send a helicopter to rescue me.”

The Sapphire is equipped with the latest satellite communication systems and radio, and all the room has a telephone. Taking advantage of the fluidity of communication, now almost all passengers have started calling home. Everyone was in despair.

Through the portholes, tourists could see the huge sea waves outside, raging on the Sapphire. This boat was in these huge waves like a rag doll bouncing on an air mattress.

The crew report and the tourists’ phone calls were returned to the United States, and their family members exploded. Their loved ones are in the waves, and the ship could capsize at any time.

This sort of thing didn’t fall apart on just anyone. They immediately used their connections. They lobbied the mainstream media, the government, and the Royal Galle Cruises Group, asking them to come up with a bailout now, immediately, and very immediately.

After tens of minutes, the whole country shook even President Donald Trump immediately put everything in his hands and called a press conference for White House reporters.

The chairman of Royal Galle Cruises Group flew to Japan on a chartered flight. At the same time, the major news sites used their best rights to promote this news.

[One hundred thousand in a hurry ~ More than two hundred tourists are trapped in the seas of Japan, and their lives are in danger at all times.]

[The Sapphire, one of the ten largest luxury cruise ships in the world, has been trapped in Japanese waters by a storm and can sink at any time.]

[SOS ~ who will save the Sapphire.]

The media bombed the nest collectively, and even internet users from across the country followed the bombing of the nest with their own bombs.

[Nowadays, in the 21st century, in today's advanced technology, is this going on really? Does everyone stand still and watch a luxury cruise ship carrying over two hundred tourists sink under the attention of people from all over the country at all times?]

In the emergency team set up by the White House, the mood was suddenly choked with the list of people in the Sapphire ship; this list was given by the staff of the cruise company, the Royal Caribbean Group.

There were 120 crew members and 221 passengers. Among those passengers were retired senior lawyers and retired business executives. There were also the parents and wives of the Wall Street elites, and there were also the families of lawmakers.

.....

It is no wonder that if the Sapphire cruise ship is calculated based on its size, it can be considered luxurious if it carries thousands of people. Now, the entire cruise ship only serves over two hundred people, and the residence is also a luxurious room comparable to a Presidential Suite, and most people can't really afford this luxury.

.....

After half an hour, the news spread around the world. European countries and major Chinese news sites reported these shocking headlines.

[Shocked, due to a severe weather forecast error from Japan, a cruise ship owned by the United States will fall into a deep hole.]

[Urgent important news, the Japanese Meteorological Service caused a terrible disaster.]

[A luxury cruise ship becomes a push cruise ship, let's pray for the Sapphire. Please pray.]

However, media around the world heard the news and rushed to send photographers and reporters to the nearest sea area where Sapphire is located. The media and the Japanese government were silent at the time. Even ~ even the Uradake Island Expedition Center in Miyano had become reluctant.

Under frantic questioning from the United States and anger from the mainstream media and the American people, the Japanese Coast Guard rushed to release information.

They had put in a whole procedure to launch the rescue, but the sea area where the Sapphire was located became more and more stormy, moreover, it is impossible for a helicopter to fly over the boat to transfer the passengers and ordinary ships cannot approach the Sapphire at all in this situation, because, thanks to the waves, the closer they are, the more likely they are to collide with each other ~ but ~ they still mobilized five speedboats, and the crew of these stars risked their lives to get to the maritime zone. Unsurprisingly, the first batch of high-speed boats could arrive in twenty minutes.

At the same time, the US Meteorological Department also collected the latest local weather data via satellite. Data showed that above this sea area, a torrential rain cloud was gathering in the sky at this time.

.....

Due to the high temperature of the previous week, the water temperature increased and the proportion of seawater vaporization was large, which caused an increase in airflow, forming a tropical storm. Now the local wind has reached 9.5 and it seems to get stronger and stronger, when it goes up to 10 it will turn into a typhoon.

.....

Twenty minutes later, five speedboats eagerly sailing through huge waves finally arrived at the scene.

At the strong request of the leaders of the United States, the travel agency had to broadcast the images of the scene live from the internal cameras of the Sapphire boat.

When mainstream US media streamed the footage received from Sapphire in real time, countless people covered their lips and couldn't breathe as they saw all the landscaping facilities and buildings on the bridge. Sapphire had been completely destroyed by the waves.

When family members saw the live footage on the news, they were nearly passed out in grief and many people who specified the location of this sea zone online asked the U.S. Air Force in Guam, thousands of kilometers away, to send rescue planes. In their impression, the US Air Force is omnipotent, fighting the world, fighting aliens, and fighting monsters.

This time, the Guam Air Base did less well than Japan. There is only one sentence from start to finish: "When local weather conditions allow, we will send a plane as soon as possible."

The five speedboats that passed on the spot only sailed for half an hour, and three of them could no longer hold out and had to turn around and come back. Because they have to keep moving high, hitting the waves over and over again, and they don't even dare to approach the Sapphire.

At 2:08 p.m., the White House spokesman issued the most anxious call for help to media around the world.

"On behalf of the US government, I would like to send the most sincere appeal for help to the countries near the sea where Sapphire is located ~ whatever ~ any government official, organization or company, as long as you have the ability, please save the Sapphire."

As soon as the news broke, the whole world screamed.

Chapter 587: Despair.

However, when the news has spread, neighboring countries have only to euphemistically express their regret.

The China News spokesperson immediately expressed China's determination to provide humanitarian aid at sea and expressed willingness to provide more weather data. It is only in the face of such a harsh natural climate that China can only be powerless. South Korea has also said it is ready to facilitate the rescue. But no one knows exactly what to do. As for the countries of South Asia, they were satisfied with verbal expressions, and no one will count on them.

What happened to Sapphire forced the US government to make such a direct appeal for help. Is America still supreme and invincible?

More than a thousand kilometers from the Asian mainland near Guam Island, there are two of the largest overseas bases in the United States, the Yokosuka Naval Base, and the Okinawa Naval Base, where the powerful United States Air Force Team is stationed. Could it be that even the United States cannot save the people existing on Sapphire?

The situation with the Sapphire was very grim. It was struck by the huge waves for three hours, and the tourists and the crew of the boat are physically and mentally exhausted.

The helmsman at the helm takes twenty minutes to turn the boat one turn, and the captain's orders go nonstop to the first officer than from the first officer to the second and then to the third officer and finally to the helmsman in the cockpit, he was so tired his whole body was shaking.

All unfixing things on the outside deck are gone and the cabin was even messier. Dozens of service personnel and sailors hold handrails along the side of the aisle, moving harshly towards each cabin step by step. Without the consent of the passengers, they directly opened the doors to the rooms with their own keys and violated the privacy of the passengers. But no one can object, since they cannot even open the door.

Service personnel and sailors must transfer all guests to the public room on the first floor of the Sapphire.

The Sapphire is one of the ten most luxurious cruise ships in the world and has a launch time of only two years. The newer the ship, the more advanced its supporting scientific and technological facilities. The public room on the first floor of the Sapphire has been specially modified. In addition to having hidden safety seats, the hall was also specially reinforced and had an independent air supply system.

This is also the reason why in many disaster films if a cruise ship sinks, everyone walks towards the theater. In addition to security reasons, the more crowds are concentrated in a single place, the more they facilitate the rescue of the rescue teams.

Taking advantage of the geographical position, the Chinese media immediately carried out a large number of follow-up reports. Some TV stations also invited experts in to explain to the public the biggest doubt in their minds which was none other than why the US government had watched the Sapphire struggling in the waves and could not do anything about it.

"As we all know, the United States is the most powerful nation in the world and has the most advanced equipment in the world, whether it is air or sea rescue forces, the United States is much more advanced

than other countries. Even many sea rescue standards are developed. This is formulated by them," the expert seated in the guest seat, addressing the audience in front of the television: "But everyone should pay attention to the fact, that this is the sea area of Japan here. It even takes time for the aircraft carrier to catch up ~ and the local waters are extremely abnormal, there are often huge waves bigger than usual and the wind is very strong. Even if there are rescue ships, they can't seem to get out to sea against the huge waves."

"~ This sapphire incident is a great test of the leadership capacity of the US government ~ If the Sapphire is going to capsize under the noses of the whole world the anger in the hearts of the American people will certainly peak in an instant."

"Professor Wang, how long do you think the Sapphire can withstand before it sinks?" The host asked in a timely manner.

"I have a copy of the Sapphire technical data released by the White House a few minutes ago. According to the data, the Sapphire has been sailing from the Bering Sea and the ship's fuel reserves are already low running at full power to withstand the wind and waves. So within one to two hours, they will be faced with the situation of fuel exhaustion. Once the fuel is exhausted, it can only drift with the flow."

.....

Under the strong order of the White House, the Japanese Coast Guard had to continue sending small speedboats to the cruise ship Sapphire.

This time US News Network reporters and photographers risked their lives to drive a wave-piercing speedboat and when the picture came the American people grew increasingly angry telling each other even: "Since the little speedboat can approach the Sapphire, why not launch the rescue?" Do journalists eat shit? They only know how to tap, and the government? What if we defended their American team?"

After half an hour, the storm has not subsided.

"What can the government do?"

"If Sapphire is in danger, then I will immigrate. This country has lost the meaning of existence."

"Does the government want us to witness the tragedy of the Twin Towers of World Trade once again? And stay helplessly watches the Sapphire go to annihilation?"

"The military is good in the movies. The army is very powerful. In reality, this is rubbish bullshit."

"Oh my god ~ everyone watching TV, the Sapphire's power completely is going to go to waste."

"Oh my God!"

"I'm a front line CBS reporter in Japan, the Sapphire ship... has lost momentum. God be with it," on the angry sea and the swirling waves and under heavy rain on the waters unstable, a speedboat cruised through the waves at full speed. The physically strong reporter had held the edge of the speedboat with one hand, shouting into the microphone while holding it with the other hand.

The camera shook violently, and the audience watching the television was full of wind and rain.

With the Sapphire adjusting its course to fight against the wind and waves, the captain shouted over the radio; his voice was tired: "The fuel is exhausted, I have done my best, we will pray,"

People all over the world watching the news all fell silent. In the photo, the blurry Sapphire floats in the rain and countless travelers were praying.

.....

Perhaps there is an unknowable existence in the dark, which has heard the voice of prayer. Gradually, people realized the original roaring waves became unusually small.

The original wave from eleven to twelve meters slowly transformed into tens of meters, then into 9 meters... In just five minutes, even the public could clearly judge that the huge waves were diminishing according to the ups and downs of the speedboat piercing the waves the reporter took.

"God bless us. I'm Bassett, a front-line reporter from CBS. The waves got smaller, the waves got smaller. The government rushed to send ships and planes."

The White House, which was bombed by the whole country for several hours, finally dared to show up at this point.

"With our cooperation, the Japanese Coast Guard will send two tugs into the sea where Sapphire is located and allow us to refuel for the Sapphire."

Suddenly, cheers rang out across the internet as the huge waves got smaller.

For a moment, when no one could foresee it, on the surface of the sea which had gradually softened, suddenly a huge wave rolled up. The huge wave was like a majestic perimeter wall, coming from a good distance with a height of 15 meters.

By this time, the weather forecasting stations on several nearby islands were all praying to God frantically.

The stars of the television channels that saw the new wave coming towards them were immediately frightened; they pushed all their power to escape; only the CBS film crew remained.

"I believe there will be a miracle. We are ready to be with Sapphire. I am ready to be with one hundred and twenty crew and two hundred and twenty-one passengers."

"God will bless us, and the American people who pray will bless us. Amen. Let us pray... together for the Sapphire."

In the last sentence, reporter Bassett was already roaring, but the audience watching TV no longer heard his roar, their ears were full of the roar of the huge wave coming like an apocalypse.

The camera started shaking violently and the photographer screamed in horror.

Cursing desperately in desperation the decades-long reporter who has been heavily hired by ghosts.

"Boom ~"

A curtain of water covering the sky and the sun was passing by. With the sound of the impact and the beating, the audience who witnessed this moment discovered the sea and the sky were turned upside down, and the whole world was turned upside down. Then there was the frantic lapping of the sea, and at the end of the picture the Sapphire, which had struggled for several hours in the huge waves, was thrown into the sea by the huge wave and could no longer be returned up.

All over the world, I don't know how many people witnessed this moment with their own eyes through television and the Internet.

It was a catastrophic moment as if countless people around that time were watching the towers of world trade crumble helplessly with their own eyes.

Right now the American people have forgotten breathing.

Chapter 588: Call from the Colossus.

The words of the Chinese expert are rare to be inaccurate. The disaster happened, the Sapphire capsized under everyone's nose, even the people from abroad felt very unbearable in their hearts after having witnessed this scene.

After all, boats are just carriers of ordinary people, and like any boat, Sapphire has encountered unwarranted disaster on her voyage. If it had been a warship, of course, everyone would have applauded its sinking.

The last scene on the TV screen was the sea splashing over the narrow cabin of the speedboat, the speedboat rolling in the waves, and the scene of the Sapphire being knocked down by a huge wave was that last scene. This scene caused every American who saw it to stand up putting their hands over their mouths choking an "ooh". They were grieved, unable to let off steam, and quickly turned into anger.

"Damn the United States government."

"The president must resign, and all navy troops must step down. They didn't deserve standing in their posts."

"The American people do not need such an incompetent president."

"This is not the United States in my heart. I want to emigrate to Australia."

"The government has abandoned us. They have ignored the safety of our people."

"Take Action Brethren and hundreds of people on the Sapphire need us to do something for them."

Within minutes of the transmission end, the internet was filled with overwhelming anger. Everyone turned their heads in the White House and even the administrators of the major website forums were angry and expressed their anger together.

Members of the emergency rescue team set up by the White House office were directly frightened by this scene. At the same time, almost all external calls were cut off, and the White House website was even crippled for a while.

If he wasn't far in the seas of Japan, reporter Bassett, who had vowed to be with the Sapphire, stood up again and signaled to the audience through the microphone that he was undead and asked angry viewers to take to the streets to let the White House know and fully understand what anger is.

"Ahem ~ ahem ~ our speedboat capsized earlier." Journalist Bassett was choked on seawater, coughing over and over: "But our outboard is designed to break through waves, with the engine and fuel tank placed low to adjust the center of gravity. It was just a wave, here we are again the speedboat is straightened up ~ Dallas, how are you?" Reporter Bassett laboriously called the cameraman, and after tens of seconds the cameraman quietly said: "I'm fine." Then the old cameraman screamed, cursing.

Afterward, the cameraman also staggered around and refurbished the camera. The image was blocked for a long time, and finally moved again, and he immediately aimed the lens at the Sapphire.

The Sapphire rolled over on its belly, its hull up, and at that point, it was like an iron basin curled up in the water, with a black V-shaped bottom floating on the sea.

"All ~ viewers who watch this show live, the scene in front of me reminds me of the World Trade Towers back then. But this time, I believe people who are hungry for life and afraid of death are the result of this ultimate catastrophe. ~ I will try to save people, even if only one can be saved."

After he finished speaking, reporter Bassett yelled at the sailor to drive the speedboat to the sinking Sapphire. At this point the sailor was also encouraged, driving the still moving outboard, he desperately steered the outboard towards the Sapphire and positioned it to side by side with it.

But in the storm, no castaways emerged. Instead, a few huge and incomparable splashes appeared.

"Guru ~"

"Guru ~"

After persisting for a few minutes, the Sapphire began sinking. People have turned a blind eye and firmly believe that even if the president does not resign, the heads of several bases near the sea must resign.

Under the world's attention, the Sapphire gradually sank into the water, leaving only a layer of the bottom of the ship floating in the sea.

Experts from all TV channels spat wildly and started talking live.

"There is no more hope. It is completely over. Once the ship sinks, it will have no possibility of floating again. In addition, the powerful waves will allow the sea to quickly absorb the Sapphire in the deep breaches to a depth of two kilometers ~ It will be a catastrophic moment, and the Americans will face a huge test."

.....

The Japanese government was about to be driven mad by pressure from the US government. Due to the distance, it is impossible for many US military bases to arrive on time. In fact, at the base of Meishi, there were already quite a few small and large sailboats that had rushed towards this sea area. Of course, everyone understands their efforts cannot come to anything.

According to the captain of the United States, the maritime security guards did not obey. All they had done was hardening their heads and let the speedboats return to the dock.

“Mr. President, the crisis is approaching. I suggest you speak immediately on national television and try to save our image,” the secretary of state said with a heavy face.

“Okay, help me prepare,” Mr. President looked sad.

“It’s all ready; it’s in the next room.” It seems the Secretary of State has clairvoyance.

With hasty steps, it took only ten seconds for the President to arrive in the adjoining speech room. The national broadcasting equipment was already in place, and with the arrival of the President, it was immediately connected to the signals of several major television channels.

“Citizens across the country, we saw a very sad scene ~ I’m here ~ First of all, I want to express my gratitude to reporter Bassett who helped us live the moment there ~ It’s his strength and his bravery that made us live in the moment and witness it all ~ Here I also respond on behalf of. ~ We are unafraid of danger, but our experts really haven’t come up with an effective plan ~ Now, Guam, Okinawa, and Yokosuka, three vanguards military bases sent the fastest assault boats to this sea ~ But the weather is not on our side please don’t blame our soldiers, they come at the risk of their lives.”

“So please calm down, everyone, let us face this sad moment together. We together pray and live courageously in the face of this disaster? ~ Let’s accept the reality ~ Let’s pray for the Sapphire in silence.”

Mr. President took the lead and closed his eyes, then the Secretary of State, the people to the right, and to the left, and the White House spokesman, also got their eyes closed.

In the TV broadcast screen, the small screen at the top right showed the Sapphire scene. In the crashing waves, more and more bubbles emerged. The hull of the Sapphire is looming, it seems the next moment it will never float.

Just when all of the American people were about to come to terms with this reality with desperation and began to observe a moment of silence together. Journalist Bassett suddenly shouted frantically into the microphone, “I can hear, I can hear.” The director immediately noticed the anomaly and quickly cut off his voice.

“This is the Colossus ~ The Colossus is calling you. Please respond when the speedboat hears me. My ship has been ordered to save your ship.”

The torrential rain, the roaring wind, and the huge waves could not mask the conversation that was coming over the radio.

Chapter 589: Hero.

Before reporter Bassett could learn the ins and outs of the case and figure out the whole story, the red-eyed sailor battling the gigantic waves suddenly screamed loudly, the cameraman followed that call and quickly pointed the camera towards the porthole in the bow of the ship.

At this moment, audiences around the world could see a ship of incomparable size breaking waves in their direction in stormy waves.

In the curtain of rain, the ship seemed to have no end of height, and the dam erected went straight into the sky.

“Ah!” cried the three brave men aboard the speedboat.

The huge waves are extremely small in front of this ship. No matter how strong the wind is, he can never shake his huge steel body. Her bow is not the same as any ship; it is flat like a blunt hammer, encrusted with majestic and ruthless mastodon heads in the middle. The anchors hung on both sides seemed larger than their fast speedboat. They were huge anchors covered in a mist of rain.

Journalist Bassett rushed forward, trying to see the entire picture of the huge steel ship, but couldn't see the whole picture.

Boom Boom Boom ~ the giant steel ship sailed through the waves, slicing through a huge wave that could only touch a third of its height and passed the speedboat.

“My ship has been ordered to save your ship, and this speedboat must move away immediately.”

The majestic voice of the steel giant came from the radio communicator.

The grieving American people suddenly rose from the sand and their chairs. Even the room where the President's speech took place was taken in unprecedented surprise.

“Oh my God, whose monster's symbol is?”

“Oh my God, what type of ship is it? It appears to be larger than the aircraft carrier. How can he appear here without being knocked down by the waves?”

“It's the symbol of Monster Heavy Industry, and I know that logo.”

The next moment, the live broadcast room of the President and reporters near the Sapphire were swapped. The director quickly transformed Mr. President into a small screen, allowing the audience to better see the scene.

At that time... the Sapphire was no longer visible over the sea, and no huge shadows appeared in the crashing waves. The Sapphire was sunk by a huge wave.

“Does it late, my God, please give us some more time, why are you treating us like this?” Journalist Basset grabbed the rail and screamed and looked out the window.

Keng Keng ~ Keng Keng Keng ~

At that time, a sound of mechanical gears louder than a storm came from the sky.

As the speedboat quickly moved from its position, it also allowed the audience to see the full picture of the huge steel vessel gradually approaching. It was as huge as an aircraft carrier, and the ship's steel boom was so high it never stopped.

Now the steel arrow moved quickly, detonating agility that is contrary to the huge physique and after a few breaths, the arrow moved to the side of the giant steel ship, and then everyone saw a shocking scene.

A row of giant steel claws as wide as the highway, pulled from the sky by thick steel cables. The giant claws slammed in the water, making a wave bigger than the ones before.

The sinking position of the giant claw was where the sapphire disappeared.

It was a scene, not everyone imagined: the huge steel ship, still motionless under the enormous inertia, turned its propeller upside down, circling the spot where the Sapphire disappeared.

In this way, without any exploration, research, meetings, and discussions, the experts were asked to make workable plans and came up with a variety of possible pre-plans, so that the giant claws were well laid.

No one could think of what is going to happen. The next moment there was a sound of a loud metallic collision coming from the bottom of the sea, then the boom of the giant steel ship began to rise and huge waves began to appear on the sea.

Ten seconds later, the Sapphire, which had sunk into the sea, was suddenly lifted.

They were six large iron claws the size of a highway. They accurately and firmly grasped the V-shaped bottom of the Sapphire. Due to their strength, the giant claws trapped the hull from the bottom of the ship.

The Sapphire, with a displacement of 9,000 tones, has just resurfaced. When a huge wave hit the surface of the sea, the huge steel ship, which added the weight of seawater to its hulk in the ship inevitably, shook violently.

“My God, this... what kind of a ship it is, I’ve never seen it before. But I recognize the logo on the bow of the ship, it’s the Monster Heavy Industry logo,” The Expert who was doing a show on TV was already excited to the point of the inconsistent speech.

“But...”

“But it’s very dangerous like that. In the environment huge waves appeared, it added extra weight, the weight of the seawater to the weight of the Sapphire, which made the center of gravity shift.”

“Wait ~ it’s impossible. Sapphire’s full load is close to 10,000 tons, and a lot of seawater has been dumped. No engineering ship in the world can lift it.”

It’s a shame that the words of the experts are not effective this time around.

After hoisting the Sapphire, the giant steel vessel was stopped by the power of the inverted propeller. Seawater rushed back into the sea from the Sapphire. After ten seconds, the steel giant let go of the giant claws attached to the front of the Sapphire, allowing the bow of the Sapphire to enter the water.

When the Sapphire hit the surface of the sea, a big wave appeared, it turned out that the Sapphire was advancing a bit. At that precise moment, the steel giant slapped and loosened its three giant claws.

The captain of the Sapphire was already excited and could be delighted to be able to get it moving again, and lo and behold the Sapphire was in action to straighten the hull and float on the water.

At the same time, due to the instability of the center of gravity, the crisis that could overthrow it was instantly repaired.

The claw that had come loose gripped the Sapphire deck again. One after another, two large holes appeared in the hull. The giant claws held him like a giant holding a small child so that he did not have to worry about any danger.

“Let’s check this moment out together.”

“Mr. President, I ask you to answer me, they have done their best.”

“Now I want to ask you to keep your eyes open, especially you, Mr. President. You can tell me if this scene is a masterpiece of God or a masterpiece of human science and technology?” Reporter Bassett went wild with excitement.

Six claws have been lifted, and now two have been separated to capture the Sapphire. The other four slammed straight into the sea, and the thick steel cable at the mouth of the bowl sank quickly.

Soon someone understood the meaning ~ this giant steel ship sank those claws to the bottom of the sea and serve as anchors.

The images were returned to the White House speech room, and the President made his mouth grow in front of the national audience.

The secretary of state and the speakers on the side were also silent.

Earlier, Mr. President had brought everyone to observe the Sapphire. The next moment, a huge steel ship straddling the wind, and waves rushed to save it from the water.

This process only took tens of minutes, and most of the time was the time it took to stabilize the hull.

“Heroes, the entire crew of this ship is heroes. The Sapphire is saved.»

“You can’t say anything else? ~ Only, let’s observe a silent tribute ~ How can I say that? Mr. President in mourning, or consider this giant steel ship a hero?”

“Did God bless us? It wasn’t God, and it was the heroic Monster Heavy Industry who saved us.”

“Mr. President, Your people need you, and this giant steel ship has come to their aid, he is the hero.”

“Haha ~ ridiculous, Mr. President said like a fool that there is no technology to save him and took us for a minute of silence. I am ready to let the captain of this steel giant become president because he is the hero in our hearts, we Americans! “

“I want to send calcium tablets to the White House. They need calcium supplements, or their bones will be soft and they will be unable to stand.”

From desperation to hope, in a matter of minutes, the mindset of the public changed. They were extremely disappointed with the behavior of the White House and became full of gratitude for the giant steel ship.

Looking at the pictures, the Sapphire is like a child, held alongside the giant steel ship. All the public, all the media, are all mad.

Excited, they threw away whatever they could throw away. There they would raise their arms screaming with excitement and anger.

"Long live the giant steel ship!"

"The White House is a mess!"

Chapter 590: The most successful rescue.

The mechanical claws are specially designed to grip nuclear bombs at a depth of five kilometers. Now, these huge claws have gone straight into the seabed to a depth of two kilometers, they went down on both sides of the giant ship from its left and right securing it firmly in place while gripping the seabed.

The ship Sapphire with anchors and the ship Colossus without anchors are completely in two different states since the Colossus with huge wheels winding chains was able to withstand the typhoon, thanks to its giant claws hugging on the ground at 2000 meters of depth.

Through the images returned by the photographer, people saw a huge wave hitting this giant ship, a wave ten meters high, it had hit it just like hitting a huge wall, it was so pale and weak.

"It's... it's a miracle," the footage arrived at the White House, and the President whispered: "I can't explain why this huge ship was able to save the Sapphire effectively."

"But ~ But, in the face of this first ~ Thank you for the courageous and fearless behavior of the captain of this ship! ~ Thank you for saving the sapphire."

The audience whistled, but they clearly remember that ten minutes ago, the President answered their question on behalf of the government. They are unable to send relief forces to let people come to terms with reality and pray together.

Now the face of the White House is cracked, and people no longer want to hear Mr. President speak high-sounding words.

There was also a new situation on the Sapphire side; the giant ship used a set of small dams to lift two mighty sailors towards the Sapphire. This scene caused countless onlookers to press their lips together and scream nervously down their throats.

They saw these two sailors of incredible strength. Without any safety measures, they took the demolition tools with one hand and grabbed the chains with the other hand. They soared to the sky above the Sapphire, oblivious to the waves rippling below, and leaped onto the Sapphire Bridge. God only knows how dangerous this movement was. These men are the bravest in the world.

In this case, they had to be so confident, because if the Sapphire accidentally moved slightly, they will fall into the sea, they were very sure of the situation, they were very sure that even a spray will not take off from the sea. The two muscular men had let go of the chains without any hesitation, and landed on the bridge two meters apart, followed by a bounce like a bouncing barrel, and rushed towards the cabin after releasing their strengths.

While watching the unfolding of events, countless girls thought that these two muscular men were the most beautiful and manly men, and men thought they were the bravest people.

.....

Two hours later, the wind and waves reduced again, and the Colossus directly weighed "anchor" and took the Sapphire to the nearest Miyanouradake Island. This time the wind and waves did not suddenly get stronger and remained the same until the Colossus arrived in port.

The speedboat also followed closely to one side, avoiding the waves with the help of the Colossus.

The port had already waited for countless reporters. When the two tugs reached the Sapphire and transported it to port, reporters and government rescuers rushed in: "Heroes, heroes, may I interview, I'm a reporter for Japanese public television."

"Brave sailors, you are the heroes in the hearts of the American people, what kind of ship is your huge ship, why have I never seen it before?"

"I'm an NBC reporter. Is your company the Monster Heavy Industry?"

"I am a reporter for the Chinese TV channel. Are you an employee of the Monster Heavy industry? I saw the Monster Heavy Industry logo on the bow."

A group of journalists with red eyes from fatigue stood on the pier shouted at the Colossus.

The Electronic Messenger came out of the cabin to look at them, and then returned to the cockpit to call by radio: "We will not take an interview, goodbye!"

"After risking our lives to save these persons, we have no desire to receive praise from anyone, so we should leave."

How is it possible? They have too many questions and too much curiosity. This steel giant boat is a star in the world. Who can interview them? It's even more sensational than interviewing all the Oscar winners.

However, despite the fact that these reporters have spoken and made countless promises, no one on the steel giant boat has always looked after them.

Lifeguards and government personnel on the shore were also somewhat overwhelmed. In common sense, this huge ship has no reason to leave after completing a rescue operation that has caught the world's attention. For what follows must be a heroic triumphal ceremony and generous rewards from the Japanese and US governments.

They did their best to keep it, but they couldn't keep it as much as the media.

Fortunately, the majestic giant logo hanging in front of the giant ship made them realize that if they were to travel to China to find a company called Monster Heavy Industry, surely they could find it.

The giant steel ship left, while the Sapphire was left behind.

Inside the Sapphire, there were 120 crews and 221 passengers and after a lag behind investigation by rescuers, the statistics finally provided incredible data for people around the world. With the exception

of the missing captain and the second mate who stayed last in the cockpit, the others hid in the first-floor hall, and all passengers and staff survived.

It was truly a miracle, referring to similar ships that suddenly capsized in the past. In the end, less than five passengers survived. The Sapphire broke this example, if the captain and mate hadn't stuck to the cockpit they would have survived.

Because Sapphire's first-floor lobby has been specially modified, it has an independent air circulation system and a closed hatch, designed for people to take refuge in the shipwreck and fire. And the crew and sailors organized the passengers to take refuge in the lobby when the fuel was about to run out.

Of course, this is based on the situation that the Colossus arrived on time. If there is no Colossus, Sapphire's security system will be useless even if it had to add ten bays of refuge.

.....

Tourists and sailors were all in shock. Their faces were pale. When they were helped by the rescuers, the American people were completely on a boil. Relatives of the crew and passengers cried with joy.

They shouted the name of Monster Heavy Industry and praised the company in the most beautiful language imaginable.

In the evening, the main media around the world booked plane tickets to Shanghai City, and they wanted to interview Monster Heavy Industry. Royal Caribbean Cruise Lines also announced that from now on, and Monster Heavy Industry employees will be able to eat, drink and gamble as much as they want on their cruise ships, without paying any money.

The Japanese minister personally expressed his gratitude to Monster Heavy Industry on the evening newscast and said he was ready to provide one million Yuan per person to the crew who took part in the rescue. The White House said it was studying the reward plan.

At the same time, the American media published all kinds of jokes about the president. In particular, the president's phrase: "We're unafraid of danger, but our experts really can't come up with an effective plan," has become the second headline for major websites.

Subsequently, the mass media took special action to protest against the White House.

They sent calcium tablets to the White House, which means the White House politicians, should take good calcium supplements and not shrink their bones whenever they are in danger.

What the Monster Heavy Industry did, the President even said the United States couldn't do.

In this way, various expired calcium tablets and pet calcium tablets were packed and sent to the White House.

Politicians and civilians see it differently, and what civilians see is that Monster Heavy Industry is a terrifying industrial force.

The White House urgently summoned several mechanical engineering professors to analyze the Colossus' equipment through repeated reruns, and why they could achieve feats they couldn't even imagine.

Of course, they will be unable to come to the conclusion - The real goal of this giant is to restore their nuclear weapons which terrorize the world.
