

M Factory 591

Chapter 591: Energy core.

When the Colossus and the Lord Duan Battleship met, it was already three in the morning, the storm had already subsided and the waves on the sea surface had turned into acceptable big waves.

However, only the Colossus dared to dock in the two-kilometer sea zone, while all the other ships were in shock and waited for the weather to improve before daring to leave.

The Lord Duan Battleship stood a thousand yards deep in the twilight, above it was the Colossus, and below it, every three hundred and thirty yards was a Squid Deep-sea Searcher quietly waiting. Twelve Squid Deep-sea Searchers were arranged horizontally, deep in the seabed.

When the three contraptions were together in a straight line, the Colossus again activated the enormous steel arm frame, and the six giant claws plunged into the water.

"Boom!"

The giant claws continued to sink after brushing past the Lord Duan Battleship, and eventually submerged in darkness, only thick steel cables moved in the pouring rain. Then the detector of the Squid Deep-sea Searcher N ° 12 captured the movement of the steel claw, then on the 11th, the 10th...

Squid Deep-sea Searcher numbers continued to help Steel Claws correct coordinates. While waiting for Squid Deep-sea Searcher N ° 1 to capture the image of the steel claw, the six huge steel claws hovered above the wreckage of this fighter plane.

When the six steel claws appeared on the screen, the image of Detector N ° 1 was all muddy. Flakes of volcanic dust filled the entire screen. After tens of minutes, the dust settled. The Douglas A-4 Skyhawk strike plane that had been sleeping here for decades and the nuclear bomb that the United States had lost and was struggling to find became very clear.

Over the sea, the Colossus made a mechanical noise that echoed across the sky.

As the twenty-four taut steel cables rose, the giant claws gradually rose. Passing past the Lord Duan Battleship, Ye Qing exploited it and floated with the twelve Squid Deep-sea Searchers. The two "Juli" monsters, the hard work monsters, once wore hard lead-plate suits and were standing on the bridge waiting.

When the Lord Duan Battleship floated to the surface opened the hatch and revealed the specially constructed heavy-walled lead storage cabinet inside.

The giant claws grabbed a pile of wreckage and moved towards the bridge, and the two giant workers immediately used brute force to pull out the wreckage of the plane that had been corroded down the hole. The wreckage was gradually emptied of the water, and soon a metallic object in the shape of a semi-ellipse covered with a thick layer of marl was exposed on the bridge.

Just scrape it with an iron plate, and the silvery-gray metal will be exposed. Even after decades of submerging in seawater, the metallic surface was still shiny.

Half an hour later, the nuclear bomb of the explosive power of 500,000 tons was transferred to the hold of the Lord Duan Battleship.

.....

The Colossus threw the entire wreckage and continued along its predetermined way, and the Lord Duan Battleship plunged into the sea and returned to Shanghai with the nuclear bomb.

Someone arrived a little earlier than the Lord Duan Battleship, they are more than one. These are the congratulatory groups of major media around the world, as well as those of the United States and Japan.

After the Lord Duan Battleship traveled over two hundred nautical miles, it floated on the surface and sailed on the surface of the sea. Ye Qing's satellite phone continued to receive calls from the company.

The nuclear bomb has been picked up. How could Ye Qing save time to deal with her first? So he asked the company to receive them first. No matter who has come, they have to wait for him to finish his job.

It was already nine in the morning when he arrived at the Longxitan Beach factory, and the Lord Duan Battleship entered directly into the underground wharf.

Coming out of the cabin, Ye Qing ordered 'Juli' monsters, the monsters of hard work to lift the nuclear bomb, then bring in two hundred kilograms of transparent crystal and high purity metallic tungsten that the Master Metal Experts have devoted half a month of effort to extract, high purity palladium, a jumble of metal and a thousand tons of combustible ice.

Combustible ice was loaded into several sealed pressure vessels, and the cold store did not stop cooling.

With the addition of the nuclear bomb placed in the heavy lead cabinet on the floor, Ye Qing will have finally prepared all the materials needed for the energy tower.

Ye Qing took out the Geiger counter and tested the intensity of the radiation around the lead cabinet. Fortunately, although the meter can detect the slightest amount of radiation in the air, it is only 0.5 millisievert, which is less than the safety standard requires. He pulled out the Monster Factory cell phone and took a deep breath; anxiously he chose to recruit the energy tower.

The rest of the materials can be guaranteed to qualify, but the nuclear bomb alone cannot be guaranteed. Although public information describes this type of nuclear bomb, the internal charge of the plutonium core is 15 kilograms and the purity is 96. But that's paper data after all. Who knows the purity of this nuclear bomb, if there is a problem?

Namely that during the year of the Cold War, the frenzied American and Soviet arms race, both on the number of productions up to several tens of thousands of nuclear bombs as much as, if only to save funds, on the purity joke...

[Material or breakage.]

[Didi ~ After testing, the materials on-site will meet the manufacturing requirements of the energy tower. Please confirm if you want to build an energy tower.]

[Legendary Building Energy Tower: It can generate 100 million kilowatt-hours of energy every day. At the same time, it has the capacity to absorb and transform various energy sources and can store up to 20 billion kilowatt-hours of energy.]

[The construction time is five hours, and the construction period is irreversible. Once canceled, no material will be returned.]

"Yes... confirm!

At that time, Ye Qing was relieved and finally stopped worrying about the material inconsistency. At the same time, he also admired the United States during the Cold War. The purity of the military-grade plutonium was uncompromised at all.

It should be noted that the purity of the plutonium was over 90%.

[In the future, for each purification point, you will have to pay 20% of the total energy consumption.]

A row of blue light falling from the sky hit the row of rough materials near the wharf. It was as if a source of the warm light shining on the snow. Whether it was the large transparent crystal in the metal frame or the high purity metal on the tray, which is soft enough to be cut with paper, it slowly melted and vanished. Although the combustible ice in the container and the high purity plutonium inside the nuclear bomb was not visible, they must have melted together.

The Monster Factory also has an additional progress bar.

Ye Qing didn't go anywhere, just waiting for the completion of the energy tower construction.

Five meters further ahead, a beautiful beam of purple light descended. Inside the beam of light, countless metallic particles of starlight were gathered by magical power, slowly forming a metallic color Ye Qing had never seen before.

An hour later, the base of the energy tower filled with mysterious electrical patterns formed. It wasn't as huge as Ye Qing imagined; the mysterious base in front of him was only two meters in diameter, which is very small.

Two hours later, the outer wall of the transparent energy tower condensed. Three hours later, the condensation at the top was over, and the energy tower began condensing liquid energy like thunder and lightning.

Five hours later, a five-meter-high metal base with mysterious electrical patterns, a transparent crystal body and an energy tower made up of two metals, one black, and one silver stood in front of Ye Qing.

It was a legendary building that has been out of current technology for so many years, slowly approaching this tall tower with a continuous discharge inside.

Ye Qing felt his breathing should stop because he suddenly thought of a possibility. As long as the energy tower in front of him is not huge in terms of volume, it is, therefore, possible to move it.

Whether it will move it to the giant 10,000-ton ship and serve as a power source for the giant 10,000-ton ship? No, no, the technological content of the giant 10,000-ton vessel is too low. What if it serves as the aircraft's power source?

Ye Qing thought about the sixth stage of the Monster Factory and black technology sound-absorbing steel that can swallow all sound waves and detecting electromagnetic waves.

Chapter 592: Are we familiar?

Ye Qing felt the energy tower opened a whole new door for him, a brand-new big door to a moving eternal energy source with which the possibilities will be almost limitless.

Ye Qing immediately thought of using it to produce sound-absorbing steel to build a huge airplane. This is quite doable in principle, and the lack of imagination is just unbridled imagination and rigorous mechanical design.

The energy tower can generate 100 million kilowatt-hours of energy per day. What will it be used for? One hundred million kilowatt-hours are enough to power ten aircraft carriers.

Currently, Monster Heavy Industry consumes only 5 million kilowatt-hours of electrical energy per day. This amount of energy is used to equip the high-power laser which deposits the diamond in the vapor phase and starts the melting center of metals.

Of course, Ye Qing will not connect the factory power supply with the power tower. Save that electric bill and the outside world will be suspicious. Why the factory suddenly stops using electricity, was it in a crisis, or was there a major accident?

The biggest use of the energy tower is to act as an energy core and make black-tech plasma batteries. Thinking about this, Ye Qing immediately looked for a Master Craftsman and asked him to build a base for the energy tower that could move and move it wherever needed.

But before that, Ye Qing first did a little test to try out the energy tower.

Right now, the energy tower alone has stored 500,000-kilowatt-hours of energy. It happened that the plutonium concentrated inside the nuclear bomb was completely absorbed, leaving a large metal shell and a thick lead cabinet.

Ye Qing did not dare to make a decision on the nuclear bombshell. It contained hundreds of kilograms of high-energy directional explosives. Once it exploded, the entire barren mountain would be destroyed. Ye Qing wanted to move the Lord Duan Battleship and take it far into the depths of the high seas. The lead cabinet weighing five tons became the target of the test.

After emptying the dock, Ye Qing chose to release energy on the lead cabinet using Monster Factory's mobile phone, and the power was boosted to the maximum. Then Ye Qing ran away and clicked OK.

The energy of 500,000-kilowatt-hours was instantly released. Even a few hundred yards away, Ye Qing's pores and head were erect in an instant, and there was a thunder-like electric arc in his ears.

When the dazzling white electric light was gone, the five-ton lead cabinet became the best conductor of electricity, and it was instantly hit by the arc and turned into a puddle of hot lead. It was more than an instant discharge; it was simply a lightning bolt.

In the field of engineering, the five-ton lead cabinet can withstand such a powerful instantaneous discharge device, and this transformation can only be done in the world's best major national energy laboratories, extremely large. If the power is higher, it can only be done in the drawings.

.....

At noon, Ye Qing moved the energy tower to the innermost layer of the underground base and at the same time asked the company to start collecting industrial materials for making plasma batteries.

"Boss, I really can't stand it. Come back soon," Qiu Yi, the purchasing manager, almost burst into tears when he saw Ye Qing recall the company: "Now dozens of reporters and officials from Japan and the United States have invaded the company and stayed in it and don't want to leave. ~ They insist on seeing you. Their support is greater than ours. Our managers can only accompany them but can't do anything else."

"You will help me prepare the list of these industrial materials first, I will return to the company in the afternoon," Ye Qing paused and said: "First, help me organize a schedule for meeting these officials. Each person will only have 20 minutes. Inform reporters that there will be a press conference at 5:00 p.m. I will attend in person."

After waiting a whole day, media and officials from both countries will finally meet with Ye Qing.

The media have not complained too much, to wait for big news; it is common for them to follow it for months. However, officials and representatives of the United States and Japan hold strong opinions. Especially when they have warned them they only have twenty minutes each.

The official American representative was the assistant to President Weisz whom Ye Qing knew very well. Today, she wears a white professional outfit, looking quite young, full of intellectual femininity.

Assistant Weisz said in a very serious tone to an official who was in charge of conveying Ye Qing's order: "Please change my time to one o'clock. I have important things to discuss with your president."

"I'm sorry ma'am. The president's order, I don't have the right to change it," Kong Tao, the most open of all managers, made a helpless gesture: "You can let him know your opinion when you meet him at 2:20 pm."

"I've been waiting for a day. You should know how busy my schedule is."

"But I really can't be the master!"

"I know, I now have a beautiful picture, the employees in your company seem to be as stubborn as your president," the president's assistant, Weisz, teased the golden spectacle in his ear and sighed inexplicably.

"Oh," Kong Tao turned his head and rolled his eyes: "It's no secret that our President and the President of the United States are fighting."

President Ye has threatened more than once to go into the specially monopolized high-tech industry by the United States and pull their legendary companies from the altar one by one. With this kind of relationship between the two sides, how can we expect Kong Tao to stick his warm face?

In the afternoon, Ye Qing and Weisz, assistant to President Donald Trump, met again. In the president's office, Ye Qing kept staring at her with a look of "how do you have a face?"

Assistant Weisz calmly sat in the chair without caring and crossed her long sexy legs.

"Mr. Ye, we saw each other again. ~ First, on behalf of the White House and all the people in the United States, thank you," seeing Ye Qing hadn't said a word, Assistant Weisz opened her mouth to herself: "It doesn't matter what our grievances were before, but this time I want to thank you again for helping us save the Sapphire ship, ~ due to the distance our American side didn't could send large rescue equipment over time. ~ Your company had an engineer ship passing through this sea area and approached us and lent a hand. ~ For members of this ship. We are ready to offer RMB 5 million rewards to each person. At the same time, they are granted the title of Honorary Citizen of the United States and can enter and leave the United States without a visa.

"Wait?" Ye Qing was a little surprised, and stopped Assistant Weisz's words: "You said you were in the United States and because of the distance you couldn't save the Sapphire? ~ Why? ~ What? What's wrong? ~ How do I read the news? ~ Your Mr. President said that your experts have studied for a long time and have finally come to the conclusion. The US has no technology to save the Sapphire? ~ with me, there's no need to brag, is there?"

"You ~ Mr. Ye, how come we don't have this kind of technology in America ~"

Assistant Weisz suddenly blushed: "Now, President Ye, of course, doesn't know much about this aspect. ~ Well, let's change the subject. ~ Let's talk seriously about the cooperation between the two parties. ~ In the face of interest, I think we can put aside the previous conflicts," Assistant Weisz looked at Ye Qing seriously and raised her eyebrows with her sword: "Are we familiar? You saved hundreds of Americans. Of course, these are our American friends," Assistant Weisz laughed.

"I saved them according to the humanitarian spirit of the sea," Ye Qing shook his head: "They are only civilians, and we have the ability to help, naturally, we have done our duty. ~ It means that we weren't expecting a reward."

"First, let us pay the rescue costs."

After she had spoken, Ye Qing pulled out a thick form from the desk

"Here is a detailed list of the different expenses, you can take a look."

Chapter 593: This is our last compromise.

This detailed list made Assistant Weisz's heart leap just because of its thickness and after going through its contents, her heart ached even more. This list contained quite a few expenses to be reimbursed such as travel delay costs, the crew and the Colossus boat compensation costs, fuel costs, mechanical load operating loss costs, and so on. For just right now. ~

How come there are also missed labor costs and delayed projects and uncompleted ports? Are labor costs really lost for the Colossus?

These costs are specific for each item and the details of each mechanical component. And in more detail, the mental activities of the crew, the detailed list had used a lot of space to present how the crew was not afraid of danger at that time and gave up their own safety to save the crew of the Sapphire.

Of course, that also requires money.

"Five ~ \$ 500 million!" Had almost shouted assistant Weisz: "Why don't you get this sum?"

"Why are you surprised? ~ Miss Weisz, do you think hundreds of American lives aren't worth that much money?" Ye Qing raised his sword eyebrows at her again.

"It's worth..." Assistant Weisz bit her white teeth.

"But the number on this detailed list is too exaggerated. As far as I know, even a 100,000-ton tanker is not worth the US \$500 million. I don't think your giant ship is intact?"

"Broken, it just broke from the bottom at noon today. Now it has to turn around and go back to Shanghai for the overhaul."

"This engineering vessel was originally planned to go to Nigeria to carry the material needed to build it from a deep-water port," Ye Qing sighed: "Now the main project of the ship is broken, and the project was completely delayed. ~ I don't know how long it will take for the overhaul and when he'll be back on his way back to Nigeria."

"You..."

"Well, let's not talk about this harbor project."

Assistant Weisz changed the topic of conversation: "Let's talk about cooperation ~"

"~ Your sewage plant has passed the ecological test, and this rescue operation has accelerated the facts. It has completely won a good reputation in the United States. This time we will change the cooperation plan. ~ Given that your company does not want to set up a military enterprise in the United States, we will first cooperate in the civilian field. I am here this time, on behalf of Mr. President, to offer Mr. Ye new proposal cooperation..."

"Without cooperation, I don't like your coming and going," Ye Qing knocked on the table: "The 20-minute reception time is up, Miss Weisz, you can leave."

"You don't need seeing the Japanese representative. I can use his time. Anyway, the Japanese representative has high-sounding language, and I don't think you like to listen to him." Assistant Weisz waved her hand casually in a gesture that made her look like a senior government official.

"..."

Ye Qing sympathized with the Japanese representative for a few seconds in his heart.

"Mr. Ye, this time we can sit down together and talk about cooperation. It should be the last chance. We in the White House will not try to compromise with a private company over and over again. ~ Negotiation is not our only way. ~ It's just a kind expression that we want to avoid conflict. ~ Mr. Ye, tell the truth. ~ The technology your company has shown has increasingly threatened our US interests. ~ If this cooperation fails, then I think we have to do something," Assistant Weisz recounted a case that seemed trivial. Right now, behind her is the most powerful country in the world.

After listening to Assistant Weisz's words, Ye Qing stood up, pushing back a slightly cynical smile, walked in front of her and opened the door, and looked at the young American representative.

"What? ~ What? Mr. Ye must first listen to the cooperation policy issued by the White House?" For some reason, Assistant Weisz felt she did not dare to look the young president in the eye, as his eyes were very sharp and there was a strong self-confidence that dared to face the set of the United States.

.....

If it is a group of lions, then this young president is the youngest and strongest lion in the group.

.....

Weisz sighed in her heart, if Ye Qing was American she was willing to sue him, but it's a shame, her man was Chinese and he was unwilling to cooperate with the United States.

"Miss Weisz, the growth of a great company has never been smooth. ~ I am ready to fight against my opponents, and I have fought against them. I don't care who my opponent is, even if he is such a powerful one as America," Ye Qing stopped and smiled, "If you want to ask, why a businessman does not seek profit first and goes against you. ~ So I will answer you, this is the personality of my Ye Qing. ~ From the time I was invited by your president to visit the United States until I returned from the United States, our relationship was determined. ~ I am convinced of my abilities. ~ So ~ there is no cooperation, only competition. "

"I see," Weisz slowly got up from the chair and lingered. She still reached out and explained to Ye Qing in a low voice: "From my personal perspective, I appreciate Mr. Ye's character very much. It's a shame that the interests of the United States are behind me. Since we represent different camps and we will not cooperate, there will be contradictions between us. We cannot see an adversary company gradually getting bigger that we admire and ignore, because in this way, we are irresponsible to our American technology companies. ~ Before coming, Mr. President told me several times that I must explain the relationship clear to you. ~ I think I explained it very clearly. I will leave for the United States in the afternoon. And this time, I will tell the President our conversation."

Weisz explained it seriously for a long time because she admired Ye Qing.

"Okay now ~ I'll say goodbye to you," Ye Qing shook her hand.

.....

The Japanese representative has finally come, otherwise, he will be unable to explain to people all over the country who are paying attention to the news what happened between the two of them; him and Ye Qing. Of course, the meeting time was only a few minutes. The Japanese representative uttered many high-sounding words, circled the reporters, took several rounds of flash shots, and ran away with a flat mouth, cursing the representative of the United States who stole his time. But he didn't dare say it.

At 5:00 p.m., the press conference for journalists organized by Monster Heavy Industry will be held at the conference center of the new Monster Heavy Industry Building. Ye Qing walked over to the opposite building which was standing straight up in the sky, lifted his head, faced the sun, and went to contemplate its height. It looked like a tall tower extending into the sky, and it won't be long before he can move here for office life.

By this time, the Monster Industrial Building had reached the ninety-fifth floor. After another four floors, the ninety-nine-story main building will be capped, then the exterior glass curtain wall will be entered and the curtain wall's alloy support structure will be constructed.

The interior decoration has also been carried out on the 87th floor, and when the curtain wall on the outskirts of the building is completed, and will be officially put into use.

While there was still time, Ye Qing first went to Tianjin for a walk.

In the conference center, reporters from major news media around the world gathered to prepare for an interview with the president of the Monster Heavy Industry.

This time, the president of Monster Heavy Industry is a hero in the hearts of people around the world.

Of course ~ not all media have this goal. The goal of some media is not to help Monster Heavy Industry promote its reputation.

Chapter 594: The curiosity of the American people.

At five o'clock the press conference was held on time. Over 70 media outlets from various countries gathered to prepare to interview this heroic endeavor. Among them, the American media are the most present. Now the most frequently mentioned words on the internet and social media in the United States are Monster Heavy Industry and Colossus.

During this time, several American media carried out live broadcasts on the Internet and on television. The press conference began, and Kong Tao started the opening first.

"Dear friends of the press, good afternoon everyone, ~ thank you all for coming from all over the world to our beautiful city of Shanghai, I want everyone to come and visit our beautiful country. What you want to know most about our company which has a large, globally designed vessel. A huge engineering ship was invested and built by our engineers, ~ so let me introduce you to the specific situation of the Colossus."

The reporters fell silent and began to listen attentively one by one. Kong Tao smiled and appreciated the situation.

"The hull of the Colossus has a cargo capacity of 70,000 tons, and the cargo is complete..."

After spending more than ten minutes introducing the basic situation of the Colossus and the industrial technology used in the rescue, Kong Tao indicated to everyone that they can raise their hands and ask questions, and while grazing the ground, all the reporters there raised their hands.

Kong Tao indicated one at random. This American media reporter quickly stood up, with friendly, grateful eyes: "Excuse me; your company has become a hero in the hearts of our American people. There may be thousands of them now. The Americans are watching this conference on TV. ~ Can you tell me what your company's products are? I think the American people must be very interested in knowing about them."

This was a grateful media reporter, and he wanted to advertise the Monster Heavy Industry through their webcast.

Kong Tao briefly introduced several civilian products produced by the company, and when the Magic Crystal mobile phone was introduced, the reporter looked very puzzled.

"Does your company even produce cell phones? Why haven't I seen this model in the US market?"

"Because it's still under review," Kong Tao nodded and didn't explain the Magic Crystal cell phone was banned by the US government for no reason.

After asking a few questions in a row, the reporters and media were all very friendly. In particular, the media of the United States were so polite and respectful, making people feel like a spring breeze.

It is a pity that the friendly atmosphere abruptly ended when a journalist from a relatively well-known national media outlet asked his questions.

This journalist was from the journal *Observation et Information*, and this journalist was a man with a sharp frontal bone: "Excuse me, Mr. Ye, your company didn't hesitate to let dozens of crew members risk their lives to save the yacht, *Sapphire*. Does this show that you are hoping to win favor with the United States so that the United States government can lift the embargo on your company's products?"

Ye Qing was also seated on the stage. As soon as this problem appeared, most of the media immediately scanned it back and forth.

What? Did the US government actually impose a ban on Monster Heavy Industry products? No wonder then that Americans cannot see the products of Monster Heavy Industry in the American market.

It's just this question is extremely pointed. If it had not been for the Monster Heavy Industry, hundreds of the *Sapphire's* passengers would have been swallowed up to the bottom of the sea. Such a large rescue operation was described by this reporter as a speculative act for the benefit of the company to take the life of the crew as a gamble. This made the American media at the scene particularly outraged, and they looked at the reporter with serious and contemptuous eyes.

"Firefighters also risk their lives with every rescue mission. Mr. Reporter, can you answer me, what are they for?" asked an American reporter fluent in Chinese.

The man with the pointed frontal bone had a face full of indifference to hateful looks and the question of his fellow American journalist.

Ye Qing lifted his head and glanced at the reporter.

"If you were also on this ship, I wouldn't think you would put it that way."

The American journalist burst out laughing, then Kong Tao replaced him with another journalist to ask his questions. He was also a national journalist and did not expect the question he will ask to be that specific.

"Excuse me, Mr. Ye, did you ask the US officials to lift the market ban when you meet at noon? We know Apple is suing Monster Heavy Industry over the Magic Crystal issue. Did you ask to withdraw the lawsuit? We know that because the lawsuit concerning the mobile phone Magic Cristal between Monster Heavy Industry and the Apple Company is working in court."

“One more, the next one,” Ye Qing smiled at the reporter, and directly denied him the right to answer his question.

This time, Kong Tao learned well and immediately filtered out these small and medium-sized national media and selected the larger ones.

However, the objectives of these two correspondents were achieved and many American media broadcast the conference live. Not to mention that many ordinary Americans already knew that Apple was suing Monster Heavy Industry and those Monster Heavy Industry products are banned in the United States.

Due to the time difference, it was still early morning in the US, and most of the places to watch the live broadcast were online. After the release of the news fixes from various media at noon, people watching this press conference will have a blast.

.....

Sure, the more pay to a high standard of living, the easier it is to have sympathy. In the mighty United States, people have virtually no current information to pay attention to. Naturally, this celebrity entertainment and the content of people’s lives have become one of the topics they are interested in, and for one news item over the course of a week, a puppy caught in the mud having some heated discussion between them on the Internet. So what if it was several of their compatriots in danger of death at sea?

.....

Those national reporters who raised black money from some companies that knew the broadcast was live in the United States, and they wanted to put the subject to the side regarding the image of Monster Heavy Industry, but it’s a shame that they underestimated the gratitude of the American people to Monster Heavy Industry.

When the reporter asked the question, Americans who watched the live show were really unconcerned about why Monster Heavy Industry was being sued by Apple and why the government had banned the sale of their products.

The heroic and fearless Monster Heavy Industry gave them a good first impression. After learning the Monster Heavy Industry was in fact producing cell phones, the heart’s curiosity immediately peaked.

What magical company cannot only produce industrial giants but also manufacture cell phones? What type of mobile phone? Is it a steel mobile phone that is stronger than Nokia?

Before the press conference ended, many netizens posted on some popular forums.

"Where can I buy a Monster Heavy Industry cell phone? I will just change cell phones. If their product is not bad, I will choose to buy their product."

"I just checked the internet. The reputation of Magic Cristal is very good. Where can I buy it?"

"I’m more curious, which are the functions of this kind of cell phone. Samsung has exploded, and Apple had no innovation. I really want to change phones."

"I can't buy it. The reporter said there was a lawsuit brought by Apple and it was banned in the United States."

"You're kidding. Can you buy drugs with cash, but you can't buy a cell phone? My neighbor is from China. I asked him to bring me one from China the next time he returned home just to thank them for saving hundreds of our lives."

"Haha ~ you farmer group, I have a Magic Crystal cell phone here."

Chapter 595: Free advertising in the United States.

After the press conference, the national media chose to return home. After all, Monster Heavy Industry had a great reputation in China, and people knew it well. In addition, there was no new news section at the moment, but some American reporters wanted to stay and continue the interview. Due to their good intention, Monster Heavy Industry had accepted their request, especially when the Monster Heavy Industry heard that they were learning more about the cell phone Magic Crystal, Monster Heavy Industry was more willing.

However, domestic reporters who were obviously looking for something could not help but voice their concern, especially the reporter with a sharp frontal bone named Wei Bo, a senior foreign correspondent who observed the news.

.....

Journalists rely only on interviews for the news, and they are very tough and tiring, and they can make a lot of money. If they want to improve their standard of living, they have to have experience and learn the journalist industry and use the money to capture selective news.

.....

Journalist Wei Bo and several other colleagues collected money from a certain company and deliberately shifted the pace to the tortured belt at the Monster Heavy Industry Conference, which is the most normal choice in the eyes of reporter Wei Bo.

Just like the doctor who accepts the red envelopes and the teacher who collects additional tuition fees.

In order to make money, reporter Wei Bo thought that industry ethics is crap.

"Dudu ~"

The photographer traveling with him was driving a Guangben company car and planning to return. When he was about to leave the underground parking lot he was blocked by an unknown black car. No matter how his car honked, the other party was indifferent.

With a slightly haughty look, reporter Wei Bo glanced at the domestically produced car in front of him which cost no more than 100,000 yuan. This time he had met the master of gold and only had to move his lips to earn 200,000 Yuan. After his return, he could buy a Mercedes-Benz netbsp in several installments.

The cameraman honked his horn again and got ready to roll the window down to scream, and the front passenger door of the car in front of him opened and a smiling young man in Monster Heavy Industry uniform stepped out.

Reporter Wei Bo thought this guy was familiar. It appeared to be a security guard who had just maintained order during the meeting. How could he still carry a metal box in his hand?

"Oh ~ it turned out to be a gift", the cameraman suddenly smirked: "Once the press conference was over, the organizer didn't want to say anything, and he maybe gave each of us a mobile phone."

"That makes sense," reporter Wei Bo nodded, although he did a drama for Monster Heavy at the conference venue. But in case people have a big heart, he has nothing to fear.

They were both about to get out of the car, and the security guard who had changed their overalls suddenly lifted the metal crate, then got back into the car and drove away.

At that moment, the cameraman and reporter Wei Bo felt like there was a slight electric current sweeping through their bodies, and their scalps and pores were numb, but that feeling disappeared in an instant.

"Is he crazy?" Whispered the cameraman.

As soon as the throttle was added and the cameraman was ready to go, the car stalled and somehow turned off and the car's central control screen turned black screen. When he tried to rekindle the fire, the car engine sobbed with patterns for a long time, but could not restart.

It was really bad; the car was very good not long before. He continued turning on the ignition, and the car could not always turn on again. The photographer was very puzzled and pulled out the phone, ready to call the 4s store to inquire about the situation.

"Damn, why is my cell phone black? Wei Bo, you can use your phone to call.»

"I plan to do this ~ no, both of my cell phones are black," Reporter Wei Bo was a little confused: "The phone broke. How come there is a mushy smell on cell phone now, just like the smell of electronics when they are shorted out. Could it be that?"

Reporter Wei Bo thought earlier about the security guard and his mysterious smile before leaving and the metal suitcase in his hand.

"Quick, hurry up and check out the other electronics."

Journalist Wei Bo quickly picked up his Canon eos-1d full-frame SLR camera. As a result, the aircraft had smoked from space in the fuselage. The photographer's equipment also did not escape its clutches, all recorders, cameras; data readers, etc. were all killed. He looked at his companion the cameraman and saw him with a face full of horror. What sort of high tech that can bypass all of their electronics in an instant did the Monster Heavy Industry have?

The same has happened to several other reporters with the same pace before.

.....

At around noon local time in the United States at this time, numerous news media re-broadcast the Monster Heavy Industry press conference on TV and the Internet and have debates; the main topic of their conversations was the Monster Heavy Industry and their Sapphire Rescue press conference.

Right now, a large number of people in the United States were sitting in front of televisions or laptops and watching these programs. They were eager to learn more about the news related to Monster Heavy Industry. After this lawsuit, they even found out that Monster Heavy Industry also made cell phones.

This company, located far away in China, had actually exhibited industrial wastewater treatment technology that surprised them even before being surprised by the rescue of the Sapphire demonstrating extremely powerful industrial machinery technology.

It is precisely because of this that when American journalists reported that Monster Heavy Industry also produced cell phones, they were more curious what type this cellphone is and this curiosity was greater than when Apple announced the marketing of a new generation mobile telephony product.

But how come their company's products are all embargoed by the United States?

The more true it is, the more people were curious about this phone. They searched the internet for this Magic Cristal phone, and it turned out that the Magic Cristal phone had long since become a hot search on Google.

"I am a salesperson, and I have a Magic Cristal phone."

This post at 6 a.m. was even more popular among the most popular. After several hours of lifting, the click-through rate on this post has exceeded one million, and the number of comments has reached tens of thousands.

I am a Texas Instruments salesperson. Don't ask me what my specific activity is. You do not understand. Our company is a global supplier of digital signal processing and analog technology, and I am mainly responsible for the activities in the Chinese market. ~

~ In recent years, the business has become more and more difficult to do..., of course, that was unmentioned.

~ Last month, I can't remember how many times I went to China on business. But this time, while I was flying to China, I met a guy who was using a Magic Cristal cell phone. Well, my eyes were wide along the way, and my expression was no different from that of a farmer who had never seen the world before. To use popular Chinese words, I'm just a country bun. You guys, you read this, can't imagine how cool the screen of this Magic Cristal phone is, especially when he compassionately lent me the VR device for a few minutes. ~

~ Have you seen the Max movie in Hollywood City? ~

~ Have you seen the New York Universal Giant Screen movie? ~

~ Did you know Parisian fantastic cinema? ~

~ If so, tenfold your feelings of watching movies at that time, which I felt when I looked through the VR glasses borrowed with the Magic Crystal mobile phone. ~

~ OK, when I got off the plane I also bought a Magic Cristal phone. ~

~ Originally I planned to hide this secret after all Magic Crystal phones are banned in the United States. I can only enjoy it in secret. I didn't expect Monster Heavy Industry to save the hundreds of Sapphire crews the day before yesterday with a fearless heroic spirit on the sea. ~

~ Now I'm going to run a wave of mobile ads for him, please open your eyes. ~

~ Look closely, this is the best dream phone that can empty Apple's Fifty Streets.

Chapter 596: A very popular Magic Crystal mobile phone.

The user who wrote this post and posed as a Texas Instruments salesperson not only used his own perspective but also took several photos of the appearance of the Magic Cristal phone and also brought some professional intro videos from China, with explanations in English. He had introduced almost everything he could think of, but he didn't expect his posts to quickly become popular on the internet. He expected only one thing from his article; be it an article that may shock many Americans, whether it was when it was about the screen of the Magic Cristal mobile phone or the appearance of the shell of the Magic Cristal mobile phone? He considered it to be a product of technology that has overtaken time.

And the reprinted comparison video of Magic Crystal Mobile Phone Pk Video and Apple Mobile Phone System made this group of Americans amazing. The user also told everyone that although the United States banned the registration of Magic Crystal mobile phones, this type of mobile phone could still be used in the United States as any other registered phone.

"Oh my God ~ I really can't imagine that Monster Heavy Industry could produce such a technologically sensitive mobile phone. I felt like this was a very traditional industrial enterprise, and it seemed to me that it was only good at making big machines and ships only. It's really hard to get people to believe the functional capacity of this phone, even more, the most incredible thing is that we have banned this kind of phone in the United States, are we afraid that Apple's mobile phone market is being swallowed up? Gee?"

"I checked the reason for the embargo in the United States and found Apple sued this phone for infringing two patented technologies. But what puzzles me is that in previous cases the product that is the subject of patent litigation is not prevented from being sold freely in the market, because before the judge pronounces the result of the verdict, no one can be sure if the patented technologies were really reached."

"I just want to know, how can I buy a Magic Cristal phone?"

"Go find the repairers, they must have one way."

"I think it's possible, the last time I had a broken Apple 6 screen, in the cell phone repair shop opened by China People, it only cost me sixty dollars to get one new screen. If you go to Apple's repair service, you'll get a new screen for one hundred and fifty dollars."

The next day, several American friends called several Chinese people around them in the United States to inquire about the Magic Crystal cell phone and asked them:

"If you go back to China, you can bring one for yourself and one for us."

“Even the Chinese don’t have a Magic Cristal cell phone sold by Monster Heavy Industry.”

As a result, businessmen accustomed to buying Huaqiangbei spare parts in bulk in China and coming to the United States to sell them to repair American cell phones suddenly felt that business opportunities were reduced. Also, they can’t do between Magic Cristal cell phones, because Magic Cristal phones can create a wave of hype!

Just like China did with the United States, but the United States has deliberately ignored China. At first, they didn’t keep in touch, and then they sent Apple six from the United States to China to make a lot of money. Now the situation is the opposite.

It is impossible to go through the usual shipping channels for dumping goods. Americans should be able to buy one of the hottest phones in recent days. If the goods will arrive by sea in a month, the heat will be too low this time, and they will forget, so we have to forge the iron.

This problem is certainly not difficult for savvy cell phone sellers, who even devised a countermeasure in less than an hour. Since there was no ban on the sale of this phone in Mexico, they immediately contacted those old Mexicans who want to make money with fixed ideas and asked them to quickly go through formal channels to order air expresses from China to Mexico. How to transport the work to the United States is left to the old Mexicans, who can sell it to them for 130%.

.....

Two days later, when there were Americans who came to China to buy the Magic Crystal cell phone. Basically, all the traders mysteriously told them, since you want to buy so sincerely, you have to pay a 50% deposit first and get the goods within a week. The 50% deposit is one thousand US dollars. When they asked for an explanation, they said they increased the price of the Magic Crystal phone to two thousand dollars.

Apple’s mobile phone is priced at the US \$ 649 in the United States, which was only over four thousand Yuan. The price of Magic Cristal was three times higher. Of course, this price scared a lot of people.

The middle class in the United States generally had a monthly income of around 10,000 US dollars. Ten people asked, there were always one or two impulses to pay the deposit.

By that night, these cell phone merchants had signed more than 300 orders in total in the group.

Two days later, the Mexicans who had numerous contraband channels along the US-Mexico border brought the first 1,000 Magic Crystal cell phones to try.

Right now, because there are no hot topics in the United States. Sapphire and Monster Heavy Industry are still one of the hottest spots. One thousand Magic Crystal phones were bought by Americans who wanted to experience the magical viewing effect.

Los Angeles, in southwestern California, is the second-most populous city in the United States. Because the border with Mexico is only over 100 kilometers, it is the city where the first batch of Magic Crystal phones arrived in the United States, and it is also the city with the highest volume of sales.

In a mobile phone store in San Marino, the owner, Qi Lichun, today fell into an indescribable ecstasy. Seeking wealth and risk, it's true. From 4 a.m., the 20 Magic Crystal phones he had ordered with a copy of blood arrived. He had made a net profit of several thousand dollars by selling fifteen.

There are five left, and Qi Lichun was quietly writing a sign promoting them, and seeing if he could sell them before closing the door. Suddenly, a tall white with a goatee and a beefy physique pushed open the door in a violent "Guangdong".

Qi Lichun was taken aback. If he had not recognized this great man as one of the clients who had already paid the deposit, Qi Lichun had already reached the bottom of the counter drawer where there was the butt of the Glock python revolver stuck there, and six bullets could be shot at the guy with ghosts at any time.

"What's wrong, Mr. Castleman," Qi Lichun said with lingering fear.

"Quick, quick, Magic Crystal phone," Castleman gasped, holding the Magic Crystal phone that had just been opened in his hand. With his action, Qi Lichun couldn't help but guess he was there to return the phone. This is absolutely impossible unless the Magic Cristal phone is replaced by Glock, which shoots faster.

"How many Magic Crystal phones do you have left?" Castleman pulled out his credit card in his other hand and waved it: "I want them all."

"Ah!" Qi Lichun froze for a moment before reacting.

"How can this work? I only have five Magic Cristal phones left. They are all booked by friends. You know, if you don't have to pay the deposit, you have to pay 10% more to get the goods back, even for my friends, I can't make exceptions."

This response changed Castleman, but he couldn't react. It didn't matter if he added money, but the phones are already reserved by his friends...

"Forget it ~ For what you so sincerely want, I'll let my friend wait, it's just the price..." Qi Lichun seemed very hesitant but didn't seem to speak well.

Ten minutes later, Qi Lichun hurriedly closed the door and hurried to find the old Mexican who was cooperating with him.

.....

Over the past few days, Ye Qing, who was busy collecting a large number of materials that are going to be used to make plasma batteries, gradually saw two strange things that emerged; one of them is there was a strange wind in Mexico across the Atlantic Ocean. Magic Cristal cell phones have become popular and the sales have been exaggerated day by day.

Five days ago, his company just sent a thousand telephones by air express to an anonymous supplier there. The next day he requested 10,000 phones and spoke about exclusive agency rights with Monster Heavy Industry. On the third day, another Mexican cell phone dealer knocked on the door, with an order for 20,000 units in a first opening. To date, five providers have knocked on the door, and the one with the least demand is 30,000 Magic Cristal phones.

Every Smartphone had a multilingual switching option, and the Magic Crystal phone naturally also had an English version and a Spanish version commonly used in Mexico. It's just that Ye Qing couldn't figure out when these Mexicans became such tyrants.

Another strange thing is that the Monster Factory manufacturing index has risen a bit abnormally over the past two days. The increase is abnormally high!

Chapter 597: Unexpected joy.

By simply looking at the company's sales report for the day, Ye Qing was able to accurately calculate how many crafting points Monster Factory has earned. However, in the last few days, the manufacturing points have passed hundreds of thousands for no reason.

Ye Qing tried to link the selling points of the Magic Crystal mobile phone, which suddenly became popular in Mexico, with the manufacturing points, but the colon is not directly related. Whether he sells the cell phone in Mexico or sells it domestically, the points have remained the same.

After comparing the data Ye Qing had done for a long time, he gave up. If he couldn't understand the result of the research, then he shouldn't bother to figure out what caused the research failure and leave that problem for now and solve it in the long term.

At this point, Ye Qing's main goal was to make plasma batteries and knock out Amano Heavy Industry and let it throw in the towel on the pitch. At Sapphire's last press conference, Ye Qing felt that the reporter who asked an embarrassing question was a ghost of Amano Heavy Industry.

Without a detailed investigation, Ye Qing would be unsure of this fact, but Ye Qing can be sure Amano Heavy Industry will not live long.

Sitting in the office, Ye Qing looked at the report form in his hand while looking at the Monster Heavy Industrial Building which was about to be completed. There was information about the Amano Heavy Industry in this report, as well as the collection of materials for plasma batteries.

The shell of the plasma battery is transparent, and it is different from the concept of plasma which is charged in plasma gas in the ordinary sense. It is a liquid storage material with extremely high energy density. Once the battery is charged, the internal liquid storage material will glow like a block of energy in a sci-fi movie.

The difficulty in its manufacture lies in how to transform many compounds into liquids with extremely high energy density.

There are metallic compounds and chemical elements that are difficult to produce. Ultimately, if he wanted to turn these things into a nearly new energy liquid, he would have to build a transformer station connected to the energy tower to transform them.

Compared to the headaches of various metallic chemical elements, the second piece of information related to the Amano Heavy Industry was much simpler and easier to understand.

According to tax files consulted with industrial and commercial services, as well as analysis data obtained from the professional research company, the current size of Amano Heavy Industry's assets should be around 50 billion.

Relying on the parent company Anqi Heavy Industry, Amano Heavy Industry firmly controlled a third of the robotic assembly line business in the domestic automotive industry. Since last year, Amano Heavy Industry has gradually tried expanding its sales channels to other products.

In addition to the previous products, it had imitated the giant robots from Monster Factory, and even more so it also just launched another product last month and gave it the name "Smart Gym".

What is the "Smart Gym"?

It is a piece of versatile fitness equipment developed on the basis of the principle of the mechanical joints of multipurpose robots. It is similar in size to a treadmill but has automatic mechanized components ten times more complex than that of a treadmill. Users cannot only run but also perform exercises such as spinning, sit-ups, weight lifting, sit rowing, leg curl and extension, squatting, etc.

It's not like any traditional multifunctional fitness equipment, which requires heavy adjustment and movement. One-key switching of all functions, such as selecting a squat, this device will automatically adjust its mechanical structure and become a piece of squat exercise equipment.

And there are 5 to 200 kg strength options to meet different groups of people.

Since the Smart Gym was released a month ago, its reputation in the market has been pretty good. Its price of 22,000 Yuan is not too exorbitant. Some white-collar workers who liked to use them and didn't have time to go to the gym were most interested in the smart gym. In a month, they sold over 5,000 Smart Gyms. Judging by the momentum, sales were increasing steadily and steadily day by day.

Ye Qing believed Zhang Yutian was not only a little more proud but also had a good spirit when it came to product management.

The core of this product naturally mimicked Monster Heavy Industry's mechanical seal technology, but the concept was quite different. Over time, it may be possible to gradually open up the domestic market and turn the smart gym into a chicken that lays golden eggs for the Amano Heavy Industry.

Faced with such a huge company, it was very difficult for Ye Qing to defeat them by fighting them in one product, run out of orders, and fall into an economic crisis. After all, their size was already huge, and the disappearance of orders for just one of their products will make them agonize for a while.

For example, Fresenius, which was previously deliberately targeted by Monster Heavy Industry, was too small, and its business was concentrated in industrial chips. But their parent company, Amano Heavy Industry, bit their teeth and got past the crisis. If he attacked their entire product line, a large number of monsters would have to participate in the fight, delaying the production efficiency of his products.

This is a test of Ye Qing's decision.

"Dov ~" At that point, there was a knock on the door and Sales Manager Kong Tao walked in. His expression was a little strange and he was holding a contract in his hand.

"Boss, there is another big customer from Mexico. They ordered 50,000 Magic Crystal phones at one time and paid for the goods very daringly. The only condition is we send it by express air, speed is getting better and better."

"No not true, how much did they ask?" Ye Qing was surprised at the number.

There are a total of five levels of preferential policies for Magic Crystal mobile phone providers, a 10% discount was available for cumulative purchases of 2 million phones. Until now, no one had benefited from this treatment except JD.com and the two main operators. Fifty thousand phones were for the lowest discount, and they could take advantage of a 0.20% discount.

But don't underestimate this 0.2% discount. For 50,000 Magic Crystal phones, a 0.2% discount is \$ 5 million in profit.

"Mexico has lost gold from the skies across the country. Can it digest two hundred thousand Magic Cristal phones in a few days?"

"So send me a message of your review, and you can handle this yourself, no need to bother me anytime."

"That's not the case boss, and I found an anomaly. These Mexican buyers were basically ordering the English version," Kong Tao shrugged: "Mexico has been colonized by the Spanish for quite some time for hundreds. Their official language is Spanish, and people mostly used Spanish, and they all personalized the English version..."

"You mean, These Magic Crystal phones aren't sold in Mexico?" Ye Qing looked up in surprise, thinking of a possibility in his heart, if that possibility was related to the unusual rise in Monster Factory manufacturing points in recent days, everything is reasonable.

When the United States announced the ban on the sale of ionization purifiers and mechanical engineering chairs, Ye Qing was granted a very high degree of freedom. The content of the task was very simple: if the Magic Cristal mobile phones were sanctioned in the United States, the sale of the product in the United States could benefit from a triple-point treatment.

"Yes, for the specific situation we just need to go into the back end of the server to verify."

Ye Qing nodded, stood up, and walked over with Kong Tao to the Monster Heavy Industrial Building opposite.

The server was located on the third floor underground. All Internet-connected Monster Heavy Industry products will silently connect to the server in the background. When Ye Qing came here, he let the technical staff call the basic data, and a huge electronic world map appeared on the huge data center screen.

There were countless green dots on the electronic map, and each dot represented the approximate location of the connected Magic Cristal phone.

China had the most small dots on the map, while in far North America, on the horn-shaped map of Mexico, the small green dots are so few and pitiful. On the contrary, it's the United States next door, with many little green dots scattered all over the place.

After inquiring about the data on the phones in America, Ye Qing discovered that 130,000 Magic Crystal phones had been illuminated in the United States.

"I think we need to do something." Looking at the little green dots on the US map, Ye Qing was both surprised and puzzled.

Chapter 598: Upgrade system.

Recently in the United States, there has been a strange big tendency to find Chinese merchants or Mexicans to buy a Magic Cristal cell phone. Even Americans inexplicably sensed at first how this strange wind blew. After all, if they have a good impression of Monster Heavy Industry, they won't go to great lengths to buy a Magic Cristal mobile phone three times the price of Apple.

In the eyes of people who did not know the inner story, it probably and usually is. When they heard someone had spent two thousand dollars to buy a cell phone produced by Monster Heavy Industry, they mostly berated that person for his stupidity. Monster Heavy Industry is a hero. Yes, but they don't have to spend two thousand dollars to buy a Magic Cristal cell phone produced by Monster Heavy Industry. The quotation of this Magic Cristal cell phone on the official China website is less than one thousand dollars after converting Yuan to US dollars. Isn't it that most of this money has been earned by black-hearted businessmen?

But since this strange wind has blown, it makes sense.

For example, after someone heard that someone had bought a Magic Cristal phone, they couldn't help but call and complain, and asked if they were stupid or something like that and he felt stupid when the other replied directly: "Do you know what kind of Magic Cristal phone is?" You will think your idea is stupid when you see it."

In the end, after seeing this Magic Cristal cell phone in kind, he was really surprised.

Americans immediately put aside their previous views of thinking the other person was an idiot. They tried to harass their friends and ask them where they bought their Magic Cristal cell phone, and they were willing to spend two thousand dollars to buy one as well.

The reservation is only two thousand, and the cash price is two thousand, and it may be impossible to buy it. After all, Second Road dealers all over the world know rare things are expensive.

Facing the same box-shaped Smartphone, the prismatic small tilt design of the Magic Cristal phone is easy to make consumers shine.

When consumers in the United States first saw the Magic Cristal mobile phone, with its borderless design, and after comparing its screen with the Apple 7p's large screen, and its size in relation to the Apple 5's body size which is only slightly larger, they were surprised.

Apple 5 mobile phone size is recognized as the most reasonable and comfortable mobile phone size in the world and it can be used freely with one hand.

But even so, Apple had to ditch that design and instead gave in to the mainstream big screen and ditched touch. Now Magic Cristal has solved this problem perfectly, and the slightly larger size made Americans prefer it with a larger frame.

Just the borderless design made Americans who like to pursue high tech felt worthy of it.

After turning on the screen and seeing the dream display, they can no longer be described as blown away, but completely shocked. This type of display, even when showing the standby image, can make

them feel like the image is coming out of the phone and the three-dimensional color is placed in front of them.

As for watching movies, it's a visual effect they've never experienced before. He appears to have become a Titan in mythology, interestingly observing the shrunken human world. If they brought in a virtual reality device, the effect is instantly reversed and it's like looking at the majestic and immense real world.

This is how Americans are: their excellent economic prosperity allows them to tolerate prices, but they should not tolerate a lack of technology. They are the creators of the global electronic revolution and the makers of the Internet, and they were always the first to take advantage of the most technologically advanced electronic products, but when they used the Magic Cristal phone, they found that this feeling of superiority was completely destroyed.

It turns out that the Magic Crystal mobile phone can throw the Apple mobile phone in many streets, but it is really expensive two thousand dollars. However, as long as they could touch the Magic Crystal phone, they could only bite the bullet and admit it. Once they have it, the Magic Crystal mobile phone gives them continuous surprise, making them scream for its value.

To give a simple example, whites in the United States are prone to freckles on the face because they were born with a lack of melanin in the skin. Coupled with the obvious contrast between the white skin and the surrounding environment, it is easy to highlight the freckles on the face when taking a photo with a cell phone. The brighter the sun, the more obvious this problem is.

Whether Apple or Samsung, a 12-megapixel lens will only expose the freckles more clearly, but the Magic Cristal cell phone, with its unprecedented 3D lens as long as they chose the dream camera mode, regardless of the situation, the photos taken are professional-grade DSLRs with expensive 3D lenses, and the photos of master-level photographic effects are taken. Natural, three-dimensional, beautiful light and shadow effects as for the freckles and spots, they weren't even trying to find them with a magnifying glass.

It is not the low-intensity effect of skin rejuvenation with the help of beauty programs, but only the best photographers can master the light and shadow matching technology.

Even people with dark skin, in semi-darkness, cannot see their faces when taking pictures, which has been completely resolved.

With the Magic Crystal mobile phone, everyone is a master photographer. All he needed was any technique, all he had to do was activate the dream camera option and take a photo easily.

Even if you slap a wildflower on the side of the road and post it on Facebook, you can get a lot of likes.

Of course, Magic Crystal had a bunch of shocking highlights, which doesn't mean it could be a perfect fit for discerning American consumers. He still had some minor system issues.

Take the time issue, for example, the United States stretches from the West, 5th District to the West, 8th District, with a total of four time zones and annual daylight saving time. Once they master their cell phones, they have to manually set the time zone, otherwise, the time will be wrong every time they connect to the internet.

When buying a new cell phone, it was very difficult to create an account and was necessary to look for special tutorials on the Internet. At present, the mobile phone does not support US pay channels, so only free apps can be downloaded.

Of course, these little problems can be overcome.

The biggest problem is the Magic Crystal phone is difficult to buy. Even if you pay the deposit, you have to wait more than ten days to get the goods.

Right now, people who want to buy Magic Crystal cell phones are extremely angry with the reasons why the government has banned Magic Crystal cell phones from entering the US market. They were willing to pay more than double the price for this cell phone which was originally less than \$ 1,000, and they may be unable to buy it.

.....

These problems, Monster Heavy Industry had taken the time to resolve.

When Ye Qing noticed that Magic Crystal phones sold in Mexico finally made their way to the United States, he asked technicians in the mobile phone department to start collecting feedback from users in the United States.

The triple points which equals the achievement of entering the enemy's interior, and the feeling of rapidly increasing points, made Ye Qing very excited to conform to the taste of the American consumer first, and naturally wanted mobile phone users in the United States to benefit from more convenient services.

Two days later, the Magic Crystal mobile phone underwent a system upgrade, specifically for North American users.

The time was scheduled for 7 p.m. locally, and the updated system was optimized specifically for users in the United States. First, it had improved the content of the English translation more in-depth, and it had added automatic time zone correction and optimized the user registration method of the first step to turn on the phone. Only the email verification link was required.

At the same time, the updated system also optimized the data access of Monster Heavy Industry server in the USA and opened a separate communication channel, and it improved the storage speed of Cloud services, which made it possible for US users to benefit from the news faster.

"Uh..."

After determining the system upgrade time, Ye Qing thought for a moment and said to Kong Tao: "Next time when the Mexican merchants collect the goods, you can try to suggest they recommend the Ionization Purifier."

Chapter 599: I have a tunnel.

No matter what city in Mexico there is no intermediate relationship between black and white, and if there is not a large number of subordinates under your hand who dare to fight for you do not even dream not becoming a successful person, and if you expect to be law-abiding and working hard for your career, also don't even think about becoming a successful person.

This is the heartache of Mexico: the violence that has become the only way to the top.

In this chaotic Mexico, in the town called Salvaro, a town near the US-Mexico border, a merchant who happened to be a successful person and become a leading merchant and to put it better, the best businessman, this man's name is Lopez.

At nine in the morning, Lopez, with a beard, walked out of the gate of Shanghai City Airport. He took his two brothers with him. At ten o'clock, they arrived at the foot of the Monster Heavy Industry Company building. This is the second time he has come to China. Three years since he first came visiting, Lopez couldn't help but be moved by the changes those have taken place during those three years.

According to most of the young people of this country called China, they have lived ten or twenty years without even hearing gunshots. Lopez felt this eastern country really changes every year. Decades ago, there were hardly any praiseworthy tech companies in this country. Over the past three decades, this country has grown into a powerful force among global science and technology forces, with several well-known world-class technology companies.

During his entire life in Mexico, Lopez had heard no news about Monster Heavy Industry. Until Sapphire became a hotspot in the world's media, he also learned this company also produced cell phones.

At first, Lopez hadn't paid attention to it, but recently those under his hand met many people specializing in crossing the US-Mexico border and came to their homes to rent tunnels along the US border-Mexican. Those who cannot afford the tunnel tolls on weekdays and their favorite activity that relies on getting special chemicals from Mexico and selling them to drug addicts in the United States must cross the border fence.

There were two well-hidden secret tunnels in the town of Salvaro, and as the United States adopted more and more means to combat the tunnels, these two remaining tunnels became more expensive and Lopez controlled one of these two tunnels.

One day, Lopez sensed something was wrong, so he casually stopped a few smugglers and opened their suitcases. Now it's no longer a banned chemical that they smuggle across the border, but cellphones with beautiful packaging. Wanting to understand the whole story which wasn't complicated, he casually asked these well-known smugglers to brief him on the subject, and they all explained it to him. The huge business opportunity inside this trade has finally come to Lopez, and after watching for a few days and confirming that this business opportunity might get bigger and bigger; he just flew to China from one shot.

.....

Those who have the money are always looking for various ways to earn more money.

.....

When he first arrived at the door of the Blue Sky Building, Lopez was a bit frowned upon. He believed the size of the Monster Heavy Industry business was not too large, with the office building across from him occupying only two floors. On the contrary, the newly constructed skyscraper across the road was full of unprecedented dominance.

With the humor of a local bully coming in to donate money, Lopez prepared to strut into the Monster Heavy Industry Company.

As a result, some evil-eyed and physically strong security guards stopped them at the gate and demanded they register their personal information and accept the security check. His two subordinates just looked up unconvinced and prepared to slam the security guards, and the response was quick to arrive. Two electric batons with the fuse open, and the green light of the device flashing were on the necks of the two young brothers.

Lopez saw his alien status wasn't working out well, so he ended the game in a rush. Passing the security gate smoothly, Lopez waved, in English, to the young girl who was in charge of receiving them and said: "I want to see your president."

"Sorry, if you don't make an appointment, you can't meet the president directly."

"I'm going talking about a big deal related to your Magic Crystal phone," Lopez didn't show how proud he was, but there was still a bit of superiority in his tone, and the employees here cannot bear it.

"I can arrange for you to meet our manager. Our manager Kong is responsible for the Magic Cristal mobile phone business. If you want to meet the president, you can also let him arrange that," the receptionist smiled kindly.

After a long time of self-cultivation, Lopez has naturally learned a lot in the town of Salvaro, for example, and the mayor may not be able to make a mess in the open.

When the receptionist got ready to go to the manager's office, Lopez coughed twice and straightened up. He wanted to show his integrity and his manners and make him understand he is just a very lovable big boss and that there is no such mess, the bad guys who portray the Mexican boss in their movies as a bully don't show the truth so fear not.

After walking along the long catwalk for a while, then turning twice, this beautiful and professional receptionist bent over and smiled at him and said in English: "Sir, our manager's office is across the street from you. Please, the rest area is next to you, wait a moment. Do you want coffee or black tea?"

"Is there any Chinese Longjing tea?" Lopez smiled gentlemanly, expressing his elegant taste in passing.

"Yes, wait a minute," The beautiful receptionist went to make some hot tea, and Lopez happily opened the living room door.

As a result, as soon as he walked through the door, Lopez was stunned on the spot. The seating area in front of him was nice and spacious, but the two leather tables are already full of men in leather suits and shoes. The table designed for two people is crowded with four people. Although he tried to keep the appearance soft and elegant, it's too crowded here. He almost endured their impatient stares that had already betrayed their true thoughts.

"Lopez?" In the crowded living room, waiting for an interview, someone suddenly called Lopez in Spanish.

Surprised, Lopez followed the voice and looked very surprised: "Mr. Pedro, why are you here?" After running with respect, he kissed the old man who had wrinkles on his face.

"Sit down first," Old Pedro pulled out the plastic stool from under his buttocks, slammed hard on the floor, picked up another from above, and pushed him towards Lopez.

Lopez sat down next to him with respect. Mr. Pedro was the leader of his early career. He was exhibiting in another city. In terms of influence, Lopez was not as good as him.

"Did you also come for the Magic Cristal phone?" Pedro, the older one said with emotion: "I waited two hours. Not only had me, but even Mr. Amata also waited a little longer time."

"Mr. Amata... is here too?" Lopez felt his brain was a little hypoxic. Mr. Amata was a famous figure throughout the northern region. If we were talking about money, he could fill two containers.

After calming down, Lopez felt it was all too unreal. He thought he was a rich man, but it was only here that he realized he wasn't. What's even more incredible is so many great people here were waiting for an interview with the manager.

"Why is that?"

This question made Lopez, after having thought about it several times and did not understand it. He thought about it from morning to afternoon, and when he finally saw the "manager" in his office, Lopez knew the whole story.

Originally, he thought the 50,000 units he wanted to buy that were worth hundreds of millions of dollars in transactions was a big deal. When he got here, he saw they were just one of the most important roles. There were a lot of customers who were willing to buy 100,000 or 200,000 units, and they were suggesting they prepay 50% of the purchase price.

Even in his own eyes, he had to come in person and spend several days negotiating and deliberating over and over on his important order. He had thought that it was very possible for him as a great businessman to simply present his data and place an order over the phone.

But in the end, Lopez accomplished something that no one else did. He followed Manager Kong's suggestion and took an additional 10,000 ionization purifiers. He also met the young president who was very popular because while chatting with the business manager he casually said he had a tunnel across the US-Mexico border.

Chapter 600: I have a new product here.

There aren't many people in Mexico who had a tunnel that led to the other side of the Mexican border. This is due to the relentless strikes by the US border police and the addition of increasingly advanced detection equipment by the United States.

Here the tunnel refers to a labyrinth dug tens of meters underground, is several kilometers long, and has a complete lighting and ventilation system. It regularly has private houses or warehouses to enter and exit in cities of both countries entrances and exits are guarded by confidants and there are several high-level underground passages with hidden exit and entrance axles.

As for the people who dig a pothole a dozen meters long under the dividing wall and use planks of wood for support and a cover of grass, this is not at all authentic. Lopez prefers calling it a "dog hole". Last year alone, US border police discovered more than 20 dog holes. The way they treat the dog hole is very

simple - they directly pull two concrete trucks and pump concrete into the dog hole and engrave the date as a remembrance.

The Lopez tunnel was built thirty years ago and was one of the oldest tunnels in the city of Salvaro. This is due to Lopez's father with an international vision and foreknowledge.

At the time, his father and five brothers, who were none other than Lopez's uncles, were working illegally in the United States. At that time, Lopez's father saw a lot of people trying all means to sneak into the United States from the Mexican border, and when they have made some money, these people will do their utmost to return to Mexico.

This gave Lopez's father a feel for the days of yore when he was digging in the mines of Mexico with a huge business opportunity, so he immediately returned to Mexico with his five brothers and spent several years day and night, dug a hidden tunnel, precisely to make these people pay high travel costs.

The Lopez family relied on this tunnel to start their business, and to date, the exit of the tunnel in US territories has been changed several times.

"What detection equipment is used in the United States?" Ye Qing asked with interest in his office of the tall Mexican businessman who was somewhat cautious for some reason.

"It should be some kind of vibration sensor, because three years ago since the Americans installed detection equipment at the border if a certain person digs a tunnel from Mexico. Most of the time, they do. Will find in half of the work, ~ by the way, this equipment is drilling a deep hole in advance and burying the tunnel underground."

As he spoke, Lopez kept staring at the beautiful model of the building on Ye Qing's desk. At that moment, he suddenly realized the magnificent skyscraper opposite was the work of this young man, and he thought in his heart: "How much it must have cost him to build it!"

"Oh, by the way, ~ the ones that have been discovered are those long-distance tunnels. The dog holes dug under the separation wall are often watched by the police. Now my tunnel is completely carpeted. I asked people. Who crosses it not to speak when they walk on foot? ~ "

Lopez didn't think it had anything to do with Ye Qing. The young president's products were all under embargo by the United States. Can he get a good impression of the United States?

"~ This should be for some analytical instruments with fixed vibration frequencies. Simple vibration sensors will be disturbed by vibrations from large vehicles."

Ye Qing nodded: "Actually, it's very easy to crack. ~ The easiest way to detect vibration, of course, is to detect constant mechanical vibration. The machine has an invariable fixed transmission gap, and the helical blades have a fixed frequency when they screw into the ground. ~ If you dig by hand, dig today with a tool, and when you dig tomorrow change tools, and the equipment will naturally be undetected.»

Lopez was stunned. The young president was badly untaught... Then he nodded as if he knew nothing and said: "But manual digging certainly wouldn't work now. It takes at least a few years to dig a tunnel, the return on investment on hand tools is a little too unprofitable. A few decades ago it paid off, but now after a few years of progress, there are too many variables. Mechanical digging would be easier and more profitable."

Ye Qing mysteriously smiled and casually knocked on the table: "Mechanical vibrations cannot be eliminated, but if the machine does not rely on electric motors or diesel engines, there will be no vibrations. ~ You see j I hammered the table, the table gave birth to a shock. If I would press on the table, the table will undergo the same pressure, but will not produce a shock."

Lopez was in doubt.

"Popularly, it's about changing the way of mechanical displacement. ~ Our company will be launching a new product in two days, but that product will not have a market. So, Mr. Lopez, you have to help me ~ and let's share the sales gains."

Lopez understood that sentence. After struggling to get out of the petrochemical state, the first thing he did was run from his desk in ecstasy, hold Ye Qing's hand, and keep shaking: "Mr. Ye, don't worry, I will help you sell this product as much as possible, how much of this product do you have."

"Don't get upset. Our product is only intended for urban areas that increasingly pay attention to noise pollution and is used by the construction crew for quiet construction during the day."

Lopez did everything in his power to hide his innermost feelings after arriving in China, and he had a deep sense of admiration for the ever-changing urban architecture in China and made the following decision: "Upon his return home, he will find a construction team to create an apartment building zone and this product can be considered a great help to him."

.....

Two days later, Monster Heavy Industry quietly launched a new product. This new product is unsold in China at all, and even the company's sales department was not even aware of it. It is a type of tunnel boring machine; its shape is very peculiar; there is a semicircular counterweight metal cover behind the rotary excavator. Once the power is turned on, the heavy metal cover will move slowly in an irregular plane to completely transfer the vibrations generated by the rotary excavator. The boring head of the milling machine is also very special; it is not a traditional spiral blade. Instead, rows of steel brushes are used to brush the floor evenly.

Ye Qing named it and accompanied it with a construction manual detailing how to eliminate various vibrations.

For example, if you come across a hard obstacle such as a boulder, you can destroy the rock structure by burning the boulder with the most traditional fire and then pouring cold water. When you come across hard ground, you can wet it with a water pipe first. This product does not have a manufacturer's name, serial number, and contact number. This means this product has no ownership rights, but its price is one million Yuan, which is tens of times more expensive than the rotary excavator in the market.

Using this type of excavator, if you brush ordinary soil, you can dig a distance of several hundred meters per day. Even dirt that has been brushed off will be transferred from the bucket to the back of the equipment. Also, if anyone wants to use vibration sensors to detect this type of equipment, it really is a dream, because the mechanical noise it produces is much lower than the natural noise in the natural environment.

Seeing ten devices carried through the shipping channel Lopez contacted, Ye Qing smiled and said nothing.

So far he has done all he can, as to his penetration into the United States, it depends on the skills of these Mexican businessmen. The more capable they are, the more triple points Ye Qing will earn.

.....

If you're in a good mood, of course, you want to find something fun to do.

.....

After returning from the company, Ye Qing casually sent a WeChat message and asked if she could request time off:

"If you come, I will take you to the city of Asashima for two days."

"Hmm..."

Ye Qing's goal was really not very good, and Bai Douer herself understood this too. She was silent for a moment, and then answered him with a shy expression. I'm going to contact the director, he promised to give me two days off, and I'm going to ask him to delay recording the show.

"Hehe," Ye Qing raised his fist with a smirk.
