

## **M Factory 641**

### **Chapter 641: Announce the second message.**

Unlike Magic Crystal mobile phone conference, no journalist or citizen expected this car to be so dazzling, wow ~ this product from Huge Industrial Monster is a great experience.

People could not sit still during the presentation of the technology and configuration of the Shi Lei car, because they could more intuitively see the technological and scientific breaking point of this Shi Lei car with that of the other cars.

In less than ten minutes, a number of online media across the country broadcast the news of the Shi Lei car one after another, and before the end of the conference, the internet has been swept away by the main news sites. They did not focus on the core energy of the Shi Lei car, but on the disruptive supporting technologies demonstrated by it. These media did not dare to exaggerate too much in their opinions until they had actual contact with the mass-produced cars, saying how the Shi Lei car is going to be, always using headlines as questions.

The chaotic scene of the Shi Lei car performance meeting continued, and Director Kong Tao repeatedly advised everyone to be quiet. But guests and media at the scene couldn't stay silent for five minutes before they got very loud again, and when he proudly announced that the Shi Lei car was equipped with a plasma battery with high-energy density three times that of a lithium polymer battery, and with the security that no battery can match, and that it is fast charging, the media and guests were abuzz.

As soon as the news got out, they were no longer giving shocked expressions, but rather stunned.

Is it possible?

If the color of the glass can be changed, and the glare can be filtered out at night, it is also a technology that people can accept. These plasma batteries, which are three times more powerful than lithium polymer batteries, people here did not believe at all that this technology could be realized.

"It's impossible," someone spoke loudly: "The energy density of batteries is limited by the energy storage materials. Scientists have tested almost every material that can be found as batteries. Among them, there is indeed lithium, which is the best of battery materials, but these do not have the ability to mass-produce them. Some materials are even more expensive than gold. ~ We do not believe see the possibility of breakthroughs in battery power within the next ten years."

"True or false, after the conference is over, we will know if we buy a Shi Lei car," someone clenched his fist, expecting: "Even without new battery technology, with only the other benefits, the Shi Lei car can already offer luxury, so what about the name of the car?"

"Ah yes, the price of this car is certainly over a million, with these new technologies there is certainly no way of mass production, walking the fine line, but the car meets the definition in the terror of death."

.....

At 7 a.m., when the office workers in the United States stood up and ushered in a new day, the information returned by the American media during Shi Lei's meeting was published on the Internet and the TV news.

The former Monster Heavy Industry and now the Huge Industrial Monster was one of the more recent hot topics in America. At the same time, the American people were more interested in high-tech products than the citizens of any country.

However, compared to the enthusiastic advertising of the Chinese home Internet, the US media was much calmer.

Not only do they have strong suspicions about plasma batteries, but they also have serious doubts about the color-changing glass of the Shi Lei car. Several media websites focusing on science and technology news have also published lengthy articles on the unrealistic nature of plasma battery data to disprove material, process, and cost data.

At 7 p.m., at the end of the conference, Kong Tao announced the price of the Shi Lei car. Not only Chinese media but also Japanese, South Korean, European and American media were bombed.

There are a total of four configurations for the Shi Lei car.

Standard type, priced at 240,000 Yuan. It has fingerprint recognition, an electric vacuum door, four electrically adjustable seats, transparent and opaque glass with adjustable colors. The windshield is equipped with a night mode, as well as assisted driving and remote-controlled driving functions.

Comfortable type, the price is 320,000 Yuan. In addition to the standard version which has it all, it is equipped with a three-level emergency mode, the glass can be set to three minutes, and it is equipped with an automatic parking system, driver's seat massage, air purification system, etc.

Elite type, the price is 420,000 Yuan. Equipped with a secondary emergency mode, the glass can be set to five types, four massage seats, sixteen airbags, active hazard avoidance technology, etc.

The fourth most high-end model is not the noble or luxurious model launched by traditional car manufacturers, it has no model, only the name of Shi Lei and Lightning, and the price is 750,000 Yuan.

As soon as the prices of the four models were announced, there was only a strong question mark on everyone's mind.

It wasn't the luxury car at the million Yuan level they guessed. Although the top-tier Shi Lei version is close to this number, the standard model costs only 240,000 Yuan, which is basically the price of a mid-range joint-venture brand car.

240,000 Yuan for a family car, with color-changing glass core and night driving modes, as well as assisted driving and remote driving, not to mention the plasma battery which is known as a revolutionary technology.

What exactly does Huge Industrial Monster want to show?

With this standard model, are they really not going to lose money?

So what about the version of Shi Lei and Lightning?

By convention, after the end of the Huge Industrial Monster fabric show new products can be laid for purchase but not this time, the car is different from ordinary daily necessities and can be taken away after paying the price.

To buy a Shi Lei car, you need to go through the formalities with the insurance company, vehicle management office, and tax department one by one. Therefore, to buy a car from the first batch of Shi Lei cars, you need to log into the Huge Industrial Monster flagship store at 7:30 a.m. the next day when the officials are at work.

At the end of the conference, the media finally seized the opportunity to rush in to interview host Kong Tao, and at that moment, Ye Qing walked over to the conference booth.

"Dear media friends, and distinguished guests, I know you have too many questions about Shi Lei Motors."

Ye Qing smiled at everyone and motioned for everyone to be quiet, "If you don't feel late, you can go to a restaurant later. After we had had dinner, we organized a spokesperson for the company to answer journalists' questions..."

"... But until then, I want to tell guests and the media one of the important news related to our Huge Industrial Monster industry... I'm counting on ~ I'm counting on ~"

The media that came to participate in the conference were almost stunned by the overwhelming sense of happiness. Is today their lucky day? The big news is emerging one after the other. The Shi Lei car is already enough of a surprise, if this car can have a third of the cattle described by the conference host, then in the next month, they can rely on the news of the Shi Lei car to eat.

Now the president of Huge Industrial Monster is personally on stage to deliver important news.

As soon as Ye Qing's voice dropped, everyone immediately returned to their seats.

#### **Chapter 642: The intersection of fate.**

Looking at the rows of eyes waiting below, Ye Qing took a deep breath, suppressing the excitement in his heart. He had a plan that had been brewing for a long time in his mind, and today he will finally announce the second major event to the world when he launches his new product which is none other than the Shi Lei car.

This plan has been itching in his mind ever since Monster Factory was promoted to Stage Six, and Ye Qing got the Power Tower and Plasma Battery.

At first, Ye Qing had preliminary ideas and had reviewed them several times and summoned company staff to discuss them several times in order to evaluate and improve this plan.

Now...

"Before I announce this important question, I would like to ask you two questions," Ye Qing stood still for a few seconds and smiled, "The Shi Lei car, in fact, is the first real model launched by our Huge Industrial Monster. It is the staple product of our industry."

"Cars are also called the crown of the industry. Anyone can think of cars as very ordinary. Even in the countryside, you can see them. But if you look closely, you will find cars in all the streets, and according to the latest statistics, they are focused on the types of cars and that according to the brands chosen by the countries."

"Automobiles are the products with the highest industry standards and the most comprehensive types of industries in our lives. They include all of the industry categories in a country and involve approximately 30,000 different industrial parts."

"It is until today that our Huge Industrial Monster show dared to launch the first automotive product. It also marks that our Huge Industrial Monster has entered a new chapter of the show."

"So, I want everyone to predict. How many units of our Shi Lei car will be sold next month?"

As soon as the problem arose, guests and the media were puzzled.

Although they don't know how Ye Qing's problem relates to the major events that will be announced later. But that didn't stop them from imagining that if the technology of the Shi Lei car is really as good as that presented at the conference... No, even if it is only half of that presented at the conference. The Shi Lei car will become a little horse in the Chinese car market, a little dark horse.

I'm afraid the only thing limiting the sales of Shi Lei cars is the downside of pure electric power.

It is unnecessary to list the faults of electric vehicles, but if the plasma battery of Shi Lei cars has three times the energy density, this fault will also be greatly alleviated, but these assumptions are based on the fact that if really Shi Lei had this kind of technology.

A reporter from Sohu Entertainment took the initiative to respond. The bespectacled journalist thought it over: "Tesla is a star in the electric vehicle industry. It is highly regarded in European and American countries. But Tesla's sales in the Chinese market are not too high."

"I think for the Shi Lei car, next month, sales can reach 5,000 units. When the reputation of the Shi Lei car gradually spreads, sales will gradually breakthrough and reach ten thousand units."

Another man raised his hand to give another answer it was a car dealership and gave a more professional answer. He said: "Wuling Zhiguang and Haval H 6 are the best-selling cars in China. Combined sales of cars of both brands for all-electric vehicles are less than 1% of all cars produced by Wuling Zhiguang, so I believe the best Shi Lei car sales volume should be the sum of all vehicles pure electricity from the country. However, if you want to change people's car-buying habits and switch them from fuel-powered vehicles to pure electric vehicles, I think the Shi Lei car still has a long way to go," for this answer Ye Qing winked at the man.

In terms of brand awareness, there is a huge gap between the Shi Lei car and the Tesla car. But sales of Tesla cars in China are less than 5,000 units per year. In European and American countries, sales of Tesla cars are quite good, but together they still have not reached 1% of sales of Wuling Zhiguang's fuel car sales.

Although Tesla is very profitable, he could not get into the families of ordinary people, right now he may just be a toy for the rich.

The pricing of the standard version of Shi Lei appears to be the biggest pie targeting mid-range cars in the Chinese auto market which is the private land of foreign joint venture cars. Can we count on an electric car to destabilize this market?

"The second question, why are sales of electric vehicles slow?" Ye Qing continued.

"We have carried out a special investigation on this matter. On the one hand, the actual mileage of pure electric vehicles can only reach half of the norm. On the other hand, the charging of pure electric vehicles is too heavy, and the community has to build special charging batteries. This considerably limits that. The freedom of pure electric vehicles can only be parked in fixed parking spaces every time. However, in most communities across the country, parking spaces are free and can be parked casually."

"There are still electric cars that have been around for two or three years, and they need to replace the battery. By calculation, it's not cheaper than a gasoline car."

This answer is sharp, the pure electric car seems to be energy efficient, and it can run as long as it is charged, but everyone knows that the longer the battery runs, the lower the endurance. After two years of operation, the mileage is only half the start, and after three years it will drop to a third. Are you biting your teeth to change the battery? But the money you need to change the battery is enough to buy a domestic fuel car. Isn't this a scam?

"Everyone understands the flaws of pure electric vehicles. These flaws are also obstacles to the pure electric car show."

Ye Qing waited for tens of seconds. When the scene was completely silent, he said calmly: "So our Huge Industrial Monster decided to solve this stumbling block in front of the electric car..."

"...Our huge industrial monster has decided to build 5,000 seats across the country over the next two years. We want to build a nationwide battery charging network so that all users of Shi Lei cars can enjoy and power their cars and have the same treatment as those who have gasoline cars."

"In the energy service area, a Shi Lei vehicle can be fully recharged with electricity in half an hour. If a person is traveling long distances, the time it takes to charge their car a full charge at the charging station is just enough to rest and eat; it only takes tens of minutes to get a mileage of over 300 kilometers."

Watching the double damn eyes of the live double below, Ye Qing continued to smile: "Maybe everyone thinks this is a fifth-dimensional fairy tale. The cost of building a gas station in a city is several tens of millions, and to cover an area with gas stations on the highway costs more than 100 million Yuan. At Huge Industrial Monster, we have the capacity to invest in the construction of 5,000 energy service stations."

Who dares to answer this question?

Tesla initially promised to build several charging stations in China, but it took five or six years to build less than fifty charging stations, which still aren't much bigger than a car platform. All of them are concentrated in first-tier cities, where sales of Tesla cars are good.

It is estimated that the cost of these charging stations added up did not cost the price of a service station as it should be.

How much does an energy service area cost?

If you are on the main road, even if you build a thatched-roof hut, but to build two entrances and exits connecting it with the main roads, it will cost over 100 million Yuan.

Listening to the meaning of Huge Industrial Monster, it looks like they not only wanted to build an energy service area at the top but need to build more as well.

"We have the strength to build them," Ye Qing clenched his fists and answered the question rolling in everyone's heads with an unmistakable tone.

"The energy service area we want to build not only includes extremely charged batteries, but also provides a recreational place for communication and relaxation for every Shi Lei car owner, and any car service imaginable."

"This energy service area will also become a calling card of our Huge Industrial Monster. A contribution from our Huge Industrial Monster, to the whole Chinese nation, for the belief that science and technology change lives."

"..."

It was a shock!

"Any technology, any product produced before," to the declaration of the young president of Huge Industrial Monster, they all turned into poor performances.

What spirit is it?

Five thousand gas stations, even with the most conservative estimate require an investment of 300 billion Yuan. Three hundred billion is maybe the sum of Huge Industrial Monster's fixed assets and cash, or more. This investment may even be accompanied by a cold reception of the Shi Lei car in the market, and it will lose all its money.

But this young president didn't care. In a tone full of confidence, he announced this event which will determine the fate of the whole company.

### **Chapter 643: Who buys the first car?**

As soon as the price of Shi Lei was launched, journalists here as well as internet users have already found it incredible. Although the standard version was the lowest version, the technology that came with it was still far ahead of any similarly priced models on the market.

Now with the plan to build 5,000 energy service zones, a huge wave across the entire Chinese Internet, and even the global Internet has sparked. What? Has the Huge Industrial Monster yet to invest in building more than 5,000 energy service areas across the country?

China has 661 cities and 1,636 counties across the country. On average, large cities can have four energy service zones, and small counties can have one. If these energy service zones are built, as long as there are no major technical flaws, Shi Lei vehicles are sure to sell well. However, regardless of the volume of sales, how to recover the investment cost of the energy service area?

This account is very easy to calculate. Last year, Volkswagen of Germany sold around 4 million vehicles in all models in the Chinese market, accounting for 18% of the Chinese car market. The financial report showed that the Chinese market brought Volkswagen a total net operating profit of 5 billion euros, equivalent to 37 billion Yuan.

Even giants like Volkswagen must earn ten years of net profit to proceed with this plan.

No matter how powerful the Huge Industrial Monster can use pure electric vehicles to compete with the German Volkswagen?

Obviously, no matter how hot the sales of Shi Lei cars are, this energy service area plan is also a bottomless pit to waste money. If you can't tell it by yourself, it is uncertain whether the Huge Industrial Monster ignored the seriousness of this plan.

That night, the search volume for Shi Lei cars soared to the number one spot among the major search engines.

At eleven o'clock that evening, China's largest automotive portal, and also the world's most visited website, which has published many authoritative reports on automobiles, added to their posts an article based on the latest information on the features of the Shi Lei car in the news.

The editor who wrote the news is called Liu Lin Zheng, and he is the most popular car test driver and member of the new car news publisher on the 'My Car Home' website. The report of his press conference will be preceded by the title of Xiao Liu Report.

Over time, the Xiao Liu Report website has used humorous language and a sharp professional attitude to win over a large number of car buyers.

Nowadays, domestic auto brands actively invite him to participate in the press conference whenever a new car hits the market. Even some brands, when the car is not yet on the market, would invite Xiao Liu for a test drive, to give a professional test report, and the manufacturer will make small-scale improvements based on his opinions. Naturally, Liu Lin Zheng was also invited by Huge Industrial Monster to participate in the launch of Shi Lei cars.

Although he did not appreciate the treatment which was unexceptional and was not like the one he received when visiting other domestic automobile brands. However, at the end of the press conference, Liu Lin Zheng actively requested to visit the interior of the Shi Lei vehicle and obtained staff approval, and the company employees also accompanied him to the car to drive it for several hours.

In Xiao Liu's report, seven consecutive automotive revolutions were used to describe the Shi Lei car.

"From Great Wall's first-generation SUV to top-of-the-line BYD-Tang models to the Land Rover and Audi joint venture, I have tested over two hundred domestically produced car models. For imported models, I have tested BMW I 8, Mercedes-Benz 2017 S 600, Audi S 7, etc., same Tesla. ~"

"~ But there was no car listed here that could bring me pleasure like the pleasure of trying out this Shi Lei car. The more test cars there are, the more modifications I demand on the car. The pickier I am during the test drive. Manufacturers often asked me what the perfect car was in my mind, and I was saying there is no such thing as the most perfect car. But this time I tested the Shi Lei car and found it to pass the test drive. I discovered I had found a lot of flaws by testing hundreds of models. This did not exist at all in Shi Lei. ~ "

"~ I'll tell everyone, what is my biggest feeling during the hour-long trial. ~ Technology, disruptive technology, and let me go, I'm about to fall in love with the smart assistant. ~ "

"~ I feel like I'm driving lightning, just like I had just driven a 1980s Santana and suddenly hit a BMW I 8. My test time was between 7:30 am and 8:30 am. It's just now luckily it is dark so I also had the chance to experience the night mode of the Shi Lei car. ~ "

"~ Did you know that in night mode, the front windshield of the Shi Lei car will automatically compensate for the low light level. Even though the high beams are not on, I can clearly see the landscape outside. And on this road, there is no high beam of any car that could make my vision impossible on the road. ~ "

"~ I asked the staff about the technical principles of night mode. ~ They graciously told me that the principle of the headlights of the Shi Lei car is different from the traditional headlights. The headlights of the Shi Lei car are blue, the light source illuminates the target, light reflection occurs. This reflected light is reflected back to the front windshield and will be enhanced by a special transparent intermediate layer inside the glass, allowing the driver to achieve at least daytime vision. ~ "

"~ This is a revolutionary technology, so mid-range automakers can't develop similar technologies. It is difficult for me to imagine their future living environment."

Star test pilot Liu Lin Zheng also posted some photos of the night mode renderings he took with his cell phone in the news, and the effect of the images shocked hundreds of thousands of Internet users.

At the end of the news, Liu Lin Zheng also used a very exaggerated tone to ask why the Huge Industrial Monster had priced the standard version of the Shi Lei car at RMB 240,000.

Because he believed the standard version is also equipped with this windshield technology, and the glass supports the color-changing function. At the cost of two hundred and forty thousand Yuan, will the Huge Industrial Monster really lose money?

According to Liu Lin Zheng, the standard version should be priced at 500,000 Yuan, which is more in line with economic interests.

Liu Lin Zheng's generous praise has excited countless Internet users. The standard version is priced at 240,000 Yuan. Most of the users who wanted to buy a foreign brand car as a joint venture can get it. If the price is really 500,000 Yuan, 95% of users cannot afford it.

The price is two hundred and forty thousand, is it at a loss?

Some people trade badly, and no one trades loss. The price of 240,000 Yuan for the Shi Lei car is naturally not at a loss, and the configuration of the standard edition of Shi Lei is an innovative technology in the eyes of others. However, in the Huge Industrial Monster, except for the relatively high cost of plasma batteries, the rest is all cabbage technology.

The standard version is only equipped with transparent and opaque glass with adjustable colors. The windshield is equipped with a night mode, as well as assisted driving and remote-controlled driving functions. As for ESC seats, sensor wipers, airbags and side air curtains, cars made in China under 100,000 Yuan are ready to match. Of course, Shi Lei cars will not be stingy and will do better.

It is not impossible to increase the standard version to 500,000 Yuan, but it will abandon the entire Chinese population and even the largest share of the mid-range car market in the world.

This choice is like having the gold of the world and the multiple-choice question of owning the steel of the world. Gold looks luxurious and expensive, but people who really ditch steel and choose gold will only make countless people laugh at their big teeth.

Dropping out of the mid-range auto market is like having several auto industry giants ranked higher than the Huge Industrial Monster on the manufacturing ranking list to win the gold medal without getting too tired.

Small profits but quick turnover brings more than just more profits. There is also Huge Industrial Monster's voice in the automotive market and its fatal assault on the overseas industrial market.

The plan to build 5,000 energy service zones nationwide is Ye Qing's undefeated golden body for the Shi Lei car. As long as the sales volume of the Shi Lei car reaches a certain scale, the energy service area can be like a gas station, making money every day.

The money is so important there is nowhere to spend it, which is also one of the driving forces that prompted Ye Qing to come up with this great plan. If the money is unspent, it will still be just a string of numbers without any value.

.....

That night, most users who were considering buying a car in the country were a little sleepless by the news media.

People who were originally planning to buy a 200,000 Yuan car from foreign joint venture brands saw that the standard version of Shi Lei was only two hundred and forty thousand Yuan, and they were not calm about it at that time.

I'm counting on ~

New energy vehicles don't have to be a lottery. The state also has special subsidies for the purchase of cars, and numerous tax reduction and exemption policies. Should we wait and see how the users of the Shi Lei car will react?

Users who planned to buy high-end cars between 400,000 Yuan and 700,000 Yuan are also not at ease.

What the Elite Edition of Shi Lei, Shi Lei looks super smashing.

Anyone who buys one quickly, let's listen to the owner's review.

Buying a car comes right after buying a house. Many potential buyers who are not too far from the city of Shanghai have decided to look at a prototype car first.

As a result, the first group of users who arrived in Shanghai city early the next morning, planning to see the prototype car, were shocked by the crowds and could not help but fear being rushed by the crowds.

#### **Chapter 644: First buyer.**

Who will be the buyer of the country's first Shi Lei car?

Early in the morning, the flagship store at the Huge Industrial Monster Building was filled with men. In addition to countless curious potential car buyers, there were also reporters from the mainstream news media.

At the press conference, the Shi Lei car amazed everyone, but sometimes the show cars released by the automakers have big differences in the details from the official mass-produced version. This detail is often reflected in the reduction of technology and the reduction of the interior during series production of the version for sale.

The media was unsure whether the producer of the Shi Lei car will do this, so they came to the Shi Lei car sales site first to report the latest news about the Shi Lei car to the curious public.

"This year, I want to get married. In cities above the third rung, in addition to housing, cars have also become a necessity."

Regardless of free love or blind introductions, as long as it is a city dweller and a young couple wanting to get married, they have to talk about buying a car. In most cases, the woman brings up this topic first. Of course, boys also want to own a car. As long as both parties can financially, most couples will buy a car and a family home when they get married. If the economy does not allow it, and if the woman insists on buying a car, the man will be in a big dilemma.

Among the customers who came to see the Shi Lei car today, there are many young men and women in couples.

"Feng Ling, my mother said it is better to buy a famous brand when I decide to buy a car. I checked on the internet, and now the prices of Mercedes-Benz E-Class and BMW 5-series are between 300 000 to 500,000 Yuan," said a young girl in a dress and holding a young boy wearing a striped shirt and wearing glasses and had slightly pale skin.

This boy was dressed softly, and his length was also soft, giving people the feeling of an intellectual. His name was Xu Feng Ling, and he is a senior technician in the Shanghai City Wastewater Treatment Plant. It was he who broadcast the movie about the Monster Heavy Industry Sewage Treatment System on the Internet and rectified the ideas of people in the United States about this sewage treatment system produced by Monster Heavy Industry not so long ago.

"Feng Ling, why don't we go to the Mercedes store and buy a Mercedes-Benz 4S car? See, people here are almost crowded..."

"Zhang Yao, I really wanted to listen to you before and buy a BMW or a Mercedes-Benz, but isn't Huge Industrial Monster launching a new car? How can BMW and Mercedes-Benz compare to that?" Xu Feng Ling was also engaged in the crowd, but no matter how many people there were, it couldn't stop his determination to buy a Shi Lei car.

Zhang Yao firmly held Xu Feng Ling's arm, she was woken up by her boyfriend's phone at 6 am. She had heard from her boyfriend on the phone that he wanted her to go with him to buy a car today. She was excited and walked out with some good makeup. She thought she could accompany him to a circle of friends to show off her boyfriend driving a Mercedes-Benz or BMW in the afternoon, but her boyfriend took her to the Huge Industrial Monster Building taking a cab and said he was going to buy a newly classified electric car...

Seeing her boyfriend's stubborn expression, Zhang Yao was a little upset.

The loud and crowded atmosphere of people around her amplified her discomfort even more and made her a little more angry.

"Xu Feng Ling, you agreed to go see Mercedes-Benz and BMW together. Now you've changed your mind to buy that Shi Lei car that nobody knows about?"

Zhang Yao threw up her boyfriend's arm and said angrily: "Before going out with you, I was with friends. I posted in the WeChat group a piece of news about buying a Mercedes-Benz or a BMW and said I will show it to them in the afternoon. The little sisters have posted a lot of likes and comments, and they are almost envious of me. Now how are you gonna make me appear in front of them?"

Angry, Zhang Yao didn't learn that her boyfriend wanted to buy a Shi Lei car and that he wasn't going to buy a Mercedes-Benz or a BMW, so she played this trick by crying and making trouble. in front of her boyfriend like one of those ignorant little girls.

She's twenty-six this year, even though she's in town; she's reached the age where she has to think about marriage. Her parents and friends had introduced her to more than a dozen people before, but Zhang Yao did not look at them. Later, during a gathering of friends, she ran into Xu Feng Ling. Originally, Zhang Yao didn't feel much for him. Xu Feng Ling was the kind of gentle boy, restrained and loved peace and quiet. During the meal, Zhang Yao, who was single, and he, who was also single, made an arrangement together. This wasn't a blind date. They were sitting in another place like light bulbs. Out of politeness, Zhang Yao and Xu Feng Ling chatted. Unknown men and women can only talk about what they do for a living, how old they are this year, and so on.

As a result, Xu Feng Ling introduced himself and said he worked in a sewage treatment plant and worked there as a technician.

"..."

Although Zhang Yao didn't hate this career, she didn't like it.

She worked at the Fenghe District Civil Affairs Bureau in Shanghai City. Although she was only a regular staff member of the Social Affairs Unit, she was a staff member of a national administrative unit. In terms of identity, she is a serious civilian, a civil servant in a public institution. Of course, Zhang Yao had a feeling of superiority in her heart towards Xu Feng Ling. If it wasn't after dinner, some friends would boo and would ask them to add a WeChat chat, and Zhang Yao would probably never meet this nice boy a second time again.

If you don't know, she was taken aback another time.

After adding his WeChat, Zhang Yao flipped through the hints in Xu Feng Ling's two pages of WeChat and found that this guy turned out to be a graduate student at a fairly well-known US polytechnic university. The photo of standing in front of an American college wearing a bachelor's degree uniform suddenly shattered her sense of superiority and accepted this guy's awesome and mysterious feeling.

Slowly, Zhang Yao took the initiative to chat with Xu Feng Ling on WeChat and Xu Feng Ling was a gentleman, and he was not that inexplicable kind of person but he was witty, so the two had a pleasant conversation.

One day she found out that this guy was very powerful; it was because of a mood swirl made by her. She once complained in the circle of friends about her dissatisfaction at work. She was always scolded by the manager and wanted to change jobs. Women always liked to be very emotional and weak. She said she really didn't like staying working at her job, so she just quit her job. At that time, Xu Feng Ling ran to comfort her, saying that if she didn't like that position she could change it to another and asked her which department she would like to work in.

Zhang Yao laughed foolishly; it took nine hundred cows to be admitted to the office. Change to another station, at the wastewater treatment plant?

She casually said that if she could be a little leader, she won't need to be berated every day. The niece of the director who also came with her for the civil service exam was not admitted, and she was admitted on the spot. Then... the next day she went to work, the secretary-general did call her to the office, congratulated her from head to toe and finally asked her if she wanted to get up and go to the service and put herself in a burden to serve better without sensitivity.

She became deputy director...

The deputy headmaster who berated her before when he saw her was unpleasant to watch, seeing her now, he has become as polite when he meets her as if he is meeting the headmaster.

Zhang Yao went mad, she thought she was dreaming. If it hadn't been for Xu Feng Ling's smirk as he asked her if she was happy when she became Deputy Director, Zhang Yao would have doubted she was supported by a great leader. Knowing it was Xu Feng Ling's help, Zhang Yao was shocked and moved into a complete mess. It was only with a personal promise that she could repay her great kindness.

Becoming this guy's girlfriend, Zhang Yao discovered Xu Feng Ling was much better than she thought. The last time she went to the sewage treatment plant, and her boyfriend actually received two mayors and three directors of the Environmental Protection Bureau one day. Zhang Yao felt frightened by the tone of his boyfriend who spoke to these leaders, as if they were simple men or if he was a friend of these leaders.

With such a powerful boyfriend, why would Zhang Yao play tricks in front of him?

"Believe me; the driving force behind the Shi Lei car is far superior to the BMW or the Mercedes-Benz." Xu Feng Ling did not intend to calm his girlfriend's emotions just yet. Buying a Shi Lei car is the royal road.

Xu Feng Ling's voice drowned in the rowdy crowd. When the Huge Industrial Monster Building flagship store opened, Xu Feng Ling immediately grabbed his girlfriend and burst into a savage force that was incompatible with the gentle appearance, and snuck into the flagship store full of Science fiction.

A Shi Lei vehicle experience area was recently opened here, and dozens of brand-new Shi Lei vehicles are lined up next to each other.

"I want to buy a Shi Lei car!" Xu Feng Ling shouted breathlessly.

Zhang Yao was already pissed off, now she couldn't take it anymore, her boyfriend doesn't even try to test the car anymore, he wants to buy it straight away. She has to try for a long time before buying a bag, but he buys a car without even touching it.

"Xu Feng Ling, let me tell you, I don't care how bad you are. If you want to buy this Shi Lei car today, you need to get my consent," at the moment, there is no reason for Zhang Yao to hold back her anger.

"Fool, didn't you see the crowd behind?"

Xu Feng Ling took out his bank card and shouted at the ignorant shopping guide: "Quick, two Shi Lei Elite models, you don't need to present them. Just do the formalities."

"Are you crazy? ~ Wait ~ how much is the Elite model? Do you want to buy two?"

"420,000 Yuan."

"Where do you get so much money and two cars don't cost 840,000 Yuan? Even the licensing procedures..." Zhang Yao's eyes were wide open like those of a caiman when Xu Feng Ling took out his card bank, her boyfriend actually wanted to buy two Shi Lei Elite cars, that kind of car that he doesn't even know if it's good or bad.

Xu Feng Ling hurriedly hissed and lowered his voice: "I know the president of Huge Industrial Monster. He can give me a 40 % discount when I buy a car. I will buy you two for the price of a one."

"Ah..."

Zhang Yao does not remember what happened a few days ago, and she felt dizzy. Her boyfriend unexpectedly got to know the president of Huge Industrial Monster, the legendary big man. She too needs to buy a car for herself...

When the salesperson finished check-in and handed over the keys to the two Shi Lei Elite cars, Zhang Yao was still dizzy.

"Haha ~ baby, don't be dazed. Let's go to the car management office to complete the procedures. After the procedures are completed, you can drive it to show it to your little sisters."

"Show... shows off..."

Zhang Yao suddenly remembered that before going out, she posted in the circle of friends, saying her boyfriend was going to buy a BMW or a Mercedes-Benz and that she was going to show it to them in the after-midday. Now, was she going to mention that he bought a Shi Lei Elite car for 420,000 Yuan?

The gorgeous boyfriend actually got a 40 % discount.

"Dear... honey, how do you let me show this car?" Zhang Yao took Xu Feng Ling's arm again, not knowing whether to cry or laugh.

#### **Chapter 645: I am a smart assistant.**

Zhang Yao's dreams of owning a Mercedes-Benz or a BMW car were shattered, but originally she just wanted to show off the fancy car her boyfriend gave her by taking pictures and posting them in her circle of friends, and sometimes allowing them to borrow it and open it and settle in.

Now her boyfriend waved a big hand and made her love this car at first sight by buying this Shi Lei car which was the same price as the BMW 5 Series.

Zhang Yao got dizzy when she received the Shi Lei Elite car priced at 420,000 Yuan as a gift, because although the two young people had recently met and were going to get married. But nowadays, people are getting divorced after they get married, and is her boyfriend really willing to pay for a car to pick up a girl?

Armed with the keys, the staff member took them to go through the vehicle formalities, and as soon as they turned their heads, Zhang Yao and Xu Feng Ling found themselves surrounded. To be precise, they were surrounded by journalists. A dozen reporters at the microphone stared at them, like a hunter staring at an antelope.

"I'm a Phoenix News reporter. Excuse me ~ Handsome guy and beautiful woman, you are the first consumers in the country to buy Shi Lei cars. Can you give us your opinion on this car?"

"Excuse me, are you confident in this car? I noticed you hadn't even taken a test drive."

"Excuse me..."

Not only did reporters see Xu Feng Ling buy two Shi Lei Elite cars at once. Potential car buyers who were also spectators gathered and asked. How's his car? Can they walk him to the parking lot and let them see the inner car first?

As for the ten show cars, even the shadows were surrounded by the crowd. If it weren't for the salesperson who saw too many customers and locked the cars on time, it's estimated that seven or eight people might have climbed in by that time.

After being surrounded for half an hour, Xu Feng Ling pulled Zhang Yao out of the pile of reporters and never ceased to rejoice he bought these two cars early, perhaps if he had waited until at noon to buy them, these cars would no longer be available.

"If you didn't buy them, we would buy a Mercedes-Benz." On the way to the accompanying personnel vehicle management office, Zhang Yao followed in the last row with a flat mouth.

"I have just enough money to buy a Mercedes-Benz, but I can't buy one for you and a Shi Lei for me." Xu Feng Ling laughed extremely satisfied: "Baby, you women don't understand cars, and you don't understand the strength of Huge Industrial Monster. I won't talk about good or bad plasma cells, with only machining technology from Huge Industrial Monster, the quality of our car is far from Mercedes-Benz and BMW."

"I don't know the cars?" Zhang Yao protested disapprovingly and almost cried: "With the purchase of this car, I can't show it to my girlfriends and brag to them."

"This gentleman has a vision. At Huge Industrial Monster, we say machining is our top priority, and no one in the world dares say the second." The staff responsible for driving and guiding the two new users to the Shi Lei car and familiarizing themselves with its functions smiled confidently: "Ma'am, believe me, Shi Lei is superior to Mercedes Benz and BMW."

.....

After the procedures are completed, the license plate is placed and the duties of the Shi Lei car under the direction of the staff are settled, Xu Feng Ling, who was busy with business, said he will leave to work first and made an appointment with her and asked her to wait for her at night.

Zhang Yao, who obtained her driver's license for five years, only drove a handful of times, and even forgot about the manual transmission requirements, nervously sat in the driving chair of the Shi Lei Elite.

"I'm nervous."

"Yeah ~ Come take a picture of the Moment."

Listening to this, Zhang Yao quickly took out her cell phone.

Zhang Yao felt sweaty hands. As soon as her boyfriend found out she had five years of driving experience, he left a line saying this car is easy to drive.

.....

She is now in the parking lot in front of the sales office. She must tell herself the appearance of the Shi Lei car is too cool, and the interior space is much more spacious than the similarly priced BMW 5 Series. Barely parked here, the Shi Lei car caught the attention of passers-by.

Although the Shi Lei car is not as famous as Mercedes Benz and BMW, and also a domestic car, Zhang Yao can still feel that this Shi Lei car is profitable and its function is too science fiction, through the explanations given by technicians throughout the morning. And these functions are really suited for that. She remembered the staff introduction and put together this smart assistant that looked very interesting.

After all the adjustments were completed, Zhang Yao turned on the short film shoot function, looked around the car first, then said: "~ Meng Meng starts the car ~."

The cute cartoon little girl on the center control screen nodded, the originally dark car interior suddenly woke up, the steering wheel was automatically lifted, and the color low-light electronic mirrors both sides were on, like what people are watching 3D movies, as clearly as possible, she could see the view behind the car. On the front windshield, a translucent screen was also illuminated, marking the various data of the car.

"Meng Meng ~ Help me turn the car windows blue."

"Meng Meng received it!" As the cartoon girl nodded, Zhang Yao quickly recorded the original transparent glass with her cell phone, and gradually was turned into a cool blue sci-fi screen.

After the ten-second video was taken, Zhang Yao, with the car book with her name printed on it, downloaded it with satisfaction. She's been in a Mercedes-Benz too, but comparing her to the Shi Lei car, the gap between the two cars is as big as a tractor and a Mercedes-Benz.

Sure enough, after the video was released, Zhang Yao's phone kept spinning and she felt like she had become a star. In the circle of friends, even the people who hadn't said a word for several years tried to leave a message below, admiring the high end of this car and asking what type of car it was.

Then her phone rang, and she was a best friend who had a good relationship with her on weekdays. Her best friend enthusiastically asked her if she really bought this car and asked her to go shopping with the sisters.

"Alright, alright ~" Zhang Yao quickly agreed, of course, she had to show up after buying a new car.

Slowly and nervously she had driven the Shi Lei car to the underground parking lot at Wanda Plaza, now not only came to the two good friends for fun but also to a sister who was secretly making her frown. This sister is called Xu Han Yan, she is a beautiful person, especially her water snake size, her twist makes men drool. It's just that this sister's private life is messy and she likes vanity.

Today, Xu Han Yan actually drove a Mercedes-Benz S 400!

"She definitely came showing off, and this Mercedes-Benz I don't know what man she took it from. She's driving it to me." Sister Zhang Yao thought.

Of course ~ After the Mercedes-Benz deftly parked in the parking lot in front of Zhang Yao, her little sister approached the Shi Lei car with a proud face, pushed Dior sunglasses, and smiled: "Yao Yao, you didn't want to buy a Mercedes-Benz with your boyfriend in the morning. Well, how did your boyfriend buy a production car?"

The other two girlfriends were driving Volkswagen cars, and when they met, one of the girlfriends quietly told Zhang Yao that Xu Han Yan should follow her, and Xu Han Yan called to ask someone, a boyfriend older than her who was in the Mercedes-Benz he comes.

"It's so shameless to buy a domestic car. Now Mercedes-Benz cars aren't expensive. If you can't afford the S-series, you can buy the E-series."

Zhang Yao blushed and said nothing.

If Xu Han Yan is here to pretend that or something, Zhang Yao admits she was successful.

Mercedes-Benz S 400 appears to cost over a million Yuan. Its Shi Lei Elite is only four hundred and twenty thousand Yuan, and it is still a domestic car. It is a thousand miles from the world-famous brand of Mercedes-Benz. Even if the car was given to her by her boyfriend and the Mercedes-Benz was given to Xu Han Yan by an older boyfriend, it wouldn't save any face.

The other two girlfriends quickly finished the game and said the domestic car is very good. This kind of Shi Lei car is very famous on the Internet. Didn't Yao Yao post a video?

"The interior of this car looked really high-end, so let us in and take a look."

Zhang Yao was in a bad mood, she forced herself to smile and said: "Okay, okay."

The two girlfriends were about to open the door and get into the car, and Xu Han Yan took the lead in the co-pilot's seat.

"Yo ~ the interior of this car is good. But for domestic cars, we can only work hard on the interior. The motivation and the gearbox change are much worse than the imported cars. The finish of these invisible details is even worse."

As soon as she got in the car, Xu Han Yan, who admired vanity, kept babbling: "My Mercedes-Benz S 400 has a V 6 engine, and it only takes 6.8 seconds to reach 100 kilometers per hour. Yao Yao, that kind of Shi Lei that looks like a sports car from what country is it imported from, and how much does it take to get to 100 kilometers an hour?"

Zhang Yao didn't remember these things, and she didn't know the car very much. She was shocked by Xu Han Yan's question, she didn't even think of speaking, her face was hot and her heart was angry.

"I don't know," Zhang Yao replied stiffly.

The atmosphere in the car has become a bit awkward...

"My little sister, you don't need the motivation to motivate the car, Shi Lei." In the uncomfortable atmosphere, the voice of a charming girl suddenly comes to mind in the car: "We are equipped with a double horsepower rare earth permanent magnet motor, featuring the world's highest industrial manufacturing technology. It only takes 3.5 seconds to reach 100 kilometers per hour. My little sister, Shi Lei is the fastest car in the world. "

"Who ~ who spoke?" Xu Han Yan, who sat on the co-pilot shouted in shock.

"My little sister, it's me." On the central control screen of the car Shi Lei, a cute cartoon three-dimensional pretty girl jumped up.

"Her Royal Highness said she didn't know, I can answer your questions for her. ~"

"~ I'm a smart assistant, Meng Meng, my little sister, don't compare Shi Lei with Mercedes-Benz S 400, that kind of stupid car, Her Royal Highness can overtake this stupid car with her eyes closed."

#### **Chapter 646: Don't change your car for a Mercedes Benz.**

Shocked?

Zhang Yao and the two girlfriends in the backseat were amazed, they didn't expect this little assistant to be so smart.

Xu Han Yan, who was hit the most, was also the quickest to come to her senses and set out to show off the Mercedes-Benz S 400, after sustaining 10,000 critical damage to her heart. She was slapped in the face by a little software helper... That little helper, against all odds... even said her Mercedes-Benz is a stupid car, and she could pass it with her eyes closed?

"Accelerate to 100 kilometers for 3.5 seconds, blow it, how much are you worth?" Xu Han Yan was unconvinced: "My Mercedes-Benz S 400 is worth 1.5 million Yuan, and you?"

"Meng Meng is priceless!" On the central control screen, the pretty girl proudly raised her head.

"..."

"Haha!"

Now even Zhang Yao is almost laughing, this little helper is so cute. When the staff first introduced it, he said it is very smart and has a matrix thinking program. At the time, she disagreed and thought it was similar to the voice assistant on the cell phone. If you ask it, "What's the weather like today?" It will

answer you: "Check out Baidu." If you ask it: "What clothes should I wear today?" It will say: "I can't do anything or can't recognize what you're talking about." She had never expected the little Meng Meng she named to be so cute and awesome.

The other girls thought it was funny, but Xu Han Yan thought the laughter was very hard. She was driving a luxury car worth over one million Yuan, and a domestic car worth over four hundred thousand Yuan laughed at her. How could she take it?

"Huh ~ sensational little helper."

"My Mercedes-Benz has 12 airbags. How much do you have in your car? Are there six?"

"My little sister, I have sixteen airbags. You can't follow me. In-depth detail I also have three more electronic protection technologies and five more passive protection measures than you. I also have the main rebound protection beam created by industrial technology unique in the world. The overall safety performance is safer than that of your Mercedes-Benz S 400. The data is so much higher."

"Even the little helper can boast?" Xu Han Yan's face was full of hell.

"Meng Meng is not bragging."

"You said you had sixteen airbags. What are you talking about?" Xu Han Yan sneered.

"Your Royal Highness, this young woman suspects Meng Meng's loyalty to her, so she wants you to show her the location of the sixteen airbags?" In the realistic display, the cute girl from the cartoon started crying.

Zhang Yao was a little distressed for no reason, but Xu Han Yan sneered and interrupted her again, saying: "How didn't you know, she didn't show them to you? So... show them to us?"

Zhang Yao didn't know how to show them and couldn't even find the sixteen airbag positions. For ordinary cars, there are two airbags, and four airbags are suitable for mid-range cars. Six airbags or eight airbags are configurations available only in high-end cars, but how for sixteen airbags? ...

"Good Majesty." The lovely little assistant nodded: "The car airbag position is identified by the abbreviation SRS in the international market. I will take turns turning on the airbag position malfunction indicator lights, please pay attention to me, my little sister."

The voice dropped and the yellow light of the SRS logo flashed on the steering wheel where Zhang Yao was sitting.

Then there is the position of the co-pilot's dashboard, the position of the headrests of the two seats, under the dashboard, the position of the co-pilot's knees, and the six side safety airbags on either side of the ABC column. Once these lights were on, there were already twelve flashing amber lights. The girls in the car were shocked at how many airbags it had and wondered where there were four more. The head restraints on both sides of the rear seats and on the rear doors respectively illuminated yellow reminder lights.

"My little sister, sixteen airbags, Meng Meng is not bragging."

Xu Han Yan looked at the sixteen flashing yellow lights in the car, and 100,000 bison rushed into her heart. Is it still a car? Isn't that so overkill? There are not so many even in the first class of the plane.

"My little sister, do you want to listen to a piece of light music and experience a good massage? Meng Meng masters hundreds of massage techniques!"

.....

The plan to ruin Zhang Yao for buying this car has been ruined.

It is not that Xu Han Yan aroused the enthusiasm of everyone only but she aroused the enthusiasm of Meng Meng too, the girl who likes to boast no longer has a face to stay even longer in the car, so she broke the phrase: "I have other things to do." And fled in despair.

No one took care of her when she left, the girls in the car had been deeply drawn to the car Shi Lei and the cute little helper especially when he talked about the massage, even Zhang Yao obediently lay down on the chair, waiting for Meng Meng to give them a massage.

Then these girls appeared to be in a car full of Chanel, and looked over to smart assistant Meng Meng and started deep research into the technological functions of the whole car. They asked so many things like discoloration of the car windows, smart driving, assisted driving, remote control, and even automatic parking functions.

At the instigation of her girlfriends, Zhang Yao also top-up Meng Meng with one thousand Yuan through WeChat payment. This money can be used to buy things in the Shi Lei car mall, and she can automatically pay a fee at the entrance to the freeway, and pay for the distances traveled on the freeway through the onboard network card and choose the color of Meng Meng and her clothes, and so on.

After playing all afternoon, posting everything they've been up to that afternoon in the circle of friends. In the evening, Zhang Yao finally met her boyfriend Xu Feng Ling.

Now, not to mention a 450,000 Yuan Mercedes-Benz BMW, even if you gift a Mercedes-Benz S 400, Zhang Yao will never change her beloved car. What kind of car is it? It's clearly her heart, okay with her most beloved baby.

After the two of them had dinner, Xu Feng Ling took her home. After arriving at the community, Zhang Yao asked her boyfriend, confused, how to charge the Shi Lei car. She has completely forgotten the charging modes that the staff explained to her in the morning.

Xu Feng Ling said that when buying a Shi Lei car, they will install a charging pile with the car, they will install a stake as big as a fire hydrant, special technicians will come to the door to install it. At this time, the car will stop next to the charging pile.

"What about the electric battery? Can't I pull a line from the house to the basement?" Zhang Yao asked suspiciously: "It turned out that I like to charge my electric car like this."

Xu Feng Ling was a little sweaty, so he had to give his girlfriend some folk science. If the battery capacity of the Shi Lei car is converted to ordinary household electricity capacity, it is equivalent to 400 kWh. With the charging battery, it can be fully charged in about an hour. If it drags a line from home, the Shi

Lei car will automatically adjust the recharge time according to the strength of the line. It is estimated that the time will be very long.

Zhang Yao innocently asked, "Why?"

"Stupid, the lightning technology content is too high, the wires and circuitry in the house are too outdated, and they cannot handle the 400 kWh load in an hour. The charging battery is connected from the ground wire network, which is better than yours. The line used is much thicker. ~ "

"~ I saw your car still has 95% of the energy, enough for you to drive for over a month to get to work. The electric battery will be built in three days, and we are awaiting energy service in the future. After it's built in the neighborhood, the charging speed will be faster and it only takes 20 minutes to half an hour to recharge the battery, and the price is cheaper."

"400 kilowatt-hours of electricity, how much money is wasted." Zhang Yao estimated that the family uses tens of kilowatt-hours of electricity per month. It can reach 200 kWh in summer. The Shi Lei car needs 400 kilowatt-hours of electricity to be fully charged.

"Half the price for electricity phased overnight, only 36 cents, including a small loss during the recharging process, 170 Yuan for a full charge, enough for you to run for more than a month. If you switch to gas, you have to pay 600-700 Yuan."

"Ah ~ It saves money!" After listening to her boyfriend's folk science, Zhang Yao smiled like a treasure, "My friends bought a lot of cars, and they almost couldn't refuel. Now I can stimulate them to buy a Shi Lei car."

#### **Chapter 647: Fire burst.**

The power of plasma batteries is much more than that.

Lithium batteries fitted to hybrid vehicles, even if these cars are unturned on, will see 1% to 3% of the electricity naturally disappear from their batteries each day. This is an inevitable technical flaw of mass-produced large-scale lithium batteries, whether the car is driven or not, electricity is wasted.

Plasma batteries do not have this defect at all. Even compared to technologically advanced lithium polymer batteries, they belong to two completely different concepts. In addition, the plasma battery is just a bright spot in the Shi Lei car. The intelligent assistant developed by Tianjin, like poison, quickly captured all the users who bought the Shi Lei car.

It should be mentioned that at 12 p.m. 276 Shi Lei cars were sold, of which 7 are the Shi Lei Lightning Edition. The flagship store was packed with people, in the end; many customers clenched their teeth and paid for the order without even looking at the car.

Don't think that 276 cars are very few; this is just the number of cars sold at the flagship store in a day. According to the average price of 360,000 Yuan, the sales volume has reached 100 million Yuan. Which 4S store can achieve a sales volume of hundreds of millions a day and the boss of the automaker is guaranteed to nod and bow to the manager. If the Shi Lei car manages to maintain this daily sales volume, it will already be a wild horse in the Chinese car market or the kind of king horse.

Of course, the sales volume on the first day matters a lot. The whole Shi Lei car network is much discussed, and the advertising effect is better than that of the last ten TVs. When the hot discussion subsides, the Shi Lei car can still achieve sales growth, which is really great.

If a car is to sell really well, it can only earn a very good reputation with users. Just like when everyone talks about buying a car, they think it's better to buy a Mercedes-Benz. As to whether you can afford it, that's another story.

Two hundred and seventy-six Shi Lei car customers, how many people can they reach?

It may not affect a few people around them, but now it's the Internet age!

Almost overnight, the Shi Lei car swept the screen of major video websites and mobile video software. Some of these videos have been repeated quite a few times, and it has affected tens of thousands or even hundreds of thousands of viewers to help it become popular.

On the famous Connotation Duan You, as long as you click on the recommendation section, you can drag a particularly popular video after a few clicks.

.

.

By clicking on the first video, people got to see a strong car owner with a strong back, driving a comfortable version of Shi Lei.

"Hei Zi ~ Adjust the seat to a comfortable position for the Lord."

"At your service," a cute cartoon black bear nodded on the screen, then the seat 3D model appeared, and there was a person sitting in the seat, a character model similar to the owner.

"Master, your height is 182 and your weight is 190. According to your sturdy and solid physique, Hei Zi has especially increased the support of the third and fourth vertebrae for you when adjusting, and the reclining chair on both sides is also raised for you."

On the screen, the adjustment changes for each seat angle are shown. The owner's seat also changed with the angle of life, so that it showed an air of great pleasure.

"Master, are you comfortable?" The little black bear asked as if taking credit for himself.

"Well... Comfortable, let's listen to music again. I want to listen to Xu Ning Gong."

"My lord, your level of appreciation is very high. The rank of Xu Ning Gong's song has always been in the top five on the hot song list. But sir, we don't have this song in our music library, do you want to download it?"

"Well, didn't I buy you the stream, the damage-free one?"

"This song has a fee as well, why not open a subscription for yourself?" 10 Yuan per month, free download of 400 paid songs, the kind of lossless format?" The little black bear held out a VIP music logo like magic.

"Kaikaikai, sir, I have no shortage of money."

As soon as the Smart Assistant Perfection video came out, it was past three in the morning and countless people loved it.

"Where did you download this little helper, is it on Duan You, my central control is Android, and I'll move on to the next one."

"You are using the Apple system control, and I'm afraid it won't work. It's the terror of vehicle death for people, and he didn't see this effect in the control screen, we don't like it."

"Damn, you haven't noticed the adjustment of his seat. It's almost like a memory sponge. Can you change the angle at will, no matter how you are? How comfortable is it to sit on that seat?"

A second video was downloaded and only ten seconds later.

This owner drove the comfortable Shi Lei model which sold for 320,000 Yuan. He activated the assisted driving mode, sat on the co-pilot seat, took his hands off the wheel, and filmed a video pretending to be forced to do so in the video.

At this point, a silvery gray Mustang car came in from behind and raced past the Shi Lei. It looks like the Mustang owner thinks this cool Shi Lei car shouldn't roll smoothly sideways but bomb the throttle, and motivation soared to 7200 and wanted to fight it.

Then countless viewers saw on the transparent driving data display on the front windshield of the Shi Lei car, a red frame on the rear window of the silvery gray Mustang. The central control screen has zoomed in on that red box, and it's a sticker with a Duan You connotation, and there's also the words (Stop when Duan You beckons you).

"Your Majesty, I caught a wild Duan You in front of you. Do you want to honk a longhorn or two short horns to answer the challenge?"

.....

Duan You and Kuai Shou have similar meanings, and they both have their own cultures. There are a lot of people on Duan You who put a Duan You sticker behind the car window. If another Duan You in the same town sees the sign, and as long as they accept the challenge and win, they can ride in the car for free.

.....

This smart little helper really understands the culture of Duan You and can recognize Duan You from afar, and ask the driver if he accepts the challenge!

"666!"

"My God, I'm going sell my Audi Q 7 and buy a Shi Lei car."

"My BMW suffered 10,000 points of damage, what will the owner of the Shi Lei do? That can only remind me of a flat tire."

"Duan You, the wild horse in front of him, he laughed so much, he dared to challenge the Shi Lei car? This coercion can only give him 94 points, and the traffic police will give the remaining 6 points."

"I want to know how the Shi Lei car performs. Even the comfortable guy will be so excited. Can the Shi Lei version be used in the sky?"

Overnight, 6 consecutive Shi Lei car video updates became the new favorites of the header lines. These Shi Lei car owners didn't even have ten subscribers on their original account. The next day, the number of subscribers will pass the fifty thousand mark. Just put a detailed picture of the Shi Lei car and go out, and you can get tens of thousands of likes.

At noon, the mainstream media also rushed to capture the hearts. They edited all kinds of Shi Lei car-related videos from the internet. The kind uncles and aunts who can surf the internet for a while quickly reached out to the juniors who were considering buying a car and recommended they buy a Shi Lei car.

To buy a car?

Which car to buy?

In total, 5,000 vehicles were stored at the Longxitan plant. At first, Ye Qing felt there was no problem selling them for a month. He believed that when the reputation of the Shi Lei car spread, the factory's production base would be completed.

Against all expectations... When the flagship store reopened the next morning, the swarms of customers did not even dare to ask for the opportunity to take a test drive and waved their bank cards to buy the stock of cars in its entirety.

"Come on, I want the standard version of Shi Lei."

"I pay the full price."

"Go through the formalities for me."

"Any color is good."

"Sorry gentlemen, the standard version of Shi Lei is sold out," the seller responded by sweating profusely...

"So the comfortable version, hurry up, any color."

"Sorry sir, the comfortable version is gone..."

The country's provincial capitals have also opened order points for Shi Lei cars. But now the flagship store is unable to collect the goods,

"Order first, pay the deposit first."

This cannot be blamed for Ye Qing's lack of stock. Five thousand Shi Lei cars are worth nearly two billion. For other automakers to launch a whole new series of cars, they have to dare to stockpile billions of dollars and wait for shareholders to unscrew the heads of those who are going to place that order.

For hot cars, you have to queue, that's normal.

## **Chapter 648: A second hand car more expensive than a new car.**

Regarding the scenarios of selling the Shi Lei car after its launch, Ye Qing thought about many scenarios, and the scenario of competing with Volkswagen, Mercedes-Benz, and BMW never came to his mind because it was only a good fantasy.

In terms of the number of stocks, Ye Qing has always followed reality and prepared only 5,000 Shi Lei cars at the start. However, the primitive situation is there were only 5,000 Shi Lei cars prepared and 2,000 cars were presented in the flagship store and the rest of the cars were distributed to sellers in the country, and then the situation that arose was that dealers across the country had sold their assigned Shi Lei cars in the blink of an eye.

Prior to the establishment of the 4S store, Huge Industrial Monster contacted more than 20 major auto trade companies as sales outlets for the Shi Lei car. Now, these auto trading companies are eager to make ten phone calls a day recommending merchandise.

At the same time, the unusually popular situation of the Shi Lei car not only caused a sensation on the internet, but even the official China TV channel spent more than three minutes on the news to report the scorching situation. China's official television is the most authoritative medium in China, and the information it publishes represents the opinions in the hearts of many ordinary citizens of the country. For this reason, official television rarely ran the kind of product news that tends to be advertising. But this time for the Shi Lei car it broadcast more than three minutes.

In the news, the reporter introduced various revolutionary new technologies of the Shi Lei car to everyone in an excited tone. At the same time, he also contacted two owners of two Shi Lei cars with great power and entered the cars for an interview in the cars. He made these two interviews are done only by a personal initiative out of love towards the Shi Lei car. Even though the host no longer has professional literacy skills, he was for a moment stunned by the Shi Lei car on the highway, showing amazing technology.

Of course, this event was not the most important. After talking about the technology of the car Shi Lei and liked it very much. Later, the host solemnly began presenting the plan for the locations of the energy service stations and the 5,000 berths that Huge Industrial Monster will install.

The host announced to all of China that this was a respectable plan. It will change the way Chinese people live and travel and trigger an energy revolution in the automobile and auto industry, the Chinese people have successfully overtaken other peoples in the bends, becoming in front of the whole world for the first time.

This news sent a signal to people, not only can the insider see from this news that officials in China are very supportive of the Huge Industrial Monster's energy service station plan, but they will also facilitate the implementation of this plan.

Of course, the reason is not difficult to interpret: China is the largest importer of oil in the world and imports a large quantity of oil from abroad every year to satisfy its domestic consumption. Once the external stability situation changes or the oil-producing countries fall into turmoil, China will be extremely passive, and even in order to get oil energy, it will have to resign itself to compromises in international affairs.

Whoever controls oil controls the lifeline of the global economy, but that lifeline is in the hands of the mighty United States.

Promoting new energy vehicles means less dependence on oil, greater economic benefits to household electric power, and at the same time, it will also reduce vehicle exhaust emissions and play a role in energy conservation and environmental protection.

In the past, this could only be used as a nice slogan to promote. Now the Shi Lei car is bringing the light.

.....

The signals in the news, combined with the sales of fast vehicles, set off a series of chemical reactions throughout the auto industry.

The big automakers, especially the foreign joint ventures that go down the path of mid-to-high-end cars, urgently need to buy a Shi Lei car for research, and at the same time, they are wary of the Shi Lei car.

Ye Qing was also caught off guard by the explosive sales of the Shi Lei car.

At present, the production of the Shi Lei car can only guarantee a maximum of 500 vehicles per day. Ye Qing can only deploy more monsters to put into the processing of the Shi Lei car production line, and only when the production base is completed a day earlier than the order surge of Shi Lei cars will be satisfied.

Early the next morning, Ye Qing went to the business as usual.

The popularity of the Shi Lei car made Ye Qing feel a very heavy burden on his shoulders. At the same time, the strategic plan of the energy service center must be implemented as quickly as possible.

With this big idea in mind, Ye Qing drove a brand-new Shi Lei Elite to the underground parking lot of the Blue Sky Building. Now that Huge Industrial Monster has produced its own cars, Ye Qing can no longer drive the original Lagonda. It's like the fact that it's impossible for Huawei bosses to use Apple, so consumers think all bosses think Apple phones are good, but Huawei phones are not good. So what are they going to say? Huge Industrial Monster has built its own cars, and Ye Qing drives another car. Even if consumers say nothing, employees will whisper behind his back.

However, Ye Qing's Shi Lei Elite car was unusual. First of all, it is equipped with a single standard version of the plasma battery, with a range of 4,500 kilometers.

"..."

The standard version of the plasma battery with the attribute bonus of Huge Industrial Monster is exactly like this, with a single charge, and it can almost work from south to north of Chinese territory.

Although the appearance of this Shi Lei was like that of the market, but under the metallic paint, the body is a full-size nickel-titanium memory alloy. The tires are infused solid bulletproof tires, and due to the use of new materials, Ye Qing's Shi Lei car not only has strong safety performance but also weighs only 0.2 tons more than the normal version of Shi Lei car.

The technological equipment of the car is also very different from the release version. If necessary, Ye Qing can even activate the car's oxygen supply system to provide more than two hours of independent oxygen supply in the car.

In fact, this scientific and technological equipment is the icing on the cake. They are really against all danger. For which Ye Qing invited from the factory monsters, seven or eight angry miners, and hundreds of monster laborers to push everything horizontally.

This Shi Lei is a unique Shi Lei except that the brand does not ring Lagonda, other aspects of experience and driving and technological content are added far more than the Lagonda had before.

However, when such a powerful car entered the underground parking lot, it was stopped by two security guards at the gate.

"Mr. Ye ~ You are wrong," The two Blue Sky Building security guards nodded and smiled: "Mr. Ye, your building the Huge Industrial Monster Building has been finished for a few days, and you still think about coming here."

Ye Qing rolled down the car window and suddenly took a picture: "Where's my head? I was a little distracted while driving earlier, and I got used to coming to the Blue Sky Building."

After saying, thank you, he turned back to the Huge Industrial Monster Building, where he was arrested again.

At that time, the open-air parking lot of the Huge Industrial Monster Building was full of cars with license plates from all over the country. There were a lot of people around the entrance to the flagship store. Ye Qing's Shi Lei did not have time to enter the underground parking lot. It was like a huge magnet, attracting the attention and footsteps of countless passers-by. There were two handsome middle-aged men anxiously blocking the front of the car, and Ye Qing rolled down the window a little suspiciously.

"Dude, sell me that Shi Lei, I'll give you a million." Someone shouted in Mandarin with a heavy accent: "Cash, a million will be transferred immediately, then you will go to the DMV with me to do the transfer procedures."

Ye Qing was stunned on the spot, there was a man with a shiny back and a Gucci handbag in his arm who was panting because he had run: "Little brother sell me your Shi Lei Elite. I can immediately transfer 1.1 million. Any bank will it be okay?"

"..."

If the security guard hadn't had a keen eye and recognized Ye Qing's license plate number, and quickly came to arrest those crazy people who wanted to buy Shi Lei cars, Ye Qing probably won't be able to move for half an hour.

#### **Chapter 649: Energy service center.**

The underground car park is divided into indoor and outdoor areas, which are located at the entrance to the underground car park on both sides of the flagship store for external services. The original passage that led to the civil air defense project has been turned into an entrance to the underground parking lot for employees, and Ye Qing also went down to here.

After driving on the asphalt pavement, Ye Qing flashed the light, and the car light Shi Lei woke up the electronic gate mechanism of the exclusive garage reserved for Ye Qing. The induction recognition device recognized the license plate, then the door opened automatically.

Entering here is like stepping onto the stage at the Paris Auto Show. In this garage, which is not open to the public, almost the world's biggest luxury car brands are gathered. From world-famous road king the GTR, to Bentley Mulsanne, to Rolls-Royce Phantom, to Ferrari and McLaren, they are all present here. And every car is new, most of which hasn't even removed the seat covers. There is no doubt that these luxury cars belong to Ye Qing.

These luxury cars were unbought by Ye Qing to show off. Shi Lei cars were only mid-range cars. In Ye Qing's vision, when the reputation of the Shi Lei car is established, a luxury car with a price of over 2 million Yuan can be launched.

Of course, now is not the time to launch a luxury car. No matter how perfect Shi Lei is, he is still just a newborn, and there is still a long way to go before he becomes a world-class brand like Mercedes-Benz or BMW.

Luxury cars are not the same as regular cars; if they are launched too early it would be a shame that the sales are not good. Besides, the luxury version of the car is still being designed, and it is impossible to push it back.

Entering his own elevator, Ye Qing first went to the 66th-floor multi-functional conference room to prepare for today's morning meeting.

The Huge Industrial Monster Building has a total of 99 floors. Floors 60 to 66 are the directors' offices, and Ye Qing's work office is also located here. During working hours, everyone gathers in this office and represents their work situation. As per usual practice, during the morning meeting, the heads and managers of the different departments will report on the business and sales affairs of the day before, as well as the work plan for the day.

It was just that after Ye Qing entered the conference room today, for some reason, the supervisors and managers in front of him all looked at him with great grievances.

"What's the problem, isn't you comfortable moving to another office?" Ye Qing sat down in his seat with a puzzled smile. It didn't bother him at all but felt very happy.

In the Blue Sky Building, a hundred or two hundred people could be crammed into one office, and all the noise made while working was annoying. Now, in the new environment, even the bathroom is larger than the original sleeping area, and the environment is also brand new, making people feel comfortable from the bottom of their hearts.

"No, boss, we are harassed by customers who want to buy Shi Lei cars."

Kong Tao said with a wry smile: "Since the official announcement from China TV yesterday, which gave us over three minutes to talk about Huge Industrial Monster and his Shi Lei car to show us. Now calls from across the automotive industry, whether from dealerships or parts and materials suppliers, have fallen into a jumble, and they are eager to find us to further cooperate with us. ~ "

" ~ Boss, since the news that ended at 7:30 am yesterday, I received about twenty people, all partners, you know I couldn't get home after work, they blocked me at the door of the apartment building..." Kong Tao involuntarily shuddered just after speaking.

The phone in his pocket vibrated again, and it goes without saying the gang must have called back.

"Even me," the HR manager who isn't in charge of products added: "I've been approached by a bunch of people. The popularity of Shi Lei vehicles is so great that now we are out of stock on all ranges of Shi Lei vehicles. I have heard there are a lot of bosses out there who want Shi Lei vehicles, no matter what model they are, they will buy them directly for a 30% higher price."

"I didn't expect the Shi Lei car to be so highly recommended," Ye Qing stood up spread his hands, and said slowly: "Actually, the 5,000 vehicle inventories are already pretty amazing. I have already extended the production line at the factory. It is expected that by next week the production will be doubled. ~ "

" ~ The main problem is on the raw materials side, not to talk about the report on the labor situation."

Ye Qing is the chairman, but in the conference room he is the one who takes care of the business of the company the least, which makes it easier for him, but he can understand the inner thoughts of those partners who cooperate with Huge Industrial Monster.

Nowadays, the real development of the economy has slowed down, coupled with the increasingly fierce competition, it is more and more difficult for everyone to do business. Now the Huge Industrial Monster has opened a golden door for these traders. As long as they can make contact with the Huge Industrial Monster, it's almost like someone patted their shoulders and said: "Brothers, as long as you can move the money in the safe, you can move it."

Hearing the news that he was waiting for Ye Qing to announce it, Kong Tao brightened up with a cheerful smile at the corner of his mouth.

"Boss, at 9:00 pm last night, the flagship store and 23 outlets across the country have signed and sold over 3,700 orders for Shi Lei cars. Today, I think orders will explode. After all, we must take into consideration the influence of official Chinese TV news."

"But at the demand level, the orders need to be controlled. I suggest limiting the signatures on the number of advance orders for Shi Lei cars at each point of sale based on the results of previous sales. Otherwise, there will be too many advance orders and two months will not be enough to fulfill those orders."

"We have also sent a notice to dealers in provinces that have sold cars, to install chargers for the battery within three days and have them in their place."

"It's not enough to be responsible for the point of sale." Ye Qing nodded and shook his head after hearing this: "The Shi Lei car is a whole new energy technology, and ordinary household lines cannot withstand the current charge when recharging the batteries. The quality of battery charging directly determines the user's experience of the Shi Lei car."

"Let the technical department send technicians to different outlets to guide and strictly control the installation of electric piles, if they cannot meet the standards, their qualification as an agency will be directly revoked."

Kong Tao nodded seriously.

"Boss, the personnel office sent a message of recruiting a large number of skilled workers to the Jiangnan Ministry of Labor Office and large intermediary enterprises throughout the province as well as neighboring provinces."

"It is estimated that 3000 technicians can be recruited in a week to take on our own construction of electric piles and construction of the energy service area."

"Has the location of the first batch of energy service zones been determined?" Learning that the energy technicians were on the right track, Ye Qing turned to Wu Xiao Fan, the new director of the construction bureau.

"Boss, according to your request, the approximate location of the first 100 energy service centers has been investigated. In addition to provinces and municipalities directly under the central government, there are also 30 high-traffic highways to set up energy service centers."

"For cities, we can buy land to invest and build. For the highway, you have to get state approval very quickly."

"The approval document is not a big deal. We can have state support for this plan. Let me show you the factory-scheduled energy service area rendering first." Ye Qing took out a USB flash disk from his pocket and connected it to the media equipment in the conference room.

As soon as they heard the word rendering, the supervisors and managers immediately turned their attention to the huge dream screen behind Ye Qing.

#### **Chapter 650: Returnee buyer.**

In Ye Qing's vision, an energy service center cannot only satisfy up to 200 car owners but also park and charge in a dedicated charging area. It also has to undertake the maintenance work of Shi lei cars and has enough leisure and relaxation equipment, which is unique and attractive. It can't be like a traditional freeway service area, just for the owner to fill up and eat, and wash the car and add water on the way. It must be unusual and very attractive.

Ye Qing just calculated the current profit of Huge Industrial Monster Co., Ltd., and found that the cash reserve has reached a scale of 100 billion and once the energy service area plan is officially launched, it is assured that the money will flow faster than gambling in Las Vegas and even a large amount of follow-up profits will be met in the future to meet this plan.

With such an incredible investment, Ye Qing certainly will not allow himself to create an ordinary, poor energy service center. He wants to make the energy service center a Huge Industrial Monster calling card and a landscape and whoever sees it will give a compliment and whoever goes there will be amazed.

The renderings were opened, and an irregular diamond-shaped, scalene-triangle silver building appeared on the dream display.

At first glance, it seemed to the directors to even have a few irregular gems placed at random, and then they found that it was a long column that contained a nameplate in the shape of the scaled-down

version of the Huge Industrial Monster Building and that said the identity of the building. The building was surrounded by three rectangular parking lots covered with a shaded roof and each parking lot was equipped with high power charging stations and users can charge their own car as long as they park their car in the car park and the charging fee is directly deducted from the smart assistant's portfolio.

"For the energy service center construction method, I intend to use the modular construction scheme." Ye Qing clicked the mouse, and the energy service center on the screen suddenly dispersed into pieces of translucent glass with the same specifications and round square steel of several specifications.

"The material will be supplied by the factory, and the factory will also supply Mechanical Colossus Type I for construction and installation. ~ At the moment we are not talking about highway energy service centers. ~ In 23 provinces of the country, in half a month, I want to see at least 70 energy service centers start construction."

Ye Qing gave orders to Wu Xiao Fan, the director of the construction department, and looked to Kong Tao the sales manager, and added:

"At present, we can only rely on the cooperation of major auto trading companies for the sales of Shi Lei cars. When the energy service centers are completed, I plan to include other Shi Lei car sales cooperators, to improve the sales quantity of Shi Lei cars. Manager Kong, please contact those who wish to cooperate more closely with us, that they should set up a 4S store for Shi Lei cars, and they should set it up in the energy service center and accept our supervision."

Kong Tao thought for a few seconds, and then nodded in agreement: "Boss, this plan is good. These other automakers have 4S stores all over the country. Our Shi Lei car has just started, and naturally, there is no 4S store for it, so we can only cooperate with big auto trade companies. ~ If there is no 4S store, consumers will always feel the after-sales service is not guaranteed. However, the establishment of traditional 4S stores is too inconvenient. If we put it in the energy service center, we will not only generate additional income but also use the fastest speed to open a large number of 4S stores all over the country. ~ No problem boss, there are many car dealers who want to cooperate with us. ~ Sorry, during the meeting the phone in my pocket shook six times."

.....

Is the meeting over early? Yes, it didn't last too long.

After the morning meeting, Ye Qing called Qiu Yi, the general manager of the purchasing department, at the office alone. He too was present at the morning meeting, but some things were not so easy to say in front of everyone.

At the meeting, in addition to talking about professional tasks, everyone was eagerly waiting for the Shi Lei car to beat Mercedes-Benz and BMW in sales. But in fact, if the hardware problem is unsolved, then there is no problem for the Shi Lei car to defeat Tesla and to win the mid-to-high-end car market in China.

Ye Qing was prepared to take all the risks to invest in energy service centers, isn't it just for this purpose?

As for the material problem, it is, of course, only a question of the supply of the mineral Dysprosium.

At present, the monthly supply of metallic Dysprosium has increased from one ton to three tons. Depending on the amount of the current metallic Dysprosium and the Dysprosium required for the shrunken version of the plasma battery for the Shi Lei car, Ye Qing can only produce 30,000 vehicles per month at most. If a full version of the plasma battery is produced, the consumption of metallic Dysprosium is even more alarming.

The plasma battery carried by the Shi Lei car is at its lowest level, and only one-tenth of the necessary metallic Dysprosium has been used in its manufacture. 30,000 cars per month, only 360,000 cars per year, this weight represents less than a tenth of the annual car sales of a company like Volkswagen.

If there is not enough amount of metallic Dysprosium, the Shi Lei car will not even think of gaining the market share of mid to high-end automobiles in the Chinese market.

In the office, Qiu Yi stood in front of Ye Qing and sighed for a long time: "Boss, I couldn't do what you explained to me. I have contacted many suppliers of electronic raw materials in Japan and South Korea in recent days. None of them are willing to sell metallic Dysprosium; a 50% premium is not enough. ~ They also informed me that the main supplier of Dysprosium in the international market is China, why Chinese companies will buy more Dysprosium metal in overseas markets?"

"Nobody sells with a 50% premium?" Ye Qing has doubts. Don't these capitalists just recognize interests and don't recognize nationality?

"This may be related to the fluctuation of metallic Dysprosium in the Chinese market." Qiu Yi explained: "The Bureau of Mines has deliberately reduced the international export share of metallic Dysprosium to supply it to us. Now, these foreign suppliers of electronic raw materials are all covering themselves. The metallic Dysprosium is a treasure, and they themselves don't have enough, how can they be willing to sell it?"

Ye Qing sighed and motioned for Qiu Yi to go to work first. He has 100,000 machine guns in hand, but not enough bullets, which is probably Ye Qing's current mood.

Sitting on the mechanical engineering chair in the office on the sixty-sixth floor, Ye Qing turned around and looked out the window with some anxiety.

Seen from here, the crowd in the square below is no bigger than a swarm of locusts. However, many people gathered in the square. Whenever a brand-new Shi Lei car was kicked out of the underground garage by the buyer, there were always a lot of people around it, rendering the buyer unable to bounce back. These buyers are the lucky ones who started lining up early.

Cars are different from commodities: although orders in the flagship store have been on hold for two months, there is still a third left, buyers who bought the place before they completed the formalities.

You don't have to think of Ye Qing's place to know the people around happy car owners are local tyrants who want to buy Shi Lei cars at a high price.

.....

Not everyone can resist the temptation to win tens of thousands, or even hundreds of thousands if they change the car's hands. At least a third of the local bullies who are willing to pay a premium price for their cars have achieved their wishes. Soon there was another in the second third.

Cheng Han, who is 29 this year and was planning to marry his girlfriend next month, was the lucky buyer who just brought out a Shi Lei car from the underground garage. He was able to purchase the Elite Edition of Shi Lei on the first day it hit the market after it was built. There weren't too many complicated reasons for him to make this purchase. The main reason is that his parents work in the electricity utility and do not pay for electricity at home.

After spending over 400,000 Yuan to buy an electric car and his girlfriend had no problem with it, moreover now, there are jokes and videos about Shi Lei cars all over the internet showing that the one who can drive a car Shi Lei has more face than the one who drives a Mercedes-Benz. So, after waiting in line to complete the formalities so far, Cheng Han finally arrived at his Shi Lei car.

But who would have thought that as soon as Cheng Han stepped out of the parking lot, there would be a group of bosses with a strong accent and a lot of glitter surrounding him and his Shi Lei car, and are ready to buy the car that he had bought at a more expensive price? The highest price someone offered was 650,000 Yuan, which really scared him.

It was only when this man full of Chinese and English, who looked like a returnee who had lived abroad for many years, transferred the 650,000 Yuan, real money, to the bank card. of Cheng Han through multiple online bank transfers, and Cheng Han reacted like a dream and took this guy to the DMV to do the transfer.

"I'll make a call first." The returnee, who knows English and Chinese, pleaded guilty with a smile and took two steps to the side.

The call was made overseas. When the call was connected, the returnee said in plain English: "Mr. Lauder, everything is fine. I will drive the Shi Lei car to the designated port for loading at eight o'clock this evening."
