

M Road

Chapter 151

The best season to travel to the frontier is autumn. In the season of fragrant melons and fruits, there are all kinds of grapes. In the past, when he was in Jiangsu Province, Zhang Fan knew a horse milk (a) grape. When he came to the frontier, he knew that there were many varieties of grapes.

The sweet to greasy Hami melon can distinguish the male and female pears, and the pomegranates that are troublesome to eat can be squeezed and drunk directly. Figs and flat peaches can eat too much. Fragrant pears sold in the mainland are not the best. Good fragrant pears go to Europe to earn euros.

Shaohua's parents are farm workers. Their farm has a large Wine Vineyard. Every autumn, Shaohua's father will buy some wine grapes and brew red wine by himself.

In small cities, the pressure is small, and people's quality of life is fairly good. You don't have to think about whether today's mortgage has earned enough before going to bed every day. Get up early and think about how much money you want to earn today to get a mortgage! One of China's longevity towns is in the frontier. What can make people live longer? It's not that you take tonics, Australian vitamins and American calcium tablets every day. These are useless! A good attitude and living habits are the most important.

Shao Hua led the two old people to finally buy everything at home. You can't live now. No matter how expensive furniture you use, you must ventilate for a long time, otherwise all kinds of chemical components of furniture and decoration will enter people's body, human vacuum cleaner! Then there are various diseases.

Cardiothoracic surgery, it can't be said that there are few operations for several days. It's a major operation, lung cancer! The highest incidence rate of cancer in the male is air pollution, industrial dust exposure and long term smoking.

Some people are naturally big hearted and look down on life and death. In the face of death, they can "ha ha!" A smile, and some people are extremely secretive, there was no big problem, scare themselves, and finally scare themselves to death!

What is cancer, do not say what factors, what size cells, with the most popular saying is that the development of inflammation is cancer. Long term inflammation can not be cured or stimulated by inflammation. When quantitative change reaches qualitative change one day, it is cancer.

Full of rotten teeth, I feel nothing, as long as it doesn't hurt! This long-term oral irritation may lead to tongue cancer. These things are small things that are particularly casual in daily life. Long-term neglect leads to extremely bad results.

With the improvement of national strength, the quality of life of Chinese people began to improve significantly. First of all, the most obvious are civil servants and employees of enterprises and institutions. The annual physical examination expenses are reimbursed by the state! Although it is a designated hospital to have a physical examination, it is always better than none!

Liu Wenli, a senior teacher, is a math teacher of No. 1 high school in Chasu city. He is in his early 40s. He is bald and has thick glasses at the bottom of the bottle. He always squints his eyes when talking, which makes people feel that he didn't wake up, but his professional level is really unique. He has produced two Olympiad players in succession.

In small places, this kind of teacher is the real God. The child's parents try to put their children into his class. The child's parents in his class try to let him pay more attention to their children.

He is also in charge. He takes a reincarnation every three years. He brings out many students who have been admitted to famous schools. The more honor, the greater the pressure. Some people can face difficulties and have the courage to break through, and some people will be crushed by honor!

Stay up late every day to read materials and get teaching materials. It is common to go to bed at 3 a.m. and get up at 6 a.m. smoking and drinking coffee stimulate the central nervous system. After a few years, the head is bald, the pouch is heavy, and the body is boastful!

Originally, the teacher ate chalk ash every day, and his lungs were bad. He stayed up late and smoked. As a result, there was a problem during the physical examination. Although Ma Wentao left the relationship and put the physical examination in his hospital, he didn't fool people at all. He wouldn't make reports and throw away things that didn't check after blood drawing.

Everyone who has a physical examination is responsible for their own work. They do a good job in the examination. What should be is what. They will never fool around. Liu Wenli found a problem in this physical examination and occupied a space in the lung! Nature to be determined, please combine with clinical practice. As soon as the report came out, the director of the respiratory department knew that the disease was not very good as soon as he saw the film.

"There's a little problem with this. Maybe the machine in our hospital is not very good and can't see clearly. Go to the municipal hospital and recheck it. Take this film with you when you go." The breathing director gently gave the film to Liu Wenli.

Chinese law clearly stipulates that patients have the right to know, but when such things happen, human feelings are greater than the law, and doctors generally do not directly inform patients! But please go to the superior hospital!

Liu Wenli also felt a little uncomfortable recently. He was tired, thin and coughing. As soon as he listened to the doctor, he knew there was a problem! A good math teacher's logic is very clear.

He went to the hospital alone and didn't tell his family. He hung up the number of cardiothoracic surgery. As soon as the director of cardiothoracic surgery saw the film, he said, "let's be hospitalized! This has to be operated on! "

"Doctor, what's wrong with me?"

"It's just that there is a tumor, the location is troublesome, and surgery is necessary. Go and get ready and let your family handle the hospitalization. " Liu Boyan, director of cardiothoracic surgery, also spoke tactfully.

As soon as Liu Wenli heard it, he knew it was wrong: "doctor, just say it. Is it cancer? Is there still a chance? How long can you live? "

"Well! This hasn't been examined yet, and it can't be said to be cancer. Don't think nonsense first and actively hospitalize! " I can't help it. The director of cardiothoracic surgery can't help but say!

"OK, I see!" Liu Wenli said lonely! The old face, especially gray, has no anger!

Die! Is it terrible? Terrible! Liu Wenli is most worried about his children under the age of 10, his white haired parents and his increasingly emaciated wife! And the students who have just been promoted to senior three.

He stood at the gate of the primary school, hid under the tree and secretly watched his happy son running“ You should grow up quickly! Dad can't accompany you! Dad can't watch you grow anymore! You should be sensible! You should be more considerate, mom! "

Liu Wenli bought the ultra-thin TV that his father had been reluctant to buy, his mother's wheelchair and his wife's clothes in the mall. What is money! At the end of life, money is paper! In exchange for health, in exchange for life!

In the class, the children study by themselves quietly for three years! Over the past three years, he knows the temperament and temper of these children like the back of his hand. The little fat man in the last row likes to eat snacks and play games. If he can be more strict, he may be able to take an undergraduate course.

The first row of beautiful little girls, grasp the rhythm, should be able to enter Dabei and Huaqing this year.

Try hard! Try hard! The teacher is leaving! I can't see it!

I'm sorry!
