

MADAM'S IDENTITIES SHOCKS THE ENTIRE CITY AGAIN Chapter 700

As the best class in First High School, the discipline of Class A had always been praised by the teachers.

They usually didn't need to stop in the middle of class to maintain Class A's discipline. Everyone listened obediently. Even if a few students weren't interested in studying and did not listen in class, they basically did not disrupt the lesson. They usually just slept or picked up their cell phones to read web novels; few people would whisper or talk during the lessons.

Today's physics class was different from usual. Few of the students in the class listened to his lecture at ease. Instead, they craned their necks and looked out of the classroom from time to time.

Their hearts weren't in the right place.

"It's Sister Nian."

"I see her."

"Sister Nian is back."

"I heard that the dozens of universities that have come to school today are all looking for Sister Nian, and Teacher Shen probably told her to come back to school to have a look..."

The physics teacher wrote the problem-solving process of the exam paper with chalk on the blackboard. Hearing the hushed voices below, he revealed a helpless look.

He was halfway through writing the solution to the last problem, but he couldn't go ahead with it. He turned his head, put down the chalk, and looked at the girl leaning against the door of the classroom, casually holding her cell phone with her head down as she waited for them to finish class. He called out, "Student Qiao Nian, do you want to come in directly?"

Qiao Nian was replying to the news, and just after replying, she heard someone calling her.

She raised her head, and her black eyes met the gaze of the physics teacher. She froze for a moment, put away her phone, then scanned the classroom again. Then, after rubbing her temple briefly, she asked apologetically, "Did I disturb your class? I'm sorry."

She just went to the principal's office. Seeing that the lesson was about to end, she came over and waited outside, not knowing she would affect the lesson.

As soon as she apologized, the physics teacher smiled kindly and joked. "It's none of your business, it's these little brats who get excited when you come. All of them can't wait for me to dismiss them and get out of the class.

"It happens that I'm teaching them the last physics application question. No one in the class has done it for this exam. Why don't you try it?"

He handed the chalk to Qiao Nian with a look of anticipation.

Qiao Nian felt her head hurt slightly as she was tasked with this problem. She took the chalk in his hand and said, "I will try, but I may not be able to solve it."

When barely anybody in school heard about her grades back then, the physics teacher might have believed her words. But now, how could he believe her!

She was the top scorer in the Qing University entrance examination, and for the Olympiad-level physics paper, she scored a perfect score!

Full marks!

Not 90, but full marks!

He had been a teacher for so many years, but he couldn't guarantee that he could score even 80 marks on the Qing University paper.

Hence, the physics teacher was really anticipating this. He wasn't worried at all that Qiao Nian might not be able to do it. He smiled and said, "You try it first, it doesn't matter if you can solve it. I believe you can do it."

He had the standard answer for the problem, but he mainly wanted to see if Qiao Nian, a student with such a high IQ, might have a better way of solving the problem.

"Sister Nian..." As soon as Qiao Nian walked in, everyone in the classroom couldn't help but get excited, and they wanted to stand up from their seats one by one.

Fortunately, they all remembered that they were still in class. Although they were excited, they didn't do anything to undermine class discipline.

"Mm," Qiao Nian replied calmly and walked to the podium, holding chalk and scanning the question on the blackboard with her eyes.

The physics question was a bit difficult by the initial visual inspection, but it was a popular question type in the College Entrance Examination this year. She had seen similar questions on the physics test paper of Qing University..
