

## **Master of Time 123**

### Chapter 123

Of course, this is all part of an experiment .

My real body is actually resting peacefully back in the living room, allowing the nanomachines to carry out their tasks, whatever those tasks may be, all under the watchful eyes and guidance of Selene .

But that didn't mean I couldn't use this bio-mechanical avatar to fuck a sexy elf into unconsciousness .

And I am doing just that, as I am balls deep inside her tightness .

If Eliana has noticed the differences in my body, she hasn't said anything yet . All she is doing right now is moaning and groaning as I brutally pound her hot cunt into submission .

Eliana is really into the sex .

I am as well .

Is there a reason not to?

All parts of the avatar, inside and outside, are functioning as they are designed to, allowing me to fully immerse myself into the blissful experience .

I can even cum when I am ready to . It is real cum too, carrying my genetics .

But I did make sure my baby batter doesn't make anyone pregnant for obvious reasons .

I admit that the avatar does feel strange at first, but I do get used to it quickly .

It is a very highly advanced piece of engineering marvel, capable to simulating all five senses perfectly .

But more than that, it never gets tired no matter what . And if it gets destroyed in combat or otherwise, I am still safe and sound .

My mind might get the shock of its life in such an event, but my mind has been through so much after all these times . A bit more wouldn't matter .

Deadly combat is the main reason why I am testing out the avatar . The fornicating part is just a bonus .

"Master! Master! Please teach me!"

Eliana calls out as her body convulses violently and her passage becomes incredibly drenched . She has her sexual awakening not really that long ago, and she is already well on her way to become a nympho – my nympho .

"I will, my little sexy cock-sleeve . I will! Now, scream for me . Scream for your God! Screams!"

I response and slap her perfect bubbly ass repeatedly while continuing to pound her snatch hard and fast from behind .

My cock thickens as it spears her wet and hot inside recklessly .

"Ah! Master! Master! Ah! Ahhhh!"

Eliana screams and screams at my behest . It is hard not to when I am wrecking her cunt with my cock, making sure it remembers its shape and size .

And I reward her dedicated servitude with a bucket load of cum, flooding her lovely inside completely again and again .

My cock remains rock hard despite the empowering climax .

It is currently plugging her overflowed cunt, preventing any cum from spilling out .

Eliana collapses headfirst against the edge of hot spring, panting and heaving . Her pussy continues to tighten and squeeze me . Find authorized novels in Webnovel, faster updates, better experience, Please click [www . webnovel . com](http://www.webnovel.com) for visiting .

Since I am completely unaffected by exhaustion, I resume pounding her pussy and dumping another steamy load or two into her womb before letting her clean me methodically with her mouth .

And just like Allison, Elian-a is getting good at sucking my cock and deepthroating me . They all should, amongst the other things they are good for .

Once Eliana finishes cleaning junior with her wet mouth and washes me by using her body as a sponge, I made sure that her ass remembers me, repeatedly .

It was before I send her back home to her husband . I also give her a creamy milkshake for the journey home since her throat might be parched with all the screaming she had done .

As much as I enjoy her company, Eliana has things she must do back in Azula, and so do I .

Legion cleans up our mess in a jiffy, restoring the landscape and forest to what they were before .

The sky also brightens up, becoming daytime once more .

Within this spatial dimension, Legion can emulate perfect day and night cycles as well as all the season, but most of it is unnecessary .

I mainly use this dimension for weapon testing instead of playing farmers and growing crops .

Speaking of which, quite a bit of weapon testing is done right after sunlight bathes the vast landscape, stretching into the flat horizon . As this is not a planet, the horizon is not curve, but perfectly flat .

The weapon testing is for me to see whether magical shields and barriers can really stand up to a wide range of weaponry in my secret arsenal .

Hydra wishes it has all my toys .

I am keeping the very best for myself, as some of these weapons are capable of destroying the world .

Through the countless tests so far, I have learned that magic did not really break the fundamental law of the universe . Blunt force trauma can still be a bitch when you get thrown around the battlefield, and plasma bolts can still pack a punch under sustained fire .

In fact, concentrated laser or plasma beam focus at a single point can puncture a magical shield within a microsecond, killing whatever or whoever inside the said shield .

31st century powered rifle is very capable of this, as it is mainly used to kill pilot inside heavily armored and shielded mechs . That is why most mechs are highly mobile and constantly on the move .

Standing still in combat for even just a second will get you killed, especially inside a warzone .

This is not to mention the intense heat being generated when being blasted with high-powered plasma or laser bolts repeatedly .

Nothing can theoretically survive at extreme temperature, exceeding millions of degrees .

Magical shields do not dissipate heats, and they certainly did not stop the heat from penetrating .

Thermal Lance demonstrates this with a single shot . Nothing remains after the dust has finally settled, including the landscape .

At more than a couple of trillion degree Celsius, everything gets instantly vaporized upon impact, being shielded or not . I don't think that Dragon God even generate a temperature that high .

But magical flames do have its own advantageous .

While exceedingly powerful for a single shot, Thermal Lance is only used against slow moving targets since it takes forever to charge up . They are basically siege weapon, firing from one planet to another similar to coronal mass ejection from the sun .

I also learn that direct-energy weapons can bypass almost any magical shields and barriers unless they are specifically designed to counter electromagnetic radiations .

That is unlikely since I am sure that the mages have no concept of such scientific thing .

Seeing microwave beam cooks and melts an organic dummy while it is being protected by a powerful magical barrier is very interesting . The shield didn't even stop the microwaves .

Microwave beam is also invisible, so against real opponent, they wouldn't even know what hit them .

It is actually very difficult to defend against focused microwave beams or electromagnetic pulses, even by the 31st century standard .

That is why most military vessels are usually fully automated or controlled from afar . It is pointless to pack ships with crewmen when they can be killed with little efforts .

The best way to defend against such a weapon is try not get hit in the first . It is quite impossible since directly-energy weapons fire its charges at lightspeed .

And I will not go into the latest and most powerful direct-energy weapon humanity has ever thought of in their infinite wisdom of trying to kill each other – Gamma Projector .

From my understanding, a single gamma beam has about the same amount of energy in a 10 trillion, trillion billion megaton bombs, so it gives me a good idea of how destructive it is against pretty much anything .

For comparison, the most powerful bomb recorded thus far is 50 megaton Tsar Bomba by the Soviet Union back in October 1961 . A gigaton bomb of the future is capable to wiping a country off the map, and they spam the damn things all over the planet .

That is really child play compare to Gamma Projector .

Luckily, no one has built and fired such a weapon yet . It is a weapon of pure annihilation . Not only it kills everything on a planet and below the surface, it renders a planet utterly uninhabitable .

And this is not even the most dangerous weapon our ingenuity has created .

Humans are just very good at killing things, mostly each other . And without a stern hand, humans will always bring forth their own extinction .

I am sure that even if humanity is spread out throughout the universe, humans will find a way to kill each other across the galaxy .

The superweapon that fire planetary-busting shells across the solar system demonstrates the extreme length that people will go in order to make those who they disagree with gone .

Aggression is human nature . It helps humanity to become the dominant species .

Sadly, it will lead humanity to their extinction .

Honestly, a good solution to this very extinction problem is to stop technological progress completely .

I could do it with a few thousand satellites around the planet, generating electromagnetic pulse .

No electronics will work within an electromagnetic field, meaning no easy planetary busting weapons, but doing something like that doesn't sit right with me .

It also traps humanity on a single planet since the highest technology they can reach without electricity is steam and mechanical power . Is it possible to launch spaceships into orbit with steam power alone?

I have no clue . I will do some experiment on that .

Once the weapon testing is done, I turn my attention to the curses and blesses rune that Eliana provide for me .

Why did I test new weapons first? No reason other than I like blowing up things .

You have to have fun every now and then .

Most of the Runes that Eliana provided are not known to future Alex or Hans, even if future Alex and Hans are 10th circle mages .

As that is the case, I am sure that there are probably a shitload of Runes waiting for me to learn them .

Runes are like Japanese Kanji or traditional Chinese Characters . That is to say, they are not like English words, formed from the alphabet .

You can only remember the Runes by heart, which is insane since there are like millions upon millions of them, combining together, they can have all sort of effects .

Drawing random symbols with magical power without any knowledge about what they mean will always results in an explosion, so it isn't just remembering them . It is also comprehending them .

Good thing I have a lot of cheats with this, comparing to all those poor mages who have to study each one and try to remember them .

Like Eliana had explained previously, curses are created specifically, targeting specifically thing .

Blesses or blessings are designed to counteract or nullify curses .

But what Eliana didn't mention is that it fucking takes forever to find and formulate a proper blessing against a certain curse, especially if a curse is exceedingly complex .

I don't even remember how long I am at this without asking Selene . Probably months .

[It has been 107 days, Operator]

Luckily, time is being compressed in here . Only about an hour has passed in the outside world . I still have some time before morning comes .

Returning to the problem at hand, the Curse of Decay that kills all life in an entire universe is beyond complex, so finding a counteracting Blessing is way beyond my current capability .

Plan B then . I am already at this for too long .

If my magic is insufficient, my technology will swoop in to save the day .

Fabricating technology is more than sufficient to provide enough foods for an entire world .

Since the Curse of Decay only targets plants that are growing in the field, it should not affect the ones that have already been harvested .

I need to check this first, but I am relatively sure .

Of course, fabricating technology wouldn't solve their problem, but it does give them a future to look forwards to .

I am aware that humanity isn't the only one at the short end of the stick in that reality . Countless other species on Earth as well as outside of Earth are brought towards extinction as well, but I can only save a few, and I prefer humanity to be a part of that few .

At least, humanity would have an entire universe to expand into . There would be no need to genocide of other alien races or fear the intergalactic invaders from outside the galaxy .

Those invaders should be dead, right?

In any case, I wonder if humanity would prosper if they remember the horrors of what had happened to them and their family in the wake of their extinction?

An idea pop into my mind . Maybe . Just maybe .

It will also give humanity a common goal! I want to test this theory out in the real world . No simulation or anything of sort . It is about time .

"Legion . Prepare an interstellar battle cruiser and its escorts . We have a world to invade . "
