

Maxing MT 831

Chapter 831: Mechanic, Transcendent Talent!_2

However, to him, it was better to be useful than worthless, so he did not dwell too much on this matter.

The underground space of the Ultimate Martial Academy was very huge, and Li Yueming realized that there seemed to be more than one floor.

The two of them came to a separate dormitory building in the college. Liang Run took out a key from his pocket and unlocked it. He handed it to him and said, "This is the dormitory that the school has prepared for you. Unlike other students, it's a separate building. This is the key. You will be the owner of this house until you graduate!"

Li Yueming didn't reject him. He took the key from him and thanked him politely.

Compared to living in the same dormitory with other students, having a separate dormitory could obviously avoid a lot of trouble.

After the two of them put down their luggage, Liang Run brought Li Yueming to a coffee shop outside the school.

After sitting down, Liang Run took the initiative to say, "Alright, you can ask any questions you have.""

Li Yueming silently took a sip of coffee. The bitter and rich coffee taste hid a touch of sweetness. The taste was unexpectedly good?

Since Liang Run was so proactive, he naturally did not refuse such a good opportunity. After thinking for a moment, he asked, "I don't have too many questions. I just want to know what kind of knowledge we will learn after entering the Ultimate Martial Arts School."

This was the most basic question, but it was also what Li Yueming was most concerned about.

After all, because they would sign a confidentiality agreement in advance, and the confidentiality level of the agreement was very high, the specific learning situation and assessment situation of the Ultimate Martial Arts School were extremely confidential.

Therefore, although Li Yueming for his entrance exam, he didn't know what the Ultimate Martial Arts School would teach the students.

Although there were many discussions about this topic in the outside world, it was ultimately not as reliable as the official channels.

Liang Run was stunned. Obviously, he didn't expect Li Yueming's first question to be so basic. Then, he suddenly remembered that he came from a remote planet. Then, the big guy answered, ""The Ultimate Martial Arts School's knowledge covers a wide range. Under normal circumstances, it's decided based on the student's specialty and the choice of teacher..."

"As for you, you'll be receiving the best training treatment. Therefore, not only can you choose your major, you can also choose your favorite teacher. The only restriction the school has on you is that you must get 30,000 points every year!"

” Academic credits are the only standard by which the Ultimate Martial School judges whether a student is outstanding and worthy of nurturing. Your starting point is very high, but this is definitely not your end. As long as your subsequent performance is as outstanding as ever, I believe that the Ultimate Martial School will invest more resources into you year after year!”

Li Yueming nodded.

This set of rules sounded complicated, but it was actually very simple.

Due to Li Yueming’s outstanding performance in the entrance examination, he received the highest level of treatment for new students after entering the Ultimate Martial Arts School.

However, this glory was not eternal. The academy could not possibly spend a large amount of resources to support a fake genius who could only enter and not leave.

Thus, Li Yueming had a hard target every year, which was to get 30,000 points.

If Li Yueming could get more on this basis, then the resources given by the Ultimate Martial Arts School would definitely increase.

From the looks of it, the competition within the Ultimate Martial Arts Academy seemed to be more cruel and intense than he had imagined. In order to continue staying here for further studies, every student had to do their best to showcase themselves.

Li Yueming did not have much objection to this set of rules.

After thinking for a moment, he asked again, ”Then may I know how to obtain points?”

Liang Run answered without thinking, ”Including but not limited to breaking various records in the school, beating others at the assessment site, making some extreme contributions to the school, researching and discovering some powerful weapons, and so on...” And the last, most dangerous, and also the most common way, was to carry out some missions regularly assigned by the military committee!”

Hearing Liang Run’s answer.

Although Li Yueming’s expression didn’t change much, his heart was a little more fearful.

It seemed that the relationship between the Ultimate Martial Arts School and the Military Committee was deeper than he had imagined. Otherwise, he would not have been able to obtain such high military authority.

After helping Li Yueming answer these questions, he saw that Li Yueming suddenly fell into silence again, as if he had no intention of continuing to speak. Liang Run took the initiative to say, ”Since you’re clear about all this, the next important choice is to choose a teacher and a major...Did your guide tell you about your teacher’s situation in advance? Is there a suitable candidate?”

This question made Li Yueming fall silent. He shook his head and said, ”I’m also the first student on our planet to enter the Ultimate Martial Arts School. I’m the hope of the entire village...”

Liang Run smiled, but he didn’t say much. He took out a document from his pocket and handed it to Li Yueming. ”This is the information I prepared for you. It includes the best teachers in our Ultimate Martial Arts School’s regular curriculum. Take it back and take a look.”

He then exchanged his contact information with Li Yueming before he got up and walked to the entrance of the cafe. He waved his hand and said, "Your current identity information has been recorded into A0004's system. Other than some strictly guarded military restricted areas, you can enter and exit freely. I'll find a disciple to bring you around the school. After all, you're a young man, so you should interact more with young people."

As he spoke, he even gave Li Yueming an ambiguous expression.

This undoubtedly made Li Yueming confused for a while, but Liang Run had already left, so he couldn't chase after him and ask.

Fortunately, the information he had just revealed was already quite sufficient. It did not matter if he would understand the other problems later. Right now, the most important thing was to choose a better major and a teacher.

The information Liang Run gave him showed the various fields under the Ultimate Martial Arts Academy, as well as the corresponding batch of top teachers.

Since it was the Ultimate Martial Arts Academy, then there was no doubt that the most powerful and most powerful people on this list were naturally teachers of the martial arts department. Moreover, the reason why the Ultimate Martial Arts Academy was able to attract students from other galaxies to study here was also because its teachers of the martial arts department were quite famous in the entire third universe.

After many martial arts teachers, it was time for the Mechanic, Esper, Dao Cultivation, and Psychic classes... And other categories.

Under normal circumstances, Li Ming would undoubtedly choose a teacher from the martial arts department.

After all, he was a martial arts student and cultivated martial arts techniques.

However, Li Yueming did not think so.

This was because compared to the martial arts department, he was actually more interested in the mechanics department.

Here, he had to mention the two golden talents he had obtained from this reincarnation.

[Machinery God (shiny gold): You are a natural-born Mechanical God. Damage of mechanical weapons increased by 3000%, efficiency of research and development and manufacturing increased by 5000%, Intelligence increased by 5000%]

[The only special effect of the shiny gold talent: Machinery God]

[You can control all the mechanical components around you to assemble a huge Mechanical Deity. The attributes of the Mechanical Deity are ten times that of your own attributes!]

[Omnipotent Martial Saint (shiny gold): Your attainments in martial arts can be said to be omniscient and omnipotent. All the power that can be used will be used by you and become the source of your personal power!]

[All attributes increased by 5000%, personal strength cultivation technique and secret manual cultivation efficiency increased by 5000%, personal martial damage increased by 50000%.]

The existence of the Machinery God and the All-rounded Martial God gave Li Yueming the possibility of starting anew. Compared to cultivating martial arts step by step, perhaps changing the track and cooperating with each other could produce unexpected powerful effects.

After all, this was a brilliant gold-level talent. Anyone who had such a talent would be able to reach the limit of the corresponding field.

Letting it remain idle was definitely an extravagant waste.

Thinking of this, Li Yue already knew what was going on. She picked up the phone and called Liang Run, who had just left.

Chapter 832: Weakened flesh and blood, mechanical ascension!_1

After making up his mind, Li Yueming picked up the phone and called Liang Run, who had just left.

The call went through, and Liang Run's voice was very puzzled. He asked, "What's wrong? Is there something I haven't told you?"

The two of them had just separated not long ago, so his first reaction when he received the call was that Li Yueming might have forgotten to ask about something or he might have forgotten to tell him.

Li Yueming didn't keep him in suspense and said, "Teacher Liang, it's like this. I've just decided on my major direction and teacher, so please help me report to the school!"

Hearing this answer, Liang Run was silent for a moment before he scratched his head and said, "Eh, you've thought of it so quickly? Tell me directly. I'll help you contact that teacher. I'm sure they'll be very willing to accept you!"

Of course, who could reject a young man who broke the record of the Ultimate Martial Arts School's entrance examination points?

After receiving his affirmation and assurance, Li Yueming felt much more relieved. He then said, "I want to choose the Mechanic Department as my major course. As for the teacher, I'll choose Dr. Levin!"

Originally, Liang Run had a smile on his face.

After all, he was probably the only one who knew what Li Yueming's existence meant.

However, when he heard Li Yueming say that he wanted to choose the Mechanic Department as his major course, the smile on Liang Run's face froze. He asked in disbelief, "What did you say you would choose? Mechanic class?"

Li Yueming nodded. In order not to be treated as a fool, he even made up a half-truth excuse. "That's right. I've liked machinery since I was young. It's just that the small planet I was born on had limited resources and did not have this course. Now that I finally got into the Ultimate Martial Arts School and have this opportunity, I want to give it a try. Perhaps the Mechanic class will be more suitable for me..."

Before he could finish his sentence.

Liang Run suddenly interrupted, "Wait, you know that our Star Field's extraordinary abilities are based on martial arts, right?"

Li Yueming nodded.

“Then you should also know that the core competitiveness of the Ultimate Martial Arts School is the teachers and advancement experience of the martial arts department, right?”

Li Yueming also expressed that he knew.

After confirming that he did not have any cognitive errors, Liang Run’s mind was filled with question marks.”Since you’re so clear, why did you choose the Mechanic class? Don’t say that I didn’t remind you. Our academy’s Mechanic Department is purely used to make up the numbers. There are less than thirty students and only two teachers. They study logistics and supply issues. There aren’t many Battle Mechanics who can actually fight. Could it be that you want to work in logistics?”

Li Yueming was stumped.

After thinking for a moment, he said word by word,”Of course, I don’t want to work in logistics, but I won’t reject any logistics work. As long as I have more contact with machinery, it’ll be fine.”

Liang Run was speechless.

To be honest, if it wasn’t for the Pope’s previous instructions not to interfere with the growth trajectory of the Fated Child, he probably wouldn’t have been able to resist making a move.

After all, he had personally witnessed Li Yueming’s combat ability.

In the same age group, Li Yueming could definitely be said to be at the top level in terms of skills and methods.

And the unprecedented terrifying score he obtained during the assessment also proved this point.

Such a rare talent was born to cultivate martial arts. How could they let him abandon his talent in martial arts and embrace a Mechanic who had no advantage in the Ultimate Martial Arts School?

Wasn’t it simply a waste of heavenly resources?

But now, Liang Run still remembered the instructions the Head of Church had given him. Therefore, although he opened his mouth several times to persuade or reprimand Li Yueming for wasting his talent, he eventually endured it.

After all, as long as his own judgment conflicted with the Pope’s judgment.

Without a doubt, the Pope was absolutely right.

Even if it didn’t seem right now, the future would prove that the headmaster was right.

This was a truth that had been proven over the years.

Therefore, Liang Run sighed.” Since you insist, then there’s nothing else to say. I’ll go through the procedures for you first. If you regret it, I’ll think of a way to arrange it for you!”

From his point of view, Ming Li liked the Mechanic class.

However, that didn’t mean that he was really suitable for the Mechanic class, nor did it mean that he had the talent for the Mechanic class.

One had to know that the heavens were very fair. Geniuses who were good at martial arts were often very sensitive and had strong control over their bodies. However, having a special talent in this area also meant that their senses for other things would not be as sensitive.

For example, the Mechanic class required an extremely intelligent brain and an affinity for machinery that was beyond imagination.

The talent required for the two categories basically had little to do with each other.

Therefore, Liang Run's current thought was to wait for Li Yueming to go to the Mechanic class and meet with difficulties. After he felt the difficulty, he might be able to turn back.

At that time, he would think of a way to transfer him back to the martial arts department.

Of course, Liang Run might not have even dreamed about how much of an impact his temporary compromise today would have.

He hung up the phone.

Li Yueming felt much more relaxed.

From planet 7-20003 until now, he had basically never stopped. He had passed five obstacles and killed six generals all the way until he was admitted to the Ultimate Martial Arts Academy. Only then did he finally achieve his goal.

Chapter 833: Weakened flesh and blood, mechanical ascension!_2

From now on, he basically did not have to worry about the resources for cultivation anymore.

After all, the Ultimate Martial Arts Academy was considered a well-known school even in the entire third universe. The resources it could apply for were basically on par with most schools in the third universe.

In terms of resources, only a handful of schools like the Third Universe Central Martial Arts School could be better than it. It was enough to meet Li Yueming's future needs.

Just as Li Yueming was still in a daze, footsteps suddenly came from outside the coffee shop. The owner of the footsteps stopped at the entrance of the coffee shop and pushed open the door after a moment.

A fair-skinned woman with a flawless face walked in. Her eyes were as sharp as a knife. She glanced around the coffee shop and finally stopped on Li Yueming. After glancing at him twice, she said indifferently, "You must be the new junior that the mentor said?"

Li Yueming's thoughts were pulled back to reality by the woman. He couldn't help but look in the direction of the voice. After realizing that it was a girl who spoke, he nodded and said, "Hello, senior. My name is Li Yueming. I'm a new student this year."

Seeing him admit it, the woman couldn't help but glance at him again before saying, "So you scored more than 27,000 points in the entrance examination?"

Li Yueming didn't expect that his reputation had already spread so far when he had just entered the academy.

He could not help but scratch his head and say awkwardly, "Uh..." I was just lucky!"

The woman didn't reveal too much of her emotions and said, "My name is Surna Flay. I've been entrusted by my mentor to bring you around the school. If it's convenient for you now, can you cooperate with me to carry out a mission?"

"Cooperate with the task? Li Yueming was confused by her explanation.

Moreover, the surname Surna... Why did it feel like he had heard it before?

"This is a reward system unique to the Ultimate Martial Arts School. The instructor will issue a mission in the mission hall of the teaching building with the points that can be obtained after completing the mission. Students who have the time and meet the requirements will go to the mission hall to check every day." Flay replied.

Li Yueming was stunned by this mechanism.

However, he quickly reacted to the situation. Wasn't this feeling similar to the mission reward hall in the game?

So the points of the Ultimate Martial Arts School were obtained through this method?

As if sensing his doubt, Flay took the initiative to say, "There are many ways to obtain points. Completing missions is just one of them. I just happened to have the time and this mission is more cost-effective, so I came to you!"

Li Yueming nodded. Out of curiosity, he asked casually, "So what did Teacher Liang tell you about the bounty mission?"

Although Flay's attitude towards him was very subtle, she was still very patient. She replied unhurriedly, "Daily Mission: Bring the new junior to familiarize himself with the campus!"

"Details: Female, height above 1.7 meters, beautiful appearance, cheerful personality, must be able to introduce and answer some questions about the school for juniors, weight must not exceed 55KG, three-dimensional must be between 102-61-89, up and down can not exceed 5..."

When she said this, Flay's face was expressionless.

However, Li Yueming felt his teeth hurting. Where did this go? She didn't expect the head examiner, Liang Runn, who looked like a serious person, to have such a thorough understanding of a girl's figure.

After calming down, Li Yueming glanced at Flay and asked suspiciously, "You... Is there really 102?"

Hearing this, Flay's expression stiffened. After a moment, she replied, "Since I can accept the mission and appear here, I'll naturally satisfy all the requirements. You don't have to worry about this!"

Li Yueming, [Concealment.]

Would you believe me if I said that I didn't mean it that way?

He had really hidden it too deeply and could not be seen at all!

Forget it, the more he explained, the more troublesome it would be. Li Yueming stood up and said, "Then I'll have to trouble Senior Sister to lead the way!"

Fulei nodded as she walked out of the door and said, "The academy is relatively large, and there are many areas that ordinary students have no right to enter. As a result, many senior students may not be able to guarantee that they have been to every place even after staying here for more than ten years... So, I'm very likely to bring you around in a short period of time. Is there any place you want to go?"

Li Yueming thought for a moment and said, "Yes... Several main teaching areas, canteens, bookstores? That's all for now. I don't think I'll be walking around the school often. I just need to know the locations of a few key buildings!"

Flay nodded, and the two of them pushed open the door and left the cafe together.

It had to be said that the Ultimate Martial Arts School was really generous. The entire underground world had many facilities. Whether it was vision or touch, it was basically no different from the surface world.

Moreover, it was possible to manually adjust the temperature and climate.

The underground world was even more suitable for human survival than the ordinary surface world.

In the next few days, Flay brought Li Yueming to familiarize himself with the environment of the Ultimate Martial Arts School.

In the beginning, Li Yueming didn't have much of an idea about the "Ultimate Martial Arts School's relatively large scale" that Flay mentioned. However, after taking a look at the sky from the spaceship, Li Yueming realized how ridiculous this concept was.

Because there were many no-fly zones and other spaceships underground, it would take at least half a day for the spaceships that couldn't move all the way to the campus.

The entire Ultimate Martial Arts School was almost equivalent to an underground kingdom. Even if Li Yueming sat on the spaceship and looked out, he couldn't see the end of it.

According to Flay's description, the entire school was divided into six districts.

Among them, only three were accessible to ordinary students. The other three were said to be places to train high-ranking military officers, and they were equipped with organized military control for 365 days a year.

Ordinary students could only take a glance from afar.

The teaching buildings in these six districts only occupied about 30% of the Ultimate Martial Arts School's scale. As for the other buildings, only about 10% were for civilian use. No one knew what the remaining 60% was for.

From this, it could be seen that this place was only called the 'Ultimate Martial Arts School' in name.

In fact, it was very likely to be the military and technological research center of the entire Imperial Sun Star Field!

It was no wonder that Commander Wu, who was a Supreme Expert, had to be named in the Ultimate Martial Arts School. This seemingly unremarkable little planet was too important, and it could not afford any mishaps.

Li Yueming definitely wouldn't be able to finish visiting such a large campus.

He was not in the mood to finish shopping.

After all, his purpose here was to study, not to stroll around.

Therefore, after knowing the specific locations of the martial arts teaching building and the mechanics department teaching building, as well as the school cafeteria and sports field, Li Yueming returned to his dormitory.

Flay also left him a contact number, indicating that he could call her if he had any further questions.

Naturally, Li Yueming was more respectful to him.

Anyway, no matter where he went, he was unfamiliar with the place. It was never wrong to have more friends and more roads.

As long as he was on the right track, everything else did not matter.

On the morning of the fifth day after officially arriving at the Ultimate Martial Arts School.

Li Yueming was still cultivating in the dormitory building, but the communicator on the table rang for a long time.

After picking up the call, Liang Run said that he had already settled the admission procedures for the Mechanic Department.

After all, the students who applied for the martial arts academy were basically aiming for the golden signboard of the martial arts department. Unorthodox disciplines like the mechanics department rarely recruited new students. Now that students were finally willing to come over, there was naturally no reason to reject them.

However, when the Mechanic instructor saw Li Yueming's results and resume, he was dumbfounded and also expressed great confusion.

What the hell was this martial arts genius doing in the Mechanic class?

Flesh and blood weak, machinery ascending?

Wasn't this a joke?

Chapter 834: Joining the Mechanic class, planning for the future!_1

Obviously, when they heard that Li Yueming was going to major in the Mechanic Department, the teachers from the Mechanic Department were quite confused.

After all, Li Yueming was a genius in the martial arts department. What was the point of him coming to the mechanic department?

Of course, no matter what, as long as the teachers of the martial arts department were willing to let Li Yueming come over, the teachers of the mechanics department would definitely have no objections.

So did the teachers of the martial arts department have no objections?

There must be!

However, Liang Run was still quite influential in the school. Under his tireless efforts, this matter was finally finalized.

After another two days, Li Yueming entered the Ultimate Martial Arts School for a week. The admission procedures and elective courses were finally completed.

Li Yueming's teacher in the Mechanic Department was called Sumanla. He was a scrawny old man who always smelled like engine oil.

When Liang Run personally brought him to the machinery factory to greet Sumanla, the little old man was repairing and maintaining a spaceship. When he heard the noise, he stuck his head out and glanced at Li Yueming. He casually said, "Are you the new student? Listen to the old man's advice, hurry back to your martial arts department. The Mechanic Department is not suitable for you!"

Li Yueming didn't say anything, but Liang Run spoke first, "Sumanla, it's not easy for the Mechanic Department to have a new student, and you're welcoming them with this attitude?"

Sumanla did not even turn his head. "Anyway, your martial arts department is watching him every day. Sooner or later, you will bring him back. Moreover, this kid's talent is not here. Why should I welcome him?"

Liang Run stopped talking.

Although Su Manla's words were not pleasant to hear, the truth was indeed the case. The martial arts department would not let such a genius waste his talent, so sooner or later, they would snatch Li Yueming away.

The only reason he had compromised was because he wanted Li Yueming to persuade him after he met a wall in the Mechanic class.

The atmosphere fell silent for a moment.

Li Yueming took the initiative to pick up a part that fell on the ground. He placed it in his hand and weighed it casually. Then, he walked to the workshop and opened the hood of the spacecraft.

At this moment, not only did Liang Run notice his actions, but even Sumanla stopped what she was doing and looked at this overly young student in front of her with a puzzled expression.

Under the strange gazes of the two, Li Yueming walked around the components unhurriedly and finally removed a part from it accurately. Then, he replaced the part he picked up in his hand.

Liang Run had yet to fully react to his smooth movements, but Sumanla had already walked out of the machine with a puzzled expression. "You... Have you repaired a spaceship before?"

"No!" Li Yueming shook his head.

The doubt on Sumanla's face became even stronger. He got up and walked to Li Yueming's side. He jumped into the cabin of the spacecraft and took a look. Then, he turned around and picked up the replaced electrical parts in Li Yueming's hands.

“How did you know that I was going to replace this engine component if you haven’t repaired the spacecraft before?”

“Teacher, you’re repairing the spaceship, right?” Li Yueming said matter-of-factly. Among the scattered mechanical parts on the ground, the left part was damaged and used, while the right part was unused. Therefore, I guessed that the right part should be the one that you would be replacing next, so I randomly picked one up and tried it out.”

Hearing his answer, Suraman was shocked. He couldn’t help but take a few steps back and look at Li Yueming from top to bottom again. His eyes clearly revealed some suspicion.

Although the maintenance and repair of the spacecraft did not require particularly high technical content, there were many precision parts inside. It was definitely not something that a layman could casually learn.

And now, Li Yueming actually dismantled and replaced the engine parts in front of him.

This was called having no contact with him before?

Suraman obviously didn’t believe it.

After thinking for a while, he took another component from the parts on the ground and handed it to Li Yueming.”Mount it!”

Li Yueming picked up the parts and looked at the structure. Then, he weighed the weight with his hand and looked at the spaceship in front of him again.

His eyes scanned the room and opened a few cabins to take a look at the structure inside.

Li Yueming didn’t know where to place the component.

Li Yueming glanced at Suraman, who was smiling faintly in front of him. Li Yueming had a slight understanding in his heart, but he did not say anything. After looking around the spacecraft, Li Yueming’s eyes suddenly stopped on an engine on the hanging tower not far away.

He pointed at the engine hanging in the air and looked at Suraman behind him.””Teacher, can you please put down the engine?”

When he saw Li Yueming looking at the engine, Suraman was completely shocked.

He looked at Li Yueming as if he was looking at a ghost.

He didn’t put down the engine but cried out in shock,””This mechanical part is military-grade protection. It can’t be circulated outside. How did he do it?”

Although the spaceship he was currently repairing was also a military model, its level of confidentiality was not that high. Even if it was not circulated much outside, if one had enough financial resources, it would not be difficult to get in touch with it.

Chapter 835: Joining the Mechanic class, planning for the future!_2

The mechanical parts that Li Yueming was looking at were specially used for military super kinetic mechs. The level of confidentiality was more than one level higher than the spaceship. Other than a few specific maintenance mechanics, even the pilot himself might not know its function.

Therefore, it was impossible for Li Yueming to have come into contact with it beforehand, and it was even more impossible for him to have professional knowledge of this component.

However, it was under such circumstances that Li Yueming took the parts and searched around. Not only did he keenly discover that this thing was not from the spacecraft, but he could also accurately find the kinetic mech engine hanging in the air among the large number of mechanical parts in the warehouse.

If he didn't know that Li Yueming was a martial artist, Suraman would have thought that Li Yueming was a telekinesis master and had stolen his memory through some means.

Li Yueming didn't give a specific explanation. He just said vaguely, "From the feel, this mechanical part is different from the batch of specifications I just received. I searched around the spaceship but couldn't find any similar parts to replace this part, so I think this shouldn't be a part of the spaceship at all... After realizing this, I began to observe the mechanical parts around me. After all, Teacher Su, you can't find me a part that can't be replaced, so there must be a mechanical structure that can match this part!"

He paused for a moment before continuing, "I looked around and found that only the engine hanging in the sky fits the specifications. Whether it's size, weight, or shape, it roughly matches, so I want you to put it down for me to see!"

Hearing his analysis.

Suraman couldn't help but gasp.

Although on the surface, what Li Yueming said didn't seem to have much to do with machinery, in fact, only a professional mechanic like Sulaman knew how terrifying this talent was.

How many parts were there in a machine?

How many styles were there for each component?

Not to mention Li Yueming, even he himself would find it difficult to answer.

With just a few glances, he could accurately find the corresponding machine among such complicated mechanical parts... Without a doubt, Li Yueming's affinity with materials and machinery must be very high. It could even be said to be terrifyingly high!

SurSuraman couldn't help but glare at him when he thought of this.

If Li Yueming didn't play any tricks in the tests just now, then this young man in front of him... It was very likely that he was a super genius in the field of machinery!

Not far away, Liang Run looked at the old and young man who suddenly fell silent and looked at each other. He could not help but ask in puzzlement, "What's wrong? Is there a problem? Suraman, if you're really not satisfied, I'll bring this kid back!"

His main occupation was martial artist.

He basically knew nothing about machinery and disdained to understand it.

After all, in the understanding of martial artists, only pure personal power was the power that truly belonged to oneself.

Research machinery? This was just a method used by those bean sprouts whose bodies were not strong enough to make up for their shortcomings and flaws!

He didn't want to be associated with them.

Therefore, although Li Yueming showed off his operation in front of Suraman, Liang Run did not see anything worthy of attention. It was too difficult for a martial artist with a brain full of muscles to understand the art of precision machinery.

He heard Liang Run say that he wanted to bring Li Yueming back.

Suraman, who had been silent, instantly became angry. He blew his beard and glared at him. "Who told you to take him away? He's my disciple. I'll teach him the knowledge of the Mechanic class in the future. You bunch of brainless martial artists, don't come looking for trouble!"

Liang Run was speechless.

If I remember correctly, you were the one who found it troublesome, right?

So what happened just now? Why did you change your attitude so quickly?

As expected, there was something wrong with the brains of those who worked in machinery. Both of them were so strange even with their tempers.

After being ridiculed for no reason, Liang Run did not realize the seriousness of the problem. After seeing that Suraman was willing to accept Li Yueming, his mission was completely completed.

Looking at Li Yueming, Liang Run said happily, "You can try it here now. If you feel that the Mechanic class is not good enough, give me a call. I'll help you switch back to the Pugilist class!"

Li Yueming didn't refuse and replied with a smile, "Then I'll have to trouble you, Teacher Liang!"

Liang Run waved his hand and left without looking back.

After Liang Run ran far away.

Suraman stared at Li Yueming and said excitedly, "What you just said is that you can identify the structure of mechanical parts and accurately identify their functions and attributes?"

Li Yueming smiled and nodded. "I don't know how to describe it either. It's just a feeling. I'm born with a feeling of familiarity with this kind of item!"

How could it be just a simple identification?

He only needed to weigh many parts in his hand to accurately know the function and use of the parts. As long as the tools were complete and the level was high enough, he could even replicate them one-to-one!

The Machinery God's shiny gold talent was an astronomical number for every aspect of machinery. The reason why he didn't show it was because there was no need for it at the moment.

After all, his purpose was to make Suraman accept him, not to cause unnecessary trouble through his talent.

Chapter 836: Joining the Mechanic class, planning for the future!_3

Seeing him admit that he was born with an intimate nature towards machinery...

Suraman's expression changed dramatically. He wanted to laugh, but he couldn't.

After holding it in for a long time, the sloppy old man suddenly grinned and quickly threw away the repair tools in his hand. He grabbed Li Yueming and ran out. As he ran, he said, "Looks like our Mechanic department has picked up a treasure this time. Follow me, I'll introduce you to the other teachers in our department and show them your talent!"

Li Yueming was not used to his attitude.

Was this what a Mechanic was?

Why did he look so wretched?

It was a little different from the flashy posture he had imagined!

When the time came, he must not become like this.

After all, being strong was a matter of time, but being handsome was a matter of a lifetime!

Then, Sulaman brought Li Yueming to walk through the streets and alleys into several flat-roofed factories.

Every time they entered a factory, Sulaman would enthusiastically introduce Li Yueming, his new disciple, to the teachers inside. He would also let Li Yueming show some of his mechanical talent in front of them.

When the other party's mind was stirred up, this damn old fellow pulled Li Yueming away, afraid that he didn't know that he was here to show off.

After walking around, Li Yueming's eyes were filled with resentment.

This old fellow looked sloppy, but he was actually so flirtatious. Pulling him around for a walk had basically offended all the teachers in the Mechanic class.

However, Li Yueming didn't care much about it.

After all, he wasn't the one who offended the old man, but the old man himself. Since he didn't care, Li Yueming didn't care either.

After strolling around, Sulaman was obviously in a good mood. He looked at Li Yueming and asked, "I brought you to the territory of our Mechanic class just now. You probably remember everything, right?"

Li Yueming nodded.

He would probably be staying here for a long time, so he naturally had to remember the way.

Seeing him nod, Sulaman was quite satisfied. He raised his wrist to look at the time and said, "It's getting late today. I still have some things to deal with. You can go back first. Remember to come tomorrow morning. I'll teach you the professional knowledge of the Mechanic class!"

Before he left, Sulaman gave Li Yueming a key and asked him to go to his office drawer to get a set of information about the entry to the Mechanic profession. He asked Li Yueming to take it back and

learn it first. With the preparation before class, he could also improve his efficiency when he officially started teaching.

Li Yueming naturally had no objections to this. It could even be said that it was exactly what he wanted.

After all, to him, the speed at which Sulaman imparted knowledge was not as fast as his own learning from relevant books and materials.

After getting the information and returning to his residence, Li Yueming began to study hard.

He did not have enough time at the moment.

According to the information he got from the deduction, there were at most 30 years before the Bug Tribe would attack Planet 7-20003 and the entire Imperial Sun Galaxy. With his current level, he was not qualified to investigate the deeper reason for this attack.

Thirty years might seem like a long time, but compared to the tens of thousands of years of life of Star-level powerhouses, it was just a snap of a finger.

So what if Li Yueming had improved his strength to Level Six or even Level Seven in the past 30 years?

In this disaster that swept across the entire universe, they were at most just a slightly larger ant. They could not even be considered ants.

Therefore, in order to reverse this big event, it was definitely not enough to just focus on improving his strength. Li Yueming had to climb to a high enough position in the military system of the Imperial Sun Star.

This was the only way to warn the Alliance of Law and Order to be prepared before danger arrived.

Only the Order Alliance could wrestle with the Zergs.

No matter how many other plans he had, it would be useless.

The reason why he chose to join the Mechanic class was not only because of his talent, but also because of Li Yueming's plan for the future. He only hoped that he could make it in time and that the tragedy would not happen.

Chapter 837: Spare parts warehouse, first try!_1

Thirty years later, the disaster that swept across the entire Imperial Sun Star Area and even the third universe, Li Yueming still had no way to know whether it was a coincidence or a deeper reason.

Therefore, what he could do now was to arm himself as soon as possible. In addition, he had to climb to the top of the Military Committee as much as possible.

This was the only way to turn the tables.

At night, Li Yueming started to flip through the information that Suraman gave him.

It recorded the basic knowledge of the Mechanic class.

To become a powerful Mechanic, other than controlling the power of machinery, the most important thing was undoubtedly the understanding of mechanical components.

After all, the complexity of the battle was terrifying.

If a Mechanic didn't have a good understanding of the mechanical parts that made up their body, they wouldn't be able to fight.

From a certain standpoint, the strength systems of a Mechanic and a Warrior were interlinked. It was just that one tested one's proficiency with machinery and mecha, while the other tested one's proficiency with one's own body and techniques.

In the end, everything was still the same.

Therefore, every Mechanic had to undergo a long period of learning and education before becoming a Battle Mechanic. Only then would they have a sufficient understanding of mechanical parts.

The study plan that Sumanla had given him was also very simple.

That was to start from the maintenance and repair of simple machinery and level up.

Only when he was able to make and repair his own mecha would he be able to graduate.

Most Mechanics would find it difficult to overcome these layers of technical barriers in their entire lives.

Not to mention becoming a Battle Mechanic, even staying in the logistics department would take a lot of effort.

This kind of person did not have any mechanical talent. If he did not want to work in a dark factory for a lifetime, he could think of a way to see if he had other abilities.

In other words, the threshold to become a true Battle Mechanic was actually much higher than that of a martial artist.

Martial artists trained their physical strength. Even if they could not reach a very profound level, even an ordinary person could still gain some benefits from this profound knowledge.

To become a Battle Mechanic, not only did one have to have advanced information about the Mechanic class, but they also had to have sufficient talent. Otherwise, they might only be able to stay in the factory as a mechanic for the rest of their lives.

Of course, the heavens were always fair. A high threshold meant a high reward. After truly evolving into a Battle Mechanic, the increase in the strength of the person controlling it was unimaginable for ordinary martial artists.

There were only three Battle Mechanics in the Ultimate Martial Arts School who could operate a mecha.

Although Suraman did not look serious, he was the most experienced among the three Battle Mechanics.

However, this old man had suffered some kind of stimulation when he was young. It had been many years since he had piloted a mecha. He had been holed up in the factory every day doing his research, so much so that even many of the mechanics teachers did not know that he was actually an official battle mechanic.

After reading the information.

Li Yueming's interest in the Mechanic class grew.

During this reincarnation, he had obtained the Machinery God and the All-rounded Martial Saint, two shiny gold talents.

The Machinery God's gift to him was enough for him to be proficient in machinery, and the All-rounded Martial Saint could allow Li Yueming to convert all his energy into martial arts strength.

These two talents complemented each other, and the effect was far greater than one plus one. Perhaps it could allow him to walk a path that no one before him could.

That's right, it's time to let the Zergs experience the fear of the big machine overlord!

He closed the book.

Suraman probably couldn't even imagine it in his dreams. Li Yueming had already engraved all the information in the data into his mind, and he had also analyzed it to complete the learning and digestion.

It could be said that Li Yueming had completely mastered the basic knowledge of the Mechanic class.

The reason why he was able to complete the basic knowledge so easily in just one night was not only because of the Machinery God's talent, but also because Li Yueming had learned some simple mechanical assembly in the Nightless City in the past.

Although the basic knowledge of the Mechanic class that Sulaman gave him was much more complicated than the mechanical assembly knowledge that he learned in Cloud Sky Nightless City, the root cause was still the same, so Li Yueming understood it very easily.

The next morning, Li Yueming appeared in the factory on time.

Suraman went to the junkyard to find an old spaceship that had long been eliminated. He was excitedly preparing to introduce some basic knowledge and kinetic energy principles of the Mechanic class to Li Yueming.

However, under his incredulous gaze, Li Yueming walked forward and repaired the teaching spaceship that he had prepared.

It took about half a day.

Suraman stared at him without blinking.

At the beginning, he was still very relaxed.

However, the more he looked down, the more he realized the seriousness of the problem. In the end, he was horrified to find that the dilapidated spaceship that had been abandoned for nearly a hundred years had basically recovered its functions from the past under Li Yueming's repair!

What the hell was this?

The people of Suraman were all dumbfounded.

Although this spaceship was old, the technology used was also outdated.

However, even if he repaired it, it would still take half a day.

Now, Li Yueming only spent half a day to completely repair it.

Chapter 838: Spare parts warehouse, first try!_2

Didn't that mean that Li Yueming's understanding of machinery was not inferior to his?

Of course, this thought only appeared in his mind for a moment before it was immediately eliminated.

Li Yueming's age did not allow him to learn so much knowledge.

The planet that Li Yueming was born on couldn't possibly have any Mechanic knowledge for him to learn.

So what was going on?

This student of his seemed to be even more monstrous than he had imagined!

Sensing Suraman's puzzled gaze, Li Yueming took the initiative to explain, "Last night, you asked me to bring back a set of beginner Mechanic materials to study. Among them was an introduction to the model and structure of this spaceship. I learned it briefly, and it seems to be quite simple!"

He looked at Li Yueming's serious face.

Suraman even thought that Li Yueming was joking with him.

The information about this spaceship was indeed described in the information, but that was quite the later knowledge.

It would be difficult to read all the information in one night, let alone fully understand it. How could he copy it all?

Suraman was a little skeptical.

He knew that there were geniuses in the Mechanic class, and some geniuses could also do similar operations.

However, he did not believe that a martial arts star field like the Imperial Sun Star Field could produce such a genius Mechanic.

Thus, under his request, Li Yueming found a few more beginner machines to assemble and repair.

During this process, although Li Yueming occasionally looked troubled and there were many assembly errors, he could always find the problem after the assembly was completed.

Even if there were some hiccups, the final result would always be much better than he had expected.

This discovery surprised Suraman.

At the same time, he finally believed that Li Yueming was a rare genius.

But here came the problem.

If he remembered correctly, Li Yueming was also a genius in the martial arts department, right?

Now that he had transferred to the Mechanic class, he had actually revealed such a strong talent.

Could the Mechanic class really keep such a person?

For a moment, Sulaman even wanted to write a letter to his old friend, whom he hadn't contacted for many years, asking them to send Li Yueming to the Mechanic Academy in the second universe for specialized studies.

But in the end, he suppressed this thought. He looked at Li Yueming and said with a serious expression, "Before you learn the advanced knowledge of the Mechanic class, you must not reveal your talent in the Mechanic class!"

"I'll apply to the higher-ups. The resources you can obtain in the Pugilist Department will not be less than in the Mechanic Department. You can even obtain more!"

Looking at Li Yueming in front of him, Suraman thought for a moment and added, "I don't want to compete with the Pugilist Department for talent. It's just that there are too few young people in the Emperor Sun Star Field who have the talent of the Mechanic Department..."

"In a war, the martial artists who are fighting at the front are undoubtedly very important, but the mechanics who are hiding in the back researching, repairing, and making weapons are ten times more important than an ordinary martial artist!"

"No matter how powerful a martial artist is, they only have a pair of fists. In the face of the vast insect tide, only destructive firearms can play a greater role!"

"I won't stop you from returning to the martial arts department, but I sincerely advise you to stay. It's for your own future, as well as the future of millions of people and soldiers..."

Seeing that this wretched old man, who was usually not serious every day, had become serious, Li Yueming also said seriously, "The Mechanic class is the path I chose myself, so I naturally won't give up easily."

Suraman nodded in satisfaction.

After some thought, he pointed at the pile of broken copper and iron in the warehouse behind him. "Since your talent is so good, you can directly start practicing. If you encounter any problems that you can't solve, come and ask me... There are too few Mechanics in the Imperial Sun Starfield, so I have a lot of work and limited time!"

As he spoke, he stood up and walked to the entrance of the warehouse. "I'll report to the higher-ups in the next two days. You just have to wait for the resources to come. Don't think that I'm an inconspicuous old man."

Although he still felt that the old man was a little unreliable.

However, as long as the resources were available, Li Yueming didn't care much about the others.

After Sulaman leaves, he will be in a great deal of pain.

Li Yueming turned to look at the warehouse behind him.

According to the old man's description before he left, this place would be his territory in the future. Although the mechanical parts piled up inside belonged to the batch of primary products that had been eliminated, it was still a treasure trove full of surprises for Li Yueming.

After closing the door, he waved his hand.

Instantly, the Mechanical Deity's talent was activated.

The messy parts in front of Li Yueming suddenly came to life. Each of them seemed to have a soul, and he could roughly understand their function with just a glance.

The biggest use of these mechanical parts was to combine them into a mech. Combined with the talent of the All-rounded Martial Saint, it could increase his combat strength by several times or even ten times.

Mech assembly wasn't too difficult.

However, to truly control it, one had to be familiar with the use of Mechanical Force. The so-called Mechanical Force was similar to the Qi-Jin of martial arts.

However, the effect of Qi-Jin was on the body.

On the other hand, the Mechanical Force effect that a Mechanic comprehended through dismantling machinery would be added to the machinery.

Chapter 839: Spare parts warehouse, first try!_3

This was also the biggest difference between a Mechanic and an ordinary mecha operator.

If he wanted to comprehend Mechanical Force, Li Yueming would have to at least raise his Mechanic class knowledge to Advanced.

Right now, he could only use these scrap metals to practice and accumulate experience.

If they were able to produce any weapons with actual combat significance, they could also take them to the Military Industry Department for inspection. After passing the inspection, the Military Affairs Committee's logistics department would give rewards to the developers.

If the equipment that he developed could be sent to the battlefield, he could even receive a military rank from Li Yueming.

Li Yueming's current goal was to increase the knowledge level of the Mechanic class as soon as possible. In the process, he had to produce some practical equipment in exchange for military resources.

This was the only way to increase his strength and prepare for the possible ambush of the Zergs in the future.

Since he already had a plan and a target.

Li Yueming naturally couldn't waste any time.

After checking and counting the parts in the warehouse, he began to disassemble and assemble them.

This process looked very boring. Not to mention ordinary people, even a true Mechanic would sometimes find it difficult to maintain his composure.

However, it was not a problem for Li Yueming.

Because of the Machinery God's talent, when he studied these machines, it was like greeting elves with different postures.

Every mechanical component represented a different function and quality.

It was enough to make him lose himself in it.

Just as Li Yueming was still in the factory, thinking that he had escaped the whirlpool of public opinion.

Liang Run was on the phone with the headmaster, reporting everything that Li Yueming had done in the Ultimate Martial Arts School.

The Head Prefect was silent for a long time after hearing this.

In the end, they only told him not to act rashly and not to let Li Yueming notice their existence.

Liang Run naturally knew that the news could not be leaked, so he hurriedly nodded.

On the other side, Sulaman contacted the high-ranking officials of the logistics department on Planet Diyang with his communicator. He briefly reported Li Yueming's talent and future achievements. Although the head of the logistics department was a little skeptical, he was still very happy to transfer the money.

After all, compared to the value that Suraman had created for their logistics department to repair and maintain various mechanical parts, the price paid to train Li Yueming was only a drop in the ocean.

Therefore, the logistics department naturally had no reason to refuse.

Finalize the treatment of Li Yueming.

Suraman also heaved a sigh of relief.

The talent that Li Yueming had shown not only surprised him, but also made him excited for a long time. After all, what could be more blissful than getting a satisfactory disciple in his later years?

At the same time, in the Ultimate Martial Arts Academy, news about Li Yueming had already spread throughout the school.

The Martial Arts Department, which was the most lively, had all kinds of discussions flying around.

"Have you heard? The genius who scored more than 100,000 points in the last assessment did not join our Pugilist class. He went to the Mechanic class to join in the fun!"

"Damn... Was this for real? Why would a genius from the martial arts department go to the mechanic department?"

"Who knows? Geniuses always have some quirks..."

"The key is that there are so many martial arts teachers in the school.!"

“Indeed, I also think that this matter is a little strange, but I heard that Director Liang Run also persuaded him, but he was determined to go to the Mechanic Department. Director Liang was really forced to let him go!”

“I don’t know what’s wrong with this junior. The most promising department in the martial arts academy is clearly the martial arts department. Isn’t going to the mechanics department just to make things difficult for himself?”

“Hey, young man...It was normal to be a little arrogant. Did he get more than 30,000 points during the entrance examination? Even if he did not do anything this year, 30,000 points was enough for him to survive this semester!”

” That’s true, but I’ve already seen the scene of him pissing his pants when he returned to the Pugilist Department. After all, the Mechanic Department is not only boring, but there are also no girls. He stays in the factory every day, hugging a broken part and studying it non-stop. Who can stay there!”

Chapter 840: Resources Obtained, Repair the Spaceship!_1

No matter how the outside world viewed him joining the Mechanic class, Li Yueming finally had a place to settle down.

In the next month, Li Yueming’s schedule was quite regular. Every day, other than eating and sleeping, he would immerse himself in the factory to learn basic mechanical knowledge.

During this period, Sulaman also took time to visit him a few times and answered many questions about machinery.

After confirming that Li Yueming was very serious in his research in the factory, Suraman felt that he was a rare talent.

After all, Mechanics were recognized as the slowest job in the Extraordinary system.

A Mechanic would go from apprentice to beginner, and then from beginner to awaken the Mechanical Force talent to become an official Mechanic. The time required for this journey could even span a person’s entire life.

It couldn’t be helped. There was too much knowledge inside. It could even be said to be as vast as the ocean.

At the very least, he had to raise his Mechanic class knowledge to the Advanced Level. Only then would an ordinary Mechanic be able to free himself from the arduous and complicated basic research and officially become a Transcendent Mechanic who could travel the world.

Because of this, there were fewer and fewer young people who dared to focus on doing research. Even the young people in the Second Universe who were mainly Mechanics were very impetuous. They even found a shortcut to become a Battle Mechanic in order to skip the boring basic research stage and directly advance to a Battle Mechanic.

A month later.

The resources that Suraman promised Li Yueming had arrived.

Suraman wasn't bragging about this.

As the top mechanical expert of the Ultimate Martial Arts Academy, he could even directly skip the school and contact the Military Committee, and get sufficient treatment for Li Yueming.

That's right, the resources given by Suraman were directly distributed by the Military Committee, skipping the academy level.

Suraman was also thinking of ways to fulfill the many resources promised by the Ultimate Martial Arts Academy.

In other words, not only did Li Yueming's resources not drop after he joined the Mechanic class, but he even obtained more than double the resources for no reason!

The extra resources were all obtained by Suraman!

This made Li Yueming feel that he had come to the right place.

The relationship between Mechanics and the Military Committee was much closer than that between Martial Artists and the Military Committee.

Any problems with spaceships, firearms, weapons, or other tools, or the desire to create, develop, or create a new generation of equipment and machinery, every single one of these could not be avoided without the participation and contribution of mechanics.

And this was only the preferential treatment that Mechanics received in terms of logistics.

The battle mechanics on the frontlines were even more popular.

Not only did it possess immense destructive power, but it could also control thousands of troops. Those damaged mechanical creatures could even be repaired using Mechanical Force.

The weight of a Mechanic with a deep foundation could even be compared to a warship!

This was also the only class that could be compared to the Zerg's sea of Zergs.

One could see how popular it was.

In the end, a Mechanic was actually a rather well-rounded profession. They could tank and fight, and their firepower was quite fierce. They could also explode their soldiers to attack in groups. The only drawback was that it was too difficult to train them.

The other classes still had the experience of their predecessors to learn from.

For example, martial artists only needed to cultivate step by step.

Where could a person's body increase their strength, where could they increase their speed, and what would happen if they touched something?

This had long been summarized by the seniors of the martial arts world.

Even if the later generations had average talent, even if there were differences in talent in the human body, there would definitely not be too big of a difference in structure. As long as they followed the path that the predecessors had explored and climbed, even if they could not reach the top, they would still be able to grow to the limits of their talent.

Another example was Xianxia. There were all kinds of cultivation techniques and secret manuals, and there would always be one that was suitable.

Only for Mechanics, even if one was extremely smart and was born with talent in this field, after reading the knowledge compiled by the predecessors and understanding it all, one still needed a huge amount of time to understand the basic parts and circuits.

After all, the knowledge in the books could never catch up with the knowledge in real life. As long as one had many problems with machinery, it would be very difficult to become a true Mechanic.

And this was under the condition that his talent was excellent.

If one's talent wasn't very good, it would be a tragedy. One might invest a lot of time and energy, but in the end, they would still be stuck at the threshold of a certain advanced knowledge, unable to advance for the rest of their lives.

If one could not become a Battle Mechanic who comprehended Transcendence, then an apprentice Mechanic would still be in the category of an ordinary person.

Even if their lifespan was slightly longer than that of ordinary people, it was limited.

Who would have the courage to take such a huge risk to become a Mechanic when they still had a choice?

A young man like Li Yueming, who had chosen to study the Mechanic class instead of the Pugilist class, was as rare as a panda.

At the end of the month.

The military committee's spaceship that was transporting resources stopped outside the factory where Li Yueming was.

Under Li Yueming's gaze, boxes of resources were transported off the ship by the military robots in the spacecraft. In just ten minutes, the military green boxes in front of Li Yueming were piled up like a small mountain.
