

《Medical road》

Chapter 26

After the morning meeting, Lin Cong took Zhang Fan and two newly graduated graduate students into the operating room. Ding Lei and Wang Guiyang, graduate students, have just graduated and have been admitted to the affiliated medical college of Qingda. One is a joint and the other is a spine major. Now they are transferring to another department. Today's task is to observe the level of Zhang Fan and two graduate students.

After the film was put on the X-ray film viewing lamp, Lin Cong said to Zhang Fan, "Doctor Zhang, look at this film. Are you sure? "

"It's a little difficult, but it shouldn't be a problem." Zhang Fan said after watching the film.

Ding Lei and Wang Guiyang looked at each other, which meant: this thing bragged. Such a difficult operation is not a problem.

Lin Cong was also a little surprised. The difficulty of this operation is already a deputy high level in trauma surgery. You, a little doctor from the frontier, said it was not a big problem. Let's start.

"OK, let me help you. Ding Lei raises his legs. Wang Guiyang disinfects. Dr. Zhang, you are studying carefully. You are the main knife today."

"All right, director."

Wang Guiyang doesn't feel comfortable washing his hands. What's the rhythm today?

Start the operation, connect the bone and absorb the congestion. The bones are broken badly. If a steel plate is fixed, many small broken bones can't be helped. Zhang Fan first tied it with steel wire and then re straightened the steel plate to make it more stick on both ends of the broken bone. Steel plate is made of industrial assembly line. Although it is very standard, there are differences between people. Zhang Fan's muscle memory is quite profound. The orthopedic steel plate seems to be tailored for the patient.

"It's really good. Great skill. " Lin Cong admires Zhang Fan's operation.

"Sister, can you be stronger. Is my graduate student on TN fake? " Ding Lei and Wang Guiyang teased each other directly. They have to work in the Department for at least five years before they can be used as the main knife.

"Doctor Zhang, why are there few steel nails here?" The graduate student's eyes are still very poisonous. Ding Lei found a problem and opened his mouth and asked.

"What, Dr. Zhang? You'll call me a teacher later. I've worked hard in the front-line hospital in the frontier. It's more than enough to be your teacher." Lin Cong said.

"Miss Zhang." They shouted at the same time. In the third class hospital, a doctor is called a teacher, which means that he has made some achievements. Most of them are called a doctor, especially in the high-level medical industry. The boss is particularly dissatisfied with the second child. As long as you can't crush each other, it's no use just being a little ahead. It has been used for more than ten years. I have worked hard day and night on the operating table. Why are you a teacher and I can do your surgery! Therefore, teachers in large hospitals are really a title of respect, not just a title.

"I'm just a little more proficient. I'm embarrassed to call my teacher. I'm an undergraduate. " Zhang Fan was embarrassed, but his embarrassed words were a big blow to the two graduate students.

"Medical treatment is a discipline combining basic with clinical. It is not enough to have basic, but clinical. It's a little harder than clinical improvement, so you don't have to be embarrassed. " The director said with emotion. After the operation, Ding Lei and Wang Guiyang are put into plaster. The bones are broken badly. They must be put into plaster to strengthen fixation. Zhang Fan wants to start, but Lin Cong won't let them.

At the internal meeting of the Department, Lin Cong said, "in the future, Dr. Zhang Fan will work with me. Zhang Fan has the right to veto the discussion within the operation group of our group. " He is the orthopedic bully of the young doctor, with all doctors. The doctors of the Department were surprised when they said this. This is the position of the deputy head of the Department. The deputy head of the Department is not the deputy high school“ Those who come are not good! "

Zhang Fan they were settled in the dormitory building for advanced students outside the hospital. Zhang Fan never went back except once on the first day. He took two clothes and toiletries and lived in the Department. There is a hospital canteen to deliver meals every day. There are places to take a bath and sleep. Anyway, he doesn't have to write medical records. There are five doctors in their group. Lin Cong's words, no one dares to ask Zhang Fan to write medical records. He is also happy to do surgery.

No matter day or night, if you are tired, you will find a place to squint for a while.

When you wake up, you will go to surgery for surgery, major surgery and minor surgery. He was in the emergency department, and he was also in the operation of other groups. His mental state, not to mention technology, first of all, let the doctors in the Department of trauma and orthopedics admire his hard-working spirit. Taking the hospital as home is not just talk, it's work.

"In the future, the resident doctors in our department can't reach the level of Dr. Zhang Fan, so the spirit of hardship must reach the level of Dr. Zhang Fan and rest for two days a month. If you can't bear it, go to other departments. Talent is better than you and can work harder than you. Not ashamed." Lin Cong was really angry at the internal meeting of the Department. Zhang Fan has seen it for more than ten days. Effort, ascetic effort“ Not surprisingly, ten years later, he will be a generation of famous doctors. He has talent and works harder. It's not natural for him to stand out. " Facing Huo Qinghua, Lin Cong sighed.

On the fourth day, orthopedics was upgraded, and a new discipline of the system was opened. The upper level of trauma orthopedics was joint, spine and micro orthopedics, and other subjects could be opened. After thinking for a long time, Zhang Fan opened a new point of general education.

Department of general surgery is a clinical discipline that mainly treats liver, biliary tract, pancreas, gastrointestinal, anorectal, vascular diseases, thyroid and * * tumors and trauma. It is not only the largest specialty of the surgical system, but also the basis of other surgeries. Zhang Fan originally wanted to open an internal medicine department. His internal medicine foundation is general, but such a good opportunity to study can't let him pass in vain. If Zhang Fan stays in general surgery, there will be no less than a dozen secondary subjects alone. Upgrading these subjects will require at least 5000 general surgery. There are higher levels.

What to do, salad! God has given him a chance. Zhang Fan must not waste his poor life. He did not complain about others. He worked hard in the mire and on the road. Never give up the opportunity you can seize. There was a famous saying that a child without an umbrella must run hard. He is like a drowner. He should grasp a straw and live hard.

Driven by him, the newly admitted doctors and graduate students in the Department of trauma orthopedics worked hard. Almost all the top three hospitals in big cities are Xueba. The advantage of Xueba is that it can liver.

"Miss Zhang, emergency." Confused Zhang Fan woke up the nurses in the operating room. Zhang Fan's many years of peddler life gave him a life experience, that is, small benefits can buy people's hearts. In order to make it convenient to follow the table in the operating room, he often buys meals and drinks for the little nurses and head nurses in the operation room. On the contrary, it doesn't cost a lot of money. People

don't care about this, but this is an attitude. In a few days, the nurses in the operating room took good care of Zhang Fan who came to study.
