

## One Planet 204

**Chapter 204: The explosion begins! The first record of the college entrance examination..... is born!**

“This record is of little use even if it is broken.” The older male examiner said.  
“Don’t talk about it yet and rate the results of the other candidates as well.”

.....

Inside the examination room, Jiang Fan’s face was a little weird.

He could feel that the awareness of these three examiners came in again and again.

In addition, shortly thereafter, another more powerful consciousness came in.

“Could it be that there was an accident!” Jiang Fan speculated.

The good thing was that, shortly after that, all these consciousnesses were gone.

Above the Blue Star, calm was restored.

An hour passed quickly.

The ethereal voice sounded again:

“The second subject exam is all over, all candidates, please get ready and the third subject exam will start soon.”

As the second and third subject exams were all about rating the individual candidates’ planetary situation, so it was done together.

There was no break in between.

The reason why it was divided into two sections was also to make it easier to score and rate!

Otherwise, there were only three subjects in the college entrance examination.

It was a little bad to say it out loud.

“The third subject of the exam begins.”

Not long after that, the ethereal voice rang out:

“Please be prepared, one minute before the test, a prompt will be given.”

Same as the second exam, in the third Section, the three examiners also worked together to evaluate.

The rating was for the development status of each candidate’s planet!

Inside this, there were a lot of things to include.

The main consideration was the variety and number of species of life on the planet and the perfection of the ecosystem and so on!

The examiner would be a little more subjective.

This section was the same as the second one.

It also had a perfect score of one hundred.

For quite a few top geniuses, even those ranked in the heavenly pride list, the third section would pull them back because many geniuses cultivated transcendent races.

It was very monolithic!

Although the potential was great, it was not easy to develop in the beginning.

Species integrity was not high!

Especially the powerful alien civilization!

This was often the case but there's nothing that could be done about it.

There were gains and losses!

There was no such thing as a perfect civilization.

For this assessment, Jiang Fan was naturally not worried.

He built the Blue Star but in the entire history, it was the only natural ecosystem!

The rest of civilizations, no matter how powerful and how unbelievable, had artificial ecosystems.

These two were completely incomparable!

About half an hour had passed.

The familiar three-way examiner consciousness came in again.

This time they stayed longer.

Exactly three minutes later they left.

They were aware of scouting a level 1 planet.

For a Level 4 Planet Master, it was only a matter of seconds!

Three minutes was also slightly exaggerated.

.....

In the assessment Building, inside the room of those three examiners.

The three examiners once again showed a strange look on their faces!

“This is the candidate who just had 725 kilometers, right?”

The young male examiner said with some uncertainty.

“That's right, it's him.”

The female examiner frowned slightly and said, “The species I detected is 1412, how about you two?”

“Mine too.”

“Same.”

Both male examiners nodded.

This time, there was no wonder on their faces.

Rather, it turned out to be eccentric.

1412 Species was totally incomprehensible!

It was like seeing a freak!

They were aware!

Even if it was a level 2 planet, there were not so many species!

This was something that could only happen on at least a Level 3 planet!

To confirm that it was correct, they had explored for the entire three minutes!

They confirmed it more than ten times!

“Perhaps this candidate created an unprecedented new civilization.” The old examiner guessed.

“But it’s also too outrageous, there are more than a thousand species.” The female examiner couldn’t help it and said, “The previous 725 kilometers in diameter might still be believed when told, but this level 1 planet has more than a thousand species! Not to mention the people out there, none of the other examiners in the building will believe it either!”

“Believe it or not, that’s the truth.” The older male examiner said with a solemn expression, “What we do as examiners is to confirm the facts and as for believing or not believing that is someone else’s business.”

“All right.” The older male examiner waved his hand and said, “We have already delayed quite a lot of time, so hurry up and evaluate this candidate.”

“In terms of species richness, a perfect score is no problem, right?”

The older male examiner looked at the other two.

“No problem.”

The female examiner and the young male examiner both nodded their heads.

If a candidate had more than one thousand species and was not rated full marks, he absolutely would be scalded to death!

“Ecosystem integrity, with so many species, should also be a perfect score, do you all have questions!”

The older male examiner asked.

“There is no doubt that with so many species, there is absolutely no need to question his integrity.”
