

Physician Wife 2431

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2431

At this moment, the disaster area needed this medicine the most. 100000 boxes were enough to relieve the first batch of victims who were caught.

The Shi family's press conference attracted widespread attention from all sides.

The president, who had received Nangong Jin's video, was still on the verge of exploding in anger.

He had secretly developed drugs that were strictly prohibited by the International Federation and had even attempted to kill a former member of the combat Services Department!

Although the medical Association had made a lot of contributions to society, this kind of action was really too infuriating.

The president was about to make a move on the medical Association, but the Shi family held a press conference at this time. First of all, I'd like to talk about the genetic modification incident that happened in the medical Association.

It didn't matter if the Shi family handed Qi Fang over because they knew that Nangong Jin had saved him, or if they really didn't know anything. Three billion was not a small amount, and the medicine was a necessity for the disaster area.

Therefore, to make up for his mistake, the president thought for a moment and decided not to disclose this matter.

However, the president still took the possibility of the medical Association developing a genetically modified drug to heart. He immediately called the Food and Drug Administration and found his own people to ask if there were really no genetically modified ingredients in the medicine. He would only be at ease if his people personally examined it. Otherwise, Kamino would be thrown into chaos because of this.

"Get number 13 to come see me immediately."

After calling the Food and Drug Administration, the president called Prime Minister No. 13, Shi maowen. recently, shi maowen had been busy dealing with lan weisong's matter. since the situation was clear, it was easy to investigate. LAN weisong had already been transferred to the guard post.

shi maowen's attitude was very humble when he saw the president.

Mr. President, do you have any orders for me? "

The president looked at Shi maowen. To be honest, compared to li Heyi, he really did not like Shi maowen. Although Shi maowen had never made any mistakes, the president did not have a good impression of him because of the Shi family.

"Sit." The president pointed to the seat opposite him and asked him to sit down.

13th, I called you here today because I want you to personally give me a promise.

Shi maowen already knew why the president was looking for him, so he was very comfortable facing the president.

Mr. President, please tell me. As long as I can promise you, I will definitely do it.

“You should have heard about the press conference held by the Shi family just now.”

“Yes, Your Excellency.” shi maowen nodded.

“I have a video here.” Then, the president played the video for Shi maowen to see.

Shi maowen’s eyes were filled with shock, and he was so shocked that he stood up from his chair.

“Mr. President, the Shi family really has no idea about this! After developing Paul’s Secret research into genetically modified drugs, the first thing we did was to remove his name from the list and then send people to arrest him. He’s still trying to deny it. He doesn’t want to admit that he’s using the resources of the medical Association for genetic modification research. We didn’t know that Qi Fang was poisoned by him. I know that it’s wrong of us to make mistakes time and time again, but we really didn’t know about this. Qi Fang is just an ordinary staff member in the medical Association, so we don’t pay much attention to him. He didn’t even know that he was actually harmed by Paul!”

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2432

The president said unhappily, “since he’s just an ordinary staff member, how do you know his name?” You’re not even a staff member of the medical Association.”

“Although we didn’t pay much attention to him, Qi Fang is quite famous in the medical Association.

“Because he was an outstanding officer in the northern War service department, he retired due to an injury. However, because he was from the medical department and had done pharmaceutical research, when the northern War service department invited the medical Association to take Qi Fang in, we didn’t let him do any Human Resource Management work. Instead, we let him do his favorite pharmaceutical research. That’s why I know him. I know him. He also knows me, and I’ve even talked to him many times. President, you’ll know once you send someone to investigate this matter.”

what about Qi Fang’s accusation that you were researching a genetically modified drug and used it on patients, treating them as your lab rats? what do you say about that? ”

“Mr. President, this is indeed the medical Association’s mistake. As you know, if the medical Association wants to produce good medicine, they need someone to do experiments. Many of the patients who were sent to the hospital had recovered after taking the new drugs developed by the hospital, or were out of danger.

therefore, although we all know that the medical Laboratory staff gave the medicine to the patients, we didn’t conduct strict monitoring on every pharmaceutical experiment of each pharmacist out of trust in these people. This led to Paul’s genetic experiments behind the medical Association’s back.

Mr. President, we only found out that Paul was researching genetic modification behind our back, but we didn’t know that Qi Fang had been harmed by him. She also did not know that he was using the

name of the medical Association to attack Qi Fang. I didn't even know that Qi Fang was fired, Your Excellency. If you think that the medical Association is behind this, I'll definitely agree to your investigation."

"Alright, that's enough!" The president said impatiently, "every time, no matter what happens, the first thing you do is to be shocked. Then, you're innocent. You immediately cut the Shi family off from all these things. Then, you cut off your wrist and say that the other party's actions were private."

Number 13, if it was a coincidence once or twice, then three or four times was definitely not a coincidence! Do you want to tell me that this time is also a coincidence?"

shi maowen:

he knew that the president would be really angry this time. however, after the shi family had already made such a donation and contribution, he was still so angry. this made shi maowen a little angry.

However, he had no choice. In Kamino, the president was the absolute center of authority. He had no way to go against the president. Furthermore, this incident was indeed the Shi family's fault.

Shi maowen immediately bowed to the president and said, "Mr. President, please calm down. It's true that the medical Association didn't know about this, but now that we do, we'll do our best to compensate Qi Fang."

"Is this a matter of compensation?" The president was furious.

"Mr. President, this can't be solved with just compensation, but the Shi family has to show our attitude no matter what. This incident was caused by our poor management. We will definitely strengthen our management in the future, or if the president thinks that the medical Association should be punished or something, we will do our best to cooperate."

shi maowen decided not to explain. after all, the president was already very dissatisfied with the shi family. it was useless to explain any further.

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2433: 36

Seeing that Shi maowen had stopped talking, the president asked, "I want you to promise me that the Shi family has absolutely no involvement in the genetic research. The 100,000 boxes of ointment for traumatic injuries that you've donated to the disaster area definitely doesn't contain any genetically modified components. These medicines definitely have no side effects on the people in the disaster area."

"yes! I, Shi maowen, hereby promise that the Shi family has never participated in the research of genetic modification. The 100000 boxes of drugs donated to the disaster area definitely have no genetically modified components in them, and these drugs absolutely have no side effects on the human body."

"I hope you can keep your promise. If the promise you made to me just now was a lie, and I was able to put the medical Association under the Shi family's jurisdiction, I can also take it back from your Shi family. So I hope you can live up to the trust I have in you."

Shi maowen was filled with hatred in his heart, but he did not show any flaws on his face. He said, don't worry, Mr. President. If the medical Association really did research on genetic modification, you can do as you said and take the medical Association back.

When Shi maowen was speaking, the president kept looking at his micro-expression, but unfortunately, no matter what happened, Shi maowen never had any micro-expression.

However, seeing how resolute he was, the president couldn't probe any further. After all, even if he wanted to investigate further, the other party would have taken precautions and would not let him find out.

"alright, i hope you're telling the truth. however, since Paul's incident has already happened, it's possible that there will be a second or a third. So, I hope that there will still be people from the military Medical University who can enter the medical Association and participate in the research. What do you think?"

Shi maowen was so angry that he wanted to slam the door and leave.

In the military, the Chi family was always in charge of the most important Eagle, and the Nangong family was always in charge of the military service department in the Emperor province. Besides the Xiao family, which no longer had any family members in the military service department, even the ning family was in charge of the northeast military service department. There was nothing. Their family only managed the southeast Region. In Kamino, the most important cities were concentrated in the north and west. The South was a barren area, and it was hard to get in touch with the battle Bureau. Therefore, brother-in-law's southeast area was of little value.

The only hospital that they thought was useful was the president's. furthermore, he wanted the people from the medical department university to infiltrate the hospital.

It wasn't easy for the medical Association to separate from the medical department, and now they wanted to let someone in. How could he accept it?

"What's wrong? you're not willing?" The president asked.

"Mr. President, forgive me for being blunt! although the medical association was separated from the provincial medical university and belonged to the country and the war services department, it was clear how much money the war services department had allocated to the medical association over the years. to put it bluntly, the funds allocated by the war department could not even support the medical association's experts. Not to mention the research funds, machines, and a large number of consumables in the medical Association.

It can be said that without the Shi family's own money to support people and to buy machines and all kinds of medicine abroad, the medical Association would never have developed to its current scale, let alone develop medicine that can repair tissue."

The president was not happy either. Seeing how domineering Shi maowen was, he asked, "So you're saying that the country is relying on your Shi family to survive?"

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2434

"I wouldn't dare. however, i think that the shi family has invested the most in the medical association. now that things are finally getting better, mr. president, you're going to burn the bridge after crossing the river. Isn't this a little inappropriate?"

The president was also a domineering person. After being provoked by Shi maowen, he asked,"I hate being threatened the most. Sending some people to the medical Association is already provoking you, and that's already burning the bridge after crossing the river. What if we really let the medical Association merge with the medical administration University?"

"mr. president! if that's the case, i'm sure the shi family will back out."

"Are you threatening me?"

"No! this subordinate does not dare! You're threatening your subordinate and the Shi family. After all, the Shi family had spent all their efforts on the research of the medical Association, and even most of the profits of the time group had been invested in the medical Association. The Shi family had put in so much effort. If they couldn't get what they deserved, as businessmen, the Shi family would withdraw. by then, the people hired by the shi family, the equipment, and medicinal herbs will all be taken away. you have no right to interfere, mr. president."

" do you think that without the shi family in kanino, there will be no one else to do the research? "

"There are. However, the Kamino Kingdom would have to pay at least twenty times the amount of funding they currently had to hire those medical researchers. Because all these years, the Shi family had paid this price. He used his own money. Your Excellency President, may I ask if the Internal Affairs Bureau and the War Bureau are willing to fork out such a large sum?"

The president narrowed his eyes.

At that moment, he thought of Nangong Nuannuan. The girl who was very talented in the medical field.

when he thought about how she was the founder of the world's most famous angel medical research base, the shi family's withdrawal did not seem so difficult to resist.

however, when he thought about nangong nuannuan's other identity, he felt a sharp pain in his teeth.

at such a young age, he was already the chairman of disheng and tian heng land, two of the top 50 companies in the world. it was possible to ask her for help, but it was unrealistic to ask her to manage the entire medical association.

After all, he couldn't afford it!

It was all because of the lack of funding.

If the funds were right, he really didn't want to entrust the Shi family with such a heavy responsibility.

As a President, although everything needed real evidence, his sixth sense was very strong. He always felt that something bad was going to happen if the Shi family continued to control the medical Association.

Seeing that the president had nothing to say, Shi maowen said, " "Mr. President, although there were some problems with the medical Association this time, the Shi family has been trying to solve the

problem after discovering it. In order to salvage the negative image of the Shi family in the president's heart, we still donated 3 billion to the disaster area despite the financial difficulties of the Shi family. At the same time, we also sent the first batch of medicine developed to the disaster area free of charge.

mr. president, no one is a saint. everyone makes mistakes. you're so wise, but there are still criminals in kamino under your control. but just because there were criminals, it didn't mean that there weren't good people or heroes, right? Our country is prospering under your rule, and our status is getting higher and higher. This was just like the Shi family. The Shi family had many members, many collateral relatives, and even more people under the collateral relatives. It was like a small Kamino Kingdom. Some people did want to stir up some trouble, but that didn't mean the Shi family was bad. I hope you can give the Shi family a fair assessment."

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2435: 38

This was the first time Shi maowen had a direct confrontation with the president. However, under his carrot and stick approach, the president ultimately did not send someone to the medical Association to supervise.

after all, the medical association had been supported by the shi family all these years. Without the Shi family, the medical Association would just be an ordinary medical research sub-hospital under the general Administration of warfare. They would not become an international medical research organization.

"let's forget about this matter. i hope that the shi family can handle qi fang's matter properly and clean up the illegal activities within the medical association. At the same time, I hope that this batch of medicine is really good and can really solve the emergency of the disaster area."

"Yes, I promise!"

The news conference held by the Shi family was extremely shocking. It could even be said to be more shocking than when Nangong Nuannuan had donated two billion each with Imperial Palace, Shengyang, and Hawkeye.

after the shi family announced their donation of 3 billion, the ning family also announced that they would donate 2 billion. at the same time, they would also take out a small community area of 300000 square meters for the victims of the disaster to live in temporarily. it was a very large sum.

The media was not stingy with their praises for the seven powerhouses. After all, the total amount of donations from these seven families alone reached 15 billion.

Before they had a deeper understanding of the disaster, everyone thought that 15 billion was enough to compensate each family that suffered.

Looking at the high-spirited Shi maowen and Shi maocheng, then at the ning family's donation, Nangong Nuannuan, who was from the Chi family, could not help but sneer.

2 billion was not a sum that an ordinary company could come up with. The Chi family, Nangong family, Xiao family, and Wu family being able to take out so much money already made her feel very good. She didn't think that the Shi family and the ning family could also come up with 2 billion.

not to mention 3 billion.

did he really think that money was like cabbages?

Even cabbages required hard work to farm, and a single mistake would result in a bad harvest.

therefore, nangong nuannuan was deeply suspicious of the authenticity of the donation, given the shi and ning families 'character.

At the same time, she was also suspicious of the Medicine's effects.

It was said that human genes and human tissues were two completely different concepts.

Why was it different?

How could there be human tissues without human genes as a Foundation? why was it that even though everyone looked different, they all had human forms? instead of some having human or alien forms? Why do humans look different from cats and dogs?

Wasn't this because the human genes determined the general direction of human beings? Therefore, humans were divided into two types, men and women. However, apart from their looks, weren't their shapes basically the same?

which of those people who had a headache and had strange shapes wasn't caused by a problem with their genetic chain?

The Shi family was simply confusing the public.

to be able to heal the wound so quickly and even improve the healing of the meridians, blood vessels, and bones, it must have been because the medicine had changed the gene chain in a certain part of the body, causing the brain to secrete more hormones and accelerate the body's metabolism, thus healing the affected area.

therefore, this type of medicine must have changed the genes.

Genes were a powerful link. If one part of it was changed and a link was connected to another part, it would allow the wound to recover quickly, but at the same time, the other part would definitely be in an unbalanced state.

It could only be said that this situation was big or small, good or bad.

Since the ancient times, the genetic chain of human beings had been constantly changing.

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2436

According to the theory of evolution, humans were always developing in a good direction that was more suitable for human survival.

for example, to the ancient people, the appendix was a very important organ, but it always had problems. that was why many people in the modern era had to remove their appendix if it was infected.

since 150 years ago, the appendix had become less important. this was a sign that the human body's genes were constantly changing in a direction that was more conducive to human survival.

However, there were also some bad changes. many women nowadays didn't pay attention to protecting themselves. when they were doing it, men didn't want to wear t-shirts, but they didn't stop them, and they didn't take medicine after. she knew that it was not the right time to have a child yet, but in order to make the man's heart ache, in order to create more blood ties between them, she went to get pregnant and then abort it.

as a result, many girls who aborted their children would realize that it would be very difficult to get pregnant again in the future.

Why?

This was because the human body's genes had memory. The child formed in the womb was a genetic memory that was passed down from the birth of a human.

However, genetic memory was developing in a direction that was more beneficial to human beings. Once the woman aborted her child, it would have a negative impact on the human body. Then, the genes would automatically remember the child as an error or a harmful foreign object.

This way, if this woman really wanted to get pregnant in the future, it would be difficult for her to get pregnant again. This was because women who had aborted their children would more or less develop an antibody for it.

This type of antibody was divided into anti-Jingzi antibody (sound), anti-dynasty antibody (sound), anti-ZG membrane antibody, etc.

Once this antibody was produced and formed, once the same man, or even after breaking up, passed on another man's gene, the woman's body would produce a strong rejection.

It rejected all the factors that could form a child.

this was the reason why many women could not get pregnant again after an abortion. This was because the genes had formed a separate memory according to the individual-children were foreign substances that affected the physical health!

Over time, the infertility rate naturally increased.

It wasn't that they thought women couldn't give birth anymore, but that their genetic memory had been formed. Once it was formed, it was very difficult to change.

However, the medicine developed by the Shi family could rapidly heal wounds, and this speed was obviously beyond the normal range. Those who were injured were not brother chiyang. They did not have any special abilities, nor did they have a powerful healing system, so the only way was to change the healing genes.

logically speaking, fast healing was good for the human body, but why had the genes not evolved in this aspect since ancient times?

The reason was that if the genes in this aspect were updated, it might affect the genes in another aspect. Once the genetic chain in that area lost its link, it was likely to cause more serious consequences.

This was the only thought that came to Nangong Nuannuan's mind when she saw the release of the new medicine from the medical Association.

after thinking for a moment, nangong nuannuan immediately gave brother chiyang a call.

However, the phone still could not be connected.

after that, she called her first uncle and big brother, but they still couldn't get through.

she had no choice but to call her second brother.

After his second brother had trained in the Special Forces Department of the police department for a while, he had been transferred back to the War Department and was in the same battle zone as his eldest brother. His elder brother was the commander, and he was the instructor. His elder brother was a major General, and he was a senior captain.

However, her second brother's phone could not be connected.

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2437: 40

nangong nuannuan was a little depressed.

she could see what was going on over at brother chiyang's side, because when she came back last night, she had asked little danqi to help him hack a satellite. Therefore, she was completely aware of what her brother chiyang was doing.

But now, she needed some medicine!

In order to clear a green passage for the disaster area, only the combat Services department's planes and military cards were allowed to pass through the sky and land.

If she wanted to enter, she could only take the highway. However, she knew the situation in the disaster area. The roads were blocked, and the rivers formed dammed lakes. If they wanted to enter, they had to walk. It was at least two days later when she came back with the medicine. In addition, the research time was very limited.

Even if they discovered the problem and tried to stop it, it was too late.

But at that moment, an anonymous call came in.

There were too many sales calls and Harassment calls these days. Nangong Nuannuan didn't want to answer them at first, but after thinking about it, what if it was brother chiyang who had found a way to call? He still picked it up.

"Who is it?"

"Nuannuan,"

a strange yet familiar voice was heard.

With her superb memory, Nangong Nuannuan immediately recognized who the person was.

“Mr. President,” he called out in surprise.

The president obviously didn’t expect the other party to recognize his voice.

“It’s me. I didn’t expect you to have such a good memory.”

“Mr. President, is there anything I can help you with?” Nangong Nuannuan asked with a smile.

“There’s something I need your help with. Of course, this is definitely not for free, the Internal Affairs Bureau will definitely pay for it. ”

Nangong Nuannuan was amused. Did she lack money?

“Mr. President, I’ll definitely help you if I can. It’s free. But if I can’t, I won’t help no matter how much money you give me, because I don’t lack money.”

not only was the president not angry at nangong nuannuan’s words, but he also felt that she was a girl with a genuine personality.

“did you watch the press conference held by the shi family today?”

“I’ve seen it.” Nangong Nuannuan raised her brows as she thought of something. It couldn’t be such a coincidence, right?

then you should have seen the new 2s-grade medicine released by the Shi family, right? ”

“yes.”

“what do you think?” The president asked.

” i wonder which aspect mr. president is referring to? ”

“genetic modification.” The president didn’t beat around the bush and directly voiced his concerns.

“Your brother sent someone to my office this morning and gave me a video. i’m sure you’ve seen the video. Just as I was about to deal with this matter, the Shi family held a high-profile press conference and even showed off the new medicine they had developed. I immediately called Shi maowen over and asked him. He swore that the new drug developed by the medical Association was definitely not genetically modified. I threatened him and told him that if he found out that the medicine was genetically modified, then the medical Association would be taken back by the general Administration of warfare.”

did he accept the threat? ” Nangong Nuannuan asked with a smile.

The president sighed. I trusted them too much at the time. When I saw that they were willing to pay for it out of their own pocket, I let them take control of the medical Association. I’m quite satisfied with their research results over the years. However, if they have really crossed the line of humanity, then I will definitely not let them off. Although we didn’t manage to threaten him, without the support of the state, the strength of the Chinese Medical Association will be greatly reduced.”

My Sweet Physician Wife Calls The Shots

Chapter 2438: 41

Nangong Nuannuan shook her head. the real use of the medical Association is the medical researchers. These people have already been won over by the Shi family. It doesn't matter whether you take them back or not. If they're really doing genetic research, even if you take it back, they'll just have to move to another place to do their research."

"if their research on genetic modification is confirmed, it will only be a matter of minutes before i sanction them. after all, the shi family's huge business was in kamino, and almost all of them were in various parts of kamino. As long as I want to, the Shi family must be destroyed."

" yes, mr. president. i believe you can do it. " However, it was a little awkward.

When she thought about Viper and the man named Feng Yao, Nangong Nuannuan felt that he was overthinking things.

"So now, I would like to ask you to help me study whether the medicine developed by the Shi family is genetically modified. If it's really genetic modification, I'll definitely punish them."

"mr. president, do you have a sample of the medicine?" nangong nuannuan asked.

"the food and drug administration has it. i've already asked them to send it over."

With that one sentence, Nangong Nuannuan had a feeling that their phone conversation that day had been monitored.

If Shi Yalin knew that the president was going to attack the Shi family, the president would be in trouble.

nangong nuannuan narrowed her eyes slightly and said, " "I'll send one of disheng's employees to get the medicine."

"Alright," he said.

after she hung up, nangong nuannuan immediately called baili yue.

An hour later, according to the location provided by the president, the employee of disheng group entered a villa area.

After the employee was brought into the villa area, he was led into the villa by the staff.

In the villa, the president was drinking tea in the back garden. When he saw the staff, he looked at him and asked, " "Nuan Nuan didn't come?"

The person bowed 90 degrees to the president. reporting to the president, our Chairman still has something to do. She asked me to come and collect the things and then go back.

The president frowned. but I've given it some thought. I need to know the situation with this medicine as soon as possible. Why don't you tell Nuannuan and ask her to bring it over for research? "

The staff member nodded slightly. I'll call our Chairman now.

However, no one picked up the phone.

"I'm sorry, Mr. President, our Chairman's phone is not answered. do you think i should take this medicine with me or leave it with you temporarily?"

The president thought about it. let me keep it for now. Go back and tell her to come to my place personally."

The person nodded. yes, Your Excellency. I will definitely let her know.

The staff said goodbye to the president and left.

After the man left, the president walked through the door from the back garden, and a man and a woman came down from upstairs.

The man's face was pale, and his steps were unsteady. He was supported by the woman, as if he had a kidney deficiency that couldn't be cured even after eating a whole box of six flavor dihuang pills.

The woman, on the other hand, had a smug smile on her face.

This woman was none other than Shi Yalin, the woman whom Nangong Nuannuan had been constantly thinking about.

"Foster father, it's all thanks to you this time. If you hadn't helped me, I'm afraid that the hospital would have been targeted by Nangong Nuannuan. She's so smart, she'll probably suspect me soon. but now that we have the president's protection, i'm afraid nangong nuannuan will have to think twice before trying to stir up trouble."

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2439

"You've recovered, but have you ever thought about me? Due to the limitation of my level, every time I use my hypnosis, I will be exhausted for a long time. Do you know how long I have to rest after I hypnotize him this time? Can't you use your brain when you do things? Can't you be a little more low-key?"

foster father, " Shi Yalin said, feeling wronged, " you know that ever since brother Xuan gave KE to Nangong Nuannuan without even discussing it, we've lost our source of funds. Nangong Nuannuan's x-ray vision has rendered our Bugman plan impossible. Now, not only do we have to do new research on controlling humans, but we also have to extract energy from the Jade. nowadays, a lot of jade stones overseas are monopolized by disheng. i don't have enough jade resources to use with the shi family's meager wealth. I need a lot of money to continue our new experiment. Father, I know I've dragged you down this time, but isn't it your wish to continue the experiment?"

The person who was called "foster father" was Feng Kun.

However, no one knew why Feng Luan, who was originally in Saibo, would suddenly appear in Kamino.

"Are you sure your medicine this time won't affect the genes much?" Feng Kun asked.

"Yes." Shi Yalin nodded,"the medicine this time was brought from there. Although it will change a little bit of the genes, it will not cause much harm to the human body." It was just that for some other medicines, the efficacy would not be as good in the future. Even if Nangong Nuannuan noticed this, it

would not be a big deal. However, I believe that she won't be able to see it since the genetic link is so small. If we do things secretly, she will definitely suspect the president. Once she sends people to monitor the president, we can cut off her left and right arms. Baili Yue, danqi, and the others would not be able to survive. If he wanted to get Nangong Nuannuan, he had to kill them first. It's best to wipe them all out in one go."

"Why do you still want to kill Baili Yue?" Feng Kun frowned.

"Foster father, didn't brother Tianxuan send people to kill Chi Yuancheng and Chi zeyao? Although he didn't succeed, brother Xuan's right-hand man, Stephen, died. He would definitely not let this go. As for the Chi family, Chi Yuancheng and Chi zeyao had almost been killed, so Chi Yang would definitely not let this matter rest. With Chi Yang's ability, he must have suspected brother Xuan a long time ago. Otherwise, Chi Yang wouldn't have destroyed the forces that brother Xuan had arranged in the Emperor province.

Therefore, the two of them must be secretly competing with each other. However, now that the earthquake had occurred, their hatred could only be put aside for the time being. However, just you wait. When the earthquake is over, the battle between the two of them will still be coming. The president is a distant relative of the Nangong family. As long as we can kill Baili Yue, brother Xuan will definitely avenge her. Then, we'll quietly kill danqi. Without danqi, they'll be as good as blind. Our threat will be eliminated. Otherwise, with danqi around, we'll be constantly worried that Nangong Nuannuan will get suspicious and ask danqi to follow us. That would be bad."

Feng Kun's figure was a little hunched. Shi Yalin quickly supported him and let him sit down on the sofa at the side. The president stood by the side, like a pawn for the two.

"Foster father, what do you think? When the president's men killed Baili Yue, Feng shengxuan would definitely blame Chi Yang for it. Won't they fight to the death?"

[My Sweet Physician Wife Calls The Shots](#)

Chapter 2440

Feng Kun thought for a long time and finally nodded. He looked at the president and said, " we'll send someone to handle this matter. You'll handle it.

"Alright," he said.

feng kun looked at shi yalin. " i'll leave the matters here to you. i need to go back and rest. "

After receiving the president's great help, Shi Yalin happily nodded in agreement.

Feng Luan took out a talisman, bit the blood on her fingertip, and drew a spell on the talisman. Her pale face became even paler, but the next moment, the talisman burned and Feng Luan, who was sitting on the sofa, suddenly disappeared, leaving only a talisman that was gradually burning to ashes.

Mr. President, if there's nothing else, I'll take my leave.

"Alright," he said. The president nodded. He couldn't see anything wrong with it.

"From now on, these people will be by your side to protect your safety."

“I know, don’t worry.”

“But you have to remember, every time you meet with Nangong Nuannuan, you must not bring them along. If Nangong Nuannuan finds out that they’re bugmen, you’ll have to abandon them immediately. Otherwise, you’ll be suspected as well.”

don’t worry, I’m already aware of this situation. She won’t find out.

an hour later, nangong nuannuan called. After asking the staff why they didn’t give the medicine to her, she said that they came to get the medicine themselves. The president had asked if they could conduct the experiment in the villa, but Nangong Nuannuan had rejected it.

Therefore, the president suggested that he send someone to deliver the items to Nangong Nuannuan. Nangong Nuannuan readily agreed.

After receiving the medicine, Nangong Nuannuan immediately brought it to her research room to study it.

But surprisingly, this medicine was different from what she had originally thought.

Originally, she had thought that when the tissues were repaired quickly, there must be a certain gene chain that was forcibly matched. And this result must have resulted in the deficiency of another genetic chain.

However, after a whole day of research, Nangong Nuannuan realized that the medicine had indeed changed some genes. However, according to several experiments, the genetic change was only a slight change in smile and was not enough to cause great harm to the human body.

However, Nangong Nuannuan realized that she could not identify the most important ingredients in the medicine.

he couldn’t analyze where the medicine that could quickly coagulate and recover came from. To Nangong Nuannuan’s knowledge, there was no medicine in the world that she could not analyze.

In other words, the drugs that she couldn’t analyze didn’t belong to this world?

Even though this statement was a little far-fetched, Nangong Nuannuan was certain that this medicine had not been known to anyone in the world. As long as there was knowledge and records, even if it was an extinct thing, she would know.

After confirming that the drug was not harmful to the human body, Nangong Nuannuan continued to study the drug’s properties.

Just like human genes, everything that appeared in this world had its own genes and structure. Whether it was an animal, a plant, or even a stone.

nangong nuannuan was full of curiosity about this unknown thing and had unknowingly studied it for an entire night.

Nangong Nuannuan’s mouth formed an “ O ” shape as she looked at the chemical reaction that she had recorded. She could not believe her eyes.
