## Chapter 101 - 100: Poaching

Chapter 101: Chapter 100: Poaching

Translator: 549690339

Discarding the usual assembly line used for enhancing efficiency, a place where each part is crafted with complete attention! There's a dedicated person overseeing every single component to ensure that every part produced is of the best quality! The final assembly, including seat trim and other details, doesn't even enter a mechanical assembly line but is instead manually handled, completely customized! That's the real meaning of handmade! However, that doesn't mean that the factory equipped for this type of production is outdated.

On the contrary, most of the machines in there are top-of-the-line!

In a similar manner, if the machines are cutting-edge, then it naturally follows that the workers using them would also be advanced engineers! The yearly salaries of this group of workers are astronomical sums, even for people who are worth billions. Otherwise, why do you think luxury cars cost millions each? Do you really think it's because of high material costs? Of course not, a large portion of that price point is the workers' salaries!

After pondering for quite a while, Truman Dale's eyes lit up. He then cautiously phrased his own statement saying: 'Mr. Lewis, your requirements are very stringent, and you definitely will not settle for some ordinary factory. Judging from your requirements, the bespoke factories owned by the Volkswagen Company that are looking to be sold do not meet your needs at all. However, there is a factory currently that perfectly meets your requirements and most importantly, its parent company is also looking to sell it.'

"Oh?" Finn Lewis raised an eyebrow. This guy sure has a way with words, masterfully downplaying Volkswagen while emphasizing my status. If even Volkswagen, the world's second -largest car manufacturer, doesn't have many factories that can meet my standards, how prestigious am I? Of course, I am! Who says folks from the Federation can't flatter people? Search the website to access chapters of novels early and in the highest quality.

"It's under the BC company, a brand you must have heard before, Maybach!" Truman Dale quickly blurted out. As soon as Truman Dale spoke, a light gleamed in Finn

Lewis's eyes. This guy hit the nail right on the head, capturing exactly what Lewis was looking for. Flying Horse's technology is naturally not inferior to Volkswagen's, although they lag behind in market sales, company scale, and automobile manufacturing.

But, don't forget that Flying Horse doesn't just manufacture cars; they also produce military off-road vehicles, trucks, buses, and even aerospace technology.

Of course, Finn Lewis knows about Maybach. It's comparable to the Quadriga

Phantom. However, back in our country, a HyperCraft used to cost more than

40 million Flame Nation coins, which is more expensive than a Quadriga Phantom by a lot! Yet, it didn't offer anything exceptional. In the end, the parent company of Flying Horse had to stop the production and sales of the

HyperCraft. However, that doesn't mean that the factories producing

HyperCraft were lacking in technology; there were just some issues with the design.

Truman Dale was observing Lewis's face closely. As soon as he saw Lewis show interest, he knew he hit the mark. He immediately said, "Mr. Lewis, the HyperCraft was one of the first creations of the Flying Horse company. It was renowned in Southern Federation from 1921 to 1940. Although it has stopped production, for all these years, its factories have always been among the most advanced ones of the Flying Horse company. Similarly, the engineers and employees there are also top-notch. Therefore, it very much meets your standards. Now, because it has stopped production, Flying Horse wants to sell it. After all, each day they keep it, it loses money."

"Oh, but I heard that Flying Horse Company recently released a new model of HyperCraft, didn't they?" Finn Lewis suddenly asked. This news isn't precisely recent. For such a luxury car brand to go to waste is simply an extravagance. So naturally, Flying Horse wouldn't sit idle. They would undoubtedly try to introduce a desirable model like the Quadriga Phantom to break into the market.

"Yes, you are correct. But I believe that the higher management at Flying Horse isn't exactly confident of HyperCraft reclaiming its market share. because it

has already failed once," Truman Dale immediately responded. When he spoke, he was confident. Clearly, he has a lot of insider info in this field.

"Mr. Truman Dale, are you satisfied with your current life?" Finn Lewis suddenly asked.

Truman Dale was taken aback. What did Lewis mean by this question? But he understood it in an instant. They were both intelligent people, so why else would Lewis ask such a question? Satisfied with his current life? Doesn't this mean he's asking Truman Dale if he wants to advance his life further?

What kind of life is most interesting to people? Look at the change in Fishy Wells. Before, a fifteen-yuan meal would probably make her feel anxious, but in just a short time with Finn Lewis, she's become entirely numb to Lewis's lifestyle. However, numbness doesn't mean she hasn't changed. On the contrary, Lewis's lifestyle has stirred certain ambitions deep within Fishy Wells. Everyone has ambitions; there's no doubt about that. People who appear to lack ambition just haven't had theirs discovered yet.

This is even true for someone like Fishy Wells. In such a short time, she's been studying hard every day. The books she reads and the things she pays attention to have changed from academic textbooks to the most cutting-edge fashion and advanced management concepts. Also, she has been learning from Julia Parker on how to apply makeup and buy top-tier fashion items every day.

These changes all indicate one thing: Fishy Wells wants to change her life.

Then what about Truman Dale?

If you asked Truman Dale in the past whether he was satisfied with his life? He would tell you that he was very satisfied. He makes close to 1.5 to 2 million South Federation Currency in a year. Even if there are differences, the gap wouldn't be too big. This salary is undoubtedly part of the high-income group in the Federation. He has a villa, luxury cars, a beautiful wife, well-behaved children. Is he satisfied? Of course, he is! You need to know that ninety percent of the people in the world can't compare to his life.

Unfortunately, the problem with this world is that there's always someone for comparison. There's always that small group of people that you just can't compete with. If you asked Truman Dale in the past whether he was satisfied with his life, he would definitely say he was. But after just a short conversation with Finn Lewis, Truman Dale isn't so sure whether he's satisfied with his life anymore.

He has a beautiful wife, and even a beautiful, young lover. But what about Finn Lewis? He has two beautiful assistants who act like maids. From the time they booked their hotel rooms, Truman noticed that these two beauties didn't even book a second room. Obviously, they are staying with Lewis. And here's the problem: his beautiful lover costs him money, and he has to coax her. But what about Lewis? From beginning to end, Lewis has hardly ever paid attention to the girls' feelings..

## **Chapter 102 - 101: It's That Simple**

Chapter 102: Chapter 101: It's That Simple

Translator: 549690339

However, these two beauties were treating each other as respectfully as if they were emperors. I once envied myself for driving a luxury car. What about them? They simply bought a car manufacturer, did nothing, and did not sell to the outside! Just producing unique luxury cars for themselves! It's clear who surpasses the other! As for other things, he hasn't touched it yet. But to stay in Achievement Country for just a few days, he directly went to buy a Siamese Phantom. He didn't even bother to rent a car. Do we need to talk about other aspects?

Comparing this way, is he satisfied with his life? "Although my life is already good now, if there is better development, I certainly hope to go further." Truman Dale carefully started to speak.

"Yes, if the factory is successfully purchased, I will need someone to help me run it here, I need a president. Mr. Dale, you are proficient in law, and proficient in multiple languages. Although you have not managed a business before, those tasks can be done by professional managers. So, Mr. Dale, would you like to take this position?" Finn Lewis nodded and looked at Truman Dale, asking straightforwardly.

"Boss, I will resign tomorrow." Truman Dale immediately stood up and opened his mouth without saying a second word. He did not hesitate and was even willing to give up his current job. Julia Parker and Fishy Wells were stunned. Did this man get kicked by a donkey? Finn Lewis hadn't said anything else yet, he just asked a question before extending his invitation, and Truman Dale immediately agreed? Furthermore, planning to resign tomorrow? Isn't he afraid that Finn Lewis is a fraud?

Yes, Finn Lewis is not a fraud, but what if? Aren't you afraid at all? The two girls could not figure out what Truman Dale was thinking. However, Finn Lewis just smiled. In the past, Finn Lewis might not have understood, but now he can somewhat see why. The strength Finn Lewis showed to Truman Dale is a completely different level from Truman Dale's current life. Truman Dale used to be able to access the rich. search the website to access chapters of novels early and in the highest quality.

But it's nothing more than becoming someone's legal advisor, providing legal support for them – although he can earn a lot of commissions. However, compared to earning a high commission and being a talent in this kind of wealthy person's business, which one has more potential for development? It goes without saying, doesn't it?

Moreover, is Finn Lewis a scam? Even if Finn Lewis is a scam, what about it? The achievements of Truman Dale now, he is actually in name only in that law firm, and a top lawyer like him can find a job in a minute even if he doesn't work in that law firm. Any large group would not mind having one extra top legal adviser like Truman Dale, especially top lawyers with very strong networks.

Therefore, although he has resigned, the risk Truman Dale has taken is not as great as imagined. But even so, Truman's attitude still satisfied Finn Lewis very much. Another smart man like Luca Hall. However, Finn Lewis just likes this kind of smart person, otherwise, where can so many elites serve him?

"Very well, so when will I meet the President of Flying Horse?" Finn Lewis nodded and asked.

"Boss, do you need to rest?" Truman Dale did not say when, but instead asked whether Finn Lewis needed to rest. Finn Lewis was as strong as a bull and did not need to rest.

He directly shook his head and said: "I don't need to rest, but the two ladies next to me should need to rest."

"Okay, tomorrow at noon, I believe the President of Flying Horse Company should have time to have the honor of inviting you to dinner." Truman Dale immediately said.

Finn Lewis laughed satisfactorily: "Alright, great, then I will leave this to you."

"Then I'll go to arrange other things first, and also leave the car buying to me. Do you need us to hire a professional driver for you?" Truman Dale spoke very fast. This guy was on the right track. The task of buying a car was originally something Finn Lewis assigned to Fishy Wells and Julia Parker, but he directly took it over because Finn Lewis just said that the two ladies next to him needed rest.

What a talent!

"He didn't even ask about the salary and just left?" Fishy Wells was still a bit confused after Truman Dale left and instinctively asked.

"Do you think I will give him a low salary?" Finn Lewis smiled and looked back at Fishy Wells and asked.

"Uh." Fishy Wells was choked, she couldn't help but recall the scene when Finn

Lewis recruited her. Thinking about it, she was already so stunned by Finn Lewis's series of benefits at the time that she never thought she would be worth that much. Or even that she had thought about offering her body, even thinking about offering her body, she never thought Finn Lewis could give her that much money.

But in fact, this matter which caused a huge sensation in the entire T

University, up until now, countless people on the school forum are still discussing topics such as their five beautiful girls being kept, and so far, nothing has happened! Whether it was her who was so nervous, or Ruby Frank who was already prepared, even she wanted to take the initiative, Finn Lewis did not touch any of them.

It was for this reason that Fishy Wells understood that many things wouldn't be believed as true if you didn't experience them personally. For example, if they tell outsiders that Finn Lewis did nothing to the five of them, would anyone believe it?

"Alright, stop daydreaming, go to bed early, and if things can be negotiated tomorrow, you can freely stroll around Achievement Country." Finn Lewis said with a smile and knocked on Fishy Wells' head.

After leaving the hotel, Truman Dale couldn't help but look back at the hotel behind him, and then he drove away. All the way, Truman Dale's mind was a little trance, not until he almost rear-ended several times, that he sobered up. It must be said, the things he encountered today excited him a bit, undoubtedly, if he could join Finn Lewis' group, this would be a new starting point in his career.

As a lawyer, he is basically at the top now, unless he is willing to change careers to politics, and also, politics isn't something you can do just by wanting to. At least Truman Dale is self-aware in this aspect, although his network is indeed not small, he is still slightly lacking in politics, and he may not have any significant progress.

Since this is the case, the opportunity given by Finn Lewis undoubtedly is the greatest opportunity he has encountered so far. Although he still doesn't know what kind of person his future boss is, the strength shown in such a short time has shocked Truman Dale greatly. As long as everything Finn Lewis said was true.

Whether it's true or not, it can be proven soon, Truman Dale is not in a hurry.

Besides, does Finn Lewis know he is going to resign from the law firm? Anyway, he can stay away from the firm for a few months and nothing will happen. He drove home smoothly all the way. Seeing his wife, Truman Dale couldn't help but run over, directly kissed her..

## **Chapter 103 - 102: Negotiations**

Chapter 103: Chapter 102: Negotiations

Translator: 549690339

Soon, the two of them were both panting slightly. Despite it being daytime, Truman Dale was suddenly stirrily passionate. His wife, although a bit older in age, still had her charm and wasn't like most western women whose figures had become barrel-like.

“What’s gotten into you today? It’s still daytime right now?!” Truman’s wife couldn’t resist giving him a little push, although they had had wild moments in their youth, after so many years, their intimate times were regrettably infrequent, let alone during the daytime.

However, Truman obviously didn’t care whether it was daytime or not, after all, it was just the two of them at home, “Daytime arouses me even more.” Truman left her with that sentence before launching himself onto her, his wife no longer resisted and began to enjoy fully. Not until Truman was exhausted did the two calm down, while lying on Truman’s chest, his wife asked, “What on earth is it about you today? Did you come across something that made you happy?”

Truman chuckled, “Yes, a good thing did happen. Perhaps my career will hit a new high soon. We might soon have a private jet and yacht. It’s good, but you might not understand if I told you, you go cook, I’ve still got stuff to do.” Truman patted his wife’s bottom before speaking.

Truman’s wife gave him a stare, but didn’t inquire further and instead got up to dress and make food. In the meantime, Truman began contacting the people Finn Lewis had asked for, the chairman and CEO of Flying Horse Dr. David

Lancaster (Dieter Zetsche), a sixty-two-year-old born in Istanbul, Turkey. Now, he is the eldest executive and CEO within the Flying Horse group, one could say his whole life was spent with Flying Horse.

The call was quickly connected, “Hello Mr. Dieter Zetsche.” Truman began respectfully, at least for now there was a big gap between him and the other.

“Attorney Truman Dale, hello, what can I do for you?” David Lancaster’s German, slightly accented with Turkish, came through the phone.

“Hello, Mr. Lancaster, here’s the situation. I’ve been hired by an employer from the Flame Nation who is interested in acquiring an automobile manufacturing factory in Achievement Country.” Truman Dale stated his intention.

“Attorney Truman Dale, you can’t possibly be suggesting that your employer intends to acquire Flying Horse?” David Lancaster chuckled, making a seemingly not-so-small joke. Putting aside whether anyone could afford to acquire Flying Horse, the market value of Flying Horse was not low at all. Even if someone could afford it, there was no way Flying Horse would sell, not to mention the other party was someone from the Flame Nation.

“Of course not Mr. Lancaster, you’re joking. However, my employer is particularly interested in one of Flying Horse’s all-hands car workshops, which is also a problem for the Flying Horse company.” Truman Dale quickly responded.

“Oh? You mean HyperCraft?” David Lancaster immediately knew what Truman Dale was referring to. It wasn’t exactly a secret in the industry. However, even acquiring HyperCraft wasn’t a straightforward task, as the brand name alone isn’t a small figure. Search the website to access chapters of novels early and in the highest quality.

Of course, while HyperCraft was a luxury brand, even though Flying Horse Company had new plans to relaunch it once again, but this time it would fall from the position of a luxury brand to become the high-end luxury car of Flying Horse’s S series. Even though it would still be priced high, the HyperCraft brand would no longer be able to sit at the level of top luxury brands like Quadriga and Ice Horse.

Even so, the Flying Horse Company was still very anxious about relaunching HyperCraft because the market reaction to date wasn’t great. There was internal disagreement within Flying Horse Company; no other company wanted to accept HyperCraft, but Flying Horse couldn’t merely let this brand fall out of public sight as it would be a huge loss for them.

But to maintain this brand, they must launch new cars. Now that there’s someone willing to take it, the Flying Horse Company is not opposed to selling it. Frankly, since Flying Horse acquired HyperCraft in 1960, it has never been a pillar within the Flying horse group and was seen as a semi-useless asset.

“Yes, sir.” replied Truman Dale promptly.

“Oh. May I know which company in the Flame Nation is your employer?” Lancaster opened his mouth to ask immediately.

As the largest market in the world, especially with the rapid emergence of the Flame Nation’s economy, it’s safe to say the Flame Nation is the world’s largest automobile market. David Lancaster would never be unfamiliar with the Flame Nation. In fact, he was very familiar with the Flame Nation. He basically knew almost every big name billionaire and company in the Flame nation.

“I’m sorry, but I can’t disclose my employer’s information. But I can tell Mr. Lancaster that this time Mr. Lewis is not purchasing in the name of a company, but as a private individual. As for other information, my employer would like to invite Mr. Lancaster to lunch tomorrow, if that’s okay?” Truman Dale quickly spoke.

David Lancaster immediately fell into contemplation, after a long while he raised his head and said: “Well, since Mr. Lewis has come from afar, he certainly shouldn’t be the one treating for lunch. I’ll treat Mr. Lewis to lunch tomorrow noon, would ZurLetzteninstanz Restaurant work for you?”

“Sure, see you at ZurLetzteninstanz Restaurant at 12 noon tomorrow.” Truman Dale agreed without hesitation. After hanging up the phone, Truman Dale breathed a sigh of

relief. The headquarters of Flying Horse Company isn't in Bean City, but Truman Dale knew that the president of Flying Horse happened to be in Bean City. He didn't know if the man had time or not. Fortunately, now that the deal was confirmed, Truman Dale breathed a sigh of relief. From this, it seemed that Flying Horse Company was indeed ready to part with HyperCraft.

ZurLetzteninstanz Restaurant in Bean City, said to be one of the oldest restaurants in the Achievement Country, established in 1621, it's been around for over three hundred eighty years now. When Finn Lewis heard about this, he was a bit curious. After all, it was rare for a restaurant to last that many years. No one in Bean City recognized Finn Lewis and only a few people could recognize David Lancaster. The two met each other in a dignified setting of the restaurant. As someone who "still doesn't understand" German, Finn Lewis naturally brought Truman Dale with him.

As for Fishy Wells and Julia Parker, they followed but sat at a separate booth, "Hello Mr. Lewis." When David Lancaster saw Finn Lewis, he was slightly taken aback. He hadn't expected Finn Lewis to be so young.

"Hello, Mr. Lancaster. Nice to meet you." Finn Lewis extended his hand to shake with the other man, nodding his head politely.

"I didn't expect Mr. Lewis to be so young." said David Lancaster with a slight smile, both men exchanged pleasantries before delving directly into business, "I heard Mr. Lewis is quite interested in our company's brand HyperCraft?" "Including its hands-on production workshop." Finn Lewis added..</p></div>

<div data-bbox="111 717 876 841" data-label="Text">
<p>David Lancaster chuckled, apparently unfazed. He was not aware of the real intentions of Finn Lewis, who wasn't here for the brand that David assumed to be the most valuable asset of HyperCraft. For David, the brand's production factory had far less value. How much could it actually be worth? A hundred million Federal coins at most, even accounting for the engineers who worked there. Although the boutique manufacturing workshop was equipped with the most advanced machinery in the automotive industry, its scale was not large.</p>
</div>
<div data-bbox="111 855 819 893" data-label="Text">
<p>As a result, its value couldn't be too high. However, the HyperCraft brand carried significant worth – depending on how one looked at it.</p>
</div>

“Alright, all these are included. So, may I ask what is your estimate, Mr. Lewis?”  
Watching Lewis, David Lancaster asked a crucial question directly.

Feeling somewhat speechless, as David was incredibly direct, Lewis thought for a moment and counter-asked, “So Mr. David Lancaster, how much do you think it is worth?”

“I think we need to establish one thing first.” David thought for a moment, did not answer Lewis’s question, but instead changed the topic, as he hadn’t expected an answer when he asked his own question. Today’s meeting was simply to gauge if both sides were interested.

“Of course.” Lewis nodded, and after exchanging more words, the two confirmed the preliminary intentions of both sides. As the Flying Horse was a shareholder-held company, David Lancaster could not make the decision alone. He would need to discuss this with the board of directors, and only after obtaining their approval could the negotiation proceed. However, since David Lancaster appeared here, he had a 90% certainty that the board would approve his decision.

Even more so, because the majority of the directors no longer harbored love for the HyperCraft brand, including David Lancaster himself, and that’s why he was here. After a rather pleasant lunch, Lewis parted ways with him. Now, all he needed to do was wait for the announcement from Flying Horse company. David Lancaster promised he would convene a board meeting as soon as possible to discuss the matter further.

Then, Lewis would need to visit the headquarters of Flying Horse in Stuttgart to conduct the next phase of negotiations. David Lancaster predicted that the board meeting could only be convened tomorrow. However, there were still a plethora of tasks that Lewis needed to prepare. For instance, elite-level workshops that could manufacture handcrafted cars to the standard that Zero demanded were generally owned by major global brands only.

These workshops could only be found in established companies. For instance, Toyota might be the world’s largest automaker, but even within the company, there were luxury cars but no ultra-luxury ones to speak of, let alone luxury brands like Quadriga. Lewis’s options were thus significantly narrowed down. However, do you think these companies would sell their factories?

The engineers who stood behind the brands and supported their existence were the true heart of the brand, which was why Lewis did not tell David Lancaster that he was not interested in keeping the HyperCraft brand if he bought it. If he could successfully acquire it, the HyperCraft brand would recede from the historical stage and Lewis would never allow it to return. Of course, if someone were willing to buy this brand from Lewis, he wouldn’t mind selling it.

Returning to the hotel, Lewis summoned Truman Dale and asked, “Truman, how much do you think it would cost us if we fully acquired this? I really have no idea how much the HyperCraft brand is worth. Based on the prices at which these cars sell, I suspect the value wouldn’t be a small figure, right?”

Truman immediately fell into deep thought and eventually looked up at Lewis and said, “Boss, though the HyperCraft brand hasn’t really taken off and many people don’t know about its existence, all it really needs is for the wealthy to know about it. This brand undeniably qualifies as a luxury one. That’s why I think its price exceeds this number.” Saying this, Truman spread out his right hand, holding out five fingers.

Seeing the number indicated by Truman, Lewis was surprised and said, “5 billion Federal coins?” Lewis was taken aback. He couldn’t afford that figure, especially without Zero’s support.

Truman was momentarily stunned, then said with an awkward laugh, “How could it be that much? HyperCraft brand has not generated so much profit from the day it was established till now. It is around 500 million Federal coins.

Despite its luxury status, its value doesn’t live up to its hype.” search the website to access chapters of novels early and in the highest quality.

“Although it seems like they can sell each car for several million, or even tens of millions, their profit is usually about half of this price. The hyperinflated valuation is due to tariffs in many countries. Thus, even for brands like Bugatti, they are probably only worth between one and two billion Federal coins. That price is also somewhat high.”

“Oh, 500 million Federal coins, I can accept that.” Lewis nodded. He had initially understood it to be 5 billion Federal coins, a figure he could not afford at all. However, Lewis had missed Truman’s point and thus thought the figure to be 5 billion.

David Lancaster indeed acted quickly. After waiting for two days, Lewis received a call from him, confirming that Lewis could travel to Stuttgart to conduct the next phase of negotiations. It seemed Flying Horse really wanted to sell off the HyperCraft brand. Although they did withdraw a HyperCraft S600 series car model, it had not yet hit the market and thus was not a problem.

Upon arriving in Stuttgart, Lewis saw no difference from Bean City. He wasted no time in wandering around the city, but directly set up a meeting with Flying Horse company for the negotiations. The first round of talks began swiftly. Lewis’s negotiation team was relatively simple – Truman Dale was one, and Lewis, Fishy Wells, and Julia Parker were the other three.

On the other hand, the negotiation team from Flying Horse consisted of relatively more people, approximately 11 in total, including the company’s president, David Lancaster. Some minor details were quickly worked out, including the sale of HyperCraft and its

pristine craft-based production workshop from Flying Horse, along with the engineers within the factory as part of the package to Lewis..

## Chapter 105 - 104: No Need for Courtesy

Chapter 105: Chapter 104: No Need for Courtesy

Translator: 549690339

However, there were some disagreements regarding the engineers. These people were all talents that Flying Horse knew of and Finn Lewis planned to use them to build his own cars. Naturally, he would not let them go. In the end, both parties reached a certain agreement. Originally, Flying Horse didn't plan to keep these engineers, but Finn Lewis had a point. If these people did not stay, there was no need for Finn Lewis to buy.

In Flying Horse's view, if Finn Lewis bought it, he would definitely not put it at the bottom of the box as a treasure. He definitely had to operate it. Others were not stupid. Without these experienced engineers, the car brand naturally couldn't operate, so Flying Horse finally relaxed some restrictions. Although it was agreed that the Flying Horse company had an obligation to help Mr. Lewis retain these engineers, if these engineers insisted on leaving, Flying Horse was not responsible.

Finn Lewis did not care about this clause, as long as not Influenced by Flying Horse, Finn surely had ways to keep these people. After all the details were confirmed and there were no disputes, the only thing left was the price.

"Mr. Lewis, the HyperCraft brand has a brilliant past..." The main negotiator on the other side, a middle-aged woman in her forties, began to talk about the brilliance of Flying Horse and the HyperCraft brand when negotiating the price. Finn Lewis naturally knew what she meant, it was nothing more than a hard landing price. She wanted to sell this chicken-rib thing for a good price.

At the beginning, Finn Lewis didn't interrupt her, but after twenty minutes, as her words became more and more exaggerated, Finn Lewis's face began to look a bit ugly, "... Miss Bonnie, forgive my directness, I am not here to listen to the glorious history of the HyperCraft brand. I don't value the history of this brand." Finn Lewis interrupted the woman very simply.

Her talk being interrupted, Bonnie's face was slightly embarrassed, and Finn Lewis' rude words made Bonnie look even more ugly. She simply said: "Mr.

Lewis, I was talking about a kind of corporate culture. The fact that the HyperCraft brand has survived such a long history, represents a kind of heritage, represents the glorious past of our Achievement Country's industry, and of course, it also represents its value.

"Well, I admit what you said before, but maybe not the latter, right? If its value is high, would you, Flying Horse, sell it? Just tell me straightly, how much do you want to sell for it? Don't talk to me about culture and value." Finn Lewis said simply.

"Mr. Lewis, I think the price is not the key but the inheritance of the HyperCraft brand and what it represents. Of course, a suitable price also represents its significance. If Mr. Lewis buys it, he will naturally enter the world's top ranking car manufacturers immediately. Forgive my frankness, this may also be Mr. Lewis's purpose for coming, right? Just like in your country, there is definitely no such long-standing car brand heritage. What it represents has a high value, so we think 450 million Federal coins is a reasonable price." Bonnie said bluntly, apparently Finn Lewis' rude attitude had provoked her, and her last sentence carried a touch of sarcasm.

Four hundred and fifty million Federal coins, somewhat lower than Truman Dale's forecast, but bear in mind this is merely the value of the HyperCraft brand, its factory and staff will need another 100 million Federal coins! This price had been agreed upon earlier. In other words, Finn Lewis had to spend 450 million Federal coins just for these three words. Of course, the price cannot be said to be outrageous. Didn't Fruit spend tens of millions of Federal coins for the naming rights to iPad in Flame Nation? Of course, what they bought and sold later made a far greater profit than this number.

But for cars like HyperCraft, how many units do you have to sell to recover the cost? It might need at least a decade. Even if the price of each car is not low, this kind of luxury car brand is destined not to be widely sold like ordinary cars, it must be limited. Search the website to access chapters of novels early and in the highest quality.

"Miss Bonnie, please apologize to me," Finn Lewis rapped on the table in front of him and said coldly.

"Why? What did I say wrong? Damn Flame Nation monkey!" Bonnie looked at Finn Lewis in contempt, and even cursed in German at the end.

"Bonnie!" David Lancaster on the side couldn't help but speak up. Was this woman an idiot? In the middle of the negotiations, she let her personal emotions get involved. David admitted, just now, Finn Lewis's seemingly indifferent expression to the HyperCraft brand made him feel a bit uncomfortable as well. But that was not a reason to let personal emotions get involved in the negotiations as a competent business executive! Even though he knew from the daily dealings that Bonnie was prone to racial prejudice because her grandfather died in a conflict between China and Britain during World War I.

David stopped Bonnie and turned his gaze to Truman Dale, hoping he wouldn't translate Bonnie's last sentence for Finn Lewis. If translated, negotiations today would absolutely collapse.

David snapped, forcing Bonnie to finally calm down. If David, along with most of the people on the Flying Horse board, supported selling HyperCraft, Bonnie was a firm opponent, especially when it came to selling to people from Flame Nation. Although Flying Horse needed Flame Nation's huge market, this could not change Bonnie's inner view of Flame Nation.

"Okay, Mr. Lewis, I apologize to you..." Bonnie finally started, somewhat grudgingly out of respect for David, but before she could finish, Finn Lewis, who was standing opposite her, immediately got up, laughed coldly, and said, "No need. Your apology is not sincere, I won't accept it. Are you concerned about the cultural value and heritage of the HyperCraft brand, right? Great! I bid five hundred million Federal coins!"

When Finn Lewis stood up and started talking, David cursed quietly, but when Finn Lewis's last sentence came out, David was stunned, as was everyone else in the room involved in the negotiations. They had been through countless negotiations, seen all kinds of people, but they had never seen anyone directly raise the price like this! Even Bonnie, who was already prepared to face the rage of the Flying Horse board, was looking at Finn Lewis, not understanding what he was doing.

"Is there a problem?" Seeing that everyone in the room was silent, Finn Lewis laughed coldly, raised his head, looked around, and asked..

## Chapter 107 - 105: I've Never Seen Such a Bidding

Chapter 107: Chapter 105: I've Never Seen Such a Bidding

Translator: 549690339

"No... No." Even Bonnie herself was momentarily at a loss for words. Although foreigners may not be familiar with the phrase "there's something queer in the wind," the meaning was certainly clear. This was too abnormal; conventional negotiations involved driving the price lower, yet here was Mr. Lewis simply increasing it. Search the website to access chapters of novels early and in the highest quality.

"Mr. Lewis, what's going on?" asked David Lancaster, albeit somewhat nonplussed. Given his position and status, it seemed inappropriate to be asking this question. The seller volunteering to bump up the price – was such a thing even possible in this world? But for some reason, David felt that his question

was justified.

"Nothing much. 500 billion federal coins for the factory and the engineers, a total of 600 billion federal coins. Are you selling or not?" said Finn Lewis calmly.

"In that case... I hope our cooperation will be pleasant." David was the first to stand up and extend his hand towards Finn Lewis.

"I hope so too." Finn Lewis reached out his hand and shook David's, then he immediately asked, "Can we sign the contract now?"

"Of course." David quickly nodded his head. Selling for not only the anticipated 450 million but an unexpected additional 50 million federal coins was better than he had expected. Therefore, the sooner the contract was signed, the better.

"Right, but I have a requirement. There's definitely going to be a press conference, correct?" Finn Lewis asked directly.

Puzzled, David nodded in agreement. "Very well, you can mention that a Flame Nation citizen purchased this brand. However, you cannot disclose any information about me. Can you do that? I would like this point to be written into the contract. If you deliberately disclose any of my information, you will have to compensate me with a loss of a billion federal coins. Of course, I'm not asking for too much; at least within a year's time, you cannot reveal information about my purchase of this brand."

Although Finn's demands were somewhat peculiar and the penalty for violation of the contract was rather high, business confidentiality clauses were commonplace. After

David pondered momentarily, he readily agreed to incorporate the new condition into the contract. Subsequently, both parties promptly signed. After the contract was finalized, David suggested a celebratory banquet. However, Finn rejected it outright and instead walked up to Bonnie. Then he switched to German and directly said, "I've never been one for tough talk, because I believe it is the behavior of the weak. But today, I have to tell you something: I will remember today."

Upon hearing Finn's German, everyone present was taken aback. Then the expressions on their faces gradually turned peculiar, and they instinctively looked at Bonnie. Everyone had heard Bonnie insulting Finn in German just moments before. They were shocked to find out that Finn himself was fluent in German as well. Besides, it was evident from the German Finn spoke that he was very skilled!

At that moment, every person there could feel an invisible pressure coming from Finn. No one dared to belittle him any longer.

Without waiting for any reaction from the HyperCraft team, Finn directly took Truman Dale and others away. As they left HyperCraft's headquarters, Truman couldn't help but speak up, "Sir... what just happened?"

"Truman, remember this – only when one's own strength is formidable will one not be bullied in this world. One day, I will buy this place. Do you believe it?" Without giving Truman a chance to respond, Finn pointed towards the HyperCraft headquarters and asked the question.

Truman's face was full of shock, and he didn't know what to say for a moment.

This... wasn't something that could happen just because you wanted it to... Besides, HyperCraft would need to agree to sell! However, the confidence written all over Finn's face left Truman in a daze.

"Now, leave the factory matters to you. I hope that tomorrow I can hold a meeting for the most important group of engineers at the factory. Can you arrange it?" After Finn finished speaking, he briskly changed the topic. Some things were better kept secret, but Finn remembered what happened that day! Hypercraft, eh?

"Yes, leave it to me," responded Truman promptly.

"Good, I don't care what method you use. The engineers probably know that HyperCraft sold the factory and may not be willing to work under us. You don't need to worry about the salary issue. The only thing you need to worry about is making sure none of them leave before I get to hold the meeting tomorrow. Can you do that?" Finn Lewis asked.

"Yes!" Truman nodded quickly. It wasn't a difficult task. Even if the engineers didn't want to leave HyperCraft and wanted to go back, they certainly would have time to wait for one day to meet the new boss.

HyperCraft's factory was not located in Stuttgart but in Kilron, a famous industrial city in Achievement Country. However, Achievement Country wasn't that big, so it wouldn't take too long to get from one city to the other. Right now, Finn valued the factory the most. Once he had the factory and its engineers, he would be able to assemble his first car.

After passing the rest of the matters to Truman Dale, Finn immediately flew to Kilron. The next day, in the factory's main conference room, Finn met with all the engineers and workers. There were fewer workers than Finn had anticipated, and indeed, the whole factory wasn't that large. After all, this was a handmade car production factory that prioritized quality over efficiency. Given the current production lines, manufacturing a hundred cars in a year was already a stretch.

And this was only achievable if components like engines were produced in other factories. However, even a hundred cars would be too much for Finn; he only needed ten units a year. The current labor force in HyperCraft's handmade production factory consisted of only 283 workers, 80 of whom were engineers. However, even the workers were skilled and elite in their field. Looking at the workers below, Finn confidently stood on the podium and spoke. "I believe many of you already know that HyperCraft has sold this factory and the HyperCraft brand to me, which means from today onwards, you'll be working for me."

"Of course, you don't have to worry about changes in your jobs; there won't be any. Firstly, from today onwards, Truman, standing next to me, will be in charge here. You can approach him with anything. Secondly, I have another announcement to make. From today onwards, everyone's wage will increase by fifty percent of your current salary," Finn announced directly.

Upon hearing this, the workers below fell silent for a moment before erupting into thunderous applause and even whistles. The workers and engineers, whose faces had been tense, instantly lightened up. They knew that wages in Achievement Country were already much higher than in their own country.. But then, Finn proposed an immediate increase of fifty percent in their salary! What did this mean? It meant that they would be the highest-paid in their industry!

## **Chapter 108 - 106: Excitement**

Chapter 108: Chapter 106: Excitement

Translator: 549690339

“But! There’s an issue. I know many of you have been working here for several years, some for over a decade, and even some of the older engineers have dedicated about twenty to thirty years. You all have a deep attachment to this place. But I believe everyone is aware of the current state of the HyperCraft brand and understands the previous decision made by the Flying Horse Company.” Finn Lewis paused. The faces of every person in the room reflected contemplation.

They were the workers and engineers who built these cars, so they knew the state of their brand better than anyone else. “Now, I have an announcement to make. After it’s made, if anyone wishes to leave, I won’t stop you. I will provide compensation according to the laws of the Achievement Country union,” Lewis stated.

Seeing that no one responded, Lewis continued, “I purchased the HyperCraft brand with exactly 500 million Federal coins. But I can frankly tell you all that the HyperCraft brand means nothing to me! I didn’t aim for the brand when I made this purchase. I aimed for every worker, every engineer, and this factory here. You all are the most precious treasure here. As for the HyperCraft brand, it is meaningless. Moreover, I can tell you, although I spent 500 million Federal coins to buy HyperCraft, I bought it without planning to have this brand appear in this world ever again.”

With Lewis’ words still hanging in the air, the room filled with murmurs of surprise, their faces full of disbelief. They felt comforted by Lewis’ words but they dared not believe them. After all, who would throw away something they bought for 500 million Federal coins?

“Perhaps you don’t believe me, but I’ll soon show you why I said this. First, I

bought this factory with the intention of it becoming a renowned leader in the auto industry. Just as Microsoft is to the operating system, people will think of our factory when they think of cars! I will guide you in building the world’s most advanced and excellent cars! Perhaps you don’t believe this either, but don’t worry, you will soon. The production and design blueprints for the new cars are already here,” Lewis said nonchalantly.

Without waiting for any reactions, Lewis asked Fishy Wells to connect her laptop to the projector in the meeting room. After all the windows were closed and the projector was turned on, an image of a car with a very steady design appeared. The design, based on Zero’s blueprints, wasn’t too different from most cars available now but it was standing out and unforgettable.

This was because there were virtually no visible gaps on its surface. It looked like it was made directly in Photoshop, but it gave off a strangely realistic feel. The metallic texture was very strong and left a deep impression. There was also the impressive logo on the hood – a butterfly. Nobody could miss it! Search\* The website to access chapters of novels early and in the highest quality.

The wings were blue with white stripes – a butterfly! People with a bit of knowledge instantly recognized it as the famous, most beautiful, and rarest butterfly in the world – the Goddess of Light Butterfly, also known as Helena Flash or Danube Butterfly. But that wasn't the most important part. The emblem could be any shape, but no one can reproduce this logo as lifelike. Although only in a photo, everyone could tell that it looked as if a real Goddess of Light butterfly were perched on the hood of the vehicle.

The choice of this logo was for another task. Originally, Lewis was not planning to enter the automotive industry. But the insult he had received from Flying Horse the day before made up his mind – he was determined to acquire Flying Horse! Of course, he knew that Flying Horse wasn't just available for purchase whenever he wanted. What if they weren't willing to sell?

Then only one other solution was left – bankrupt them first, then buy. What do you think of this idea? Just because your brand is famous and has a long history, doesn't mean it'll always have a market. The car that Lewis produced now, named after the Goddess of Light, if it were to be mass-produced, he could guarantee that car manufacturers around the world would go bankrupt.

“Next, I'd like to mention the performance of this car,” Lewis switched the slide. When the German explanation of the car design appeared on the projector, there was an uproar below. An older engineer stood up and raised his hand.

Lewis gestured for him to speak, “Mr. Lewis, forgive my directness, but are you sure that this car performance isn't designed for a car from the future? As far as I know, such a car doesn't exist.” Being an experienced car design engineer, the older man knew how outrageous these performance indicators were.

“Sir, I know what you're talking about. However, this relates to another thing I mentioned before. Firstly, I didn't buy this car manufacturing factory for making a profit, but as a personal car manufacturer for me and my family. The cars you produce will only be used by me. So, I only seek for it to be the best and highest quality, regardless of its price or marketability. As for what you said, I could only tell you that every technology required is available as a finished product in my lab. And the first car of its kind will be born right here, in your hands,” Lewis responded with a smile.

After Lewis explained, an even greater uproar ensued. Some engineers even stood excitedly, which was no exaggeration. Being able to remain involved in the industry for many years proved that they loved designing and producing cars. They were true industry enthusiasts. The car Lewis had proposed was simply...as the older engineer had said, a car from the future!

“All the necessary materials will be transported here tomorrow. In addition, I hope everyone can keep it a secret! Also, for those who want to leave the company, Mr. Truman Dale will handle the related procedures for you,” Lewis

said directly..

## Chapter 109 - 107 Shocked

Chapter 109: Chapter 107 Shocked

Translator: 549690339

No one left, at least up until now, no one has left, because Finn Lewis has already said that the prototype of this car already exists in the laboratory. It implies that if it gets completed, it might become the most advanced car in the world, without a doubt. Even the specially customized cars for world leaders cannot match this car's power and performance.

As engineers and workers in this industry, everyone has been working for years to create a classic car. And now, it is beyond doubt that if this car is produced, their names will go down in history with it.

Seeing that nobody was opting out, Finn Lewis paused his explanation with a smile and looked toward the manager from Flying Horse who had come along. Today was a day of transition, so of course, someone from Flying Horse would be present.

When the middle-aged man noticed Finn Lewis approaching, he paused slightly. What Finn had just said had given him quite a shock. "Sir, please deliver a message to Bonnie when you return. Tell her, she likes talking about

HyperCraft's history, right? Then let her know that from the moment I bought HyperCraft, this brand will disappear from the world. To me, this brand is worthless. Did you get that?"

"Yes... got it." This middle-aged man was not a senior executive of Flying Horse, only a middle-level manager. He seemed tentative in front of Finn Lewis, and gave an anxious, stammered agreement.

"Additionally, inform Flying Horse to destroy every car bearing the HyperCraft logo, regardless of whether they are old or unsold. I don't want those cars. If I see one, I will immediately take Flying Horse to court!" Finn Lewis snorted coldly.

"Yes, yes, yes." This middle-aged man nodded quickly.

search the website to access chapters of novels early and in the highest quality.

“Truman Dale, show him out. From now on, we have no relation with Flying Horse,” Finn Lewis said immediately after, addressing Truman Dale standing on the side.

Flying Horse has not held a public press conference so far, naturally waiting until the final transition step is completed. However, upon this completion and the return to the company, every executive at Flying Horse was taken aback by the report received about Finn’s intentions.

They couldn’t figure out what exactly Finn Lewis intends to do. It was understandable that he had willingly spent an additional fifty million Federal coins to acquire the company, but why had he spent those fifty million to brand-lock the company, ensuring its disappearance from the car market? Had he done this out of spite because of Bonnie’s remarks? Bonnie herself seemed particularly shaken, as if she had taken a personal attack.

Most people thought that Bonnie’s comments were solely for negotiation purposes. However, those who knew her were aware that Bonnie genuinely loved the HyperCraft brand. She had been in charge of it previously and had ambitious plans for turning HyperCraft into the world’s premier luxury car brand, but her dreams had failed and she had ended up having to sell it. Although she hadn’t opposed the sale due to her lack of power in this situation, she’d come to despise Finn Lewis, especially considering her pre-existing prejudice.

Hearing the manager’s report about Finn Lewis’s plans for HyperCraft, Bonnie was enraged. How dare he?! How dare he buy the brand just to make it vanish? How dare he make a point of telling her?! Nobody knew how much effort she had poured into HyperCraft. Now, after more than a decade of dedication, the brand had disappeared just like that. Bonnie seemed dazed, possibly even shattered.

However, the other top executives of Flying Horse didn’t feel as devastated as Bonnie. After all, they had sold the brand at a good price. Still, knowing that the young man from Flame Nation who had bought their brand held it in such contempt, even suggesting that he didn’t care if the brand ended up in the toilet, left them all feeling very uneasy. They were truly uncomfortable!

Finn Lewis hardly cared whether they felt comfortable or not. In fact, he preferred it if they did not. If they were comfortable, he wouldn’t be. This was just the beginning. Eventually, he planned to make all of them pay. They had taken an extra fifty million of his money today, but one day, he would make them pay back fifty billion.

However bitter they felt, Flying Horse still needed to proceed with its operations. The following day, Flying Horse held a public press conference announcing that the HyperCraft brand, including its corresponding handcraft factory, had been fully sold at a price of six hundred million Federal coins. This news was met with considerable astonishment, as Flying Horse had previously launched a new HyperCraft car. Yet now,

they were suddenly selling off the brand? This news was an instant headline in major media outlets worldwide.

However, Finn Lewis hardly cared about that. He was excitedly waiting for his first car. For this first car, all the materials Finn Lewis had ordered were finished products, such as the engines, electrical systems, etc. Furthermore, he used this purchasing strategy for all the materials he exchanged with his points in the early stages. This was because many of the processing techniques for these raw materials were beyond the capabilities of his current factory. More critically, this prevented any leaks.

Since the cars were only intended for personal use, he did not need to worry about such issues in the short run. It only cost him 200 points for the raw materials for one car. Finn Lewis found this incredibly cheap. The workers who chose to stay had to sign a strict confidentiality agreement before joining the assembly line. With Truman Dale overseeing matters, Finn didn't feel the need to worry about anything.

All the materials, including the car interior trim, were custom-made by Finn Lewis. So, the only step left for the first car was the assembly. Given the experience of the workers, assembling one car did not take much time. Finn Lewis waited for a whole week in Kilron. After completing all the tests, his first car rolled off the production line.

Finn Lewis had no doubt about the quality of the car. However, the workers insisted that a car cannot simply roll off the production line without going through testing. In fact, without these testing data, the car could not even be driven legally. Although HyperCraft was a sub-brand under Flying Horse, each brand was actually a company in a microcosm..

## **Chapter 110 - 108: Surprise**

Chapter 110: Chapter 108: Surprise

Translator: 549690339

For instance, you can't simply sell cars produced by your car factory. You must have the right verification mechanisms and relevant sales qualifications. Without those, even if Finn Lewis gets the car to the domestic market, he wouldn't be able to get a license plate and it wouldn't be roadworthy. However, there's no need to worry about these things now. Despite the fact that the HyperCraft brand only retained one factory, they have all the necessary qualifications. Truman Dale took care of all these procedures. When the auditors from Graham Kingdom's Department of Industry saw the data of the car that Truman submitted, their eyeballs almost bulged out.

But in the end, the review process passed. Although Graham Kingdom's Department of Industry was a bit skeptical of the data, they did the same data test accompanied by their staff. Only then, in a state of daze, did they pass the car for export sales. search the website to access chapters of novels early and in the highest quality.

What makes Finn Lewis rather annoyed is that he owns the factory, and the cars produced are also his, but he has to pay every bit of tax due. Furthermore, some money has to be spent. For instance, this car, branded as 'Goddess of Light', to reflect its value, is priced at a whopping one hundred and fifty million South Federation currency! This means that Finn Lewis needs to pay millions of South Federation currency in taxes to the Graham Kingdom government for his left-hand -to-right-hand business maneuver.

However, he's okay with that! This brand might just become the most luxurious in the world. Although Finn doesn't sell to the public now, it doesn't mean that he won't in the future. He also plans to buy the neighboring Flying Horse. For future considerations, the tax expenditure is just peanuts.

However, among the one hundred and fifty million South Federation currency, twenty percent has to be paid as tariffs to Flame Nation. There's no other way around it since the car is entering the Flame Nation market. Although HyperCraft is a complete company with all the necessary procedures, entering Flame Nation requires an additional payment of tariffs. But as long as he can afford such a car, Finn isn't bothered by this amount of tax.

Although this car cost him merely forty million South Federation currency of his own money, this isn't significant for Finn. The money he made from selling the #4 left him only with a hundred million Federal Currency. But what he gained was indeed a large number of points.

On his return journey, Finn hired a whole plane. Otherwise, if he had to ship his car by sea, wouldn't that be a waste? Finn wanted to drive his car as soon as possible. But for Fishy Wells and Julia Parker, who were on the same plane, they both were in a daze. A car that cost one hundred and fifty million South Federation currency translates to a whopping one billion Flame Nation coins!

A car for one billion, isn't that about the same price as a private jet? But the car in the transportation cabin undoubtedly is worth one billion. That is without question because the engineers in Graham Kingdom priced it even higher! The current price is after Finn reduced it. If it were evaluated by those engineers, the value of the car might even break ten billion.

As they entered Flame Nation's airspace, Zero suddenly announced: "Mission accomplished. Advanced completion of the offshoot mission in the training of Noble Spirit, reward 15000 points, reward a super-rare item draw, reward a hyper-light quantum G-type smart computer, reward a dynamic equilibrium computational data system, reward two T2500 type intelligent deception robots, reward unlocking the right

to redeem all T series humanoid robots, reward three random ordinary item draws, and three ordinary item unlock draw chances.”

Faced with Zero’s string of voiced rewards, Finn Lewis was dumbfounded and almost jumped out of his seat in excitement! If it weren’t for Fishy Wells and Julia Parker by his side, Finn would have screamed out loud! What is a surprise? This is a real surprise! Finn never thought that this entire operation, put together just to satisfy his desire, would result in such a huge surprise at the end!

The Noble Spirit cultivation mission that Finn initially thought was more about simulating nouveau riche did indeed have offshoot missions, and they awarded massive surprises! However, Finn never thought that completing an offshoot mission in advance would unlock such a substantial reward!

Although Finn can’t directly ask Zero, he hurriedly takes out his phone, switches it on, and opens the software. The flight attendant nearby saw it but disregarded it since there were only three people on the chartered flight, making phone usage not an issue.

Finn opens the app and immediately begins to review the series of rewards he received. While the 15,000 points seem significant, they are now the least valuable! Because the subsequent string of rewards is unheard of, especially the first one, its value is clear considering that it is listed as a super-rare item by Zero!

Leaving that aside, let’s talk about the hyper-light quantum G-type smart computer. Finn has seen this in the point exchange list before; just this computer alone costs 150,000 points to redeem! Now, he gets one directly as a reward. The dynamic equilibrium computational data system that follows might look complex to Finn, but as per its description, it can be used to calculate dynamic data balance, and it could come in handy in many situations.

The two T2500 type intelligent deception robots that come next; Finn has seen their predecessor, the T800, before. But the point redemption value for this T2500 type is 50,000 each, adding up to 100,000 for two! These intelligent deception robots are almost indistinguishable from humans and certainly won’t be detected. While their combat ability isn’t as high as the T800’s, compared to an average human bodyguard, it’s a total blast.

The two T2500 type intelligent deception robots that come next; Finn has seen their predecessor, the T800, before. But the point redemption value for this T2500 type is 50,000 each, adding up to 100,000 for two! These intelligent deception robots are almost indistinguishable from humans and certainly won’t be detected. While their combat ability isn’t as high as the T800’s, compared to an average human bodyguard, it’s a total blast.

What's more, Finn can now unlock and redeem the entire T series robots, not to mention the several chances to draw ordinary items. In sum, it's like Zero has been bullying Finn for such a long time and now suddenly gave him a massive gift bag!

If advanced completion of offshoot missions can yield so many rewards, does that mean Finn can keep doing this? It's vague what the Noble Spirit cultivation mission was about, but it undoubtedly involved him purchasing a private car factory only to produce cars for his use..
