

## **Starchild 421**

### [Chapter 421: Approaching](#)

It must be a fake future! It must be an illusion!

There are only five people on the bed made of golden sands. The sixth person never exists!

It will never become true!

Skuld covered her mouth and decided to never tell anyone this terrible future.

She swore that she would do everything to avoid it!

The future she saw wasn't ill-fated, it was just the most likely possibility on the web of fate.

Skuld, you can do it!

You can stop this future from coming true!

In the Mechanus God's Domain, the alchemists and engineers who were cheering for Cyber Elf Alpha's victories saw the newest record from the Starry Sky Chessboard. Suddenly, they froze and fell into silence.

"Norn was defeated?"

“He and Orfina the Ruby Dragon were defeated by the same person?”

“What happened? Who is the newbie?”

“He has almost achieved 30 victories in a row. He will become a new 3 star points Star Go player!”

“Where are the records of the games he played before? We must analyze them!”

Gold will shine everywhere. Even though Yun Xi himself didn't realize what an achievement he had obtained, the alchemists and engineers in the Mechanus God's Domain wouldn't ignore it.

Before Cyber Elf Alpha was born, Norn was the recognized strongest chess player. His Star Go style was the most stable, he had rarely lost to chess players whose rank was below 5 star points.

It was a lifetime achievement to defeat Norn the God of Wisdom on the Starry Sky Chessboard!

He may defeat Orfina due to luck, however, the truth that he defeated Norn had proved her true strength! No matter what the reason behind the thing was, his Star Go strength must be in the list of top 5.

However, such a strong chess player shouldn't be unknown, but the information on “A Cloud in the Sky” showed that he was a total newbie. In the database of Cyber Elf Alpha, only his information was nonexistent.

“Record his games! Build the mathematical models from scratch!”

“Be quick! We don’t have much time!”

“Alpha! Recalculate his database model! We need to make as much detail as possible on this newbie.”

In the God Crystal, the newborn cyber god looked around with curiosity. As the engineers were busy imputing the record of Yun Xi’s games, a great amount of flowing data appeared in her beautiful pupils, all information about “A Cloud in the Sky” was scrapped and started all over again.

For the first time, Alpha felt curious about an opponent who she hadn’t met.

She felt interested in him, she wanted to know how he defeated Norn the God of Wisdom.

Even though her computing power was hundreds of times stronger than Norn’s, she tried her best but could only defeat Norn by depleting Norn’s time.

If Norn had the equal computing power, Cyber Elf Alpha thought that her winning rate wouldn’t be higher than 50%.

Build and calculate a special mathematical model.

Code name: “Cloud”.

At the same time, Cyber Elf Alpha met her 47th opponent, whose threat level was only slightly inferior to Norn in her database.

Orfina the Ruby Dragon.

“Cyber Elf Alpha... she has 6 star points! Wait, she defeated Norn the God of Wisdom?” Orfina was really surprised.

Apart from Norn the God of Wisdom, a new 6 star points chess player was just born. It was really an incredible achievement.

Orfina always felt a headache when facing Norn the God of Wisdom. Originally, Norn was weaker than her, but he could always withstand her fierce attacks and reverse the situation on the chessboard at the last moment.

“Confirm the target, Orfina the Ruby Dragon.” Cyber Elf Alpha looked at her opponent with expectations in her eyes.

Her core program was built referring to the styles of the two strongest chess players, Norn and Orfina. Half of her Star Go style was learned from Norn and Orfina.

Learning the advantages of all chess players and increasing her computing power infinitely by using the planet computers, this was the secret of her incredible Star Go strength.

In some sense, Orfina the Ruby Dragon was her teacher. She could also perform Orfina's Star Go style. Actually, she could reproduce all the Star Go styles she had recorded in her database as long as she needed to use them. She was the culmination of all the advantages of all Star Go players.

This was her, the powerful cyber god.

"Tengen!" Just like Norn the God of Wisdom, Orfina couldn't help but exclaim when she saw Alpha's first move.

Why is it tengen? Why is tengen again?

Why are you using the same style as my Casina?

Come clean, do you have any relationship with my Casina?

#### [Chapter 422: Code Name Cloud](#)

Looking at the same tengen, Orfina couldn't help but make blind and disorderly conjectures.

"Tengen..." From the record which was just inputted into her database, Cyber Elf Alpha also noticed Yun Xi's Star Go style.

Amongst all the chess players, only she and "A Cloud in the Sky" were putting their first chess piece onto tengen, and they were the only two people who hadn't been defeated by anyone.

After the game started, the chess players wouldn't have any time to take a breath. At most, they could only catch their breaths in their opponents round.

However, Cyber Elf Alpha didn't need to worry about this, because she was a cyber god!

Her computing power was from the Planet Quadrant Computers in the Mechanus God's Domain, every second and every minute, they would consume countless resources at an astronomical level.

It was her fixed route to put the first chess piece onto tengen, it was her method of pursuing stability.

Tengen was the core of the star map, as long as she could occupy this point, any disadvantage would only be temporary. This was the optimum strategy she found after calculating hundreds of millions of times.

Although she didn't have the same instinct about stars like Yun Xi, she still figured out the best solution, and only her terrible computing power could let her control the situation around tengen from the beginning of the game.

"I will put my first chess piece onto tengen the next time!" Orfina ground her teeth.

She tried putting her first chess piece onto tengen before, however, she couldn't withstand the amazing requirement of computing power. She had to give up and started to learn the formalized series of moves on the chessboard to reduce the computational cost.

Now, she started to rethink this move again. Maybe it was really a workable strategy.

She was defeated by Norn's formalized series of moves many times, so she spent a lot of time studying the formalized series of moves of Star Go. She thought that she may be going in the wrong direction.

“Pa!”

“Pa!”

“Pa!”

Orfina immediately started her fierce attacks. As usual, no matter who her opponent was, she wouldn't give up her style.

It was a persistence and faith. She didn't mind being defeated, however, she would never be a coward in the face of anyone, even though it was an opponent who defeated Norn the God of Wisdom before!

For victory!

“Commencing attack!” In the face of Orfina's fierce attacks, Cyber Elf Alpha chose to strike back!

“Good! That's right!” To Orfina, she really enjoyed this will.

Although, she already had realized that she had no chance of winning this game.

However, the fact of “using my strongest attack to fight against the strong opponent who even defeated Norn the God of Wisdom before” was a most pleasant thing!

Only the strongest could survive! This was the most desirable game Orfina was eager for!

The Sanctuary of Fire is completed!

A huge fire demon dragon appeared behind Orfina and roared toward the sky, as if it was airing its grievances.

At the same time, Cyber Elf Alpha also summoned her fire demon dragons. Two fire demon dragons appeared in Alpha's Sanctuary of Fire!

Arguably, the winner has already been determined.

Fierce storms of fire swept through the entire star map, three fire demon dragons roared and bit each other. Although Orfina had only one dragon and Alpha had two dragons, Orfina's dragon was crazier and stronger!

"Calculation... is wrong..." Cyber Elf Alpha looked at Orfina's dragon in surprise.

There were wounds and scars of being burned on the body of Orfina's fire demon dragon, as if it was just punished by heaven. However, its aura was stronger.

Originally, it was at the same rank as Alpha's two fire demon dragons, but it was crazier. Finally, it was killed, but before that, it bit one of Alpha's dragons to death and seriously injured the other dragon.

Alpha still achieved victory on the chessboard, however, it was no longer a crushing victory.

After the game with Casina, Orfina's Star Go strength increased again. It wasn't anything about computing power but other unknown stuff, which could never be obtained by simply increasing one's computing power. This was what Alpha lacked.

Instinct, inspiration, courage... they were the intangible variables in the world, which could even change one's doomed fate. If Alpha's computing power wasn't hundreds of times higher than Orfina's, it was hard to say that she would be the final winner.

"I lost. You are strong." Orfina conceded. However, there were flames burning inside her eyes, which made Alpha feel confused, as if Orfina wasn't the loser and she didn't win the game.

"However, you will meet a stronger person soon. That 'cloud' is stronger than you."

Cyber Elf Alpha kept silent, but she remembered Orfina's words.

The strongest target confirmed: A Cloud in the Sky!

[Chapter 423: Wow, Golden Legendary!](#)

Why does the Starry Sky Chessboard determine the star points of the chess players by using their records of successive victories?

Isn't it a matter of course to defeat the opponents who are weaker than me?

If one was lucky, one could avoid meeting all chess players whose star points were more than his own. Although the probability was small, it did exist. Theoretically, it was possible.

The time of playing was equal for everyone. As long as the chess player defeated his opponent at top speed, he could immediately start the next turn of the game.

If one wanted to fight a quick battle and force a quick decision, he would consume much more of his energies and have a greater chance of making mistakes.

Under such a harsh rule, Norn's 60 victories in a row and Orfina's 50 victories in a row all proved their real strengths. No one could obtain star points due to luck.

Once entering the world of 4 star points, the Starry Sky Chessboard would become a real cruel battlefield.

There was actually no newbie protection mechanism on the Starry Sky Chessboard, so it was possible for any newbie to meet Norn the God of Wisdom in their first turn and meet Orfina the Ruby Dragon in the second turn.

All 4 and 5 star points chess players were real insurmountable hurdles. Newbies could only pray not to meet them, not mention to defeat them.

Throughout the history of the Starry Sky Chessboard, only a handful of newbies could achieve 20 victories in a row.

However, the newbies this time were doomed to shock the entire world.

The first was Maha Mystery, the “secret weapon” of Buddhism. After being defeated by Yun Xi, he easily achieved 20 successive victories, then was defeated by Norn the God of Wisdom.

The next was Hero of Might, the unknown chess player from the Dragon Tower. He also achieved 20 successive victories, then was defeated by Orfina.

The last two newbies hadn't been defeated by anyone, their performances made everyone who was paying attention to this game feel interested.

“A Cloud in the Sky”, a newbie from the Sky Tower. His identity is unknown, his race is unknown, and his gender is unknown. He had achieved 32 successive victories till now. Unfortunately, he was the strongest newbie in the history of the Sky Tower, a sparkling new 3 star points chess player.

“Cyber Elf Alpha” was even more like a monster than “A Cloud in the Sky”.

When most chess players had only played 40 turns of the game, she had achieved 72 victories in a row, which was unprecedented in the history of the Starry Sky Chessboard. The more amazing thing was that her battle record was still updating!

No one could escape from the fate of being butchered when facing Alpha. Even Norn the God of Wisdom and Orfina the Ruby Dragon were defeated by her easily.

Suddenly, Cyber Elf Alpha became the focus of all legend ranked beings who were concentrating on this game.

“Cyber Elf Alpha, it sounds like a code name of an elf. Is she really a strong Star Go player from the elf race?”

“It’s possible. After all, I wouldn’t feel surprised to see any genius from the elf race. However, Norn the God of Wisdom has been defeated 2 times! That’s really incredible.”

“Orfina also lost two times. This time, the Starry Sky Chessboard will really be changed!”

“None of the four newbies are easy to deal with. They are monsters!”

“Two 2 star points, a 3 star points and a 7 star points. Am I dreaming?”

“Can the two newbies have some kind of relationship?”

The two newbies defeated all the old overlords of the Starry Sky Chessboard, Norn and Orfina. The traces of their rises were so similar, it was hard to believe that they had no relationship.

Their special Star Go style, “putting the first chess piece onto tengen” became the focus of everyone.

Each star map was unique. If one didn’t see the star map, it was impossible to deduce and reproduce of any turn of Star Go on the Starry Sky Chessboard.

Even if they could see the composition of Star Go, most people wouldn’t understand the moves of either side of the chess players. This was one of the reasons why Star Go was the highest masterpiece of wisdom in the endless god’s domains.

A Chess manual was just a kind of reference. Even Alpha could only extract the style of the chess players from the records of their moves, but she couldn't reproduce the same composition of Star Go again.

Nothing was impossible on the Starry Sky Chessboard, this was the charm of Star Go.

Gradually, everyone changed their topics to the "duel" which was fated to happen in the not too distant future. .

"Cyber Elf Alpha" vs "A Cloud in the Sky".

Neither of them had been defeated by anyone, which meant that it was only possible for them to defeat each other. Although the duel between them hadn't appeared, it was predestined to be a classic that would be recorded in the history of the Starry Sky Chessboard.

Everyone was waiting for the coming duel.

Most people thought that Cyber Elf Alpha would be the ultimate winner.

It was a matter of course, because the computing power Alpha had shown was incredible. Everyone could imagine how strong she was by looking at her battle record.

On the contrary, although "A Cloud in the Sky" also defeated Norn and Orfina, no one understood how he defeated Norn and Orfina even after studying all the records of his moves.

Especially the game between him and Norn, it looked as if they were two newbies who played Mimic Go, then Norn made a fatal mistake that only a newbie would make.

Even so, no one doubted the true strength of A Cloud in the Sky. After all, he did achieve 3 star points. It was an unarguable truth.

If Cyber Elf Alpha hadn't come, he would be the biggest black horse.

Finally, the 73th game of Cyber Elf Alpha and the 33th game of A Cloud in the Sky, they met each other on the chessboard.

"Oops, golden legendary... no, a 7 star points chess player!" Looking at the star points above Alpha's head, Yun Xi was really shocked.

Chapter 424: God Crystal

The mysterious legacy the elves brought was God Crystal .

According to the words of the elves, God Crystal was a legacy of the Era of Gods . Its special properties couldn't be explained by science .

It was both real and virtual, it could be touched but didn't have weight .

Anyone could see it with their eyes, but it wouldn't offer any information to any detecting instruments, as if it was just a phantom image .

Even a god tried to destroy the God Crystal, but returned without accomplishing anything .

The God Crystal wouldn't react to any outside attacks, it just stood there, as if it was waiting for something, also looked like it was sleeping .

If it wasn't because after inputting great amounts of data into it, the God Crystal would give a weak response, even elves wouldn't associate it with the Planet Quadrant Computers in the Mechanus God's Domain .

The God Crystal was both real and virtual and could have infinite data written into it, it perfectly met the requirements of building the final fantasy of the Mechanus God's Domain!

The method the elves used to move it into the Mechanus God's Domain was simple . A lot of legendary ranked elves worked together, moving the entire planet the God Crystal was located on into the Mechanus God's Domain .

This planet, where the God Crystal slept, was the origin and the core of the Alpha Plan .

By using the secret magic of the elf race, people could input data into the God Crystal . After connecting it into the network of the Planet Quadrant Computers, Alpha was born .

Alpha was the only god and belief of the Mechanus God's Domain .

For her birth, the Mechanus God's Domain specially built hundreds of Planet Quadrant Computers . They were all Alpha's subsets .

Only Alpha could unify so many Planet Quadrant Computers together .

After defeating Norn the God of Wisdom and Orfina the Ruby Dragon, everyone believed that the era of Cyber Elf Alpha had come, the era of the Mechanus God's Domain had come!

Science was still the truth of all things, the best tool to explain everything in the world .

With Cyber Elf Alpha, the Mechanus God's Domain would become a legend in the endless god's domains!

The birth of Alpha meant that even mortals could create real miracles .

Of course, more or less, the engineers ignored the God Crystal's unscientific properties .

And the several elves, who lived from the beginning of the Alpha Plan till this day Cyber Elf Alpha was really born, were the real creators of Alpha .

Elves had beautiful faces and perfect bodies, even the river of time didn't leave too many traces on their bodies, but the wisdom and vicissitudes in their beautiful eyes still proved everything .

"Well, I didn't expect that the final opponent wouldn't be Norn the God of Wisdom . "

"Is the final opponent from the Sky Tower in the Eastern God's Domain?"

“We shouldn’t underestimate the Sky Tower . At any rate, it was the strongest tower . Fortunately, their West Queen is busy with creating new fantastic creatures, otherwise, the ranking of the Sky Tower won’t drop to the bottom . ”

“Humph, no matter who the opponent is, our Alpha is the strongest!”

As the favorite of the world, elves firmly believed in Alpha .

She was a god who was born from the legacy of the old time .

She was a cyber god that stood for the dawn of a new era .

Combining the power of god with the power of science, she was the most beautiful creation in the world . She was a “truth” that could even give the bright elves hope .

In order to see her birth, the humans in the Mechanus God’s Domain had almost invested all the resources in their entire god’s domain, and the elves offered their long lives as a tribute . They personally experienced the entire progress . No one would know Alpha better than them .

As long as there were more and more Planet Quadrant Computers, Alpha’s computing power would be literally “infinite” .

The God Crystal was both “existent” and “nonexistent”, it could turn all fantasies into a reality .

According to the investigation of the elves, the God Crystal could reveal distinct properties .

If people worshiped it as an evil god, the darkest and deepest abyss would be born from it .

On the contrary, if kind people prayed to it with hope and light in their heart, the master of glory and holiness would be born from it .

The God Crystal was a legacy from the era of the gods . Essentially, it was a combination of endless gods' soul shards, it was the initial form of a god .

If inputting countless programs and equations into its core, and connecting it with countless Planet Quadrant Computers that were specially made for it, what kind of god would be born from it?

It was Alpha, the newborn cyber god . An unprecedented faith about science was born in the endless god's domains .

The Starry Sky Chessboard was the first place the newborn god chose to announce its coming .

"Boom boom pow!" They were the running sounds of the Planet Quadrant Computers .

"Clap!" "Clap!" Because the Planet Quadrant Computers were running at full power, on the surfaces of the planets, a great number of thunderstorms were forming .

Surrounded by countless thunder and lightning, the newborn god stretched out her hand in the God Crystal, putting down her first chess piece on the Starry Sky Chessboard .

The location was “tengen”!

#### [Chapter 425: God Crystal](#)

The mysterious legacy the elves brought was God Crystal.

According to the words of the elves, God Crystal was a legacy of the Era of Gods. Its special properties couldn't be explained by science.

It was both real and virtual, it could be touched but didn't have weight.

Anyone could see it with their eyes, but it wouldn't offer any information to any detecting instruments, as if it was just a phantom image.

Even a god tried to destroy the God Crystal, but returned without accomplishing anything.

The God Crystal wouldn't react to any outside attacks, it just stood there, as if it was waiting for something, also looked like it was sleeping.

If it wasn't because after inputting great amounts of data into it, the God Crystal would give a weak response, even elves wouldn't associate it with the Planet Quadrant Computers in the Mechanus God's Domain.

The God Crystal was both real and virtual and could have infinite data written into it, it perfectly met the requirements of building the final fantasy of the Mechanus God's Domain!

The method the elves used to move it into the Mechanus God's Domain was simple. A lot of legendary ranked elves worked together, moving the entire planet the God Crystal was located on into the Mechanus God's Domain.

This planet, where the God Crystal slept, was the origin and the core of the Alpha Plan.

By using the secret magic of the elf race, people could input data into the God Crystal. After connecting it into the network of the Planet Quadrant Computers, Alpha was born.

Alpha was the only god and belief of the Mechanus God's Domain.

For her birth, the Mechanus God's Domain specially built hundreds of Planet Quadrant Computers. They were all Alpha's subsets.

Only Alpha could unify so many Planet Quadrant Computers together.

After defeating Norn the God of Wisdom and Orfina the Ruby Dragon, everyone believed that the era of Cyber Elf Alpha had come, the era of the Mechanus God's Domain had come!

Science was still the truth of all things, the best tool to explain everything in the world.

With Cyber Elf Alpha, the Mechanus God's Domain would become a legend in the endless god's domains!

The birth of Alpha meant that even mortals could create real miracles.

Of course, more or less, the engineers ignored the God Crystal's unscientific properties.

And the several elves, who lived from the beginning of the Alpha Plan till this day Cyber Elf Alpha was really born, were the real creators of Alpha.

Elves had beautiful faces and perfect bodies, even the river of time didn't leave too many traces on their bodies, but the wisdom and vicissitudes in their beautiful eyes still proved everything.

"Well, I didn't expect that the final opponent wouldn't be Norn the God of Wisdom."

"Is the final opponent from the Sky Tower in the Eastern God's Domain?"

The God Crystal was both “existent” and “nonexistent”, it could turn all fantasies into a reality.

According to the investigation of the elves, the God Crystal could reveal distinct properties.

If people worshiped it as an evil god, the darkest and deepest abyss would be born from it.

On the contrary, if kind people prayed to it with hope and light in their heart, the master of glory and holiness would be born from it.

The God Crystal was a legacy from the era of the gods. Essentially, it was a combination of endless gods’ soul shards, it was the initial form of a god.

If inputting countless programs and equations into its core, and connecting it with countless Planet Quadrant Computers that were specially made for it, what kind of god would be born from it?

It was Alpha, the newborn cyber god. An unprecedented faith about science was born in the endless god's domains.

The Starry Sky Chessboard was the first place the newborn god chose to announce its coming.

"Boom boom pow!" They were the running sounds of the Planet Quadrant Computers.

"Clap!" "Clap!" Because the Planet Quadrant Computers were running at full power, on the surfaces of the planets, a great number of thunderstorms were forming.

Surrounded by countless thunder and lightning, the newborn god stretched out her hand in the God Crystal, putting down her first chess piece on the Starry Sky Chessboard.

The location was "tengen"!

[Chapter 426: Opening](#)

In the Sky Tower, on the Starry Sky Chessboard.

Perform the guess odd or even game. Cyber Elf Alpha won.

In the rule of the game of Go, the player who went first would obtain an absolute advantage, therefore, it was necessary to make some rules to restrict the chess player. However, there wasn't such a rule in the game of Star Go.

"Sente" or "gote" could only show the difference of different chess players' styles. Orfina the Ruby Dragon liked to attack first, if she couldn't win the guess odd or even game, she would feel gloomy for a while; Norn the God of Wisdom didn't mind "sente" or "gote", if he used "gote", his winning rate would be higher.

As for Yun Xi, because his winning rate was still 100% till now, it really wasn't a problem for him.

Similarly, Cyber Elf Alpha didn't mind it either. At any rate, she would be the winner.

Their duel was being considered by countless legend ranked beings. It would determine the strongest Star Go player.

The number of people who were concentrating on their duel was in the "hundreds of millions". Legend rank stood for the highest will of a god domain, as the stage of the highest wisdom in the endless god's domains, their duel was destined to be recorded and eulogized.

Most people thought that Alpha would be the person who laughed last, after all, she had achieved the unprecedented 7 star points.

Although "A Cloud in the Sky" also gave an incredible performance in the games before, his style wasn't as intimidating as Alpha's, it was difficult to make up your mind to put up stakes on his side.

Just as the alchemists and engineers of the Mechanus God's Domain expected, Cyber Elf Alpha's performance shocked the entire endless god's domains.

"Hum? Tengen?" Yun Xi was surprised.

Cyber Elf Alpha was the first 7 star points chess player he had ever met, no wonder that she was the strongest chess player till now!

She understands the importance of tengen, maybe it will be a tough battle. No, I'll not be surprised if I lose this time.

Teacher Casina, maybe I can't achieve 100 victories in a row in this game.

Yun Xi sighed and looked at the chessboard, putting his first chess piece nearby tengen.

Cyber Elf Alpha, she is really tough!

In the Mechanus God's Domain, when Yun Xi put down his first chess piece, Alpha suddenly trembled. Countless data flows flashed through her pupils.

"Alpha requires additional computing power!"

"What? The game just began! What is happening?"

“Don’t ask, just do it. Be quick!”

“Understood. Launch the 15th and 16th Planet Quadrant Computers! Start synchronizing the data!”

“Preheating the engines of the 17th and 18th Planet Computers, unlock their dormant states.”

“Prepare the 19th and 20th Planet Computers, perform the first power-on test!”

“Boot all satellites!”

Alpha’s will was absolute to the engineers in the Mechanus God’s Domain. Even though they felt strange, they still performed her orders determinedly.

In a desert star field, one huge building after another rose to the surfaces of the planets, one solar sail after another opened from their folded forms, and one windmill after another opened their fan-bladed wheels.

Hydroelectric power, geothermal power, solar power, wind power... all kinds of automatic power plants ran at full speed.

These Planet Computers could use all kinds of powers as their energy source, this was their special property. Because of these automatic power plants, the computers could calculate even faster than gods.

If converting the energy used to boot a Planet Quadrant Computer to money, the number could let a country instantly bankrupt. And there were hundreds of Planet Quadrant Computers! They were all built for one goal.

Everything is for the great Alpha! This is the final fantasy of the past Starship Alliance, the present Mechanus God's Domain.

Infinite data started to flow inside Alpha's metallic antennas.

"Code name, Cloud."

"Import all the records of the games he has played, and build 130,000 mathematical models for the next 30 rounds."

"He is used to putting his first chess piece onto tengen. When he played with Norn the God of Wisdom and Orfina the Ruby Dragon, he obtained 'sente' and used this method to gain his upper hand advantage."

"Therefore, if I put my chess piece onto tengen first, it will effectively reduce his chance of winning."

"He is good at activating fire-type, wind-type and mixed-type 'ko' on the star map, I should pay attention to his moves in case that he repeats the 'ko' he used to defeat Orfina the Ruby Dragon."

"Decide the place where I should put my second chess piece at. Calculate  $10^{24}$  possibilities within 3 seconds."

“Build the new model about his style.”

Within a second, Cyber Elf Alpha had calculated over hundreds of millions of times, the mathematical models she built this time were ten times more than what she built when she played with Black Mage and three times more than what she built when she played with Norn the God of Wisdom.

All these were for determining where she should put her second chess piece at!

“Pa!” Yun Xi put down his fourth chess piece and looked at Cyber Elf Alpha in confusion.

This 7 star points chess player is different to any chess player he met before.

After putting down her first chess piece onto tengen, her moves became irresolute.

Since she had occupied tengen, Yun Xi had to take the second best, putting down his chess pieces around tengen.

It didn't have any special meaning, he was just used to putting his chess pieces in the center of the chessboard. At any rate, Star Go was always an interesting game.

To Yun Xi, Star Go was just an easy-to-understand game. No matter where he decided to put his chess piece at, he could always feel the mystery of the orbits of stars.

Tengen was just the simplest method for winning, it wasn't his only option.

Actually, he didn't mind if he put his chess pieces at any place on the board. As long as he played Star Go, he could naturally gain an advantage on the chessboard.

Chapter 427: God Match (1)

On the Starry Sky Chessboard.

"Cyber Elf Alpha" vs "A Cloud in the Sky".

Alpha looked at the chessboard in silence. The metal antennas on Alpha's head slowly rotated, transmitting all the changes on the star map into her real body in the Mechanus God's Domain.

At the same time, the calculation calculated by the terrible computing power of the Planet Quadrant Computers also transmitted into Cyber Elf Alpha's body.

Apart from her, no one could possibly achieve this.

Only in the final fantasy of the Mechanus God's Domain, the newborn cyber god whose goal at birth was to calculate everything, made it possible for her to withstand the amazing computational costs and she was far from reaching her limit.

In the past, the research of the Mechanus God's Domain went in a wrong direction, a blind alley. They continuously built bigger and bigger cores of Planet Computers, in order to meet the requirements of more and more computing power.

Until they built the largest Planet Computer on the biggest empty planet in the domain, they finally found out that they could do nothing more.

All the stars in their domain, apart from fixed stars, even the largest planet had been used to build the largest Planet Quadrant Computer in history.

In memory of the origin of the Mechanus God's Domain, the Planet Quadrant Computer and the planet was named "Star River".

However, their proudest achievement in all the history of the Mechanus God's Domain also represented a terrible truth: the expansion of the entire Mechanus God's Domain had come to an end.

Theoretically, there were still a lot of planets in the Mechanus God's Domain that could be used to build new Planet Quadrant Computers, and the people here were already used to living on and around the Planet Computers. The starfield where the "Star River" was at, was the core of the entire Mechanus God's Domain.

However, it was impossible to build any bigger Planet Computers, this truth was even worse than death to the engineers of the Mechanus God's Domain.

However, they could do nothing about this, because there wasn't any larger planets in the entire domain.

For dozens of years, it seemed that there was no road they could move forward on.

Until the elves brought the God Crystal, then everything changed.

For the first time, desperate engineers agreed to cooperate with alchemists. They started to pursue the mystery of gods together.

And Cyber Elf Alpha was their final product.

With the God Crystal as the core, using the rules of science and alchemy, plus the secret magic of elves, their highest masterpiece was born. She was born with the power of dominating all Planet Quadrant Computers.

Each Planet Computer was like a part of her body, with them, she never needed to worry about the upper limit of her computing power, because it was destined to be infinite!

If using the life system of the natural world to describe her, she and the Planet Computers formed a huge banyan tree.

Each branch could be independent and complete, but also, they formed a perfect life system when being connected together.

In the natural world, the branch of the banyan tree could be stripped and cultivated to be a new banyan tree. One for all, all for one. The relationship between Cyber Elf Alpha and the Planet Quadrant Computers was like the relationship between a banyan tree and its branches.

Alpha could control all of these branches, and help them grow up.

Because of her, the final fantasy of the Mechanus God's Domain finally came true! She was destined to be the master of all electric equipment!

From the moment she was born, the entire Mechanus God's Domain was doomed to be changed. Alpha had understood the meaning of her life and was ready to fulfill her mission.

She will come.

She is destined to come.

Her birth stood for the new beginning of the Mechanus God's Domain!

With the infinite computing power, she could solve all problems in the world. She would be able to predict the fate of the world, the possibility of the appearance of any natural disaster, and even the constitute forms of gods!

Her computing power could even become ten thousand times stronger than any legend ranked being, as long as people built more and more Planet Quadrant Computers for her!

"My goal... is to transcend everything..."

"My future... my wish... is to become an omniscient god!"

"Past, present, future! I will be able to record everything, calculate everything, predict everything!"

“!! Alpha! Am Invincible!”

Yes, this was the wild ambition of the Mechanus God’s Domain, and the result the elves were pursuing.

Find the secret of the legend rank and even the gods by using Alpha’s infinite computing power!

It would become an unprecedented magnificent feat, because no one knew exactly how to become a god. Even Hydra, the favorite fantastic creature of the world could only become a god due to luck.

Only through Alpha was it possible to find the secret of gods by using her computing power.

Alpha was the absolute faith of the Mechanus God’s Domain.

Alpha was the ecstasy of the elves who were tired of their long lives and the boring world.

Alpha was the strongest weapon of the mortals who wanted to find the secret of gods.

Even though they had to use the power of the God Crystal, the engineers of the Mechanus God’s Domain wanted to prove that nothing couldn’t be calculated.

Chapter 428: God Match(2)

Yun Xi was the final opponent she needed to defeat. After that, she would achieve a total victory on the Starry Sky Chessboard. This was what Cyber Elf Alpha judged.

For this purpose, the computing power she used now was beyond the limit of when she played with Norn the God of Wisdom. Apart from that, three more Planet Quadrant Computers were supporting her in the Mechanus God's Domain.

The resource expenditure of the Planet Computers was costly. Although they could draw the necessary energy of the planets themselves to maintain their running, once they entered full force calculation mode, they would draw extra energies from the core of the planets, which could cause damage to the environment of the planets.

Even though only one-fifth of machine sets were running, the energies they consumed were still massive, the coolant liquids they were using could even fill up an ocean.

These coolant liquids were not the products of the planets themselves, but the special products of the Mechanus God's Domain. They were specially made for these Planet Computers.

The rule of equivalent exchange was valid in all worlds. Alpha's amazing computing power was building on these planet level consumption of materials.

Cyber Elf Alpha didn't look down on Yun Xi at all. She treated him more seriously than even when she played with Norn the God of Wisdom.

However, after 10 rounds, Alpha found that some rare logical errors appeared in her counter circuits.

It was a really strange and incredible problem to Alpha.

For the first time, Cyber Elf Alpha realized that there were bugs in her calculating programs!

Code name: Cloud.

Model 1 of calculating the winning rate: over 90%. He has made three big mistakes till now, which has greatly raised his possibility of failure to 99%.

Prediction: I can defeat him after 50 rounds with a great advantage.

Model 2 of calculating the winning rate: unknown. I can't predict his next move. His style doesn't meet any models in my database.

Prediction: Before I make an advanced prediction, I must update my calculation programs and upgrade the mathematical models.

The first model was based on Alpha's experience, which was easy to be inferred by all Star Go players.

Yun Xi's style was easy-to-understand, it wasn't complicated at all. He didn't use any formalized series of moves or tricks, because no one taught him about these.

At first glance, he was just a common newbie. With the amazing analytical ability of her supercomputers, Alpha easily found that he hadn't even understood all the rules of Star Go.

Even Alpha would use formalized series of moves to reduce the cost of computing power. However, Yun Xi knew nothing about them, he just put down his chess pieces by following his feelings.

Most experienced Star Go players, for example. Black Mage would give a wee smile in the face of such a newbie, then crush his chess pieces on the chessboard using the most fierce attack without mercy.

Of course, Black Mage had been taught a painful lesson. He didn't dare to hold such an idea anymore.

After calculating, Cyber Elf Alpha also drew a similar conclusion.

In the final analysis, her experience was just a combination of data sets, which could be summed up after calculating.

The formalized series of moves of Star Go was a similar thing, it was the basics, the trick, the method that was used to save the player's computing power.

Each formalized series of moves was a valuable experience and wealth, it was the weapon saved in Alpha's database. No one was stronger than Alpha when using formalized series of moves, she could crush anyone on the chessboard if anyone wanted to compete with her.

Her computing power was so terrible that even Orfina's instinct and Norn's prophecy were inferior to her.

No matter what formalized series of moves her opponent was using, Alpha could even predict her opponent's next 10 steps. However, Yun Xi didn't understand anything about formalized series of moves, therefore, she could find no method to deal with him from her massive database.

Moreover, there was no record about the battle around tengen in any formalized series of moves! Therefore, errors occurred in her calculation.

Her logical loop formed two distinct judgments.

The first was that her opponent was just a newbie, victory was already waving its hands at her.

The second was distinct. Because there was no record in her database, she could find no method to analyze Yun Xi's style and predict his next move.

The "unknown" has appeared.

The two distinct judgments put Alpha into a tight spot.

It was an overwhelmingly weird phenomenon.

If it was a Planet Computer, it would calculate over and over again in loops, pursuing a result which could never be calculated, because the corresponding data hadn't been inputted into its database.

However, Cyber Elf Alpha wasn't just a cold machine.

She was a god born from the God Crystal, the highest wisdom that was controlling all the Planet Computers.

In the face of the unknown logical loop, she chose to pause the game, updating her database first.

After the 10 rounds, Cyber Elf Alpha first stopped playing and started self-checking.

In the Mechanus God's Domain, engineers held their breaths, looking at their god slowly opening her eyes.

"Five minutes... update all data sets... build a new folder specifically for the game style around tengen..."  
An emotion named "seriousness" was burned inside this newborn god's crystal-like clear eyes.

At that moment, all people felt a special aura, just like the wind sweeping through a tower heralds a rising storm in the mountains!

Chapter 429: God Match (3)

"Hum? She stopped?" Yun Xi was slightly surprised looking at his opponent.

The game of Star Go just became interesting! For the first time, he met a chess player who also put her first chess piece onto tengen, it was a quite fresh feeling to him.

He wasn't the only person who had found the secret of tengen!

Indeed, he was just a newbie and he could find it. There was no way that a 7 star points chess player didn't know it.

Compared to his style, the 7 star points chess player's style was aggressive, she attacked him on the chessboard from the beginning. No wonder that she was the strongest chess player he had ever met!

Apparently, she was far stronger than the 5 star points "Ruby Princess" and the 6 star points "God of Wisdom".

Judging from this, the gap between 6 star points and 7 star points was really wide. Maybe it was as wide as the gap between the strongest hero rank, the sixth rank and the star point of the legend rank, the seventh rank.

Taking her as a reference, the 8 star points and 9 star points chess players must be incredibly strong!

I'm just a newbie, why did I meet a 7 star points chess player so early? Did the newbie protection mechanism just lose efficacy?

In the Mechanus God's Domain.

In the God Crystal, for the first time, Alpha didn't ask for more computing power.

"The formalized series of moves in my database lost efficacy."

"I need new programs and new computational models."

“Clear the database, I need to recalculate from zero!”

Engineers looked at each other with a look of panic.

Their Alpha didn't ask for more computing power this time.

It was really a fresh experience for them.

It was just like a little girl who suddenly didn't want more candies but wanted a rose. They suddenly felt that their daughter just “grew up”.

Yes, it wasn't just their imagination. Cyber Elf Alpha's power was indeed increasing on the battlefield on the Starry Sky Chessboard.

It wasn't just a simple increase of her computing power.

From the game with Black Mage, Alpha understood the advantage of meddling with the situation on the chessboard.

Since the game with Norn the God of Wisdom, Alpha understood the perspective of “overall situation”.

And the game with Orfina the Ruby Dragon, Alpha started to try to use the “purest power”.

More or less, she learned a lot of things from each chess player, which was becoming a great benefit to the newborn god.

Until Yun Xi appeared.

After 10 rounds, Alpha quickly noticed that the “unknown” which didn’t exist in her database appeared.

His style was as naive as any other newbies, however, he actually defeated Black Mage, Orfina and Norn.

Even Alpha’s program judged that there was a big fallacy and logical error. Until their game started, she finally experienced the mystery of Yun Xi’s style personally.

It wasn’t recorded in any chess manual. If one judged his moves using common sense, no one would understand the reason behind his victories.

She was almost cheated by his naive style of Star Go, until the 10th round, an error appeared in her logical loop and activated her automatic measurement system.

He isn’t a newbie. He is a brand new “unknown” field!

The alchemists and engineers of the Mechanus God’s Domain wouldn’t refuse any of Alpha’s requirements.

“Clear all the old data! Change the mathematical models!”

“Be quick, we have only 5 minutes!”

“What’s wrong with this opponent? Why could he activate the logical errors in Alpha’s programs?”

“Upgrade the programs! 10% is done!”

Collecting all the manpower, material and financial resources in the entire Mechanus God’s Domain, they finally fulfilled Alpha’s requirement within the 5 minutes.

After calculating using the newly built mathematical model, Cyber Elf Alpha figured out a new result.

“My winning probability... is only 31%...”

“Draw probability... is zero...”

“The probability of being... is 69%...”

When they were output onto the screen, all the engineers and alchemists forgot to breathe.

“What... how can that be possible?” The elves exclaimed. As Alpha’s creators, they never imagined that Alpha’s winning probability was so low.

The computing power of “A Cloud in the Sky” was even less than 1% of Alpha’s computing power, how could he achieve this within 10 rounds?

“Impossible!”

“The game just started!”

“I must be dreaming!”

“No, we still have a chance. We can reverse the situation!”

“Alpha, increase your computing power! We don’t have much time.”

Before Alpha said anything, the engineers and alchemists had lost their temper. They proactively applied for more computing power for Alpha.

Save resource? Optimize computation structure? Reduce energy consumption? It’s not the time to be thinking about these!

Our Alpha won’t lose!

How can our Alpha be stopped at this point by a newbie?!

“Understand... keep increasing my computing power...” As a cyber god whose life was to respond to the wish of the living beings in the Mechanus God’s Domain, Alpha clearly felt the enthusiasm in the hearts of the engineers.

They were her people. Their will was her will.

I, Alpha, won’t lose.

No matter who the opponent is, I won’t lose!

The battle just started.

I still have a lot of power that can be put into this battle!

Chapter 430: God Match (4)

In the Mechanus God’s Domain, in the secret starfield which was named using Alpha’s name, in the holy land that stood for the future of the entire Mechanus God’s Domain.

Countless engineers and alchemists were working just for Alpha, just like the worker bees who were servicing their queen.

“Launch the 20th, 21st, 22nd, 23rd Planet Quadrant Computers!”

“Preheat the engines of the Planet Computers from the 24th through the 30th!”

“Activate all satellites, listen, I’m saying ‘all satellites’!”

“Awaken all alternate engine sets!”

“Strengthen Alpha’s programs, we must prepare for more optimization programs for our Alpha!”

Countless macroscopic light flows flowed at great speed on the planet where Alpha was born, they were the data sets transmitted back to the God Crystal from the Planet Computers nearby.

More Planet Computers were being booted and connected to Alpha’s quantum network.

Over 1/3 of the super-quantum network specifically made for Alpha had been activated.

After 10 rounds, Alpha was already forced to use 1/3 of her power. The energies and cool liquids the Planet Computers were consuming were beyond any normal person’s imagination.

Code name: Cloud.

Updating the information...

Current winning probability: 37%.

Draw probability: 1%.

Loss probability: 62%.

Judgement: infeasible. All moves around tengen should be avoided.

Data deficient, unable to calculate the opponent's style of play.

Warning! Warning! Modify the tactic as soon as possible!

"I must... modify the tactic... I must... reverse the situation..."

"Failure to calculate the style of this opponent..."

"Avoid playing around tengen..."

In the God Crystal, the newborn god pressed her forehead and sent orders to her avatar in the Starry Sky Chessboard.

Alpha finally changed her style to "Sea of Chaos", which was invented by Black Mage.

Black Mage's tactic was a rare genre that could be used by the weak to overcome the strong. Apart from Norn, almost all Star Go players were defeated by his "Sea of Chaos" before.

Also, "Sea of Chaos" required a high computing power from the player.

"Sea of Chaos" was used to muddle the situation on the chessboard, then Black Mage could form his "Black Death Hexagram" to defeat his opponent.

After learning from Black Mage, Cyber Elf Alpha's "Sea of Chaos" was much stronger than Black Mage's. With her terrible computing power that was a thousand times stronger than any legend ranked being, even Norn the God of Wisdom couldn't predict her moves after 5 rounds.

Therefore, Alpha determinedly left the battlefield around tengen, putting her 11th chess piece onto one of the corners.

For the first time, she gave up the battlefield on the chessboard, opening up the second battlefield.

In some sense, it was also the first frustration Alpha had ever met. She was forced to look for "change".

It was destined to be a distinctive duel.

For the first time, she met a real "opponent".

For the first time, she realized that there were still bugs in her programs.

Even her creators wouldn't know what this duel meant to Alpha.

There were too many "first times" she had experienced in this game, the newborn god had firmly remembered this special opponent in her program kernel.

Who is the person hiding behind the code name "A Cloud in the Sky"?

Why could he force me to this degree?

With curiosity, nervousness, and unshakeable will, Cyber Elf Alpha experienced a brand new emotion named "excitement".

I need more computing power, I need stronger computing formulas.

My people, please lend me more power! Please trust me!

The newborn god hadn't realized what the impulse, pleasure, and excitement were.

She only knew that she started to love this battlefield, love this stage that was making her Planet Computers become hotter.

Thank you, everyone. Thank you for letting me come here.

I come.

I see.

I win!

“Hum? Did she change her tactic?” Yun Xi looked at the chessboard in surprise.

Did she notice something? Looking at the changes on the chessboard, Yun Xi admitted that he was indeed taking the upper hand currently.

If they kept playing around tengen, it was still hard to affirm who would be the final winner.

She was the strongest Star Go player he had met, since she did this option, maybe she just found a chance he didn't realize.

Staring at the chessboard for a minute, Yun Xi chose to respond to her challenge.

It doesn't matter if you chose to open a second or even a third battlefield.

Let's have a good play.

At any rate, I'm just a newbie. Even if I lost, it wouldn't cause the end of the world, would it?
