

Super D. S 2611

Chapter 2611: Tianhe Star Turbulence

"Hey..."

At this moment, Ye Xuan's ears are all such high-frequency low-pitched humming sounds. The whole ship's sacred shuttle is like being placed on a platform with a super-speed micro-shock. The hull continues to tremble. It is caused by the strange power of the space oscillator.

It directly affected the speed of the stealing shuttle, and let the star guns of the ten star-rated warships have the possibility of locking their hulls.

At this time, the instructions issued by Ye Xuan were actually to close the energy shield, regardless of the defense, break through at full speed.

This is all about giving up.

Even if the energy shield is not closed, it can't hold the bombardment of the energy beam of ten cannons at the same time, and it will eventually be destroyed. Turning on the energy shield will affect the speed of the gods.

Two-phase trade-offs, Ye Xuan made a choice!

Either let go of everything, just speed, break out, or, once you can't get out of this space, the final result is that the ship is dead!

"call out!"

"call out!"

"call out!"

.....

It seems that you can hear the broken sound of the white energy beam, and the ten-spot gun energy beam is gathered at the same time.

It was also at the same instant that the energy shield shrouded in the body of the sacred ship was disappeared in an instant, accompanied by a hull that was originally caught in the mud, and suddenly rushed toward it.

This is the mega-visual increase in speed.

It was this sudden rush, trapped in the high-frequency turbulent area of this space, and slammed out of the ground, rushed out of the shocking network and entered the normal universe void outside the big net.

It was also at this time that the ten horrible star gun energy beams were coming, all of them fell in the position where they were in front of the sacred shuttle. The horrible energy exploded, and the small piece was shaking at high frequency. The space was torn apart, forming a hollow black hole in a few miles, and the infinite black hole rushed, and a large amount of floating dust mites were involved.

Directly swallowed!

At this time, the sacred shuttle that rushed out of the encirclement, but under the command of Ye Xuan, opened the energy shield again, and then rushed into the distance with a speed that surpassed the ten star-rated battleships. The starry river is empty, and the blink of an eye disappears...

"Running? Actually ran?"

"Let's finish..."

"Fast! Hurry and evacuate, the space has been collapsed, this void black hole will gradually expand, eventually swallowing everything, and immediately report to the Tianhe Star, we are in a big disaster!"

In the flagship general control room, the major officer was unwilling to look at the disappearing sacred shuttle on the big screen. After swearing and swearing, he immediately put the matter behind him, because now he needs to face it. It is a bigger evil.

In fact, he did not need his instructions to be issued. In the next second of the formation of the miniature virtual black hole in this circle, the other star-rated warships around him have already opened the maximum speed and moved to the distance. Retired.

The black hole will swallow everything, and once the void black hole is formed, it is difficult to bridge the repair.

A star cannon energy beam naturally cannot open the starry sky. In fact, the ten channels are gathered together, and the probability is very small.

However, the only convergence point of the energy beam of the ten star guns is in the state of being affected by the space oscillator, so the probability of all this is invisibly magnified.

Can only say that the guy is unlucky, even if it is enlarged, it may not necessarily appear, but this time, they really hit the big luck, this void black hole, it is clearly appearing!

The vast expanse of the funeral star field was originally a huge black hole that was slowly forming. Now, among the huge black holes that are not formed, a real black hole suddenly appears. Although it is too small, the area of the circle is now In the whole funeral star field, it is almost a sesame in the sea.

But it has already appeared after all. As time goes by, the whole funeral star field will be affected, but what kind of impact will it be? No one can say it now!

Ye Xuan, who had already gone out of trouble, never imagined that he had been forced to flee, and he had left such a huge hidden danger that would affect the entire funeral star field at some point in the future. Even the third universe where the Federal Republic of V...

Ten star-rated warships soon went away, but this black, huge star did not calm down, and the storm was even more raging.

Among the tiny black holes in the circle, every moment, a powerful sucking force is transmitted, and the surrounding emptiness and the floating dust mites on the lower surface of the stars below slowly **** the past and then swallow it.

The sky above the black stars has turned into a place of death.

When this scene was seen by the 12 people who had just walked out of the Jianyan cave deep in the trench, the group of guys was like an appointment, and Zhang Dazui was sluggish.

They didn't know the death of Lilith and Bai Shili, and they didn't know the volley of the ten star-rated warships. It was impossible to understand how the tiny black hole in the sky appeared.

But one thing they all understand, that is, this time, Tianhe Star really wants to make a big deal. This is a void black hole. Inside the funeral starry field, there is a real black hole in the real sense...

In fact, without waiting for the ten star-rated federal warships to return, when they were still on their way back, the entire Tianhe star exploded.

The death of white splashing leather is the key. The key is that the small black hole is of great importance. The major military officers on the flagship did not dare to conceal. They contacted Tianhe Star for the first time and reported it truthfully.

The Tianhe Star official did not dare to conceal it. It was also disclosed on Tianhexing's internal skynet at the first time. At the same time, it was reported to the star of the White Emperor Bai Zhengjun and Tianhe Star to station Zhao Jun.

At this moment, in the star-length official residence in the Tianhe City in the northern part of the Tianhe Star, the sound of the roar of the white Zhengjun roaring is thundering...

"Rice! Waste! A group of bastards!"

"Shi Li, my grandson, is it so gone?"

"The slayer's star thief, this thing, I will not be willing to take a break, will cramp your skin, and frustrate! Immediately contact Tianchenguodu, I want to talk with Jieheng, his son... no more!"

At the same time, in the city of a huge starry sky above the vast ocean in the eastern part of the Tianhe Star, Zhao Long, the commander of the General of the Federal Army of the Tianhe Star, is now the same as Xing Changbai Zhengjun.

At this moment, he is very angry and laughs: "Black hole? Void black hole? Hahaha... This is playing big, who dares to imagine that there is a real void black hole in the funeral star field?"

"I immediately contacted the national dust star and reported it to the military headquarters of the country. I said that the general had ordered him to wait for the rice bucket!"

"In addition, immediately dispatch the star-rated fleet, block the black hole area, wait for the above to send people to the aftermath..."

Chapter 2612: Star nucleus fifth order

In the federal military, the star of the captain of the kilometer is only an entry-level listed warship, and the star of the 3,000-kilometer captain, at the level of the small country, belongs to the main battleship of the military.

The Tianhe Star Federal Military Department is also equipped with a star-rated main battleship. One of the ships is assigned to the Star Changbai Zhengjun as the **** force for his travels, while the other ninety-nine star-rated battleships are deployed and The use of power, they are all in the hands of the Major General Zhao Long of the Tianhe Star Federal Army.

Of course, in the Tianhe Star Federal Army, the three-kilometer captain's star-rated battleship is not the most advanced, and there is a star-space protection for the five-kilometer captain. Its shape is no longer a traditional ship. Shaped, but like a honeycomb in the air city.

This five-kilometer-diameter star-space protection is a small nebula-class, with a dusty star in the country, and a larger star-level starry sky, but in the Tianhe Star, in addition to ninety-nine three-kilometer star-rated battleships. In addition, this five-kilometer-diameter nebula-level star-space

protection base has only two ships, and generally does not move, and the energy consumption is too terrible.

The 10,000-meter-diameter Star River-level starry sky, the Tianhe Star Federal Army is not available!

With the command of the commander Zhao Long, twenty star-rated federal warships flew out of the Tianhe Star and quickly rushed toward the incident area.

This powerful fleet will block the area where micro black holes appear in the first time to prevent further deterioration of the situation, while waiting for experts from the dust capital of the dust capital to solve this problem!

At the same time, Tianhe Star's star Changbai Zhengjun also passed the news of Tongyu Yexuan through some channels. This time it is no longer the official formality of the official. After all, the big trouble of the void black hole is caused. It is Bai Zhengjun, and it must also be low-key.

However, this time the warrants issued from the black market, the amount of rewards has increased tenfold from the previous 10 billion stars, reaching the horror of 100 billion stars.

With the spread of this sky-high price order, a large number of interstellar mercenaries and federal powerhouses flocked out from the stars and rushed to the depths of the funeral star...

.....

For all this, Ye Xuan is completely ignorant!

After fleeing from the huge black star, Ye Xuan did not stop, and spurred the sacred shuttle to sail at full speed. In the emptiness of the funeral starry field, he stayed up all night for five days. He felt that when he left the film that was far enough away, Ye Xuan stopped.

Although he did not know the micro-empty black hole, but it was only the death of Bai Shili, Tianhe Star would never stop doing it. Yes, Ye Xuan, who fled all the way, found some stars with excavation value along the way. At the time, they all bite their teeth and forcibly resisted, directly ignoring.

But now, since it has reached a safe area, then exploring the stars to explore the origin of the star nuclear immediately jumped into the top priority for his attention.

Not only does it need to hide the energy cabin of Shensuo, but his own needs are even more urgent.

The average strong man has limited speed in extracting the source energy of the star, but Ye Xuan has a starry engulfing beast and a phagocytic system. This limitation has been basically weakened to the extreme.

As long as he has enough star nuclear resources, his realm strength can continue to rise rapidly and continuously... The death of Bai Shili makes Ye Xuan's sense of crisis stronger and stronger, and he must grow up as soon as possible!

After all, there is no impenetrable wall in the world. Ye Xuan believes that one day, Bai Shili will die from the truth of his hand, and will eventually be dug up!

"Hey, congratulations to the host, find the source of the star nuclear, four-level green one foot square!"

"Hey, congratulations to the host, I found the source of the star, the third-grade blue half-foot square!"

.....

The star field in front of us is quite ridiculous. Ye Xuan came all the way and only encountered a small private battleship on the way. After arriving here, it was even more empty-eyed, except for a large number of stars and cosmic dust. Nothing else.

However, although absurd, the stars in this star field did not disappoint Ye Xuan.

He also urged the gods to hang around in a circle, and the sound of the phagocytic system sounded continuously in his mind. It is the system that devours the blood talent of the beast with his already integrated starry sky. Captured the atmosphere of the star's nuclear source.

Although most of the tips did not attract Ye Xuan's attention, because the core of the star has a star source that is too small, or the grade is too bad, he can't see the eye, but some of the stars are quite rich. It is considerable.

For example, there is a small star near the meteor. The center of the star's core is actually a six-level blue star nuclear source. In the current Ye Xuan, this is a surprise!

In the following time, Ye Xuan moved all the way, and in this star field, he dug for three days. The collected star nuclear source was filled with a cabin in the hidden gods, and all of them were all three grades of green. The goods, the best of which, there are actually seven levels of purple star nuclear source.

However, this seven-level purple star nuclear source is not much, only about a quarter of a square, so Ye Xuan is quite sorry.

Three days later, Lingyi decided to suspend the mining. For the sake of stability, he decided to take the source of the pile of stars and upgrade his strength.

Since many stars in this star field have left traces of his excavation, it is not safe.

Therefore, Ling Yi urged Shensuo to leave the star field, and found a quiet and inconspicuous star in another star field outside the voyage. After choosing the retreat, Lingyi will breathe inwardly. The system issued an instruction to retrieve the source of the star kernel in the cabin.

Of course, before the order was issued, Ye Xuan had already selected and classified the source of the star-filled star.

The quarter-level purple star nuclear source of about a quarter of a square, and a small pile of six-level blue star nuclear source, which was touched by the square, was properly received by another compartment, and this kind of high-quality goods He intends to stay in the sixth stage of the star's nuclear environment and use it more efficiently.

The rest are the five-level red and below the star nuclear source, which is suitable for the current Ye Xuan, but he is not all finished, and plugged about one-third of the energy cabin to the Shensuo.

The source of the star nucleus in the energy compartment is not currently used. The source of the star nucleus thrown in is also captured in the leisure time, and then stored in the energy core of the sacred shuttle. Therefore, Seduo is not afraid. !

As for the blank star crystal that has taken energy, it will be automatically transferred from a small cabin next to it...

This time, the retreat lasted for two days. When there was only a small two-footed cyan three-level star nuclear source in the cabin for collection, Ye Xuan's mind finally sounded a long-lost system prompt. sound.

"Hey, congratulations to the host, the realm of the realm, the current realm: the fifth level of the star nuclear!"

Chapter 2613: Make a fortune

With the prompting of the phagocytic system, Ye Xuan opened his eyes and ended the retreat. First of all, I felt the power of the fifth-order of the star's nuclear environment. It was even stronger, and he was quite happy.

However, when his gods swept through the cabin of the sacred shuttle, and found that the original source of the star-shaped nucleus was piled up, there was only a small pile of three-level cyan that touched two feet square, and Ye Xuan shook his head again. I smiled bitterly.

This is only the fifth order of the star's nuclear environment. If you break through once, you need such a large number of star nuclear sources. Then the next six-order seventh-order, even eighth-order nine-order?

As for the next big boundary meteor after the astral environment, let alone mention it.

It seems that most of the energy in the future has to be placed on the mining of the origin of the star nuclear...

Realizing this, Ye Xuan knew that he had just entered the starry sky, and he had a lucky encounter with a starry sky engulfing the beast.

Although he also knew that the starry sky swallowed beasts were precious, the phagocytic system would not be able to evaluate its blood.

But at that time, Ye Xuan did not realize the importance of the origin of the star nuclear and it was difficult to extract, so the feeling was not very strong. Now, he finally realized.

Although there are many starry beasts in the sky, there are not many blood extracts, and in this case, the starry sky is absolutely at the forefront.

The number of starry swallowing beasts is even less. Even if one meets, if it is already adult, its blood can no longer be extracted, which is also useless.

This is why even the existence of Bai Shili, after encountering a starry sky in the early days of engulfing the beast, would be so crazy, leaving the **** fleet alone, and hurting the blood to trap!

If Fei Ye Xuan got this starry sky to engulf the beast, his realm was only feared that he was still in the first stage of the star nuclear stagnation, including the hidden **** shuttle.

At the moment, even if he has the anti-sky blood of the starry sky, but Ye Xuan's pressure is still not small.

The first is that the various auxiliary systems of the phagocytic system need to be activated, and some special treasures and resources must be obtained, such as the activation of the previous phagocytic system, which is an example.

In addition, even the activated phagocytic system, each time the fusion of treasures, the fusion energy that needs to be consumed, is already a small expense, and is not even lower than the consumption required by Ye Xuan's own strength.

His sacred shuttle has appeared in the surveillance screens of the ten star-rated warships. As soon as he appears in front of people, he will immediately reveal his identity. Therefore, for Ye Xuan, there is a matter of course. That is to find a suitable small warship, three times of fusion, to change the external features of the sacred shuttle.

First of all, not to mention the appropriate small warships, the source of the star nuclear required for three times of integration, there must be quite a lot.

Therefore, at the moment, Ye Xuan, on the one hand, requires a large number of star nuclear sources for its own cultivation. On the other hand, the fusion system that has just been activated requires a large number of star nuclear sources.

In this case, even if he possesses the starry devourer, he is extremely sensitive to the origin of the star, and can easily detect the breath of his breath. The pressure on Ye Xuan's shoulder is still heavy.

"In a short period of time, we have successively broken through the first stage of the star nuclear environment to the fifth stage of the star nuclear environment. It is really inconvenient to continue the crazy breakthrough. The stability of the realm also takes time. Otherwise, the foundation is unstable and the future will be achieved. Also has an impact!"

With a double fist, Ye Xuan's smashing flashed a touch of fineness: "Then, for the next period of time, it's all used to mine the core of the star, the three fusions of the gods, and the next breakthrough. ... reserve resources!"

"Excavation! Crazy mining..."

With this conviction, Ye Xuan jumped into the sacred heart, and after the mind was moved, he flew from the star of the retreat and once again whizzed toward the depths of this funeral star field.

Along the way, the sound of the phagocytic system sounded from time to time in his mind, but Ye Xuan never ignored it.

"Hey, congratulations to the host, I found the source of the star, the third-grade blue half-foot square!"

"Hey, congratulations to the host, found the source of the star nuclear, two-level orange two feet square!"

.....

These are all low-grade goods below the fourth grade, and now they can't meet Ye Xuan's needs, and they can't attract his interest.

In Ye Xuan's view, this is all taken for granted, but if this incident is passed to the other interstellar mercenaries or monks of Tianhe, it is estimated that a large piece of vinegar jar will be overturned.

For them, the one-size-fit second-level orange star nuclear source, it is definitely a small gain, and here at Ye Xuan, but simply dismissed.

In fact, the more important reason is that the system sounds appearing in his mind are very loose, often separated by a very empty space, will ring again.

With the experience of the previous emptiness of the origin of the star nucleus, Ye Xuan has long discovered that there are a large number of areas, or high-level stellar sources, often with a central core of all stars in the star field. The ratio is extremely high.

If you look at a large number of stars, but only a few stars are sensed by the intrinsic star nuclear source, then this star field will basically not have much to gain, not worth staying.

Seven days passed quickly.

In the past seven days, Ye Xuan has never stopped, because he has never encountered a region with a relatively large density of stars that can be mined.

It wasn't until he was getting intolerance that the surprise finally came.

"Hey, congratulations to the host, discovering the origin of the star, the six-level blue one-foot square!"

"Hey, congratulations to the host, find the source of the star, the seven-level purple half-foot square!"

"Hey, congratulations to the host, found the source of the star, nine grade nine color, the reserves are weak!"

.....

As the system prompts the sound in his mind, Ye Xuan's whole person has been shocked. Even the control of the sacred shuttle immediately stops and forgets the brain. The system sounds that have been resounding in his mind are gradually sparse. Far from the star field, he reacted to his body and quickly turned around.

The four-level green is also considered, even the six-level blue has two feet square?

Ye Xuan has never seen such a big six-level blue star nuclear source.

This color, the seven-level purple is also half-foot square, and there are legendary nine-level nine color, although the reserves are weak, but this is the source of the nine-color star nuclear!

There are nine colors of nine colors appearing here, and the problem has been explained by itself.

What's more important is that when Ye Xuan passed through this star field, the system sounds appearing in his mind appeared almost continuously one after another without gaps.

The distance between the stars and the swallowing beasts to sense the origin of the star's nucleus is also limited. The continuous appearance of the sounds can only indicate that in this star field, the stars in the central star nucleus have the origin of the star nucleus... the ratio is extremely high!

This is also the place of mining that Ye Xuan has been looking for. This time, I have made a fortune!

Chapter 2614: Great harvest

"Hey, congratulations to the host, found the source of the star nuclear, nine grade nine color, the reserves are weak!"

"Hey, congratulations to the host, found the source of the star nuclear, eight black, the reserves are weak!"

.....

As Ye Xuan manipulated the sacred shuttle to return again, and turned around a large circle around the star field, the system sounds in his mind resounded like a tide.

However, Ye Xuan did not immediately start mining, and he did not mistakenly cut the firewood. He planned to explore this area with amazing reserves of star nuclear resources, determine the best central point of reserves, and determine the boundaries. The area, then starting from the center point, continually digs outward.

After half a day, the work was finally completed, and Ye Xuan was already excited and even flushed with red, just like drunk.

Because the area of this star-nuclear source is densely populated, the range is really not small. With the speed at which he flies in the void in full force, the radius from his center point to any edge needs to fly Ye Xuan. A few hours.

He is now in the fifth stage of the star's nuclear environment. It is conceivable that the virtual space behind him is flying for a few hours. What is more, this is only the radius of the whole reservoir-intensive area?

In a word, this time, if you don't send it, it's definitely a big harvest!

For the next half-month, Ye Xuan has been staying in this area. Although he has the blood talent of the starry sky, he can sensitively sense whether there is a star in the inner star of the star within a certain distance. Nuclear source.

However, after determining the reserves, in order to get the source of these stars, Ye Xuan still has to manually excavate one by one until it reaches a certain distance, and then can use the "swallowing hand" of the phagocytic system. Grab.

Therefore, the progress of mining is not very fast, but Ye Xuan has undergone a fusion of the Scorpio sword. The speed of manual excavation is not slow. In half a month, he has collected more than 8,000 stars in this star field. The source of the star nuclear is simply massive.

After half a month of mining, the star nucleus of this star field has basically been dug by him. There are some hidden stars in the stars, but because they are not very high quality, Dispersion, because of the current Ye Xuan, has completely lost the attraction to extract.

This time of crazy mining, it is over.

At the first time, Ye Xuan urged the gods to quickly leave the star field. After all, in a small star field, so many stars were dug up in high density, whether or not they were harvested, or harvested. How many of these actions are doubtful, and once they are discovered by other strong people, there will definitely be trouble.

Ye Xuan is not afraid of trouble, the key is that he is now anxious to count the harvest of this time, the whole heart is like a cat scratching, itching uncomfortable.

The sacred shuttle sailed at full speed for four days, and finally stopped in a relatively remote star field. Ye Xuan's figure fell to a very ridiculous black star, sneaked into the ground at the concealment, and then began to count .

At this moment, almost all the cabins of the sacred shuttle are almost full of star nucleus sources of different colors and different levels.

Of course, when mining, every time there is a harvest, Ye Xuan will put the star nuclear source away, and when they are placed in the cabin of the hidden gods, they are stacked according to their color and grade, so it is convenient to count them now.

In addition to the main control room, there are also twelve cabins, including eight empty seats. Right now, all eight cabins are full of star nuclear sources.

Its color quality starts from four levels of green, to five levels of red, six levels of blue, seven levels of purple, including the legendary eight-level black and nine-level nine colors.

At the third-grade cyan and below the source of the star nuclear, Ye Xuan did not deliberately exploit it, but it was accompanied by other high-grade star nuclear sources.

These, Ye Xuan all collected by the way, but did not pile up and left, but directly thrown into the energy cabin of the Shensuo, was quickly smashed the energy contained in it, and turned into a pile of blanks. The star-shaped crystals piled up in the bottom compartment.

Among the eight cores in the star cabin, four levels of green piled up a full five cabins, totaling hundreds of cubic meters.

Not a ruler, it is a cube!

In the other three compartments, the five-level red star nuclear source has a whole cabin, nearly one hundred cubic meters.

The other two cabins, one is full, and one has a lot of space.

The full stack is six-level blue and seven-level purple, the former is more than seventy cubic meters, the latter is more than twenty cubic meters.

The remaining ones in the last compartment are all legendary eight-level black and nine-nine-color.

These two legendary levels of star nuclear origin, eight-level black Ye Xuan extracted a total of two cubes, and the top nine nine-color, are fist-sized pieces, a total of one hundred and eight, add up, even None of the cubes. However, it was the most secret place in the cabin of Ye Xuan, and it was protected by layer-by-layer method. At the same time, it hides its dazzling eyes and colorful eyes...

The three cores of the seven-level purple, eight-level black and nine-level nine-color are not intended to be used now. It is too wasteful. He is ready to break through to the ninth order of the star's nuclear environment.

At present, his cultivation is the fifth-order of the star nuclear environment, and there are four small steps from the ninth-order. The remaining six-level blue, five-level red, and four-level green star nucleus are simply massive, and they are seen in Ye Xuan. Come, it should be enough for him to fill these four small steps in the star's core!

"In any case, first fill the energy reserve of the sacred shuttle, then you will use it afterwards..."

After the inventory was completed, Ye Xuan made a decision. Between the two movements, the four-level green star nuclear source of the whole cabin began to flow into the energy compartment, and soon after being extracted, the energy was turned into The green, blank star-shaped crystal appears in the largest basal compartment of the space.

This process lasted for almost a day, and after fully consuming a four-level green star nuclear source of one and a half cabins, the energy reserve of the sacred shuttle was finally full, and there was no way to confiscate it.

After Ye Xuan again piled up the empty energy cabin into the half-level green star nuclear source of the big cabin, this was stopped.

At this point, in addition to the seven-level purple or more star nuclear source, Ye Xuan currently has four levels of green three hundred cubic meters, five levels of red nearly one hundred cubic meters, six levels of blue more than seventy cubic meters!

Only these are the horrible wealth that can make Tianhexing's official financial squad cool, but Ye Xuan, now watching the dazzling crystals of this full cabin, after a while, he soon became distressed. It's up...

Chapter 2615: Immortal fragments

For Ye Xuan, the star nuclear source is definitely not missing for the time being!

At the same time, he could have a sense of incomprehensibility for the various levels of the star nucleus in the sacred shuttle cabin.

I don't know what to do next!

In the short period of time, the realm of the realm has been successively broken. At present, it is already the fifth-order of the nuclear environment. In the near future, it is really inappropriate to continue to triumphantly. Otherwise, the foundation is not strong and the impact on the future will not be small.

Of course, in addition to cultivation, there are still many things to do, such as the fusion of treasures, but he now has a large number of star nuclear sources, but there is no magic weapon that can be used for integration.

After some entanglement, Ye Xuan bit his teeth and decided to go back to Tianhe Star!

Before the completion of the third fusion, Hidden Shuttle could not publicly show people. This is a very serious constraint and must be resolved as soon as possible.

In addition, the blank star crystals in the bottom compartment where the energy has been collected are also full. This is all star coins. Is it better to throw it away directly as garbage?

Only when you return to the Tianhe Star can you change them to Star Coin in the Federal Affairs Hall. Of course, it can be a polished standard or a virtual star coin tied to federal citizenship!

Ye Xuan is obviously more inclined to the latter!

With the stars, you can exchange all kinds of treasures, exercises, and special materials in the Federal Affairs Hall.

Of course, the star that has not been harvested is more valuable and can exchange more things.

Before Ye Xuan took a general glance, many items, specifically marked must be exchanged for the star nuclear source or other treasures, do not accept the star currency transaction.

This is not a problem for Ye Xuan. As long as there is something that is really needed, the star currency is good, and the star nuclear source is good. He is all out of it, and it is still massive!

The only pity is that both the Starcoin and the Stars can only exchange items in the hall of the Federal Government of Varo, but they can't exchange the devouring system for the things in the store.

In exchange for items and exercises, even blood and ability, what is needed is to devour the source!

Ye Xuan currently only has a little bit of engulfing the source, or the system resets to upgrade to the starry level, can be exchanged for chicken ribs!

"Wanluo is so big, it will definitely be swallowed up. If you can exchange the stars and the stars, you can use it to devour the source..."

In the thought of this, Ye Xuan could not help but move. The desire to return to Tianhe Star suddenly rose, so he did not hesitate to activate the hidden array of Shensuo. After his mind was moved, the battleship was instantly turned into a stream of light. 茫茫 emptiness!

.....

The number of federal powerhouses encountered on the way back is obviously a lot more than when they came. Ye Xuan knows it well, but he is not afraid!

In fact, he can connect to the federal network of the Tianhe Star through the shipboard system of Shensuo, so as to explore the situation and the wind in the Tianhe Star.

But after considering it again and again, Ye Xuan eventually gave up. The starry sky network of Tianhe Star is obviously very powerful. If you leave something like a back door, a wooden horse and the like in the system of hiding the gods, don't you bother?

As a result, Ye Xuan thought of another problem, that is, the information channel in the future!

The source of the devour he needs is not an ordinary item. It is hard to say whether there is a small area of the Tianhe Star.

However, there is a huge dusty country above the Tianhe Star. There are three great empires on the Tianchen country, the three empires go up, and the entire immortal dynasty...

It can be ascertained that in the entire immortal dynasty, the source of engulfing must be there, but Ye Xuan simply could not obtain this information, because he could not reach the upper-level star network.

In the scientific and technological camp of the Federal Human World in Varo, almost every administrative star has a star-shaped super brain, which is both the central data processing center inside the administrative star and the network backbone of the adjacent administrative stars. The battleships in the starry sky of the Galaxy can also be accessed through shipborne equipment.

The extreme distance depends on the level of the warship. The larger the warship, the larger the radius of the network that can maintain the network connection with the administrative star.

Of course, this kind of network is just the internal network of a single administrative star.

The starry network of the immortal dynasty of the science and technology camp has four levels.

In the immortal star where the emperor's emperor is located, there is an immortal super brain. The endless territory of the entire empire half of the cosmic starry sky is under the network of this immortal super brain. This is a level one network.

The three empire under the dynasty is a secondary grid.

The three-level network is a small country belonging to hundreds of empire.

Under the small country, it is the fourth level, which is the internal network of a star political star!

The starry sky and super brain in the Tianhe Star is one of the many four-level networks in the Tianchen National Star. In Tianhe and its surrounding stars, anyone who wants to access the three-level network of Tianchen must pass it. to realise.

Unfortunately, the authority to contact the third-level super brain through the four-level super brain is not available to anyone.

Because the energy consumption generated by the administrative star's starry sky super brain access to the superior network is terrible, the authority is insufficient, and the starry sky super brain is impossible to provide services!

Although the phagocytic system is powerful, it is also impossible to forcibly suppress the starry sky super brain of an administrative star, making it used by Ye Xuan!

It seems to have sensed Ye Xuan's distress at the moment, and the sound of the phagocytic system suddenly rang: "Hey, the system prompts that if you want to activate the cosmic-level independent communication system, you need an immortal star super brain!"

"puff!"

In the first half of the sentence, Ye Xuan was inexplicably happy. After listening to the latter half of the sentence, he almost smothered the old blood.

An immortal starry sky super brain?

That is the core network of the first-level network in the emperor's immortal star. If you can get this kind of thing, Ye Xuan still hasn't swallowed the source?

"Hey, the system prompts, the Tianhe Star Federal Exchange Hall item search!"

"Hey, find the items you need: a stark sky with a brain! Level: immortal! State: depth after atrophy! Form: a piece of debris! Value: Jane!"

Ye Xuan on the spot petrochemical!

The immortal starry sky is super brain, so I found it? How do you feel like you are dreaming?

Even if it is just a piece of debris, and this piece of debris is detached from a star that has shrunk, the three words of immortality are placed here, enough to crush everything.

What's more, even the identification value given by the phagocytic system is a rare level. Just a piece of debris can get a systematic evaluation of the system. Only this point can explain many problems.

“Hey, the item has been identified, is it going to enter Tianhe?”

When the system sounds in my mind rang again, Ye Xuan was able to recover from the huge surprises. Only then did I realize that the Tianhe Star had arrived, just in front of the line of sight. No wonder the phagocytic system can view it at this time. Item information in the Federal Affairs Hall.

Although it can also access the four-level network of the administrative star, it must be within a very short distance, even small warships are not as good as...

Chapter 2616: Star-core crystals piled up into mountains

Considering the problem that the sacred shuttle can't be exposed, Ye Xuan stopped at a distance from the Tianhe star, and the gods swept out to make sure that there was no suspicious space in the surrounding starry sky. The gods shuttle, and then waved it into the body.

After the meal, Ye Xuan once again came to the entrance of the Tianhe Star canopy shield that had passed before, mixed into many federal powerhouses, and soon entered the interior of the stars.

Under the light road, Ye Xuan went straight to the suspended platform where the Tianhe Star Federal Affairs Hall was located, and went to the window to purchase the blank star crystal.

The federal civil servants in the window are all intelligent robots. Of course, as a service organization, the shape of these intelligent robots is still very eye-catching. The beauty of the all-round beauty, the level of artificial robots in the Wanluo alliance is still quite high. It's enough to be fake.

The entire Tianhe Star Federal Affairs Hall platform is extremely wide, dozens of square kilometers, and a different building handles different affairs, so there are many people, and almost every window or reception is lined with long queues.

But the window that only recycles the blank star nucleus can be seen. Before Ye Xuan arrived, it was like a clear water trick, and there wasn't even a figure at all.

It's strange to blame, but it's not hard to understand.

This kind of thing, such as the origin of the star, is almost everyone in the federation. After all, it is the most common and important resource for cultivation.

However, unless you have a special lineage like Lilith, or if you have a phagocytic system like Ye Xuan, the general monk's progress is extremely slow when he extracts the energy contained in the source of the star.

This situation directly led to the fact that all the monks could continue to appear in the hands of the star-shaped crystals that have been extracted, but basically everyone will accumulate a certain amount to exchange the stars.

This is the root cause of the coldness of this star-shaped crystal exchange window.

When Ye Xuan approached the window, the robot beauty inside, even if she turned around and looked at her, she did not ask her, Ye Xuan had already said: "Hello, I want to exchange some star crystals, um, the stars must Virtual, don't be real!"

Perhaps because this window is too cold, it is really eye-catching to stand alone here. Yes, some of the federal powerhouses that are lined up in other windows are subconsciously turning around.

"Okay, please pass in your star crystal from the window. The system will give you an estimate of the value. If there is no objection, the corresponding amount of the coin will be able to enter your federal citizen ID within ten seconds. "

In the window, the voice of the robot beauty came, very beautiful, the smile on the face was also very friendly, so that the only remaining tension of Ye Xuan was gone.

However, looking at the window that was only half a meter square in front of him, he was a bit stunned, and for a moment, he snorted and said: "Hey, is this window? Is it too small!"

"Do you have a star nucleus? It is recommended that you redeem one, and the east side is the federal exchange hall."

The smile of the robot beauty is still the same, raising the finger to the east side of the window: "The capacity of a cubic star nucleus is only 10,000 stars, even the top star nucleus of ten cubic space, only one million stars. Of course, it is generally not used!"

She said that the star nuclear capsule Ye Xuan also knows that this time it is indeed intended to redeem a few, so as not to hide the bottom of the shuttle tank is full.

This is the combination of the top space technology experts of the federal science and technology camp and the refiners of the comprehension camp. Of course, it is not a manual, but an assembly line, otherwise there is no way to open the supply like this. Widely promoted exchanges.

The reason why this kind of star nucleus is required is because the intrinsic energy of the star nucleus is extracted, and after it becomes a blank nucleus crystal, it will continuously absorb energy from the outside and store it internally.

Because of this characteristic, the general space magic is not suitable for collecting the crystals of the star, otherwise it will affect the quality and the order of the magic weapon for a long time.

This kind of star nucleus is made of special materials and special materials, coupled with large-scale mass production, the value is not high, so there is no such hidden danger.

However, let alone Ye Xuan does not have a star nucleus at all. Even if there is, I am afraid that he will not be able to dispose of the nucleus crystals that he has transferred from the sacred bottom of the sacred chamber.

The top star nucleus is only 10 cubic meters of space. His star crystal is hundreds of cubic meters. How do you install it? Can't you reach out and hand in a bunch of bags?

Under the circumstance, Ye Xuanton was very impressed: "Hey... I don't have a star nucleus for the time being. In addition, the space of the star nucleus is not enough, because the number of crystals in my star nucleus is relatively high, so I have enough cough. Can I get a warehouse and let me take it out and stack it?"

The beauty robot in the window is directly stunned.

warehouse?

Recycling a little star nuclear source, actually opening a warehouse?

This kind of thing she has never encountered before.

Other windows on the left and right sides, at this time some sneer came over, revealing the meaning of ridicule.

"Sorry, here is the reception window, there is no warehouse. If your star crystal is really a lot, if you don't come in from the window, I suggest you take it out directly and put it on the counter. I will help you check it out!"

The beauty of the robot beauty is still good, but the smile on the face is gone. The technological level of the immortal dynasty has already allowed this intelligent robot to have some simple emotional changes. After all, the Tianji people have given birth to self-consciousness and finally Out of the human race, in contrast, this simple emotional endowment is really nothing!

"counter?"

Ye Xuan glanced at the narrow platform outside the window, and flatned his mouth and muttered: "It seems that I can't put it here, or I will pile it on the ground. Anyway, there is no one here, but you just said it, you count it. In fact, I prefer to pile up in the house, or do you open a door?"

The face of the robot beauty is getting worse and worse, even the tone is cold: "Please follow the rules of the business hall, working hours, no window door is allowed to open easily. Well, you can take out your star core. Crystals, if it is really large, I can apply for assistance!"

"Well, this is what you said. Anyway, I have suggested it. You can't listen to it."

Ye Xuan shrugged his shoulders, and then he raised his hand and waved it. He received all the stars in the body in advance.

"Oh la la..."

A large and continuous intensive noise came out. In an instant, on the open space behind him, a hill was piled up, all of which were star-shaped crystals of various colors, at least two or three hundred cubic meters.

Around, a sound of cool air came, and the beautiful robot in the window was even more open, and the eyes of the two rounded, the stars inside the circle flashed...

Chapter 2617: Purple electric shuttle

"Hey!"

"Hey?"

"Beauty, can you hear it? Is it without electricity?"

After Ye Xuan screamed a few times, the window was sluggish with a small mouth, and it seemed like a normal robot beauty without power, and finally the body shape returned to the soul.

Immediately, she turned her face and turned to Ye Xuan: "I'm sorry, I was rude! It's never been seen that someone has brought so many stars and crystals to exchange, the most once, even here. One tenth is not there!"

"Hey, I'm inadvertently squatting in the sky. Before that, they have been piled up in the valley on the back of an abandoned star. It should be poured after the energy of a large warship. It may have special circumstances, not portable. It!"

Ye Xuan grinned and laughed. After three words and two words, the situation was explained. Although there is no such thing as a million, it may not be completely absent. Generally, there are so many star-shaped crystals accumulated by large-scale warships. If they encounter a sudden in the sky, they will suddenly The state of hair is not to be dumped as garbage. After all, they mean only the stars.

Although this explanation is bizarre, but the federal monks who are concerned about other eyes in other windows are obviously accepted, just like the lottery is difficult, but there are always such lucky people in the world. Now Ye Xuan is in their eyes, no doubt One of them, so some sighing words began to faintly come, all of them reveal the meaning of envy.

The work efficiency of the beauty robot is really good. Just three minutes later, a team of robots rushed over, carrying instruments and star nucleus capsules, and estimated the value of the pile of star crystals on the spot, and then used a bunch of top stars. The nuclear capsule was collected.

"Hey, congratulations to the host, get the federal star currency, a total of 1.68 billion!"

Not a minute, Ye Xuan's mind once again sounded the sound of the phagocytic system, and the huge amount of 1.68 billion made him a big jump. A top star nucleus with a space of ten cubic meters One million stars, can you buy more than a thousand?

Suddenly sitting on such a large fortune, Ye Xuan has a bit of awkwardness, and I don't know how to leave the window of the star nuclear crystal exchange. When he returns to God, he looks up and finds that he has already arrived here. Inside the hall of another building on the expansive suspended platform.

It is the largest Tianhe Star Federal Exchange Hall!

The people in the hall are shaking, and the three walls on the left and right sides are like a led LCD screen, but it is obviously more high-end. I don't know how many times, the above is full of federal text.

The three walls are divided into several large areas, and each large area is subdivided into many districts, showing the items that can be exchanged with civilization, and sorting them into categories.

Anyone who has the knowledge of God and chooses the exchange of interest categories after interest, only need to extend the past with God, all the items under this category and the details of the introduction, redemption requirements and prices can appear in In my mind, it is very convenient!

Ye Xuan only scanned it roughly, and he felt that his eyes were fast-sighted. The three walls were subdivided into thousands of small categories, and even the main categories had more than a dozen, which was almost dazzling.

However, although there are many items available for redemption, it is obviously impossible to successfully convert them without a corresponding family.

Among the dozens of categories, there are even special sections that are limited to star-based nuclear resources, or equivalent value treasures, and do not accept the trading of stars.

Other large plates are some exercises, magic weapons, warships, special materials and other items.

Ye Xuanzhi's piece of the immortal starry sky super brain is classified as an unidentified substance under the large section of special items. The requirement for redemption is 10 million stars, which is simply a leak!

Repressing the madness of the heart, Ye Xuan extended the knowledge of the past in the first time, and engraved the imprint, and the system prompts that one million stars were automatically deducted.

This million is a deposit. After imprinting the mark of God, this item will no longer appear in the category. Others can't even see the search, and what Ye Xuan needs to do is just wait until the opposite. The window of a building is lined up to pay the balance and receive the exchange.

Of course, if you change your mind temporarily, the deducted star currency will not be refunded!

Although it was only a deposit, but as long as there is no accident, this piece of immortal starry sky super brain has basically been nailed to Ye Xuan, which makes his heart hanging in the eyes of the blind completely fall back, and then, will The gods swept the small private battleships in the large section of the warship on the opposite wall.

As the gods touched the fonts on the wall, Ye Xuan's mind immediately appeared a long list of forms, all of which were small private warships of various models and different characteristics. There were tens of thousands of choices, no matter which one they were looking at. A ship, just a mindful move, the performance parameters and characteristics corresponding to the battleship, including information such as redemption requirements and prices, will automatically appear.

Ye Xuan had just wanted to get a warship for three times, just to change the shape of the gods, but now there is room for choice, naturally it is a good choice.

After some consideration, he set the target of the choice of the warship with speed advantage.

His sacred shuttle energy shield is also available, and the star guns are also available, and these systems can be upgraded with the fusion of the times, and now it is enough, there is no need to specifically improve the attributes of these two aspects, However, speed is extremely important. After all, the starry sky is vast and the speed of the battleship is faster. In the case of monks, it will save time!

As for the advantages in terms of escape, don't even mention it!

Therefore, the speed of private small warships is indeed very important!

After the decision, Ye Xuan added the speed option before the move. Soon, the original battleship of more than 10,000 was reduced by 95%, leaving only more than 500 ships.

Ye Xuan looked down from the first one of the list, but never saw the warships with the obvious advantages in terms of speed. It was basically a little faster than the ordinary warships.

At the time of disappointment, a battleship at the bottom of the list caught the interest of Ye Xuan.

Purple electric shuttle?

It's a shuttle and it's electric, isn't it fast?

When the heart moved, Ye Xuan even took out the detailed information of this warship. The first thing I saw was the exchange value. The simple line of text directly took Ye Xuan's breath and took a sigh of relief.

Redemption requirements: Do not accept the star currency, only accept the star nuclear source, the requirements are all six blue, the amount is one cubic meter!

Six levels of blue, or a whole cube, said the exaggeration point, almost enough to buy all the other battleships in the list, nearly five hundred!

If non-Ye Xuan unexpectedly made a windfall in the sky because of the adventure, the six-level blue star nuclear source, he is afraid that he can't even find a square!

This is almost a price, too shameless!

Between the abdomen, Ye Xuan's consciousness looked down, and the second line of text that he saw next made him breathe again. This purple electric shuttle was actually a superb battleship that engraved the speed array method... ...

Chapter 2618: Cave vain

Although the scientific camp and the comprehension camp of the Wanda federal human race are equally strong, they are totally different in terms of cultivation methods and living environment.

For example, in the science and technology camp, the main cultivation method is to use various genetic enhancement agents to excavate and enhance the potential of human beings. Of course, the various

cultivation methods belonging to the cultivation camp are also in the science and technology camp, but they are not mainstream.

This point is not reflected in Tianhe Star. After all, it is in the funeral star field. There are countless strong people coming and going in the whole federation. The liquidity is too big and has been affected.

It can be said that after the development of the human race for a long time, almost all of the two camps have reached the peak in their respective fields. Whether it is self-cultivation or technological civilization, it is unlikely that new ones will emerge in a short period of time. Major breakthroughs and progress.

It is in this context that some special items that combine the elements of comprehension and technology have emerged, such as warships that have engraved certain arrays, or magic weapons that incorporate technological elements.

This kind of thing, in the two camps, is really a tight cargo, and it is very rare. It is impossible for any one of the administrative stars to throw it into the federal exchange hall.

In the federal exchange hall of any executive star, in addition to the officially provided items, private individuals can also provide goods commissioned transactions, but a 10% commission is charged!

This purple electric shuttle is obviously of this kind, and its owner is desperately in need of a large number of six-level blue star nuclear source, otherwise it is the best, it is impossible to be handed over!

In a word, the opportunity is rare, but you can't ask for it!

For this, Ye Xuan knows well, but at the moment, while examining the performance parameters and various attributes of this purple electric shuttle, he is indulged in hesitation and hesitation.

An entire cube of six-level blue star nuclear source is not a joke. The previous batch of star-shaped nucleus crystals has been a bit exaggerated. If you come up with so many high-quality star nuclear sources, I am afraid It's hard not to be stared!

But if he gave up, he was extremely unwilling, and after a lot of entanglement, Ye Xuan bite his teeth, and finally passed the mark of God.

However, the origin of the star nuclear is not deductible from the system of the exchange hall, so the deposit is delivered in the form of 10 million stars. After the redemption of the star source, the system will automatically return!

After doing all this, Ye Xuan turned and walked away. He planned to leave the Tianhe Star immediately after completing the transaction in the hall opposite the building.

The wealth has been revealed, this place should not stay for a long time!

At this time, the sound of the phagocytic system in the mind unexpectedly resounded again: "Hey, find the hole in the void! Value: Starry Treasure, immeasurable! It is strongly recommended that the host participate in the auction!"

A hole in the void?

Auction?

Ye Xuan's heart was shocked and immediately stopped!

In his impression, the phagocytic system seems to be the first to add a strong emotional word in front of the suggestion. Before the discovery of the piece of the immortal starry sky super brain, there has never been!

This is clearly a deliberate emphasis and reminder, and this alone is enough to illustrate the value and importance of this vain.

Listening to the name should be a kind of practice, but it is a scum, but even so, the system's evaluation of its value is still the highest level of immeasurable, is it really a star-level supreme treasure?

When Ye Xuan's line of sight was swept to the curtain wall on the right side of the hall, there was an auction section here. After looking for it, I saw a hole in the void.

However, the information about this object in the section is extremely simple. It can even be said that there is no information at all. There are only a few words: the cultivation of the truth, the cruel article!

In addition, it is the auction information about this item, even the bottom price is not marked, it is to indicate the time and place of the auction, just at 8 o'clock tonight, Tianhe Auction Center!

Stars and treasures, nature should not be missed, Ye Xuan even once again sent a glimpse of the brand, paying 10 million bidding deposit, this is also the entry qualification to enter the Tianhe auction center!

In front of you, there are now two choices.

First, go to the auction first, then return to the auction after the end of the auction, complete the transaction of the immortal star super brain and the purple electric shuttle, and then quickly leave.

The second is to complete the transaction of the two treasures, and then immediately transfer the purple electric shuttle and the hidden gods to the system, calculate the time, before the end of the evening auction, the third fusion should be completed.

In this case, whether it was because of the whites that were traded when the two treasures were traded, or other accidents were followed in the subsequent auctions, Ye Xuan left the Tianhe Star to enter the outer Star River. After the void, you can sacrifice the battleship in the first time and leave at a very fast speed!

The purple electric shuttle is a superb battleship engraved with the speed array method. Joining it to complete the third fusion of the new warship, it must definitely improve a lot in terms of speed, even if the strength of his strongman is strong, Ye Xuan There is also a certain chance to escape!

After some discretion, Ye Xuan turned to the opposite exchange delivery hall. He chose to carry out three integrations on the battleship first. Although it may be eye-catching in advance, the speed of the battleship obviously makes the advantage outweigh the disadvantages!

There are also a lot of federal powerhouses in the redemption hall. There are absolutely a hundred rows of windows, but even so, there is still a long queue in front of each window.

Here, any window can complete the final delivery of the reservation redemption, Ye Xuan found a relatively small number of windows waiting, about half an hour later, the front person finally completed the transaction, but behind Ye Xuan, but A new number of strong people have come to the queue.

At the moment, Ye Xuan did not realize that one of them was actually in the distance when he first took out the star-core crystal in exchange for the star currency.

This person is not amazing, it is a type that is thrown into the crowd, and it is difficult to recognize it at once. But the flashing mans in the middle of it are quite fierce, and sometimes glance at Ye Xuan, obviously I stared at him early.

"Do you have a redemption transaction that needs to be delivered? If so, please send a glimpse of the gods to this terminal, and the system will identify and take out the items you redeemed."

The staff in the window is still a beautiful-level intelligent robot. At the same time, when the voice prompts, he also raises his finger to the side of the window counter. There is a fist-sized translucent prismatic crystal, which is supposed to be the so-called system. The terminal is crystallized.

Although Ye Xuan felt a bit novel, but his face did not show up, the slight jaws, passed the power of the gods.

In the window, the voice of the beautiful robot soon came again: "There are two treasures you exchanged, one with a total price of 10 million stars, one million prepaid, and the other with a total price of one cubic meter. Six-level blue star nuclear source, prepaid star 10 million."

"The treasure is being transmitted. Please deliver one cubic meter of the six-level blue star nuclear source. The prepaid ten million star currency will be automatically refunded by the system. After deducting the first piece of treasure and paying nine million, the amount of returning the star currency is one hundred. Wan, please confirm..."

Chapter 2619: Zhao Long's way of making money

As the beautiful robotic voice heard from the window, Ye Xuan and a few windows adjacent to the left and right, a large number of exclamations came out instantly...

"God, this guy is so rich, just one exchange transaction is tens of millions of stars. I haven't had him so many times in recent years."

"What is the star currency? Didn't you hear that someone has a redemption transaction that was delivered by the star nuclear source? It is a great deal for my brother. The star nuclear source does not have cultivation, but it is used to exchange transactions. This is extravagant." ?"

"Hey, you think it's a luxury. People don't necessarily look at it. Do you not understand the specific amount and grade of the star nuclear source that people have delivered? Six levels of blue, one cube!"

"One cube? God, the blue six levels I've seen in my life don't add up so much!"

"Isn't it going to be deliberately chaotic? Look at him's appearance is not amazing, it is not so good to cultivate the realm, it is not like a person who can pull out a cubic six-level blue!"

.....

As the sound of these arguments sounded, other windows on both sides suddenly cast more attention, and the sound of the cool air was sometimes audible, and this small area was gradually noisy.

Ye Xuan's face quickly gloomy. He was expected to attract attention, but he did not expect the scene to be so big. If it continues to develop, I am afraid that the situation will be more serious.

This time, he did not dare to take out the cube of the six-level blue star nuclear source directly, otherwise it will lead to riots, a concept in the mind and really see the real thing, the effect is completely different.

It was only then that he was surprised that he had forgotten to redeem a few star nucleus capsules. At this time, it was obviously not wise to return to the opposite redemption hall. In the bitter smile, Ye

Xuan could only ask for help from the beauty robot in the window: "I'm sorry. My star capsule is running out. Can I borrow one?"

"Yes, every window of the star nucleus is ready, because occasionally this kind of situation is met with the physical source of the star nuclear..."

The beauty robot nodded and raised his hand and handed a star nucleus out of the window.

Ye Xuan thanked, took up the star nucleus sac, and then easily removed a cubic blue quaternary star nucleus source from the hidden gods of the immortal world in the body, directly transferred to the star nucleus. After the completion, the bag was taken out again and handed to the beautiful robot in the window.

"The quantity is correct! The grade is correct! Congratulations, the delivery is completed, the system has already refunded the remaining one million coins, please check it!"

The beauty robot counted the star nucleus in the star nucleus, and soon confirmed that it was speechless. As the other hand said, the right hand had pressed a green button on the front desk.

A flash of light flashed over, the original empty desktop on the right side, immediately appeared a palm-sized space box, which should be the two treasures exchanged by Ye Xuan, delivered from the warehouse by means of transmission.

The value of this kind of space box is not high, it belongs to the lower-level civilian storage magic weapon, the beauty robot directly handed it out of the window, apparently did not intend to take back the space box, which belongs to the free delivery of this transaction!

Ye Xuan took over and did not dare to look at it in public. When he turned his hand, he sent the space box into the immortal world, and then turned and left.

There are still a few hours away from 8:00 in the evening, but there are many people in this area. Ye Xuan decided to enter the Tianhe Auction Center in advance. After all, there is no way for individuals to enter, at least 10 million bidding deposits must be paid. Only qualified to enter!

After leaving the huge hanging platform where the Federal Exchange Hall is located, Ye Xuan first inquired about the location of the Tianhe Auction Center through the phagocytic system, and then went straight to the body!

At the same time, with Ye Xuan's departure, the small exchanges in the redemption delivery hall, and soon restored the previous order, only a few sporadic voices are still talking about this matter.

However, if you pay attention to observation, you will find that Ye Xuan has just left, there are four or five lines that were originally waiting in line, suddenly left, and rushed out of the redemption delivery hall.

Among them, the young man who was previously behind Ye Xuan's ugly young man!

Although the appearance of this person is not outstanding, but its cultivation is not weak, it is already the seventh stage of the star nuclear environment, and it is two small steps higher than Ye Xuan. As for its identity, it is even more in this Tianhe Star. It's not the same thing, but no one knows it.

After the delivery hall, the young man did not leave immediately. Instead, he found a secluded place on this huge suspended platform. After seeing no one left or right, he raised his hand and threw a few flags. A simple, isolated image that only hides images and sounds in a small area.

After completing all this, the young man in the formation raised his hand and stroked it on the ring of the left middle finger.

This ring is actually his personal network terminal. In the human ethnic science and technology camp, personal network terminal equipment has already diversified. It can be a ring, a pen, or even a button pinned on clothes. Or pin!

The light flashed, and there was a five-dimensional virtual screen in front of him. The young man clicked on it and found some information, and then opened the communication.

Less than two seconds, the screen of the virtual screen flashed, showing a half-length image, but the face can only see half, the other is a national character face, middle-aged, the gas field is very strong, the body is a coalition military uniform The rank is terrible, actually a major general!

In the Tianchen country, the presence of the rank of major general is enough to serve as the commander of the military department of any other administrative star other than the national dust star. The military commander Zhao Long of Tianhe Star, the rank of the rank is the major general!

In fact, the federal general who appeared in the virtual screen of the young man's personal terminal at the moment is Zhao Long.

"General, I found a big fish today..."

The face of the young man has already filled up with a smile of aunty, and even the waist has been slightly bent. There is more excitement and excitement in the discourse:

"That kid should be a young man who first arrived at Tianhe Star. First, he threw hundreds of cubic stars of the star crystal into hundreds of billions of stars. Then he went to the exchange hall and exchanged two treasures. One is delivered by 10 million stars, and the other is a physical delivery of a cubic six-level blue star. I suspect that he still has a large number of star nuclear sources, and the grade is definitely not low. Fertile sheep, a hundred years of hardships, generals..."

Without waiting for the young man to finish, the virtual screen in front of him has already heard the sound of Zhao Long's coldness without the slightest emotional fluctuation: "What about people?"

"It should be to the Tianhe Auction Center. I can check it out in the inside of the redemption hall. He paid ten million bidding deposits!"

The young man smiled slightly and cautiously replied: "It is the one that started at 8 o'clock tonight! General, are we..."

Chapter 2620: Triple integration

In Tianhe Star, Zhao Long is the only one that can make the star Changbai Zhengjun jealous, and it can be said that the authority is awkward!

However, as a federal general, he actually has his own troubles. This kind of trouble is that the power in his hand is large, but it cannot be transformed into his own private power and interests.

The military discipline of the immortal dynasty was extremely harsh, and basically no one dared to touch the head of the matter. Once it was found above, the consequences were unimaginable.

Therefore, even if Zhao Long has already visited the major generals and stationed an administrative star, the annual military expenses allocated in his hands are completely astronomical figures, but these are not dare to move.

In Tianchen, all the financial officers of the administrative star military branch are independent and directly responsible for the Tianchenxing military headquarters. Therefore, although Zhao Long has military power in his hands, he has the right to have no food!

Of course, the rank of Major General is already at the top of the federal military. Zhao Long's annual salary is still very generous, enough for his cultivation and other aspects of the cost, if it is the average person, it is enough.

However, Zhao Long is different. His family is not only in the dusty capital of the dusty country, but even in the sky dust star, it is also a first-class luxury valve. This big family is generally prosperous, Zhao Long There are hundreds of people in the generations, and only a few of them are male.

In the case of Zhao Long, these cousins are all competitors in the future and he is the leader of the Zhao family!

Hundreds of men, naturally, it is impossible for all to excel, if Zhao Long belongs to the kind of mediocrity, it is not necessary to fight, because hope.

However, he happens to be one of the few tips of the hundreds of Zhao's men. In this case, is there a reason for this master?

There are too many profound lessons left by the human races in the Starry Age in the long river. Basically, there is no such feudal and pedantic thought. The bigger the family and the forces, the stricter and harsh the system is. .

This is not the case, it is not enough to maintain its continuation!

Like Zhao's first-class giants in the small country, the younger generation must be independent after adulthood. Of course, you can also choose to enjoy resources freely within the family, and then live forever, no one will stop, but if you want to fight for hegemony, then You must go out, the family will not provide any resources to support, have the ability to spell out a day to prove it!

Zhao Long and a dozen other cousins who have the potential of competitors are all like this!

Therefore, although the Zhao family is strong and rich in the Tianchen country, Zhao Long does not have much resources from the family. All the necessary expenses for the position of the homeowner must be obtained by himself!

Of course, Zhao Long has a lot of money to make money, and the occasional robbery of the squadron is only one of them. However, this kind of unsuccessful business is not open. Once opened, the profit is extremely amazing.

In the Tianhe Star, Zhao Long has a lot of confidant-like confidants, widely spread outside as an eyeliner, for him to find the target of the hand, the young man who is in video communication with him at this moment is one, the responsible area is Tianhe This floating platform where the Federal Exchange Hall is located!

"I can give you double the right to do it on a daily basis. You need to pick it yourself. There is only one requirement. This must be done!"

After a short period of indulgence, Zhao Long in the virtual screen once again said: "This time, the idiot of Baijia has caused a lot of chaos. It is the best time to bring him down and win the stars of Tianhe. But Baijia is in Tianchenxing. It's not unfounded. The old man did have a good son and held a high position in the country. If he wants to take this opportunity to bring him down, the strength of his operation must be painful!"

"And the appetite of the old things in the country is not small, ordinary things are afraid of not being able to impress them. Today, this prey can throw a bunch of six-level blue star nuclear source, and it is very likely that there will be higher grades. The best star nuclear, these things are exactly what the

generals are in urgent need of now, is the success or failure of the Zhao family's dispute, I say, you can understand?"

The young man who claimed to be Zou Hong's face was full of fear, and quickly bowed his head: "The general is relieved, Zou Hong understands that this matter will go through the fire, I will do my best to complete it. If there is a mistake, please come and see!"

When he lifted his head again, the figure of Zhao Long in the virtual curtain in front of him disappeared. Zou Hong sighed with a sigh of relief and shook his fists. He said that he was ecstatic: "I thought it was as usual. It's just a lamb with a little fatness. I don't want this to be related to the battle of the general's homeowner."

"Oh, once the generals have moved to the White Army, and the people of the Zhao family have replaced the position of their star, the future will not only be a source of money, but it will be no different from the great merits of the Zhao family. There is no suspense in the position of the family. , Zou Hong is the first hero, the future Zhao family high-level, there must be a place for me..."

.....

"Hey, I found the best battlefield battleship purple electric shuttle! Meet the integration requirements, is it fusion?"

In the mind, the hint of the phagocytic system sounded, and Ye Xuan did not hesitate, even if he made a positive reply.

Soon, the hidden gods and purple electric shuttles that he received in the body disappeared at the same time, and a large number of star nuclear sources in the former cabin were moved out and received the immortal world of Ye Xuan.

Of course, as the energy needed to swallow, Ye Xuan deliberately left a cubic meter of the five-level red star nuclear source, how should it be enough.

After a short while, the system's tone sounded again: "Hey, the fusion energy is captured! Three integrations start! Progress 1..."

At this point, Ye Xuan was completely relieved. He originally planned to check with the system whether the immortal star super-brain fragments could be used immediately, and activate the system's star-level communication system, but at the moment there has been a vast land. The Tianhe Star Auction Center is located near the coast and is about to arrive.

Therefore, Ye Xuan can only temporarily put the matter down, and move his body to shape the body, and quickly fall toward the central mainland of the Tianhe Star in front!

Compared with the ocean area, the land of Tianhe is more prosperous and lively, with huge buildings, even the most inconspicuous ones have hundreds of layers. A large number of shuttles are interwoven in the low sky, which is like a galaxy. .

However, in an area near the edge of the sea, there is a huge castle-like building that looks isolated and awkward. There are few other buildings in the surrounding area. However, the large-scale commercial shuttle is everywhere. Yes, looking at it at a glance, the whole area is like a special holiday resort.

This castle-style large single building is the Tianhe Auction Center, the only auction agency affiliated to Tianhe Star, a large indoor venue with huge space and massive seats.

Ye Xuan had no intention of traveling outside the castle. When he fell, he went directly to the east gate of the auction center. After passing the mark on the entrance and verifying his body, he walked in...
