

## The Game 1101

### [Chapter 1101 We Can Only Rely On The Pet Merchant](#)

The two of them were chatting when the Secretary walked in and handed them a document.

When the two of them saw the document, their faces turned even uglier. It was a prevention document targeted at animals, requiring all kinds of sick animals to be quarantined.

In other words, this situation didn't only happen in your city. The animals in other places were also having problems.

Linlin Manor.

Qin Lin had just returned to his office when Zhao moyin came to him in a hurry. "Hubby, I've already ordered that we won't be receiving any visitors today. How are wangcai and the rest doing?"

Qin Lin frowned. We don't know what's going on yet. The veterinarians haven't found anything yet. There are also animals in the ranch that have the same condition.

Zhao moqian took out his phone, opened a news video, and handed it to Qin Lin. It's not just our Manor. It's happening all over the country. Many animals have the same disease.

Qin Lin took the news and read it. It was indeed about animal diseases.

As you can see, the new pet hospitals in the city are already full. In addition, many owners have discovered that their furry children have suddenly fallen ill. They are lying on the ground powerlessly and are burning hot. So far, the cause of the illness is still unknown. So far, animals all over the country have been found to have related diseases, hehe.

Qin Lin knew that the situation was serious when he saw the news. He thought that this only happened to his farm. He didn't expect that the same thing was happening all over the country.

This was obviously bad news.

No matter what kind of illness it was, it came in waves. Furthermore, it was a National illness, so it couldn't be more serious.

Qin Lin scrolled through a few more videos and found that there were indeed many videos about this illness on the internet.

I have four dogs. One of them was sick yesterday and I sent it to the pet Hospital. But when I woke up this morning, the other three were also sick. The pet Hospital can't fit them anymore. Can someone tell me what to do? " one of the owners of the pet dog said helplessly.

"I just invested in this year's Ranch, and I even bought cow sperm from Linlin Ranch. Who knew that so many cows had problems since yesterday? no medicine was used." A rancher was helplessly asking for help on his farm.

Several videos were posted by pet owners and breeders from all over the country.

After scrolling through a few more videos, Qin Lin saw an official video posted by the Animal Control Department:

" a serious animal-transmitted disease has suddenly appeared throughout the country. the current situation is unknown. we only know that this disease will lurk in animals 'bodies for a month. animal quarantine will be carried out in various places. i hope that everyone will cooperate actively. in addition, this disease has not been discovered to be harmful to humans for the time being, so everyone can rest assured! "

Qin Lin's frown deepened when he saw this. This meant that the situation was more serious than he had thought. Fortunately, this infectious disease was not harmful to humans.

Otherwise, their villa would have received so many tourists every day, and who knew how many tourists they had received in a month.

At this moment.

The internet was also in an uproar.

No one had expected such a thing to happen.

especially those who had pets or were breeding livestock, all of them were on guard.

Although the illness wouldn't cause harm to people, which pet hadn't been raised by its owner for a long time? they already had feelings for it.

Moreover, farming was the livelihood of the family. If the animals were infected, there was no way to know what to do.

...

Qin Lin put away his phone and immediately said to Zhao mochen, Moke, I think I've read about this similar illness in a medical book. I'll study it and see if I can make any medicine.

After that, he walked toward his office.

In this situation, he could only count on the pet merchant in the game.

Pet merchants sold all kinds of potions to treat animals.

However, when he took out the medicine, there had to be a source. He could only blame it on the medical book and push it to a Chinese medicine recipe.

Back in the office, Qin Lin looked at the virtual screen in his mind and controlled his character to go to the pet merchant's place.

Clicking on the pet merchant, a list of pet names such as penguins and seals appeared. Scrolling down, he saw all kinds of potions that could heal pets.

The first was the familiar pet healing needle.

The pet healing needle could heal injured pets.

Once, red hair asked for help. A pregnant squirrel was injured, and it was cured with a pet treatment needle.

However, the pet healing needle could only heal injuries.

After that, there was pet healing needle No. 02, pet healing needle No. 03, pet healing needle No. 04.

Each healing potion had a number and had different effects. They could cure all kinds of pet diseases.

A moment later, Qin Lin locked onto one of the pet potions. Pet treatment needle No. 6.

Pet treatment needle No. 6 could cure all kinds of pet infectious diseases.

[ do you want to buy pet healing needle No. 6? Who was it? [ no? ]

Qin Lin chose "yes" and bought five injections in one go. He would treat wangcai, snowy, red hair, Xiaowu, and xiaobao first, and then he would treat the other animals on the farm.

After purchasing pet treatment needle No. 6.

Qin Lin controlled the game character to return to the farm, then locked the door and entered the game with a thought.

Then, he saw the remark of pet treatment needle No. 6:

pet healing needle No. 6: heal "

[ this is a special treatment needle used for pets. It can treat infectious diseases of pets and is extremely effective! ]

#### [Chapter 1102 We Can Only Rely On The Pet Merchant](#)

Qin Lin took the pet treatment needle No. 6 and exited the game with a thought.

back in the office, he tore off the symbol on the treatment needle, then returned to the manor to put it on for a while before leaving for the veterinary department.

Wang Cai, Xiao Xue, Chi Mao, Xiao Wu and Xiao Bao had special positions. They were not isolated like other infected animals, but were arranged to be in the special treatment room of the veterinary Department.

The situation of five was obviously more serious.

"Wuwuwu!" Wangcai looked at its master, like a very wronged child, and called out to Qin Lin weakly.

"Master, it's uncomfortable. Xiao Wu is very uncomfortable." Xiao Wu's voice was somewhat like a child's cry.

" chairman qin, their condition is getting worse. we've tried all kinds of special drugs, but they're useless.

" When Zhang Guizhu saw Qin Lin coming, she hurriedly reported, " "There's no way we can solve this problem with the current capabilities of our Ranch. We can only wait for news from the Animal Control Department."

qin lin took out the pet healing potion no. 6 and handed it to zhang guizhu, " "Let them try this potion."

Zhang Guizhu was obviously stunned. She also remembered that her boss had also taken out a medicine to treat the squirrel.

At that time, the little squirrel's condition was also helpless. It was almost dead, but the medicine quickly cured it.

She didn't dare to delay. After taking the treatment needles, she went forward and injected it into wangcai and the rest.

After the injection, Zhang Guizhu said to the veterinarian next to her, " "Doctor Lin, please keep an eye on wangcai and the rest."

"Alright!" Doctor Lin replied immediately.

However, what Zhang Guizhu and doctor Lin didn't expect was that not long after, they saw wangcai and the rest, who were originally lying on the ground, get up.

Zhang Guizhu immediately informed Qin Lin.

Qin Lin naturally knew that it was the effect of pet treatment needle No. 6. When he returned inside, doctor Lin reported with a face full of surprise, " "The body temperature of Wang Cai and the rest is dropping rapidly."

This was definitely good news.

Zhang Guizhu was even more surprised. This was the second time her boss had taken out such a magical medicine.

"wuwuwu!" Wang Cai's voice was heard and it looked at Qin Lin with a pitiful look.

I'm hungry. Let's eat something. I'm hungry! Xiao Wu also flapped her wings and called out.

Qin Lin smiled and immediately asked someone to bring Linlin's pet food. He fed a few of them. As long as they could eat, there would be no problem.

Sure enough, at night, wangcai and the rest were completely fine. The things produced by the game were indeed the most trustworthy.

However, Zhao moyin heaved a sigh of relief when Qin Lin brought wangcai and the rest back to the manor.

She was very worried about Wang Cai and the rest.

pet treatment needle no. 6 was effective for the disease, so qin lin went back to his office. he had to treat the animals on the farm, but before that, he had to think about how to make the medicine appear in a reasonable way.

If he wanted to give it to a Chinese medicine secret technique, he would need a formula.

As he thought about it, he controlled his game character to go to the pet merchant to buy pet treatment needle No. 6. Then, he entered the game to take out the medicine and went straight to Linlin's laboratory.

He had to first test the composition of the medicine, and then find a way to come up with the formula.

At the same time, the internet was in an uproar because of the animal's illness.

this was because the laboratories had announced the results of the examination of the disease one after another:

our Kageyama laboratory is conducting research on this sudden animal illness and has unexpectedly discovered that there is human intervention in the virus gene, "

our Tianyuan animal disease Research Association has conducted special Disease Research and has speculated that this animal disease has similar characteristics to the warmer coagulopathy virus in animals. The same animal is weak all over and has a high temperature fever. At a certain level, it will die from blood coagulation.

"If it is confirmed, it would be a very bad thing. This is because the warmer coagulopathy virus has not been completely conquered yet, and there is no complete treatment for the illness!"

The heated coagulopathy virus was the cause of the internet's chaos because of this term. Some people had explained that this virus was a type of plague.

In the 1920s, the number of certain animals soared to 10 billion, but because of this disease, these species went from a terrifying number to the extent of extinction.

Moreover, according to the records, every time this disease appeared, it would kill many animals. Moreover, there would be different diseases each time.

If it was this disease, it would be absolutely terrible. There was almost no feasible treatment for the infected animals now, and they could only wait for death.

[Chapter 1103 496! The Game's Products Can't Be Cracked!](#)

A day passed, and the storm on the internet became even bigger.

This time, the issue of the animal disease certificate had become the most concerned issue on the internet.

Even the ordinary people were worried, not to mention the pet owners and farmers.

After the incident, no one dared to eat meat anymore, afraid that it would affect them.

It could be said that the situation was getting worse.

The latest news and research on the disease were also emerging endlessly on the internet.

according to the latest research progress, we can confirm that the animal disease this time is the mutated high-temperature coagulopathy virus. The disease will first make the animal weak and hot. When it is serious, it will cause coagulopathy, and then irreversible blood failure.

however, we also discovered that the disease only affected domestic and domesticated animals. It had no effect on wild animals.

"After our experiments, we found that wild animals are indeed immune to this high-temperature coagulopathy. We are still studying the specific reasons, and we hope to find a solution from it!"

This was undoubtedly bad news.

Infected animals would die from blood failure, but there was no treatment at the moment.

Did this mean that those infected pets and raised animals would only die?

One could only imagine the feelings of those who raised pets!

Which one of them didn't treat their pets as family?

Who wouldn't be sad when their loved ones were about to die?

Moreover, many pet owners were isolated as soon as the news came out.

People would always seek advantages and avoid disadvantages.

Even though it had been proven that the illness was not harmful to people, everyone would still be worried.

who knew if there would be a "what if"?

This was a terrible situation.

While the internet was abuzz, some people were already gloating.

Herbal country (I'm not allowed to use any small countries, please understand!) In a cattle farm, yagyama eiro was smiling as he read the news from that country.

Because the Wagyu cows had been stolen by that country and were wantonly spread, he naturally paid attention to all the news about the Wagyu cows in that country.

As long as there was any related news, his assistant would inform him immediately.

therefore, when his assistant saw the news, he immediately told him.

This was definitely great news for yagyoshan Yoshihiro.

The Wagyu Bulls were their national treasures. They were the beliefs of the president of the Wagyu Association. They were also loyal to his career and mission.

for this business, he was willing to give up everything.

Therefore, he became the president of the Association.

What that country had done to kazufuru made him hate them to the core.

Now that such an animal disease had appeared in that country, it was definitely a punishment from the gods of Takama-ga-hara.

This kind of almost incurable illness could not be controlled.

The kazufuru that the other party had deliberately stolen from them would also die in an instant.

At that time, the advanced Wagyu and the advanced full snow Wagyu would still be exclusive to them.

their national treasure was still a national treasure. it was not something that others could trample on or snatch away.

They wanted to trample on their national treasure. Wasn't this retribution?

The more he thought about it, the happier yagushan Yoshihiro smiled.

But at this moment, his assistant came in in a panic and said, " Mr. Yagyama Yoshihiro, bad news, bad news. Many of the cows in our Ranch have the same animal diseases as those in that country.

they're lying on the ground limply, and their bodies are burning. I've asked around, and it seems like the same thing happened to other cattle farms a long time ago, but they didn't care. It seems like the news is going to spread soon.

"What?" Yagyama Yoshihiro's smiling face instantly froze, and he stood up in disbelief.

A bolt from the blue had suddenly struck him, and he wasn't prepared for it at all.

Yagyama Yoshihiro hurriedly got up and rushed to his farm.

He had seen the news of that country and knew how serious the animal's illness was.

Soon, he arrived at the farm and saw the Wagyu cows that had been isolated.

As expected, they were all lying on the ground weakly with their tongues out.

Moreover, when she reached out to touch it, her body was burning.

"How did this happen?" Yagyama Yoshihiro fell to the ground.

he was still gloating just now and did not think that the disaster had already befallen him.

at the same time.

The other countries that were watching the show also discovered the same animal disease.

In fact, when the symptoms were revealed, they were already very serious.

The reason why the news had only come out now was that it had been suppressed by others before. It was not that no one had mentioned it.

The person-in-charge didn't want to solve the problem, but to solve the problem.

This was interesting.

...

When Qin Lin arrived at Linlin's laboratory, he found that the laboratory was also broadcasting the news.

This animal disease was widespread, and people from all over the country must be paying attention to it.

It was just that Linlin's laboratory was not good at this area of research. Otherwise, it would have already done research on this disease like other laboratories.

Why were there experimental announcements from relevant laboratories on the internet?

They were competing.

This was a chance to prove his laboratory.

Whoever could be the first to cure this illness would be the time to declare their strength.

At that time, it would represent a huge reputation, status, and even money.

When Qin Lin arrived, the news was playing an official notice:

our Animal Control Department has conducted research with many laboratories and confirmed that this high-temperature coagulosis is only harmful to animals and not to humans. There is no need to panic.

#### [Chapter 1104 The Game's Products Can't Be Cracked At All!](#)

"However, this virus can be carried by human contact. As the incubation period of the hyperthermal coagulopathy virus is as high as half a month, it is hoped that people who come into contact with the infected animals will not come into contact with other animals. They should also disinfect it well to avoid transmission."

This news was bad news for those who kept a few pets.

They couldn't avoid contact with other animals.

They didn't even know that they had the virus.

In other words, they had inadvertently exposed other pets and raised animals to the virus.

Who could stand this kind of thing?

It could be said that the people on the internet were even more anxious.

If a treatment plan could not be produced in time, most of the domestic animals would not survive.

Li Kai walked out and saw Qin Lin. He asked with concern, " "Brother Qin, how's the situation at your farm?"

Qin Lin sighed. the situation is not good. According to the news, it means that all the animals in the farm have been infected by the virus. We just have to wait and see when it will attack.

" right now, i can only think of a way to make a medicine that can cure this disease as soon as possible. otherwise, it will be very troublesome. "

As he spoke, Qin Lin quickly walked into a laboratory.

Li Kai, on the other hand, was stunned.

He also knew that the only way to solve this problem was to find a medicine that could cure this disease.

But what does old Brother Qin mean by this? Why did he look like he wanted to make the medicine himself?

How was that possible?

After all, the high-temperature coagulopathy virus had appeared so many times, yet it had not been conquered or resolved.

Moreover, each time, there would be a difference.

Those laboratories might not be able to solve the problem in a short time.

The treatment for this illness might be the same as the previous few times. When the animals were almost dead from the infection, the illness would pass by itself.

It was just that the price and impact of this was too great.

Qin Lin, on the other hand, had already entered the laboratory. Because of the knowledge he had learned from the mysterious stone Book before, he was quite familiar with the testing equipment.

Moreover, it was not a problem to test the drugs other than plants.

After all, potions were mostly made with medicinal materials, which were also a kind of plant. Therefore, he tested it with ease.

Qin Lin turned on pet treatment needle No. 6 and began to test it.

It didn't take long for him to detect three substances.

These three substances were the characteristics and States of medicinal materials.

It was just that these three substances needed to be verified as to what kind of medicinal herbs they were produced from. If there was data to compare, it would be faster.

Li Kai came in and looked at Qin Lin, who was seriously examining it, and his suspicions grew.

Could it be that Brother Qin really wants to solve the problem of the hemorrhaging virus?

However, what was old Brother Qin testing?

"Brother Qin, do you need any help?" he asked curiously.

When Qin Lin saw Li Kai, he didn't stand on ceremony and said, " "Old brother Li, you can help me test this thing. I've already detected three kinds of substances, and I need to compare the information and data."

When Li Kai heard this, he was even more curious and went forward to ask, " "Old Brother Qin, what is this test about?"

"It's a special ancient medicine. I want to test the medicinal ingredients in it. It might be useful," Qin Lin made up another story.

"It's effective against the high-temperature coagulopathy virus?" Li Kai asked again.

Qin Lin continued to talk nonsense. I'm not sure yet. I'll have to test the ingredients first. Then, I'll see if there's anything useful about the medicinal properties and the ratio of the ingredients!

"That means we should test the ingredients first." Li Kai was even more certain now that his brother Li really wanted to get rid of the high-temperature coagulosis virus.

However, he didn't ask much. After all, he didn't know much about Chinese medicine. Brother Qin was an expert in Chinese medicine.

he knew that the Chinese medical practitioners recruited by the Chinese Academy of Sciences from all over the world were no match for Qin Mo even if they worked together to crack ancient Chinese medicine recipes.

however, the coagulopathy virus was not that easy to cure.

If it was that easy, the virus would have appeared so many times and been researched by so many laboratories. The problem would have been solved long ago.

naturally, if brother Qin really used Chinese medicine to solve this problem, it would be fun.

It would probably embarrass all the laboratories at home and abroad.

Soon, with Li Kai's help, Qin Lin was able to easily obtain a medicinal ingredient after comparing the data and data from Lin Lin's laboratory. Green cattail yellow.

Cattail leaves had the effect of stopping blood flow and removing blood stasis. They were a commonly used herb, and green cattail leaves were a type of cattail leaves.

Very quickly, the latter two substances were also detected. Jing Tian and Di Yu!

With Li Kai's help, Qin Lin managed to find 17 other herbs, including crane grass, purple bamboo, stove heart grass, Whiteley, and Chinese scholar tree.

It could be said that the progress was smooth.

Qin Lin even started to have the illusion that it wasn't that difficult to test the products of this game.

however, reality immediately gave him a tight slap.

After that, he and Li Kai detected seven more substances. These seven substances were a compound component, and they were multi-compound.

Qin Lin and Li Kai found a compound component to test, but they didn't know where to start. They couldn't detect it at all.

If this was the case for just one type, there was no need to mention seven types.

Moreover, Linlin's laboratory didn't have any data or information on this kind of composite material.

[Chapter 1105 496! The Game's Products Can't Be Cracked!](#)

There was no relevant data or information on the internet, which meant that the laboratories in the outside world had never released this substance.

As expected, the game was still your game.

I'll let you show off for a while, and then I'll give you a ruthless and unsolvable question.

ask Minister Lu, " Li Kai suggested. the Chinese Academy of Sciences 'research on medicine and the data collected on the composition of related substances are incomparable to the outside world. Maybe we can find something.

Qin Lin nodded and immediately called Minister Lu of the Chinese Academy of Sciences.

On the other side.

Minister Lu was also in a terrible fix.

When the animal's disease appeared, the Chinese Academy of Sciences 'medical research team went all out to test and study it. However, the high-temperature coagulosis virus was not so easy to solve.

Or perhaps, just like before, when a large number of animals died and the virus had no way to spread, there might be no results until he disappeared.

However, this time, it was even stranger and more serious than before. There were too many species of animals this time. The previous records only targeted one or two special animals.

Now, even domestic animals could be infected, and this situation had been discovered all over the world.

In the current situation, whoever could find a solution first would have the initiative in this matter.

The phone rang. Seeing that it was Qin Lin's number, Minister Lu picked it up immediately. "Boss Qin, how's your farm doing?"

"It's a little bad." Qin Lin said and went straight to the point. director Lu, I have some data and information on the compound of several medicinal materials that need to be compared. I hope you can open up the relevant data and information to our Linlin laboratory.

minister lu was stunned and asked subconsciously, " "Is it about animal diseases?"

Qin Lin started to make up stories again. Minister Lu, I have a Chinese medicine secret prescription that is effective for this disease, but the person who made it is not here, so I don't know the formula. I can only test it, but I can't find the data and information of several compound ingredients at all, so I can only ask you for help.

"It's true." Minister Lu couldn't hide the excitement on his face.

he was afraid that this illness would be incurable like the previous ones, but this was undoubtedly very good news.

This animal disease had appeared in every country, and it was very urgent.

If they had a solution, he knew what that meant.

"No problem, boss Qin." Minister Lu agreed decisively and then said with a pleading tone, " "Also, can you please give us a copy of this drug and the relevant information?"

He did not doubt Qin Lin's words.

After all, the Chinese Academy of Sciences had long known that boss Qin had learned Chinese medicine from a senior Chinese medicine practitioner.

The other party's Traditional Chinese Medicine skills and brewing techniques were also taught by the old senior.

The old man had even left many decades-old and even centuries-old wines for boss Qin.

this medicine might have been left behind by the old senior, but without the formula, boss qin could only test the ingredients himself to crack it.

The reason why he made this request was naturally because he wanted to organize a group of people to carry out the test together.

Their testing power was better than Linlin's laboratory, right?

Now, the sooner they found a solution, the better.

Obviously, sometimes, the things in one's head would be taken more and more seriously.

"That's no problem." Qin Lin also agreed to Minister Lu's request.

The drug had not been cracked yet. Even if it was cracked, it would definitely need to be promoted by the Chinese Academy of Sciences in order to be solved as quickly as possible.

"Boss Qin, thank you so much." Minister Lu thanked him and hung up the phone. He began to make arrangements.

It didn't take long for the Linlin laboratory to receive the information and data share from the Chinese Academy of Sciences.

At the same time.

Ma Hong also went to the Chinese Academy of Sciences. It was Minister Lu who asked him to send the drug, Qin Lin's test results, and the composite material back.

Qin Lin and Li Kai also immediately compared the seven compounds with the data from the Chinese Academy of Sciences.

But in the end, he realized that none of them matched.

In other words, these seven composite materials had never appeared before. They were a new type of composite material that had been discovered.

this was definitely not good news.

If it was a newly discovered compatible material, it meant that they had to start from the beginning.

However, they had tried, but they had no idea how to test for these compatible substances. It was too complicated.

"Old Brother Qin, this won't do. I don't know how long it'll take to decipher these seven substances." Li Kai's brows furrowed.

Qin Lin nodded. After all, it was a product of the game. If it was so easy to crack, the things he had taken out before would have been cracked by others long ago.

Therefore, such a test was indeed not feasible.

He had thought of another method that might work.

If even this method didn't work, then there was really no other way.

Similarly, after the Chinese Academy of Sciences received the items, they immediately organized people to start testing, especially the seven composite materials found by Qin Lin and Li Kai.

But soon, the people from the Chinese Academy of Sciences were shocked to find that it was difficult for them to find these seven composite materials. It was impossible to detect them in a short time.

The two academicians in charge of the test found Minister Lu immediately.

"How's the situation?" Minister Lu hurriedly asked.

Those seven composite materials are very complicated," an academician immediately said. It's the first time I've seen something so difficult to work on.

"There's no way to test it?" Minister Lu asked again.

Another academician said, "It's not that there's no way to test it. It's just that there's not enough time. To completely test out these seven composite materials, I'm afraid it will take years and months.

"How did this happen?" Minister Lu couldn't help but sigh.

They were all suspicious that this was really a medicine made with a Traditional Chinese Medicine recipe.

Was the composition of Chinese medicine so complicated?

It seemed that they did not have a deep understanding of Chinese medicine.

[Chapter 1106 Dr. Dott's BUG Is Actually Targeting A Cheater?](#)

No matter how difficult it was, Minister Lu knew that he had to do his best. So, he also ordered his two academicians, "Academicians, we have to do our best no matter what."

Boss Qin must be undergoing the test now," he added. We have so much information to help us, so we can't lose to him, can we?"

Obviously, Minister Lu was trying to encourage the two academicians.

After all, if Boss Qin's test results were out first, he would indeed look bad.

The two academicians nodded.

He really couldn't lose to that young man.

However, it would take a long time to determine the winner.

They believed that boss Qin wouldn't be able to solve these seven composite materials in a short time.

If they were to be easily taken care of by the other party, not only would they be useless, but the people in the laboratory who had studied the high-temperature coagulopathy virus would also be useless.

While the two academicians were thinking, Minister Lu's Secretary hurriedly ran in and said, " Minister Lu, look at this news. It's against us.

Minister Lu took the phone in confusion, and the two academicians also came forward.

There was an international news report on the phone:

due to the outbreak of the feverish disease, the official laboratories of several Western countries have proposed to join forces to discuss and study the problem of this disease. In addition to the Western countries, they have also invited laboratories from Asian countries, including those from the herbal plaster country and the Korean country, Huahua!

"What do they mean by this? what do you want to do?" Minister Lu's face turned gloomy after reading the news.

There was no problem in working together to study this illness.

After all, this illness was too serious. It had appeared a few times in the past, and no one had been able to find a solution.

Moreover, every time this symptom appeared, it would cause the extinction of some species of animals.

This time, the situation was so serious that almost all the animals raised at home would be infected.

If they worked together and concentrated their strength, they might really be able to solve the problem of this illness.

However, the key was that they invited laboratories from all over the West, and even those from Asian countries, big and small. They were the only ones who were ignored.

Wasn't this a clear target that everyone could see?

"He's trying to isolate us on this matter."

"He really won't let go of any opportunity."

The two academicians were also annoyed.

The mood of the three people became even worse. Who could be in a good mood when faced with such a despicable matter?

...

Linlin's laboratory.

Qin Lin didn't know about this. He and Li Kai were still busy in the laboratory. One could see that there were more researchers in the laboratory.

After Li Kai realized that he and Qin Lin had no idea where to start with the seven composite materials, he called over the other researchers in Linlin's laboratory to work together with them.

The researchers were then divided into small groups and distributed the seven composite materials.

He was also stuck with these composite materials.

However, the researchers were all frowning.

For them, there was no way to start with these composite materials.

However, they were all extremely serious. They were participating in professor Li Kai and the boss 'experiment again.

qin lin was already typing in front of a computer.

He was writing down recipes one by one.

These formulas were all based on the dozen or so medicinal materials that he had previously tested as supplementary medicinal materials, and then he blindly filled in the formulas of the main medicinal materials.

He was guessing the formula for healing potion No. 06.

Naturally, he knew that these formulas were not the real formula for healing potion No. 06.

the reason why he wrote it this way was because he thought of a BUG in the game.

That was, Dr. Dott could analyze and modify the function of the formula.

Even if it took years to detect the seven kinds of composite material rods, it would be too late.

He might as well take advantage of doctor Dott's BUG. If he was lucky, he would have a greater chance of getting the formula.

He made a random guess and wrote down a stack of formulas, then left Linlin's laboratory with them.

When he returned to Linlin Manor, Zhao moyin looked for him with an ugly expression. "Honey, the farm is in a bad condition. More and more animals are infected. Also, the young ducklings in the dagery have died. The lion cubs are also infected."

"I know." Qin Lin heard that the little lion was also infected and rushed to the office.

The little lion was different from the other animals in the villa.

This was also his bound pet.

Although it was a horse and could only stay in the ranch, unlike wangcai and the others, it was different from other animals.

Therefore, the little lion had to be treated first.

Qin Lin entered the office and locked the door. He controlled his game character to buy another batch of healing agent No. 6.

after he exited the game, he tore off the logo of pet treatment potion no. 06, put it in a bag, and hurried to the horse racing field of linlin ranch.

Because of the lion's special nature, Zhang Guizhu also brought a veterinarian to check on the lion.

Seeing that Qin Lin had arrived, Zhang Guizhu greeted him as usual, ""chairman qin."

"hiss hiss ~"

The little lion's cry rang out at the same time.

When it saw Qin Lin, it struggled to get up and walked to Qin Lin with light steps, rubbing its head against him.

This was also a characteristic of horses.

other than dogs, horses were the most loyal animals to humans.

[Chapter 1107 Dr. Dott's BUG Is Actually Targeting A Cheater? 2](#)

Moreover, horses could distinguish their owners from their voices. They were also very smart, with the highest IQ reaching the level of a 10-year-old child.

In the movies, many generals were surrounded, and their horses would suddenly rush to their rescue. This was because of their loyalty, but also because of their intelligence.

The little lion was naturally very intelligent. Now that it was sick, it was as uncomfortable as a sick child. Children knew how to find their parents to comfort them, so the little lion naturally wanted to find its master.

Qin Lin, who was being rubbed by the little lion, also reached out to stroke its head. His actions obviously made it feel at ease.

At the same time, he could feel its burning body.

"How's the little lion?" Qin Lin immediately asked.

Zhang Guizhu said, " I've just confirmed it. It's indeed an infection, but it just started acting up, so it's not too serious. However, the other small animals in the villa are a little troublesome. The Ducks have begun to die, and those squirrels may not be able to hold on for long. If there's no solution, the situation will be very bad.

Qin Lin handed the pet healing potion No. 6 to Zhang Guizhu and said, " give the lion cubs an injection first, then give the squirrels an injection. As for the rest, give the cows, happy elephants, fitness pigs, and white peacocks that can't hold on any longer.

He had specially given instructions to the squirrels.

Although the little Chow Chows weren't from the game, they had made great contributions to the Youli villa. They had been there for a long time and were animals that worked for the villa.

As for the animals from the other games, they could be brought out from the game repeatedly, so he was not in a hurry to treat them. Otherwise, if all of them were cured, it would attract attention.

he had yet to produce the potion.

Therefore, if he couldn't hold on any longer, he just needed to heal him.

Zhang Guizhu was happy to see the potions.

She knew what it was, so she immediately took out one and began to inject it into the little lion.

"Boss, there are a lot of infected animals in the ranch. I'm sure this medicine is not enough," she asked Qin Lin after she was done.

do as I say for now. There's no way to mass produce this potion for the time being. Qin Lin could only explain casually.

However, he had to get the potion ready as soon as possible. Otherwise, he couldn't just watch all the animals in the ranch die.

After all, it was very troublesome to bring an animal out of the game and replace it with a fake one.

Qin Lin saw that Zhang Guizhu had finished injecting the medicine into the little lion, so he also instructed her and led the little lion out of the race track.

there were so many animals infected on the ranch, and even a few horses on the racing track were infected. if the little lion continued to stay on the ranch, it would soon be infected again even after the injection and treatment.

Qin Lin led the little lion out of the ranch.

The little lion followed behind him obediently. After the injection, it took effect very quickly, and it didn't walk unsteadily as it did on the race track.

Qin Lin brought the little lion back to the manor. Wangcai and snowy, who had been cured and could play now, ran over and surrounded the little lion, barking curiously.

"hiss hiss ~" The little lion was also calling out in response.

A moment later, Xiao Wu also flew out with Xiao Bao, landing on the little lion's back.

"What a handsome guy!" Xiao Wu was clearly praising the little lion.

Qin Lin called Gao Yaoyao over and asked her to take care of the little lion. Then, he rushed back to his office.

as soon as he entered the office, he locked the door and took out the stack of formulas he had. he brought a thought into the game.

When he exited the game and looked at his game character on the screen in his mind, there was a stack of recipes in his backpack.

He quickly controlled his game character to head to ore town, found doctor Dott, and chose to repair and analyze the formula!

He placed a formula into the box to be analyzed, and a notification appeared.

[ do you want to analyze and crack the current formula? who was it? [ no? ]

Qin Lin directly chose "yes."

A moment later, he received the prompt of the analysis results.

[ it's a pity that the formula you deciphered has no value at all! ]

Qin Lin had expected this result. If he could succeed by randomly writing a formula, then the medicine produced by the game would be too worthless.

He immediately inserted the second analysis.

[ i'm sorry, but your recipe is trash. it has no analytical value! ]

...

[ I'm very sorry, Yingluo ]

...

[ it's a pity, Yingluo ]

He clicked on the [ Analysis ] page continuously, but none of the formulas had any effect. Even at the last page, the prompt that appeared was still very regretful.

Sure enough, it was not easy to come up with a formula based on the names of a few Chinese medicinal herbs. He could only rely on his luck.

qin lin remembered the names of those herbs and continued to write down the formula in his office.

After spending half a day, he finally wrote down another stack of formulas!

Moreover, writing blindly would also use up one's brain. If you don't believe me, you can write an 800-word essay blindly.

Qin Lin controlled the game character to return to the farm and brought the scribbled recipes back into the game. He then exited and controlled the game character to click on the repair and analyze the recipes one by one!

Unfortunately, as he analyzed and restored them, none of the formulas were useful.

"Al!" Qin Lin sighed helplessly.

He could only silently waste his brain and start to make up a formula!

For the next few days, he spent most of his time in his office.

He wrote down the recipe blindly every day, but the notifications he got were always filled with regret and apology.

This was a blow to one's passion.

On the fourth day, when he placed a recipe in the box for repair and analysis, he finally received a surprising notification:

[ huh? This seems to be a good recipe, please wait a moment ]

.....

in the past few days, the internet had been abuzz.

The spread of animal diseases had also increased.

The virus that had been lurking broke out, and more pets and domesticated animals were confirmed to be infected.

a large number of animals in linlin ranch suffered from the disease.

It was the same in other places.

This was especially true in foreign countries. For some unknown reason, the outbreak of the disease was even more serious and difficult to control. There were even large numbers of animal deaths in some countries.

This also made the relevant laboratories around the world even more urgent.

In a laboratory in America.

the head of the laboratory, bowens, hung up a phone call.

The call was naturally from a Big Shot, asking about the matter he had been entrusted with.

Bowens was a world-famous expert in animal diseases, and he had been studying the high-temperature blood clot virus for a long time.

After hanging up the phone, Bowen found his Secretary and asked, " how's the joint research proposal going? did the invited countries agree? "

the secretary hurriedly explained, " mr. bowenz, the proposal has been passed, and the invited countries have agreed to come. after all, you're the best at this kind of research in the world, and the animal diseases this time are more serious than we thought. there are already large-scale animal deaths in some places, and they also hope to work together to make a name for themselves. "

"are they all willing to sign the alliance agreement?" bowens asked again.

"yes, i'm willing to do both." the secretary nodded.

"That's good." Bowens smiled. As long as they signed it, they wouldn't be able to give the technology to that Eastern country even if the research was successful.

This was also the reason why they had isolated the eastern country.

Under his leadership, the laboratories of various countries would definitely have a better chance of developing a treatment plan than that Eastern country.

Once they successfully obtained it, the eastern country would have to exchange it for the treatment method.

The other party had punished many of their techniques, such as the purification grass and the Linlin leisure tea.

As long as they followed the plan, there was a high chance that the other party would exchange the technology for it.

After all, that Eastern country wouldn't want all the animals in their country to die, right?

If they were not willing, they had ways to spread the news. Humans were selfish. Think about it, what would those who kept pets and farmers do?

he would force the other party to agree to the technology exchange.

This was also the purpose of the joint research.

This was also an opportunity bestowed by God.

Of course, the premise was that they had to find a way to treat it when they had no other way.

#### [Chapter 1108 The Main Herb Is Ordinary Weeds? 1](#)

[ hey, this seems to be a very good recipe. Please wait a moment. ]

Qin Lin couldn't suppress the joy on his face when he saw the notification.

For the past few days, he had been cooped up in the office, failing again and again. He had lost weight.

Now, his hard work paid off, and he had successfully made up a useful formula.

While Qin Lin was looking forward to it, the system notification sounded again.

[ congratulations, you have obtained pet healing potion no. 06 (weakened version) formula! ]

Qin Lin clenched his fists tightly when he saw the notification.

He had finally obtained a useful formula.

Although it was a weakened version, it was indeed the pet healing potion No. 6 formula.

He didn't insist on the original version. After all, it had taken so much time and effort to get the weakened version.

If he insisted on the original version, who knew how much time it would take? time was of the essence.

Qin Lin immediately controlled his game character to return to the farm. He locked the office door and entered the game with a thought.

He immediately saw the remarks of the formula:

[ pet healing potion No. 6 (weakened) formula ]

[ this is a special healing potion formula for pets. It can be used to make a weakened version of pet potion No. 06! ]

Originally, it had an extremely strong effect, but the weakened version had become very powerful.

Anyway, it was effective.

[ do you want to use pet healing potion No. 6 formula? ]

As expected, he chose yes.

Did this even need to be said?

the system would sometimes ask stupid questions.

after qin lin made his choice, the pet healing potion no. 06 (weakened version) formula turned into light spots and disappeared, then went into his mind.

the information regarding this formula instantly gushed into his mind and was deeply imprinted.

at the same time, the production technique and proficiency of this formula were also directly imprinted into his muscle memory, just like the previous formulas.

after receiving all the information regarding the recipe, qin lin immediately logged out of the game. he opened the door to his office and rushed to lin lin's laboratory.

this pet healing potion was different from ordinary chinese medicine.

This medicine was to be injected, and it required the extraction of medicinal ingredients to be combined. It was very troublesome to buy such tools outside, but the laboratory had the extraction equipment, which could be used.

Furthermore ...

There were so many animals in the ranch that he needed to use, especially the large number of youthful ducks. He couldn't extract all of them by himself, so he needed the help of the researchers in Linlin laboratory.

Qin Lin arrived at Linlin's laboratory. After the inspection, he went to the laboratory where he had tested the drug.

Inside, Li Kai and the other researchers were still fighting with the seven composite materials.

The researchers who were divided into seven groups were all very serious, but there were constant sighs. It was obvious that the test had failed.

Li Kai noticed Qin Lin's arrival and complained, " "Brother Qin, who made this potion? Was this substance meant for people to solve? No one can crack it in such a short time, okay?"

qin lin nodded and went to a computer. he wrote down the recipe in his mind and said, old brother li, get the lab to prepare these herbs. I want to make a potion and test it.

li kai was taken aback. he looked at the dozen or so medicinal ingredients that they had tested together on the computer and said, " "Old Brother Qin, you've solved it?"

After he finished speaking, his face was filled with shock.

The dozen or so medicinal ingredients were the medicinal ingredients that they had detected together. In that case, the new medicinal ingredients must be the medicinal ingredients that they could not decipher.

"Let's prepare the medicinal herbs first!" Qin Yang said.

Li Kai nodded and immediately called Shen Li.

I still have to ask Chen Li to handle this matter.

When Shen Li received the call, he did not dare to delay and went to deal with it as quickly as possible.

In the laboratory.

Li Kai looked at the ingredients on the recipe in disbelief.

The researchers also gathered around, equally shocked.

they had worked together to crack it, but it was difficult to even get a hold of those composite materials. there was no result at all.

Now that his boss had cracked it himself, he even had to obtain the complete formula?

"Old Brother Qin, how did you do it?" Li Kai couldn't help but ask for help.

some people were envious and jealous, while others were curious about the situation.

Li Kai was just curious and eager to know.

"It's all solved by Chinese medicine," Qin Lin explained.

" chinese medicine has such an ability? " Li Kai couldn't believe it.

"It's a cultural treasure with thousands of years of heritage. You know too little about Chinese medicine, brother li," Qin Lin made up a story.

The Chinese medicine doctor continued to take the blame.

When Li Kai heard this, he asked expectantly, " "Old Brother Qin, can you teach me? I'll try to crack these seven substances myself."

The other researchers also subconsciously looked at Qin Lin.

They couldn't figure it out either, and they wanted to know as well. They were all eager for knowledge.

Qin Lin turned on his computer with a smile and searched for basic Chinese medicine books, basic Chinese medicine pathology books, and basic Chinese medicine books.

There were more than ten books on Chinese medicine.

Qin Lin continued to make up a story. read these basic Chinese medicine books first and memorize them by heart. Then, I'll let you read other advanced Chinese medicine books. When you've reached a certain level, I'll tell you the method. It's too early to rush.

[Chapter 1109 498-A Weakened Version Of The Main Herb Is Ordinary Weeds?](#)

Li Kai looked at the books and tried to click on a Chinese medicine book with his mouse. He tried to read two pages and then shook his head in pain.

He couldn't take it in at all.

the other research institutes also retreated in defeat.

Chinese medicine books could be said to be the most obscure and difficult to understand books. They were also the hardest to learn.

Wasn't there a saying that if one didn't learn the basics of Chinese medicine, the older one got, the more one couldn't read.

Even if Li Kai and the others wanted to learn and read these Chinese medicine books, it would be extremely difficult.

Therefore, this was the best way for Qin Lin to shift the blame.

In any case, if one wanted to learn how to crack it, one had to at least have the ability of a senior Chinese medicine doctor.

As for those who had the ability to practice Chinese medicine, they would have to have the research ability of an academician.

There was no solution anyway.

unless you're proficient in both, don't show your curiosity.

Shen Li arrived at the laboratory in no time. He even brought the medicinal herbs that Qin Lin needed. However, he was still short of two main medicinal herbs.

"Why are you lacking two herbs?" qin lin asked.

Shen Li immediately explained,"Chairman Qin, most of the medicinal herbs you want can be bought in pharmacies. However, there are two medicinal herbs that the pharmacies don't have, and there's no place to purchase them." &Nbsp;

the owner of the pharmacy said that these are just two kinds of wild grass in the wild. They are generally not used for medicine. I can only ask manager Yu of the villa to take people to pick them. The people in the laboratory are not good at identifying them.

"What are the two herbs?" Qin Lin asked again.

"It's gray cloth grass and double sickle grass. The pharmacy owner said that they're not hard to find in the mountains in the South," Shen Li explained.

Qin Lin nodded.

It was unbelievable that two of the main ingredients in the recipe given by the system were not medicinal herbs, but common grass on the mountain.

As for whether it was true or not, he would have to wait for the two herbs to be sent over to make the potion.

Linlin Manor.

Yu Shui had already led the two people out of the villa with a small hoe and sickle.

He didn't dare to neglect the task that President Shen had entrusted to him at Linlin laboratory, so he decided to go there personally.

Although he did not belong to chief Shen, they were still part of Linlin company, so he still had to give them some face.

Besides, he often helped Linlin's laboratory test out things, so they often met.

"Old Yu, where are you going?" what's the situation? " Chen dabeí asked curiously when he saw Yu Shui. He was patrolling with a few security guards.

Yu Shui replied with a smile, " President Shen from the laboratory asked me to dig two kinds of grass from the mountain and send them to him. I'll go there myself. The laboratory needs them urgently.

When Chen dabeí heard this, he thought of something. old Yu, let me go with you. I'm free and want to climb the mountain too.

"Are you okay?" yu shui asked.

it's nothing. I'm just checking on the security. I'm done! Chen dabeí instructed the security guards to do their own things and followed Yu Shui.

Yu Shui and the others left Linlin Manor and entered the mountain that was being developed. They quickly found gray cloth grass and double sickle grass, then began to dig.

"These are just two normal types of grass, right?" Chen dabeí asked. Why did the laboratory want to dig this grass?"

Yu Shui explained, " boss Shen said what kind of potion he wanted to make. I didn't ask much. You know that there are many secrets in the laboratory.

Chen dabeí nodded and started to dig up the gray cloth grass and double sickle grass.

When there was enough, Yu Shui went down the mountain again and brought the two kinds of grass to Linlin's laboratory.

When Chen dabeí returned to Linlin villa, he took out his phone and called his wife.

"Honey, take my brother and your brother to the mountain to dig gray cloth grass and double sickle grass. You can also pay others to help you dig," he said.

A puzzled voice came from the other side of the phone."Hubby, isn't this grass just wild grass from the mountains? If it's useless, what's the point of digging it up?"

"don't worry about it, just do as i say." Chen dabeí hung up the phone.

Linlin's laboratory must have had some purpose for digging up the weeds. When he heard Yu Shui talk about making potions, he thought of the animals in the ranch.

Currently, the internet was talking about the high temperature coagulosis plague (virus is not allowed to be used, change to plague!) was so popular that everyone knew about it.

Hence, Linlin's laboratory might have been used to make potions to cure the plague.

If that was the case, then the originally worthless gray cloth grass and double sickle grass had some value.

That was something that the entire country, or even the entire world, would need.

Whether it was Linlin's laboratory or the government, they would definitely buy these two kinds of grass in the end. Once they sold them, they would make a fortune.

Of course, if the rules stated that he couldn't sell it, he would just hand it over directly.

Naturally, he had to send a batch of them to the laboratory for free so that the laboratory could treat the animals on the ranch first.

Qin Lin also saw the two kinds of grass very soon.

He was a little surprised because he often saw these two kinds of grass when he went up the mountain to play when he was young. They were both grass that were despised by the roadside.

However, he remembered that it wasn't called this name in his hometown. It was used in you city. Gray cloth grass and double sickle grass were scientific names in Chinese.

Now the two main ingredients of pet treatment potion No. 06 were actually these two ordinary weeds?

Qin Lin didn't think too much about it and immediately got to work with Li Kai and the others. The researchers didn't stay idle either, and they began to extract the corresponding components.

It didn't take long before a portion of the medicine that could be injected was produced. This medicine could be divided into dozens of syringes.

While Li Kai and the researchers were examining the potion, Qin Lin took the opportunity to grab a potion. He went to the toilet cubicle in the laboratory and locked the door. He entered the game with a thought and saw the properties of the potion:

"Pet healing potion No. 6 (weakened version): [ healing ]

[ this is a special healing potion for pets. Although its effect is much weaker than the original, it is still very effective in treating pet infectious diseases. ]

In other words, the potion was a success.

the two common weeds were really one of the two main ingredients of the potion.

Qin Lin also immediately called Lin Lanzi and asked her to arrange for someone to send a few infected ordinary animals from the ranch for the experiment. At the same time, he also asked her to bring Zhang Guizhu and a veterinarian to cooperate with the experiment.

Zhao moqian had already handed some matters over to Lin Lanzi, and now he was calling Lin Lanzi to make arrangements. He also expressed that he had officially confirmed Lin Lanzi's succession to Zhao moqian.

otherwise, only zhao mochen could arrange this. after all, zhang guizhu was also a department manager, and in theory, she was at the same level as lin lanzi.

Lin Lanzi naturally understood this logic and got the matter done as quickly as possible.

The infected animals were sent to the laboratory. Qin Lin asked Zhang Guizhu and the veterinarian to examine the infected animals first and record the situation. Then, they injected the new medicine into the animals.

because the effects of the potion were not as good as the ones produced by the game, the effects were not as obvious.

However, the next day, when Zhang Guizhu and the veterinarian checked the animals again, they found that the diseases of the animals had been much better.

In other words, there was no mistake in the preparation of the potion, and it was indeed effective.

qin lin saw the effect and asked li kai to continue checking for any side effects.

This was naturally just for show.

After all, he knew that there was no problem.

At the same time, he also called for Shen Li, " President Shen, the medicine is basically a success. Hurry up and purchase the medicinal herbs here. Get someone to dig gray cloth grass and double sickle grass to make the medicine. We'll treat the infected animals in the ranch first.

that's right. Shen Li nodded and said, " manager Chen of the villa has already sent a batch of gray cloth grass and double sickle grass over. It should be enough to make the medicine for the animals in the villa.

" chen dabei, how did this guy know? " even qin lin was surprised. although he knew that chen dabei was smart, it was obvious that he already knew the use of these two herbs.

However, he didn't want to probe further, because it was not necessary, and it was human nature.

didn't they say that if a person was smarter, the driver and nanny of a rich person would also be rich?

#### [Chapter 1110 A Crude Excuse? 1](#)

On the internet.

The coagulopathy incident was getting more and more serious.

Pet deaths were starting to appear.

There were also videos of pets dying and their owners crying their hearts out on the internet.

That kind of situation was heart-wrenching.

Especially when he saw a video of a little girl crying while hugging a kitten that she spent so much time with.

Emotional people really couldn't be seen.

Moreover, during this period of time, almost no one dared to eat meat, which made many people even more miserable.

For Linlin Manor, it was a ray of light.

this was because linlin's laboratory had already developed a medicine that could cure the animals in linlin's ranch in the shortest time possible.

Moreover, after the injection, the animals in Linlin Ranch had obviously improved, which made the people in the villa and the ranch very happy.

After working in the villa and Ranch for so long, everyone naturally had feelings for those animals and did not want anything to happen to them.

The actions of the Linlin laboratory and Linlin villa naturally attracted the attention of the county.

To the county, Linlin villa was a treasure. Without Linlin villa, the situation would be unimaginable.

Because of the animal disease, Linlin villa and Linlin Ranch stopped receiving tourists. You city was visibly depressed and not as lively as it was before.

Naturally, the economy was also greatly affected.

Therefore, the county was the first to receive the news about the situation at Linlin Ranch.

sun xian asked his secretary in surprise, "Are you sure about the information?"

"Sun Xian, I know the importance of Linlin Manor and the ranch. I've been sending people to the Linlin Ranch to keep up with the latest situation," the Secretary said hurriedly.

" the people we sent saw with their own eyes that the farm's veterinary department was using a drug to treat the infected animals. the animals that were injected with the drug were obviously better. "

"that's great." When sun Xian heard this, he couldn't help but feel excited. At the same time, he said to his Secretary, " quickly call County Chen over. We'll personally go to Linlin Ranch to take a look.

The Secretary nodded and immediately went to inform Chen Li.

Chen Li's face was filled with excitement when he arrived. " sun xia, i'm checking on the animal quarantine situation in the county. i came over as soon as i heard the news. is it true? "

I don't think so. sun Xian nodded happily. but I still have to go and see for myself.

"Go, go!" Chen Li naturally agreed and immediately said.

The two of them quickly left the office and went straight to Linlin Ranch.

With their status, the security guards did not stop them. They even informed the manager, Chen dabe.

Chen dabei was the first to come out and greet him. sun Xian, Chen Xian, the boss is at the laboratory. I've already informed him.

"Manager Chen, please take us to see the animals that have been treated," sun Xian said with a smile.

"Yes." chen dabei invited them into the farm, to an isolated area.

This was the area where Qi Linlin's farm was previously infected and quarantined.

However, the animals in the area had all improved. They were either eating the dog tooth grass or playing with each other.

How did this scene look like someone who had been infected with the coagulosis plague?

"Are these all treated animals?" sun xian was surprised to see a cute happy elephant sniffing a tube of water with its nose, and then spraying it on the fitness pig behind the guardrails.

After the happy elephant finished spraying water, it even grinned and barked at the gym pig, as if it was asking something.

The gym pig grunted at the happy elephant, as if to show that it had done a good job, and started running around the railing again.

it was obvious that he had sweated a lot after working out and suddenly taking a shower. it felt good, very good.

The happy elephant used its nose to suck in another tube of water. When the fitness pig ran a few rounds, it sprayed the water on it again.

the two seemed to be having a good time.

This scene caused both sun Xian and Chen Li to be unable to hold back their laughter.

they were really in a good mood now.

He also knew why Linlin Ranch was so popular with tourists.

The animals on this farm were really interesting and intelligent.

Of course, the most important thing was that all the animals in Linlin Ranch had been cured.

In that case, the infected animals in you city could be cured. He had to discuss with boss Qin to treat the infected animals in you city first and resume normal travel in the mountain villa and ranches.

Qin Lin quickly returned from Linlin's laboratory. When he saw sun Xian and Chen Li, he immediately went to greet them.

"Boss Qin, Linlin's laboratory is the best." Sun Xian sighed with emotion as soon as they met.

He was already being modest with Qin Lin's attitude.

After all, this boss Qin was the God of Fortune of you city. Countless people in you city had become rich because of boss Qin.

Up until now, almost every family had benefited more or less from boss Qin.

Fortunately, boss Qin lived in a modern and civilized society. Otherwise, in ancient times, if one person had so many people to benefit from, even the Emperor would have found an excuse to kill him.

Once such a person encountered a great disaster, countless people would rebel with a single wave of his arm.

Moreover, with the current scale of Linlin company, if boss Qin went to any city, the mayor would have to personally receive him. The treatment wouldn't be any worse than that of blind Dong or Big Boss Ma.

Chen Li asked, "boss Qin, now that Linlin's laboratory has developed the medicine, I wonder if you can help us make the medicine so that we can cure the infected animals in your city?" Otherwise, we won't be able to recover our tourism in your city."
