

The Game 1221

[Chapter 1221 You're Really A Genius! 2](#)

They entered the ranch house.

he saw the express delivery.

it was a typical marine express delivery, but it looked more beautiful and exquisite than most of the marine express delivery boxes in reality.

Qin Lin opened the package and saw the sea cucumber eggs inside.

These sea cucumber eggs were all orange-red in a web-like structure and sticky.

He touched and grabbed some of them, and he saw the remarks of these sea cucumber eggs:

[special sea cucumber egg: grade 2]

[this is a special type of sea cucumber egg that can be used to breed special sea cucumbers!]

When Qin Lin saw the attribute note, he knew that it was a waste of his expression. He couldn't see anything now.

He immediately logged out of the game and controlled the game to bring some sea cucumber eggs to the level 2 paddy field. He wanted to see if the paddy field could cultivate this special sea cucumber.

it definitely wouldn't work in reality. who had ever seen anyone cultivate sea cucumbers in a paddy field?

However, this was a different story in the game.

After all, all the fish caught in the sea could be placed in the pond and would not die even after such a long time.

He controlled his game character to the front of a level 2 paddy field and received a notification.

[do you want to breed the current sea cucumber eggs?]

Sure enough, it was possible.

Qin Lin immediately clicked "confirm," and the sea cucumber eggs were raised in the level 2 paddy field.

after doing all this, qin lin snapped out of the game and began to look at the information of linlin's company.

...

At noon the next day, Qin Lin received another game prompt.

[the sea cucumbers you planted can be harvested!]

he looked at the screen in his mind and saw that the child had already gone to the level 2 paddy field to harvest sea cucumbers.

At the same time, Qin Lin received another notification.

[the dwarves are already harvesting mature sea cucumbers. Do you want to keep the female sea cucumber to lay eggs?]

"It can be done like this?" Qin Lin was surprised.

did this mean that he could also eat a sea cucumber every morning, lunch, and night?

would they have an endless supply of sea cucumbers in the future?

he wondered if qin feng would play football in the future. or maybe he could buy a football team to play with?

Qin Lin thought about it and chose to keep the female sea cucumber to lay eggs. Then, he locked the office door and entered the game with a thought.

at this time, the dwarf had already harvested the sea cucumbers and put them in the storage room.

Qin Lin finally saw the attributes of these sea cucumbers.

"special sea cucumber: grade 2"

[this is a special type of sea cucumber with special effects: protein +2, cignotosugar +2, kidney and essence enhancing +2, yang curing dream +2.

[special attribute: long-term cooperation with high-intensity sports training can increase physical fitness!]

Qin Lin looked at the notes. He could understand the protein +2.

Even nourishing the kidney and essence +2, healing yang dream +2, he could understand.

This was even more awesome than the quality two okra.

Qiukui was only good for the kidney and essence.

This sea cucumber also had the ability to heal yang dream +2.

Okra can only be supplemented. If there's really a problem, it should be fine after supplementing it. But this sea cucumber can cure you directly.

The sea cucumber was the real blessing for men.

However, he didn't quite understand what this '+2 sticky candy' was.

After logging out of the game and doing some research online, he found out that this was something that increased one's immunity.

For example, when a person was injured or the patient's wound was infected during surgery, this sticky candy could increase the patient's immunity and prevent this kind of infection.

this was a pretty good attribute, but it was much worse than the previous two.

The last special attribute was the first time he had seen it.

This attribute had not appeared much before.

Long-term cooperation with high-intensity training could increase physical strength, and there was no +. This seemed to mean that the effect depended on the user.

He finally understood why everyone ate sea cucumbers, one in the morning, one in the afternoon, and one in the evening. He finally understood why the national football team was so weak, but the person in the game was an international superstar.

in addition to the different attributes of the sea cucumbers in this game, it should also be related to the training of the national football team.

when it came to the training of the national football team, everyone knew that the intensity of the training was even higher than that of primary school students.

They even called it a self-created comprehensive training method.

[netizen: playful training.]

for the national football team, the linlin leisure tea couldn't save them, and the body-increasing medicinal liquid couldn't save them.

He had heard from Minister Lu that among the athletes selected from the liquid medicine experiment, only the national football team had not made much progress.

he just didn't know if this special sea cucumber would be able to save the national football team.

If this still didn't work, then they could really disband.

After all, if even a plug-in couldn't do anything about it, it couldn't be done by just changing coaches.

Qin Lin entered the game again. He took a bag of sea cucumbers out of the storage room, went to the kitchen, and gave the bag of sea cucumbers to Master Lin.

"boss, sea cucumber? This was good stuff. Cheap cultivated sea cucumbers cost 200-400 yuan per catty, and wild sea cucumbers cost 5000-10000 Yuan per catty. Master Lin opened the bag and said in surprise.

Of course, he knew about sea cucumbers and knew how to make them. However, this was the first time he had seen his boss bring them back.

qin lin naturally knew the value of sea cucumbers. moreover, the quality of his game was 2, so it was definitely better than those wild ones.

"Master Lin, please make some sea cucumbers for me at noon," he instructed.

Sea cucumbers weren't fish, and he didn't have any special cooking skills. Therefore, he wasn't as good as Master Lin when it came to cooking sea cucumbers.

"Okay, boss!" Master Lin nodded. After Qin Lin left the kitchen, he began to process the sea cucumber.

There were many ways to cook sea cucumber, and he was very good at braised sea cucumber with scallion.

This cooking method was similar to red braised with ginger, scallion, and saucy sauce.

qin lin, on the other hand, pretended to leave the manor. he took two small aquarium tanks from the villa aquarium and went to the remote warehouse to enter the game again.

He went straight to the level 2 paddy field.

There were still sea cucumbers that could lay eggs in the level 2 paddy field. He could see that those sea cucumbers were obviously more bloated than the ones he had taken out. They would be able to lay eggs soon.

He scooped up some female sea cucumbers, put them in the aquarium, and left the game.

...

At noon.

Yuan shancong returned to the manor after he was done with work at the county hospital. As the cancer treatment with tea leaves was coming to an end, he had to organize the information and was getting busier and busier.

As soon as he returned to the living room, he saw boss Qin busy with something. When he got closer, he saw boss Qin pouring sea cucumbers into the original aquarium.

"Boss Qin, are these sea cucumbers pregnant?" Yuan Shan asked in surprise.

"Academician Yuan, you can tell?" Qin Lin said with a smile.

Yuan Shan explained, " sea cucumbers are actually medical supplements. I know about them. Also, our hospital sometimes supplies sea cucumbers, and we've eaten a lot. Two years ago, I was even invited to participate in a sea cucumber cultivation technique conference.

Qin Lin didn't find this strange. After all, the national football team provided sea cucumbers every day, so what was wrong with the academicians providing them sometimes?

Since it was a medical supplement, and academician Yuan was a medical expert, it wasn't strange for him to come into contact with it.

"yi!" Yuan Shan approached and observed the sea cucumbers. Suddenly, he let out a surprised cry, "boss qin, these sea creatures seem to be a little different from the sea cucumbers i've seen before."

"it's a little different," qin lin said."it's different from the usual breed."

This was a product of the game. In the future, when it laid eggs and bred, people would definitely find out that it was different. It was better to confirm it now.

This way, academician Yuan could be a witness.

"boss qin, is this the new sea cucumber that you've specially cultivated?" yuan shan immediately came to a realization. Just like that Chinese alligator, I heard from Minister Lu that you've gained knowledge in animal genes again. It seems that you've succeeded."

"Ran ran." Qin Lin was stunned when he heard this.

If Yuan Shan didn't mention it, he would have forgotten that he had asked Minister Lu for information and data related to animal genes.

he had originally prepared this for the brachiosaurus 'bone. after all, genes could be extracted from the brachiosaurus bone, and there was a chance of breeding a docile brachiosaurus.

It was a pity that he never got the mysterious stone Book again to learn about animal genes.

He didn't expect that he was already an animal geneticist in the eyes of these people.

yuan shan looked at the female sea cucumbers and said, " boss Qin, you're a genius. You've already achieved so much in plant genetics and animal genetics. Now I know why Minister Lu is so upset every time he says that studying tourism is a waste of time.

[Chapter 1222 Professor Li Kai Has Developed A Tree? 1](#)

As Yuan Shan spoke, he looked at Qin Lin with some regret. boss Qin, to be honest, with your talent, you studied tourism for four years. It's not just Minister Lu, but I also feel a little regretful.

"Ran ran." Qin Lin didn't know how to respond for a moment.

At that time, he was just an ordinary college student who really didn't know anything. These people really thought too highly of him.

"Boss Qin, I really hope to see the results of the sea cucumber research soon." Yuan Shan smiled. it's just like the Chinese alligator that you've raised. It can actually get close to people and likes to eat grass. It's really amazing.

"Yup yup yup!" A voice suddenly called out.

He saw a domineering-looking creature with a grayish-black skin wagging its tail and crawling in.

the one who was mumbling was yang.

this chinese alligator was probably the happiest of all the chinese alligators. it could enjoy a big meal every day and still move around the manor without any worries.

During this time, Yang's body had obviously grown a lot bigger.

Of course, it was one thing to grow in size, but it was another thing to be a kun. It still did not dare to fight with the little fellow, red hair.

"Speak of the Devil, and the devil will come." Yuan Shan looked at little yang with a smile and even squatted down to Pat his head.

Because of his human-like nature, yang didn't refuse.

Yuan Shan had been living in the manor for a long time, so little yang remembered this person. He even cooperated by rubbing his head against Yuan Shan's arm, showing a cute look.

"this crocodile is really likable." yuan shan couldn't help but praise him. then, he retracted his hand and went back to his room to sort out the data.

minister lu had already been urging him to gather the experimental data on the cancer treatment with the tea leaves. it was obvious that the higher-ups attached great importance to this matter.

After Yuan Shan left, little yang, the crocodile, circled around him and started yelping.

Qin Lin looked at the sea cucumbers in the aquarium and thought of something. He didn't have anything to feed sea cucumbers, nor did he know how to raise sea creatures.

He immediately gave Yang Dong a call.

Yang Dong was looking at the newly hatched beauty ducks in the duck house. When he received the call from his boss, he answered it immediately. "Chairman Qin, do you have any orders?"

"help me buy some things to feed the sea cucumbers," qin lin ordered. "also, find a person who knows how to raise sea cucumbers to the manor."

"Alright, Chairman Qin." Yang Dong didn't ask for the reason. He agreed to the order as soon as he heard it. At the same time, he immediately ordered people to go to Ming city to buy the deep-seated algae and seaweed to feed the sea cucumber, and they had to buy the good quality ones.

Since the boss had personally ordered it, the sea cucumber to be fed must not be ordinary.

he went back to his office as fast as he could and did some research on sea cucumbers on the internet. at the same time, he opened a document and began to write a plan for " sea cucumber feeding plan, employee recruitment and training. "

He felt that with such an order from Chairman Qin, there might be a sea cucumber cultivation plan in the future.

Moreover, whether or not it was as he had guessed, it was always better to be prepared in advance.

...

At noon.

when qin lin arrived at the manor's main hall, master lin had already prepared lunch for him, including the sea cucumbers you xi had brought out.

"Honey, is this sea cucumber?" Zhao Moyu was a little curious.

She had never eaten sea cucumber before and had only seen it on TV.

In other words, most people in the country had never eaten sea cucumbers before.

Qin Lin had never eaten sea cucumber before.

"En!" "Wan na try it?" Qin Lin nodded and asked.

Zhao mochen used his chopsticks to flip the sea cucumber over and shook his head. "I feel a little nauseated."

Indeed, many people loved to eat sea cucumbers, but many people also hated them and felt nauseated. These people probably didn't have the luck to eat them.

This was obviously the case for Zhao Moyu.

Qin Lin didn't feel this way. Moreover, after using the fried green onion, he had already offset the disgust in one way.

After taking a bite, he even felt a bouncy feeling, which was similar to eating a cow's penis.

Master Lin's sea cucumber tasted pretty good.

however, after eating some, a warm current appeared at her waist every now and then.

Those who had eaten a quality 2 okra would naturally know what attribute it was.

Qin Lin looked at Zhao moyin inexplicably. Shouldn't he have some for dinner? After all, his wife was so beautiful.

"Hubby, why are you looking at me like that?" Zhao Mo Xi said, embarrassed.

"you guess!" Qin Lin said with a smile.

All of a sudden, he had a special guess about the attributes of this special sea cucumber.

This attribute seemed to be able to be used in conjunction with high-intensity exercise. By the way, that should be high-intensity exercise, right?

After eating sea cucumbers, not only would a man become more masculine, but it would also increase his physical strength after high-intensity exercise?

He seemed to have found something.

If this sea cucumber was cultivated on a large scale and sold in the future, which Playboy who liked to eat sea cucumbers would exercise at high intensity every night? wouldn't his physical strength be stronger than those of the national football team?

This Kasaya

during the meal, qin lin only had a bunch of random speculations about the special sea cucumber.

moreover, after the meal, gao yaoyao came to report, " "Boss, sister silent, there's a fight over at the resort."

"What's wrong?" zhao moyin frowned and asked.

This was the first time a fight had happened in Linlin Manor.

Gao Yaoyao blushed and said, " I think they're father and son. They're doing this for a woman. That woman seems to be father's mistress. The son brought her out to play and I think they took a video. Father found out and rushed over to Linlin villa.

" ? ? ? "Zhao Mo sneered.

" ? ? ? "Qin Lin.

The husband and wife were a little confused. It was so complicated. If one's comprehension ability was weaker, they would not be able to understand it in a short time.

gao yaoyao added, " a lot of people are watching the video. this kind of thing is weird, and it happened in our linlin villa. it should be trending soon. "

just as gao yaoyao had analyzed, qin lin went back to his office and took out his phone to scroll through the videos. sure enough, he saw a popular video of a father and son fighting over a woman. there were a lot of likes on it.

as soon as the video was played, the sound of quarrels could be heard.

"Bastard, who asked you to bring her out? Do you know that you're eating and drinking my food right now?"

"Old man, don't go too far. Your things will be mine sooner or later!"

"let me tell you, there's no place for you in the future. she's pregnant, so i'll leave everything for her."

"....."

When Qin Lin saw the video conversation, he felt that his three views were completely destroyed.

It was said that in the chaotic circles of the rich in TV and movies, it was common for father and son, brothers, uncles and nephews to fight for love.

He just didn't expect such a thing to happen in reality.

he just didn't know how the father and son would face their friends 'circle in the future if they were on the news now.

The comments below were mostly boisterous.

some said,"it's already like this, who knows whose child the woman is carrying. after all, even DNA can't be tested." it seemed that the enmity between the father and son was a little strange.

It was also said that the father and son could compromise with each other. After all, the woman was also willing, wasn't she?

qin lin really didn't understand what this meant.

Just as he was thinking about it, his phone rang. It was Lin Lanzi.

He roughly knew what it was for.

Picking up the phone, Lin Lanzi said as expected, President Qin, the video about professor Li Kai and the new rice is ready. Take a look.

A moment later, Qin Lin received an edited video on WeChat.

he was the one who had shot the video and sent it to lin lanzi. after the editing by the multimedia department, it gave people a different feeling. it was not as rough as the video he had shot.

Qin Lin looked at the video and felt that there was nothing wrong with it, so he replied to Lin Lanzi's message on WeChat, " "president lin, there are no more questions. you can post it now."

"Alright," he said. Lin Lanzi also replied.

.....

On the internet.

the video of the father and son fighting for love was getting more and more popular. this news should be the most popular gossip news of the year. it was more attractive than a celebrity cheating on him or a celebrity secretly dating someone.

However, the netizens were curious as to why there was no movement from Linlin Manor.

according to some people's thoughts, since this had happened in linlin manor, there should have been some movement in linlin manor, right? Even if it was just a small announcement to tell them the details.

Therefore, not everyone was paying attention to Linlin Manor's official account. Anyway, there were so many people who were idle and were willing to be onlookers.

Very quickly, someone discovered that the official account of Linlin villa had really released a video announcement.

as soon as the video was released, many people clicked on it, thinking that it should be related to the father and son's jealousy.

once the video from linlin villa was posted, people on the internet quickly discovered it.

After all, Linlin villa itself had more than 130 million fans. Once the video was posted, many people received the notification.

Very quickly, people turned on their Douyin and clicked on the video. However, everyone was surprised to find that the video posted by Linlin villa had nothing to do with the father and son's fight for love.

The title of the video was [professor Li Kai's latest research results!]

However, he didn't say what the result was, giving people a sense of mystery.

After clicking on the video, he saw a palm open and a close-up.

The close-up wasn't on the palm, but the crystal White particles on the palm.

The White grain was slightly bigger than a peanut, but no one recognized it.

Most people's subconscious thought was that this was a new variety of peanuts cultivated by Linlin's laboratory.

Just as everyone was puzzled, the scene changed again.

In this scene, everyone saw a familiar figure.

That was professor Li Kai.

The netizens were naturally familiar with professor Li Kai. After all, he had been on the hot search many times.

everyone knew his background very well. he had made great contributions to several scientific research results.

everyone saw professor li kai run toward a tree.

The tree was more than three meters tall, almost five meters tall.

Moreover, many people were convinced that they had never seen this tree before.

There were heavy branches and leaves on the tree, and there seemed to be a dense number of fruits growing on it.

he saw professor li kai go to the tree and pick something from the branch.

seeing this, everyone was a little curious about what kind of tree it was. they could guess that the crystal-like object that was bigger than a peanut was picked from this tree.

professor li kai developed a tree?

[Chapter 1223 Realizing The Ultimate Dream! These Are All Talents! 1](#)

everyone was wondering what the tree in front of li kai was.

At this moment, a voice finally appeared on the screen, " seeing this, I'm sure everyone is very curious about what professor Li Kai is researching. The fruit produced is so crystal clear, right? "

Indeed, everyone was very curious.

The people who heard this really wanted to say, " Wasn't this f * cking nonsense?

the video continued, and the voice continued, " this is a new type of rice cultivated by professor Li Kai. Not only is the rice taller than sorghum, but the rice grains are also larger than peanuts.

" more importantly, the rice made from this rice is even more fragrant and sweet than the ordinary secret recipe. the key is that the yield of this seed is extremely high. if it is combined with professor li kai's low-temperature genetic technology, through scientific estimates, our country can grow this new rice and meet the food needs of the entire world. "

right now, this rice plant has entered the reserved planting stage. The seeds collected later will also be used for full planting.

by next year, we might have enough seeds for regional planting.

Everyone was shocked when they saw the end of the video.

no one dared to believe that the tree was actually rice.

Who had ever seen such a large paddy field?

Furthermore, the rice was even bigger than peanuts. Who would believe it if they didn't say it was rice?

What was even more terrifying was the production rate mentioned in the video.

Professor Li Kai's new rice, coupled with his low-temperature genetic technology, can actually allow our country to use this new rice to meet the food shortage of the world.

Even someone with a slow brain would be able to figure out what this meant.

In an instant, the number of likes and reposts of the entire video increased at an unbelievable speed.

moreover, the comment section was even more lively.

I feel like I'm dreaming after watching the video. It seems like this kind of rice can only appear in movies.

rice is higher than sorghum, and the rice grains are bigger than peanuts. Didn't anyone think of anything? "

Hexia's cool dream, this is Hexia's cool dream. I suddenly feel my eyes getting wet. I can only say that professor Li Kai is amazing. He actually did this kind of thing. This is one of our National dreams.

I suspect that professor Li Kai's research on the low-temperature genetic technology was for this purpose.

as expected of professor Li Kai. He should be able to win a Nobel Prize, right? "

"upstairs, do you think you'll dare to give the nobel prize to professor li kai? and you think professor li kai will go and receive the award? He's wearing the same pants as little Qin."

Someone mentioned little Qin, and with that, everyone seemed to understand why professor Li Kai had such a good relationship with little Qin.

This was a case of geniuses only being friends with geniuses.

The two of them were both outstanding in scientific research.

Previously, little Qin had created the medicine to treat the coagulosis plague, and now Professor Li Kai had created such a terrifying rice.

In a short period of time, the video of Li Kai developing a new type of rice was shared all over the internet, and more and more people were shocked.

It wasn't that no one had fantasized about he Xia's cool dreams before.

There were even some Hollywood sci-fi movies that had rice trees.

it was like the rice growing on a tree.

However, Hollywood was also created by computer special effects, and the United States did not have such technology at all.

What they saw now was not a science fiction movie, but that this kind of rice had been cultivated by someone.

nanjiang.

In a Rice Research base.

At this moment, several experts were observing the rice plants in front of them, not forgetting to take notes as they observed.

this research base was the place where senior yuan had worked.

After that senior had passed away, they had inherited his last wish.

They wanted to develop the rice that was higher than sorghum and had rice grains larger than peanuts to achieve the ultimate dream of rice.

the paddy in front of them was their latest research.

However, these paddies had failed.

They were now observing the paddies and concluding the reasons for their failure.

Even though they failed time and time again, they were not discouraged.

After all, this goal was clearly not something that could be achieved in a short time.

It was a Grand goal.

they were all top experts in this field.

even if they joined forces, they would still fail time and time again.

According to their estimates, they might not even be able to achieve this Grand goal in the next ten years.

If they could complete it within this time, it would be a huge success.

With this thought in mind, the few of them finished their summary of the paddies.

"sigh, this ultimate dream is still a long way from us!"

"It doesn't seem to be the same type of rice. We need a new research plan."

or we can try to extract the genes from sorghum and crossbreed it with this new type of rice? "

that doesn't seem feasible either. It might even affect the genes of the rice.

"....."

While the experts were discussing, a person who looked like an assistant rushed in and handed a tablet to the experts. "Experts, there's a piece of news on the internet. Take a look!"

The experts were a little puzzled and took the tablet to look at it.

When they saw the news video playing on the tablet, they were all stunned when they saw the nearly five-meter rice and the rice grains that were bigger than peanuts.

"Someone has already researched it? This is professor Li Kai?"

this is unbelievable. How did professor Li Kai do it? "

[Chapter 1224 Realizing The Ultimate Dream! These Are All Talents! 2](#)

"This ... This ... This ... This ... This ..."

"....."

The few experts could no longer remain calm.

After all, they were the inheritors of this research project. They were the inheritors of the senior's last wish.

They even felt that it was impossible to complete this Grand research in ten years.

Who knew that in the blink of an eye, someone would actually complete this research and even produce the finished product?

In the news video.

That stalk of rice was really taller than sorghum, just like a tree, and its grains were bigger than peanuts. It was even much bigger than the senior's wish.

In particular, the production rate. If a country could provide food for the entire world, what did that mean?

The key was that this rice was actually tastier than ordinary rice. This was not just a problem of production, but it would probably completely change the food structure of the entire world.

Just by using grain to fight a price war, they could stand firmly in an undefeatable place, which would make some countries uncomfortable.

This professor Li Kai was too amazing.

However, they were not jealous. They only admired professor Li Kai.

then, they started to watch the video seriously. they felt a little depressed. after all, their dreams had been fulfilled by someone else.

On the internet, professor Li Kai and the new rice completely occupied the hot search.

This sci-fi product was made known to everyone at the fastest speed.

linlin's laboratory.

Li Kai, on the other hand, locked himself in his office and watched the news video on his phone.

His expression was a little ugly.

" why? if i had known earlier, i would have let brother qin go down and let me take the video first. " As Li Kai spoke, he beat his chest and stomped his feet, then said in frustration, " "Why can't I understand the principle of striking first and gaining the upper hand?"

Li Kai saw that the popularity had already reached such a high level, so it was basically confirmed that this thing was trained by him.

The key was that the special soil was a secret between him and brother li. He couldn't tell anyone about it. Even the people in the laboratory thought that the special soil was just a special nutrient soil that he had researched.

Li Kai quickly turned on his computer and pulled out the experimental report.

This was the report that he had written after racking his brains and studying the genes of the new rice.

It could be seen that his name was the first participant's name on the experimental report. Previously, he had wanted Brother Qin to sign first, then silently add Brother Qin's name on the participant's list. This way, Brother Qin would have to bear a large part of the blame.

Who knew that the plan he had learned from the TV would not succeed, and he would be lonely.

there was no way to add brother qin's name now. even if he did, the boss would not sign it, and the experiment report would not count.

"Sigh, that's the only way." as li kai spoke, he immediately started typing on the keyboard, writing down names one by one.

these names were all his assistants, and some of them had participated in the experiment.

however, this was not enough.

"Chu Xin had watered the new rice a few times, so he was also involved." Li Kai mumbled as he added another name.

Wang He found the grass growing beside the new rice plant and pulled it out. He was also involved. Another name was added.

"Lin Xia took photos and video recordings for a few days, so he's also involved." Another name was added.

"Yingluo" and a name.

"Yingluo" and a name.

"....."

by the way, it's very hard for the security guards to look after them. They should be considered as a contribution. He added a few more names.

After an unknown period of time, Li Kai finally managed to add a bunch of names to the list of participants in the training research.

if he didn't have to worry about it, he would have added the name of all the cleaners outside the laboratory.

Only then did Li Kai nod in satisfaction, finally feeling his back relax a little.

...

hua hospital.

Chief Lu was in a good mood.

This was because the matter of the Jade consort cream had been confirmed by the leader.

although they couldn't make the ointment that boss qin made, the yufei ointment made with old herbs would be better than before.

"Little Lu, although we can't crack this Jade consort cream for now, we can't stop the cracking." "since boss qin's ointment has such an effect, if we can figure out the factor composition, then the theoretical recovery of a broken waist that you've been speculating about might be possible," the leader said in a heavy tone.

" don't worry, leader, " chief lu said immediately. " i've already arranged for a special cracking team. no matter how long it takes, whether it's the next 10 years or 20 years, they will continue until the jade consort cream is cracked. "

in fact, he knew better than the leader that research was in the future.

A lot of scientific research did not have immediate results. It would take ten to twenty years to see the results.

However, they couldn't stop doing it just because they couldn't see much effect.

The leader sighed. this boss Qin is really an extraordinary genius. It seems that our country has never had such a young man before. So, this era is ours. We must protect boss Qin well.

"Yes, I understand!" Chief Lu said.

As the two of them were talking, a person dressed as a Secretary rushed in and reported, " "Leader, there's a big issue on the internet. It's about Linlin's laboratory."

"What's going on?" "what did that boss qin do again?" the leader asked, puzzled.

"It's not boss Qin, it's that professor Li Kai," the Secretary said hurriedly.

chief lu seemed to have realized something and asked anxiously, " "Is it about the new type of rice?"

[Chapter 1225 Realizing The Ultimate Dream! These Are All Talents! 3](#)

The Secretary nodded and said, " yes, that professor Li Kai has developed a new type of rice. It's five meters tall, and each grain is bigger than a peanut. It tastes better than ordinary rice. Furthermore, Linlin villa said that with the low-temperature genetic technology, the new rice can be produced in an estimated amount that our country can supply the world's food.

"What?" The leaders.

"Really?" chief lu.

The two of them stood up in shock when they heard the news.

They naturally knew what this meant.

Just think about the ranking of the world's top ten most agricultural-developed countries.

[first: merica] [second: Canada] [third: Ollidia, fourth Germany, fifth: france, sixth england, seventh: Our ran ran

this was the ranking before.

With professor Li Kai's new rice and low-temperature genetic technology, in a certain aspect, they could supply to the world alone. The first six would have to suffer a lot.

" when these guys are in pain, we naturally feel good.

The leader immediately added, " not only boss Qin, but this professor Li Kai must be protected as well. It seems that professor Li Kai has been avoiding the topic because of his family background. He has wasted a lot of time, just like boss Qin who has been studying tourism for four years.

It was obvious that it was a huge loss for these two talents to be buried and only discovered now.

Seeing this, chief Lu comforted him. leader, it's good now. You see, boss Qin and professor Li Kai appreciate each other. They've gathered in you city and have such a good relationship.

" not long after one of them produced results, the other side also produced results. it's as if they're competing with each other with conscience. the two of them can be said to be the two heroes of scientific research. it's also a good story. "

" you should go to you city personally and confirm the new rice. " The leader nodded his head. This was indeed a good story.

furthermore, you city was really a blessed land.

in the past two years, you cheng seemed to have taken over everything.

"Alright," he said. Chief Lu also left after answering. He asked his assistant to book a plane ticket and rushed to you city. Then, he went to Linlin Manor as fast as he could.

Just as he was about to enter, he saw Li Kai hurriedly Park his car and get out. He was holding an experimental report in his hand and seemed a little distracted.

"Professor Li Kai," Chief Lu's eyes lit up and he immediately greeted them.

"chief lu," li kai responded and quickly greeted him.

chief lu looked at the document in his hand and asked curiously, " Is this the experiment report? "

"achoo, yes!" li kai said subconsciously.

"can i take a look?" captain lu's eyes lit up.

When Li Kai heard this, he could only awkwardly hand over the experimental report to chief Lu. There were so many names on it * and he felt * little guilty.

chief lu took the report and saw the names on it. he couldn't help but exclaim. it seemed that linlin laboratory had gathered a lot of scientific research forces to help professor li kai complete the cultivation of the new rice.

Looking at the blank space of the participant, the names were so densely packed that they could not be written.

However, this was normal. For such a Grand cultivation experiment, no matter how strong professor Li Kai was, he would need help.

Chief Lu looked at the names of those people one by one. He wanted to at least have some influence. After all, they were all great talents to be able to participate in professor Li Kai's cultivation experiment.

[Chapter 1226 The Selfless Professor Li Is More Terrifying Than I Imagined](#)

Linlin Manor Office.

Qin Lin was looking at an interview document.

She was a 28-year-old woman named Lee yueqiong. She had been in the sea cucumber industry for seven years and was the supervisor of a large sea cucumber farm in Ming city.

The other party was also someone Yang Dong had specially found after Qin Lin had asked for someone who knew how to cultivate sea cucumbers.

Li yueqiong was surprised and nervous.

He was surprised to find out that little Qin was the boss of Linlin company, and nervous because he was afraid that he would not pass the interview.

She was already the manager of the breeding base, and the reason why she came to Linlin villa to apply for a normal breeding officer position was because of Yang Dong's reminder.

as long as she could do this sea cucumber cultivation work well without any mistakes, she would be the person in charge of any sea cucumber cultivation projects in linlin manor in the future.

Linlin Manor's development space and prospects, the same position's value could not be compared to the outside. She was naturally nervous.

qin lin was also looking at li yueqiong's information seriously.

The other party's experience in cultivating sea cucumbers was indeed rich.

Since Yang Dong had recommended her, she must have thought about it carefully.

he also believed in yang dong.

To be honest, if something went wrong with the people Yang Dong and the other managers recommended, Yang Dong and the others would be the first to be affected.

"Yes." qin lin put down the resume and said, " yang dong, take her to go through the employment procedures. after that, hand her over to gao yaoyao. she'll make the necessary arrangements. as for the special sea cucumbers in the manor's hall, give them to her first. "

"Alright, Chairman Qin." Yang Dong said.

"thank you, chairman qin." li yueqiong was also excited.

Yang Dong left with li yueqiong.

A moment later, Li Kai and Minister Lu arrived.

"Minister Lu, brother li, why are you here together?" Qin Lin was surprised.

"i met professor li kai outside, so we came in together," minister lu explained.

"Minister Lu, are you here for the new type of rice cultivated by brother li?" Qin Lin nodded.

" that's right, " minister lu said with a smile. " professor li kai's research results are amazing. "

li kai listened to their conversation and felt very depressed.

who could understand the heaviness of being the scapegoat?

He could only helplessly hand the experimental report in his hand to Qin Lin and said, " "Brother Qin, this is the experimental report on the new type of rice. Please sign it."

Qin Lin took the experimental report and saw the densely packed names of the experiment participants.

This made him look at Li Kai in surprise.

did old brother li really think that he didn't know how many people had participated in the training?

It was impossible to have so many people.

boss Qin, " Minister Lu said with a smile, " there are so many participants in the experiment report. I can see that your Linlin laboratory has really done its best to cultivate this new rice.

"Ran ran," Qin Lin.

Li Kai naturally understood that old Brother Qin had seen through his trick and hurriedly winked to signal him.

It seemed to be saying, "Brother Qin, you know how big this pot is."

qin lin naturally understood what brother li meant, so he signed the experiment report.

Old brother li was the best shield and scapegoat for him.

Such a small thought would naturally satisfy the other party.

seeing this, minister lu was even more certain of his thoughts.

The fact that so many people from Linlin's laboratory were involved in the cultivation of the new rice showed that they were really full of talents.

Otherwise, ordinary people wouldn't even have the chance to get involved in such an experiment.

Li Kai took the experimental report but didn't want to stay with Minister Lu any longer, so he left in a hurry with the excuse that he had something to do.

This trick made him feel guilty and afraid that Minister Lu would ask more.

Soon, Linlin's laboratory released an experimental report on Li Kai and the new rice.

In fact, many people in Linlin's laboratory knew that Professor Li Kai had cultivated a new rice plant.

However, after the discovery of the new rice, the experimental plot could not be entered by anyone.

Therefore, most of them did not know about the condition of the new paddy.

When the news of the new rice came out and the state of the new rice was known, many people in the laboratory were shocked. They had been waiting for Professor Li Kai's experimental report.

Now that the experiment report was out, everyone in the office was paying attention to it.

The most interesting thing was naturally the list of experiment participants.

However, when they saw the name list, everyone was dumbfounded because there were too many people on it.

In an experiment room, a few researchers gathered together and discussed in surprise.

"So many people are involved in Professor Li Kai's new rice research?"

"Hasn't Lin Hua been doing genetic testing for watermelons in our group?"

"I think he was transferred to another class for a week."

"No, this Yun Fei isn't the head of security?"

"And this Liu Zhen is also a security guard."

"....."

The group of researchers was a little dumbfounded or felt that it was a little unbelievable.

When did the security guard's name appear on the experiment report?

While the researchers were discussing, a man walked in and said with a frown, "What's there to discuss?"

Hearing the man's words, the researchers immediately dispersed to do their work.

This man was the researcher in charge of their experiment room.

He was once a beneficiary of Professor Li Kai's experimental report.

Originally, based on his participation in the purification grass, it was impossible for his name to appear on the experimental report of other laboratories.

However, Professor Li Kai helped him and wrote his name, even if he didn't do much.

" don't be surprised by professor li kai's experiment report, " the man continued. " when experiments are conducted in other places, the team leaders are afraid that they'll share the credit with other people. "

[Chapter 1227 The Selfless Professor Li Is Scarier Than I Imagined](#)

" but professor li kai is different, because his achievements no longer care about these things. moreover, professor li kai is a selfless person. he is willing to give others opportunities and is willing to help others. "

" for his experiment report, as long as you're involved in the experiment, regardless of your role, he's not stingy with helping you and writing your name. "

it's because of professor Li Kai's selflessness and generosity that Chairman Qin trusted him with the laboratory. That's why Linlin laboratory has such a reputation and strength.

the researchers around him nodded in agreement. they no longer had any doubts, only admiration.

Even researchers like them were willing to follow and assist a selfless person like professor Li Kai.

he really wanted to participate in professor li kai's next experiment.

He was really lucky to be able to work in a laboratory led by such a person.

it was obvious that li kai's good reputation had spread even further.

the researchers in the laboratory all loved professor li kai, admired his ability, and wanted to do experiments with him.

...

the news of the new rice was too shocking. not only in the country, but also in other countries, especially in a beautiful country that was ranked first in agricultural development.

"is this news true?" When Adolphus saw the news, he could not believe it.

how could such a thing happen?

They were the country with the most developed agriculture.

Moreover, this kind of thing should only exist in Hollywood science fiction movies at this stage.

"Mr. Adoxi, the news is true." the person who made the report said with certainty.

"Why is God so unfair?" adoxi couldn't help but sigh.

why did such good things keep appearing in that eastern country?

when he saw the news, he knew that the new paddy field would bring about a negative impact on drifting country.

He had thought that there was only that bastard Qin in that Eastern country. Who knew that there would be another li?

Moreover, to the United States, the new rice and the low-temperature genetic experiment had a greater impact on them than the purification grass and plague medicine.

They didn't have the purification grass, so they didn't have to use it. Anyway, their air quality was already like this.

if he didn't have the plague elixir, he just didn't use it. it was a big deal that if the animals he raised died, the plague would be gone.

But now that the other party had this new rice, it would have a huge impact on them.

Just the fact that the other country could supply to the entire world was enough to make many of their strategies impossible to carry out.

It wasn't just the Americans. People from several Western countries saw this news and their mood was extremely bad.

therefore, many countries had already sent out applications, hoping to share this new rice in the spirit of humanitarianism.

It was obvious that he had committed the 'using the money' kind of crime again.

they didn't care if they could grow it in their own countries, they just had to get it first.

Unfortunately, they had already forgotten that the Dragon of the East had already taken off, and they could no longer do whatever they wanted.

No matter how shocked the people from the Western countries were, Minister Lu had already entered Linlin's laboratory with Qin Lin and Li Kai after a series of inspections. They arrived at the experimental site where the mutant rice was planted.

When he first saw the mutated rice, Minister Lu could not take his eyes off it.

The height of the paddy field and its luxuriant foliage were never as shocking as seeing it in person in a video.

"Amazing, amazing." minister lu kept praising him.

When he got close, he went down to the paddy field like Li Kai and personally picked a few grains from a branch of the Paddy. He rubbed them open and immediately revealed the crystal clear rice grains that were bigger than peanuts.

When he was done, he directly put the rice grain into his mouth. As he chewed, there was indeed a sweet and delicious taste that was more delicious than ordinary rice.

This was very intuitive, and there was no need to make it into a comparison of rice.

Looking at the scene of the branches bending under the pressure of the dense rice grains, Minister Lu sighed again. The production rate was really terrifying.

minister lu hurriedly asked, "professor li kai, what's the name of the new rice?" How long do we need to harvest the seeds?"

Li Kai explained, " I'm planning to call this rice Linlin rice as well. After all, we have the Linlin tribute rice. As for the seeds, according to the saturation level and water content, it will only take a few days before the conditions for the seeds to germinate are met.

this test site is for temperature control. After the seeds are harvested, I'll have someone use low-temperature genetic technology on one batch, and the other batch will try to cultivate new rice seedlings immediately.

"That's great," Minister Lu nodded.

After that, he didn't hesitate and directly took out his phone to contact his leader.

He had to stay in you city for some time to personally confirm that the seeds could be cultivated normally after they were harvested.

A few days passed in the blink of an eye.

Li Kai also started to lead his men to harvest the mutated rice seeds.

Qin Lin and Minister Lu were both there and watching.

As it was their first time harvesting the seeds, Li Kai and the other researchers were very careful. They did not even dare to directly cut down the mutated rice.

even if the first mutated rice plant was harvested, it would be kept to check on the subsequent situation until it withered and died.

Hence, Li Kai and the rest were standing on tall stands to pick the rice seeds.

it was not easy to harvest all the rice seeds. other than the ones that were used for low-temperature genetic experiments, the portion that needed to be directly cultivated left li kai vexed.

[Chapter 1228 The Selfless Professor Li Is Scarier Than I Imagined](#)

after all, the first one had been discovered by accident, and this was the first time he had cultivated it on his own.

He didn't know if the new rice would work according to the usual rice cultivation method.

However, with the current situation, he could only use the old method to cultivate it.

Therefore, Li Kai and his men spent the rest of the time sun-drying the mutated rice seeds, selecting them, and soaking them in warm soup.

...

A few more days passed.

Linlin Manor's main hall.

Qin Lin was looking in the direction of the corner of the aquarium.

Li yueqiong was busy inside.

Li Yueqiong had already officially joined the company. From how seriously she treated the female sea cucumbers these past few days, one could tell that Yang Dong had not poached the wrong person.

At the side.

Minister Lu also looked at it with great interest. "Boss Qin, I didn't expect you to study sea cucumbers."

He had stayed in Linlin Manor for the past few days to witness the cultivation of the new rice.

Minister Lu felt a little gratified as he spoke.

He should be the one who knew boss Qin's talent best.

he was in charge of scientific research, so he really didn't want boss Qin to waste his talent.

If possible, he hoped that boss Qin would continue on the path of plant research. Then, boss Qin's achievements in plant gene research would be beyond anyone's reach.

Unfortunately, boss Qin was not under his control. With the other party's current business, he was not qualified to manage it.

Moreover, he also knew that boss Qin would not concentrate on plant research. So, even if the other party wanted the information and data of animal genetic experiments, he immediately got someone to give it to him.

In his eyes, even if boss Qin was distracted by animal genetics, it would be better than putting his mind on cooking.

Therefore, he had given boss Qin the data and information.

When he found out that boss Qin had trained a special crocodile in such a short time, he was very amazed.

He didn't expect boss Qin to be studying sea cucumbers again when he came to Linlin Manor.

Li Yueqiong was pleasantly surprised. Chairman Qin, it's out! The first sea cucumber's egg has been laid. Furthermore, these eggs are different from ordinary sea cucumber eggs.

That's right, Li Yueqiong was giving birth to the sea cucumbers.

However, he didn't know that the sea cucumber eggs produced in the game were different from the ordinary ones. After all, he had never seen ordinary sea cucumber eggs before.

At this moment, Li Kai walked in from outside. Brother Qin, Minister Lu, the paddy seeds have been processed and returned. We can now sow and grow the seedlings.

Since Minister Lu was concerned about this matter and had informed him, Li Kai came over to invite him as soon as he finished dealing with the seeds.

"Really? Professor Li Kai, please take us there." Minister Lu immediately stood up and hurriedly greeted Li Kai.

Qin Lin also got up and followed.

The three of them left the manor and went straight to Linlin's laboratory. After many inspections, they entered the experimental area of Linlin's laboratory again.

Li Kai had long wanted to arrange for people to come here to handle it, and he had even brought the new rice that had been processed.

When they arrived at the laboratory, Li Kai did not forget to introduce, " " we've already processed the rice seeds with the current known methods of cultivating rice seedlings. "

these methods are the most advanced. If these methods can't be cultivated, then we'll have a headache and have to research new methods to cultivate rice seedlings.

The three of them had just arrived at the experimental site when a researcher ran over in a hurry. " professor li kai, you're finally here. hurry and take a look at the new rice plant. something's wrong. "

"What's going on?" li kai asked, but he had already rushed over to the rice plant.

When he got closer, he saw the paddy field and his face revealed a surprised expression."it's blooming again?"

It was because that stalk of rice had just been harvested a few days ago, and now it was actually covered in dense rice flowers.

"Isn't this the first batch?" Minister Lu asked in surprise.

li kai didn't know how to answer. he didn't know either.

"Professor li, look at the surroundings of the paddy field," the researcher reminded him.

Li Kai looked over and was even more shocked. He could see that there were many green sprouts that had just emerged around the Paddy.

These should be the seeds that fell when he harvested them, and then sprouted these days.

Li Kai looked at the new sprouts and opened his mouth. "This Gu doesn't need any special cultivation method? I can just plant it directly?"

Then what were they busy with these days?

even minister lu came forward and looked at the scene in front of him in shock.

The yield of this rice plant was already shocking enough, but who knew that this rice plant had not just been harvested, but could still continue to bloom after harvesting.

More importantly, the rice seeds could germinate by themselves even when they fell into the field.

This was not only because the yield was more terrifying than he had expected, but it also meant that it had a strong vitality and would be easy to plant.

One could only say that the new Paddy was more terrifying than one could imagine.

[Chapter 1229 553! The Strange Place In The Game! Constant Temperature](#)

Linlin rice was the name given by the Linlin laboratory to professor Li Kai's new rice.

Within a few days, this name also spread through the internet at the fastest speed, and people were talking about it with great relish.

While everyone on the internet was paying attention to Li Kai and the new rice, professor Li Kai's new product was quietly launched on the market.

Outside a University.

Chen Xue and a few of her university friends walked out of the school gate.

A few of her close friends couldn't help but discuss the news about the new rice when they were scrolling through their phones.

Xiaoxue, you city is going to have another good thing. I'm so envious.

I'm envious. In the future, you city will have Linlin tribute rice for high-grade rice and Linlin rice for ordinary rice. It's really high-end and low-end. Moreover, the news even said that Linlin rice is more delicious than ordinary rice.

I really want to try the Linlin rice, which is bigger than a peanut. I wonder when I can buy it!

Obviously, they were looking forward to the Linlin rice.

"Not only that, you city also has those extinct Atlantic sturgeons and Atlantic pufferfish. Xiaoxue, I really envy you people."

"Actually, we should be more envious of Xiaoxue. I heard that she has already booked an opportunity to go to Linlin villa for an internship next year."

Yeah, I'm so envious. That's the Linlin villa!

A few of her close friends looked envious.

Seeing this, Chen Xue was also a little proud.

What were university students looking forward to the most? Wasn't it just going to be a good and fruitful relationship, then graduate and find a good job?

She was even more interested in work than love.

After all, many couples would break up right after graduation for a good job. Many people would even rack their brains and use all kinds of tricks to get a good job.

She really didn't need to worry. After all, she really had the opportunity to intern at Linlin villa. Now, this opportunity wasn't any worse than doing an internship in the top 500 companies in the world.

Of course, she had fought for this opportunity herself. After all, she had spent her summer and winter holidays working in Linlin villa, and basically spent all her time in Linlin villa.

Not only had she learned a lot from Linlin villa, but she had also given some suggestions. That was why the Human Resources Department of Linlin villa had given her an opportunity to intern in advance.

As Chen Xue was thinking about it, one of her close friends pointed at a Fruit Shop and said, " "They sell Linlin watermelons over there."

Chen Xue and the other girls held hands as they walked towards the fruit store.

the fruit store wasn't big. after all, it was in the university city, and the rent was extremely expensive. moreover, in such a place, even a small store could make money.

At the entrance of the fruit store, there was a very conspicuous sign: Tricolor Linlin watermelons were on the market. &Nbsp;

" the tricolor linlin watermelons are already on the market? "

"The boss wrote this."

When Chen Xue and the others saw these words, their faces immediately revealed a look of surprise, and then they were eager to try.

Everyone knew about the Linlin watermelons. After the Linlin villa watermelons were released, they quickly occupied the high-end watermelon market. Moreover, those who had bought them knew that the Linlin watermelons were indeed much more delicious than ordinary watermelons.

it was said that the people in the countryside of you city relied on cooperating with linlin's laboratory to grow linlin watermelons. every family bought a car and built a house. they lived more comfortably than the white-collar workers in the first-tier cities. many people were envious.

However, many people on the internet knew that there was a special type of watermelon in Linlin villa. It had three types of pulp and three colors. It was called the three-colored watermelon.

Some of the three-colored watermelons had been sold at the Linlin Manor's sales center before, and it had even been posted online.

however, the tricolor watermelons were not on the market, so there was no place to buy them. gradually, no one paid attention to them.

Chen Xue immediately entered the fruit store with a few of her close friends.

"Boss, can I have a three-colored Linlin watermelon?" one of her besties asked the boss.

The boss shook his head. I'm sorry. The three-colored Linlin watermelons are selling like hotcakes. There's only half left.

"we'll take this half," Chen Xue immediately said.

The boss nodded and took out the remaining half of the three-colored watermelon from the fridge.

Chen Xue and a few of her close friends were immediately attracted to the watermelon.

As expected, it was a fruit with three different colors. The colors alone were enough to make people hungry.

he weighed it and paid.

"boss," Chen Xue immediately said, "help us cut the watermelon. each slice must contain three types of pulp."

It was obviously not the first time the boss had heard such a request. He took the watermelon and began to cut it with great familiarity.

After a while, Chen Xue and the other women each took a slice of watermelon and ate it.

After that, the women also looked surprised.

There are actually three different flavors in the same melon.

Yes, and every taste is better than the average watermelon.

I really enjoyed it. I can taste three different flavors from a watermelon.

"....."

The few women ate with excitement and relish.

At this moment.

A few more people came in hurriedly from outside and asked, "'boss, do you have any more tricolor watermelons?'"

I'm sorry," the boss shook his head. The last half has been sold out.

Those people could only look at the three-colored watermelons in Chen Xue's and the other girls' hands. Their faces were filled with annoyance. Clearly, they were a little too late.

It was obvious that Chen Xue and the others knew about the tricolor watermelons. However, some of them did not know about it because they did not have much time to rest and rarely went online.

Li Yong was such a person.

[Chapter 1230 553-The Strange Place In The Game!](#)

He worked at a construction site and was paid by the number of bricks he moved.

He usually took a break after work. He didn't spend much time playing cards or watching Short Video, so he didn't watch the video of the tricolor watermelon.

Yong Li got off work as usual and walked to a fruit store. He was getting paid today, so he planned to buy a watermelon for his daughter.

"Boss, what's a tricolor watermelon?" Yong Li asked curiously. What surprised him even more was the price of the three-colored watermelon, which was too expensive.

One catty of this was enough to buy a few ordinary watermelons.

"This is the Linlin Villa's three-colored watermelon," the owner explained. "Not only does it taste as good as the Linlin watermelon, but it also has three different pulp and three different colors."

"Really?" Li Yong couldn't believe it.

This was too surprising to him. He grew up eating watermelons, so it was not like he did not know about watermelons. How could the same watermelon have three colors and three flavors?

how could it be fake? " the boss said. this tricolor watermelon was also developed by professor Li Kai.

"Professor Li Kai?" Li Yong was shocked. Even if he stopped scrolling through the videos, he still knew about the new rice. His colleagues were all talking about it, and he also had some understanding of how amazing professor Li Kai was.

This made him curious about the tricolor watermelon. After all, it was a product of professor Li Kai's research.

The boss nodded and made three small cuts in three different places for Li Yong to see the fruit inside.

Sure enough, the three pieces of flesh were of different colors, which surprised Li Yong.

When he was paying, he felt a heartache. It was really expensive, but he could afford such a rare thing.

After all, with the Linlin leisure tea, as long as he was willing to work hard, he could make a lot more money by moving bricks. When he had no energy, he could drink the Linlin leisure tea provided by the construction site and quickly become full of energy again.

Therefore, after they came out of Linlin leisure tea, they could really make more money by moving bricks.

after yong li paid the money, he went home with the watermelon in high spirits. his wife and children would definitely like the three-colored watermelon.

When Yong Li got home, his wife was already cooking and his daughter was doing her homework.

Seeing that he had returned with a watermelon, his daughter was happy. "dad, you bought watermelons? I want to eat watermelon."

"Yes, I'll eat watermelon." Li Yong said happily when he saw his daughter. He carried the watermelon into the kitchen.

" why did you buy watermelons all of a sudden? " his wife asked. " are there any problems with the watermelons in this season? "

li yong hurriedly explained. " this is a watermelon from linlin's laboratory. and it's not an ordinary watermelon. it has three-colored pulp. "

"Really? however, linlin's laboratory shouldn't be lying." his wife asked in surprise.

She obviously didn't go online often and didn't know about tricolor watermelons, but she still trusted Linlin's laboratory. Then, she curiously took the kitchen knife and began to cut the watermelon.

When the watermelon was cut open and the three-colored pulp was revealed, she revealed a look of disbelief.

It really was three colors.

When his daughter saw this, she clapped her hands excitedly. " dad, mom, i want to eat three-colored watermelons! i want to eat them! "

It was obvious that the tricolor watermelon was very attractive to children.

It wasn't just one place that was happening.

this was because the tricolor watermelons had been released at the same time. furthermore, linlin's laboratory had not specially publicized it because there was no need for it.

The Linlin watermelons had always been in short supply.

naturally, the news of the release of the linlin tricolor watermelons quickly spread online. many people couldn't help but post videos of customers buying the watermelons on the internet.

can you believe that there's actually a watermelon with three-colored pulp?!

" a watermelon with three different fruits, three colors, and three flavors. it's an indescribable miracle! "

tricolor watermelon, another research result of professor Li Kai. Professor Li Kai is too amazing.

indeed, the release of the tricolor watermelon on the market was a surprise to many people.

After all, many people had never thought that a watermelon could have three colors at the same time.

However, the fact that the tricolor watermelons were cultivated by professor Li Kai was shocking. After all, professor Li Kai was the one who dominated the trending Searches.

While the internet was abuzz with activity, Qin Lin had already stopped paying attention to these things. He was already in the middle of a forest.

This was a part of the forest on Mount goddesses.

Today, he had found some time to come here again and explore, and his current position was in the opposite direction of the dwarf Valley.

the forest was surrounded by lush and tall trees that reached the sky. moreover, between these trees, there were also some ruins.

This was clearly a special place, as if someone had once lived here.

However, at this moment, Qin Lin's face was filled with deep doubt, or perhaps curiosity.

He walked to a shady area and stayed there for a while. Then, he walked to a place where the sunlight shone in.

After that, he was even more curious.

There was something wrong with this place.

No matter if he was in the shadows or under the sun, he felt that the temperature around him was the same.

He didn't know if it was an illusion, but it really wasn't a normal phenomenon.

In the same place, a shady place and a place where the sun shone, how could the temperature be the same? this was completely illogical.

However, he didn't know if he was right based on his feelings.

As he thought about it, Qin Lin remembered the route he took to come here and returned. When he reached the mountain road in the game, he logged out of the game with a thought.

Back in his office, he opened the door and found Gao Yaoyao immediately. He ordered, "Yaoyao, help me get a few thermometers."

"Okay, boss!" Gao Yaoyao nodded and left immediately. Not long after, she brought a few thermometers to Qin Lin and handed them to him.

Qin Lin took the thermometer, went back to his office, and locked the door. Then, he entered the game with one thought and followed the previous route to the special place.

When he arrived, he immediately placed the thermometers he had brought in around the area. Some were placed in the shade, some were placed under the sun, and some were even placed in the pool and hung on the treetops.

After putting the thermometers in place, he waited.

However, as time passed, his face gradually revealed a look of surprise.

No matter where the thermometers were placed, he found that the temperatures were exactly the same.

This situation was clearly not right.

It was as if the surrounding temperature had turned into a constant state. No matter what the situation was, the temperature would not change.

Qin Lin immediately looked around. There must be some reason for this.

Not long after, he looked at the strange bushes around him in disbelief.
