

## The Game 1291

### [Chapter 1291 The Alien Has Discovered A Seed? The Temperature Here Has Been Controlled?](#)

As soon as he arrived at Linlin Manor, he saw a few familiar faces.

Weren't they Li Qing, Chen shengfei, and MA Levin?

it had been a long time since the three of them had come to the manor together.

"Qin Lin, I haven't seen you in a long time. I've missed you so much." Li Qing gave Qin Lin a hug as soon as he saw him.

"If you want to ask for wine, then ask for wine. Why do you have to be so mushy?" Chen shengfei immediately exposed Li Qing and gave Qin Lin a hug with a smile.

Li Qing immediately glared at Chen shengfei.

How could this Chairman not understand the ways of the world?

Qin Lin, " Marvin said directly, " I not only miss you, but also your wine and tea.

Qin Lin smiled and said, " the tea leaves and wine are fine. Old Chen, old Ma, old Li, you guys have fun. If there's anything you need to do, let Yaoyao know. I'll go to my office to look at some information.

"Boss Qin, go do your thing. We're familiar with Linlin Manor." chen shengfei immediately said.

Li Qing and Marvin also nodded in agreement.

Qin Lin immediately went to his office and opened his email.

professor wang's email had already arrived. he had taken it out from the game. even if he was not familiar with this area, it was still necessary to understand it a little.

in the manor.

Chen shengfei and the other two had already walked towards the pavilion.

They all knew that this Pavilion was made of yellow Rosewood and red sandalwood, and they also knew the magic of this Pavilion.

Especially Chen Sheng Fei, he was a loyal fan of these famous trees.

However, just as the three of them were about to enter the pavilion, they were shocked.

a ferocious big guy crawled out of the man-made spring. his head was bigger than wangcai's body and there was a thick layer of horned scales on his body.

Who else could it be but yang?

Its body grew very quickly, and it actually became a little bigger.

The sudden appearance of the ferocious crocodile shocked Chen shengfei and the other two.

"What a huge crocodile!"

"When did Qin Lin raise such a big crocodile?"

"It won't attack people, right?"

The three of them were obviously shocked by Yang's words. Just as they were frozen in place, they noticed that the crocodile's eyes had narrowed, revealing a silly and honest look.

This was the activation of the cute attribute.

then, assistant yang turned around and ran out of the room as if he was trying to escape.

This scene caused Chen shengfei and the other two to look at each other.

He was stunned, but he didn't know what to say.

In the end, the three of them were relieved. Wasn't it normal for Qin Lin to have strange animals here?

It seemed quite normal!

The three of them entered the pavilion. As soon as they sat down at the table inside, they suddenly felt that something was wrong!

"The temperature here seems to be different from the outside." Chen Sheng Fei said in shock.

it's a little different, " Marvin nodded. the temperature is even more comfortable than outside!

Li Qing could feel it too. This temperature was indeed more comfortable than the special climate of you city.

He tried to walk around and found that the temperature around him was exactly the same, as if there was no change at all, even when he was under the sun.

This was a little unbelievable.

"You two, come out and take a walk. Something's not right here," Li Qing said subconsciously.

When Chen shengfei and Marvin heard his words, they subconsciously got up and walked around. Then, they stood in shock under the sun where Li Qing was.

Something was wrong!

The temperature of the surroundings seemed to have been controlled by magic.

[Chapter 1292 This Grass Is Too Magical! It Can Really Control The Temperature](#)

Chen shengfei and the other two were shocked by the situation in front of them.

One must know that in modern society, there were many temperature control devices.

air-conditioning was one of the types that everyone used in their homes.

However, even if these equipment and instruments could control the temperature, it was only in the room. In this open area, it was impossible to achieve such a degree of control.

Although it wasn't necessarily accurate to rely on the skin to feel it, they felt that it was at a constant temperature. The temperature was the same. Even simple sunlight or wind could affect this temperature.

In the office.

Qin Lin went out of the office after seeing the test data sent by professor Wang. He went to the wine cellar and took out a bottle of Linlin medicinal wine.

Since old Chen, old Ma, and Li Qing had come, he had to serve them good wine first.

When he brought the wine to the main hall, he didn't see the three of them.

Just as he put down the wine and walked out of the hall, he saw the three of them walking back and forth in the pavilion, discussing something.

Qin Lin walked towards the pavilion, but as soon as he entered the pavilion, he was stunned.

After entering the pergola, he clearly felt the difference in temperature. He felt more refreshed and comfortable.

After your city's climate change, the warm winter and cool summer became more pleasant, but the difference in temperature now was even more obvious.

He immediately knew what was going on.

It must be that the temperature-maintaining grass at the side had completely matured, and the constant-temperature attribute had been activated, affecting the surrounding temperature. Chen Shengfei and the other two also saw him.

"Qin Lin, you're here just in time." Chen Shengfei immediately stepped forward and pulled him over, his face like a curious primary school student, "How can the temperature be like this? There's no difference between being under the sun and in the shade? The temperature seems to be the same."

Li Qing and Marvin also walked over curiously, waiting for an answer.

Qin Lin looked at the three curious people and said with a smile, "Follow me!"

He brought the three of them in front of the constant temperature grass.

The constant temperature grass had indeed matured.

The red and blue leaves on it had completely changed.

"Turtle Back bamboo?" Marvin recognized the plants in front of him, but immediately felt that something was wrong, "It's different. The leaves of the Turtleback bamboo have no color."

"Qin Lin, is the surrounding temperature because of the turtle back bamboo?" Chen Shengfei asked.

If it was anywhere else, he would not have such thoughts. What kind of plant could control temperature?

But this was the Linlin Manor. With Qin Lin here, any magical plants could be grown, right?

qin lin nodded with a smile and explained, " that's right. i call them turtleback bamboo. i prefer to call them everlasting temperature grass. they can control the temperature and achieve a constant state. even the current equipment can't achieve their effect. as long as there are enough of them, the temperature can be controlled to 22 - 25 degrees celsius whether it's winter or summer. "

"It's that magical?" Li Qing's face was full of surprise.

even though he wasn't a researcher, he knew how difficult it was to control a constant temperature.

"Won't you know once you try?" Suddenly, Marvin was eager to try. He pulled Chen shengfei and said, "old chen, let's move a few pots to other places to take a look."

chen shengfei knew what he meant.

he was also curious, so he and marvin carried a pot of constant temperature grass and walked in the other direction.

The temperature here was no longer the same as the temperature in the pavilion. It had returned to normal.

This temperature-maintaining grass wasn't small, and the two of them had to work together to move it.

Very quickly, the two of them moved the pot of constant temperature grass to a place under the sun.

The temperature here was normal.

The two of them went over again and carried out another pot of constant temperature grass, and then the third pot.

By the time the third pot was brought over, the two of them could feel that the temperature around the three pots of constant temperature grass had already changed.

This change was clearly visible, and the effect was shockingly strong.

Marvin quickly ran into the manor and borrowed a thermometer from the waiter.

When he came out, the temperature change around the three pots of constant temperature grass could be felt even more clearly.

then, he put the thermometer down and was surprised to find that the temperature on it had started to change.

The temperature around the pots of constant temperature grass was maintained at 23 degrees Celsius.

They then moved the three pots of constant temperature grass to the place where the sun was scorching. Under normal circumstances, the temperature here would change no matter what.

However, after the initial temperature rose to 25 degrees Celsius, the temperature on the thermometer quickly dropped to 23 degrees Celsius.

it was indeed at a constant temperature. no matter how the surrounding temperature changed, it would still be adjusted to the same temperature.

"This effect is amazing," Chen shengfei exclaimed.

Marvin couldn't help but ask Qin Lin, "Qin Lin, what's the general range of the everlasting warmth grass's effect?"

"It's a 150-square-meter apartment, so about five pots are more than enough," Qin Lin explained.

"What about the price?" "Such a magical effect, the price shouldn't be low, right?" Marvin asked.

"the cost wouldn't be much higher than the turtleback bamboo." Qin Lin said with a smile.

Of course, this cost was not based on illusory costs such as experimental costs.

For example, how much was the real cost of a cell phone? Most of the prices were in terms of brand and technology cost, especially the technology cost.

and those medicines, many of them only cost a few cents, but they were sold for thousands of yuan.

This was the cost of the experiment.

it was something that he had spent billions on. how else could he recoup his losses?

However, to Qin Lin, what kind of experimental costs did everlasting warmth grass cost? It was completely dug out from the game Forest.

Of course, if he were to sell it to the outside world, he could add a little bit of the experiment cost. No one knew if he had the experiment cost, so if he said he had it, then he did.

#### [Chapter 1293 This Grass Is Too Magical! It Can Really Control The Temperature](#)

The only problem was the cost of the experiment.

Li Qing suddenly thought of something. Qin Lin, I saw a piece of news before. It seems that Huaxin's air conditioner is trying to scam your Linlin Manor. There are even people on the internet saying that Huaxin isn't afraid that Lin Lin's laboratory will come up with something to counter their air conditioner. Qin Lin, I didn't expect you to cultivate it so quickly.

This made Chen shengfei and Marvin subconsciously look at Qin Lin.

qin lin had naturally seen the video. he immediately said awkwardly, " "Would you believe me if I said it was a coincidence?"

chen sheng fei, ma li wen, and li qing were silently looking at the constant temperature grass. at this time, silence was better than words.

Then, the three of them teased, "

" why did huaxin's Luo Sheng have to extort Linlin villa out of everyone? "

I heard that Huaxin has replaced GRI's position as the second largest air conditioner brand. The market Forecast is that Huaxin may reach the top.

"What's the point of reaching the top? The biggest blow is to climb up the clouds and then be kicked down again."

The three of them could already see the end of Huaxin and its boss, Luo Sheng.

Qin Lin's head was filled with black lines. The three of them obviously didn't believe him.

"Qin Lin, can you supply me with some of these warming herbs first? one of my group's subsidiary companies is entering the internet market. Because of the high requirements for the server room, they also have very high temperature control requirements."

otherwise, the entire network will be stuck. This will have a huge impact on our entire network.

it's just that, at this stage, only that level of server can meet our needs. However, the heat dissipation of this kind of server room is a problem. It exists in all major network companies because of the high power output.

"I think your constant temperature grass can replace the air conditioner in the server room. After all, constant temperature is the requirement of the server room. It's not too hot or too cold. 22 - 25 degrees is the ideal temperature for the server room,"

Qin Lin didn't refuse. that's not a problem. This batch has ripened quite a bit. I'll give you 10 pots!

Seeing Qin Lin agree, Marvin was also very happy and grateful.

Therefore, after lunch, he called for a delivery car and left with 10 pots of constant temperature grass, leaving Chen shengfei and Li Qing behind.

He wanted to see if the constant temperature grass was effective in controlling the temperature of the server room.

qin lin had also arranged rooms for li qing and chen shengfei in the linlin manor.

the three of them had originally agreed to come to linlin manor for a vacation.

It was rare to have three to five good friends in one's life. The three of them were good friends. When they had free time, they would naturally meet up. Qin Lin's place was their best place.

Qin Lin also returned to the workshop in the inner area. He locked the door and entered the game with a thought. He appeared on the mountain path of Mount goddess.

The reason why he was so generous as to give 10 pots of constant temperature grass to old Ma was also because it was not so troublesome to collect the seeds of the constant temperature grass.

Of course, he had also tampered with the 10 pots of constant temperature grass that he had given old Ma. However, he had castrated them and they could not form seeds.

Otherwise, if these 10 pots were given out and seeds were formed, they would definitely be distributed.

To the current him, this was a simple matter.

the knowledge of plant genes that he had learned through the mysterious stone tablet was something that not many experts or professors could surpass.

The area around the goddess mountain was filled with constant temperature grass.

he just needed to go in and collect the seeds of the constant temperature grass.

Following the original route, Qin Lin soon arrived at the area and saw the dense constant temperature grass all around.

Many of the temperature-maintaining grass had already grown seeds and could be harvested.

Qin Lin stepped forward and began to harvest the seeds one by one, then put them into a bag he brought.

After obtaining a large bag of seeds, he returned the way he came and exited the game. He returned to the workshop and began to process the seeds. Then, he took them to the rooftop of the manor to dry them.

time passed.

Marvin also returned to Ming city.

He didn't go back to his own group's headquarters, but directly went to the subsidiary's office.

This subsidiary company was independent outside the group's office building.

It was now the age of network information, and this subsidiary into the network business would also be the group's top priority for a period of time.

When the chairman, MA Lewen, arrived in person, the subsidiary was also in a mess. The General Manager directly came out with the senior management to welcome him.

The General Manager of this subsidiary was called Lin Qi. He greeted MA Levin respectfully, " "chairman ma, why are you here all of a sudden?

Marvin went straight to the point and said to Lin che, "I'm still here for the computer room. Have you found a solution?"

Lin Yang immediately shook his head and said, " Chairman MA, you know that this problem is common. Even Jingdong, Fox, and Penguin have servers of this level. At the moment, we can only rely on those expensive equipment to help with the heat dissipation. We're already choosing which brand of heat dissipation equipment to use.

This type of auxiliary heat dissipation equipment was naturally not cheap. It was rumored that the heat dissipation equipment in Penguin's main engine room was in the tens of millions.

no, " Marvin immediately said, " since the most expensive equipment at this stage is not a cure for the root of the problem, then we won't choose it. I have a better choice on my side.

"Director MA, you found another way?" Lin kui asked in surprise. Which company's new technology is it?"

[Chapter 1294 This Grass Is Too Magical! It Can Really Control The Temperature](#)

" let's go to the server room first, " marvin said. " i've already had people move the things up. we'll be there soon. "

Lin Yang nodded and followed Marvin to the computer room.

The company's server room was very large.

However, as soon as he entered, he could immediately feel a sense of heat. It was the heat generated by the high-power operation of the server.

In fact, the engine room already had heat dissipation equipment, which was the engine room air conditioner, also known as the engine room precision air conditioner, a special air conditioner in the engine room.

This type of air conditioner was enough for the general server room, but it was not enough for the server required by the subsidiary.

if they had to prepare enough equipment for use, the price would be very expensive, and the daily expenditure would be huge.

The key was still the temperature control. The best temperature control in this kind of computer room was 22 degrees Celsius in spring and 25 degrees Celsius in summer. The temperature-maintaining grass cultivated by Qin Lin was just enough to meet this temperature.

the key was to maintain the temperature.

Shortly after Marvin brought Lin Yang and the other managers to the computer room, there was some noise outside. Some people were moving in pots of warm grass.

Seeing this, Lin Jing stepped forward in confusion. "What's going on? did you guys move the green plants to the wrong place?"

"Yes, this is the place. Chairman MA asked us to send these bamboo to the engine room," the men said hurriedly.

Lin Yang looked at Marvin in confusion.

this is what I said, " Marvin explained. let's move the things into the computer room first.

Hearing Marvin's words, Lin Qi and the company's management were all a bit dumbfounded.

What was going on?

Could these green plants solve the computer room's problem?

What kind of joke was this?

They could understand if it was a new technology from some company, but who would have thought that Chairman MA was talking about this?

in this situation, the management of lin qi and the other subsidiaries didn't dare to say anything. chairman ma was the most powerful person in the company.

Anyway, it was just a few green plants. When Chairman MA was done messing around, he would have to leave and then get someone to move them away.

the 10 pots of constant temperature grass were quickly moved into the server room.

Lin Yang wanted to say something, but Marvin interrupted him, "Turn off the heat dissipation and air conditioning in the computer room and wait for a while. There will be an effect soon."

"qianqian." lin ran's words were stuck in her throat.

He could only watch as the heat dissipation and air conditioning of the computer room were turned off. He actually wanted to say that the temperature of the server would rise immediately, which could easily cause the server to crash.

as expected, an engineer immediately reported, " the heat dissipation equipment and the air conditioner in the server room have been turned off. The temperature of the server room is rising. It's already 28 degrees Celsius. If this continues, the server will have the problem of overstepping.

lin yang frowned. it seemed that there would be some problems in the server room today.

However, just as he was thinking about this, the engineer Manager suddenly said in surprise, " the temperature has dropped again. It's only 27 degrees Celsius now. How is this possible? "

Lin Qi was stunned when he heard this. He looked over and asked, " "The temperature has dropped?"

The engineer Manager immediately nodded. Mr. Lin, that's true. It's dropped again now. It's already at 25 degrees Celsius.

The others immediately felt incredulous.

Furthermore, they could feel the change in temperature in the engine room.

This didn't make sense.

"Are you sure the heat dissipation equipment and the air conditioner in the engine room are off?" someone asked.

The engineer Manager immediately confirmed and said with certainty, " "they've all been turned off."

at that moment, everyone looked at the 10 pots of green plants in shock.

[Chapter 1295 The Air-Conditioning Company Will Cry! The Special Plant With Bubbles!](#)

Lin ran's management was really incredible.

The temperature of the server room suddenly dropped. The air conditioner and radiator were not turned on, and director MA had specially brought the 10 pots of green plants here.

The only explanation was the credit of these 10 pots of green plants.

Lin Qi had never seen such a magical thing before, but he had to believe it even though the truth was right in front of him. Moreover, he knew that Chairman MA had shares in Linlin laboratory.

It was also possible that Chairman MA had gotten some magical plant from Linlin's laboratory.

"Chairman MA, what's going on with Yingluo? Is it the effect of this plant?" Lin Yang couldn't help but ask Marvin.

the others also looked at marvin, curious.

As an internet company, it was inevitable to have to deal with servers and computer rooms.

this was the first time they had seen such a magical thing. who had ever seen a plant that could lower the temperature of the engine room like an air conditioner or a cooling device?

"let's see the effect first!" marvin nodded.

Lin Yang immediately instructed the engineer, " monitor the temperature and the status of the server immediately.

"Alright, Chairman MA!" in fact, engineer management was already working on this.

But Lin Qi was the General Manager, and he had to answer with a good EQ.

The engineer Manager was monitoring the temperature and the status of the server room, and the surprise on his face was getting more and more amazing.

Ever since the temperature dropped for the first time, the temperature of the server room continued to drop. It was now 24 degrees Celsius.

Because their server power requirements were too high, the air conditioning and heat dissipation equipment in the server room could only control the temperature at this level.

This temperature was enough for the server to use, but occasionally, the server would run to its limit and the temperature would rise.

However, to his surprise, the temperature was still dropping after a while.

23°C

22°C.

finally, the temperature in the engine room reached 22 degrees celsius.

This temperature was actually the best temperature for the server room.

if the temperature was too high, the server would be affected. if the temperature was too low, the server would also be affected.

A moment later, the engineer said in surprise, " " it's amazing. it's completely controlled at 22 degrees celsius. even if the server is running at a high frequency and the temperature rises, the temperature will be controlled immediately. moreover, the server is not affected at all. this is a process that has never been seen before. "

the problem was completely solved with 10 pots of plants! Lin kui couldn't help but sigh with emotion as he looked at the 10 pots of constant temperature grass.

If the giant internet companies Penguin, Jingdong, and Qianqian the Fox knew about this, they would probably cry and beg for this plant.

Marvin laughed when he got the result.

When he had heard about the effects from Qin Lin at the Linlin Manor, he knew that constant temperature grass could definitely solve this problem.

director MA, this seems to be Turtleback bamboo, " Lin Jing asked curiously. why does it have such magical effects? "

" this plant is known as the constant temperature grass. it can control the surrounding temperature. you've all seen its effects. " Marvin explained, and then solemnly ordered, " "After this, everyone will sign a confidentiality contract. Before Linlin's laboratory officially releases the information, no one is allowed to tell anyone about the constant temperature grass."

Although Qin Lin had given him these everlasting warmth herbs, he didn't know if it would affect Qin Lin if it was spread out, so he could only take precautions.

But his words also confirmed Lin Qi's and the others 'suspensions that it really was from Linlin's laboratory.

this also made everyone come to a realization.

It wasn't strange for something from Linlin's laboratory to have such an effect.

marvin, lin yang, and the others monitored the server room for a long time. after making sure that there were no problems, they left with happy faces.

Solving the temperature problem of the server room would not only solve a big problem, but it would also save a lot of money.

In order to protect the secret of the grass, Marvin had Lin Yang arrange for security to be on duty in the computer room.

As for himself, he drove back to Linlin Manor in a hurry.

He had made an appointment with old Chen and Li Qing to go to Linlin Manor for a vacation.

When he returned to Linlin Manor, the sun had already set.

As soon as he saw Qin Lin, Marvin couldn't help but praise, " Qin Lin, the temperature-maintaining grass you've cultivated is too awesome. I can even see the Huaxin air-conditioner wailing and crying, regretting that it had extorted Linlin villa.

Qin Lin sighed. well, the cultivation of the warming grass has nothing to do with Huaxin company, " he explained. I'm not that stingy.

These words made Chen shengfei, MA Levin, and Li Qing look at each other.

"Qin Lin, I believe you." Chen Sheng Fei.

"I also believe that." marvin.

"Yes, I trust you very much." Li Qing.

The three of them answered very seriously.

However, he could taste the underlying meaning of his seriousness.

Qin Lin was too lazy to argue with these three guys.

He could only blame it on the coincidences.

when the time came for the herb to be promoted, he hoped that outsiders would not think this way.  
at night.

qin lin also made a sumptuous dinner for mr. chen, mr. ma, and li qing. with the help of the system's cooking skills, this was probably the most delicious feast in the world.

Chen shengfei, Marvin, and Li Qing naturally ate with relish, but they still wanted more.

"There's no other chef in the world who can make more delicious food than Qin Lin," Chen shengfei said with a sigh.

"Yeah," Marvin added, "we should be the envy of countless people now, right?"

[Chapter 1296 The Air-Conditioning Company Will Cry! The Special Plant With Bubbles! 2](#)

These words made Chen shengfei and Li Qing nod in agreement.

That was indeed the case.

As Qin Lin's friends, being able to make Qin Lin cook for them was definitely a treatment that countless people envied, whether it was Qin Lin's cooking skills or Qin Lin's status.

Therefore, they were very glad.

They were even more grateful that they had been able to get to know Qin Lin and become friends with him before he had completely made a name for himself.

If it was another time, it would be difficult to even get to know Qin Lin, let alone become friends.

This was probably the wonder of fate.

The next day.

Qin Lin got up and had some breakfast. He also called Yu Shui.

"Chairman Qin, do you have any orders?" yu shui asked as soon as she entered.

"Have you completed the planting task at fairy tale mountain?" Qin Lin asked.

Yu Shui nodded. it's basically done. Just arrange for some people to plant it later.

this also meant that boss, if you have anything to say, just tell me, and i can immediately bring people to do it. there won't be any impact.

Qin Lin also smiled and handed Yu Shui the seeds of the warming grass he got from the game. manager Yu, take some people and plant these seeds in batches on the land that the villa has contracted. This is a newly cultivated plant called everlasting warmth grass. It's very important. Ask Chen dabei to cooperate with you and make the arrangements.

"alright, chairman qin." Yu Shui understood and nodded.

since the boss had personally instructed him to do so, he had to pay the greatest attention to it. this also showed that this thing was definitely not simple.

So, the first thing he did when he left Linlin Manor was to call Chen dabeij, the security Manager, and discuss the matter.

After Yu Shui left, Qin Lin saw that Chen shengfei, Li Qing, and MA Levin had also finished their breakfast and were in his office.

The three of them had come to say hello to Qin Lin. They were going to see the National treasure fish, the Atlantic sturgeon and Atlantic dolphin.

They were actually on vacation together. In addition to drinking Linlin medicinal wine and eating okra to nourish the waist, they also wanted to play and take the opportunity to relax.

qin lin also went to the office. after sitting down, he began to complete his daily tasks for the day.

First, he went fishing, then he cut trees, and then he went to the mountains. Finally, he walked around the town and chatted with every NPC in an attempt to trigger the plot quest.

unfortunately, he didn't get any special gains from fishing, cutting trees, or mountain goods.

The NPCs did not trigger any special plot mission for him.

He could only control his game character to return to the farm.

however, as soon as he entered the farm, he was surprised to find the dwarf, ah ni, at the entrance.

Was there a benefit at the door?

Qin Lin immediately controlled his game character to click on the dwarf ah ni to talk, but another prompt immediately appeared.

[ it seems like the dwarf ah ni has something to say to you????? ]

However, when he saw the question marks behind the text, he knew what was going on.

This was another BUG incident outside of the game's plot.

therefore, he immediately locked the office door and entered the game with a thought. after taking over the game character, he saw the dwarf ah ni.

we meet again! ah ni exclaimed excitedly. I have a business deal to discuss with you!

"Another greenhouse tree design?" Qin Lin laughed. have you used up the previous ones?"

It had to be said that the dwarf's consumption of the greenhouse tree design was a little fast. However, this was good. If the consumption was not fast, how could he benefit?

that's right. I want the design. The dwarf, ah ni, was obviously not a businessman, so he immediately admitted his intentions.

"Then what do you want to exchange this time?" Qin Lin asked with a smile.

"I don't have anything this time." Ah ni said matter-of-factly.

"I don't have a design either." Qin Lin said teasingly.

"I can bring you to a place that I found by accident," Ah ni said hurriedly. "There are some magical plants there. I'll bring you there and you'll give me the design."

"Where?" Qin Lin, on the other hand, was attracted.

"Follow me." Ah ni waved at him, then turned around and left the farm.

Qin Lin caught up with him and saw that Ah ni was heading towards the goddess mountain. He then entered the depths of the forest through a mountain path.

This direction did not lead to the dwarf Valley, and he had never explored in this direction before.

The dwarves still had an advantage in the forest. Even if they didn't clean up the bushes, they could easily pass through them.

Qin Lin couldn't do it. He had to take out an axe and cut out the front road.

Ah ni led him further and further away, and they soon arrived in front of a pool.

To his surprise, there was a broken statue in front of the pool. It was a cat's head with six whiskers.

That familiar appearance, wasn't that Doraemon?

This was not the first time he had seen Doraemon's statue in the goddess mountain.

He even seriously suspected that the addition of so many mystical items in the system-enhanced version had something to do with Daxiong and Doraemon's version of the story of the farm.

The things in that version of the story of the farm were really sci-fi.

However, none of the plot quests had anything to do with that version.

There was no information or plot quest in the game.

He had only seen Doraemon's sculpture in the real world of the game when he was exploring the restricted areas of the mountain of goddesses.

Qin Lin looked at other places.

There were some special plants growing around the pool.

Those plants were like enlarged dandelions.

Unlike dandelions, what grew at the top of their heads were not floccules, but something similar to bubbles. There seemed to be very strange crystals growing inside, which was very magical.

This was probably the plant that the dwarf Ah ni had mentioned.

Moreover, it was clearly a special plant that he had never seen before.

this is the place, " ah ni said immediately. these plants are very magical. The bubbles on them can be plucked off and can completely wrap our heads inside.

as he spoke, he walked to one of the plants and picked one of the bubbles.

The part where the air bubble and the plant were connected could actually be pulled open like a rubber band.

the dwarf put his entire head into the bubble.

moreover, the opening seemed to have some sort of elasticity as it tightly wrapped around ah ni's neck after it was released.

Judging from ah NI's condition, the package did not seem to affect him at all. It did not affect his breathing and did not restrict his neck too much.

This was a little magical.

It looked more like the transparent cover of a spacesuit.

in some cartoons, without spacesuits, some characters could wander in space with only a cover.

The dwarf was carrying the bubble, just like a character in an anime.

Then, ah ni jumped into the water and disappeared without a trace.

Qin Lin was confused. He didn't know what was going on, but soon, he was surprised. After a few minutes, ah ni still didn't come up.

After 10 minutes, the dwarf ah ni still did not come out of the water.

after 20 minutes, they finally saw the dwarf ah ni coming out of the water.

"How did you do it?" Qin Lin asked in surprise. He had the Shard of the Kappa integrated into his body, and he was good at swimming, but he couldn't have been in the water for such a long time.

He felt that this thing might have something to do with the bubble on ah NI's head.

it's because of the plant's air bubbles, " ah ni explained. when you breathe, the air bubbles can produce oxygen and provide you with breathing.

I've tried it before. This bubble can be used for a very long time, far longer than the time I can stay underwater. Also, this thing can be used in many other places.

[Chapter 1297 580-Too Awesome! Sixth Brother Took Advantage Of The Situation](#)

Qin Lin's face was filled with surprise when he heard ah NI's words.

When the bubbles grew on the plant's head, after people breathed, the bubbles would produce nourishing Qi for people to breathe?

this was a little too magical.

However, from the dwarf ah NI's reaction, it didn't seem like he was joking.

After all, the dwarf had been in the water for so long. If it wasn't for the plant's bubbles, he didn't believe that ah ni could hold his breath so well.

out of curiosity, qin lin walked straight to a special plant and picked a bubble.

When he held it in his hand, he could see that there was a special structure of a gap at the part where the plant grew, which was very flexible.

Through this gap, he would be able to pull it open like the dwarf ah ni, enlarge the gap, and then put it into the head.

At this time, Qin Lin was also surprised to see the bubble's remark:

[ special isolation protective bubble: special! ]

[ this is a bubble that grows from a special plant. If you don't pick it yourself, it's hard to imagine that nature will grow such a strange thing. After wearing it, it has a special effect. As people breathe in carbon dioxide, it can produce a special reaction with the crystal inside, releasing the Qi needed by the human body. It is harmless: [ oxygen supply time: one day, hazardous substance filtration +2, endurance quality +2! ]

Qin Lin finally understood what this thing was.

It turned out that the crystals in the bubbles could react with the carbon dioxide that people breathed out and release oxygen. Moreover, these crystals could provide oxygen for 24 hours.

This was truly too miraculous.

so, what was 20 minutes in the water for ah ni?

if he wasn't afraid that his body would be damaged in the water, he could totally stay in the water for a day. that would be amazing.

moreover, this thing could not only be used in water.

It also had an attribute of filtering harmful substances +2 and endurance +2. These things could make the firefighters, the infectious diseases department, and the respiratory department ecstatic.

If this thing could be cultivated in batches, it would really benefit society and bring boundless merit. Even the purification grass could not compare to this thing to a certain extent.

Thus, this time, the dwarf ah ni had really given him a big gift.

Qin Lin hurriedly opened the gap in the bubble and put it on his head. The elastic part was released, and then it shrank again to fit his neck.

This fitting did not make him feel uncomfortable. After he tried to go into the water, he found that the water could not flow in. It was a bit like the fitting of a diving suit.

Moreover, after entering the water, because of the +2 endurance attribute, the bubble was not squeezed and deformed by the water pressure.

Through the bubble, he could breathe freely and also observe the underwater situation.

This was very magical.

He even thought that after this thing was cultivated, he could develop a special underwater sightseeing project.

after a while, qin lin came out of the water again and plucked the bubble from his head. then, he walked to the plants again and picked one up. he saw the message:

[ bubble grass: special! ]

[ this is a special type of bubble grass. When it matures, it will grow special bubbles: [ growth rate +1 ]

Clearly, just the soaked grass alone also had an attribute.

Production speed +1, this meant that this thing was growing very fast.

naturally, qin lin was not looking for this. he was looking for the seeds of this plant.

after all, he could only plant the soaked grass in the real world after he had the seeds.

A moment later, he also found the seed on the bubble grass. The seed was growing at the part where the bubble and the plant were connected.

The seeds were very small, even smaller than peanuts. There were about seven or eight seeds in each pebbled.

[ bubble grass seed: special! ]

[ this is the seed of a special bubble grass. after planting it, it will grow into a special bubble grass! ]

Qin Lin laughed. It was good enough that he could harvest the seeds, which could be cultivated.

After that, he found a few more stalks of bubble grass and plucked the bubbles from them. Then, he dug out the seeds from the knots.

at this moment, the dwarf ah ni, who had been watching all this while, spoke, " "how are the things here? Was it very magical? I didn't let you down, did I?"

after saying that, he kept staring at qin lin. in fact, the underlying meaning was that qin lin shouldn't go back on his word and should give him the greenhouse tree design.

Qin Lin laughed as he understood the dwarf's meaning. "Let's go. I'll give it to you when we get back to the farm."

of course, he wouldn't go back on his word. after all, the greenhouse tree design wasn't worth much to him. on the other hand, ah ni was a long-term bait. he could use the greenhouse tree design to fish out many good things from ah ni.

he still understood the difference between a full meal and a full meal.

"I know you're a man of your word." Ah ni immediately complimented him happily, " "How many do you want to give me?"

"How many do you want? You're just leading the way?" qin lin asked with a smile. he didn't mind giving ah ni a few more cards if he got something, but he didn't want to give him the number. instead, he wanted ah ni to ask for it.

This way, no matter how many cards he had, the other party would not have any objections.

Ah ni immediately said, " 2 "4" 6 "cards. Can I have 6 cards? "

he changed it three times and finally said his request.

"Alright, six tickets!" Qin Lin said with a smile.

"you're really too generous." The dwarf ah ni shouted excitedly after receiving the reply.

#### [Chapter 1298 580-Too Awesome! Sixth Brother Took Advantage Of The Situation](#)

Qin Lin laughed in his heart. It was too cheap.

She could really come to him a few more times for such a good thing.

after that, he plucked a few more special bubbles and returned to the farm with ah ni.

As soon as he reached the farm, he logged out of the game and took out six greenhouse tree designs from his office drawer. He brought them into the game and gave them to the dwarf ah ni.

After the dwarf ah ni received the greenhouse tree design, he looked through them one by one. Naturally, he was very satisfied with the results and left the farm with a smile.

Qin Lin exited the game again, opened the office door, and walked out. Then, he returned to the inner area, went to the rooftop of the manor, and began to process the seeds of the bubbling grass. He had to sun-plant them first.

after drying the seeds, he entered the workshop, locked the door, and re-entered the game. he took out the special bubbles that he had brought to the farm.

Naturally, he wanted to study the crystal inside the bubble. After all, this thing could react with the carbon dioxide exhaled by the human body to produce oxygen. It was amazing.

One had to know that the most worthless thing in today's society was carbon dioxide. If he could figure out what was going on with this crystal, he could produce oxygen without any worries.

Think about it, how big of an impact would this bring?

One had to know that many places were lacking in oxygen.

Qin Lin's knowledge of plant genes, which he had learned through the mysterious stone Book, made him very confident in this aspect.

However, as he studied it, he realized that he was wrong. Although the crystal was growing inside the bubble, the knowledge involved was not only plant genes, but also physics and other subjects.

This was a little difficult for him.

After studying it for a few days, Qin Lin finally gave up.

As expected, advanced scientific research, especially research that required cross-field knowledge, could not be completed by one person. It was no wonder that many research projects needed research teams.

Even for academicians, many projects required a few or even more than a dozen academicians to work together.

He still didn't have enough knowledge, and he missed the mysterious stone Book.

When he opened the door of the office and was about to go out, his phone rang urgently. It was Minister Lu.

he quickly picked up the call and heard minister lu's anxious voice, " boss Qin, we'll be in you city soon. Sorry to bother you again at Linlin Manor.

Qin Lin hung up the phone in confusion. Minister Lu's tone seemed to be very urgent and important.

he immediately went out of the inner area and into the hall. he saw chen shengfei and the other two who had just returned from watching the atlantic sturgeon and the white-fin dolphin.

When the three of them saw Qin Lin, their faces were full of surprise.

Qin Lin, you city is really incredible. Those white sturgeons and white-scaled pufferfish are amazing.

"That's right, especially those white-fin dolphins."

"i was lucky, i saw those white-fin dolphins all leaping away."

Qin Lin naturally knew about the spectacular sight of the White-fin dolphins collectively leaping, and he had seen it more than once.

"old brother qin, it's good that you're here." Li Kai's voice suddenly rang out as he hurriedly walked in.

"brother li, why are you in such a hurry?" qin lin asked, puzzled.

it was Minister Lu who called me; " Li Kai explained; he specifically asked me to come.

Qin Lin was even more confused.

Minister Lu not only informed him, but also brother li. It was obviously a very important matter.

it didn't take long for a few cars to appear in the manor's parking lot.

it was minister lu, and the other was an escort vehicle.

The formation felt different.

After Minister Lu got out of the car, the escort personnel also got out of the escort vehicle with two boxes in their hands.

After that, Minister Lu came in hurriedly and saw Qin Lin and Li Kai.

chen shengfei, ma levin, and li qing knew that something was up. the three of them also tactfully said goodbye to qin lin and left.

"Boss Qin, professor Li Kai, I need your help this time!" minister lu said as soon as he saw the two.

At the same time, the escort had already brought two boxes forward.

The boxes were opened, and there was a small transparent box inside. One could see that both boxes contained something like a Peach Pit.

At this time, the Peach-Pit like thing had already cracked open, revealing the small thing inside. It seemed to be some kind of seed.

Both of them had similar shapes. One was a small oval, slightly smaller than a peanut, while the other was flat like a melon seed.

Moreover, one of the colors was red, while the other seemed to be grayish-white.

Qin Lin was a little surprised. After learning so much data about plants through the mysterious stone Book, his ability to identify the number of plants and their degree of identification was unparalleled.

however, he could not recognize these two seeds at all.

Li Kai was also unrecognizable, and he didn't even have any relevant knowledge in his memory.

Logically speaking, these two types of seeds were very unique and should not be like this.

"Minister Lu, What's this?" Li Kai asked, puzzled.

"Boss Qin, professor Li Kai, do you still remember academician Hao's deep space rocket exploration technology?" Minister Lu asked.

Qin Lin nodded.

this wasn't the first time academician hao had heard of this.

It could be said that the research of academician Hao and the others represented the future.

Minister Lu continued, " because of the meteorite found in you city, and academician Hao's enlightenment in the manor, the three of them worked together and quickly completed the rocket technology. Then, they launched the rocket. This technology is at least 20 years ahead of the world.

Qin Lin felt a little proud when he heard this.

After all, the reason why academician Hao and the other two were able to have an epiphany was because he activated the moonstone's attribute, and the nightmare stone was something he had specially taken out from the game.

Such a simple operation could make the country lead the world in this rocket technology by more than 20 years. This was definitely a very fulfilling and meaningful thing.

minister lu continued, " because of the rocket technology of academician hao and his team, we can send astronauts further. for the first time, we explored a few small planets that are speculated to be very dangerous. "

in general, none of these findings were found, but there was an unexpected discovery on a small, barren planet that seemed to have once had plants.

these two seeds were the only discovery. After they found these two things, they resisted with all their might and spent half a month to bring these two things back.

at first, the two seeds looked the same, so we thought they were petrified by the same seed. But after testing for no dangerous substances, the botanist at the Chinese Academy of Sciences found that there was something inside the two seeds, and the outer shell was just a wrapping, similar to condensed Amber.

"it's a pity that the botanist at the chinese academy of sciences couldn't come up with any cultivation plan after testing the seeds inside. they can't be sure if they can be cultivated. "

also, these two seeds might be the only discovery. So, we decided to ask Mr. Qin and professor Li Kai to help.

"After all, you're the best experts in this field in the country."

ah!!!! Li Kai subconsciously exclaimed.

He only felt a chill down his spine!

it's one thing to take the blame, but can you not find him for this kind of thing?

One of the most amazing experts? he relied on special soil.

was he? everyone else thought so.

he really wasn't. he was nothing.

Qin Lin was also a little stunned. This was the first time he had encountered such a thing!

he subconsciously looked at li kai, and li kai was looking back at him.

the two of them seemed to see the helplessness in each other's eyes!

"Old brother li has just finished the new rice production, so he should be free!"

"brother qin hasn't been doing any training recently, he should be free!"

The two of them said almost at the same time.

This was awkward.

the two of them looked at each other awkwardly!

Was there a need?

Minister Lu was very happy when he heard their conversation. "that's great. since both of you are free, then boss qin and professor li kai can each take care of one seed. please."

"Hehe." Li Kai.

"Ran ran," Qin Lin.

The two of them didn't know how to describe this feeling. They only felt that sixth brother had taken advantage of them.

### [Chapter 1299 581-Stealing A Beam And Replacing It With A Pillar!](#)

Qin Lin was really helpless, but since Minister Lu had used the word " please ", he couldn't refuse with their relationship.

Therefore, he could only sigh when he saw Minister Lu distributing the fruits in two boxes.

In the end, Qin Lin and Li Kai each got a seed.

"Minister Lu, I want to do the training inside the manor. I hope no one will disturb me." qin lin made a final request.

He was sure that under normal circumstances, this seed would not be able to survive to a large extent. He might even have to cheat in the game, so he naturally did not want anyone to disturb him.

he was afraid that the higher-ups would be worried and send people to participate in this matter.

When Li Kai heard this, he immediately said, " "I'm cultivating in Linlin's laboratory. I don't want anyone to disturb me."

he might even need to rely on the special soil at the critical moment, and he didn't want anyone to find out about this secret.

" that's not a problem. we have absolute trust in boss qin and professor li kai. " Minister Lu immediately agreed.

There's nothing wrong with agreeing to this request?

After all, it was boss Qin and professor Li Kai, not anyone else. If it was someone else, he would have to send someone to monitor them.

However, the technology that boss Qin and professor li had donated was limitless.

For example, if boss Qin had not been so selfless, they would not have had such a good thing.

that thing was much stronger than this seed.

so, what was there to be worried about?

if they sent people to supervise them, it would seem that they were underestimating the heart of a gentleman.

however, minister lu sighed with emotion. these two were indeed worthy of appreciating each other. geniuses were indeed geniuses. even their requests were the same.

It was no wonder that the two of them had such a good friendship.

minister lu suddenly felt envious of this kind of friendship.

chief lu wasn't worried about linlin manor. ma hong and the others were all there, and there were two special guards who had taken the body-increasing medicinal liquid in the dark.

However, when Li Kai brought a type of seed back to Linlin's laboratory, he had sent someone to escort it.

in the end, minister lu also stayed in linlin manor.

He was in charge of this seed, so he naturally had to pay some attention to it in the early stages, leaving it for ten days to half a month.

.....

qin lin brought the grayish-white seed, which was smaller than a peanut, to the workshop inside the manor.

He was really helpless against this seed.

He really didn't do much about seed cultivation. After all, he was only using this title to make it more natural for him to produce game crops.

This time, he was really forced into a corner. He had no choice but to try to cultivate it.

It was also good that he had learned the knowledge related to plant genes through the mysterious stone Book. It would be good to practice it. Otherwise, he would feel like a sword that had nowhere to be unsheathed.

When he picked up the seed, Qin Lin's mind began to spin. Suddenly, a few ways to cultivate this seed appeared in his mind.

The knowledge he had learned through the mysterious stone tablet seemed to have been deeply imprinted in his mind, and he could easily integrate it.

Among them, he felt that one of the cultivation methods was the most reliable.

it was just that this method required in-depth cultivation and the use of some equipment to produce special nutrient solutions.

he also took out his phone and called shen li, asking him to send the equipment over.

Linlin's laboratory had all kinds of equipment related to crop cultivation, and there were many spare ones.

At Qin Lin's order, Shen Li also sent the equipment over as fast as possible.

Minister Lu was naturally very happy to see this.

Boss Qin was obviously serious.

Qin Lin also started the training after the equipment arrived.

the first thing he had to do was to test these seeds, and then use special equipment to cultivate the nutrient solution to soak the soil with nutrients.

Qin Lin didn't know what level the soil soaked in nutrient solution he had cultivated was.

However, to cultivate seeds, especially new seeds, soaking the soil in nutrient solution was necessary.

this process took three days.

However, just as he was about to plant these seeds, he suddenly thought of something. He was wondering if these seeds could be planted.

It could survive, but it could also be necrotic.

Minister Lu and the others didn't know if the seeds could be cultivated successfully. There were only a few of them, and they didn't dare to take them for testing. Therefore, they could only try to cultivate them.

To them, this was all unknown.

However, he was different. He knew whether the seed could be successfully cultivated. He just had to bring it into the game and look at the remarks.

with this in mind, qin lin brought these seeds into the game and saw the remarks:

[ unknown seed: unknown! ]

[ this is an unknown space seed, but it's all dead. there's no way to plant it! ]

"As expected," Qin Lin sighed and thought that he was stupid.

Three days of hard work was in vain. He should have brought her in three days ago.

in this case, qin lin could only express his helplessness.

These dead seeds could not be planted even if the gods came, so he had no way to do it.

Suddenly, Qin Lin thought of something. It didn't matter if these seeds couldn't grow. He seemed to have other things.

Soaking grass seeds.

The soaked grass seeds that he had picked from the game had already been sun-dried and could be planted normally. It just so happened that the soaked grass seeds were a little smaller than peanuts, and the two seeds were quite similar.

most importantly, if he were to take out the bubble grass directly, its ability to create bubbles would be truly astonishing and even more shocking.

#### [Chapter 1300 581-Stealing A Beam And Replacing It With A Pillar!](#)

What if these kimchi grass were the seeds sent by Minister Lu, the seeds brought back by the rocket exploration team from outer space?

there shouldn't be any problems then, right?

Qin Lin was suddenly enlightened.

Wasn't this a good way to shirk responsibility?

At the thought of this, Qin Lin exited the game, took out the soaked grass seeds that he had planted in the sun, and secretly planted them in the prepared nutrient solution soaked soil.

Moreover, in order to make it more reasonable, he only planted three. It was impossible for all of them to survive, right?

After finishing everything, Qin Lin felt extremely relaxed.

It wasn't that he didn't want to give the knowledge he had learned a chance to display its potential, but that the heavens didn't give him the chance.

Qin Lin went out of the inner area. When he arrived at the hall, he saw Minister Lu, who was full of joy.

"Boss Qin, you're finally out. That's great." When Minister Lu saw Qin Lin, he ran up to him with a happy face. boss Qin, there's news from Linlin's laboratory that professor Li Kai has made special nutrient soil and planted the seeds.

"Did old brother li plant it too?" Qin Lin didn't find it strange. After all, he had made his own nutrient soaking soil in three days, so brother li would definitely be no slower than him.

The only difference was that he had a cheat and could even secretly replace old brother Li's seeds. If the seeds couldn't be planted, then they really couldn't be planted.

Minister Lu was also happy to hear Qin Lin's words. "Boss Qin, did you plant it too?"

The two of them were indeed in sync.

since he had already planted it, all he could do now was wait.

In Linlin's laboratory.

Li Kai looked at the experimental basin in front of him and sighed slightly.

He didn't do anything else in the past three days. All he did was put some special soil into the cultivation pot and plant the seeds.

they announced to the public that this was specially cultivated nutrient soil.

Next, he would have to see if the special soil was useful for the seed.

Naturally.

he hoped that the special soil had no effect on the seed. he had already suffered enough, and he didn't want more, even if it was just a layer of ashes.

As he thought about it, he smacked his own head.

If that was the case, why did he go through so much trouble to get special soil to plant these seeds?

He could just use ordinary soil to plant it, and if it didn't work, he could just say that he couldn't do anything.

It was a good time to let Minister Lu and the others know that he was not that powerful.

The more Li Kai thought about it, the more reasonable he felt. If he had the urge to dig out all the special soil, then the cultivation would definitely fail.

However, when he looked at the surveillance camera not far away, it was a little troublesome.

In the end, Li Kai gave up on the idea.

Perhaps it was because of his responsibility, but he knew that this thing was very important, especially to the country.

if this plant could be planted, it would be the first plant discovered and grown in outer space. it would be of great significance to the entire human race.

he couldn't destroy it on purpose and cause the cultivation to fail.

Therefore, he could only hope that the special soil would not have any effect on the plant. Then, he would not hand over any water or nutrient solution.

With that thought in mind, Li Kai spent the next few days staring at the seeds he had planted.

On the first day, there was no germination. He heaved a sigh of relief and did not water it or use any nutrient solution.

The next day, it didn't germinate. He heaved a sigh of relief and didn't water it or use any nutrient solution.

On the third day, there was no germination. He heaved a sigh of relief. He did not water it nor did he use any nutrient solution.

On the fourth day, there was no " sprouting ". what the hell "

" ? ? ? "Li Kai was dumbfounded as he looked at the sprout that had suddenly appeared.

Under the sunlight, the sprout appeared to be a bright red.

He had been waiting for it to sprout, but it still did.

more importantly, it happened so quickly.

Was the special soil so effective on the seed?

li kai only felt his heart was very tired, very tired.

However, the result was already like this. He could only leave the experimental site, take his phone outside, and call Minister Lu.

Hello, professor Li Kai, " Minister Lu answered immediately. how's the training going on your side? "

Li Kai could only helplessly speak into the phone. Minister Lu, this might be good news for you. One of those seeds has survived and sprouted.

"Really?" Minister Lu's surprised voice came from the phone.

he knew that professor li kai could do it. he was the publicly acknowledged number one expert in the field of crop genetics.

However, he was still a little confused. Professor Li Kai said, " What did 'perhaps it's good news for him' mean? was this not good news for professor li kai?

Wouldn't it be a great achievement to be the first person to successfully cultivate a seed from outer space?

If Li Kai had heard this, he would definitely have retorted. Only a ghost would want to be successful.

he had already returned to the cultivation pot, but when he looked at the sprout in the cultivation pot again, he was stunned.

The sprout was no longer red, but a light gray color.

"what's going on?" li kai was stunned.

A moment later.

He also realized that the difference was that there was no sunlight.

sure enough, the sun came out again, and the sprout turned bright red again.

it seemed to change color?

Li Kai was shocked and immediately moved the cultivation pot to the other side. When he got close to the shadow of a few plants, the seedlings had actually turned black.

he tried to find an incandescent light to shine on it, and the sprout turned white again.

"this ..." li kai was shocked.

This thing is awesome, as expected of a space plant.
