

The Game 1341

[Chapter 1341 Terrifying Effect! Terrifying Growth Speed! 1](#)

Shen Li's cry attracted the attention of the others.

Qin Lin walked over.

"Boss Shen, what's wrong?" professor Liu immediately asked.

"look at the willow leaves in this bucket." Shen Li immediately pointed at the bucket and said.

"Yi!" professor Liu looked at the bucket and was also surprised.

Qin Lin also noticed the abnormality.

Yellow spots started to appear on the special willow leaf duckweed in the bucket.

This yellow color was like the yellow of autumn leaves.

Moreover, as time passed, these yellow spots increased in number, just like the spots on a human face. Once they reached an age, they would grow uncontrollably.

when some of the yellow dots connected together, they formed an even larger yellow spot.

Shen Li frowned, "is it going to wither?" After all, there's no way for plants to survive in this level of pollution."

Professor Liu shook his head and said, "under normal circumstances, it shouldn't have withered so quickly even in this kind of sewage .." &Nbsp;

Qin Lin also frowned slightly.

He had just taken this special willow leaf floating duckweed out of the game, so he could only understand its condition from the remarks. He couldn't figure out the situation.

"The same thing happened to the Willow leaves in this bucket." shen li suddenly pointed to another bucket and said.

Qin Lin and professor Liu looked over and saw that the Willow leaves inside had indeed turned yellow.

not only that, but the other buckets of willow leaves also showed the same situation. yellow spots began to appear on them.

As time passed, large areas of yellow spots also appeared on the Willow leaves in the buckets.

A few hours later, the special duckweed in the first bucket had turned yellow and was in a completely withered state.

"The rate of withering is too fast." Professor Liu frowned. this is not normal. Is there something special in the waste water? "

"It shouldn't be possible." shen li shook his head. " your city's wastewater testing is extremely strict. there are experts and nature reserves watching over it. they check the nearby rivers at all times. the factory wouldn't want to die. "

Just as they were discussing, they revealed looks of surprise.

Because on that completely withered yellow willow leaf floating duckweed, black dots actually began to appear again, and more and more.

It was as if the yellow dot had repeated itself.

very quickly, the willow leaf duckweed in the other buckets also withered and turned yellow. then, black spots also began to appear.

The Willow leaf floating duckweed seemed to change color.

Looking at the unusual scene, Shen Li and professor Liu no longer thought that the yellow color from before was the withered yellow of the Willow leaves.

There must be some other reason.

Qin Lin immediately understood the reason.

The special willow leaf duckweed had the property of decomposing and absorbing water pollution substances by +3.

when these special willow leaves were able to break down and absorb the polluted substances in the sewage, there would be a change in the overall, right?

It was just like when a person ate harmful substances. Sometimes, his entire body would turn pale and his skin would turn sallow.

How could the special willow leaf duckweed not be affected at all?

This was definitely the cause of the unusual scene in front of them.

In other words, the special willow leaf duckweed's two +3 attributes were already quickly showing their effects.

it didn't take long for the special willow leaf duckweed in the bucket to turn completely black. in the end, they all rolled up and turned into black balls.

after that, there were no more changes.

"Fish out all these willow leaves," Qin Lin ordered.

A researcher immediately stepped forward and used a sieve to fish out all the special willow leaves that had turned black and rolled into a ball. He placed them into an empty bucket.

But then, when everyone saw the water in the bucket, they couldn't hide the surprise on their faces.

"Look at the water in the bucket. Isn't it much clearer now?" professor Liu asked subconsciously.

"it seems so!" shen li nodded in disbelief.

Qin Lin was sure that the bucket of dirty water was much cleaner.

The bucket of water was completely turbid just now, but it was at least a lot lighter now.

In other words, this was the effect of those special willow leaves.

therefore, as long as there were enough willow leaves floating duckweed, even such heavily polluted water could be purified!

"Quick, re-test the quality of this bucket of water." Professor Liu immediately gave an order to a researcher.

The researcher immediately took the water quality testing instrument and tested the water quality of the bucket.

The TD value rose quickly.

"What was the value of the previous bucket of water?" Shen Li asked.

"It's 1435!" a researcher reported.

This was indeed a very high value, and the pollution was extremely serious.

however, when they re-examined the bucket of water, everyone was shocked when they saw the new td value.

987!

This was the newly detected TD value, which had dropped by more than 400.

"This Gu is too unbelievable." professor liu muttered to himself in shock.

He was a researcher in the field of water plants, so he naturally knew how amazing this was.

There were many plants that had the effect of purifying water, but the effect was limited. Purification was also in a certain sense, and it would take a very long time to slowly recover.

Moreover, the most important thing was that there was a limit to the effects of those plants. Once the pollution reached a certain level, they would be completely useless. They would not even be able to survive in the water. In three to five days, their roots would slowly rot and they would wither.

[Chapter 1342 Terrifying Effect! Terrifying Growth Speed 2](#)

How incredible was it for the Willow leaf floating duckweed cultivated by Chairman Qin to be able to reduce the seriously polluted sewage by more than 400 TD values in such a short time?

if he put more willow leaves in it, the sewage would be completely purified by tomorrow morning.

The researchers were also shocked.

this was because they knew how unbelievable it was. it could even be said that it was a little fantasy.

Soon, the special willow leaf duckweed in the other sewage also slowly rolled into a ball and turned black.

The first thing professor Liu did was to ask the researchers to do another test on the quality of the sewage.

The final result was just as shocking.

after each bucket of sewage was tested, the td value dropped by more than 400. none of them exceeded 1000.

Even modern technology for sewage treatment was not as effective as this. It would cost a lot of money to treat this level of pollution.

now, these willow leaves floating duckweed could actually achieve this level.

They were just plants.

"examine these willow leaves as well." Qin Lin pointed at the Willow leaves that were rolled up into a black ball and ordered.

immediately, a researcher brought up the special willow duckweed and left the manor, returning to linlin's laboratory.

This was not a simple water quality test. It required special equipment, which had not been brought over. They still had to go to Linlin's laboratory.

Moreover, this kind of test could not be done in a short time. It was likely that it would only be done tomorrow.

After that, professor Liu also got people to fish special willow leaf duckweed from the swimming pool and put them into the dirty water in the buckets.

The next step was to rely on time to let the special willow leaf duckweed purify the sewage.

Qin Lin also went back to the office first. He looked at the mental light screen and completed his daily task for the day.

The next day.

Qin Lin got up, washed up, and had breakfast with Zhao moyin. The first thing he did was go to the swimming pool.

early in the morning, shen li, professor liu, and the other researchers were all present.

In other words, they had not left the entire night. They had all been waiting here, all shocked by the special willow leaf floating duckweed effect. They were not willing to leave until the results were out.

This was probably the tenacity and persistence of scientific researchers.

lin liu and the others had also woken up early.

it was always like this when it came to taking care of a child. she would wake up early and sleep late. it could only be said that it was not easy for a mother to give birth and raise her child.

When they came out early in the morning, they were attracted by the scene by the swimming pool, and their faces were filled with shock.

Because professor Liu was actually drinking the water from the pool.

They were all a little shy.

Because they had swum in this pool before. The key point was that although the water in the pool was flowing in small streams, it didn't seem to have been changed, right?

This Kasaya

Qin Lin came out and was shocked to see this scene.

what was this professor doing?

He quickly walked over to ask, but before he could speak, he saw a water quality detection instrument by the pool. The testing equipment was a spectroscope that was deep inside the pool.

however, the data on the instrument made him understand professor liu's behavior.

this was because the td of the water in the pool was 1.

Perhaps many people don't understand what the value of 1 means. Here's an example.

Many mountain spring water had a TD of more than 30. Many restaurants that used mountain spring water to cook also used this level of water.

In addition, for the pure water that they sold, most of them had a TD less than 5. Some companies with a good conscience might have a lower price.

So, what did this mean?

The water in the swimming pool was cleaner and safer than the pure water that everyone usually drank.

It made sense. The special willow leaf floating duckweed could even purify the heavily polluted water, so purifying the water in this pool would be a piece of cake.

When professor Liu saw Qin Lin, he said to Qin ran even more excitedly, " Chairman Qin, you're really amazing. The Willow leaf floating duckweed you developed will shock the world and make all the water and plant researchers around the world tremble in fear. They all need to respect you, including me.

As professor Liu spoke, he took out another set of test data and gave it to Qin Lin. At the same time, he reported, " "Qin Lin, take a look at these test data. This factory's wastewater, which was originally seriously polluted and had a value of more than 1000, now has a TD value that has dropped below 10. This is incredible."

After professor Liu's report, the researchers, including Shen Li, all had an indescribable expression on their faces.

yesterday, it was still seriously polluted factory wastewater, but now it had become directly drinkable pure water.

Who would have thought that this wasn't the effect of high-tech, but the effect of a Water-type plant?

Moreover, the harmful substances in the sewage had all disappeared without any technology. This was the most shocking thing. They didn't even know where the harmful substances had gone.

More importantly, if news of such a terrifying effect in such a short period of time were to spread, the entire world would be shocked.

The entire water plant research and sewage purification industry would be greatly impacted and annihilated under this stormy wave.

Now that he knew the result, the only person who could remain calm was Qin Lin. After all, he had a hack and had taken out many things. He also knew the attributes of this special willow leaf floating duckweed in advance.

The impact would not be that great.

A moment later, a researcher from Linlin's experiment rushed in with a shocked expression on his face, holding a test report in his hand.

the researcher handed the report to professor liu.

professor liu took the report and was completely shocked when he saw the test results of the willow leaf duckweed.

Acid, base, contains chemicals, which include chemicals, chemicals, calcium, potassium, potassium, and so on.

How could he not be shocked?

The Willow leaf duckweed actually contained harmful substances.

Now, he finally knew where the harmful substances in the sewage had gone. It turned out that they had all been absorbed by the Willow leaf floating duckweed. It was like a waste collector.

It was truly inconceivable. It was simply a wondrous idea to the extreme.

what kind of inspiration and brain hole did chairman qin have to cultivate such a thing?

"Chairman Qin, this willow leaf floating duckweed can actually absorb the harmful substances in the contaminated water." "Chairman Qin, what is the principle behind this?" professor Liu asked in disbelief.

Qin Lin didn't know how to answer this question. After all, he had never studied it before. It wasn't that he couldn't figure it out. With the knowledge he had obtained from the mysterious stone Book, it was easy for him to study it.

However, he really didn't have the time and couldn't be bothered to waste his time. If he really studied everything he took out, what meaning would there be in life?

the theory is only in my mind, I haven't refined it yet. Professor Liu, why don't I give you a task? you'll be responsible for refining it. What do you think? "

ah! professor Liu's face was filled with surprise.

He naturally didn't think that Chairman Qin had cultivated this thing. It wasn't difficult at all to study the details of the principles.

Now that Chairman Qin gave him this task, he was giving him a chance to participate in the research.

"Thank you, Chairman Qin. I'll make sure everything is done beautifully." Professor Liu immediately thanked him.

the researchers at Linlin Laboratory all said that both Chairman Qin and Professor Li Kai were willing to give others a chance, and it was true.

"Professor Liu, I'll leave this to you." Qin Lin nodded.

"Chairman Qin, what's the growth cycle of the Willow leaf floating duckweed?" Shen Li immediately asked.

Qin Lin said, "The cycle is very fast. I didn't remember the specific time. I'll give you the seed later. This thing will be cultivated in Qin Lin's laboratory."

"Alright, Chairman Qin." Shen Li's face was filled with joy.

This thing was cultivated by Linlin's laboratory, which could further enhance the reputation of the laboratory. With the purification grass, their laboratory's influence on the world would definitely be the top.

Qin Lin returned to the Linlin Manor and took out the remaining special Willow duckweed and handed it to Shen Li.

Shen Li also went back to Linlin's laboratory immediately and arranged for people to cultivate the seeds of these special Willow duckweed.

However, these Willow leaf floating duckweeds had only been planted for a day. When Shen Li brought people to check on the situation again, they discovered that the seeds had already sprouted.

On the third day, a small section of the Willow leaf floating duckweed had already grown.

Clearly, this was the effect of the special Willow leaf floating duckweed's growth speed +2 attribute.

However, this rate of growth shocked Shen Li.

It was simply unbelievable.

When he thought about the terrifying effects of the Willow leaf floating duckweed that Chairman Qin had researched, he was afraid that the bosses of those companies who were in charge of sewage treatment would be anxious and jump in anger if they knew about it.

[Chapter 1343 Are You Going To Be An Academician?](#)

Time passed!

Although Fairy Tale Mountain was still popular with tourists, its popularity on the internet had dropped a lot.

In the office of the Linlin Manor, Qin Lin had just finished his daily tasks for the day when Shen Li came to look for him.

As soon as he entered the office, Shen Li exclaimed, " Chairman Qin, let me tell you something shocking. The growth rate of the Willow leaf floating duckweed you're cultivating is incredible. With that speed, as long as you give us the time in the laboratory, we can even treat the water quality of the world without a problem.

Qin Lin knew that the special willow leaf floating duckweed had an attribute of +2 growth speed, so there was no problem with it growing quickly.

Moreover, after testing the effects of the special willow leaf floating duckweed, he no longer had to worry about the trouble caused by the rapid growth of the special willow leaf floating duckweed.

If such a thing really happened, the man-made pollution would be offset by these special willow leaves.

There was a limit to the amount of pollution that these willow leaf floating duckweeds could absorb and decompose. Once they completely turned black and rolled into a ball, it was equivalent to withering and dying. It was actually very easy to eliminate them if they were really overflowing.

After all, it was difficult to control the water quality. Was it difficult to create water pollution?

After all, humans were good at destruction, and it was only a matter of minutes before they created pollution.

"Oh right, this willow leaf floating duckweed is growing so fast, we have to control it well." Qin Lin said.

This was what he was most concerned about.

The Willow leaf duckweed grew quickly and was indeed very effective, but if it was not controlled well, it would soon be all over the world, and the various countries would be able to cultivate it themselves.

although it was impossible to control this thing for a long time, it was good to be able to control it for a long time.

Shen Li immediately said, " Chairman Qin, I've already arranged for two research groups to conduct sterilization research on this. In the future, the laboratory will cultivate these willow leaf floating duckweeds in two batches. One batch will be reserved for domestic cultivation, and the other batch will be sterilized and promoted to the public.

"I'll leave this matter to you." qin lin nodded his head. since shen li had a plan, he trusted him.

Shen Li immediately said, " President Qin, there's something I need to tell you. The world sanitation organization has raised a large amount of funds. In collaboration with Mauritius, they've sent out an invitation to all pollution management companies around the world to bid for the 4000 tons of oil-polluted Sea area.

"with the growth rate of the duckweed, i think our linlin laboratory can participate in the bidding. the whole world will be shocked by our duckweed."

"What's the specific situation?" qin lin knew about the 4000-ton oil spill in Mauritius.

Mauritius had no idea how to manage the sea area, but they didn't expect the world sanitation organization to be involved.

"Chairman Qin, I've already sent the relevant documents to your internal email," Shen Li immediately said.

qin lin opened his internal email and saw the document.

After reading the contents of the document, he had a general understanding of the situation. The world environmental protection organization wanted to govern the waters.

In the current situation, as long as the money was in place, it would probably cause fierce competition among sewage treatment companies all over the world!

As long as the bid was successful, it would prove that their technology was the best in the world.

Qin Lin was confident that no other company in the world had better technology than the special willow leaf floaters in sewage treatment.

Moreover, he wasn't even afraid that someone could tamper with it.

This was because Mauritius really needed to control the sea area, and the world environmental protection organization knew the effects of the special willow leaf floating duckweed, so they would be begging for it.

In the future, their organization would not be able to avoid this willow leaf duckweed.

" president shen, i'll leave this matter to you. i believe you can handle it well, " qin lin finally said.

"Alright, Chairman Qin." Shen Li nodded his head. He was very grateful for Qin Lin's trust.

As the two of them were chatting, there was a knock on the office door.

Gao Yaoyao walked in with Minister Lu and reported, " "Boss, Minister Lu is here."

"boss qin, sorry to trouble you again." Minister Lu said with embarrassment as soon as he came in.

because he had really been troubling boss qin all this time, even he himself was a little embarrassed.

Fortunately, the application documents he submitted should be coming soon. It could be considered a little compensation to boss Qin.

When Qin Lin saw Minister Lu, he immediately welcomed him in. "Minister Lu, what's the trouble? just tell me what you need."

Minister Lu knew Qin Lin well, so he went straight to the point. it's about the bubble grass. Didn't we find the bubble grass and color-changing tree on that planet? the leaders suddenly had a meeting and decided to launch another rocket with the color-changing tree and the bubble grass to see if they could be grown to maturity.

so, in addition to the seeds of the color-changing tree, we also need a batch of bubble grass seeds. The quantity requirement will not be small. Now, we can only ask your Linlin laboratory to provide us with the cultivated seeds.

Qin Lin was stunned when he heard this, and then he immediately said, "no problem, Minister Lu. Linlin laboratory will cooperate with the higher-ups."

He understood the meaning of this!

Humans had never discovered life in outer space, not even plant life.

But now, a plant seed was found on a planet, and this seed was grown on earth.

If these seeds could be cultivated and grown on that planet, it would be of great significance.

If there were enough of them, they could create a special area through photosynthesis.

then, this area could be transformed. if he could plant purification grass, which would release a large amount of oxygen through photosynthesis, it would be completely different.

Thinking of this, how could Qin Lin not cooperate?

In fact, the other countries in the world did not even know about this. Everything was carried out in secret, which made the significance even greater. Their country was quietly doing something that led the world.

When all the results were set in stone, all the countries would be dumbfounded.

The only thing he didn't know was that the color-changing tree was brought back from that planet and could be planted.

however, the bubble grass was not a plant from outer space. he had brought it out of the game, and it was unknown if it could survive on that planet.

thinking of this, qin lin said, "minister lu, all the bubble grass seeds cultivated by linlin's laboratory will be provided to the higher-ups. moreover, we will not promote it to the outside world for the time being. we will not disclose any information to the outside world."

When Minister Lu heard this, he could only say with emotion, "Boss Qin, thank you so much for your cooperation."

At this moment, he really didn't know what to say other than thank you.

In fact, after the leaders had decided on this matter, they had hoped that Linlin laboratory would not promote bubble grass to the public for the time being.

He didn't expect boss Qin to bring this up himself.

They really had nothing to say to boss Qin. The higher-ups really owed him too much.

Therefore, when he went back, he had to get the higher-ups to rush him and get it approved as soon as possible.

After that, Minister Lu and Qin Lin followed Shen Li to Linlin's laboratory to check on the cultivation of the bubble grass.

During this period of time, the first batch of bubble grass had already grown very tall due to its growth rate attribute. There were already bubbles that had begun to condense and grow.

After checking the situation, Minister Lu went back to Beijing immediately and reported the situation in your city to the leader's office.

After the leader heard the report, he sighed. "Boss Qin, you're so cooperative, we're really embarrassed."

"Leader, how's the document that I submitted earlier?" Minister Lu asked in a hurry.

Hearing this, the leader took out two documents from the drawer and handed them to Minister Lu, "yes, I've been watching and urging him. He's already down."

When Minister Lu heard this, he immediately went forward to take the document in surprise.

It was the application documents for the two academician positions.

There was a fixed quota for an academician application every year, and it was inevitable that they would be ranked according to seniority. Only a few geniuses could skip this rule.

Of course, there was also a type of person who could be given the title of an academician at any time.

This type of person was one in a million even among the researchers, not even the few geniuses.

Only those who had made great contributions that made academicians feel ashamed could be given special instructions.

Even the academicians and future academicians didn't dare to object to this kind of person.

This kind of person, in the same industry, was an existence that could crush his peers.

Boss Qin and professor Li Kai were such people.

Even the academicians of plant genetics would feel inferior to the contributions of these two.

Therefore, it was normal to give them special instructions for the title of academician.

Even in the outside world, this should be expected by the public, and everyone would cheer for it.

"Leader, I'll have to trouble you with these two documents." Minister Lu put away the documents and said with a smile. After chatting with the leader for a while, he hurried back to his office and called his Secretary.

"Minister, do you have any instructions?" The Secretary immediately asked.

Minister Lu immediately sent out the two documents, then prepared the relevant information and sent it to Linlin laboratory for boss Qin and professor Li Kai to fill in before sending it back.

"Alright!" The Secretary took the document and was only surprised when she saw the contents. She was not surprised.

As the Secretary of the leader, she naturally knew the things and people that the leader had been paying attention to. She also knew how much contribution boss Qin and professor Li Kai had made.

It was reasonable to give these two academicians titles.

If he didn't give it to these two, if the foreigners knew about it, they might say that they didn't know how to use people well. Perhaps some people would use this to rope in these two.

this was not impossible.

In the past, there were some talented people who couldn't wait for the title of academician, so they were poached by Western countries like the United States and changed their nationality.

Some talented people were already like this, and with the abilities of these two, it was even more possible.

The Secretary didn't hesitate. After taking the document, she left the office immediately and made arrangements. Almost immediately, she had someone post the relevant documents on the official website of the Chinese hospital.

Once a new academician was promoted, the official website of the Chinese People's Hospital would publish it.

Soon, the Chinese Academy of Sciences' official website updated with an announcement. The announcement was about Qin Lin and professor Li Kai becoming academicians.

The Chinese Academy of Sciences, as the scientific research Center in China, was also the focus of countless reporters and people in the scientific research industry. Even many patriotic people would pay attention to it, looking forward to the rapid development of National Science and Technology, and looking forward to new research results that could lead the world.

Therefore, many people were also paying attention to the official website of the Chinese Academy every day.

When Qin Lin and Li Kai's academician approval was released, many people saw it, and it immediately caused a huge sensation.

[Chapter 1344 Qin Lin Himself Was Dumbfounded 1](#)

Xiang Chong was the assistant Chief editor of a scientific research program.

The job scope of this position was to check the latest scientific research News and Report to the chief editor as soon as there was a discovery. The chief editor would then lead editor Qi ya to edit and release the news or inform the reporters to release the news.

This was a very boring job, so he had Linlin leisure tea and Linlin spirit-nourishing liquid on his desk.

The official website of the Chinese Academy of Medicine was also the place he visited the most.

Because the Chinese Academy of Sciences was a domestic Scientific Research Center, it was the easiest to produce successful scientific research. Once a major achievement was released, it would be major news.

As usual, Xiang Chong logged into the official website of the Hua Xia Academy to check the situation. But this time, as soon as he entered the official website, he saw a newly released announcement.

the moment he saw the announcement, he couldn't help but exclaim, " "F * ck, awesome!"

This caused his colleagues around him to be suspicious, and they all asked him questions.

the chief editor, who had just come out of the office, happened to hear it. she looked at him and asked, " "Xiang Chong, what's going on?"

Under normal circumstances, employees would speak of National quintessence like this because they had discovered some big news.

chief editor, " Xiang Chong reported in surprise, " look at the latest announcement on the official website of the Chinese Academy of Sciences. Little Qin and professor Li Kai have been specially approved as academicians.

Everyone was stunned by his words.

who didn't know about little qin and professor li kai?

not to mention the fact that these two were hot news, their achievements in scientific research were enough to make countless scientific researchers ashamed.

In addition, the friendship between the two of them was also something that people always talked about.

If it weren't for their prestige and attention, no one would have dared to write that. Perhaps many tabloids would have written a series of 'gay friendship' about them.

That scene was probably censored.

They were in the field of scientific research news, so they naturally knew how much contribution these two had made.

Moreover, many of these two's technologies had imposed sanctions on foreign countries, which made them all excited.

Now that they heard that these two were specially appointed as academicians, everyone clicked on their computers and logged into the Chinese Academy of Medicine's official website.

The chief editor also went to the nearest employee's computer to check it.

Very quickly, surprised voices rose one after another.

"It's actually true. Little Qin and professor Li Kai are academicians now."

"they really do deserve their reputation."

" yeah, with the results of their research, other than elder yuan and a few other academicians in the field of plant research, i'm afraid the rest are only qualified to be their students. "

"little qin, you must be the youngest academician, right?"

"....."

Obviously, no one was surprised that Qin Lin and Li Kai became academicians.

To be honest, it would be strange if little Qin and professor Li Kai couldn't become academicians.

It was just that little Qin's age was really shocking.

It was probably the first time an academician of his age had such a problem.

"Hurry up and publish the news." After the chief editor saw the public notice from the Chinese Academy of Medicine, he immediately shouted to everyone.

All of a sudden, the people around them began to move.

It wasn't just the research news company. Other research companies and research enthusiasts who followed the Chinese Academy of Sciences also saw the announcement.

for a time, this matter caused a sensation.

it was hard not to cause a sensation.

Now, if he mentioned little Qin and professor Li Kai on the internet, he would see how many people didn't know them. Even the most popular stars couldn't compare to the two.

Now, even a four-character celebrity's career establishment examination could make the whole internet aware of it. Becoming an academician was much better than taking the career establishment examination. It was impossible not to attract people's attention.

Therefore, almost in a short time, the news section and Short Video platforms on the internet were filled with this news.

This was especially true for a certain music platform. Out of the top 10 most searched topics, almost eight of them were about Qin Lin and Li Kai.

The internet exploded with popularity.

A news video about this matter on mouyin received more than 10 million likes and comments.

666, I can only say that little Qin and professor Li Kai deserve their names!

the two of them have already made such great contributions to plant research. It's too much to not give them to the academician.

"I saw this news the moment I went online. I'm so happy to see it!"

"Little Qin is indeed little Qin. The youngest academician has been born."

"....."

...

On the Saint missus mountain.

qin lin, on the other hand, walked out of the forest with a large bag of things.

he took some time to enter the game again and explore the goddess mountain.

he originally wanted to follow the memory of the previous goblin mission and find the path according to the mission. besides, he did find the damp and dark forest where he had met the goblin abril during the mission.

However, he didn't see Abair or any other gnomes around him.

This made him feel very strange.

The previous mission was clearly here.

In the end, he could only explore other places and found some wild fruits.

He had never seen these wild fruits before. They were called favus fruits, and the remarks stated that they could be used to make fruit wine. This fruit wine could treat diabetes.

seeing this, he also picked some and brought them outside to brew fruit wine, increasing the capacity of his wine cellar.

Back on the mountain path, Qin Lin logged out of the game with a single thought and returned to his office. He then controlled his game character to bring the big bag of diarrhea fruits back to the farm.

Then, he went to the wine cellar and entered the game again. He took out the bag of diarrhea fruits and a barrel of 40-year-old white wine from the corner of the wine cellar. He started to make the fruit wine.

[Chapter 1345 Qin Lin Himself Was Dumbfounded 2](#)

He had prepared a complete set of equipment in this wine cellar, even the medicinal herbs for brewing various kinds of wine. He had prepared this for such a situation where he could do it directly without the trouble of buying the necessary equipment and medicinal herbs.

He spent some time to seal the fruit wine before leaving the wine cellar and returning to his office.

As soon as he sat down, Qin Lin took out his phone and habitually looked for the news online. However, as soon as he opened the tidingyin news, he saw the news that someone had been specially approved to be an academician.

This was a little awesome.

One had to know that in China, the number of people who didn't go through the normal procedures and received special academician titles could be counted on one hand.

Once such a person appeared, it would be the country's fortune.

"this little qinqin is a little too much, huh?" Qin Lin mumbled and was about to eat his melon when he suddenly felt that something was wrong.

Little Qin?

was it little qin?

Himself?

qin lin was suddenly a little confused.

how did he get an academician title out of nowhere?

He quickly started to read the news seriously.

Then, he was completely stunned.

The people from the Chinese Academy of Sciences had specially approved him and brother Li to become academicians.

The entire internet knew about it now.

The key was that he didn't know?

Qin Lin was really shocked. He was only a graduate of the tourism major. How could he get the title of an academician because of the things he did?

Moreover, Minister Lu didn't mention this to him.

Just as he was thinking about it, Minister Lu called.

He quickly picked up the call and wanted to ask what was going on, but Minister Lu's laughter was heard first. boss Qin, did you see the news? from today onwards, you are academician Qin little. This is a big surprise, right? "

" ran ran. " qin lin didn't know how to respond for a moment.

Was this a surprise? This was a shock, okay?

Minister Lu laughed again. by the way, the relevant information has been sent to Linlin laboratory. You and professor Li Kai fill it out and send it back as soon as possible. We'll keep it in our files.

"Ran ran." Qin Lin couldn't help but ask, Minister Lu, can we not take this academician? "

minister lu was dumbfounded by the question and didn't know how to answer.

He was in charge of the Chinese People's Hospital, so he naturally knew how many people worked hard to get the title of academician every year.

Everyone wanted this title. Even the most passionate researchers couldn't be indifferent to this title.

there was really no one who would ask if they could give up on an academician.

How was he supposed to answer?

i don't think there's a rule that states that you can't reject an academician title, right?

More importantly, why did boss Qin look like he was going to reject the title of an academician?

however, if boss qin refused the title of academician, it would be embarrassing. this good thing would turn into a bad thing.

This Kasaya

"Boss Qin, we can't do this. The news and public announcement have already been released. We're representing the government's authority!" Minister Lu was anxious.

What followed was a long speech of earnest advice.

when he finally hung up the phone, qin lin could only sigh helplessly.

He couldn't run away.

it wasn't just qin lin. in lin lin's laboratory, li kai was walking out after finishing an experiment when he found that all the researchers outside were looking at him and congratulating him.

"Professor Li Kai, congratulations!"

"I should call you academician li."

"Yeah, academician li, congratulations!"

"....."

Li Kai was also confused. When did he become an academician? after he heard the reason from the researchers, he immediately returned to his office.

He also saw the news on the internet.

"How did you become an academician?" Li Kai was also a little terrified.

He was very clear that all of his research results were all black cloaks. The only research result that truly belonged to him was the low-temperature genetic technology.

Even if he could get the title of an academician because of this technology, it was not now. He would have to take it step by step in about three years, and there would not be any special instructions.

But now that he was flying up into the sky, he was completely not used to it. He felt guilty, and this was simply deceiving the world to the extreme.

He remembered that Qin Lin was also receiving special approval for his title as an academician, so he quickly called Qin Lin.

when qin lin received li kai's call in his office, he naturally knew what was going on. he answered the call and said, "Old brother Li, you also know about it? congratulations on becoming an academician."

Li Kai was dumbfounded. Brother Qin, do you know that ran ran knows the details? can she give up her position as an academician? " he asked.

He didn't mention the special soil over the phone. It was a secret and could only be told in person.

however, he and old brother qin were both well aware of this matter. if he were to put it this way, old brother qin would definitely understand.

Qin Lin was well aware of it, because he was the one who had secretly put the blame on brother li, but brother li thought it was because of the special soil.

Besides, he didn't want to be an academician, but what could he do?

He could only try his best to persuade him. old brother Li, you can't do that. The news and announcement have already been released. That's a representative of the official authority.

In Linlin's laboratory, Li Kai was dumbfounded when he heard Qin Lin's words. Was this something his younger brother Qin would say? these words were too official.

before he could think further, he realized that brother qin had already hung up the phone.

This Kasaya

The news on the internet had indeed blown up.

more and more people knew that qin lin and li kai had been specially appointed as academicians.

Descriptions like 'academician Qin junior' and 'youngest academician' became the hottest topics and labels for a while.

[Chapter 1346 Qin Lin Himself Was Dumbfounded 3](#)

In the county.

Chen Li also immediately went to sun Xian's office.

"You've already seen the news?" Sun Xian asked excitedly.

Chen Li nodded. I've already seen it. Although I knew that boss Qin and professor Li Kai would become academicians sooner or later, I didn't expect it to be so soon. And it's even a special notice. We were caught off guard.

"Yeah, but they deserve it." Sun Xian said with a smile.

In this era, any place that produced a famous person would be specially publicized. If a National College Entrance Examination top scorer appeared, the place would publicize it for a long time.

Now that you city had two academicians with special approval, it was even more so.

Even if boss Qin and professor Li Kai didn't need them to promote their reputation, they still had to show the attitude of the county.

"Have you arranged everything?" Sun Xian asked Chen Li.

"Yes, I personally arranged it." Chen Li nodded.

"That's good." Sun Xian nodded with a smile.

While the news was trending online, the tourists in you city naturally knew about it.

Especially since they were in you city and knew that little Qin and professor Li Kai were there, the discussion among the tourists became more intense. Many tourists even hoped to meet little Qin and professor Li Kai.

After all, little Qin and professor Li Kai had come out of fairy tale mountain to take a sedan chair before. If he could meet them, he could take a photo and get their signatures. How nice would that be?

The tourists of you city also realized that there were banners hanging everywhere on the streets and alleys of you city. Congratulations to little Qin and professor Li Kai from you city's Linlin laboratory for receiving special academician titles.

It wasn't just the banner. The tourists also realized that the people of you city were all talking about little Qin and professor Li Kai.

A lot of shops were hanging similar banners to congratulate the two new academicians.

It was as if the entire you city was honored that these two became academicians. Everyone in you city was proud of them. This situation seemed to be even happier than their own children getting into high school.

But thinking about it, this seemed very normal.

after all, someone had analyzed you city's situation on the internet. the development of you city was almost inseparable from linlin's company, which also caused the people of you city to more or less receive the favor of linlin's company.

In this situation, people who knew how to be grateful and weren't dark-hearted would be happy to see two academicians from Linlin laboratory.

At Linlin Manor, Lin Fen was taking little Qin Feng with her when Chen Zhao rushed in and said to her, "Lin Fen, where's my son-in-law? old Zhao said that he became an academician. The teachers at school are all discussing it. He went home and drank happily.

"Lin Lin has become an academician?" Lin Fen rarely went online and had little Qin Feng with her, so she didn't know what was going on online. She was shocked when she heard Chen Mo's words.

although she wasn't very cultured, she had lived in the manor with those academicians before. she knew what those academicians represented and how powerful they were.

Now, his son had become an academician?

of course it's true, " Chen Zhao replied immediately. it's all over the internet. My son-in-law is amazing now.

this made lin fen completely excited. she paced back and forth, so excited that she didn't know what to do. after a while, she handed little qin feng to chen xiao."little guy, go to your grandma."

After Chen Xiao carried little Qin Feng, Lin Fen excitedly walked towards Qin Lin's office. As soon as she saw Qin Lin, she asked, Lin Lin, you've become an academician? "

"Yes, Mom," Qin Lin nodded.

really? that's great! Lin Lin, you've grown up. I'm going to offer incense to your father and tell him! Lin Fen became even more excited after her son's confirmation. She turned around and walked out, or she took out her phone and made a call.

uncle Dashan, I have good news for you. Lin has become an academician.

"Uncle shuigen, that's right, Lin Lin has become an academician!"

"....."

Obviously, her son becoming an academician was the most exciting thing for her at this moment.

Qin Lin saw the excitement on his mother's face and suddenly felt that becoming an academician wasn't a bad thing. At least it made his mother proud.

[Chapter 1347 That's Linlin's Laboratory After All](#)

On the internet.

The news of little Qin and professor Li Kai's special approval for the title of academicians still occupied the hot search.

You Cheng was also celebrating the two becoming academicians.

naturally.

If they were fans of Linlin villa or consumers of the Linlin series of products, they would be in luck.

After the news of little Qin and professor Li Kai's special approval of the title of academicians came out, the official account of Linlin Manor made an announcement:

In order to celebrate little Qin and professor Li Kai's special approval of the title of academicians, all projects in Linlin Manor will be at a 50% discount for the next week, and all products of Linlin series will be at a 20% discount.

This was definitely a celebration for those who liked to travel and enjoy Linlin villa.

originally, it would cost 5000 to go to linlin villa to play some games, but now it only cost 2500.

This was a very cost-effective thing for anyone.

Therefore, the number of tourists in Linlin villa exploded again. The result was that the traffic in you city was paralyzed again. The three third ring roads that had been built were blocked.

The tourists swarmed into you city for the 50% discount.

Then, something embarrassing happened. The Linlin Scenic Area had a limited number of visitors, so many tourists were not allowed to enter the area.

so, he couldn't have come for nothing, right?

Then he could only stay in you city for now. He would have to buy tickets tomorrow.

There were even some people with bad hands who couldn't get tickets online and couldn't get up early to grab tickets to the scenic Area. That would be awkward and they could only stay.

after going back and forth, they realized that they were spending more than when there was no discount.

Isn't it awkward?

Some people even suspected that they had been tricked.

...

linlin manor office.

shen li looked at qin lin, who was reluctant to start writing, and couldn't help but urge him, " "Chairman Qin, academician Li Kai has already filled in the information. The People's Hospital of Huaxia is urging us to hurry up. We're just missing your information."

the title of an academician had been given, but the person who became an academician still had to fill in the relevant information and submit it to the chinese people's hospital.

The documents sent by Minister Lu were in front of Qin Lin.

Qin Lin sighed and picked up a pen to fill in the form.

Since he couldn't refuse, he could only cooperate.

Other people were worried about how to become an academician.

He didn't want it, but he was sitting at home, and the academician came to him.

After spending some time filling in the information, he handed it over to Shen Li.

After Shen Li took the document, he smiled and said, " "Chairman Qin, our laboratory's title column will look very good."

every laboratory had its own title column, which was the photo and information of each project leader.

Naturally, the titles of the people in charge would also be filled in.

For other laboratories, as long as they were famous, they would at least have an academician title on their title column. Even if they didn't have an academician, they would still invite an academician to be the honorary project leader.

it didn't matter even if the academician didn't come to the laboratory. he could just be an academician in name, and the laboratory would pay him a fixed salary every month.

The Linlin laboratory was one of the top laboratories in the country, but even Li Kai, the head of the Laboratory, was only a professor.

If it weren't for the Linlin laboratory's reputation and the many scientific research results it had produced, people would think that this laboratory was low-class just by looking at the title column.

But now, at least there were two academicians on the board.

As soon as Shen Li left with the information Qin Lin had filled in, Qin Lin received a call from master Zhang.

It should be that he had instructed master Zhang to make the preparations for the bone-strengthening medicinal wine.

pressing the answer button, master zhang's voice was indeed heard. " " chairman qin, the wine cellar and wine you ordered have been prepared. the medicinal herbs have also arrived. "

When Qin Lin heard the news, he immediately said, " "I got it, master Zhang. I'll go to the winery tomorrow."

The next day.

Qin Lin went to the Linlin winery.

As soon as he saw him, master Zhang went up to him. "Chairman Qin, you're here. Are you going to the wine cellar now?"

go now. Call a few more trustworthy winemakers later. Qin Lin nodded and ordered.

after this bone-strengthening aged wine was mass produced for the first time, he was going to pass the secret recipe to the winery. in the future, it would become one of the main products of the dark forest wine industry.

"Alright, Chairman Qin." Master Zhang nodded and brought Qin Lin to a wine cellar.

The wine cellar was not the original 60-year-old one. It had been built later, but it was not completely new either. Linlin Wine Company had bought some 20 or 30-year-old wine cellars from elsewhere and moved the entire cellar here.

Naturally, the process was complicated and Qin Lin didn't understand. Linlin Wine Company hired a professional to handle it.

After that, master Zhang called over a few of the old winemakers from the winery. They were all trustworthy.

Qin Lin also looked at the herbs that were carried in and then ordered, master Zhang, please separate these medicinal herbs one by one and place them properly. After that, I'll let you put the medicinal herbs into the wine in order.

"Alright, Chairman Qin." Master Zhang nodded.

after that, the bottles of white wine that were prepared were opened.

Qin Lin also instructed master Zhang and the others to start adding medicinal herbs into the White wine.

The first time, three kinds of medicinal herbs had to be added in order. Moreover, there was a requirement on the proportion of each medicinal herb.

After the three herbs were put in and sealed, they needed to be fermented for a day before the second batch of herbs could be put in and continued to ferment, followed by the third batch.

After that, it took more than 20 days for the several thousand pounds of old people's body strengthening medicinal wine to be completely sealed. After that, it would be able to take effect after three months.

"Master Zhang, I'll leave the wine to you now." qin lin looked at the wine and ordered master zhang, " now that the recipe has been given to the winery, you can try to make a second batch of wine with your people.

"Alright, Chairman Qin." Master Zhang said excitedly.

He knew the formula, so he naturally knew the effects of the medicinal wine.

Once this medicinal wine was available, Linlin wine industry would have a long way to go.

His initial plan was to expand the winery.

Qin Lin returned to the Linlin manor after giving his instructions. He sat down and prepared to complete his daily tasks for the day. However, Shen Li came again.

Mr. Qin, I need you to sign this document. It's about environmental management in the waters of Mauritius. Shen Li said as he handed the documents to Qin Lin.

Qin Lin took the document and read it. After signing it, he asked, "How's the training of the Willow leaf floating duckweed going?"

"It's enough to participate in the bidding, and we've already done artificial sterilization on a batch of them," Shen Li explained.

Qin Lin nodded.

Participating in this environmental management bidding was nothing, but it was also good to let the outside world know the power of the special willow leaf floating duckweed.

The incident of 4000 tons of stone leaking out of the waters of Mauritius had been the focus of the environmental management departments of various countries.

Naturally, the bidding for the water pollution in the waters of Mauritius had attracted a lot of attention.

If there was really such a powerful technology to manage that Sea area, then all the countries would definitely want to import it.

If that Sea area could be cured, it would definitely not be a problem for the internal pollution of rivers in other countries.

The domestic environmental governance Department was also paying attention to this matter.

Even though the water pollution in America and Europe was serious, the water pollution in China was getting worse as well.

A large amount of fresh water resources in the country were concentrated in the South, but because of the large number of factories in the South, the quality of the water in the five types of bad water had reached 44%.

In addition, the pollution of shallow groundwater resources in China was more common. About 65% of the shallow groundwater areas were polluted to a certain extent, and about half of the urban areas were seriously polluted.

Due to the wanton discharge of industrial waste water, more than 80% of surface water and underground water were polluted.

Therefore, the water pollution problem in the country was very serious. Although it was treated every year, it was ineffective if the pollution continued to be treated at the same time. The current technology was not able to completely suppress the pollution technology.

therefore, the joint efforts of the international environment organization and Mauritius to manage the sea area might result in the emergence of technology that was effective for domestic environmental management.

if this technology really appeared, they would have to think about how to introduce this technology into china to treat the water quality and environment.

In an office in the environmental management Department.

The person-in-charge was also looking at the information of the companies from around the world that were participating in the bidding in Mauritius.

These were officially announced by an international organization so that people all over the world could see it. It was also for fairness.

Several of them were world-famous water environmental management laboratories.

These laboratories had the most advanced water Environmental Management Technology.

They had also thought about introducing the technology from these laboratories, but the other party was a laboratory from a beautiful country. When it came to the introduction of technology, there were always various shirks or various conditions.

These conditions were very difficult for them to agree to.

in short, the beautiful country just didn't want to give it. if they wanted it, they had to pay an unequal relationship.

Naturally, they would not agree to such unfair conditions.

Most importantly, even though these technologies were advanced, their effects were limited. After all, the American's domestic environment was still terrible.

Therefore, they had never compromised.

if these laboratories in america really had a new era of management technology, even if they agreed to unfair conditions, they would still have to introduce it.

It was a pity that domestic water quality and environmental management companies and laboratories were not comparable to Western countries. There was still a gap in overall.

Therefore, no domestic companies were seen participating in the bidding for the water quality environmental management project in Mauritius.

the person-in-charge looked down the information of each company, but suddenly, a laboratory that participated in the bidding attracted his attention.

Linlin laboratory!

The person-in-charge was shocked, and then he was pleasantly surprised.

He naturally knew about the Linlin laboratory, and was even more aware of its contributions.

However, he did not expect the Linlin laboratory to participate in the bid for the control of the sea in Mauritius.

could it be that linlin's laboratory had the technology to control the sea?

An uncontrollable look of anticipation suddenly appeared in the eyes of the person in charge.

After all, this was Linlin's laboratory. They had created too many miracles.

With Linlin laboratory's style, they wouldn't be able to participate in the bid for the control of the sea in Mauritius without the technology.

Since the Linlin laboratory was involved, they must have the technology. According to past experience, they might have the technology that far exceeded the current level of the world.

Thinking of this, he rushed out of the door. Whether or not it was as he had guessed, he still needed to find a way to confirm it.

Soon, the person in charge went to a leader's office and reported Linlin laboratory's participation in the bid for the Mauritius sea management.

after the leader finished listening to the report, he was obviously surprised. moreover, he was also very excited.

After all, it was Linlin's laboratory.

[Chapter 1348 The Leader Is Shocked!](#)

Hua hospital.

minister lu had arrived at a special project team, which was the deep space rocket research team led by academician hao and academician zhu.

After successfully bringing back those two seeds, this project had become the most important project of the Chinese Academy of Medicine.

Especially after the higher-ups had decided to transform the planet and bring back the seeds of the two plants.

He had to pay close attention to this project in the future.

After Minister Lu and academician Hao finished their inspection of the project, they received a call from their leader.

this leader wasn't directly under him, or he wasn't related to him.

However, he had to answer the call when the leader called, so he immediately answered it.

However, after he answered the phone, he was stunned for a moment. Then, he hurriedly left the Chinese hospital and drove to the Office of the Leader.

When he arrived, he found that the person in charge of the environmental management Department was also there. He had seen him a few times.

He already knew the reason over the phone, so it was normal for the other party to be there.

the leader saw minister lu and said, " Minister Lu, I've told you everything on the phone. Here's the information. Take a look!

It was related to Linlin's laboratory.

Minister Lu took the information and read it immediately.

He wasn't in charge of environmental management, and he didn't know much about Water and Environment Management.

however, after reading the information given by the leader, he roughly knew how difficult it was to manage the water quality and environment in the country.

He also knew how serious the water pollution problem caused by 4000 tons of oil in Mauritius was.

That was why the International Water quality and environment Protection organization had pooled funds together with Mauritius to issue an invitation for a treatment bid.

The key was that Linlin laboratory had actually participated in the bidding.

"Linlin's laboratory must have some new research results, and it's related to water pollution." minister lu said subconsciously when he saw the information.

This was what he knew about the Linlin laboratory. He just didn't know what the results were. Was it boss Qin's research or academician Li's research?

When the leader heard this, he hurriedly asked, " "Minister Lu, Are you sure?"

Minister Lu nodded. it's basically confirmed. As for the specific situation, I'll just have to make a phone call and ask.

As he spoke, he took out his phone and called Qin Lin. In order to let the leader understand the situation more clearly, he even turned on the speaker.

Linlin Manor.

qin lin was helping to take care of little qin feng, watching him play on little yang's back.

the phone rang. seeing that it was minister lu, he immediately answered, " "hello, minister lu!"

after qin lin answered the phone, minister lu immediately asked, " "mr. qin, did linlin laboratory participate in the bidding for the oil-polluted area in Mauritius?"

qin lin didn't expect that the higher-ups had already noticed this, so he didn't hide it. " they did. We've cultivated a new kind of willow leaf floating duckweed that has a very strong effect in sewage treatment, so President Shen applied to participate in the bidding.

When Minister Lu heard this, he subconsciously looked at the leader and the person in charge of the environmental management Department, as if to say: Just watch!

The leader and the person in charge of the environmental management Department also looked at each other.

There was really a new research result.

however, they were also curious.

boss qin was talking about the willow leaf duckweed.

they knew about the floating duckweed, which could be seen everywhere in the country.

many floating duckweed did have the effect of purifying water, but the effect was very low. it was impossible to cure serious water pollution, let alone oil pollution like Mauritius.

they had thought that linlin's laboratory had some high-tech sewage treatment technology, but it turned out to be just duckweed.

But thinking about it, the research in Linlin's laboratory seemed to have always been related to plants.

Minister Lu naturally understood their doubts. It meant that they still didn't know enough about Linlin laboratory.

Since boss Qin had mentioned the Willow leaf floating duckweed, it was definitely not simple.

President Shen of Linlin's laboratory was not a fool. He was very capable. Otherwise, he would not have been chosen by capitalist MA and become the person-in-charge of the ant laboratory. Later, when he came to Linlin's laboratory, boss Qin would not have entrusted the laboratory to him.

Since Linlin laboratory had participated in the bidding, it meant that the duckweed boss Qin had mentioned must have had an unexpected effect.

no one had more trust in qin lin and his laboratory than minister lu.

"Boss Qin, can you tell me more about the Willow leaf floating duckweed?" he asked.

"That's no problem." In fact, Qin Lin had already guessed the purpose of Minister Lu's call.

The Willow leaf floating duckweed didn't hide anything from the higher-ups. After all, it would soon be promoted to treat the water quality and environment in the country.

therefore, he explained, " this willow duckweed is specially cultivated for water quality control. minister lu, you should know about the willow duckweed in our linlin manor's pontoon viewing area, right? " the water quality there will be better."

"yes, i am." Minister Lu replied.

He had been to the viewing area of the floating bridge, and the water quality there was indeed much better than the other places in the reservoir.

qin lin continued to make up stories. " those willow leaves floating duckweed have some effect on purifying water. the new willow leaves floating duckweed is improved from those willow leaves floating duckweeds. it is specifically for water quality control. "

[Chapter 1349 The Leader Is Shocked!](#)

our laboratory has done an experimental test. The water we took is serious waste water discharged from the factory, and the TD value is more than 1000.

after a night of purification, our willow leaf duckweed directly reduced the TZ value of the wastewater to below 10. All the harmful substances in the sewage were absorbed by the Willow leaf duckweed. That's the specific situation.

when minister lu heard this, he felt that it must be very impressive for a 1000-plus td value to be reduced to less than 10.

however, the person in charge of the water quality control was shocked and couldn't help but exclaim, "How could such a thing happen?"

The leader looked at the person in charge in surprise.

Seeing this, Minister Lu also said into the phone, "boss qin, i won't bother you anymore."

After hanging up the phone, he looked at the person in charge of the environmental management with a puzzled expression and asked, "Linlin's Lab's Willow duckweed is very powerful?"

The person-in-charge said incoherently, "it's more than just amazing. If a type of floating duckweed has such an effect, then it's simply unbelievable to the extreme.

"How terrifying is the wastewater with more than 1000 TD? If it's a heavy metal contamination, then you'll die immediately after drinking it. "

but for this kind of sewage, its TD value is purified to below 10 in one night, which means that this waste water has become cleaner than the pure water we drink. The TD value of the tap water in many places in the country has exceeded 50 TD.

"even the most advanced sewage treatment technology can't do this, unless it costs anything. "

At this moment, Minister Lu and the leader also completely understood how terrifying this was.

The sewage that could be deadly in an instant could be purified in one night, and it was even cleaner than the clean water they drank. This really only existed in science fiction movies.

With such a terrifying effect, what was there to be afraid of about water pollution in the future?

"As expected of the Linlin laboratory." Minister Lu couldn't help but sigh.

The leader nodded subconsciously, then said to the person in charge of environmental management, "quickly make arrangements. Pay full attention to the bidding situation in the waters of Mauritius!

"Alright, leader." The person in charge immediately nodded.

minister lu was looking forward to the bidding for the Mauritius sea management project.

According to boss Qin's description of the effects of the Willow leaf floating duckweed, it would shock the entire world's water environmental management industry.

...

Mauritius was a volcanic island country surrounded by coral reefs. It was a country surrounded by the ocean, and the sea environment here was very beautiful.

However, with the 4000 tons of oil leakage, one of the seas was seriously polluted. Almost the entire sea surface was filled with floating dead fish, and the stench covered the entire area.

And because of this oil pollution, Mauritius was in a very bad situation.

The International Water quality and environment management organization was the biggest Savior of Mauritius.

As time passed, the companies that applied to participate in the bidding arrived in Mauritius one after another. Naturally, reporters from all over the world flocked there as well.

Now, the environmental problem was one of the biggest problems on earth. News in this area would have a lot of popularity, and naturally, many people would pay attention to it.

Among the companies participating in the bidding, the Altos laboratory in America was the most popular. Their sewage treatment technology had always been the top.

although they had no way to solve the sewage problem in america, they had the best technology compared to other companies.

The most important thing was that half a year ago, the Ortos laboratory developed the latest magnetic separation sewage treatment technology.

It was rumored that this technology was not comparable to the current stage of sewage treatment technology. It was much better than the original technology of the orthos laboratory.

it was just that this technology had never been revealed to the world, so the outside world had no idea.

This time, he could witness the magnetic separation sewage treatment technology.

of course, there was another laboratory that received as much attention as ortos 'laboratory. it was the linlin laboratory from the eastern country.

in the world, linlin laboratory was no stranger to many people, because its products such as the purification grass, hot spring powder, linlin leisure tea, and high-temperature blood coagulation potion were all too famous.

These were the products of Linlin's laboratory. Most importantly, most of these products had been sanctioned by Western countries.

only linlin's laboratory could do such a thing.

Therefore, this time, Linlin laboratory also participated in the bidding for the environmental management project in Mauritius, which would attract a lot of attention.

most importantly, many people had investigated linlin's laboratory and found that linlin's laboratory didn't have any water quality control technology.

It was obviously a little abrupt for a laboratory with no relevant experience to participate in this kind of bidding.

linlin laboratory had sent a team to participate in the bidding for the environmental management, and the person in charge of the team was shen li.

They took a ship prepared by the International environment organization for the companies participating in the bidding to Mauritius.

After passing through a Sea region, Shen Li saw that the sea had already turned pitch-black, with dead fish floating on it, and a foul smell that came with the sea breeze.

This was the polluted Sea area.

the ship had specifically sailed through this area to let the bidding companies experience the sea first.

When the ship approached the shore of Mauritius, Shen Li saw that the polluted sea had been divided into small areas by the pontoon platform.

each area had a special equipment set up to test the water quality around them. some of the equipment even showed a number: 3200、3244、3321.....

Shen Li knew that those equipment were large instruments used to measure water quality. They could measure the TD value of the surrounding waters.

&Nbsp; all of them exceeded 3000, which showed how terrifying the oil pollution was.

it must be known that the 4000 tons of oil had spread across the entire sea area, and had been diluted by the seawater.

The bidding this time was very simple. The companies and laboratories participating in the bidding would choose to register an area of contaminated Sea area, and then they would begin to treat the sea area.

They didn't want to lie about a bid with polluted waters like in Mauritius.

This was because they had encountered a few international laboratories that had shown them the results of their data and samples. The results were very impressive, but the management results were terrible.

"Thus, their plan this time is simple. They'll give you time. Use your methods to choose a small area to govern and see how it goes.

shen li quickly got off the ship with his men. their willow leaf duckweed was naturally checked in separately, and it was entrusted to a trusted shipping company in the country.

The appearance of Shen Li's group of Asian faces naturally attracted everyone's attention, especially the other laboratories participating in the environmental bidding and the reporters from various countries.

Linlin laboratory was the only Asian laboratory participating in the bidding. There was no doubt that this group of Easterners were from Linlin laboratory.

However, it was obvious that the people in the laboratory didn't like Linlin's laboratory, because all the participating laboratories had professional research, and only Linlin's laboratory had no experience in this area.

However, Linlin's laboratory received more attention than all of their companies and was on par with Ortos 'laboratory. It was hard not to be rejected.

they felt that linlin laboratory was not qualified to treat water quality.

The people in orthos 'laboratory had the same mentality.

When the person-in-charge, babit, saw Shen Li and the others, he complained to the people around him, " the International environmental organizations should really have a qualification limit for their application this time.

"mr. babit, linlin's laboratory seems to be a very powerful laboratory. they've studied many magical products," said someone next to him with a frown.

Babit continued to complain. I know Linlin's laboratory is very magical. I've been using their hot spring powder all this time. This thing is extremely expensive, but they have no experience in water environmental management at all, nor do they have any qualifications in this area. What right do they have to receive the same attention as our Altos laboratory, which has top qualifications and technology?
"

The people around them nodded when they heard this. After all, their magnetic separation sewage treatment technology would definitely be able to suppress all the other companies, and they would definitely win the bid.

What was a layman in Linlin laboratory?

It could be said that this feeling was like someone using his own hobby to smash other people's rice bowls.

Was this a joke?

[Chapter 1350 605-Out Of Date? The Equipment Is Broken?](#)

out of date? the equipment is broken?

"When I went to register for the administrative area, I chose to be next to Linlin's laboratory." let's make sure that their attention is on the same level as ours, " babit said with a smile. when the time comes, we'll make them have a sharp contrast with us.

When the people around them heard this, they all smiled.

The Altos laboratory was definitely ahead of the world in terms of Water Quality Control.

After Shen Li brought his men to Mauritius, they were arranged to stay in a special hotel.

The next day, they were brought to the registration area by a dedicated staff member to register.

the staff member took out an electronic map and said, " " sir, please choose the area you want to govern. "

One could see that the electronic map had been divided into various areas.

this was the area near the sea that they had seen earlier.

Moreover, the names of companies and laboratories were already displayed on these areas. It was obvious that those companies and laboratories had already chosen their areas.

Shen Li glanced at the electronic map and chose an area on the map. He then filled in the name of Linlin laboratory.

"Sir," the staff member reminded,"after you're done with the registration, you can administer the area you've chosen at any time."

Shen Li nodded and brought his men to check out the situation in the chosen area.

However, as soon as they left, babit from Altos 'laboratory came with someone to register.

Sir, please choose the area you want to govern. The staff member still carried out his duty and took out an electronic map.

Babit looked at the names of companies and laboratories on the electronic map and saw Linlin's laboratory at a glance. Then, he decisively clicked on the area next to Linlin's laboratory.

The reason he had waited until now was to wait for Linlin's laboratory to choose the area to be governed first, then he would choose the area next to Linlin's laboratory.

A successful person would always need someone to set him off.

Ortos 'laboratory was a successful laboratory, and Linlin's laboratory was a target to set them off.

When the staff saw the area that orthos 'laboratory had chosen, they subconsciously glanced at babit.

Obviously, he knew that Ortos laboratory and Linlin laboratory received the most attention out of all the participating companies and laboratories.

now that the people in orthos 'laboratory had chosen this area, their purpose was self-evident.

this was a fight.

In other words, there was going to be a good show.

.....

Shen Li brought his men to the area by the sea.

When he arrived, he could see the names of companies and laboratories on the equipment on the floating bridge platform that separated those areas.

These names corresponded to the areas that each laboratory had chosen.

Shen Li quickly saw the name of Linlin's laboratory, and then led the group to the floating bridge.

However, as soon as he reached the floating bridge platform, Shen Li noticed that the name of Ortos 'laboratory had appeared on the floating bridge platform next to him.

“? ? ?”Shen Li was stunned.

Before he came, he had read the information of those laboratories. Naturally, he knew that Ortos laboratory had the best water Quality Control technology in the world. It was also the laboratory with the highest attention this time.

now, the management area that altos 'laboratory had chosen was actually right next to them. their purpose was self-evident. wasn't it to step on them?

It wasn't just Shen Li and the others. People from other companies and laboratories also noticed the situation here. Each of them revealed a knowing smile. Clearly, they all knew Linlin laboratory's purpose.

The reporters immediately turned their cameras to this scene. They could clearly smell the gunpowder.

as you can see, orthos 'laboratory has chosen the area next to Linlin's laboratory.

Linlin's laboratory and Ortos 'laboratory are the two laboratories that received the most attention this time, Yingluo.

This was the hot topic of the news.

however, these companies and laboratories came here mainly for the sake of bidding. soon, they also began to transport their own equipment and began to set up.

It could be seen that most water quality management companies and laboratories used high-tech equipment and principles similar to electrolysis.

He also began to pour a special powder into the sea.

Orthos used a special high-tech equipment, a magnetic separation sewage treatment technology.

This was also the first time that such technology had appeared in a water environment!

Moreover, the magnetic separation technology could break down and separate the pollutants in the water. Then, special methods could be used to extract the separated pollutants to achieve the purpose of treating the sewage.

After the equipment was loaded onto the floating bridge, babit personally led his men to start debugging the equipment.

This was the result of his research, and no one was more familiar with this equipment than him.

Soon, babit and his men had set up the equipment and began to treat the polluted water in the area.

The other companies were the same. Other than Linlin's laboratory, they had also finished debugging their own equipment.

It was also from this moment on that the bidding officially began.

This made Linlin's laboratory the focus of attention again, because the special Willow duckweed from Linlin's laboratory had not yet been delivered.

This was due to the special customs inspection and sea transportation in the country, so it could not be transported so quickly.

this also created a situation. while the other companies had already set up their equipment and started to treat the sewage, the people in linlin's laboratory were still idle and did not make any movements.
