

## The Game 1351

### [Chapter 1351 605-Outdated? The Equipment Is Broken?](#)

In particular, Ortos 'laboratory was right next to Linlin's laboratory. The two laboratories that received the most attention became the most obvious contrast.

Babit naturally brought his men to see this scene. He asked the person beside him, " "go and investigate what the people in linlin's laboratory are doing. What is the technology and equipment for their treatment?"

Someone beside him immediately nodded and left the floating platform to investigate in private. At night, he returned to babit's side and said, " "Mr. Babit, we haven't found out what kind of technical equipment Linlin's laboratory is using to deal with the sewage. It seems that their technical equipment hasn't arrived yet."

This made babit laugh. they really don't have any experience at all. They actually made such an oversight in this kind of bidding. This is the case for unqualified laboratories, even if they are very good in other aspects.

time passed.

Two days passed quickly.

The treatment of equipment by companies and laboratories in various countries had begun to take effect. In some areas selected by the laboratories, the data on the water quality testing instruments had begun to drop by a few points.

That's right, two days.

this meant that it was effective for the seawater contaminated by oil. after all, oil pollution was one of the most difficult types of pollution to deal with. even the viscosity, penetration, and fusion of oil pollution were more difficult to deal with than many heavy metal pollution.

Moreover, although this area was isolated on the surface, the seawater from the water would seep in again. It was possible that as the water dropped, the seawater from the outside area would seep in, and the TD would start to increase again.

Of course, the treatment in Ariosto's laboratory was the best. In two days, the water quality had dropped by more than 20 points. It was far better than the treatment in other laboratories and companies.

Moreover, at this speed, with Ortos 'technology, in theory, as long as the entire area was fully treated, the oil-polluted area could be cleaned up in half a year.

Of course, this was only in theory. The cost of treating the overall contaminated Sea area was higher and more difficult. Ortos did not have so many equipment to treat the entire sea area at the same time.

The real governance might take 2.3 years, or even longer.

It took such a long time to clean up the contaminated Sea area. This was already the power of the magnetic separation water treatment technology of the Ortos laboratory.

Moreover, there was indeed no other laboratory or company that had better technology than Ortos laboratory.

But at this time, everyone found that Linlin's laboratory had not begun to move. The area they had chosen was still empty.

When babit saw this, the smile on his face deepened.

this was because there were already international reporters broadcasting the relevant news, which was the comparison between their altos laboratory and linlin laboratory.

Moreover, the contrast was very obvious. After all, Linlin's laboratory had done nothing.

Babit was naturally happy to hear about this news.

This was to show off their Altos laboratory.

in china.

Beijing.

Minister Lu, the leader, and the person in charge of water quality and environmental management were also paying attention to this matter.

In a conference room, the three of them were watching a video being played on a multimedia screen. It was a video that had been recaptured from the scene in Mauritius.

this Ortos has indeed come up with new technology. The magnetic separation water treatment technology is much more advanced than the existing technology. The person in charge of the water quality and environment management said, " when we first got this information, we tried to get in touch with them, but they didn't even care about us.

"The Willow duckweed from Linlin's laboratory hasn't arrived yet?" the leader nodded and asked.

Seeing that there was still no movement from Linlin's laboratory, he was also quite anxious.

The person in charge of the water quality and environment management said, " I've already checked it out. It'll be here soon. Now, we'll see the effect of the Willow duckweed in Linlin's laboratory.

Minister Lu didn't say anything. He trusted Linlin's lab duckweed very much.

Last night, he was worried that duckweed was a freshwater creature and could not survive in the sea, so he went to Linlin's laboratory to ask for more details.

He had already learned from Linlin's laboratory that duckweed had no effect on freshwater or seawater.

More importantly, the treatment effect of oil pollution was even better than the treatment effect of factory wastewater pollution. Moreover, there would be unexpected surprises in the treatment of oil pollution.

By then, the people in Mauritius would be shocked by this special surprise.

...

Mauritius.

When a transport ship approached the bidding Coast, it attracted everyone's attention, because the people from Linlin laboratory went to the transport ship to pick up the goods. Then, they saw huge transport boxes being carried down from the ship.

Everyone knew that Linlin's laboratory equipment had arrived.

many reporters even came over to take pictures.

Linlin's laboratory was internationally famous for its products such as the purification grass, hot spring powder, and the high-temperature coagulation plague potion. It was also one of the laboratories with the highest attention in this bidding.

Only two days had passed, and Linlin's laboratory had not made any moves. Now that the other party's equipment had suddenly arrived, it was difficult not to attract attention.

Everyone was also curious about the equipment and technology used in Linlin's laboratory.

Moreover, there was something wrong.

Because there were too many transport boxes, they were being sent ashore one after another. In fact, even the laboratory and company did not have so much equipment!

Did Linlin laboratory want to win by using the number of equipment they had?

However, the amount of equipment required to treat the water quality and environment was not necessarily enough, unless the equipment was really effective.

Soon, the transport boxes were transported to the area chosen by Linlin's laboratory.

when shen li saw that all the transportation boxes had arrived, he also revealed a smile.

the next moment was for everyone to witness a miracle.

He quickly ordered his men to open the transport box. Inside were many special willow leaf duckweeds, mixed with water stains. This was to ensure that the Willow leaf duckweeds could survive after being transported over.

"Pour all these willow leaves into it." Shen Li directly ordered Linlin's laboratory staff.

In an instant, all the Willow leaves in the first transport box were poured into the sea.

after that, it was the second transport box, and then the third one, the kasaya.

It didn't take long for the area chosen by Linlin's laboratory to be filled with special Willow duckweed.

This scene naturally attracted everyone's attention, whether it was the companies, laboratories, or international reporters.

Although plants could be used to treat water pollution, it was only under the condition that the pollution was not serious. It could be treated slowly over a long period of time.

This type of management method was not suitable for the waters of Mauritius.

No one had expected that Linlin laboratory would choose to use this method. This didn't mean that the bidding results had nothing to do with Linlin laboratory.

The people in arioto's laboratory had also discovered the situation in Linlin's laboratory.

Babit didn't know whether to laugh or cry. it's true. I thought they had some powerful high-tech technology. I didn't expect it to be so simple.

he didn't care about this kind of management at all, because it was just a management technique that their laboratory had abandoned.

Now, the Linlin laboratory was actually using this method to bid. It was simply a joke.

Almost all the companies and laboratories participating in the bidding had the same idea.

Even the International reporters were pointing their cameras at the area chosen by Linlin's laboratory.

compared to the equipment in other laboratories and companies, the willow leaves floating on the surface of the sea were like the contrast between a backward primitive society and a modern society. it was very abrupt.

For a moment, Linlin's laboratory seemed to have fallen into a very awkward situation.

But a few hours later, when someone noticed the area around Linlin's laboratory and saw the value on the water quality testing instrument, they were in disbelief.

The numbers seemed to indicate that there was an error with the instrument!

#### [Chapter 1352 606-Shock! Babit Is Embarrassed! 1](#)

Audrey was a member of the International water quality protection organization. This time, he was responsible for recording and reporting the actual status of the water quality treated by various bidding companies and laboratories.

In other words, every few hours, he would record the specific TD value of the testing equipment.

At present, the magnetic separation treatment technology in Ortos laboratory was indeed the best.

After registering orthos 'laboratory's TD value, oldley went to Linlin's laboratory area to register. He didn't have much hope for Linlin's laboratory. After all, they only poured plants into the sea.

In the ocean where oil pollution was so serious, it was unknown if those plants could survive.

this really wasn't a mistake that a well-known laboratory like linlin laboratory should have made.

When oldley arrived at Linlin's laboratory, he saw that the plants that Linlin's laboratory had dropped into the sea had begun to wither.

Obviously, Linlin laboratory was going to be eliminated from the bidding, or it would be equivalent to them not having participated in the bidding.

As he thought about it, he inadvertently glanced at the water quality testing equipment in Linlin's laboratory.

With just one glance, his face immediately revealed a look of shock.

2634!

" ? ? ? "Shocked, Oldley immediately began to record on the tablet, and then saw the TD value of the area selected by Linlin's laboratory.

3256!

on the tablet, he saw the original TD value of this area.

Compared to before, it had dropped by more than 700.

How was this possible?

"This device must be broken," said Audrey with a frown.

He immediately took out a communication device and dialed a number. there's a problem with the water quality testing equipment in this area of Linlin's laboratory. Please repair it or find a new one to replace it.

Although the Linlin laboratory had been eliminated, they still had to go through the necessary procedures.

Not long after, a repair technician from the Mauritius government arrived.

One of them walked up to Oldley and asked, " Mr. Oldley, is this device broken?"

"That's right, so I'll have to trouble you to repair it." Oldley nodded.

The maintenance workers didn't say much and immediately started working.

They pulled the water quality testing machine out of the water and began to repair it.

Shen Li wasn't there at the moment, but someone was watching Linlin's laboratory.

Seeing this scene, a smile appeared on his face.

They knew the effects of these willow leaves.

these foreigners obviously didn't believe it. they thought that the water quality testing machine was broken, so they came to repair it.

However, he wouldn't try to explain. Even if he did, the other party wouldn't believe him, right?

This was because the Willow leaf floating duckweed was too heaven-defying.

therefore, it was better to let these people discover it themselves.

Only then would they realize that this was real.

The repairmen took some time to repair the water quality detector. After the test showed no problems, they put the detector back into the sea.

Soon, the number on the instrument began to jump rapidly and finally stopped at 2613.

During the repair, the value had dropped a lot.

it hasn't been fixed yet, " said oldley with a frown. the TD data is completely wrong.

The repairmen were also a little confused.

"what's going on? There was no problem with the test just now."

"There is indeed a problem with this number."

"pick it up and fix it again."

as the maintenance workers of the water quality testing instrument, they naturally knew the function of the instrument and what the test values of the management bidding represented.

This number shouldn't have appeared.

If Linlin's laboratory management had such an effect, what would the other companies and laboratories do?

a few repairmen began to repair it again. after confirming that there were no problems, they put the water quality testing instrument back into the water.

This time, it was 2603.

The value dropped again.

The repairman and odeley frowned even deeper.

"What's the problem?"

"It's clearly already been repaired."

"Fix it again!"

The water quality testing machine was pulled out again, and a few repairmen began to repair it.

During this process, Audrey also noticed that some of the plants thrown into Linlin's laboratory had begun to show black spots, as if they had begun to rot.

This didn't seem right.

Even if the plants could not survive in such polluted water, they should not have rotted.

When the water quality testing machine was put into the water again, they were completely stunned.

The detection value dropped again.

"This bi an ..." Audrey didn't dare to believe it.

Why couldn't this detection device be repaired?

A water quality instrument maintenance worker said, " "Could it be that the testing equipment is not broken at all?"

Everyone was stunned by his words.

Although it was impossible, what if?

Austria was shocked to hear this. If this was true, it would be too shocking, and something big was going to happen.

It could be seen that these repairmen had repaired it so many times and that it was good every time they tested it. However, it was like this once it was in the water. He could not help but be suspicious.

So, he took out his communicator and ordered someone to send over another testing equipment.

Not long after, the International Water quality environmental management organization sent over another testing instrument and placed it in the area that Linlin laboratory had chosen to treat.

[Chapter 1353 606-Shock! Babit Is Embarrassed!\\_2](#)

2601。

This was the value displayed by the new testing instrument.

Oldley was completely shocked.

This meant that there was nothing wrong with the numbers?

Linlin's laboratory relied on these plants to treat the oil pollution. In such a short time, it had such a terrifying effect?

If that was the case, what was the Water Quality Control technology that was separated by magnetic force in Ortos laboratory?

They could have chosen not to participate and forfeited.

As a precaution, oldley still asked someone to send over a water quality testing instrument.

The scene in the area chosen by Linlin's laboratory had naturally attracted the attention of others, especially some reporters.

At first, it was only a reporter who saw the staff setting up new testing equipment and followed them to check it out in confusion. Who knew that he would see the terrifying test data in the area of Linlin's laboratory?

after that, more and more reporters were attracted to the scene.

The reporters broadcasted the news almost immediately.

This undoubtedly shocked everyone.

Anyone who knew about water pollution and how difficult it was to treat oil water would know how incredible it was.

Naturally, the first to know was Minister Lu and the leader.

They had already sent people to watch the broadcast.

The person in charge of the water quality department looked at the repairman who was still fiddling with the new testing equipment and frowned. These foreigners must have been shocked when they found out that it wasn't the testing equipment that had a problem.

However, even I can't believe it. Who can believe that a kind of willow leaf floating duckweed can achieve such a terrifying effect on oil-polluted water? It's simply unbelievable.

The leader nodded.

Minister Lu had an expression that said, "That's what I should do. After all, it was boss Qin's creation.

Mauritius.

The government had specially arranged a hotel for the bidding companies and laboratories.

This hotel was an official tourist hotel. It was originally full because the sea environment here was really beautiful. There were bikini-clad beauties everywhere on the beach.

However, with the 4000 tons of oil leaking, no one would come to this sea area.

The tourist hotel happened to be in this area of the sea, so there was not much business.

This time, it was used to entertain the bidding companies.

After all, the bidding results were not something that could be announced in a day or two.

Mauritius was only a small area, and if that was not effective, how could the entire polluted sea be treated?

Of course, the people from the companies and laboratories could not stay by the sea all the time. Accommodation was a must, and they could also visit other places in Mauritius.

After all, they couldn't keep watching from the beach all the time. The equipment was activated at the same time. As long as someone was watching, it didn't make a difference whether most people were there or not.

As a volcanic island nation, Mauritius had many fun places. Not only did it have the unique characteristics of an inland volcanic island, but the other three sides of the sea were also open to play.

Babit in orthos 'laboratory was one such case.

Three staff members were left at the hotel to take turns checking the equipment.

As for himself, he brought some people to explore the geographical environment of the volcano island in Maoli Qiu.

he went with the mentality of a winner. he was in a good mood, so he naturally had fun. after all, no laboratory could compare to them.

In a restaurant, babit sat down with his men and praised with a smile, " "The environment in Mauritius is really good. It's perfect for a vacation."

Mr. Babit, " someone beside him said. when we win the bid for the technology of our laboratory, you can live here for a longer time. Before the management is completed, you can also stay here permanently if you want.

Babit laughed when he heard this.

"I wonder how the management of Linlin's laboratory is going," someone suddenly said.

When babit heard this, he said teasingly, " what else can we do? at this stage, all the famous laboratories have done research on plants and water, but everyone has given up. It's time to research high-tech techniques. At most, plant techniques can only be used as an auxiliary.

The others agreed with this.

"That's true."

back then, our laboratory had produced quite a lot of results, but we'd better give up!

the people from Linlin's laboratory have just entered this type of research. Moreover, they are good at plant research. They don't know that plant management can only be used for auxiliary purposes.

"....."

At this moment.

The restaurant's TV suddenly played a piece of news. It was the scene of Linlin's laboratory taking out the sea.

Mauritius was most eager to manage that Sea area and was also most concerned about the bidding. Now that Linlin's laboratory was in a state of chaos, the news was immediately broadcasted.

I have good news to announce to everyone. Linlin laboratory from an Eastern country has brought a special botanical technology that has a very strong effect on the treatment of oil pollution, Yingluo.

When the news came out, everyone in the restaurant was stunned.

When Babbitt saw the value on the instrument, he stood up in shock. "This value can't be weak."

"Mr. Babit!" The people around him looked at him subconsciously.

"Let's go back!" Babit's good mood was instantly gone. He was no longer in the mood to travel. He hurriedly left the restaurant with his people and returned to the area where the sea was being governed.

By the time babit returned with his men, they found that the area around Linlin's laboratory was already crowded with people. Everywhere was a team of reporters with cameras.

The other bidding companies and people from the laboratory had also received the news and gathered here.

Babbitt also saw a live video being played on a big screen next to him. It was the water quality test results of several test instruments placed in Linlin's laboratory.

Everyone was watching the video on the screen. They could see the values on the detection instruments. The values were decreasing bit by bit.

This showed the terrifying effect of Linlin's laboratory on the oil-polluted water.

Babit couldn't believe it.

The onlookers also had doubts.

On the side, a representative from the International Water quality environmental management organization came forward and sent a member to explain into the microphone, "there's no need to be suspicious. There's no problem with the testing equipment. We've also personally tested the water quality. The plants in Linlin's laboratory are indeed very effective.

This also caused exclamations to rise in the surroundings.

"I didn't expect the plants in Linlin's laboratory to have such an effect."

I've looked it up. It's the duckweed type, a kind of duckweed that's unique to the eastern country.

"Is it a mistake for us to give up on the research on Water Quality Control with plants? This kind of treatment effect is simply incomparable to the technology of a laboratory."

indeed, even the magnetic separation water treatment technology of the Ortos laboratory can't do it.

"yeah, the technology in altos 'laboratory is the best in the world. "

When Babbitt heard the people around him talking about his laboratory, his face turned ugly. He didn't think that the plants produced by Linlin's laboratory, which he had looked down on, would have such terrifying effects.

However, the people around them were still discussing.

Ariosto's laboratory is going to be in an awkward position this time. They've chosen the area next to Linlin's laboratory.

"yeah, altos laboratory is the strongest laboratory among all the participating laboratories, but this time, it's going to fail. "

I heard that babit was babit himself who specially got him to choose the area next to Linlin's laboratory area. There are also beautiful reporters waving flags and shouting. Look at the situation now.

"....."

These words really made the faces of babit and the others turn even uglier.

Without a doubt, the management of Linlin's laboratory area had attracted everyone's attention.

In the following time, everyone could clearly see that the Willow duckweeds were rapidly turning black, making the sea surface in that area completely dark.

However, no one knew how much of a shock these completely black willow leaves would bring to people.

#### [Chapter 1354 Linlin Laboratory Gives Up Bidding!](#)

As time passed, the area chosen by Linlin's laboratory turned completely black and rolled up into a ball.

This scene caught everyone's attention, and they were curious about what was going on.

The plants seemed to be dead, but that didn't seem to be the case for plants.

In Linlin's laboratory, Shen Li had also received the report.

He knew that the Willow leaf floating duckweed had completely rolled into a black ball, so he immediately led his men to the coast.

When they arrived at the area Linlin's laboratory had chosen, Shen Li saw that it was surrounded by people.

He naturally knew the reason.

These people were obviously shocked by the effects of the Willow leaf floating duckweed!

this was also something they had expected.

After Shen Li brought his men to the floating bridge, he immediately ordered, "Scoop up all these willow leaf duckweeds and replace them with new ones."

the people in linlin's laboratory heard the order and immediately began to take action.

This was not the only special duckweed transported by Linlin's laboratory. It could be changed several times.

Soon, the Willow leaves that had been rolled into a black ball on the sea surface were all fished up.

New willow leaves were poured into the sea.

at this point, no one looked down on these willow leaves anymore. instead, they were all very shocked and curious.

After all, these willow leaves had already proven their value and their effectiveness.

What everyone was curious about now was how the Willow leaf floating duckweed was developed and what kind of researcher could cultivate such a magical thing.

Many people in the laboratory were already discussing in amazement.

maybe our previous thoughts were wrong. Giving up on the research on water purification with plants might not be the right thing to do.

" indeed. i wouldn't have dared to imagine that plants could have such a water-purifying effect. "

I'm afraid that no high-tech technology can compare to the effects of this plant.

perhaps, our research direction on purifying water with plants has always been wrong.

"....."

The Willow duckweed that had been rolled up into a ball had been fished up by Linlin's laboratory and transported to the shore.

This scene also attracted everyone's attention. The scene of all the Willow leaves and floating duckweeds turning black was also very curious.

However, Linlin's laboratory staff did not throw away the Willow duckweed that had been rolled up into a black ball. Instead, they found some special compressor.

"What are they doing?" " what's wrong? " babit asked with a frown.

Now, he had been dealt a blow by Linlin's laboratory.

but he was also extremely curious about the willow duckweed in linlin's laboratory.

He even thought that if he hadn't given up on the research on Water Quality Control with plants, he would have been able to develop Water Quality Control plants with the same effect.

he felt that it was possible.

Then, Linlin's laboratory staff began to pour the Willow duckweed into the compressor.

at the exit of the compressor, linlin's laboratory staff had also placed a bucket below.

The compressor started up, and with the sound of the machine running, everyone was surprised to find that black liquid flowed out of the exit of the compressor and into the bucket.

The black liquid was a little sticky, which stunned many people. An incredible guess immediately appeared in their minds.

"Is that oil?"

"That's impossible, right?"

"Could it be that the plant directly absorbs oil from the sea?"

"This is too unreal, right? How did the people from the eastern countries develop this plant?"

"It shouldn't be possible. There's no such thing."

The people in orthos 'laboratory looked at this scene in disbelief.

Hearing the discussion around him, babit was already shaking his head frantically."It's not high-tech technology, and plants aren't Intelligent Systems. How can there be such a thing as specifically absorbing the oil that seeped into the sea?"

this kind of thing was very fantasizing to anyone.

Moreover, no one knew if the black liquid was actually oil.

After all, it was not easy for plants to absorb oil directly from seawater.

Very quickly.

The bucket was filled with the black liquid.

Linlin's laboratory staff replaced the bucket with a new one.

One of Linlin's laboratory staff picked up the barrel of gasoline and walked to a pile of wood. He poured the barrel of black liquid on it and then set it on fire.

In an instant, the pile of wood was set on fire, and black smoke was rising.

The fire was not normal. It was no different from pouring gasoline on it.

Seeing this scene, most of the people already knew that their guess might be true.

Linlin's laboratory staff found another machine. Those who were more knowledgeable could tell that it was oil purification equipment.

As the machine started up, Linlin's laboratory staff poured the black liquid into the machine.

This basically confirmed that the black liquid was oil.

Not long after, the oil was completely purified.

linlin's laboratory staff pushed another car over and began to fill it with gasoline.

After that, he saw the people from Linlin's laboratory get into the car, start it, and start driving.

The car drove around the coast, getting faster and faster, as if it had no intention of stopping.

this attracted more and more reporters 'cameras.

not only could the plant absorb gasoline from the sea, but the extracted gasoline could also be directly added to the car after being purified by equipment.

this was simply not something that should have happened in reality.

But now, this had happened.

This further proved the terrifying power of the plant cultivated in Linlin's laboratory.

With such a terrifying effect, what was the use of the other laboratories?

No matter how well they managed it, could they compare to Linlin's laboratory plants that extracted oil from seawater?

The capital!

Minister Lu, the leader, and the person in charge of the water quality and environmental management Department were also paying attention to this matter.

When he saw the scene of the oil being extracted and purified, the leader was so shocked that he stood up.

Even though he was a layman and knew nothing about any kind of research, he knew how shocking this was.

From the video on the screen, one could see that after Linlin's laboratory people poured new Willow duckweed into the sea, Shen Li and his team also went ashore.

The moment he got out of the water, the Mauritius government and the International Water quality and environmental management Department quickly surrounded him.

The reason they sent out the bidding invitation was to find a technology to govern this Sea area.

They had already wanted to get in touch with the Altos laboratory.

After all, Ortos 'magnetic separation water treatment technology was the best. After seeing the effect, the other laboratory technologies were basically useless.

Now that he had seen the terrifying effects of the plant from Linlin's laboratory, what use was the technology of orthos 'laboratory?

Therefore, they naturally wanted to get in touch with Linlin laboratory.

Moreover, there was no need to compete in this bidding. Linlin's laboratory had won directly, and the other laboratories, including Ortos 'laboratory, had just started.

The International reporters naturally surrounded them, wanting to get first-hand information.

With the effects of those plants, it would definitely cause a sensation if the news was broadcasted in their country.

As soon as Shen Li got out of the water, he saw Vidas, a leader from Mauritius and the head of the International Water management organization.

Vidas immediately turned to Shen Li and said, "Mr. Shen, congratulations. After our discussion, Linlin laboratory has won the bid."

"Therefore, the pollution treatment of our sea area will also be handed over to your Linlin laboratory. I hope that our organization can cooperate with Linlin laboratory in more aspects."

This scene made the reporters take pictures and record the scene and sound.

These reporters also knew that there was no need to continue the bidding, because Linlin laboratory had a crushing effect.

The other laboratories and companies, no matter which one, did not have a drop in numbers that was even a fraction of Linlin laboratory's.

Moreover, they would pay attention to the news in this area, so they naturally knew how serious the water quality problem in their country was.

Therefore, the plant in Linlin's laboratory could save the water quality of their country, which was good for all of them.

Shen Li had naturally guessed that this would happen.

As long as one wasn't a fool, after seeing the terrifying effects of their willow leaf floating duckweed, it was impossible for them to remain unmoved. They would definitely come to their door at the first moment.

However, when Shen Li heard Vidas's words, he suddenly said apologetically, "I'm really sorry, but I have to tell you something. Our Linlin laboratory is giving up on this bid. Please find other laboratories to cooperate with."

BOOM!

the surroundings were in an uproar, and the team of reporters pressed the shutter as if they didn't need money.

No one had expected that Linlin laboratory would give up on the bid when victory was in their hands.

what kind of crazy operation was this?

Could it be that the other party had participated in this bid just to let people know the terrifying effects of the plant and had never thought about bidding at all?

The leaders in charge of Vidas and Mauritius were dumbfounded. They didn't expect things to turn out like this.

And that was what happened.

But what would they do if Linlin laboratory gave up on the bid?

Mr. Shen, " Vidas immediately asked, " may I ask why your Linlin laboratory gave up on the bid? you clearly won.

" I'm really sorry, " Shen Li said with a smile. " this is the latest research result of our Linlin laboratory. it hasn't received our country's complete approval, so it can't be promoted to the public for the time being. unless you can get special approval from our country, you can't cooperate with our Linlin laboratory in the future. "

naturally, this was all nonsense.

However, there was one thing that was true. The terrifying effect of the Willow leaf floating duckweed was definitely a controlled item, so the promotion of it to the outside world must listen to the state.

After Shen Li had finished speaking, he left with the people from Linlin laboratory without looking back, leaving behind a group of dumbfounded people.

Vidas's expression turned ugly.

If that was the case, they knew that many countries would not be able to cooperate with Linlin laboratory.

After all, some countries had too deep of a grudge with that Eastern country. What good would they have to settle? they would not share it with you unless you were willing to pay a huge price.

However, the leader of Mauritius subconsciously heaved a sigh of relief. He couldn't help but smile from the pain.

Mauritius and the eastern country were like family.

The Mauritius were the only country that made the Chinese New Year a public holiday. The Mid-Autumn Festival, Dragon Boat Festival, and other traditional festivals were also maurians 'festivals.

With this kind of friendship, if they asked for help, the eastern country would definitely help them as before.

In the capital, the leader and Minister Lu looked at each other after hearing Shen Li's words.

They also did not expect Linlin laboratory to give up on the bid.

"Linlin's laboratory is going to give us a big gift." The leader couldn't help but sigh.

they naturally knew how much benefits the linlin laboratory's announcement would bring them and how much power they would have.

Minister Lu nodded with a smile.

This was Linlin's laboratory. Because of Qin Lin, the boss, there was absolutely no problem with the overall situation.

#### [Chapter 1355 Huaxin Air Conditioner Is Here To Ride On The Popularity Again \\_1](#)

Mauritius saw shen li leave, it also left in a hurry.

They had to think of a way to get Linlin's laboratory to help them control the sea.

Fortunately, they had a good relationship with the eastern country. If they asked the other side, they should agree to let Linlin laboratory help them manage the sea.

after shen li announced his withdrawal from the bidding, he immediately left Mauritius.

Now that he had achieved his goal, he had to be Swift and decisive, leaving only his back to others.

Even if those people were blown up by this news, they would never turn back.

Moreover, they had already made a plan before they came. There were already domestic ships waiting for the people from Linlin laboratory.

The first thing Shen Li did after boarding the ship was to call Qin Lin to report.

In an experimental area of Linlin's laboratory.

As soon as Qin Lin and Li Kai walked in with two researchers, they felt a comfortable sense of warmth. What they saw was the dense constant temperature grass.

These constant temperature grass had been brought to Linlin's laboratory to cultivate. Moreover, because of the growth speed +2 attribute, the constant temperature grass grew very quickly.

They had already started training the second batch.

the ones in front of him were specially kept.

A researcher reported, "Chairman Qin, these constant temperature grass have been sterilized. It's impossible for them to form seeds again. They can already be sold.

The main purpose of cultivating the constant temperature grass was to promote it. Therefore, it was normal to leave some for external promotion while cultivating it.

Li Kai walked in front of a warm grass and said to Linlin, "Brother Qin, once this thing is released, everyone will be shocked by you again. It's just that those air conditioner companies are unlucky."

by the way, I remember that Huaxin air conditioner company tried to scam Linlin villa. At that time, the netizens said that they were bold and weren't afraid that you would develop a plant that could counter air conditioners.

"this time, it might be difficult for you to explain. although i believe that you wouldn't specially cultivate this constant temperature grass for this, the people outside definitely won't believe you."

when li kai said this, he had a teasing smile on his face. it wasn't that the outside world didn't believe him, but that he himself didn't believe it either.

qin lin had already explained this many times, but he was too lazy to explain. it was really just a coincidence.

so, sometimes, the truth really didn't matter. the truth would always be in the mouth of others.

As long as he had a clear conscience, he didn't need to explain.

Qin Lin changed the topic. brother Li, I'm planning to use these warming herbs for an event at Linlin villa. President Shen is not back yet. Can you help me keep an eye on them? "

"I'll look after this." Li Kai nodded.

As the two of them were chatting, Qin Lin's phone rang. It was Shen Li.

Qin Lin immediately answered the call.

Shen Li's voice immediately came from the phone, "Chairman Qin, I've already brought the people back. When I announced that I would withdraw from the bidding, those people were all dumbfounded.

When Qin Lin heard Shen Li's words, he revealed a smile.

He could imagine the scene. After all, they only wanted to make use of the Mauritius bid to make the special willow leaf floating duckweed famous.

Moreover, with the attribute effect of the special willow leaf floating duckweed, he could already predict that it would shock everyone.

At that time, there would be many people begging for it.

Most importantly, he was also very clear that the special willow leaf floating duckweed had such a terrifying effect on water control. It was a big killing weapon. On the issue of cooperation with the outside world, the higher-ups would definitely come to find him.

Therefore, it would be better to raise this problem himself and let those countries go to the top first. If the top agreed, Linlin laboratory would help to manage it in the future.

That would be equivalent to using the top as a huge shield to block all sides, and Linlin's laboratory would have less trouble.

qin lin chatted with shen li for a while before he hung up. he then called lin lanzi.

lin lanzi was inspecting fairy tale mountain when she received the call. when she saw qin lin's call, she immediately picked it up. "Hello, Chairman Qin, what are your orders?"

She knew her boss well. He was usually the boss who did nothing, and the villa was usually watched over by the lady boss, Zhao Moyu.

if it wasn't something important, he wouldn't call her at all. once he did, it must be something very important.

Qin Lin's voice was also heard. Mr. Lin, if you have time now, come to Linlin's laboratory. I have a new crop here. I want to use it for an event at Linlin villa.

"Chairman Qin, I'll be right there." When Lin Lanzi heard the word 'event' and wanted to go to Linlin's laboratory, she knew that they must have produced something new for the event.

Moreover, once Qin Lin personally gave the order, every event would definitely be very popular.

therefore, he immediately left fairy tale mountain and headed straight for linlin's laboratory.

As boss Qin Lin had instructed, Lin Lanzi was also brought to the test site of the everlasting warmth grass after being inspected by the security guards.

Once Lin Lanzi entered the test site, she immediately felt that something was amiss.

the temperature here was too comfortable.

After you city's climate change, it was warm in winter and cool in summer. This kind of climate was already very pleasant, but the temperature here was even higher.

This was unbelievable.

She also saw the dense mass of Turtle Back bamboo. Her family had two stalks of Turtle Back bamboo, but the ones in front of her were completely different from the ones she had. They actually had two different colors of leaves.

#### [Chapter 1356 Huaxin Air Conditioner Is Here To Ride On The Popularity Again \\_ 2](#)

One of them was red, and the other was blue.

This abnormality made her immediately realize that the abnormal temperature here might be related to these constant temperature grass. She asked curiously, " Chairman Qin, the temperature here is very comfortable. Is it because of the turtle Back bamboo? "

Qin Lin nodded and immediately explained, these are everlasting temperature grass cultivated from the Turtleback bamboo. They have a special effect, which is to control the temperature to achieve a

constant temperature. As long as there is enough Turtleback bamboo, you can automatically adjust the temperature to 22-28 degrees Celsius, no matter which day it is in the Four Seasons.

"Ah, isn't this an air conditioner?" Lin Lanzi was shocked by Qin Lin's words. Then, she seemed to have realized something and immediately said, "Chairman Qin, you didn't believe that qianlin lab could develop a plant that could counter air conditioning just because Huaxin air conditioner tried to scam us, did you?"

"ran ran." qin lin suddenly felt very helpless. he didn't understand why everyone liked to associate it with this.

It was really just a coincidence.

"Chairman Qin, you're really amazing." Lin Lanzi couldn't help but praise, "If the owner of Huaxin air-conditioning unit knew about this, he wouldn't have tried to scam us to increase the popularity of his company."

"Ran ran." Qin Lin didn't want to respond to this and immediately ordered, Mr. Lin, please hand over these temperature-maintaining grass to the laboratory. Then, find someone to transport them to Linlin villa for the event. Remember to keep it a secret before that.

alright, Chairman Qin. There won't be any problems. Lin Lanzi immediately promised Qin Lin.

She also knew how important this thing was. Her mind was spinning quickly, and she began to think about the event plan.

At night.

when lin lanzi and linlin's laboratory started to transport the constant temperature grass, the news about Mauritius and the willow duckweed was also broadcasted all over the world.

At this time, it was either morning or day in the Western countries. People who paid attention to international environmental issues were basically attracted by this news.

At first, they only paid attention to it. However, when they saw the magic of the Willow leaf floating duckweed and saw that a plant could directly absorb the permeated oil from water and use special equipment to purify and separate oil for continuous use, everyone's scalps simply went numb.

Humans were actually able to develop such a plant. Were they sure this wasn't some alien technology?

It could be said that Linlin's laboratory had once again shocked the world in a short time.

the name linlin laboratory once again entered everyone's eyes.

In America, adossi was in a laboratory, nervously watching the movements of several researchers.

he could see that the few researchers were fiddling with a plant gene activation experiment.

This stimulation experiment was naturally for the purification grass.

Previously, he had wanted to use the HKR drug to recover the effects of damaged tissues in the human body and seize the purification grass from the eastern country.

Who knew that the other party would just throw out a Jade consort cream, turning their HKR potion into trash.

Therefore, he did not manage to successfully obtain the purification grass and complete the task given by the capitalist. Naturally, the other party would not fully help him to rise to the top.

In a country like the Starstreak nation, without the support of capital, it was impossible to advance further or even participate in the running for some high-ranking positions.

Therefore, he could only let the laboratory under his control continue to solve the purification grass. suddenly, there was a slight explosion.

The equipment for the experiment started to smoke, indicating that the cracking had failed.

Adoxi's expression was a little ugly. He had already failed countless times, so why was this simple purification grass so difficult to break?

Just then, adoxi received another call. Looking at the number, it was from the big boss of the capital. he quickly answered the call.

As soon as the call went through, the voice of the capital boss came from the other side, " adoxi, look at the bidding news in Mauritius. This is another chance I'm giving you."

Before he could understand what was going on, the call was hung up.

He could only hurriedly turn on his computer and go online to check the news about Mauritius.

he found the news almost immediately. when he saw the name linlin laboratory on the news, he was shocked.

When the news reported that the plant in Linlin's laboratory could treat seawater pollution, absorb oil from seawater, extract oil from the plant, purify it, and then use it for cars, his first thought was that it was a science fiction story.

This kind of sci-fi story only happened in their Hollywood movies, right?

Adoxi immediately understood what the big boss meant, and he immediately cursed.

Most of the big boss's assets came from factories that were heavily polluted by heavy metal. He wanted the plants that Linlin's laboratory had just produced.

But wasn't this a joke?

He couldn't even get a single purification grass and couldn't decipher it. The new plants produced by Linlin's laboratory were obviously not much worse than the purification grass.

What was he going to do?

Wasn't it making things difficult for him?

...

The next day.

Similarly, news related to Mauritius was being broadcast in China.

However, this news was specially arranged by the higher-ups to be broadcast in the form of a documentary. It described in detail the 4000 tons of oil pollution in Mauritius and the environmental management bidding.

At the same time, it also described how strong the technology of Ortos laboratory was and how famous it was in the world. Everyone thought that Ortos laboratory would definitely win this bid.

In particular, the video also said that due to some reasons, Linlin laboratory's bid for the product was sent to Mauritius two days late, which was already behind others.

Naturally, this was all to pave the way for the shocking appearance of the Willow leaf Floating Lotus.

Sure enough, the Willow leaf duckweed was transported and shocked everyone.

When the people in China saw the content of the news video, they were also shocked. The news video was the first on the hot search list, and countless comments almost drowned the internet.

"When I saw the news, I thought the Mauritius pollution had nothing to do with me. But when I saw Linlin's laboratory, I knew things weren't as simple as they seemed."

" i was too shallow. i was just about to scroll through the next video when i saw the name of linlin laboratory and stopped. that's why i didn't miss such shocking news. "

"I have to say, Linlin's laboratory's Willow duckweed is really out of the blue."

" my supervisor is a professor in the area of water control. this plant technique should not have appeared in this era. "

"The one above, that's because your instructor is too weak. Little Qin is not a weakling like your instructor."

"....."

The news of Linlin's laboratory and the Willow leaf duckweed were the hottest searches for a while, and no celebrity or internet celebrity could emerge under this kind of popularity.

Even the hot news of the celebrity, Li XX, finding a young lady in skimpy clothes was completely drowned out by the popularity of the Willow leaves floating duckweed news.

However, it wasn't that no one had emerged under this kind of popularity, or rather, a company had emerged under this kind of popularity.

To everyone's surprise, it was Huaxin air conditioner company, because this air conditioner company was riding on the popularity again.

Huaxin air conditioner congratulates Linlin laboratory on making the Willow leaf duckweed famous in the world for becoming a powerful force in water control. However, in addition to the technology that is

greatly beneficial to the environment, our air conditioner has also developed a technology that doesn't belong to the Willow leaf duckweed. How is this technology? "

Obviously, when Huaxin company's announcement came out, everyone understood that Huaxin company was riding on the popularity again.

Previously, Linlin Manor had tried to scam him, but this time, they were directly trying to take advantage of him.

everyone knew that linlin's company was very popular, but there were very few companies that tried to scam others. only a few internet celebrities would try to do so.

It was because those companies knew that it wasn't good to ride on Linlin's popularity. If they made Linlin angry, the losses would outweigh the gains.

Huaxin air conditioner was the first company to freeload off Linlin company's popularity like this. Moreover, the last time they tried to scam Linlin villa, they had obviously tasted the sweetness of it.

But who would believe that Huaxin air conditioner had the technology to rival Linlin's laboratory?

With this kind of technology, they still wanted to compete with the Gerly air conditioner for the first place?

It was precisely because the competition for the first place was too intense that Huaxin air conditioning company had used the same trick and targeted Linlin company's popularity again, wanting to use it as a support.

This was very disgusting.

[Chapter 1357 Huaxin Air Conditioner At The Top! Warm Grass Activity! 1](#)

Everyone could understand the internet's pursuit of popularity.

However, it was disdainful to freeload on popularity without a bottom line.

Especially when everyone could tell that he was trying to gain popularity.

huaxin's sudden behavior was indeed displeasing to the eyes. many people even voiced their disapproval.

" huaxin company is really going all out to win. "

"What can we do? Huaxin Corporation is currently fighting with Gale to this extent and is in urgent need of a way to break through."

with the popularity of Linlin's laboratory, they might really be able to defeat Gerri. However, they'll offend Linlin company by doing so.

if Linlin's laboratory doesn't teach Huaxin a lesson this time, I'm afraid that all the other companies will dare to come and ride on his popularity in the future.

"....."

...

Huaxin Corporation.

Luo Sheng was sitting in his office, looking at the situation on the internet.

This time, he had no choice but to leech off the popularity of Linlin's laboratory.

This was because after Huaxin defeated Merika's air conditioner, their competition with Gerri was indeed very intense.

Therefore, when he saw the popularity of Linlin laboratory and Willow duckweed, he thought of the benefits that the popularity of Linlin villa had brought him.

It was also that wave of popularity that allowed Huaxin to defeat America.

Now, he wanted to use the same old trick. Who asked Linlin's laboratory and willow leaf duckweed to suddenly become so popular that they directly swept the top of the hot search on the internet?

boss, our Huaxin is on the hot search. It's quite popular. As the assistant reported, he frowned slightly and said, " but many netizens online have seen through our intentions and are scolding us. This is the second time we've leeches on Linlin's company's popularity like this. I'm afraid that Linlin's company will have an opinion.

Luo Sheng looked at the growing popularity, but didn't seem to mind, " "Let the people on the internet scold all they want, what do they know? what effect will it have on us?"

the more they scold, the more popular it gets. What I want is popularity to increase sales and defeat Gerri. I won't hesitate even if I have to offend Linlin company.

besides, Linlin company doesn't make air conditioners. Even if we offend them, they can't do anything to us. At most, their reputation will be damaged. We can slowly make up for it in the future.

The assistant nodded when he heard his boss's words.

That was indeed the case.

The boss's decisions had never been wrong.

otherwise, huaxin air conditioning would not have been able to develop to its current level.

For the rest of the time, Linlin's laboratory and the Willow leaf duckweed still dominated the internet.

even when the news was about to die down, people from Mauritius suddenly came to china and signed a document to help with governance in front of international reporters, showing the friendship between the country and mauritius.

This piece of news caused many countries to have different thoughts.

Some countries that had good relations with their own country started to jump for joy. If Mauritius could successfully sign the document to help with the governance, then they might succeed too.

the water quality and environment problem had become a common problem for all countries in the world.

some countries were not having it easy.

Not only did they not have a good relationship with China, but they had also offended China many times. However, their water quality problem was the most serious in the world, so they were in great need of the Willow leaf duckweed.

Wasn't this awkward?

When this news appeared, the country was naturally in an uproar. Countless people felt relieved.

This kind of heat was mixed with patriotism and pride.

Naturally, Huaxin air conditioner appeared at this time.

They were leeching off the popularity of Linlin's laboratory again.

Moreover, Huaxin air conditioner was very effective in taking advantage of the heat.

In the new month's summary data, Huaxin air conditioner's sales finally exceeded that of gli air conditioner.

In the office of the Huaxin air conditioner company's boss, Luo Sheng looked at the latest data report and couldn't help but reveal a look of surprise.

After so long, they had even offended Linlin company and leeched on Linlin company's popularity. Finally, they had completely surpassed Gale air-conditioning company in sales.

This was good enough. It was also what he wanted the most.

Luo Shan was very satisfied with this. very good. Huaxin air conditioner's sales this month is the highest. We must maintain this.

The helper beside him said anxiously, "Boss, Linlin's laboratory suddenly has an event. They say that all tourists who come to Linlin's Scenic Area will have a chance to draw a lottery. Those who win will have the right to buy a plant called constant temperature grass. They can give up on this spot and choose to buy the constant temperature grass."

"constant temperature grass, what's that?" Luo Sheng asked with furrowed brows.

The assistant shook his head. I don't know yet. Linlin villa is quite mysterious. They haven't announced the specific information of the everlasting warm grass yet. However, it's very popular on the internet and many people are paying attention to it.

Luo Sheng furrowed his brows and logged onto the internet. Sure enough, he saw a video posted by Linlin villa's official account:

Yueyue has a piece of good news for everyone. For this event at Linlin villa, every guest can draw a free prize. As long as they win, they will have the chance to buy the mysterious warm grass Kasaya.

Not only did the announcement video go viral, but it was also extremely popular. Most people on the internet were paying attention to it.

This was especially true when the popularity of the Willow leaf floating duckweed was still high.

Everyone was still shocked by the effect of the Willow duckweed, but who knew that Linlin villa would have another kind of everlasting warmth grass.

It was hard not to attract everyone's attention.

Everyone was even starting to get curious about what the herb was.

After all, with the Willow leaf floating duckweed as a red jade, it would not be too bad.

The things that Linlin Manor used for events had never been bad.

Now that Linlin villa deliberately didn't mention the effects of the constant temperature grass, it aroused everyone's curiosity.

"I didn't expect that Linlin's laboratory would just produce a shocking Willow duckweed, and Linlin villa would use a warm grass as a reward."

"I wonder what this constant temperature grass is?"

"based on past experience, dingxi, who was used by linlin villa for an event, is definitely not ordinary."

"....."

In Huaxin Corporation.

After Luo Sheng finished reading Linlin villa's event announcement, he nonchalantly told his assistant, "This constant temperature grass is definitely a type of plant. We don't need to care about them. They are not related to us at all."

The assistant also nodded.

Even if it was a plant, it was nothing to do with their air-conditioning company, so there was no need to care about it.

If plants were associated with their air-conditioning, it would be a shock to the world.

...

Linlin villa was already bustling with activity.

lin lanzi had already led chen dabe's security and logistics department to set up the villa.

One could see that the constant temperature grass was placed next to the purification grass.

Lin Lanzi had carefully thought about the activity plan for the everlasting warmth grass.

However, in the end, she still chose the simplest plan, which was to give each visitor a chance to draw a lottery. If they won, they could buy the constant temperature grass.

There was no force in buying the slots, and those who didn't want to buy could forfeit.

Due to the high popularity and the sense of mystery, even this simple event plan was very popular on the internet, even surpassing the Willow leaves floating duckweed to a certain extent.

Following Lin Lanzi's arrangement, the constant temperature grass was placed in a special square in Linlin Manor.

There was no square in the beginning, but a new one was built behind Linlin Manor, between the Linlin Ranch and Linlin Manor.

Because of the purification grass, the air in the square was of very high quality, even better than the entire Linlin villa.

The purification grass here was also more concentrated than the other places in Linlin villa.

as the constant temperature grass was placed in, not only was the air quality better, even the temperature was gradually perfected under the control of the constant temperature grass, becoming very comfortable.

After that, the main location of the event was the square.

Moreover, there was already a sign in the middle of the square.

on it was written the information and use of the constant temperature grass.

As long as they got the right to purchase the herb, the tourists who could purchase the herb would be brought here to choose their purchase. At that time, they would be able to see the contents of the sign in the middle and know what the herb was and what it was used for.

As time went by, more and more people paid attention to the constant temperature grass on the internet. Many tourists were also becoming more and more curious. Some who were not short of money even wanted to draw the ticket to buy the constant temperature grass.

this popularity reached an extreme when the event started.

A car drove into the parking lot according to the Linlin Scenic area's sign.

Tian Shan and his wife got out of the car.

It was not his first time at the Linlin Scenic Area.

He was considered a loyal fan of the Linlin Scenic Area. Whenever there was a new event or event in the Linlin Scenic Area, he would definitely bring his wife along.

moreover, he and his wife felt that this trip was worth it every time.

The Linlin Scenic Area really gave people a strong sense of anticipation.

He had wanted to come when fairy tale mountain opened, but he had not had the time.

This time, the Linlin Scenic Area was having an event again, so they had to come.

Not only could they visit fairy tale mountain, but they could also participate in the activity of the constant temperature grass.

tian shanyi and his wife got out of the car and entered the villa. the air was of excellent quality.

You city's air quality was good, but it was nothing compared to Linlin villa.

After all, the purification grass was cultivated by Linlin's laboratory. How could there be a place better than this?

when tian shan entered the villa, he could clearly feel that there were many more tourists than before.

Firstly, fairy tale mountain was open to the public, so the entire Scenic Area could accept more tourists.

secondly, many people had been attracted by the constant temperature grass event.

"Hubby, let's go to the lucky draw. What if we win?"

"Okay, let's go to the lottery first."

Tian Shan nodded and brought his wife to the lucky draw area. As soon as they entered the villa, there were special lottery instructions.

The lucky draw was very simple. It was still an electronic random draw.

tian shan began to draw the lottery under the instructions of the waiter. he and his wife each had one chance.

he and his wife used their phones to scan the code at the same time and began the lottery.

"Thank you for your participation!"

Tian Shan sighed when he saw the content that popped up on the screen. He obviously did not win.

"Hubby, I won the lottery."

tian shan immediately looked at his wife's phone screen. there was indeed a notification:

" congratulations, you have obtained a single opportunity to purchase constant temperature grass! "

"He really hit it?" Tayama was pleasantly surprised and passed the winning information to the waiter.

" alright, " the waiter said immediately. " please register your id and phone information. we'll inform you when the prize for buying the constant temperature grass is open. "

tian shan did not hesitate and immediately cooperated with his wife to register the information.

he wasn't short of money, and since he won the lottery, he had to buy the constant temperature grass.

naturally, he was also very curious about the effects of this constant temperature grass.

#### [Chapter 1358 Warming Grass, Another Shocking Plant](#)

After Tian Shan and his wife registered their ID cards and phone numbers, they went to buy tickets to fairy tale mountain with anticipation. Then, they went to Linlin Ranch.

The tourists who won the lottery that day had to wait for the next day's notice before they could go to see the everlasting warmth grass.

he and his wife had come to linlin scenic area this time for fairy tale mountain, so they had to buy tickets to fairy tale mountain first.

Online reservations were basically very difficult to make. Those who could make a reservation basically had to hold their mobile phone and stare at the ordering page. Once they had the time, they had to use the hand speed of being single for 30 years to make a reservation.

the offline tickets for fairy tale mountain were often sold out, so anyone who wanted to go to fairy tale mountain had to go to the ticket hall at linlin villa.

Because fairy tale mountain could only be visited at night, the scenery during the day was greatly discounted. Those who bought tickets could only visit other places in Linlin Scenic Area first and go to fairy tale mountain when the night fell.

Fortunately, they had already bought tickets to fairy tale mountain. Tian Shan was relieved and began to take his wife to visit other places in Linlin Scenic Area.

In the evening, night began to fall.

tian shan then took his wife to fairy tale mountain. at night, he would have dinner with his wife at the restaurant on fairy tale mountain.

After dinner, they strolled around fairy tale mountain.

he and his wife had both watched the video of fairy tale mountain. they knew that it would be very romantic to travel with the person you loved in that night.

He didn't take the cable car either. Instead, he and his wife each found a palanquin and got someone to carry them up fairy tale mountain.

Once night fell, fairy tale mountain was once again bustling with activity.

Linlin Manor Office.

Lin Lanzi was also reporting to Qin Lin about the everlasting warmth grass activity. Chairman Qin, the first day's quota for buying the constant temperature grass has been released. Tomorrow, you can get someone to take them to the Plaza to buy the constant temperature grass.

Qin Lin had no opinion on this.

He had seen the plan for the eternally warm grass event. Although it was simple, it was very eye-catching and gave off a sense of mystery.

the popularity on the internet already explained everything.

...

The next day.

Tian Shan and his wife had woken up early in the morning.

He had not booked any accommodation in the Linlin Scenic Area.

the three camping grounds, the villa nuptial area, the ranch tent area, the flower greenhouse area, and the fairy tale mountain, were all full when he made his order. he couldn't even get a ticket.

It could be said that there were already six lodgings in the Linlin Scenic Area, but it was still very difficult to book a room. Sometimes, it was a competition of hand speed.

Therefore, he and his wife booked the Grand Hotel in you city new district.

As soon as he woke up, his phone rang with the sound of a message being received.

When he opened it, his face was filled with joy. " honey, the linlin scenic area sent a message saying that the tourists who won the lottery will gather at 9 o 'clock. they will go together to check out the everlasting warm grass and then choose whether to buy it or not. "

"Hubby, let's wash up and head to Linlin Scenic Area."

the couple went out very quickly. after having breakfast in you city, they went directly to linlin scenic area.

It was almost nine O 'clock when they arrived.

at the entrance of linlin villa, there was a sign to gather and a waiter to guide them.

When Tian Shan and his wife arrived, there were already more than 30 tourists waiting.

These were the tourists who had won the lottery yesterday.

When the waiter finally checked the list of tourists, the tourists were surprised to find that only about 30 of them had won the prize yesterday.

after the opening of fairy tale mountain, the linlin scenic area received tens of thousands of tourists a day, but only 30 of them won the prize.

All of a sudden, these people realized how low the probability of winning was.

This also made the joy on their faces even more intense.

they knew very well that the linlin scenic area would not be stingy. if it was just an ordinary item, the number of lucky winners would definitely be a lot.

Sometimes, they would even give all the tourists some gifts ...

Now that the number of people who could win the lottery was so low, and the person who won the lottery still had to spend money to buy this constant temperature grass, this showed that this constant temperature grass was definitely an extraordinary item.

After the waiter finished the registration and made sure that everyone was present, he took Tian Shan and the others to the square.

The square also had a simple and retro style, which was very harmonious with the villa as a whole. It was surrounded by triangular plum trees and green plants for viewing.

Although it couldn't be compared to those project areas as a whole, it was still more beautiful than the ordinary scenic spots, green plant areas, and squares in the outside world.

After all, the triangled plum flowers that were mixed in all had the system's attributes.

It was not Tian Shan's first time at the Linlin Scenic Area. He would come here every time there was a new project, so he was quite familiar with the Linlin Scenic Area.

there was no such square before, so it must have been newly built.

however, the linlin scenic area had been developing. from the villa at the beginning, to the floating bridge viewing area at the back, to the linlin ranch, and now to the fairy tale mountain.

Therefore, it was not strange to build an additional square.

Tian Shan and the tourists were led into the square by the waiter.

as soon as they entered the square, the 30 tourists felt that the air here was extremely good.

They had also seen the purification grass around them and knew the reason.

There should be very few people in the country who didn't know about the purification grass now.

your city's air quality was extremely good because of the purification grass, which had long made countless tourists who had come to your city look forward to it. one day, the city they lived in would also grow purification grass to improve the air quality.

#### [Chapter 1359 Warming Grass, Another Shocking Plant](#)

the transformation of the purification grass in jing was almost completed. in the past, haze would appear in the city almost every once in a while.

It had been a long time since there had been a haze. The air quality had even slowly improved, surpassing many cities that had air as their signature.

moreover, as the purification grass continued to transform, the air quality would be better in the future.

in addition, three international metropolises had signed transformation contracts with the linlin experiment.

This was naturally led by the higher-ups.

These three international metropolises were the signboards of the upper echelons to the outside world. The renovation would also be the first batch to be carried out.

in addition, linlin's laboratory would also take out a batch of purification grass for sale from time to time. now, many people had snapped up the purification grass, and from time to time, they would post the air quality test results of their homes after having the purification grass on the internet.

Therefore, Tian Shan and the others recognized the purification grass as soon as they entered the square.

this time, they found that not only was the air quality good, but the temperature was also abnormal. one of the tourists couldn't help but say, "

"Have you noticed that the temperature in the square is different from the outside?"

indeed, the temperature here is so comfortable. It's even more pleasant than the temperature of the entire you city.

not only that, didn't you guys notice that even though we're under the sun, the temperature here seems to be the same as the one in the pavilion when we entered the square? "

"....."

Tian Shan could also feel it.

this scene seemed a little unbelievable. his job was related to thermal equipment, so he was very sensitive to temperature.

He even took out his phone and opened a special APP, which was his company's exclusive app. His phone had also been modified to work with this app.

its function was simple, which was to detect the temperature. moreover, this was a precise temperature detection, different from the ordinary temperature detection outside.

how should he put it? the temperature outside was basically a rough range of temperature display.

This was actually very inaccurate.

This was because even in the same area, the temperature would vary by one to three degrees.

This would require a very precise temperature measuring device.

After the APP was launched, he saw the temperature around him. 22°C。

After that, he immediately took his wife to stroll around the square, even entering the pavilion that they had come from.

However, he was surprised to find that the temperature in the surrounding area was 22 degrees Celsius.

if it was a normal thermometer, it wouldn't be a big deal. however, it was his special device that measured the temperature. there was a problem.

His temperature test was very accurate. He could even detect a slight difference in temperature.

but now, the temperature he tested was exactly the same.

This shouldn't have happened.

unless the entire area was man-made at a constant temperature.

Constant temperature?

Temperature-maintaining grass?

tian shan suddenly realized an unbelievable possibility.

linlin villa's perpetual temperature grass could create such a temperature-maintaining area?

This didn't seem to be something that plants could do.

but in the blink of an eye, he thought of another thing, and that was the willow duckweed that linlin's laboratory had just launched.

the willow leaf floating duckweed was also a plant. however, it could directly absorb the petroleum from the seawater. the absorbed petroleum could even be squeezed out. after distillation and purification, it could even be used for vehicles.

this wasn't something a plant could do, but the willow duckweed in linlin's laboratory had done it and shocked the world.

Then it's not strange that the temperature difference in Linlin villa can control the temperature difference and create a constant temperature area, right?

the tourists were shocked by the temperature of the area and started to discuss.

"these are turtleback bamboo, right? My family also has a few stalks of Turtle Back bamboo."

"our company also has several stalks of turtle back bamboo. they look the same, but the color of their leaves is different."

indeed, these Turtleback bamboo actually have two types of leaves, red and blue. It's very beautiful.

"....."

At this moment, someone suddenly said, " "Then have you ever thought that these are not Turtleback bamboo, but everlasting temperature grass?"

His words stunned everyone, and many people looked at the waiter curiously.

someone asked,"these are temperature-maintaining grass?"

The waiter didn't hide anything. He nodded and introduced, " " that's right, these are the eternium herbs. all of you have drawn lots to buy them, so you can choose whether you want to buy them or not. there is a detailed introduction to the eternium herbs on the billboard in the middle of the square. "

Upon hearing this, the tourists immediately reacted and ran towards the center of the square.

There, he saw a Billboard in the middle of the square.

the background of the billboard was a large everlasting warmth grass with red and blue leaves.

on the front of the advertisement board was an introduction to the constant temperature grass.

tian shan was the first to step forward to take a look. the other tourists beside him were also trying to find out more about the constant temperature grass.

"The temperature-maintaining grass is a special plant developed by little Qin in Linlin's laboratory. It has a special effect, Yingluo."

these constant temperature grass can produce a special effect in the surrounding area to achieve the effect of controlling the temperature of the surrounding area, "

as long as there is enough constant temperature grass, whether it is winter or summer, the temperature of an area can be controlled to be between 22 and 28 degrees. Furthermore, constant temperature grass is not harmful at all. It is a pure natural product, Youyou.

#### [Chapter 1360 Warming Grass, Another Shocking Plant](#)

There was quite a lot of information on the constant temperature grass.

When they finished reading the introduction, the tourists were in disbelief.

Tian Shan was the same.

it turned out that the temperature-maintaining grass was really controlling the temperature of the square, keeping the square at a constant temperature of 22 degrees.

Tian Shan was in charge of temperature equipment, so he knew what this meant.

the shock caused by the constant temperature grass would not be any less than the willow leaf floating duckweed. in fact, in some aspects, the shock would far exceed that of the willow leaf floating duckweed.

This was because the constant temperature grass had too many uses and could be used in too many areas.

for example, the pharmaceutical industry, battery-controlled greenhouse, led-controlled greenhouse, military box-type greenhouse, laboratory-controlled greenhouse, large server room, and so on.

These were only high-end applications in the field.

If it was used in the private sector, this thing could completely replace air conditioning.

after all, the air conditioner had all the functions that the constant temperature grass had. it was just an additional constant temperature grass to adjust the temperature.

more importantly, air-conditioning could easily cause respiratory diseases, disturb the balance of the human body, lead to joint pain, obesity, and so on.

these temperature-maintaining grass were completely natural and harmless.

The winner was immediately decided.

There was also another point. Although people could no longer live without air conditioners and every household had to buy them, air conditioners really affected the beauty of the decorations to a certain extent.

if there was no need for air conditioning and there was something else that could replace it, especially the beautiful constant-temperature grass, then anyone who owned a house would definitely know what to choose.

Thinking of this, Tian Shan was suddenly stunned.

it was because he suddenly thought of something. he had seen a piece of news on the internet before. it seemed that an air conditioning company was trying to scam linlin villa.

some people on the internet said that the air conditioner company was not afraid that little qin and academician li kai from linlin laboratory would develop a plant specifically for air conditioning.

at that time, the air conditioner company didn't seem to care. although many netizens complained, they didn't think that linlin's laboratory could really cultivate such a plant.

after all, plants were plants, and an air conditioner was an air conditioner. there was really no connection between them, let alone using plants to deal with an air conditioner.

These were two extremes that were completely unrelated.

Now, the temperature-maintaining grass in front of him was a bit amazing. Academician Qin of Linlin laboratory had really cultivated a plant that was suitable for air conditioning.

moreover, this was no longer an ordinary target, but a destructive target.

Once the constant temperature grass was promoted, he would feel sad for the air conditioner companies.

At this time, the tourists also realized that this had happened.

Because this matter was quite popular at that time, countless people were paying attention to it. Therefore, at this time, they could all subconsciously think of this matter.

They all said, "

" do you still remember when huaxin corporation tried to scam linlin villa? someone asked academician qin and academician li kai to develop a plant that can be used for air-conditioning. "

yes, I remember now. The air conditioner company didn't care about this before, but they've been using Linlin's laboratory to gain popularity again.

haha, then the air conditioner company definitely didn't expect academician Qin to have developed this magical temperature-maintaining grass, right? "

I can only say that the people from the air conditioner company definitely didn't expect academician Qin to be so amazing, right? "

" yeah, your air conditioner company is disgusting me, so i came up with a plant so that you can't be disgusting anymore. "

" ....."
