

The Game 1481

[Chapter 1481 673! Special Status! Wasabi Really Mutated](#)

The tourist looked at the three tattooed men and felt scared. Although they were in a civilized society, it was still very unlucky to be sent to the hospital after being hit by these people when they went crazy.

Ah long brought two men with him and was about to cause trouble. He drank some wine and seemed to have lost his brain.

At this moment, a bucket of cold water was suddenly thrown at ah long and the other two.

Ah long and the other two seemed to have sobered up immediately, but they also looked angrily at the person who poured the water. The other party was also a young man.

"you're looking to die?" Ah long glared at the young man in anger.

"I'm looking for death?" The young man said fearlessly, " "You're ah long, right? Have you heard of young master Qin, Qin Ren?"

Ah long quivered when he heard the name, and he sobered up. "What is your relationship with young master Qin?"

In you city, there should be no one who didn't know this young master Qin. Everyone knew that he had a relationship with the boss of Lin Lin company. Otherwise, Lin Lin company wouldn't have given their advertising business to this young master Qin.

The boss of the Linlin company that was posted on the internet had the surname Qin, and he was from the same village as young master Qin.

Moreover, the other party was a big Boss himself, so who would dare to provoke him?

It could be said that in you city, one had to be careful when meeting people with the surname Qin. Perhaps he was from the same village as the boss of Linlin company.

"My surname is also Qin, Qin Fei. I'm from young master Qin's hometown. What do you think my relationship with him is?" the young man snorted coldly. Do you want me to give him a call?"

Hearing this, the man called ah long sobered up and immediately said awkwardly, " "I'm sorry, I'm sorry. I didn't recognize you."

"If you don't want to find trouble for yourself, don't cause trouble here." qin fei didn't want to bother with ah long, so he directly said this.

"I'm sorry, I really drank too much horse urine. I'll leave now." Ah long didn't dare to hesitate and also left in a hurry.

What kind of joke was this? in you city, he said he was willing to offend these people with the surname Qin and was in contact with the boss of Linlin company?

The surrounding people were also astonished when they heard Qin Long's identity.

so it's the old family of the boss of Linlin company. These people are really popular in you city.

that's because they used to have this relationship. But we've also taken a lot of advantage of the boss of Linlin company.

yeah, we you city people have all taken advantage of others. After Linlin Scenic Area was developed, my income has also increased several times.

I have to say that without the Linlin Scenic Area, you city wouldn't have developed so well. I might not even be able to afford a house.

indeed. In you city, anyone can say that Linlin company is not good. Only you city people like us have no right to say that.

I'm the only one who's talking about my salary on the internet. If I didn't say that I'm driving a car in you city, no one would believe me. They would think that I'm bragging about 10 Bulls.

"....."

The voices around him warmed Qin Lin's heart. It was a sense of achievement to be remembered by the people from his hometown. It made him proud.

This also made Qin Fei even more eye-catching.

Qin Fei was also a little proud.

After all, people like them were really famous in you city. Once they announced their names, people would basically give way to them. Even if someone deliberately found fault with them, they would all be scared when they heard their names.

However, they didn't dare to say Qin Lin's name. Everyone knew that Qin Lin kept a low profile and didn't want others to know his identity. Therefore, they could also say Qin Ren's name when they encountered such a situation.

But this was enough.

That was why he dared to make a move just now.

It was true. These people had taken too much advantage of Qin Lin. Because they were from the same village as Qin Lin, as long as they were willing to work hard, just this identity alone would be very convenient in you city.

So, they hoped that you city would become better and better, and they didn't want ah long and the others to ruin you city's reputation.

Qin Fei did not walk far before he saw Qin Lin.

Other people might not be able to recognize him, but he could. He was three years younger than Qin Lin. He had been seeing Qin Lin before he was in his third year of high school. It was only until he went to university that he rarely saw him.

qin fei was about to go up and greet him when qin lin immediately made a shushing gesture.

Qin Fei immediately made an 'OK' gesture. He knew that Qin Lin did not want to be noticed, so he left on his own. At this time, he was the focus of attention, and if he greeted Qin Lin, he would definitely cause Qin Lin to be noticed.

Qin Lin went to other places.

After the snowfall in you city, it had indeed made you city much more lively than usual.

There were also many snowmen on the streets. As long as there was free space, one could see snowmen in all kinds of clothes.

After that, Qin Lin left you city, got into his car, and drove back to Linlin Manor.

Just as she returned to the office, Shen Li came looking for her.

Qin Linde also knew that the other party was probably talking about the snow technology.

you city fell on time, especially the magical rainbow light and the wondrous scenery during the snowfall. it shocked everyone and made them feel incredulous.

The internet was in an uproar.

In fact, the videos had even spread abroad in a short time.

ever since the videos of the purification of the willow duckweed, optimus prime, and megatron were released, linlin's laboratory had become very famous overseas.

Therefore, this time, in the name of Linlin's laboratory, coupled with the magical scene during the snowfall, the video was also very popular abroad and shocked everyone.

after all, their country didn't have such technology.

especially on the american internet, many people were questioning why the so-called technology overlords couldn't come up with such amazing technology, while the eastern countries kept having such amazing technology.

this kind of self-doubt was easy to spread. for this reason, the internet department of the united states had no choice but to rectify it. they banned and sealed off all information to prevent any related products from appearing.

As long as it appeared, it would turn into ** or 404 and disappear.

Unfortunately, beautiful countries were different. This was a free country, and the people could still protest. This kind of text prison triggered rebellious psychology, and many people organized protests.

It could be said that a small snowfall in you city had actually caused chaos in America.

Qin Lin couldn't help but laugh when he saw the video early in the morning. Although it was an unkind thing, he still wanted to laugh.

Shen Li entered the office and followed Qin Lin to the tea table. He said, " "President Qin, this time, the snow technology test was a perfect success, and it caused a huge sensation."

the internet is filled with news about this snowfall. The officials of many cities have contacted us, wanting to work with us to have a snowfall as well. Chairman Qin, what do you think of this reply? "

let's not work together on this technology, " Qin Lin interrupted. just let you city and the scenic Area use it in the future.

He had never thought of relying on this technology to make money, and he didn't need to rely on this technology to make money.

After having enough money to spend, it was a matter of numbers.

Moreover, if he wanted money, as long as he was willing, he could make a company public and make him the richest man. Not to mention, there were still tens of billions of dollars in his card that he didn't know how to spend.

Most importantly, after hearing the words of the people in you city, he knew that they all remembered his good deeds. So, he would let you city have another special feature.

After all, it was impossible for other places to develop such technology in a short time. Only you city could have such a snow experience.

alright, I'll restore those people when I get back. Shen Li nodded. He knew what his boss was thinking.

However, he still had to ask his boss about this kind of thing.

This way, he would be able to handle it better after receiving instructions.

Shen Li and Qin Lin made a pot of tea and reported the situation of the laboratory. Then, they left the laboratory.

Qin Lin looked at the screen in his mind, and his face suddenly showed surprise.

It was because a sprout had actually appeared on the desert transformation.

The wasabi had really mutated and sprouted in the desert!

This is really ...

[Chapter 1482 Is It Difficult To Control The Desert?](#)

Qin Lin was inexplicably excited when he saw this scene. He was even a little eager to try.

This really was what he wanted.

qin lin immediately stared at the game screen. except for special seeds, there was no such thing as leaving seeds. once the seeds matured, the dwarves would harvest them immediately.

Also, he wanted to transplant the wasabi as a seed. He couldn't transplant it only when it was almost mature. He had to do it normally, at least as soon as possible, after the germination stage.

Staring at the game, Qin Lin saw that the sunflowers were almost fully grown, so he went out of the office and went to the work area inside. Then, he immediately entered the game and went to the ranch house to take out the empty flower pot.

he had prepared these flower pots in advance, so that he could use them at this time.

He took a few flower pots, an ordinary hoe, and a shovel and headed to the desert metamorphosis.

In the sand, green plants were growing healthily. They did not dry up because of the desert's lack of water.

If a botanist in the real world were to see this, his jaw would drop.

There were so many botanist experts who studied the plants used to control the desert, and they knew how magical and shocking this crop was.

Qin Lin immediately took the shovel and began to fill the flower pot with sand.

He didn't have any sand now, so he could only dig from the game.

It took some time to fill the soil with gravel. Qin Lin picked up the hoe and began to transplant the plants into the flower pots one by one.

After doing all this, Qin Lin took the transplanted wasabi out of the game and placed it in the studio.

Time passed by. The next day, Qin Lin woke up and found that all the wasabi in the game had been picked by the dwarves.

Qin Lin washed up, ate some breakfast, and entered the internal work room again. He locked the door and entered the game again with a thought.

When he reached the storage room, he saw a pile of ripe and harvested wasabi.

Qin Lin picked up a wasabi and immediately saw the remark of the wasabi:

[a special variant wasabi!]

[this is a special variant of wasabi. Wasabi is a plant that has very strict requirements for growing conditions. They like cool and humid climate conditions and even need a water source nearby. However, after mutation, they become fond of desert environments. Dry environments can make them grow healthier.

[special effects: mustard-making effect quality +1, growth speed +1, desert survival +2]

Qin Lin saw the remarks of the desert mutant wasabi. It could indeed survive in the desert, and the key was that it had three special attributes.

The effect and quality of wasabi +1 didn't need to be mentioned, because wasabi could be used to make wasabi.

Now that he had this attribute, he thought of the wasabi industry in the country of paste. It seemed to be very fun to make this thing.

as for the +1 growth speed and +2 desert survival, it went without saying that they were attributes that were mutated to survive in the desert.

Therefore, this thing could be used to control the desert.

If this thing were to be promoted, it would definitely shock the entire world.

Looking at the attributes, Qin Lin exited the game and took out his phone to call Yu Shui. As soon as the call went through, he told Yu Shui, " " yushui, find a way to buy some sand from the desert and turn it into a sand farm. "

" ? ? ? "yu shui was a little confused when she heard this request. using sand to make a sand farm? this was already confusing enough. why did he have to buy sand from the desert?

However, he didn't dare to disobey his boss's orders, so he could only nod and hang up the phone. He then began to worry about how to purchase the sand in the desert.

The key was that he was afraid that if he bought desert sand online, people would use ordinary sand to trick him.

what if the boss wanted to use this desert sand for something important and was fooled by others with ordinary sand? wouldn't that be a pain in the ass?

therefore, he might have to make a trip to the desert.

But where was the desert?

how do i get to the desert?

As a person who had lived in the South his entire life, this was a very vexing matter.

...

qin lin asked yu shui to buy desert sand because he wanted to see if there was any difference between using desert sand and ordinary sand to transplant the special wasabi.

Otherwise, there shouldn't be any difference since they were all made up of sand. However, different areas and sand that didn't pass through the environment should have different levels of saline-alkali and so on.

The effect of transplanting the wasabi might be different.

That was why he asked Yu Shui to purchase desert sand.

He put down his phone and looked at the screen in his mind again. He planted a new seed in the desert transformation.

Since the desert mutation had a chance of making the seeds mutate and adapt to the desert, as long as there were enough seeds and planted enough times, it could produce two more types of mutated seeds.

Even if it was to be promoted, it was impossible to only plant wasabi, right?

Unfortunately, at night, Qin Lin's new seed failed again. The seed had already dried up and festered.

He could only continue to plant other seeds, and then control the game character to go to ore town again to see if he could trigger the plot mission.

.....

You city, on a mountain.

Liu Hua put on his coat. Because of the snow activity, the after-effects had not yet passed, so you city was still a little cold.

However, this kind of coldness could not stop Liu Hua's burning heart. After all, after he had contracted the mountain first, his business was booming and he could make a lot of money every day by relying on the unexpected view of fairy tale mountain and Linlin Scenic Area.

[Chapter 1483 Is It Difficult To Control The Desert?](#)

therefore, in a good mood, he would lie on the cradle that he had specially designed every day and look at the starry sky.

In a good mood, the blinking stars were very cute in his eyes.

More importantly, when did you Cheng start to see stars again?

Hua Liu asked himself. He did not understand the question.

He remembered that he couldn't see any stars in you city.

As Liu Hua was thinking, he saw a ball of fire in the distant sky falling toward earth.

Was it a star or a meteorite?

liu hua didn't know. he could only think of it as a shooting star. then, he began to pray, hoping that his business would one day surpass that qin guy's.

This time, he was able to intercept the other party and establish the foundation of this mountain. He would definitely be able to do better in the future, right?

beijing.

Minister Lu was in front of the screen in the internal conference room of a Department.

His eyes were fixed on the rapidly falling ball of fire.

the fireball's estimated location would be in the wilderness of the country.

They were the rocket astronauts on academician Hao's project to return to Earth.

When the rocket was launched again, it had returned to the discovered planet and transplanted the poached grass and color-changing tree. It had also built a small base on the planet, probably similar to the base in the movie "lonely moon.

These two deep space exploration and return trips also meant that academician Hao's project technology had matured.

The image on the screen was a satellite image.

Not long after, the rocket astronaut successfully landed back on the ground and exited the spacecraft.

A professor received the report and reported to Minister Lu, " Minister Lu, the astronaut's vital signs are all normal. We just need to go through the normal quarantine and inspection.

"En!" Minister Lu nodded his head.

This was good news.

then, he left the department and went to another mysterious manufacturing department.

There were rows of guards standing in this Department. It could be seen that the security was tight. This was obviously a Department with a high level of security.

After Minister Lu arrived, he was actually inspected three times by the guards before he was allowed to enter.

Once inside, the space was a little spectacular.

There were actually a few Optimus Prime and Megatron mechas making all sorts of movements.

Moreover, these Optimus Prime and Wei zhentian's appearances were somewhat different from the Linlin Manor's.

They were equipped with all sorts of weapons.

Although the Chinese Academy of Sciences had no way of completely transforming this technology in a short period of time and making an appearance that belonged to the elements of the country, it was still easy to modify it in a small area and install weapons. Otherwise, the Chinese Academy would not be qualified to be called the center of scientific research talent in the country.

These were all meticulously made by the Hua Academy.

Minister Lu looked at the other side, where Optimus Prime and Megatron's operators were.

These operators were wearing thick spacesuits. They were actually astronauts.

"Minister Lu," a person in charge saw minister lu and hurriedly came over to report, " " these astronauts are already able to skillfully control these optimus prime and megatron in normal and vacuum conditions. "

Minister Lu nodded. that's good. Academician Hao's rocket has successfully returned. The next time it's launched, these Optimus Prime and Megatron will be brought back.

Because academician Hao and the other two had a sudden inspiration in boss Qin's Manor, there was a breakthrough in rocket technology, leading the world by at least 30 years. After the rocket was launched, it also found the planet and brought back the seeds, which were cultivated by academician Li Kai and boss Qin.

Now, other than transplanting the soaked grass and color-changing tree to that planet, he also had to explore the planet.

To be honest, if they could modify the planet one day and make it suitable for human habitation, they could secretly migrate.

The meaning of this was unimaginable.

it was unrealistic to rely on astronauts for exploration. it was even dangerous and impractical. therefore, optimus prime and megatron were different.

This kind of big guy was a great tool for exploration.

don't worry, Minister Lu, " the person in charge assured him. there won't be any mistakes. Even if it's a satellite signal transmission device, we've checked it without any problems.

Minister Lu nodded and checked the data and status of Optimus Prime and Megatron before he left the Department.

however, he had already begun to plan his next move.

perhaps after this batch of optimus prime and megatron followed academician hao's rocket and launched again, they should try to research spaceships.

When Minister Lu returned to his office, his Secretary was waiting to report, " there's news from the environmental management Department saying that the world desert control Conference has ended. Various countries have once again proposed an exchange of desert control technology, so the environmental management Department has come for help.

Minister Lu frowned when he heard his Secretary's words.

Exchange?

He said it so nicely.

As long as it involved the affairs of various countries, the so-called exchange was nothing more than a competition of technology, just like the various competitions at class reunions.

Naturally, there were also some countries that wanted to see them make a fool of themselves.

[Chapter 1484 Is The Desert Difficult To Manage?](#)

The most important thing was that the desertification in various countries was really too serious. Once a country really had good technology, they could really control other countries.

However, in the field of plant research in the Chinese Academy of Sciences, other than rice and the like, they were really weak in other areas.

He had not been very successful in his research on desert plants either.

Now that the environment Department had come to ask for help, he didn't have a good solution, nor could he produce such results in a short time.

Minister Lu suddenly thought of two people, boss Qin and academician Li Kai.

If it was these two, it should be possible, right?

After all, they were really talented in plant research.

"Book a plane ticket for me, I'm going to your city." minister lu immediately told his secretary.

Although this was a matter of the Ministry of the Environment, it would be embarrassing if other countries brought out good technology at the conference without any good technology.

After all, people would say that the researchers in your country are not good enough.

Wouldn't this implicate their Hua Yuan?

In China, boss Qin and academician Li Kai were the best at plant research.

It could be said that there were two types of plant researchers in China: The first category was boss Qin and academician Li Kai, and the second category was the others.

In another five or ten years, the researchers in the world's plant research industry could be divided into two categories: One was boss Qin and academician Li Kai, and the other two were others.

Therefore, if he asked these two for help, there might be an unexpected surprise.

Minister Lu also went to your city as fast as he could.

...

Linlin Manor.

Another day arrived.

The air in the manor was the best in the world because of the purification grass. The temperature of the manor was also the most comfortable in the world because of the everlasting grass. The environment of the manor was also the most beautiful in the world because of the game attributes.

This was a place where everyone wanted to live.

However, to Qin Lin, this was just a daily routine. He could enjoy it every day.

Just like some people's goddesses, some people couldn't get them no matter how much they begged, while some people could f * ck them whenever they wanted.

Qin Lin went to the office and started doing his daily tasks. At noon, Li Kai rushed to the manor.

"Old brother Li, have you had a good rest?" Qin Lin looked at Li Kai teasingly. He said that he was taking a break, but no one would believe that he brought Dr. Tang along and even asked for several bottles of Linlin medicinal wine.

Li Kai clearly knew this and didn't want to talk about it. Men only wanted their wives to be okay. otherwise, his wife would have to do that with someone else.

It was Minister Lu, "Li Kai changed the topic. he said he had something important to discuss with us. But I think he's here to cause us trouble again.

"It should be!" Qin Lin nodded.

They knew Minister Lu very well, but they didn't know what he was here for this time.

Li Kai suggested, "old Brother Qin, if it's really troublesome, why don't we just go through it this time?"

Before he finished, Qin Lin understood. He nodded and said, "If the situation doesn't look right, I should be very busy!"

If Minister Lu's matter could be completed through the game, he would not mind helping.

However, if the game couldn't help, then the situation wasn't right. He and old brother Li, these two deceitful people, shouldn't be able to solve it. Even if they could, it would definitely take a lot of time.

What he was most afraid of was this kind of troublesome matter that would take a long time.

"Haha, I'm definitely very busy!" when Li Kai heard Qin Lin's words, he laughed decisively. He felt that his brother Qin's heart was connected with his.

Speaking of the devil, Minister Lu arrived at Linlin Manor not long after.

When he entered Qin Lin's office, Minister Lu wanted to make an opening speech, but before he could say anything, he realized that boss Qin and academician Li Kai were both looking at him.

This made him mumble, and he even forgot his opening remarks.

Why did he feel that something was wrong?

[Chapter 1485 A Scapegoat And A Cheater](#)

Minister Lu faced the two people's strange gazes and went straight to the point, "Boss Qin, Professor Li Kai, I have something to trouble you with again."

When Li Kai heard this, he exchanged glances with Qin Lin. Both of their eyes showed that they had expected this.

Ah, Minister Lu, Li Kai immediately said, "I've been very busy recently. I have some research on hand that I can't put down. I might not be able to leave."

Minister Lu could only look at Qin Lin when he heard this.

Academician Li Kai said he didn't have time tomorrow.

"Minister Lu, tell me what it is first. I may not be able to help." Qin Lin wanted to hear what Minister Lu wanted to say.

After all, he was different from old brother Li.

Old brother Li was purely a scapegoat. He still had a cheat.

He wanted to see if this hack could help Minister Lu.

When Li Kai heard this, he looked at Qin Lin with a strange expression, as if he was asking, "Brother Qin, didn't we agree on this?"

How did you become so different?

Minister Lu let out a sigh of relief. It was good that either boss Qin or academician Li Kai were free.

He immediately said, "boss Qin, it's about desert management. The environment Department has just held an international desert Management Conference."

Minister Lu explained everything to Qin Lin.

when li kai heard the reason, he immediately knew that this was a very troublesome matter.

What a joke, that was desert management.

How many elite scientists in the world are researching this plant?

But how many results were there?

Although he and old Brother Qin had created many things, they were all scapegoats. They were all the effects of the special soil.

Moreover, the special soil's effect was too random, there was no way to guide it.

Qin Lin was surprised to hear Minister Lu's words.

Because wasn't this just a coincidence?

It could be said to be a coincidence.

he happened to have a desert mutation site, and the key was that he had created wasabi that could survive in the desert.

Minister Lu, I heard that it's very difficult to manage the desert. I'm interested in giving it a try. Qin Lin thought and said to Minister Lu.

Because he knew what to do, he said this very easily.

Minister Lu sighed in his heart. As expected of boss Qin, he was indeed a man of talent. He was very interested in this desert because it was very difficult to manage.

He was not interested in it.

If boss Qin had really developed something to control the desert, he would definitely have people record boss Qin's words in textbooks and let the world see what the confidence of a genius was.

Li Kai, on the other hand, looked at Qin Lin in shock.

He felt that this was not the case with old Brother Qin at all, because in his mind, old Brother Qin had always been the one secretly pushing the blame to him.

When he was together with old Brother Qin, he would be in danger of being the scapegoat.

What was the situation now? This time, old Brother Qin was planning to take the blame himself.

If the special soil really produced plants that were effective in controlling the desert, then he would have nothing to do with the pot.

When Li Kai thought of this, he suddenly felt that this was a good thing.

If old Brother Qin learned to take the blame himself, wouldn't it be much easier for him in the future?

Thinking of this, Li Kai felt an inexplicable joy.

"Old Brother Qin, I'm very busy with that taxi, I'll take my leave first, Zhenzhen," Li Kai said.

With that, he got up and left.

Since old Brother Qin wanted to take the blame, he wouldn't let this blame have any chance to get close to him.

"Boss Qin, I'll leave this to you." Seeing that Qin Lin had agreed, Minister Lu immediately agreed.

after that, he told qin lin a lot more about the ministry of the environment and the international desert control exchange meeting before leaving.

Before he returned to the capital, he didn't forget to remind Ma Hong to pay attention to this matter.

If boss Qin could really develop plants for desert control, it would be a very shocking thing.

He had to know immediately.

...

Half a month later.

Qin Lin received a call from Yu Shui."Chairman Qin, the sand from the desert has been transported to Xuanji."

When Qin Lin heard the news, he immediately went to an empty plot of land in the plantation Department.

yu shui had been waiting for a long time.

In the empty land, there was a high pile of gravel. It was the desert sand that Yu Shui had brought back.

"Chairman Qin, what should we do with the sand now?" Yu Shui immediately stepped forward and asked Qin Lin.

turn this sand into a sand farm, " Qin Lin ordered. then, find some of our you city's own sand and make it into a sand farm. I want to plant something on it.

Yu Shui and the other employees of the plantation Department were stunned when they heard this.

plant something in the sand?

Wasn't this a whimsical thought?

As members of the plantation Department, they were all good at planting. They naturally knew that crops needed all kinds of nutrients, and the land needed to be very fertile.

The sand did not contain any nutrients that crops needed.

It was impossible to plant crops in the sand.

If it were anyone else with such a whimsical idea, they would have gone up to teach them common sense.

However, the other party was Chairman Qin, so it was a different story.

they all knew that their boss was an academician, a great crop research expert.

the magical crops that the planting department grew were all grown under the leadership of their boss.

Now that the boss said he wanted to plant crops on the sand, he must have developed something, right?

However, if he could really grow something on the sand, how amazing would that be?

Thinking of this, Yu Shui quickly ordered everyone, "Hurry up and get to work. Get the sand farms out."

[Chapter 1486 A Scapegoat And A Cheater! 2!](#)

The plantation staff did not waste any more time and began to take action.

Ma Hong had been sent by the higher-ups to protect them. Under normal circumstances, he was the team leader, and he was only in charge of the overall situation.

Zhuang long and Li Xiang, the two people who had used the body strengthening drug, were responsible for protecting Chairman Qin.

There were other people outside the Linlin Manor and Linlin laboratory.

This time, when he knew that Qin Lin had left the manor and was heading to the plantation Department, he followed him immediately. After all, Minister Lu had instructed him to do so.

When he arrived at the empty plot of land in the plantation Department in his security uniform, he saw Qin Lin and the plantation staff who were filling up the sand farms.

He understood that director Qin must have been instructed by Minister Lu to start cultivating and developing crops that could control the desert.

With that in mind, he took out his phone and started to record videos of the sand farm.

He sent the video to Minister Lu as soon as he was done with it, along with a message. Boss Qin had already started to research on desert plants.

hua hospital.

Minister Lu was already with academician Hao.

The two of them went to a rocket Research Department. They were looking at a rocket that required hundreds of people to test it. A few Optimus Prime and Megatron had been transported and embedded into the rocket.

boss Qin is really a genius, "academician Hao couldn't help but praise. he can actually design a mechanical body like this. The people in the mechanical research Department are still dumbfounded.

minister lu nodded. "it's just that boss qin isn't a calm person. he always does things his way. how good would it be if he could focus on his research? "

When academician Hao heard this, he smiled and said, "Minister Lu, think about it in another way. Boss Qin's research on crops has made countless crop researchers look up to him. He studied animal genes

and bred that strange crocodile. Oh right, and that sea cucumber. He studied machines and machines and was able to create this mechanical body. Which one of them isn't the best? "

other people might not be able to come up with such a technique in their entire lives. For such a genius, he must be different from ordinary people. Besides, he studied Chinese medicine and didn't he also come up with something like the body enhancing liquid? "

most importantly, boss Qin is still young. How many people at his age can have such achievements? "

if it was someone else, with one of his achievements, I'm afraid his tail would have already floated to the sky and everyone would know about it. Who could be as indifferent to fame and fortune as him, not happy by material things and not sad by himself? "

" when he gets older, he might change. it won't be too late to invite him to focus on his research. after all, he has a lot of time in the future. the future is his. "

Minister Lu nodded when he heard this.

indeed, boss qin was still young.

This was the most terrifying and most precious thing.

If he had such an achievement at his current age, then what would happen when his knowledge, knowledge, and abilities were all stronger and richer in the future?

After thinking about it, Minister Lu felt that he should apply for a few more people to go to you city. Ma Hong and the others alone were not enough insurance.

If they had missed out on epoch-making grandmasters like Einstein, then boss Qin belonged to this era and their country.

Didn't the scientific research community in the Western countries always mock them for not having the kind of people who could create an era in scientific research? Boss Qin was.

Academician Hao was curious. I'm curious. Did boss Qin suddenly have this kind of talent? or did he always have it? he just didn't discover it. Professor Li Kai is the same.

that's not important, " Minister Lu said hurriedly. what's important is that we now know their talents and their importance. That's all that matters.

Academician Hao nodded in agreement.

Minister Lu watched as Optimus Prime and Megatron were transported onto the Rockets. He also left the Department and returned to his office.

As soon as he sat down, his phone rang with a lot of messages.

In the Chinese Academy, many departments blocked signals and only had an internal network. Many people were not even allowed to carry communication equipment.

Although Minister Lu could bring a communication device, there was no signal and he couldn't receive messages. Now that the signal was restored, he only received the message when he arrived at the office due to the delay.

After sitting down, Minister Lu began to read the message. The things that needed to be dealt with were immediately settled. Then, he saw the video and message sent by Ma Hong.

He immediately focused his attention and watched the video seriously.

The video was the scene of Linlin Scenic area's planting Department employees clearing the sand farms.

Seeing the sand farms, Minister Lu knew that boss Qin must be simulating the desert situation. After all, the desert management plants that he had asked boss Qin to study must be able to survive in the desert.

he didn't expect boss qin to act so quickly.

Thinking of this, he had an idea. He walked to the laboratory where the desert plant management research team was located.

previously, because of the color-changing tree battle suit, he used boss qin to deal a blow to the researchers, which had a great effect. those researchers had recently begun to work hard.

this was a very good state.

Minister Lu quickly arrived at the desert crop control Research Department. As soon as he arrived, he called the researchers over. "everyone, academician qin has already started to study desert plants. you all have to work harder and compete with him."

The researchers smiled bitterly and said, "

"Minister Lu, are you joking with us? How can we compare to academician Qin?"

that's right. Everyone knows academician Qin's ability. Everyone is convinced. We know our own limitations.

"Yeah, we really admire academician Qin and professor Li Kai!"

"....."

Minister Lu suddenly fell silent.

How was he supposed to motivate them?

The color-changing battle uniform incident was because those people were not convinced that boss Qin had been embarrassed.

Now, these people were so convinced of boss Qin's abilities that they didn't even have the intention to compete with him.

Al!

.....

Linlin Scenic Area.

Yu Shui quickly brought people to fill up the sand farm.

There was still a difference between the two sand farms.

The sand from the desert was obviously more yellow than you city's, but you city's sand was gray and green.

"chairman qin, do you want to fertilize these shatian?" yu shui asked qin lin.

Qin Lin shook his head.

What a joke.

If you want to control the desert, do you have to fertilize the entire desert?

"come with me to the manor and move some plants." Qin Lin ordered Yu Shui.

Yu Shui nodded and immediately followed Qin Lin to Linlin Manor.

Qin Lin had transplanted some mutated desert wasabi sprouts from the game, and now he could transplant them to these two sand farms.

It didn't take long for Qin Lin and Yu Shui to bring all the wasabi sprouts to the two sand farms.

There were a total of eight pots of these seedlings.

"Divide these seedlings into two batches and transplant four seedlings in each of the two sand farms," Qin Lin ordered.

"alright, chairman qin!" Yu Shui nodded and immediately called for people to start moving the wasabi sprouts from the flower pots to the sand farm.

For these plantation Department employees, this was also their specialty, so they completed it soon.

Due to professional reasons, those people planned to water the plants with buckets after they transplanted the wasabi sprouts.

Qin Lin saw this scene and quickly stopped him. there's no need to water it. In addition, you have to increase the temperature of the surrounding area to simulate the temperature of the desert. If you don't understand, you can ask the laboratory for help.

The desert's temperature was very high during the day and very low at night. Therefore, these seedlings had to adapt to such an environment to survive.

However, Qin Lin knew that these wasabi sprouts could survive because they were a product of the game.

at the side.

Ma Hong picked up his phone and started taking pictures of the plant again. Now, boss Qin wasn't cultivating it, but had already begun to transplant the plant. It seemed that he had already cultivated something.

although he didn't know much about research, wasn't this speed a little too fast? He had heard that even with so many laboratories around the world working together, there had been no results in the research of desert control crops.

Otherwise, the desertification would not have gotten worse.

But how long had it been since Minister Lu asked boss Qin for help?

Thinking of this, he sent the video to Minister Lu as soon as he finished shooting. It would be amazing if Chairman Qin's crop succeeded on the first try.

[Chapter 1487 676-I'm Really Alive! As Many As I Want!](#)

Hua hospital.

In the desert governance research Department, Minister Lu looked at the busy researchers and showed a gratified expression.

He had also racked his brains to give these people a little confidence and mobilize their motivation.

Of course, he still wanted to make an issue out of boss Qin. He promised to find an opportunity to invite academician Qin to come and communicate with them.

Now, these researchers were very convinced by academician Qin. When they heard this, their motivation rose, and they worked in full swing.

That was good. It didn't matter if boss Qin could produce results before him. What was important was that he had the enthusiasm.

Minister Lu left with satisfaction and returned to his office. He received another message from Ma Hong.

he immediately opened the message and checked it.

Ma Hong sent another message, and it was a video.

He clicked on the video and was stunned for a moment.

The video was still showing the two sand farms, but that was Yushui, right? he was the manager of the plantation department of linlin scenic area, and he was in charge of many of boss qin's research.

He was actually bringing people to the two sand farms to plant a type of sprout.

Anyone who saw this could guess what was going on.

"That's impossible, right?" Minister Lu exclaimed in shock.

After all, it had only been half a month since he had found boss Qin.

In such a short period of time, boss Qin had actually produced results?

Looking at the sprouts, it should take about 15 to 30 days to grow, right? in other words, he had only been back for half a month, and boss qin had already made some progress in desert management?

This Kasaya

He was in charge of scientific research, so he knew how difficult it was to study desert environmental management. Although all the countries in the world claimed that they had found the news of desert management, and some had even made plans to manage it.

However, the fact was that many of these results were obtained by cheating research funds and capital operations.

Even if it was the result of some major countries' promotion, everyone knew the effect. After all, the desertification of various countries was getting more and more serious.

He just didn't know if boss Qin's sprout transplant was a success. If it was a success, then the time it took was too scary.

Even if the effects were only as unsatisfactory as those developed by those countries.

He immediately thought of what boss Qin had said before, "It seems difficult to control the desert. I'm interested in giving it a try!"

He was only interested in it because it was very difficult to control the desert, and there were results in half a month?

This could simply be regarded as a century-old smelly genius's B quote.

If all these were recorded in books, people would still talk about boss Qin's words for decades or even hundreds of years.

Of course, the premise was that boss Qin's transplanted seedlings had some results and could survive in these two pieces of sand.

Thinking of this, he immediately took out his phone and dialed Ma Hong's number.

once the call went through, he said, "Ma Hong, help me set up a camera on the two sand farms and send the live broadcast to me."

"Okay, Minister Lu."

On the other side, Ma Hong hung up the phone and took out his phone to make a call. After a while, someone sent the equipment over and started installing it.

At this time, the two sand farms had already changed, because Yu Shui had asked Linlin's laboratory to help make the two sand farms into a simulated desert environment.

the people in linlin's laboratory knew that it was their boss's request, so they naturally did it as quickly as possible and assembled a special glass cover with air holes.

there were other settings in it.

These settings could simulate the temperature difference between day and night in the desert.

For the current strength of Linlin laboratory, this was a piece of cake.

not long after.

Ma Hong had also assembled the recording equipment he had asked someone to send over. He started it up and tested the transmission code. The code was set specially for this.

Soon, Minister Lu saw the image sent by the device installed by Ma Hong on his office computer.

Naturally, he had to keep an eye on these seedlings. If he failed to plant them in this simulated desert sand farm, these seedlings would not survive for more than three days. If he succeeded, then there was no need to mention that.

Not only Minister Lu, but Yu Shui had also been paying attention to the plants transplanted to the two Shatian farms. He was in the field of farming, so he knew how incredible it would be if the seedlings could survive in such an environment.

after qin lin asked yu shui to plant the mutant desert wasabi in the sand farm, he didn't pay any more attention to it and left it to yu shui.

After all, the wasabi was different from the other plants. It was a plant that had to survive in the desert, so it had to survive on its own.

If he couldn't survive in this simulated desert environment, then he wouldn't be able to survive in the real desert.

After all, no matter how much the surroundings simulated a desert, the moisture in the air and the environment was rich. It was not something that a desert could compare to.

After sitting down on the boss's chair made of fragrant Rosewood, Qin Lin looked at the screen in his mind again and controlled the game character to the desert transformation site.

Although one of the wasabi had mutated, there could be more than one mutated seed. There could be a second or a third mutated seed.

therefore, qin lin immediately controlled the game character to plant another seed.

This time, the seeds were dog tooth grass seeds.

He had just bought the seeds casually and planted them according to the order. He didn't expect to buy the seeds of the dog tooth grass.

The Dogtooth grass had created Linlin Ranch, so it had a special meaning to him.

But on second thought, if the dog's tooth grass seeds could mutate in the desert transformation site and could be planted in the desert, it would be more meaningful than the wasabi.

wasabi could at most be used as mustard, but it couldn't be grown all over the desert. not many people would eat wasabi if they grew.

if it was the dog's tooth grass, it would be different. the desert, which was originally lifeless, would become a land of gold and treasure because of the dog's tooth grass.

As long as he planted the mutant dog tooth grass all over the desert, the desert would become the best farm.

Of course, this would only work if the dog's tooth grass could really mutate in the mutated desert. Otherwise, all these were just wild thoughts.

However, with this idea in mind, even if he failed once, twice, or even three times, if he failed enough times, he would eventually succeed, right?

After Qin Lin controlled the game character to plant the dog tooth grass into the desert, he controlled the game character to go to the mine town to try his luck and trigger the plot mission.

Time passed.

A day passed by quickly.

Yu Shui got up early in the morning and went to the two sand farms to check the condition of the planted wasabi.

when he arrived at the sand farm, his face was filled with disbelief.

The sand farm in the desert did not show any signs of withering. Instead, it was extremely green and was growing very vigorously.

On the other side, the sand farms made of you city's local sand were not growing well. The color of the leaves of the sprouts was lighter, as if they were a little dry.

This surprised him, and he thought of his boss's request to buy desert sand.

Could it be that the wasabi sprouts cultivated by his boss preferred desert sand?

Minister Lu was very dedicated to his work and was very responsible. He never came sooner or later.

today, he arrived at his office early. if it was any other day, he would first read some important documents and then comment on them.

Today, he turned on his computer as soon as he sat down. Naturally, he wanted to check the surveillance footage to see how boss Qin's plants in the desert field were doing.

When he turned on the computer, the situation of the sprouts in the two Shatian appeared on the screen. He did not see it as clearly through the surveillance camera, but he could clearly see that the two sprouts were very healthy.

"In other words, boss Qin's training might have succeeded?" when minister lu thought of this possibility, his expression became very unsettled.

Another day passed.

Yu Shui also arrived at the sand farm early in the morning. In the sand farm made of desert sand, the wasabi sprouts were stronger and greener.

The leaves of the sand farm made of you city's sand were still dried up, but they were not dead.

minister lu also came to the office early in the morning to check the situation of the seedlings. through the surveillance video, he could see that the seedlings were still alive.

Time continued to pass.

On the third day.

minister lu watched the empty video again. the seedling was still alive.

This made him even more shocked.

If they didn't die in three days, it meant that these seedlings could really survive in the desert. He knew very well what this meant.

after all, he was the one who led all of this. he had asked boss qin for help, and boss qin had started to study the plants for controlling the desert.

It had only been half a month since he had asked boss Qin for help.

" no! " minister lu suddenly realized that he had misunderstood. the seedlings transplanted by boss qin into the sand farm had grown well after half a month.

However, the sprout was still half a month old. In other words, the seed of the sprout had been planted even earlier.

" this bi an! " minister lu opened his mouth in a daze.

after he asked boss qin for help, the time it took for boss qin to cultivate this seedling was much shorter than he had imagined.

"What kind of monster is this?" Minister Lu couldn't keep calm.

in other words, the research on desert control might enter the next era?

Minister Lu looked at the seedlings that were still alive in the desert and wondered if he should share this with the desert management research team.

however, after thinking about it, he decided to forget it. those people had just been motivated. he was afraid that the result would directly hit them.

While Minister Lu was still in shock, Qin Lin, who was in his office, was also looking at the game screen in his mind in surprise.

For the past three days, he had been planting the dog tooth grass seeds in the desert mutation.

To his surprise, after another failure last night, the dog tooth grass he had just planted this morning had sprouted when he arrived at the office.

The number of failures seemed to be shorter than he had expected.

In other words, the probability of the desert transforming was not low.

He suddenly felt like laughing.

when researchers around the world didn't have many results in this area, it seemed like he could get as many results as he wanted.

[Chapter 1488 The Desert Turned Into A Ranch! That's Boss Qin!](#)

Beijing.

Hua hospital.

Minister Lu continued to look at the wasabi sprouts in the two sand farms on the computer.

he really couldn't stay calm.

No matter what kind of plant it was, as long as it wasn't a desert plant, it would be incredible if it could survive in a desert environment for three days.

After all, the sprouts were tender and could be dried in a night in the desert environment.

The seedlings in one of the sand farms had not only survived for three days, but they were still healthy and strong.

Minister Lu couldn't stay any longer. He called his Secretary, " book the fastest flight for me. i want to go to you city. "

At this time, he had to personally go to you city to see the situation.

The Secretary nodded and went to do it immediately.

He also knew that it was normal for his superior to run to you city.

This was also very likely to be you city's academician Qin junior or a former academician who had come up with something good.

As a Secretary, he understood all of this.

.....

on the other side, qin lin looked at the sprouted green canine grass on the desert ground. he immediately returned to his work room in the inner area, locked the door, and entered the game.

He took out the flower pot he had prepared before from the ranch house and filled it with sand like last time.

After filling up the flower pots, Qin Lin transplanted the sprouted dog tooth grass into the flower pots and brought them out of the game.

He then looked at the game screen in his mind. Although the dog's tooth grass didn't have an attribute that increased its growth speed, it wasn't slow in the first place.

So, when Qin Lin woke up the next day, he saw that the middle desert transformation field was empty, and the dwarves had already finished their harvest.

Qin Lin and Zhao Moyu had breakfast together.

After Zhao Moyu and Lin Fen took little Qin Feng for a morning walk in the manor, he also entered the work room, locked the door, and entered the game.

When he came to the storage room, the Dogtooth grass that the dwarf had harvested was already placed in a corner.

He went forward and touched a piece, then saw the note of the dog tooth grass.

special mutated green canine grass: Grade 2 "

[this is a type of pasture that has mutated in a special desert. It has adapted to the desert environment and can grow very well in the desert. After planting it, it will have unexpected effects on ranches: Loved by herdsmen +1, nutrition for herdsmen +1, exuberant vitality +2, desert environment survival +2, desert transformation ability +2!]

Qin Lin looked at the attributes of this green Dogtooth herb. It was very different from the original green Dogtooth herb.

The green grass fragrance +2, open-minded +2, carefree +2, viewing +2, entry +2 attributes were all gone.

The attributes that the grazed animals liked and provided them with nutrition had also degenerated to +1.

Only the vitality +2 attribute remained unchanged.

In addition, he gained +2 desert environment survival and desert transformation ability.

This was an attribute that could completely survive in the desert.

The key was that although the attributes of being loved by the herdsmen and providing them with nutrition had deteriorated, it still had A +1 attribute.

Seeing this, he could think of the use of these two attributes.

When the desert really turned into a Ranch, the photos would be shocking if they were compared.

The key was still the +2 attribute of desert transformation ability.

To turn the desert into usable land, it wasn't as simple as just plants being able to survive on it. It also required the plants to slowly change the desert, giving it life.

Otherwise, if the plant died, the desert would still be a desert.

Only if the desert was transformed would it be fine to clean up all the plants.

However, it would take a very long time to completely transform the desert into usable land.

&Nbsp; moreover, this variant had A +2 desert transformation ability, which was terrifying.

He was afraid that the place where the dog's tooth grass was planted would soon transform the desert into usable land.

The key was that the attributes of the dog's tooth grass had changed so much, but it did not have any effect on the dog's tooth grass in the scenic Ranch.

Otherwise, even if the dog's tooth grass could be used to govern the desert, he would have to consider whether to take it out.

After all, if he didn't take out the green foxtail, he could use the desert to grow other mutant plants in the future.

qin lin thought about it and logged out of the game. he planted a new seed in the desert mutation.

This time, they were ordinary watermelon seeds.

He remembered that he had not bought any ordinary watermelon seeds before. They must have been left behind.

However, it was unlikely that the watermelon seeds would mutate, as the probability was too low.

Then, he called Yu Shui and asked him to bring some people over to move the seedlings of the dog's tooth grass.

Once the seedlings were brought out of the game, they would naturally be transplanted into the sand farm that simulated the desert environment.

...

On the other side, Ma Hong had been waiting in the parking lot of the scenic Area since early in the morning.

He didn't expect that Minister Lu would come so early in the morning. It seemed that he attached great importance to Chairman Qin's research on wasabi sprouts.

A moment later, a car stopped in the parking lot.

The one who got out of the car was Minister Lu. The car was arranged by Ming city. He had contacted them as soon as he flew over from Beijing. Ming city naturally had to make proper arrangements.

"Minister Lu, do you want to go to the manor to have something to eat first?" ma hong asked.

"no need!" minister lu shook his head and ordered, "take me to the two sand farms first!"

"Alright," he said. Ma Hong nodded and led Minister Lu to the plantation area, where the two sand farms were located.

he saw two sand farms and facilities that simulated desert environments.

when he arrived at the scene, he clearly saw the situation in the two shatian farms.

The seedlings in one of the sand farms were growing very strong, and there were even green leaves growing.

the seedlings in another sand farm were different. they were obviously slimmer and shorter, and their leaves were a little yellow, as if they would wither at any time.

Seeing this, Minister Lu was surprised, "this is the sand farm from you city, right?" It's really magical."

before he came, he had come to understand the situation of the two sand farms, but this was the most surprising thing.

boss qin's wasabi sprouts could actually survive in the desert and grow so strong, but they looked like they were about to wither in you city.

This was not right.

Everyone knew that plants could survive in the desert. If it was any other place's desert, they would definitely be able to survive for a while. If it was a desert, they would definitely wither overnight and definitely not last more than three days.

now, the wasabi sprouts that boss qin was cultivating seemed to be the opposite. it was as if the plant boss qin was cultivating could only survive in the desert.

If that was the case, it would be even more surprising, alright?

"Ma Hong, have you gotten the situation of these two farms wrong?" he asked.

Ma Hong immediately explained, " that's impossible, Minister Lu. I've checked it over and over again. If I can get this information wrong, I don't know how many times I'll die when I carry out my previous missions.

Minister Lu nodded. A man like Ma Hong wouldn't be able to turn things around.

This made him even more excited. He squatted in front of a wasabi sprout in the desert sand farm and couldn't help but touch the green leaves on the sprout.

The desert area of their country was about 700000 square kilometers.

If the Gobi Desert covered more than 500000 square kilometers, the total area would be 1.28 million square kilometers, which accounted for 13% of the total land area of the country.

What did this mean?

Based on the average proportion of each provincial capital in the country, if the desert area could be used, it would be equivalent to the area of 4.5 provinces.

What would happen if our country had another 4.5 provinces that could be used?

first of all, it was inevitable that the resources and environment would be greatly improved. in addition, if the country were to transform this place and carry out construction, would the price of houses in the country fall?

At the thought of this, Minister Lu became even more excited. But in the blink of an eye, he felt a little more at ease, because the bud was a wasabi.

it seemed unrealistic to plant so many wasabi in the desert. although wasabi could be used to make mustard, it was not a sustainable crop. it would not be very effective in transforming the desert.

After all, the time was up. If the wasabi couldn't be harvested, it would rot directly and there would be no way for it to survive.

Would they have to replant wasabi in such a large desert?

at that time, the cost would be too great to even imagine.

aiyoyo! Ma Hong sighed silently at the thought. Boss Qin liked to cultivate plants that were related to food. How good would it be if boss Qin cultivated plants like grass, which grew fast, had strong vitality, and cost little?

Ma Hong saw this and asked, "Minister Lu, why are you sighing?" Wasn't it a good thing that Mr. Qin had cultivated these seedlings that could survive in the desert? Didn't you come to ask for Chairman Qin's help for this?"

Minister Lu couldn't help but sigh. this is indeed a good thing, but the wasabi is still not satisfactory. If I had known that boss Qin could cultivate a plant that could be grown in the desert so quickly, I would have gone back later and suggested to boss Qin to use the seeds of other plants to plant it.

He was really regretful now. Was he really going to plant wasabi all over the desert and make wasabi?

That wasn't realistic. After all, mustard was one of the few that had strong flavors.

ma hong suddenly asked, "minister lu, can't you let chairman qin develop other plants?" that's the same."

Minister Lu looked at Ma Hong with wide eyes and said, " "how dare you have such a thought? do you know how difficult it is for the world to study desert management? in particular, this kind of plant that can control the desert is even more difficult to study. even the top laboratories in various countries can't produce such normal desert crops."

"it's already very rare for one to appear, how could you dare to think of a second? i'm afraid it won't appear in a short period of time."

"But that's Chairman Qin!" Ma Hong said.

"Eh!" minister lu was stunned.

that's right, that's boss qin. then yingying should be a possibility, right?

At this moment, the two of them saw Qin Lin and Yu Shui walking over with pots of flowers.

minister lu's eyes lit up when he saw this!

[Chapter 1489 The Terrifying Positivity Created A New Species](#)

minister lu looked at qin lin and yu shui, who came over with a new flower pot, and his face was full of excitement.

He seemed to have realized something and quickly went up. As expected, he saw new sprouts growing in the flower pots that Yu Shui and the others were carrying.

"Minister Lu!" Qin Lin was surprised to see Minister Lu.

He didn't expect Minister Lu to come so early in the morning.

"Boss Qin, are the flower pots you brought here the same?" Minister Lu asked anxiously.

Qin Lin understood what he meant and nodded with a smile. yes, this is also a newly cultivated one and it can also survive in this sand farm. This time, it's the dog tooth grass. We're going to transplant it to a simulated desert environment to test the situation.

"Really? but isn't your efficiency a little too unbelievable?" Minister Lu was surprised.

Boss Qin had actually managed to cultivate another plant.

He subconsciously looked at Ma Hong. This guy had actually guessed correctly.

But thinking about it, he was indeed boss Qin.

the key was that the pot was also filled with sand, but the dogtooth grass had already sprouted in it.

This meant to a large extent that the patriarch grass had succeeded.

After all, it was trained by boss Qin, so the success rate was extremely high.

Moreover, the effects of Dogtooth grass could not be compared to wasabi. One could easily tell the effects of Dogtooth grass from the Linlin Manor Farm.

Qin Lin had already walked to the two sand farms and saw the scene in the two sand farms. He could clearly see that the plants in the sand farms made of you city's sand had already dried up.

He knew what was going on.

the mutant wasabi had a +2 desert survival attribute. perhaps this was the reason why it could survive well in the desert.

Minister Lu, on the other hand, was full of excitement. He urged Yu Shui, "Manager Yu, let's move these pastures down quickly."

Obviously, he knew very well how effective the pasture would be for desert management if it was successful.

"Alright, Minister Lu!" Yu Shui knew the identity of Minister Lu, so she immediately brought people to transplant the grass sprouts.

With Yushui and the others 'planting abilities, they quickly transplanted the seedlings from the ranch.

minister lu squatted in front of the grasses and observed them carefully. he couldn't help but ask qin lin, " boss Qin, you're amazing. You've cultivated another plant that can survive in the desert in such a short time. Don't tell me you'll cultivate another plant that can survive in the desert in two days? "

When Qin Lin heard this, he subconsciously looked at the screen in his mind. He was stunned and said in disbelief, " "It's not impossible for that Yingluo, Yingluo."

He didn't dare to believe it.

that was because the watermelon seed had actually survived and germinated on the desert transformation in his mind's light screen.

This was really f * cking shocking. He couldn't even stay calm.

After all, the watermelon was just an ordinary watermelon seed.

he had never thought that the watermelon seeds could mutate and germinate.

Now, there were green sprouts emerging from the desert ground.

In other words, a third type of desert plant had appeared, and it was watermelon.

If the world's experts in this field were to see this, they would probably all go crazy.

How many scientific research organizations and scientists in the world would work hard to develop a plant that could survive in the desert?

if he was lucky, he would be able to successfully mutate one after another as if it was free.

If he was given enough time, he might be able to make all the plants in the desert survive.

And what did this mean?

Minister Lu didn't pay much attention to Qin Lin's words.

After all, boss Qin had already cultivated another kind of dog tooth grass that could survive in the sand in this short period of time. Could he ask for more?

Qin Lin went back to the Linlin Manor, back to the work area, locked the door, and entered the game again.

Since The Watermelon Seed had also undergone such a miraculous mutation, he would definitely transplant the watermelon sprouts.

As for the attributes of the watermelon, it was not important.

to be able to grow watermelons in the desert would surely shock everyone.

After all, there had been news about watermelons appearing in the Gobi Desert.

however, that kind of watermelon wasn't really a watermelon. it only looked like it on the outside, but it was sponge-like inside and couldn't be eaten at all.

This was a real watermelon.

Qin Lin also took out flower pots from the house on the farm and transplanted the watermelon seeds into them. He then took the flower pots out of the game.

.....

In two Shatian farms.

Minister Lu asked Ma Hong to find a few more cameras, which were high-definition and scientific-level equipment.

These devices could clearly record the growth of the transplanted dog tooth grass seeds, even if it was an inch of their growth process and changes.

It was extremely shocking.

He was very confident that if the dog's tooth grass could really survive in the desert, this video would definitely shock the experts in the relevant industry.

After setting up the equipment, Minister Lu didn't plan to go back. This time, he had to make sure that the dog tooth grass could survive in the desert.

The night passed.

Minister Lu rushed to the two sand farms and saw the situation inside.

In the sand farms made of desert sand, the wasabi sprouts grew even stronger. They had already split and produced new branches.

It was obvious that the seed had survived. The leaves were green and there were no signs of drying up.

on the other hand, the wasabi leaves in the sand farm of you city had already started to wither. even the sprout of the green canine grass was not as green as the sand in the sand farm.

It seemed that these two crops were more suitable for sand farms made of desert sand, while other sand farms could not survive.

Minister Lu immediately went to the high-definition camera in the sand farm and checked the footage.

because it was an ultra-high-definition camera, he could clearly see the growth of the dog's tooth grass in slow motion, as well as the growth and lines of the leaves on the forked branches of the wasabi.

All of these indicated that the wasabi and Dogtooth grass in the sand farms were growing normally.

Then, he went to the camera at you city's Shatian District and opened it up.

This time, he could clearly see the process of the wasabi's bud drying up and turning yellow. Moreover, from the degree of change that night, the wasabi would only survive for a few days before it dried up in this desert sand farm.

under the high-definition camera, the leaves of the dog's tooth grass also began to wither slightly. therefore, the dog's tooth grass would become more and more withered and yellow like the wasabi sprouts. in the end, it was inevitable that it would dry up and die.

this undoubtedly proved that the two plants cultivated by boss qin were only suitable for survival in the desert.

minister lu felt even more amazed.

How did boss Qin manage to make the plants grow well in the desert, but find it difficult to survive in other lands?

This kind of specialized positivity seemed a little outrageous, but it had actually happened.

Boss Qin was probably the only one who could cultivate plants with such magical properties.

The other researchers, including academician Li Kai, probably didn't have this ability.

Minister Lu didn't care about the plants in you city's sand farm. He focused on observing the wasabi and Dogtooth grass in the desert sand farm. His eyes were full of treasure.

At this moment, Minister Lu saw Yu Shui walking out with a few people in a hurry.

"Manager Yu, are you busy?" he asked, in a good mood.

Yu Shui was flattered by the question. Minister Lu, Chairman Qin asked me to bring a few people over. It seems that another plant is going to be transplanted to the sand farm.

He knew very well what kind of person this Minister Lu was. He usually didn't pay attention to him, but today, he even took the initiative to greet him. He was really flattered.

Minister Lu was in disbelief when he heard what Yu Shui said. "Boss Qin really managed to cultivate a third type of plant?"

he widened his eyes.

Yesterday, he had jokingly asked boss Qin if he would soon come up with a third type of plant that could survive in the desert.

at that time, boss qin said that there should be. he thought it was a joke, but he didn't expect it to be true.

"Manager Yu, I'll go with you!" Minister Lu couldn't help but ask curiously.

yu shui nodded and led the way to linlin manor with minister lu.

Not long after, Minister Lu followed Yu Shui to the inner area of the manor.

As soon as he entered, Minister Lu saw a shocking scene. He saw a child riding on a huge, ferocious animal.

He recognized the child. It was little Qin Feng, the Crown Prince of the Linlin company, the Qinglin laboratory, and the Linlin Scenic Area.

As long as this Crown Prince lived up to expectations and had boss Qin's adoration, he was destined to stand in a position that others of his age could only dream of.

The position he was born in was something that others would never be able to reach even if they worked hard for their entire lives.

After all, he knew very well how much assets boss Qin had. Just the 40 billion Yuan in his account alone could make him on the list of rich people.

But what caught his attention was the animal that little Qin Feng was riding.

Is that a crocodile?

It still looked like a Chinese alligator.

however, he had never seen such a huge crocodile before.

Not only could it be ridden by a child, but it could also be ridden by an adult if it was slightly bigger.

Most importantly, it was so docile even when it was being ridden by someone, and it didn't seem to be irritable at all.

Yu Shui was afraid of scaring Minister Lu, so she quickly said, " " chief lu, don't worry. yang looks fierce, but he's actually very gentle. he only eats grass and won't hurt people. "

When Minister Lu heard this, he thought of something and asked Yu Shui, " "Manager Yu, is this crocodile the one that boss Qin has been training?"

yes, " Yu Shui nodded. Xiao Yang is growing very fast. I come here every once in a while and find that he has grown a little bigger.

When Minister Lu got the answer, his eyes were filled with disbelief. The crocodile that boss Qin had trained only ate grass, right?

This was unbelievable.

How could this be the Chinese alligator in front of him?

boss qin's achievements in animal genes alone would probably make those animal gene researchers feel ashamed.

He had completely created a new species.

[Chapter 1490 679-There's A Third Type That Has! Special Liking For Food](#)

It could be said that in the study of animal genes, there were not many scientific researchers like boss Qin who had created a new creature. It could be said that there were only a handful of them.

This also showed that boss Qin's knowledge of animal genetics was very deep.

Qin Lin knew that Yu Shui had arrived, so he also walked out. He was surprised to see Minister Lu."Minister Lu, you're here too?"

Minister Lu rushed forward and said excitedly, " "Boss Qin, I heard from manager Yu that you've cultivated another plant that can survive in the desert, so I couldn't help but follow you."

Qin Lin hurriedly explained, " Minister Lu, I've actually been studying these seeds for a long time. It's just that I've recently gained some insight, and I've succeeded in one by one. There should be other crops that can survive in the desert in the future. Of course, there may not be any.

qin lin could only say this when he saw how excited minister lu was.

His luck had been too good these days.

It was a matter of probability. The survival rate of those seeds should not be so high. Who knew that the dog tooth grass and the patriarch grass seeds would succeed one after another?

This was very shocking.

It must be known that researchers around the world had not achieved much in this area of research.

After all, the survival of plants required too many factors and elements. This was something that the current stage of plant research could not achieve.

He was only able to grow these plants because of the game's mutation.

This was something that couldn't be imitated in reality, and it was also very shocking.

therefore, he could only say this. at least, this would not seem too shocking.

Minister Lu was still very shocked when he heard Qin Lin's words. "boss qin, are you serious? Is it possible that there will be plants that can survive in the desert in the future?"

qin lin nodded helplessly and answered with uncertainty, " "yes, there should be."

Minister Lu couldn't help but look forward to it. Then he asked Qin Lin, " "Boss Qin, may I know where your new plant is?"

Seeing how eager Minister Lu was, Qin Lin led him into the work room and saw the watermelon seedlings transplanted in the flower pot on the ground.

"Boss Qin, what kind of plants are these sprouts?" he asked curiously.

these are the seedlings of watermelons, " Qin Lin explained. if they can survive in a sand farm that simulates a desert environment, we can grow watermelons in the desert in the future.

"Watermelon? Is it food again?" Minister Lu was stunned.

He knew that boss Qin had a special preference for food, such as the high-quality vegetables in Linlin's laboratory, Xiangshui tribute rice, Linlin rice, and sea cucumber Yingluo.

It seemed that boss Qin really liked to study food.

In fact, for the sake of food, boss Qin had even wasted time learning cooking. To him, this was simply a waste of boss Qin's precious talent and time.

Wouldn't it be better to use this time on research?

More importantly, boss Qin seemed to have learned cooking and earned the title of the world's best Chef.

He didn't know how to put it.

now, he had asked the other party to research on plants that could control the desert, and they had produced three results: wasabi, dogtooth grass, and watermelon.

Among them, wasabi and watermelon were related to food.

Minister Lu sighed and looked at the watermelon sprout in the pot again. He ordered Yu Shui, " manager Yu, let's transplant these watermelon sprouts into the two sand farms first!

Yu Shui knew that his boss had called him over for a good reason, which was to transplant the watermelon sprouts. He nodded and said, " "Alright, Minister Lu!"

Minister Lu followed Yu Shui back to the sand farm for two days.

Yu Shui asked someone to plant the watermelon sprouts in two sand farms.

in the following time, minister lu kept observing these sprouts.

A day passed.

Two days had passed.

Three days had passed.

in the blink of an eye, a week had passed.

In the past week, the seeds of wasabi, Dogtooth grass, and watermelon had all survived in the desert sand farm.

In the sand farm of you city, the wasabi sprouts had completely dried up.

the leaves of the dog tooth grass had also turned yellow.

This meant that the plants cultivated by boss Qin could only survive in the desert, and they could not survive in other places.

To Minister Lu, this was not important.

this was because he wanted plants that could survive in the desert. only in this way could these plants be used to control the desert.

After getting the confirmation, Minister Lu also left you city and returned to the capital.

After he got some rest in Beijing, he immediately returned to work. However, the moment he reached his office, his Secretary reported, " " minister lu, the people from the environmental management department have come to ask about our research plan again. it's about desert management research. they seem to have found out that we haven't started the relevant plans yet, and they are a little anxious. "

minister lu laughed when he heard this and asked, "what's the hurry?" I didn't make any arrangements at the Hua hospital, but that doesn't mean I didn't do anything. I'll contact them."

"Alright," he said. The Secretary nodded and left.

After Minister Lu sat down, he turned on his computer and took out a USB.

The USB drive contained the images taken by the high-definition camera equipment, which clearly recorded the specific conditions of the wasabi, Dogtooth grass, and watermelon seeds in the desert.

Send these videos to the people in the environmental management Department, and they would know what was going on.

Moreover, he had already described the situation of the two sand farms in the simulated desert environment in the videos.

After the videos were taken out, Minister Lu sent them to a leader of the environmental management Department.

The environmental management Department was in charge of the country's environmental management.

Due to the development of modern society, the environmental problems were becoming more and more serious. As a result, the functions of their Department were also becoming more and more powerful.

The problem of desert management was still their biggest problem.

The key was that they did not have any good solutions to deal with the desert problem.

as the desertification became more and more serious, their burden became heavier and heavier, especially for the world desert management exchange that was going to be held soon.

If they didn't have any way to control the desert, even if it was a plan, it would be embarrassing.

The key was that if other countries had good governance technology, even if it was more advanced than the current technology in the world, it would be troublesome.

they would have no choice but to import the technology from those countries. if it was from countries like america, it would be even more troublesome to import it. they might be made difficult.

However, to control the desert, they had no choice but to bring in more.

therefore, the leaders of the environmental management department had a headache. they could only count on the hua hospital, so they went to the hua hospital for help.

However, they had also found out that it had been a month since they went to ask for help, and the Chinese Academy had not made any plans in this area, which made them a little anxious.

Therefore, a few leaders gathered together for a meeting. They were also puzzled by the Hua hospital's approach.

the Chinese Academy doesn't seem to be paying much attention to our request for help. Other than the daily study of plants in the desert environment, there are no new plans.

that's right. The exchange is getting closer and closer. Minister Gu, should we urge them again? "

"If the Hua hospital doesn't take it seriously, Minister Gu, you can write an application to the higher-ups, and maybe the Hua hospital will take it seriously."

"....."

Minister Gu was a middle-aged man with a square face and glasses.

he could only sigh when he heard his men's complaints.

There was no problem with writing the application. If the higher-ups came forward, the People's Hospital would definitely pay attention to it. However, this was not good either, because it would cause an unpleasant conflict with the People's Hospital.

The key was that Minister Lu might already have his own plan, but they did not know about it. He still wanted to have a chat with Minister Lu.

Minister Gu and the others were in a meeting when his Secretary walked in and whispered in his ear, "Minister Lu from the Hua hospital sent some videos over and asked you to take a look."

Minister Gu was taken aback. He immediately ordered his Secretary, "Play the video."

The Secretary nodded and immediately played the video on the multimedia screen in the conference room.

When Minister Gu saw the videos, he didn't understand at first. However, as the video was introduced and the scene in the video was seen, the expression on his face became more and more surprised.

If the two pieces of sand were simulated desert environments, did that mean that the Chinese Academy of Sciences were already conducting experiments and had experimental subjects that could be planted in the desert?

after all, there was already a plant in the sand farm.

The other people in the meeting room also saw it and said, "

"Minister Gu, did the Chinese Academy send this video over to say that they have some results?"

"yeah, but is the efficiency of the chinese academy of medicine so high? There's already a finished product that can be planted in the desert?"

"Did the Chinese Academy of Medicine already have some results before this, so they didn't have any plans?

"Perhaps we've misunderstood the Hua * Yuan."

When Minister Gu heard this, he nodded. He also felt that this was the most likely possibility.

However, as the video continued to play, when they saw the second and third plant being planted in the sand farm, they could not believe what they had just heard.

If the Chinese Academy had one of their research products, they would believe it, but two and three of them in a row, that seemed a little unbelievable.

After all, not many people in the world had succeeded in this area of research.

Even the most technologically advanced country couldn't produce three results in this area at once, right?

Now, the Chinese Academy actually had such an ability?

As the video played, because it was shot by high-definition technology, they could see the growth traces of the wasabi, dog tooth grass, and watermelon sprouts in the video. It was so clear.

moreover, as the video accelerated and the three plants grew in the sand farm simulated in the desert environment, minister gu and the others were no longer calm.

They had really survived.

In other words, these three plants could be used to control the desert.

Minister Gu stood up and hurriedly took out his phone to call Minister Lu. Perhaps he was too excited, but he actually dialed the wrong number.

He knew very well that as long as these three plants that could survive in the desert were promoted, they would definitely be able to solve the increasingly serious desert problem in the country.

If they could solve the desert problem, how much usable land could they create for the country?

If such a big project succeeded, their names would be recorded in the books.

The most important point was that, according to the information they had, no country in the world had achieved such results.

Even in the most advanced country in this area, everyone knew the effect of the desert plants they had developed.
