

The Game 1511

[Chapter 1511 Linlin Laboratory's World-Famous Reputation](#)

At that time, the case of the acupuncture to take revenge on society was so sensational. Many people were worried and angry for the children who were victims.

Compared to the adults with HIV, these children were definitely the most innocent.

Therefore, who would dare to object to the first batch of students being chosen by the Chinese Academy?

You city.

Meanwhile, sun Xian and Chen Li had already led the medical system of the entire County to get busy.

The two of them didn't expect such a good thing to happen in you city.

If the HIV test was successful, the disease would really be solved in you city, and that would add another legend to you city.

Naturally, HIV was also dangerous and could easily cause panic. There were too many tourists in you city, so he definitely couldn't place it in the Urban area.

In the end, they chose the newly built Women and Children's Hospital as the location.

all kinds of medical equipment were complete here, but there were no doctors or equipment. now that they had disinfected and defended themselves, they were the best experimental hospital.

soon, the research team gathered by the chinese hospital and the child victim of the case were admitted to the women and children's hospital.

"This is you city? The air is so good." When Liu Xiangyuan arrived at the Women and Children's Hospital, her face was full of surprise.

A young intern researcher next to him smiled and said, " "Liu Xiangyuan, is this your first time in you city?"

Liu Xiangyuan nodded.

It was her first time here.

She was able to become the most outstanding intern researcher in the Research Institute because she had sacrificed her time for fun and leisure.

She had only heard that the air in you city was good, but she didn't expect it to be this good.

After Minister Lu and his men settled in the Hospital for Women and children, he handed over the work to the HIV experts in the Chinese hospital and drove to Linlin Manor.

When he saw Qin Lin, he couldn't help but praise him. boss Qin, I paid attention to the fish you cultivated at first because I've personally experienced the effects of the kiss fish. But I really didn't expect that the fish you cultivated are more powerful than the other.

the effect of the whitening fish is already amazing. I didn't expect that there would be an even more amazing fish with the immune system. Now, it can even cure HIV.

Qin Lin smiled. it was an unexpected surprise. I was just lucky. If someone didn't ask me about it on the internet, I wouldn't have thought about it.

Minister Lu immediately waved his hand. boss Qin, scientific research sometimes has an element of luck. Therefore, the result is the most important.

Qin Lin didn't want to talk about this topic, so he changed the subject. Minister Lu, we will share the information of the fish with you. The fish is ready and can be transported away at any time.

there's no rush. There'll be someone coming tomorrow. Minister Lu smiled. I'll need to stay in you city for a while. I'll have to trouble you to arrange a room for me in the manor.

"this is a small matter." Qin Lin smiled and called Gao Yaoyao to make the arrangements.

The next day.

soon, a research team from the chinese academy of sciences arrived at the manor and took away the fish of the immune system that qin lin had prepared.

Minister Lu didn't go. After all, he wasn't a professional. He was only responsible for coordinating the cooperation between Linlin laboratory and the Chinese Academy of Medicine.

On this point, he only needed to make tea with boss Qin and everything would be fine.

After all, boss Qin had no opinion on this kind of cooperation, and Linlin laboratory would not have any opinion.

"Boss Qin, your tea leaves are really good!" Minister Lu couldn't help but shout at Qin Lin's Tieganyin again.

He had tried all kinds of tea leaves. The tea leaves used by the higher-ups were nothing compared to boss Qin's tea.

Everyone would be envious of boss Qin for his enjoyment.

The two of them were making tea when Zhao mochen came in with a stack of documents and handed them to Qin Lin. hubby, take a look at the information of these kindergarten teachers. They've all submitted their resumes recently.

Then, she noticed Minister Lu and quickly greeted him, " "Minister Lu! You're here too."

Minister Lu responded, but he looked at the information brought by Zhao moyin curiously.

a moment later, he roughly understood what was going on.

This was Zhao mochen's way of finding a teacher for little Qin Feng.

He knew little Qin Feng.

Suddenly knowing that Zhao mochen was going to find a teacher for little Qin Feng, he had an idea.

This was because Ma Hong had reported to him that Qin Feng was far beyond his peers. He was even smarter than his peers, and seemed to have inherited boss Qin's monstrous talent.

In the field of scientific research, there were many sons who inherited their father's talent. There were even some sons who were more talented than their father.

The genes of such a family really made people envious.

He had not paid much attention to little Qin Feng's news before. After all, little Qin Feng was still young.

Now that he heard that Zhao Moyu was already looking for a teacher for little Qin Feng, it meant that the couple should also know about little Qin Feng's talent.

In fact, he had always been brooding over boss Qin's waste of talent, and he often sighed because he couldn't let boss Qin focus on his research.

If little Qin Feng could inherit boss Qin's talent, or even be more talented than boss Qin, then if he could guide his interest in scientific research, how much influence would it have on their research in the future?

Perhaps after boss Qin's era, there would be another monstrous genius who could take over the baton.

One could imagine how big of an impact boss Qin's appearance in the country had.

What would happen if there were two Qin's?

At the thought of this, Minister Lu hurriedly said, "Boss Qin, speaking of kindergarten teachers, I can introduce some to you. Our Chinese Academy of Medicine has experts in this field. They are much better than the outside kindergarten professors."

When Zhao Moyu heard this, his face lit up and he said, "Really? Wouldn't it be a waste of talent to let an expert come?"

It's definitely a waste of talent for others," chief Lu said with a deeper meaning. But for little Qin Feng, who knows? "

Naturally, Zhao Moyu would not reject such a good thing. He immediately expressed his gratitude, "Minister Lu, thank you so much."

At the same time.

Qin Lin's batch of fish with the immune system was also brought to the women's and children Hospital.

It was Liu Xiangyuan's first time seeing a fish with an immune system. It had purple skin and a sharp mouth, which was very different from ordinary people.

After the fish of the immune system arrived, an expert in charge immediately came out and ordered, "Test the virus load in every milliliter of the patient's blood as soon as possible, and then start the first step of treatment as soon as possible. Only then will we have specific comparative data."

They were very anxious about the HIV test.

after all, this was a world-class problem that no one in the world could solve. now, it could be solved by them.

Even if the fish that cured HIV was not their research, they were still participants and executors.

Intern researchers like Liu Xiangyuan naturally became coolies, responsible for testing the virus load in the blood.

They immediately went to test it.

The HIV viral load referred to the amount of HIV in each milliliter of blood, and the unit of measurement was copy/milliliter.

The higher the HIV load, the more serious the condition was.

This was also a way to compare the good and bad treatment results.

Liu Xiangyuan and the others tested the children's blood one by one. Almost every child's viral load was more than 100000 copies.

In other words, the children's conditions were all at a high risk.

After the test, the children were arranged to enjoy the fish therapy.

For this project, the experts naturally brought the researchers to observe the entire process and also studied the fish with the immune system.

In the next few days, you city became lively. Reporters from China began to head to you city, wanting to get first-hand news.

Soon, reporters from all over the world applied to come, also wanting to know the status of the HIV test.

For this reason, Minister Lu also asked someone to directly open a public announcement platform to announce the progress and results of the experiment to these reporters.

A few days later, when Minister Lu got someone to announce the first comparative data of the blood virus load, everyone was shocked.

[Chapter 1512 691-Admitting Defeat And Begging? Are You Kidding?](#)

Whether it was a domestic reporter or a foreign reporter, the purpose of coming here was to know the status of the HIV and immune system fish test!

Therefore, when Minister Lu released the first comparative data, all the reporters swarmed up and took photos of the comparative data.

It was a comparison of the blood virus load data, and the data of each patient was clearly compared.

The reporters who came here naturally already knew about HIV, so they naturally knew what the blood viral load was.

After the shooting, the reporters were amazed when they saw the data comparison.

this was because when the two sets of data were compared, it really did drop.

"The data has dropped, which means it's really effective?"

"I knew academician Qin wouldn't let me down."

"This fish really has such an effect. It's amazing."

“œ.....”

Naturally, these were the exclamations of the local reporters. Compared to the local reporters, the foreign reporters had complicated expressions.

After all, this was the result of another country.

In the office of Kongtong village, Qin Lin had just finished his daily tasks for the day when Minister Lu rushed in and said excitedly, "Boss Qin, good news. Take a look at this data. Your fish really is effective against HIV."

"Minister Lu, you're such a big leader, you have to be calm." Qin Lin took the data and looked at it.

He had previously investigated HIV, so he knew what blood viral load meant and could understand the data at a glance.

The blood viral load had decreased, which meant that the children's conditions had really improved.

He heaved a sigh of relief when he was verified.

This was a good thing for society, for the country, and for the children.

"Boss Qin, I can't help but be excited. This is HIV!" Minister Lu was still excited.

While Minister Lu happily reported the good news to Qin Lin, the news that the fish with the immune system was effective against HIV quickly spread in the West.

It was a f * cking beautiful country. Their news media was known to be the best in the world's entertainment industry.

As soon as the news spread, the whole country was in an uproar. After all, they were deeply affected by HIV.

As the world's highest HIV outbreak country, it also meant that they were the most threatened.

However, knowing that the fish with the immune system was developed by Linlin's laboratory, they had a bad feeling.

This was because many of the products produced by Linlin's laboratory were not for their country's use.

This was the reason why many HIV patients were anxious.

Of course, the people who were more anxious were not the ordinary people, but the wealthy.

In a famous laboratory in America, ADOS came to a multimedia room once again. A few people in charge of the experiment came to report to him!

Mr. Adossi, we've come up with a new idea recently," one of the people in charge said immediately.

Adoxi interrupted the person in charge, " that's enough. There's no progress, so you don't have to report it. I don't have much hope for you. Go back and continue your research!

The researchers looked at each other, but they all heaved a sigh of relief.

indeed, they had made no progress. seeing that adoxi didn't say anything more, they all turned to leave. if they stayed and got scolded again, wouldn't they be fools?

Seeing this, adoxi didn't say anything. He lazily lay on the chair and took out his phone to check the message.

when he saw a message, he immediately replied, " Mr. Bob, I can study your project, but I won't. You know what I mean.

Instead of continuing to work hard on a road with no results in sight, it was better to take advantage of his current position and get more benefits for himself.

It was good to earn more.

After sending the message, he saw his cell phone ring. It was a call from the big boss behind him.

Adoxi was a little speechless. Nothing good ever came from this guy's call.

he could only helplessly answer the call and say, " Mr. Terang, what can I do for you? "

"Adossi, did you see the news?" he heard trang's voice.

"I see it." Said adoxi, speechless.

He naturally knew that the other party was talking about the fish with the immune system and HIV. The news had spread all over the place.

As expected, this fellow had come for this matter.

But didn't the other party have any points? He couldn't even get those things out before, so how was it possible to get this thing out?

This was HIV they were talking about. The difficulty of this thing would definitely not be lower than the previous three things.

Thinking of this, adoxi didn't give the other party a chance to mention it and said, " " mr. trump, this kind of thing is obviously impossible to crack with our technology in this area. you know, our best professor in this area has said that there is no way to get HIV for 30 years. "

He immediately lay flat.

Don't look for him for this kind of thing. After all, even the best professor in this area couldn't do anything, how could he?

" tsk, tsk. " tim fell silent for a moment, as if he could feel ados 'determination to lie down. he felt a little helpless.

In the end, he could only say, " adossi, I actually know that you can't do anything about it. After all, you don't have any solutions for the first few things. I just want to ask for your help and ask if you have any solutions. I want the product that can solve HIV.

you might not know this, but there are already some bad flames outside. If I can get my hands on this, I will have more power than I have now.

[Chapter 1513 Admitting Defeat And Begging? Are You Kidding?](#)

Upon hearing this, Adolphus suggested, " Mr. Trang, you only have two options in front of you now. Either you befriend the eastern country, give in, and ask them for medical help, or you do everything you can to get the gun and steal it. As long as you get it, they can't do anything to you even in America.

With that, ADOS hung up the phone.

What a joke, his two suggestions were also very uncertain.

Admit defeat? Go beg? How could it be possible for those big shots?

!!

Steal? To Rob? It seemed that even that small county town couldn't withstand it. Those thieves were still in the prison of that small county town.

On the other side, after hearing ADOS 'suggestion, Tim felt that it made a lot of sense. He called his assistant over and immediately ordered, " "Help me find the best spies. I want them to go to that small county in the eastern country to get that fish."

When the assistant heard this, he fell silent and suddenly said, " "Sir, it's a small county in the country of the bridal chamber, a place called you city, right? previously, adoxi had sent many excellent spies here, but none of them had returned, and we couldn't contact them."

"???"Tim was stunned. adoxi tried this, but it didn't work? " Yet, the other party still made such a suggestion?

"Then find the world's most powerful thieves, like the world's number one thief, Mike, and the others. Use our immunity and let them do it," he ordered.

"Eh!" The assistant continued, " Sir, the world's number one thief, Mike, is also in that small county Prison. The world's number one bounty hunter, number one Bandit, Youyou, and the others have all been captured in that small county. The news about them was even broadcasted previously. They were put on trial.

tsk, tsk. when Tim heard this, he felt numb. What the hell? adoxi didn't tell him about this, did he? What did he mean by suggesting him to use this method?

The assistant looked at him like he was the tale. Sometimes, he felt that his BOSS was very unreliable, so he had never paid attention to this matter.

However, it just so happened that such an unreliable person was able to hold the current power.

In the end, Trump was completely helpless. He couldn't do this or that. Was he supposed to gather his own power, admit defeat, and beg the eastern country?

How was this possible?

They were the Overlord country, how could they beg the other party?

Regardless of the turmoil in the world, Minister Lu received a middle-aged woman who looked like she was bathing in the spring breeze outside the Linlin Manor.

"Professor Zhang, I've had to trouble you to make a trip down personally." Minister Lu apologized as soon as he received the other party, because he knew that the other party was still editing a book.

The other party had put down his work and come over because of his words.

This professor Zhang was the one he was going to introduce to Zhao moyin. She specialized in early childhood education. In the country, no one was better than her in early childhood education.

Professor Zhang ran his fingers through his long hair and said with a smile, "Minister Lu, if you have any instructions, I will definitely come over immediately. However, I'm curious whose child it is that made you so concerned.

Minister Lu didn't hide anything and said, "Professor Zhang, you should know academician Qin junior!"

"En!" Professor Zhang nodded. Before I came here, I was reading the news about fish and HIV in the immune system. This is an amazing young man. In another ten years, I'm afraid that all kinds of books will have to print information and content about him.

Minister Lu nodded and said, "This time, I'm asking you to help academician Qin's child. This child's talent might be better than academician Qin's. So, I'm asking you to guide him to be interested in scientific research and use his talent in the right place.

"What?" Professor Zhang was shocked.

Everyone knew of academician Qin's talent. After all, he became a scholar halfway through his career and showed his terrifying scientific research ability.

Many people even said that if academician Qin didn't become a scholar halfway, but was trained from a young age, or if he had professional and systematic training a few years earlier, he might have long been an Einstein-level figure.

What was Minister Lu saying now?

The child of this academician Qin junior might be more talented than academician Qin junior?

Professor Zhang's eyes suddenly lit up.

As an educator, what was the most attractive thing to do? That was to teach a student whose name would go down in history.

Even if he couldn't leave his name in history, it would be good to cause a sensation in an era.

At that time, whoever talked about students would also talk about teachers.

If academician Qin's son was really so talented, he would definitely be printed in the book, right?

At that time, he would even learn from whom at which age he was, and who was the one who enlightened him.

That was her.

If that was the case, he would also be leaving his name in history.

This was a huge opportunity for him.

Minister Lu chatted with professor Zhang for a while before bringing her into the manor. It didn't take long for her to meet Zhao Moshu and Lin Fen.

He had already told Zhao Moyu that professor Zhang was coming, so Zhao Moyu naturally had to wait. It was a courtesy.

However, at that moment, little Qin Feng rode out on the crocodile Xiao Yang and walked right between the two of them.

ah, a crocodile, a big crocodile, that child. Professor Zhang was shocked. He subconsciously wanted to save little Qin Feng.

In her opinion, such a huge crocodile was even more dangerous than a giant dog. Now, a little kid was sitting on the back of the crocodile, which was definitely life-threatening.

Minister Lu quickly stopped professor Zhang and said, " professor Zhang, it's fine. He's little Qin Feng, and that crocodile is a new breed of crocodile that academician Qin cultivated to play with little Qin Feng. It's not aggressive, but closer to humans. Also, it only eats grass.

"???"Professor Zhang was taken aback. It could be like this?

Then, she could only sigh.

Even this was possible!

academician qin was really as amazing as the rumors said.

Then, Minister Lu brought professor Zhang to meet Zhao mochen and introduced him, " miss moxiao, this is professor Zhang. Professor Zhang, this is President Zhao, who is also the female owner of this Manor.

"Wait?" Professor Zhang was puzzled,"the female owner of the manor?" Then who is academician Qin?"

Minister Lu patted his head and said with a smile, " "I forgot to tell you. Academician Qin junior is the boss of Linlin company. Don't tell anyone about this. Academician Qin junior doesn't want anyone to know."

Professor Zhang opened his mouth when he heard this.

This was too shocking. The products that academician Qin little developed were already shocking enough. Who would have thought that the other party was the boss of Linlin company and had such a terrifying wealth?

But Minister Lu wasn't joking.

...

It was good to make a talented child interested in scientific research, but with a father like academician Qin, with so much wealth and property, even if little Qin Feng grew up lying down all day, he would live a better life than anyone else.

This kind of rich second generation would definitely inherit the family business, and you still want him to suffer in scientific research?

Unless academician Qin had two more children.

[Chapter 1514 Leeks In The Desert? Using Public Opinion To Target Qin Lin](#)

However, professor Zhang had been tempted by Minister Lu and was also very curious about little Qin Feng. So, after arranging a place to stay and having a meal, she also asked Zhao moyin to find little Qin Feng, intending to see the specific situation.

Qin Feng was sitting on Yang's back. He looked at professor Zhang in confusion.

Professor Zhang took out a type of wisdom cube. It was similar to a Rubik's Cube, but its structure was simpler and smaller.

This was a kind of ruling game that they had developed, which was suitable for Qin Feng's age.

Generally speaking, as long as there was an explanation, a child would be very clever to know how to rotate the square. She had never seen anyone who could completely restore the square.

He didn't have any hope for a kid at this age!

Professor Zhang took out a square and handed one to little Qin Feng. Then, he took one for himself and said to little Qin Feng, "Little Qin Feng, take a look at this thing. It can move, move, move, move."

Before she could finish her sentence, she was shocked to see that little Qin Feng had already turned the cube in his hand. Then, the cube was restored by him one by one until it was completely restored.

little qin feng, however, was uninterested and threw the cube on the ground.

"this wanwan." professor zhang.

professor Zhang, I've asked around about this cube, " Zhao Moyu said hurriedly. I've already given it to little Qin Feng to play with. It seems easy, but he's not interested in it.

"It's very easy?" Professor Zhang was stunned. This might be easy for an adult, but you said it was easy for a child like this?

Then, her eyes lit up.

A child of his age could spin the cube, but it was impossible for a child to completely restore it.

This was because it was impossible for children of this age to establish such a concept.

now, little qin feng had done it.

Furthermore, it was completed so quickly. It was simply unbelievable.

over the next few days, professor zhang gave little qin feng all kinds of tests, but the more he tested, the more surprised he became.

Little Qin Feng's intelligence was really extraordinary. She had never seen such a smart and spiritual child.

"2+9"

"11"

"4+8"

"12"

"..."

Professor Zhang raised the question and looked at little Qin Feng's baby-like answer. His heart was in turmoil.

Even a second-year student might not be able to answer these questions as fluently as little Qin Feng.

Thinking about little Qin Feng's age, it was too shocking.

he looked at little qin feng, who was climbing onto the back of the crocodile. perhaps this little guy really had a monstrous talent.

Professor Zhang was looking forward to little Qin Feng's enlightenment more and more.

In the past few days, the data comparison between the immune system fish and HIV tests was also released for the second time.

Compared to the last time, the children's data had dropped a lot.

If this trend continued, treating HIV would really not be a problem.

Moreover, compared to the last time, the drop this time was much greater, perhaps because the total amount of the virus had decreased.

Similarly, the second data comparison also spread to foreign countries at the fastest speed, especially the Western media, who reported it without restraint.

At the same time, the media also ridiculed their own officials. [why can't we cure HIV in an Eastern country?]

This caused a huge wave.

It was true. They did not know when it started, but it seemed that their technology was lagging behind that of the eastern countries in many aspects.

After all, there were a few projects that the eastern country had launched, and their country had no way of providing them.

In the laboratory in America.

When adoxi saw the latest news, he couldn't help but sneer, "it'd be a wonder if it could be solved. After all, not every country has a Linlin laboratory. That Linlin laboratory seems to have mastered technology that doesn't belong to this era.

As he was sighing, he saw Trang rush in.

this big shot must have come over for HIV again.

However, the other party did not understand that he had already said that there was no way to cure HIV.

"sir, why are you here?" Even though he was going to lie down, he still greeted him respectfully.

There was a way to lie down, but it couldn't be too superficial. The necessary formalities still had to be done.

tell me about it, adossi, " he asked as soon as he entered. what other ways are there to get that fish and solve the HIV problem? as long as you get this fish, it doesn't matter if you can't get anything else.

Mr. Terang, do you think we can't get the other things? " said Adolf helplessly. what can we do about this HIV treatment fish? "

"Damn it!" When he heard this, he couldn't help but feel annoyed.

Mr. Terang, it's not like there's no other way, " said Adolf. I have two suggestions. One is to use the media to create public opinion and force Qin to open up his treatment for us. He can't just take the public opinion on his own, can he? " Unless he's not afraid of being scolded."

"Also, I remember that the world Environmental governance exchange is about to begin. Didn't the Fars laboratory develop a desert plant that can control the environment?"

desert plants are the most difficult to cultivate. No country in the world has had any results. It'll be easy if you can persuade Fars laboratory to produce the thing.

at the global environmental exchange meet, we can shock everyone with this thing. Then, we can take the opportunity to propose to the other party that we exchange this plant for fish.

at that time, it might be possible to succeed. After all, the proportion of desertification in that Eastern country is very high, and the area of desertification is the largest among all countries.

[Chapter 1515 Leeks In The Desert? Using Public Opinion Against Qin Lin \(2\)](#)

There was a hint of ridicule in adoxi's words. He was somewhat disdainful of the person in front of him. How could such a person step over his head?

After getting adossi's hint, Tim was excited. ADOS, you're not bad. If these two methods work, I won't forget you.

After saying that, he left in a hurry.

Seeing this, adoxi sighed.

These two methods were feasible to a large extent, as long as the other party was afraid of being scolded and had not researched the plants that could survive in the desert.

I don't think so?

Linlin's laboratory couldn't have suddenly developed it, right?

At the thought of this, Adolphus swallowed his saliva and thought to himself, "It shouldn't be possible, right?"

He felt like he was traumatized. If such a f * cking thing really happened, he would run naked through the streets.

While adoxi was lost in his thoughts, on the other side, in the inner area of the Linlin Manor, Qin Lin had also gotten up early and was doing morning exercise with Zhao moyin.

Qin Lin and Zhao Moyu had just finished washing up when they looked at the light screen in their minds in surprise. They looked at the desert transformation in surprise, and there was a sprout growing on it.

Therefore, just as he had thought, although the desert mutation was a probability mutation, as long as he was given time, he could really make many plants survive in the desert.

Think about it, the ratio of the game to reality, and how many years he could live? How much time would that be in the game?

He could try one or two seeds a day. No matter how low the probability was, it would depend on the number of times he tried.

Qin Lin controlled his game character to check it out. Last night, he had clicked on the plant option and didn't pay attention to what was being planted.

When he controlled his game character to arrive at the desert transformation and saw the sprout, he was surprised.

[mutated leek seedling: special!]

[this is a variant sunflower leek seedling. It seems to have a different taste. The growth of its specific attributes can be known. Now that it's known, it seems to be a very good thing to roast leeks in the desert.]

" ? ? ? "Qin Lin didn't expect that he would plant leeks. Moreover, these didn't seem to be ordinary leeks. They were sunflower leeks grown in Level 4 plots, which were very delicious.

This was planted after the land had been upgraded, so the effect of the ** was more effective than ordinary ones.

Because he didn't need this thing to supplement himself and there were already ordinary leeks in the villa, he had never taken them out to plant.

He didn't expect that he would be able to plant the leek seed after casually planting it last night. The key was that the leek seed had mutated and could survive in the desert.

Think about it, what would it be like if there were clusters of leeks growing in the desert?

It was also not bad to directly start a fire in the desert, get on the barbecue grill, cut leeks along the way, and roast leeks to eat.

Qin Lin wanted to laugh at the thought of it. After breakfast, he entered the internal office and entered the game with a thought.

He went straight to the ranch house and took out the flower pot he had prepared earlier. Then, he transplanted the leek sprouts into the flower pot and brought them out of the game.

He called Yu Shui over and planted the leeks in the simulated desert.

He also got a piece of good news from Yu Shui, which was that the dog tooth grass was growing very well.

Dog tooth grass grew quickly to begin with, and now that it could survive in the desert, it seemed to grow even faster. This was definitely good news for the desert management attribute.

Qin Lin arrived at the manor's Hall and found that Lin Fen and Zhao Moyu were both there. Professor Zhang was also teaching little Qin Feng some knowledge.

Little Qin Feng seemed to be throwing a tantrum and said when he saw him, "Daddy, hug me. I don't want to learn, I don't want to learn!"

The little guy seemed to be resisting learning.

Qin Lin laughed when he saw this.

When he was young, he was also very resistant to studying. It had been like this since kindergarten. When he went home in primary school, he had homework, but most of the time, he would forget it because he was playing. The next day, he would go to school to catch up with it, or he would just copy his classmates' homework.

however, he had a good memory, a quick mind, and good grades. qin ren was different. he played with him and didn't do homework with him. after every exam, he had to spank uncle water root.

Qin Lin wanted to pick up the little guy, but Zhao moyin glared at him. He could only look up and pretend not to see the little guy's innocent eyes.

For the sake of her own happiness, what was wrong with letting her son make a small sacrifice? Besides, it was for his own good to let him learn earlier than other children so that he could become successful in the future.

with the influence of the fetus, this little guy would become a very powerful and awesome person in the future. he wouldn't have to rely on external hacks like him, and he wouldn't have to take the blame like old brother li.

Time passed.

The hot spring project in Linlin Scenic Area became even more popular because of the immune system fish test.

Originally, the most popular item was the whitening fish. Countless female tourists had come for this fish.

But now, there were even more female tourists coming for the fish of the immune system. Every spot of the fish hot spring was wearing a mask, as if they were guilty.

He just didn't know what they were thinking. It was just a hot spring, why did they need to wear masks?

During these days, the fish and HIV tests for the immune system progressed more smoothly. As the total amount of HIV in the children's bodies decreased, the results also became better.

Finally, after a month.

At you City Women's and Children's Hospital, Liu Xiangyuan cheered. "It's all good. The blood viral load is all good. The test paper is 0.45, it's already negative."

She couldn't hide the joy on her face, because the test subject was her sister.

Everything returned to normal.

Her sister would have nothing to do in the future. She could live like a normal child and go to the school that she missed so much.

Beside him, the researchers' joyful voices also sounded.

"That's great, my little friend is back to normal."

these numbers are great. I feel like this child is healthier than me.

"This is normal!"

"....."

For a moment, the room was filled with joyful voices. The joy of each researcher came from the bottom of their hearts.

They had gathered here to find out if the fish of the immune system had any effect on HIV. Not only was it effective, but HIV had also been completely cured.

In other words, HIV would no longer be a disease that made people despair. It had been conquered.

"Check if there's anything wrong with the fish." One of the experts in charge instructed.

Immediately, some researchers began to study the fish.

After the fish absorbed the HIV virus, it was important to know if there was anything wrong with them. After all, the success of the experiment did not mean that their mission was over.

after all, it would take a long time for this fish to be popularized. they had to study the mucus spat by the fish of the immune system, and then use this mucus to make drugs to treat HIV.

Not long after.

The researchers came to a conclusion one after another:

the fish in the first pond are all normal. We've tested five of them, and there are no problems.

the testing of the fish in the second pond is also normal. There are no problems.

"There's no problem with the fish in the third pond either."

"....."

Obviously, everything was normal. In order to ensure that there were no problems, the test was repeated a few times. Finally, the person in charge announced that the HIV experimental treatment was completed.

This news naturally spread at the fastest speed and caused a stir in everyone.

for this reason, minister lu was prepared to hold a grand press conference. this matter must be made known to the public. this was a great thing.

After all, the reporters from all over the country had gathered in you city to wait for the results, so there was no need to waste time to organize and inform these reporters.

Just as Minister Lu announced that he was going to hold a press conference, a few foreign reporters had already gathered in the Zhong min hotel in you city.

One of the White men said to the others solemnly, " everyone, this time our opportunity has come. That gentleman has agreed. As long as we find an opportunity to make things difficult for Qin Chu at the press conference, and even create public opinion to force him to open up the immune system fish for HIV treatment, that gentleman will invest in us and let us have our own media company, so we don't have to work for others anymore.

These words made the other people's faces reveal a happy expression, each and every one of them eager to try.

"That's great. It's definitely a great thing to be able to get together with that gentleman."

that's right. When that Qin appears, we'll launch an attack at the first opportunity!

it's just creating public opinion. This is what we're good at. We'll definitely make the other party speechless.

"....."

[Chapter 1516 A Tearful Scene? 1](#)

The treatment of HIV was definitely a very important event. Therefore, Minister Lu's press conference had to be Grand.

The lobby of the Zhong min hotel was directly booked, the kind that the hotel couldn't refuse.

Of course, the hotel wasn't stupid and wouldn't reject it. This was a good thing for the hotel and could increase its reputation.

after all, there were so many foreign and domestic reporters at the press conference. when the news was broadcast, the zhong min hotel would probably be mentioned.

Then the hotel would be famous in the country and abroad.

In addition, Minister Lu also divided the area into the domestic reporters 'area and the foreign reporters' area, so that both domestic and foreign reporters could broadcast live at the same time.

The other arrangements were for the children who had been cured and their families.

Minister Lu also wanted to invite Qin Lin to attend, so he arrived at Linlin Manor early in the morning. Boss Qin, why don't you join this press conference? after all, you're the one who raised this fish with the immune system.

Qin Lin was helpless and firmly refused, " Minister Lu, you know I don't like to participate in such occasions.

Then, you pointed to professor Lin and said, " let professor Lin participate. After all, he was the one who tested the fish's immune system in the first place.

Professor Lin's face lit up when he heard this.

He knew that this was an opportunity to show his face, but he didn't expect that Chairman Qin would give this opportunity to him. As a researcher, no one could refuse this opportunity.

" chairman qin, i won't betray your trust! " Professor Lin promised.

woosh! Woosh! Minister Lu was expressionless when he heard the guarantee. He wanted boss Qin.

Seeing boss Qin's firm attitude, he had no other choice. He could only say that academician Qin was busy with research, so he let his experimental assistant, professor Lin, participate.

"Professor Lin, let's go!" Minister Lu invited him with a smile. Since it was the truth, he couldn't let professor Lin feel cold.

After all, the other party was boss Qin's man.

Professor Lin saw how polite Minister Lu was, so he immediately said respectfully, " "Minister Lu, I'll follow your arrangements."

He knew that Minister Lu was being so respectful to him because of his boss.

Minister Lu took professor Lin to the Zhong min hotel. When they arrived at the hotel, the relevant staff had already arranged everything.

"Minister Lu, we can start now," he said when he saw Minister Lu.

let's begin, " Minister Lu said with a nod. professor Lin will replace boss Qin on the stage.

"Alright, Minister Lu!" The person-in-charge nodded after hearing Minister Lu's words and went to make arrangements.

The hall was already packed with people. Even though Ma Hong had already arranged for security, there were still many tourists gathered outside the cordon.

These tourists were naturally very curious about HIV. After all, who had not heard of HIV? now, they were witnessing the grand occasion of HIV being solved.

The press conference began soon after.

The person in charge was the first to appear.

He also acted as the host, and once he came out, he said to everyone, "Hello, everyone. I believe that everyone is gathered here to know about the trial treatment for HIV. I can clearly tell everyone here that HIV has indeed been resolved, so ..."

After all, this kind of opening speech was mostly nonsense. After that, it was just a few researchers participating in the experiment going on stage to talk nonsense.

After all, to hold a press conference like this, they had to drag out enough time, right? i can't just do it so hastily.

This made the reporters and tourists at home and abroad a little impatient.

After all, what they wanted to know was about HIV and academician Qin. If these unrelated people went up and talked about it, what was the difference between this and the hosts of some TV shows?

Finally, the person-in-charge went up the stage again and said, " I'm sure everyone is more curious about professor Qin Jr. And the fish with the immune system.

These words drew the attention of the local and foreign reporters to the stage.

Some of the foreign reporters had already started looking at each other. After all, they had come with a mission to stir up public opinion about professor Qin junior so that he would open up medical aid for them in the West.

In that case, even if the other party did not allow the West to use their previous products, they would have to open it up under public opinion.

after all, it was HIV, and it was a humanitarian act.

On the other side, in America.

Terang also went to Adolphus 'side again. The two of them were also watching the live broadcast. Moreover, because they had mobilized the satellite, the broadcast speed was almost synchronized.

After the translator translated it, he said to Adoxi smugly, " thanks to your suggestion, ADOS, I've already arranged for the reporters to be there. When Qin comes out, we can create trouble among the live broadcast of the reporters and create public opinion.

Adoxi didn't say anything. There was nothing wrong with his method, but it was Linlin's laboratory. He had a bad feeling.

He didn't know what was wrong with this feeling. Perhaps it was because he had been defeated by Linlin's laboratory several times, which had left a psychological shadow.

However, Tim was very much looking forward to it as he stared at the live broadcast, but the person in charge's words stunned him.

The person-in-charge said, then continued, originally, we invited academician Qin to come on stage to share his experience in breeding fish with the immune system and interact with the children. However, academician Qin is busy with his research and can't come, so we can only invite his experimental assistant, professor Lin, to come on stage and say a few words.

&Nbsp; Whoosh!

As soon as these words came out of his mouth, the whole place instantly became noisy, and there were even angry curses.

After all, they had done so much nonsense before. Everyone was patient just to wait for academician Qin.

Moreover, the person-in-charge's words at the beginning were clearly a joke. After hearing those words, everyone thought that academician Qin little would go on stage, but who knew that the topic would change and it would be academician Qin's assistant professor who would go on stage?

What was the difference between this and the movie where Teng only appeared in the form of a poster for three seconds?

They were all lies.

How could one be so shameless?

The foreign reporters who had already planned to do so had already served him with the quintessence of foreign countries.

Professor Lin went on stage. He was a little nervous about this situation. After all, he didn't really make much contribution to this research. Maybe it was just a little hard work.

He had thought that it would be a rare honor to be on stage, but now that he was asked to speak, he suddenly realized that he didn't know what to say.

He didn't know how to breed fish with the immune system at all. All he did was test the composition of the mucus of the fish.

Therefore, he said, " I was originally a very ordinary researcher. Academician Qin is a very great researcher. I'm very glad to be favored by academician Qin. I can participate in this research.

as everyone knows, academician Qin junior has developed many amazing products, and these products have all shocked the world.

Professor Lin began to speak non-stop, but everyone's expression became more and more shocked, because they realized that professor Lin and the others 'words were filled with too much flattery.

It had nothing to do with HIV research or the fish of the immune system. All that was left was praise for professor Qin. It was like an endless essay.

The key was that no one could find a reason to refute his words because academician Qin was really so amazing. He had really developed those magical products.

This was professor Lin's strategy. Under such circumstances, what better way to break the deadlock than to praise his boss?

Finally ...

professor Lin seemed to have noticed the strange expressions of the people around him, and they all began to look at him impatiently.

He could only change the topic and end his speech. "So, we still have to learn from academician Qin!"

The person-in-charge seized the opportunity and quickly went on stage. He was afraid that academician Lin would continue to speak, so he hurriedly said, " alright, thank you for saying so much, professor Lin. Everyone has benefited a lot from this. Next, let's invite the children and their parents on stage to tell us about their hard days of resisting the disease, as well as their vision and plans for the future!

Very quickly, the children and their parents were brought up one by one.

liu xiangyuan accompanied her younger brother, sister, and parents on stage.

these children's faces seemed to have lost the innocence of children, and their expressions were a little cold. if it were any child who had experienced such a thing, it was impossible for them to have a bright smile, right?

However, it could also be seen that these children's expressions were more or less relaxed now that the medicine had cured them. Otherwise, the HIV would have brought endless pain to these children.

As for the parents, they couldn't keep a straight face any longer. The joy, excitement, gratitude, and all sorts of other emotions were hard to describe.

The person-in-charge acted as the host. He was supposed to stir up the mood, but just as he was about to speak, he saw that the parents could no longer control themselves. They knelt down in front of professor Lin and even held the child.

One couldn't hold on, and then two, three staggered.

only when their children encountered such a disaster, as parents, would they know what despair, pain, and helplessness was.

They even felt that the entire world was dark. Now, professor Qin Jr. Was like a Savior, pushing away the darkness and letting the sun shine in again, illuminating The Dark World once more.

No one could understand this feeling of welcoming hope, but they knew that they had to be grateful to academician Qin for a lifetime.

"Thank you, academician Qin. Thank you so much!"

"Thank you, academician Qin, for saving my child!"

"Without academician Qin, my child would have been finished."

"....."

Words of gratitude came out one after another, but they seemed to be insincere. The parents still had tears on their faces and even pulled their children along.

For a time, the scene was somewhat moving.

Professor Lin's face was full of embarrassment. These parents were all calling him "academician Qin little" and "boss". This had nothing to do with him.

Most importantly, these people were all kneeling before him. This made him feel like he was being roasted over a fire. It was a little uncomfortable.

If he had known that these parent-teacher conferences were like this, he wouldn't have come. This kind of vanity really shouldn't have existed.

the local and foreign reporters had already started to take pictures like crazy.

This should be one of the most touching scenes of the year, right?

However, a few of the reporters received the same message. They looked at each other in unison and finally nodded together.

They had received instructions from that important figure.

America.

After sending the message, Tim's face darkened. The plan had changed, and Qin did not show up, which was out of his plan.

But since they couldn't go against that Qin guy, they could only go with Plan B, which was to attack Linlin Scenic Area.

Professor Lin was the representative of Linlin's laboratory, so he was the target.

No matter what, he had to achieve his goal.

[Chapter 1517 694-Dumbfounded! It's Impossible To Trade!](#)

the person-in-charge, who was acting as the host, walked up to the stage again and said to the reporters around him, "I'm sure all the reporters are waiting anxiously, right? It's time for the reporters to ask questions. Everyone can ask professor Lin some questions."

A reporter immediately rushed forward and pointed his microphone at professor Lin.

Even though he couldn't interview academician Qin, he could still interview professor Lin.

in the beginning, the interviews were normal, and most of the reporters asked about the fish with the immune system and HIV treatment.

But very quickly, the questions from the foreign reporters were obviously not right.

"professor lin, what do you think of the harm HIV does to the world? Especially the world's increasingly serious HIV disease." A foreign reporter asked.

Professor Lin frowned when he heard the question. "My view on HIV is very simple. This disease is one of the most serious and threatening diseases in the world. I still hope that it can be solved as soon as possible. Naturally, I also hope that HIV will no longer threaten humans."

Another reporter immediately asked, " "Professor Lin, will your Linlin laboratory ignore HIV symptoms from all over the world?"

Professor Lin didn't know how to answer.

Because the laboratory had to make the decision, he didn't get an explanation.

Seeing that he did not answer, another reporter asked,"Professor Lin, if you refuse to answer, does that mean Linlin's laboratory will refuse to treat HIV patients from abroad?"

I didn't say anything! professor Lin panicked. He didn't say that. He couldn't take the blame.

But another reporter immediately interrupted him, " professor Lin, there are human rights in this world "

Another reporter said,"Linlin laboratory, please show some pity to the HIV patients from all over the world. They are as pitiful as these children!" &Nbsp;

"....."

The topic became more and more wrong and sharp. Soon, it involved human rights and the world laws.

Smiles slowly appeared on the reporters 'faces as they spoke more frequently. They were using this method to force professor Lin to give the wrong answer.

As long as the other party gave the wrong answer, they could then Brew public opinion and achieve their desired goal.

The others also noticed that something was wrong. This was obviously the general, so professor Lin couldn't answer.

Human rights and the world laws were at stake. How was he supposed to answer?

Also, it was not up to him to decide whether or not to open treatment for HIV patients in foreign countries, so how could he dare to answer rashly?

If he answered wrongly, he would be caught and might bring trouble to his boss and the laboratory. backstage.

When Minister Lu saw this, he stood up, " "Damn it, these guys!"

Naturally, he could tell what these people were up to.

He knew that solving HIV was of great importance, but he didn't expect some people to take action so quickly.

but he couldn't do anything about the current situation. after all, the fish with the immune system belonged to linlin's laboratory. he couldn't make the decision.

america.

Terang and adoxi soon saw professor Lin's anxiety.

suddenly, trang said to adosi smugly, " that's not a bad idea, ADOS. Look at the professor. He doesn't know what he's doing wrong.

Seeing professor Lin's reaction, adossi felt that his plan would work, but he had a bad feeling.

He didn't know why it was like this.

it was as if the incident in linlin's laboratory had inexplicably caused him to become paranoid, leaving a psychological shadow in his heart.

At Linlin Manor, Qin Lin was also watching the press conference. He did not like to participate in such events, but it did not mean that he was not concerned about this matter.

He could naturally tell that the reporters were deliberately making things difficult for him.

Zhao mochen, who was at the side, could tell."Hubby, these foreigners are clearly doing this on purpose. Professor Lin is getting anxious because of them."

Qin Lin nodded. He could naturally tell.

He guessed that someone must be trying to get the fish with the immune system and use this method to create public opinion.

But did these people think he was a fool?

It would be easy to break out of this situation. He could kill them in one strike and make them dumbfounded.

Qin Lin thought about it and called professor Lin.

Professor Lin had already set his phone to vibrate. Under normal circumstances, he wouldn't choose to check it.

When he was at a loss, he felt his phone vibrate. As if he had found his Savior, he took it out to check. When he saw that it was Qin Lin, he felt even more that his Savior had arrived.

He immediately answered the call and Qin Lin's voice came from the other side,"Professor Lin, listen up. Announce to the reporters that our fish with the immune system will be donated to the country. In the future, HIV-related treatment will be carried out by the Chinese People's Hospital."

This was his method.

HIV was a major problem, but HIV symptoms were always in the minority. After one treatment, there would be very few patients, and there would not be much monetary benefits.

Since there wasn't much monetary benefit and it was troublesome, he would just throw the trouble out.

When professor Lin heard the order, he hung up the phone and looked serious. With his boss as his backing, he was very stable now. He said, " "I'll tell everyone some news. I just received a call from my

boss. He plans to donate the fish with the immune system to the country. In the future, the treatment for HIV will be carried out by the Chinese People's Hospital."

[Chapter 1518 It's Impossible To Trade! 2](#)

as soon as these words came out of his mouth, the surrounding people instantly burst into an uproar.

The few reporters who were making trouble couldn't believe it. They were simply dumbfounded, okay?

After all, the fish with the immune system could cure HIV, so why would the other party be willing to donate it?

If it were them, they would definitely not be willing to do so.

Only the reporters in China were used to this. After all, Linlin laboratory had donated more than one or two technologies and products.

If there was any boss in the country who was addicted to donating technology, it would be the boss of Linlin laboratory.

He had donated fish for the immune system again.

Backstage.

Minister Lu was shocked by professor Lin's words.

In fact, they could really do a lot of things about HIV. If they could operate on it, they would definitely be able to get the greatest effect.

He didn't expect boss Qin to donate it directly.

he couldn't believe it, so he called qin lin to confirm.

After getting Qin Lin's confirmation, he walked to the front desk with a smile.

Since someone was making trouble, he would counter-attack.

when minister lu walked up to the stage, professor lin was completely relieved. he quickly handed the microphone to minister lu.

Minister Lu took the microphone and said, "Hello, everyone. Let me introduce myself. I'm a representative from the Chinese People's Hospital. Let's talk about the fish with the immune system."

"Because this technology has just been developed, it is impossible to treat HIV on a large scale. We can only try our best to treat foreign patients while treating domestic patients. Naturally, we will also give priority to patients from friendly countries."

As soon as he said this, the foreign reporters' faces all changed.

especially the reporters, who naturally understood what minister lu meant.

Naturally, the one with an even uglier expression was Tim, who was watching the live broadcast.

Friendly country my ass, wasn't it up to the other party to decide whether they were friendly or not?

"Damn it, damn it, why did I donate a Kasaya?" trang couldn't believe it. how could he be willing to donate such technology?

Adoxi, on the other hand, only sighed.

This was probably the source of his ominous premonition. Not only was Linlin laboratory strong, but it also didn't play by the rules.

Mr. Terang, Linlin's laboratory is opposite. This is normal. Adoxi didn't know what to say, so he could only comfort her like this.

Tim's face darkened. He knew that the item was in the hands of Linlin's laboratory. It would be easier for them to get it, but now that it had been donated, it would be even more difficult to get it.

Moreover, their methods were completely useless against the government. On the contrary, they would only make themselves look like clowns.

then we'll have to rely on the environmental management Conference, " Tim said unwillingly. the Fars laboratory has agreed to cooperate with us. They'll bring out the desert plants they're studying.

Adoxi didn't respond. He knew that his idea was good, and it was indeed efficient for Tim to convince Fars laboratory.

The desert problem and the HIV problem were not on the same level to a large extent. Therefore, it was definitely possible for Farles's desert plants to be exchanged for the other party's fish.

Thinking of this, adoxi's heart began to burn. It seemed that he could really get Linlin's laboratory this time.

suddenly, he was looking forward to it.

.....

You city.

The press conference ended. Because they didn't see little Qin, many reporters and tourists were grumbling. However, one thing was exciting, and that was that HIV had really been solved.

Minister Lu went to Qin Lin immediately and said with admiration, " "Boss Qin, really, I rarely admire people, but I really do admire you."

He didn't say it clearly, but the meaning was clear.

There were less than three people in the country, or in the whole world, who would donate this technology without a care like boss Qin.

Perhaps this was what a genius was.

The confidence of a genius.

Because they could keep researching things, they could donate technology that would shock the outside world without a care.

Time passed.

in the blink of an eye, half a month had passed. during this time, the immune system fish's popularity began to drop.

In the past half a month, under the high-speed operation of the Chinese hospital, they had also set up a special department for the immune system fish to conduct special research and breeding.

The fish of the immune system could not only treat HIV, but also the clearing of the viruses in the immune system was related to many aspects, so he had to do in-depth and detailed research.

with the establishment of a new department, minister lu was naturally very busy. when he returned to his office, his secretary ran over in a hurry. leader, take a look at this document. It's from the environmental management Department.

Minister Lu took the document and looked at it in confusion. He frowned and said, "Isn't there still some time before the world Environmental governance Exchange Conference begins? Why is it going to be held in 10 days?"

The Secretary immediately explained, "I think it was suggested by the United States. Several big countries agreed, so it was decided to be brought forward. The environmental management Department couldn't solve it either. The key is that they even set the venue at the world Stadium in Shanghai central.

"What's the meaning of this?" Minister Lu frowned slightly.

He immediately felt that something was wrong. Once the time of the world exchange meeting was set, it would not be changed easily.

Now that the Americans had come out to form an alliance and wanted to bring it forward, they seemed to be in a hurry. They definitely had some purpose.

pay attention to this matter. I'm going to you city again! Minister Lu ordered his Secretary and booked a ticket to you city.

No matter what, it was always right to be prepared on time.

In another beautiful country.

By then, terang had already found Adolphus and said with a smile, "adossi, the world Environmental management Conference has started ahead of schedule. You'll see how I get my hands on it.

adoxi was silent. he didn't want to talk at all.

He didn't understand why a Big Shot like him was pulling him to talk about this. He was already lying flat and didn't want to care about these things at all.

Who knew that this person would become more and more enthusiastic and keep bothering him.

When he saw how proud Tim was, he had an inexplicable bad feeling.

This premonition was out of his control.

without paying any more attention to ados, he found his assistant and ordered, " go to the internet of that Eastern country and spread the news that Fars 'laboratory has developed desert plants. I want everyone in that country to know about this.

Since his target was the fish with the immune system, he had to let the other party know that he had something good.

Only then would it be worth the equivalent exchange.

The assistant immediately went out to contact them.

It wasn't difficult for everyone in that Eastern country to know about this. After all, it wasn't a secret. It was just to spread some news.

.....

Minister Lu arrived at you city at the fastest speed. No matter what tricks the other party used, as long as he was well prepared, he could stand in an invincible position.

It was just desert management. Boss Qin had cultivated countless desert plants. Any one of them could shock the world.

However, boss Qin had countless of them.

just as he was thinking, minister lu received a call from his secretary. as soon as the call went through, his secretary said, " " leader, look at the news on the internet. maybe this is why they brought forward the world environmental governance exchange conference. "

Minister Lu immediately called when he heard this. He soon saw the news his Secretary was talking about. Then, he frowned.

The Fars laboratory had developed a plant that could survive in the desert, and it would be brought out for exchange at the world exchange.

This news had already spread all over the internet.

Now, many netizens had noticed it and felt that it was unbelievable.

"Really? You can grow this kind of crop in the desert?"

that's a desert. Normal crops can't survive there, right? "

if that's the case, then isn't this Fars laboratory too awesome? "

seriously, this technology is probably more valuable than the fish with the immune system, right? "

" yes, if the other party really has such technology, we should be able to exchange it with the fish of the immune system, right? "

"....."

Minister Lu saw some vague messages and perhaps understood that the other party's target was the fish with the immune system.

The other party wanted to use this plant to exchange for the fish with the immune system.

After guessing the other party's purpose, Minister Lu suddenly laughed. He even looked forward to it. It was just a desert plant.

[Chapter 1519 Taking Advantage Of Public Opinion! Are They Going To Compromise Now?](#)

After Minister Lu knew the other party's purpose, he was not worried at all.

Because there was no need to worry at all.

Fars 'laboratory had only developed one type of plant that could survive in the desert, but boss Qin had already developed three types.

Three against one, it was self-evident who was more powerful.

In particular, a plant like the dog's tooth could turn the desert into a Ranch. Wasabi and watermelon could be grown and eaten in the desert.

Minister Lu didn't go to Qin Lin immediately. Instead, he went to the sand farm in the simulated desert to see the three desert plants.

Since the other party intended to trade the desert plant for the fish with the immune system, the simplest way was to throw out the three desert plants and tell the other party, " You're thinking too much.

Minister Lu soon arrived in front of the simulated desert field, but as soon as he arrived, his face revealed a look of disbelief.

This was because there were more than three types of desert plants in the simulated sand farm. There were a few more types that were growing well.

He clearly remembered that when he had visited the sand farm, boss Qin had only cultivated three types of plants. Now, there were a few more.

He walked closer and was surprised to see the extra plants. "This is rice? there's even leeks?"

Are you kidding me?

Minister Lu suddenly lost his calm.

planting rice and leeks in the desert?

Do you dare to imagine this?

He couldn't help but call Qin Lin, who soon arrived at the desert field.

"Minister Lu, why did you suddenly come here without a sound?" Qin Lin asked, puzzled.

Minister Lu was not in the mood to answer this question. He asked in a hurry, " "Boss Qin, tell me, I'm not wrong. Are these rice and leeks?"

"Yes, that's right!" Qin Lin was stunned.

Although Minister Lu had seen the truth, he was still shocked to hear Qin Lin's confirmation. "Boss Qin, I know you're good, but growing rice and leeks in the desert is still beyond my imagination."

the point is, other than dog tooth grass, why do you cultivate food? and this is an Apple sapling, right? "

Minister Lu was really speechless.

What the hell, planting apples, watermelons, rice, and leeks in the desert?

If he got lost in the desert in the future, he could still collect rice on the spot to cook, pick an Apple and watermelon to eat, and finally have some chives barbecue?

Although the scene was shocking, why was it all food?

At the thought of this, he couldn't help but ask, "boss Qin, why didn't you cultivate cumin and pepper that can survive in the desert?" When barbecuing leeks, you can also get some on the spot."

"Good idea." when qin lin heard this, he replied seriously, " I'll try using cumin and pepper seeds later.

He felt that this was a good idea, but it was full of bad taste.

If such a scene really happened in the desert in the future, it might be a wonder of the world.

" ? ? ? "When Minister Lu heard this, he quickly said, " "Boss Qin, I'm just joking, don't take it seriously."

Qin Lin waved his hand, obviously indicating that he had already done so.

To him, as long as he repeatedly planted these two seeds, he would eventually succeed in making them mutate.

Minister Lu opened his mouth but didn't know what to say. He could only blame himself for being rude.

However, he also immediately talked to Qin Lin about the world Environmental management Conference. At that time, these desert plants would naturally have to appear.

After Qin Lin and Minister Lu talked, they also learned about Fars 'laboratory-like cultivation of desert plants and his purpose.

This made him look at the desert in his mind in shock.

What the hell?

Was a plant that could survive in the desert valuable?

It's not worth much at all, alright?

Wasn't this like a beggar showing off in front of a rich man?

Minister Lu, " Qin Lin said directly, " what do you want me to do? I'll definitely cooperate with you.

Minister Lu was completely relieved after hearing Qin Lin's reply. He also bought a ticket and went back to Beijing.

as soon as he returned to Beijing, the people from the environmental management department came to him.

The person in charge of the environmental management department said, Minister Lu, you're finally back. The exchange is about to begin, and we're not prepared at all.

"Didn't I tell you that boss Qin has cultivated three types of desert plants?" Minister Lu immediately said.

The person in charge of the environmental management Department immediately said, " " Minister Lu, we just saw the video and felt guilty. We're here to confirm it with you. "

" Come with me to my office, " Minister Lu greeted with a smile. " I have a big surprise for you. "

The person in charge of the environmental management Department was puzzled, but after hearing Minister Lu's words, he still followed him into the office.

Minister Lu also took out a USB flash drive and connected it to the computer. He opened the video he had shot at Linlin Scenic Area and connected it to the multimedia screen on the wall.

After a while, a video appeared on the screen.

Minister Lu also pointed at the screen and said to the head of the environment department, " Here, let me introduce you. This is a watermelon that can be planted in the desert, this is an Apple sapling that can be planted in the desert, this is a rice that can be planted in the desert, this is a leek that can be planted in the desert, and there are also wasabi and Dogtooth grass. Why do you have such an expression? "

"Yingluo, what do you think happened? Why is there only food?" The person in charge of the environmental management Department ignored the dog tooth grass.

Because his mind was attracted by the words 'Apple', ' watermelon', 'rice' and 'leek'.

Could they grow these in the desert in the future?

He couldn't imagine what would happen if the desert became a food base or a fruit base.

One must know that a catty of leeks was not cheap these days. It was 8 yuan a catty and was popular among men.

In the future, if leeks could be planted in large patches in the desert, would it be another cash crop?

Minister Lu waved his hand and said, " It can't be helped. Boss Qin is very interested in food. You know, he is the world's best Chef. Therefore, the things he cultivates are more inclined to food.

"Boss Qin also said that he plans to continue cultivating cumin and pepper so that people can use local ingredients when roasting chives in the desert."

Obviously, he had neglected the fact that he was the one who had suggested cumin and pepper. He had to get rid of this problem.

The person in charge of the environment Department was stunned. why didn't boss Qin cultivate chili and garlic that could survive in the desert? wouldn't the barbecue taste more complete then? "

Minister Lu was shocked when he heard this. Why were they all thinking in this direction?

Don't let boss Qin hear this, or he might really start researching chilies and garlic.

At that time, he would really be treated as a foodie.

The person in charge of the environmental management Department watched the video brought back by Minister Lu and heaved a sigh of relief. He returned to his office with a relaxed expression.

With so many plants that could survive in the desert, what was there to worry about?

If that was the case, then the desert survival plant cultivated by Fars 'laboratory would be nothing more than a display of skill in front of an expert.

Time passed day by day.

These days, the world Environmental management Conference was also abuzz on the internet, and everyone knew about it.

This was because the desert environment in China was really serious. Someone had done some calculations. If the desert could be controlled, China could theoretically have four more provinces of usable land.

As long as the government was successful, there would be four more provinces of usable land. In theory, the price of houses could be reduced.

That's right, someone had brought up the issue of house prices, so the attention was even more intense.

Therefore, at this time, some subtle provocative news also appeared in time.

" there really are desert plants. if the desert is controlled, house prices might really drop! "

I think it's necessary to exchange the crops in Fars 'laboratory for the benefit of everyone!

it is strongly recommended that raw noodles exchange this plant back. After all, we have not been effective in controlling the desert!

I also suggest that we exchange the plant back no matter what, even if it's with the immune system fish! obviously, the purpose had been revealed. someone was manipulating it, and it was indeed very effective.

The use of house prices had almost won the approval of countless people. After all, house prices were also the biggest social problem in the country.

How many people work so hard that they can't even afford a house? how many people are forced to be with the person they like because of a house?

If the price of real estate could really drop, it would definitely be a great thing for them.

therefore, the demand for the immune system fish to be exchanged for the plants in Fars 'laboratory was getting higher and higher. almost everyone thought it was time.

It was also under such circumstances that the world Environmental management Conference began.
America.

Tim also found Adolphus again and said with a smile, " Adossi, look at the situation now. The public opinion on the internet of that Eastern country is completely under our control.

now, everyone thinks that we should call our plants with the immune system of fish. In that Eastern country, this is called public opinion, right? "

"Their country doesn't dare to go against the public's will and follow it. I've checked, and there's a saying in their country: Water can carry a boat, but it can also reverse the boat. That's about it. "

besides, we've caught on to the most fatal problem of the other party, which is the price of their property. You must know that their property prices are even more expensive than those in developed countries like ours.

their people are in deep trouble. The price of houses will indeed touch the nerves of many people. Once their nerves are touched, they will support us even if they know that we are playing tricks.

"This is human nature. In terms of playing with human nature, I'm better than you."

Not knowing what was going on, Aldwin ignored him and started reading the news.

When he finished watching the news video, he was shocked. It seemed like he really succeeded after drinking it once.

Perhaps, this time, after getting the fish, Tim would help him.

However, for some reason, he suddenly had a bad feeling!

[Chapter 1520 You're Thinking Too Much!](#)

The world Environmental exchange was held at the world Stadium in the center of Shanghai. On the same day, a lot of people had gathered there.

There were environmental departments from various countries, and there were also reporters from various countries.

This time, there were even more reporters than the previous reporters who were talking about the fish with the immune system and HIV treatment.

after all, this matter involved the plant-exchange immune system fish cultivated by Farles. not only were the reporters from the earlier HIV treatment press conference here, but there were also many environmental reporters.

The plant cultivated by Fars 'laboratory was also revealed. It was called the grass, a plant that was very drought-resistant and had very strong survival abilities.

This grass was inedible and had no use.

However, the biggest use of the grass was that it could be used to control the desert. After testing in farers 'laboratory, the survival rate of the grass in the desert was almost 40%.

This was a very high survival data. For desert management, it was already to the extent that it could be promoted.

Of course, there were many desert control techniques nowadays, and each laboratory was boasting about it.

However, the Fars laboratory was very disdainful of this.

For example, a technique to make desert adhesive.

It said that as long as it was added to the desert, it could turn the desert into ordinary soil for planting.

this was definitely a very amazing technology at the moment.

It was a pity that the adhesive had too many limitations. It could only be used near high mountains, where there was an underground water source, or near deserts with abundant snow water.

In fact, it was also an exaggeration. With an underground water source or an abundant water source near the snow, could this still be considered a real desert?

The key was the cost.

It was understandable. If it was really useful, would the area of desertification increase every year?

The people in the Fars laboratory and Trang were also very sure that their technology was the only truly effective desert control technology.

It was also the only plant that could be successfully planted in the desert. Although it required a large amount of fertilizer and the cost was not small, it was definitely not a problem for a big country.

Due to the special publicity by the Fars laboratory and the United States, almost everyone thought that the exchange would be about the fish and grass of the immune system.

On the internet, this seemed to have become an established fact.

Many reporters and new media bloggers had even written relevant proposals.

As long as the two sides successfully exchanged the immune system fish with the grass, they would send out a message.

This situation naturally pleased Tim, who had been paying attention to everything, because this was exactly what he wanted.

Very soon, the exchange began.

The people from the various countries 'environmental governance departments were invited into the grand conference room.

Depeslin was in charge of America's side. As soon as he entered the venue, he began to calculate madly in his heart, because he was on a special mission this time.

Although the outside world was already calling for the exchange of grass for fish with the immune system, he knew very well that it was all because of Mr. Trang's operation.

Therefore, what he had to do now was to make this reality completely come true.

The representatives of the various countries' government departments quickly sat down in the conference room. There were also reporters from the various countries who were broadcasting the scene back to their countries.

After all, all the countries were concerned about the environment.

The meeting started with the usual nonsense, which was to talk about the seriousness of desertification and the dangers of the desert.

Minister Lu came with the people from the environment Department.

When he heard this nonsense, he felt like he was going to sleep.

in the chinese academy, if someone dared to talk so much nonsense in reporting and communication, he must be a guy without any real ability.

This was the difference between scientific research and these people.

Scientific research was all about speed and efficiency.

The nonsense was enough to make people feel drowsy before it ended. Next, they began to show off the desert management technology they had brought.

Unfortunately, the desert management technology of each country was not satisfactory. There was even one country whose desert management technology was only in the conception and had not been studied at all.

This made people very stunned.

What's the point of talking about something that you've just conceived?

what was the difference between this and me having a project where i pluck the stars from the sky and paste ceramic tiles on the great wall?

However, when they saw which country this representative was from, everyone no longer felt that it was strange.

Depeslin had been waiting for a long time. Seeing that it was finally their turn, he stood up with a smile. Now that I've heard so much from you, I'll talk about the desert Environmental Management Technology of our beautiful country.

I'm sure everyone has heard about it. That's right, it's the Dragonfly. The Dragonfly is a plant that our Fars laboratory has carefully researched and cultivated. It's the most powerful plant in the world in terms of drought resistance and survivability.

the survival rate of the grass can also reach 30% if it's grown in the desert. It can be said that we are the only ones who have this kind of plant that can survive in the desert.

These words surprised the people from the various countries 'environmental management departments.

This was because it was already very impressive for Desert Seed plants to survive for 30% of the time.

It was important to note that plants needed water to survive, and what the desert lacked was water, so it was difficult for plants to survive.

The fact that the grass cultivated and researched by farers 'laboratory had a 30% survival rate when planted in the desert was definitely a terrifying number.

Someone suddenly stood up and asked, " "Mr. Depeseing, the grass you've cultivated is truly astonishing. I wonder if we can use other techniques in exchange for your grass-growing technique."

There was a problem with this question.

After all, in this situation, the first thing the speaker should have done was to ask depeseing if he could share the grass-picking technique with him.

The other party might even use moral coercion to beg for the technology to be shared.

How could he directly ask depeslin if he could use technology to exchange for it?

When depeslin heard this question, he laughed. This was because they had specially arranged for this. They wanted to direct the topic to the exchange technology and lay the ground for what he was going to say next.

On the other side.

Terang watched the live broadcast with Adolphus. When he saw this, he could no longer hide the smile on his face.

This was because he had specially arranged it.

His plan was also slowly approaching success.

This time, he would definitely be able to get the fish with the immune system.

At the conference, depeslin also laughed and said, " of course, we can exchange the technology. After all, we also hope that the world's desert can be controlled. However, this grass-picking technique was developed by Fars laboratory at a huge cost. Naturally, we need the corresponding technology to exchange for it.

with that, depeslin looked at the person in charge of the domestic governance and environment and said, for example, the fish with the immune system in the eastern countries. As far as I know, everyone on the internet in the eastern countries is calling for the exchange of the fish with the immune system for the grass-rustling technology.

although the immune system fish may not be as good as our grass-picking technology, the entire Eastern country is calling for it. We won't refuse the exchange. After all, there's a word in the eastern countries called public opinion.

Obviously, the dagger had revealed its true intention, and it was directly targeting the fish with the immune system. It even mentioned the word " public opinion.

The people around them looked at the person in charge of the domestic environmental governance.

But the person in charge of the domestic governance and environment did not answer. Instead, he stood up and took out a USB and handed it to the International environment organization. "Please help me play the contents of the USB drive."

This action made everyone look puzzled.

Especially depeslin.

He felt that something was wrong. The other party should be responding to his conversation at this time.

What was he doing now?

Not only the live audience, but many people in the live news were also confused.

Especially on the domestic internet, countless discussions appeared, but most of them did not understand.

"What's the person in charge doing? At this time, you should be exchanging the grass-picking technique."

that's right. How did this guy get to his position? we should strike while the iron is hot.

if we exchange the fish with the immune system, we can still master it. By then, we can also master a desert management technique.

"....."

Obviously, the public opinion on the internet was still very big.

At least, the people on the internet had been led by someone with ulterior motives and had no idea that they had become someone else's chess piece.

Therefore, sometimes, no matter how certain the public opinion was, one should not blindly believe it. One should prioritize the official announcement.

sometimes, many people would rather believe the guidance of others than the official announcement.

This was a pain in the ass.

At the exchange meeting.

The people from the International environment organizations were also confused, but they still took the USB drive and connected it to a computer. They played the video on the biggest screen.

The video started with a sand farm.

The person in charge of the domestic governance and environment also took the microphone that was given to him and said, "as you can see, this is a sand farm that simulates a desert. The environment inside is fully simulated. You can see the plants on it. Let me introduce them to you.

first of all, these are the seedlings of rice. You may not be familiar with rice, but it's the rice that we eat for three meals in Eastern countries. Now, it can be grown in the desert, and it should be called sandy rice in the future.

these are watermelon sprouts. Everyone should know about watermelons. That's right, we also have watermelons that can be grown in the desert.

these are called leeks, and they can also be grown in the desert. You foreigners might not know about this, but it's very good to barbeque with wine.

there are also Apple tree saplings and wasabi. I'm sure many people in your country like wasabi. These are the dog tooth grass.

These words instantly caused a clamor in the surroundings, and all of them revealed looks of disbelief. Depeslyn even subconsciously stood up and shouted, "Impossible!"

On the other side, Tim, who was watching the live broadcast, stood up in disbelief. What kind of joke was this?

Fars 'laboratory had the world's best plant research capabilities, but they had only been able to cultivate one type of plant, the hornless Dragon grass. Now, this guy had just mentioned how many types?

and was the other party speaking human language? Growing watermelons in the desert?

Watermelons required a large amount of water to grow. Unless you watered them, they wouldn't be able to survive even if they were planted in the desert with that little natural rain.

Wasn't this nonsense?
