

The Game 1571

[Chapter 1571 Preparing To Make Big White \(1\)](#)

Following the elimination of a certain football team, the netizens and fans in China began a different kind of revelry.

Before, they would still be bothered by the Lin linjing security team, but now they could get as far away as they could. They were now supporting the Lin linjing security team.

The Linlin Scenic Area security team was now their home team.

In the match against the ointment nation, Linlin Scenic Area had three more matches. To everyone's surprise, the Linlin Scenic Area security team had won all three.

All good.

In a restaurant, everyone was staring at the football qualifiers on TV in surprise.

That was the last competition in Linlin Scenic Area.

If they won this match, not only would they be able to get a ticket to the World Cup, but they would also become the champion of the Asian qualifiers.

The opponent of this game was naturally Laney, the strongest player in Asian Football.

Through the live television broadcast, everyone could see a player dribbling the ball forward quickly. That speed was very fast, and his gradually maturing technique also gave him the demeanor of a star player.

This person was Liu fan.

Finally, the competition ended and Linlin Scenic Area won. They successfully got a World Cup spot and became the champion of the Asia qualifier.

In China, several fans in a restaurant saw this scene and suddenly stood up and cheered.

"They've finally made it. They've finally made it to the World Cup."

"It's been too long. We've finally made it to the World Cup."

".."

As the Chinese fans were cheering, they suddenly saw a foreigner beside them stand up and cheer. He said in half-baked Chinese, ""We won. Our country has entered the World Cup."

" ? ? ? "Fan 1.

" ? ? ? "Fan 2.

" ? ? ? "Fans: 3.

The foreigner seemed to have noticed the gazes from the side and immediately said, ""Um, I'm from wanidia. It's our country that made it to the World Cup, not you guys."

".. "Fan 1.

".. "Fan 2.

".. "Fans: 3.

Heart-stabbing.

Following that, the fans immediately pulled the man from vanidoo to their table and began to exchange pleasantries with him.

"Brother, what's the difference between you and me?"

"Yeah, we're brothers now."

"Our friendship will last forever."

".."

Similarly, it made countless fans cheer all over the country, and some people even set off firecrackers.

After so many times, how long had it been, they finally had the chance for their country to enter the World Cup.

Many people even posted their gratefulness on the internet:

thank you, Linlin Scenic area's security guards, for telling me that it's not that we can't do it, but a certain foot can't. Before this, I really thought that we were the ones who couldn't do it.

These words were obviously aimed at a certain someone, and then it became the fuse.

That's right, why can't a certain foot do it, but a group of security guards can?

There were even radical fans who went straight to the gate of a Football Center and put up a banner:"Why can't you even compare to the security guards?"

It could be said that this time, they had been forced into a corner.

Even the voices calling for them to be investigated on the internet were getting louder and louder.

This made a large group of people extremely anxious.

Of course, the Linlin Scenic Area security team also started to be popular. Many of the players had their own fans after a few games, especially Liu fan, who was sought after by countless fans.

In the beginning, Liu fan's technique was very inexperienced and unsophisticated, and the fans could see it.

However, after a few games, the fans could clearly see that his skills were maturing and improving. It was as if he had opened up his Ren and du meridians, and the improvement was very obvious.

More importantly, Liu fan was the player who scored the most goals in the Linlin Scenic Area soccer team. He had the potential to become a superstar.

Therefore, Liu fan also received a lot of attention.

There were even fans who called out on the internet. I pray that the Football Association doesn't recruit Liu fan, don't lay a hand on him, and let him stay in Linlin Scenic Area as a security guard!

The appeal was naturally acknowledged by all the fans, and the appeal grew louder and louder.

Everyone knew that a star like Liu fan would be useless once he landed in a certain team. It was better to let him continue working as a security guard in Linlin Scenic Area.

Suddenly, a piece of information about Liu fan was posted online:

'Do you really think that Liu fan is just an ordinary security guard? Let's take a look at his information! He was a retired Scout, and the other players in Linlin Scenic Area were also retired soldiers. This was the reason why a certain football team lost.

After the information was released, no one could react in time.

Huang rongbin had been paying attention to this matter for the past few days. He was the first to see Liu fan's information.

"Oh my, no wonder!" Huang rongbin couldn't help but exclaim when he saw the information of the players in Linlin Scenic Area.

No wonder Liu fan was so powerful. He was a retired Scout.

What was an army scout? That was the special Forces.

What was the special Forces? The human troops were the strongest, known for their strength, endurance, and strength.

There were also other players who were also retired soldiers. They were all soldiers who had been trained in the Army.

Oh my God.

Was this the reason why the Linlin Scenic Area security team was so strong?

It turned out that they were not ordinary security guards at all.

In other words, it was not an injustice that the team lost this time. It was not that the team was too weak, but that the Linlin Scenic Area was too strong.

This also seemed to give a certain someone an opportunity to clear his name.

Almost at the same time that Liu fan's information was exposed, mouzu released a new announcement: a team made up of Special Forces and soldiers. They naturally have a huge advantage. In the future, we will try our best to focus on this area for the selection of Reserve members. In addition, we only lost to the World Cup qualifiers champion.

[Chapter 1572 723-Preparing To Make Big White \(2\)](#)

Countless netizens saw the announcement and left comments below.

"Are you sure you'll only lose to the champion?"

Saudi: We Are the Champions? "

ointment country: we're also Champions? "

".."

Alright, I urgently turned off the comment function.

Naturally, the World Cup would not start soon after the World Cup qualifiers. The official World Cup would only start in about half a year. Therefore, Lu Tong brought Liu fan and the other players back to China.

Because no news was revealed, and they were not surrounded by fans, they returned to Linlin Scenic Area in peace.

It was not until Liu fan and the others returned to the scenic Area and had a live broadcast that night that everyone knew that they had returned to China.

Naturally, the products they brought in for the livestream were Linlin brand sportswear and sports shoes.

The Linlin Scenic area's soccer team's crazy performance in the world Cup qualifiers had naturally made the Linlin brand's sportswear and sports shoes popular in the live broadcast, and orders were hot.

This made Deng Guang smile from ear to ear the entire night.

He had only wanted to give it a try, but who knew that the Linlin Scenic Area football team would be so good that they directly made it to the World Cup. If they won two more games at the World Cup, their brand would become one of the well-known sports brands.

..

Linlin Manor, in a large conference room.

Lin Lanzi, Deng Guang, Lu Tong, and the Linlin attraction soccer team were all called here.

"Coach Lu, you did a good job this time!" Deng Guang said to Lu Tong with a smile.

"CEO Deng, it's all thanks to your support." Lu Tong's face was filled with joy and anticipation.

Deng Guang immediately smiled and said, " we're just helping each other. Last night, we ordered three million sets of sportswear. This is just the beginning. It will be better in the future. So, Linlin company plans to give each player a endorsement fee, especially Liu fan's endorsement fee of 20 million a year.

This was also the endorsement price for a sports brand of a famous football star.

Even a football star was worth it, but not a star in a Scenic Area? That was impossible.

"Ah." Liu fan exclaimed when he heard the news.

He was just a retired soldier, and he was already satisfied with the high salary and bonus of the scenic area's security guards.

After that, he switched to playing football and his salary increased, which was already very good for him.

He had never expected that in the blink of an eye, someone would give him 20 million for the endorsement.

All these changes were not in the path of his life that he had originally planned.

"Haha, looks like Liu fan won't be able to sleep tonight." Lu Tong teased. He was in a good mood.

He knew what the meeting was about. The boss had already spread the news through President Lin that he was going to set up a professional football club.

This was also the reason why he had joined the Linlin Scenic Area football team. He wanted to promote the Linlin Scenic Area football team to a professional team. Now, not only did they make it happen, but they had also exceeded the value of the reservation requirement.

A moment later, Qin Lin entered the office.

All of a sudden, he became the focus of everyone's attention.

Liu fan and the others looked at Qin Lin's young face with some restraint and some pressure.

They knew how powerful this young man was.

Even if the other party didn't do anything, his achievements naturally gave them a sense of oppression.

Upon seeing Deng Guang and the rest, Qin Lin said, "Everyone's here? Let's talk about what happened today. The team has achieved great results in the world Cup qualifiers, so I agree to coach Lu Tong's proposal to set up a professional club."

however, I'm setting up a professional club. I don't plan to let the club Play house with those domestic teams. I plan to let you play in the Bundesliga abroad.

of course. You can't enter the Bundesliga directly now, but I hope you can work hard. As for the ticket qualification to enter the competition, I asked Prince Tara. He has a way to get it.

Prince Tala's method was naturally to use a shell and slowly start playing from the lower-level games until he kicked into the Bundesliga.

Moreover, this was inevitable. If the sea cucumber was not effective, he would give Liu fan and the others the body-strengthening liquid.

His words shocked Lu Tong, " Chairman Qin, we'll have to invest quite a large sum of money.

He had originally wanted the team to play a domestic football game, but who knew that the boss had set an even bigger goal.

"Yes, the initial investment is 1.5 billion. US dollars!" Qin Lin nodded. it's enough for you to play in the third-tier games abroad. Coach Lu, you'll be the head of the professional football club for now. I'll see how it goes.

The 1.5 billion dollars was naturally won by betting on that APP, and he had almost bet heavily on the next few rounds.

"Yes, Chairman Qin, I won't let you down." Lu Tong immediately promised.

Qin Lin nodded. He then handed the rest of the matters to Deng Guang and Lu Tong. He had never dealt with the details.

Deng Guang and Lu Tong were also very fast. It didn't take long for them to announce the establishment of the Linlin Football Club.

The news still shocked the whole internet. Although they had already guessed it, they were still excited to see the establishment of the Linlin club.

With a club, this was a true home team.

However, a few announcements made everyone nervous again.

[an Association: welcome to Linlin Football Club to the big family.]

"Chinese Super League: welcome to Linlin Football Club. Also, don't forget to register your application information."

Everyone was nervous when they saw the announcements issued by these two organizations, afraid that the Linlin football team would be destroyed by these two organizations.

However, not long after, the Linlin Football Club made an announcement through the official account of the Linlin Scenic Area, which made the two organizations lose all face.

Linlin football team officially joins the lower German league. The campaign begins. Strive to enter the German league next year!

The announcement made the domestic fans even more excited.

This was a great thing.

Linlin's team obviously did not want to play with those people in China.

After that, another announcement from Linlin club completely pushed the popularity of football to the extreme.

The Linlin Football Club was going to hold a national talent show to select the best football talents in the country.

It was a complete sensation, and countless fans felt as if a ray of light had shone into the darkness.

This was something that many fans looked forward to. Unfortunately, some football team would never do talent shows because they tied their profits to one circle. Holding a talent show was not in their interests.

However, following the Linlin team's draft, another piece of news shocked everyone. An important figure from an Association was taken away for an interview. It seemed that it was because the head coach reported that Zhang Shi had been paid to fix a match.

Zhang Shi's performance in the world Cup qualifiers was so bad that no one believed he didn't accept the money.

Unfortunately, Zhang shizhen didn't accept any money and couldn't find any evidence of him accepting money. However, other dirty things were found out, which was a shady deal under the unspoken rules of some Association.

This led to the investigation of those big shots.

No one had thought that this would turn into a revolution in the domestic football industry and completely change the current situation of domestic football. It was just that many people were unlucky in this process.

..

Linlin Manor office.

Qin Lin sat down as usual. After completing his daily mission, he locked the door and entered the game. He took out a stack of information from the game.

All this time, he had been paying attention to the bets on the World Cup qualifiers. Moreover, after this time, it was time to do serious business.

Naturally, he had taken out da Bai's design from the game.

Although the Goblin rune's AI system couldn't be used, the overall structure could be used. Moreover, he wanted to trick Minister Lu into obtaining the Hua * Yuan's AI system.

Even if the Institute's AI system was not as good as the AI in the movie, it was still better than having no AI.

Qin Lin looked at da Bai's design and took out the techniques related to the tree sap. He then called professor Lin.

He didn't intend to reveal the two major techniques in da Bai's design information at once. After all, professor Lin's abilities were limited, so he would leave it to him to solve them one by one.

[Chapter 1573 A Bit Like A Clown! 1](#)

Linlin's laboratory.

With professor Lin's research on ice-sealing technology and urban snow, as well as the production of Transformers, he became the third well-known professor after academician Li Kai and Chairman Qin.

Moreover, everyone in the laboratory approved of professor Lin. After all, he was the only professor who could cooperate with and assist Chairman Qin.

Before this, whenever Chairman Qin made a finished product, the other professors had tried to crack it, but they were helpless.

Only professor Lin himself knew what was going on. Chairman Qin was feeding him the research data.

If she still couldn't do anything, then Qin Zhi might as well bring a dog instead of him.

In the laboratory, professor Lin and his team members were doing experiments on ice-sealing technology and urban snow.

In the outside world, this ice-sealing technology was his work, and it also allowed him to have his own place in the scientific community. Naturally, he had to study this technology in depth.

His phone rang. Seeing that it was a call from his boss, he immediately picked it up. "Chairman Qin, do you have any orders?"

professor Lin, " Qin Lin said, " come to the manor's office. I have something for you to do.

"Okay, Chairman Qin, I'll be right there." Professor Lin hung up the phone and left Linlin's laboratory in a hurry.

Compared to his research, the boss's matter was more important.

He had a good grasp of the rules. Once his boss called him over, he must have come up with something and needed him to do it for him.

Professor Lin soon arrived at Linlin Manor and saw Qin Lin in his office. "Chairman Qin, do you have any orders?"

Qin Lin handed a USB to professor Lin and said, " it's a document regarding the technique of getting the resin. Go back and get it out.

resin? " professor Lin was stunned as he took the USB. Chairman Qin, is there such research going on now? "

Qin Lin explained, "the thing in the movie is one of the materials used by big Bai to produce" supermarines.""

"Ah." Only then did professor Lin react.

Da Bai's name was simply too big, and this type of thing was very popular. Many women expressed that if they had da Bai, they could even give up on their boyfriends.

However, this was a product of a movie, which was actually just a conjecture of the screenwriters and mangakas. Scientists had no way of making such a thing.

After all, scientific research was rigorous, and it was impossible to make a real thing based on the manga artist's loose scientific research conjectures.

Who knew that Chairman Qin had already developed one of the materials to make da Bai?

But thinking about the Transformers, it wasn't easy for Chairman Qin to make it. Other than the lack of intelligence, it was not worse than the one in the movie. It could be said to be exactly the same.

Therefore, it wasn't surprising that Chairman Qin could make da Bai with the materials.

"Don't worry, Chairman Qin. I'll gather my team members to deal with this." Professor Lin immediately promised and left the office with the USB.

After returning to Linlin Scenic Area, he applied for a special laboratory with Shen Li. He pulled up the USB flash drive and looked at the information inside. Not long after, he sent a list of materials to Shen Li and asked him to arrange for the purchase.

When Shen Li received the list, he was a little puzzled.

Because the materials on the list were not common materials, and even somewhat unorthodox.

This meant that professor Lin was probably conducting a new experiment.

Thinking of this, he gave professor Lin a call and asked, " professor Lin, what kind of technology have you developed? "

Professor Lin immediately replied, " President Shen, it's not me. It's Chairman Qin who has developed a new thing. These materials are used to make a special type of resin. It can be used to make the big white in the movie.

"Da Bai?" Shen Li was stunned for a moment, then he reacted and hung up the phone with a face full of disbelief.

Of course, he knew who da Bai was because his daughter liked da Bai a lot and had even bought a few big white pillows for him.

However, he didn't expect his boss to be researching this kind of thing. It was a futuristic sci-fi product, just like Transformers.

He immediately looked forward to it and arranged for people to purchase the materials on the list.

The Linlin laboratory was now very powerful and wealthy.

In addition, with the reputation of being a cooperative unit of the Chinese People's Hospital, it was very easy to purchase materials as long as they were not top-secret strategic materials.

Not long after, the materials needed by professor Lin were purchased and brought back to Linlin laboratory.

Moreover, with the detailed information given by Qin Lin, professor Lin and his team members had the experience of making the ice-sealing technique and the Transformers. They were able to make this kind of material with ease.

Therefore, it didn't take long for professor Lin to make a portion of resin and condense it into a white plastic object. After confirming that it was not poisonous, he sent it to the Linlin Manor office. He didn't forget to inform Qin Lin and call him.

Qin Lin's face lit up when he received the news from professor Lin.

Professor Lin didn't let him down. He managed to get the thing out so quickly.

Qin Lin looked at the White resin and immediately said, ""Let's go out and test it out."

In the movie, da Bai's outer material had an extremely strong defense. Although it was unknown if it could block bullets, it would definitely be able to block blades. Moreover, it was extremely elastic.

[Chapter 1574 A Bit Like A Clown! 2](#)

After Qin Lin and professor Lin left the office, they called Chen dabeai and asked him to send over all kinds of knives and a pair of pliers.

Chen dabei arrived quickly with two security guards with all kinds of knives.

If these knives were brought to the street, they would definitely be questioned by the police, but there was no problem in the manor itself.

"Chairman Qin, what do you want to do with these things?" Chen dabei asked Qin Lin.

Qin Lin immediately gave the resin to Chen and said, ""Use the pair of strength pliers to pull this material and see how much it can withstand."

"Alright, Chairman Qin!" Chen dabei nodded and began to test the resin.

As the tugger began to pull, a rapidly jumping number appeared on it.

That number was exactly the amount of force that the resin could withstand.

It didn't take long for the acid tree to be pulled apart, and the bearing force reached 100 kilograms. However, this wasn't the limit, and the value was still jumping rapidly.

After all, this was a product of science fiction, and it was used to make da Bai's outer layer. Under normal circumstances, it was impossible for such a technological product to appear at this point in time.

Minister Lu and Prince Tara came out of the hall.

Minister Lu had gone back for a while, but he came back again. The reason was naturally related to Prince Tara. No one knew what the two were discussing.

Qin Lin was not curious. After all, what did Prince Tala have that the higher-ups would pay attention to, and even made Minister Lu come back and forth? it was nothing but oil.

When the two of them came out, they saw Qin Lin and the others.

Prince Tala stepped forward and asked curiously, ""Academician Qin, what are you guys doing?"

Minister Lu looked at the White resin and thought of something. He asked in surprise, ""Boss Qin, is this big white material?"

Qin Lin nodded. yes, I read the technical information from the Chinese Academy of Medicine. I've made the resin, which is made of ethanol.

Minister Lu was obviously surprised. "So fast?"

He knew very well how difficult this technique was.

The special Department of the Chinese Academy had spent so much time to make that little progress.

How long had it been since he had brought the relevant materials from the Hua hospital to boss Qin?

Prince Tala asked, ""Mr. Lu, academician Qin, is the big white you guys are talking about the big white in the movie?"

"It's indeed that da Bai!" Qin Lin nodded.

"Ah." Upon receiving confirmation, Prince Tara was surprised. "That's amazing. Academician Qin, is there anything you can't make?"

His words were full of emotion and sincerity.

Because he really thought so. Look at this academician Qin, he made Transformers when he wanted to. He wanted to plant plants in the desert, but he developed so many plants that could survive in the desert. He wanted to purify the water environment, but he developed the floating duckweed that could purify water.

He was even unhappy with the two Cola companies, so he cultivated Cola fruits.

There were too many of such things.

Academician Qin was very famous internationally.

Now, academician Qin was going to make a sci-fi product like big white.

Soon, the clamp had pulled the resin to its limit, and cracks began to appear.

This meant that he had reached his limit.

At this time, the value on the tugger also became more than 500 kg.

This was also an extremely inconceivable thing.

however, this was only the first piece of resin that he had made. Its tolerance was still very limited, so this was not the limit.

As long as the technology could be improved, the endurance could still be increased.

After all, in the movie, da Bai's tolerance level was not limited to this.

Then, Qin Lin took all kinds of knives and began to cut the resin. One by one, he only left a white, light-colored mark.

This also proved how strong the defense of the resin was. Basically, it would be difficult for a knife to damage it.

Minister Lu's eyes lit up when he saw this. In the movie, this material was used to make da Bai, but that didn't mean it could only be used to make da Bai. At the very least, he knew several uses for this material.

"Boss Qin, can you share the technology of this material with the Chinese medical Academy?" Minister Lu couldn't help but ask. The Hua Academy will compensate you."

Qin Lin smiled and said, "of course, Minister Lu, that's not a problem. It's not just the ethanol resin. There's also another kind of polyethylene material from da Bai. I've already figured it out. We can share it with the Chinese People's Hospital, but I have a request.

"Boss Qin, please speak," Minister Lu said immediately.

Qin Lin smiled. that's an intelligent system. We'll need a very good intelligent system to make da Bai. Our Linlin laboratory doesn't have the technology in this area, so we want an intelligent system from the Hua hospital.

"No problem, I'll go back and apply for it." yes, " Minister Lu said immediately. So, the next day, he left for Beijing with the resin technology that Qin Lin developed.

He immediately found a leader and had a conversation with him. Not long after, the news reached the Hua hospital. The general content was that Minister Lu had handed over the most advanced intelligent system in the Institute to Linlin laboratory.

[Chapter 1575 A Bit Like A Clown! 3](#)

This caused a huge disturbance in the Hua Yuan Academy.

Everyone knew how important the research on Intelligent Systems was. It was a top secret, and now Linlin's laboratory had handed it over.

In a special Department in the Hua hospital.

The person-in-charge was looking at a group of researchers conducting some kind of experiment.

the 3471St attempt of the resin decay experiment begins now!

Following the sound, all sorts of data began to flash on the instruments, dazzling everyone.

But soon, white smoke came out of one of the containers, and the screens turned red.

This meant that the experiment had failed again.

The person-in-charge was a little annoyed and urged, " quickly summarize your experience and make progress. Otherwise, if Linlin's laboratory has any results, we won't know where to put our face.

Their Department was a special case Department, a Department that researched the future. Researching da Bai's material was one of their jobs.

Last time, Minister Lu took away their years of research data and handed it to academician Qin, which made all of them very unconvinced.

After all, it was the result of their research.

However, the higher-ups were on Minister Lu's side, leaving them helpless. They could only use the research to prove themselves and let the higher-ups know that the future research should be left to them.

A researcher walked in and immediately went to the person in charge. "Fellow Zhang, have you heard? "Minister Lu also applied to hand over the intelligent system that the Department is researching to Linlin laboratory. You know, that team has paid a huge price to research the intelligent system."

This made the person in charge frown.

Minister Lu really did it again and again. He couldn't stand it anymore and immediately went to the office of another leader.

Fellow Zhang quickly arrived at a leader's office and complained, ""Leader, you heard that Minister Lu gave the system technology to Linlin laboratory. How can this be allowed? This technology is the same as our department's information technology, it's top secret."

The leader frowned and looked at academician Zhang. He knew what was going on. This academician Zhang was not convinced because of what happened last time.

Academician Zhang was capable, but his heart was still a little lacking. Moreover, his ability was far inferior to that academician Qin.

The leader sighed and said,"fellow Zhang, I know about this."

" ? ? ? "Fellow Zhang furrowed his brows and said unwillingly, " leader, that's our technology. We can't just give it to an outsider like this. It'll make the people in the hospital feel disheartened.

The leader didn't say anything. He just asked, " academician Zhang, how's your research on the resin and polyethylene? "

there's no progress for now, " academician Zhang said with a frown. but we'll try to find a new method as soon as possible.

The leader didn't say anything. He just handed a USB to academician Zhang.

Academician Zhang was confused as he took the USB and asked, ""Leader, What is this?"

The leader said, " academician Qin has already developed the technology for the resin. He should be sending the polyethylene material over soon. The Institute gave Linlin's laboratory an intelligent system and cooperated with them to produce big white.

"Ah ... How is that possible?" Fellow Zhang exclaimed in shock. He didn't even look like he was in disbelief.

This was the truth?

All of a sudden, he looked at the USB drive in his hand and suddenly felt like a clown.

[Chapter 1576 725-Big White Is Produced \(1\)](#)

Academician Zhang still couldn't believe it, but since the leader said so, he had no choice but to take the USB back to his Department.

As soon as academician Zhang returned to the Department, he immediately gathered his researchers and pulled out all the information from the USB.

"All of you, do your best to experiment with the technology in this information. It's best if you can produce a finished product." Academician Zhang immediately ordered the researchers.

The researchers immediately took action upon hearing the order.

These people were actually very capable. Otherwise, they wouldn't have been called to this special Department.

So, it didn't take long for a researcher to exclaim, "

this information, how is this possible? this is the technique of resin acid.

seriously, these technologies are so much better than the information we've researched.

"Fellow Zhang, where did you get this technology from? This can definitely be used to make resin."

".."

Academician Zhang's expression turned ugly.

In other words, academician Qin really created this technology. Looking at the shocked and even excited researchers in front of him, he felt very sad.

They really couldn't beat him.

"Al!" In the end, academician Zhang could only sigh.

.

Linlin's laboratory.

Qin Lin followed professor Lin to Linlin's laboratory, along with Minister Lu and a man he had brought.

The other party was Guo Tao, an academician in the intelligent system Research field at the Chinese People's Hospital.

This time, the other party had come with the technology for the artificial intelligence system.

Furthermore, they would be participating in the project to research big white with Linlin laboratory.

Academician Qin was in charge of making big white, and they were in charge of implanting the research intelligent system.

When they arrived at Linlin's laboratory, Shen Li was already waiting for them. Chairman Qin had asked him to prepare a very Advanced Server in advance to host the artificial intelligence system brought by the academician Guo Tao.

"President Qin, Minister Lu, come with me." Shen Li waited for Qin Lin and the others to arrive and immediately led the way.

Not long after, he entered a laboratory building and opened a laboratory full of servers.

Guo Tao directly took out a USB drive, connected to the servers, and then began to transmit a type of data.

This process took a long time, and the big screen in the middle of the servers lit up with special code, which jumped wildly.

Guo Tao said, "Minister Lu, boss Qin, professor Lin, it will take some time for the technology of the intelligent system to be uploaded. When the time comes, it will take about half a month to build a separate artificial intelligence system."

"Academician Guo, I'll have to trouble you then." Minister Lu nodded and said to Qin ran, ""Chairman Qin, I'll have to rely on you to make big Bai. Now that the resin technology is out, it's time to look at the polyethylene material."

Qin Lin smiled and handed a USB to professor Lin. He said, professor Lin, this is about the polyethylene material. Go and produce it immediately.

Minister Lu was shocked by his words.

He thought that boss Qin was already very fast at producing vinegar, but he didn't expect boss Qin to be able to even produce polyethylene.

It must be known that all the countries had spent countless manpower and resources but were still unable to produce these technologies.

But boss Qin did it all by himself.

Professor Lin quickly took the USB and said, ""Chairman Qin, Minister Lu, I'll go handle it now."

He was rather impatient.

After all, with his ability, he would never be able to produce this kind of technology. Now, he had the opportunity to participate in this experiment because of Chairman Qin.

Therefore, he naturally had to seize the opportunity.

Naturally, Minister Lu, Shen Li, and the others were also looking forward to seeing da Bai.

Qin Lin also thought of something and immediately took out his phone to call Lin Lanzi.

"Chairman Qin, do you have any orders?" Lin Lanzi immediately asked.

Mr. Lin, " Qin Lin instructed immediately, " go and purchase the rights to use da Bai's appearance. Remember to be secretive. Don't let anyone know that we're the ones who want to buy it. Otherwise, they're going to ask for an exorbitant price.

"Da Bai? Alright, I got it. " Lin Lanzi's voice was obviously filled with surprise.

With her previous experience with Optimus Prime and Megatron, she immediately understood that her boss wanted to make Great White. Otherwise, he would not have bought Great White's copyright for no reason.

This made her look forward to it.

.

Time passed.

In the blink of an eye, a month had passed.

Over the past month, academician Guo Tao had already constructed the artificial intelligence system for the server and had begun testing its deployment.

Now, all he had to do was wait for da Bai to produce it, and he would be able to construct an artificial intelligence system that solely belonged to da Bai. Although it wouldn't be as amazing as the one in the movie, it would still be a huge contrast.

And that day came very quickly.

Qin Lin was sitting in his office, operating his game character to complete his daily tasks for the day. He saw professor Lin rush in. Chairman Qin, the polyethylene material is ready. We can start making white now. We just need the design for White's outer appearance.

Qin Lin stood up immediately after hearing this. Without hesitation, he took out a design from the drawer.

This design was the design for da Bai's appearance.

The blueprint wasn't very useful before, but with the tree bark and polyethylene, he could take it out.

[Chapter 1577 Da Bai Is Out! 2](#)

Da Bai's design is ready. Let's go to Linlin's laboratory now. Qin Lin handed the design to professor Lin, and the two of them went to Linlin's laboratory together.

When they arrived at the specially prepared laboratory, Qin Lin saw that the people inside were experimenting with a black material.

The black material was in the shape of a stick and was very flexible. A few machines were used to bend the material, making it bent out of shape.

However, the key was that the material did not break. After being released by the machines, the material quickly returned to the shape of a stick without any bending.

This was the polyethylene material used to make da Bai's body.

Chairman Qin, " professor Lin explained, " the test on the polyethylene material is almost complete. With the addition of the resin and the design for da Bai, we can start making da Bai.

Qin Lin nodded and called Shen Li over. To make da Bai, they first had to go through da Bai's design and mold it. Once the mold was made, they could use it to make da Bai's parts and finally assemble it.

When Shen Li arrived, he immediately made the arrangements after knowing the purpose.

Linlin's laboratory had a specialized film molding Department, so it could easily produce the molds for da Bai's parts.

Under Shen Li and Qin Lin's personal instructions, the mold was quickly produced, and they could start making white.

..

Beijing.

Minister Lu returned to the Hua * Yuan.

This time, he came back with the polyethylene technology.

He went straight to the special Department and met with academician Zhang.

"Minister Lu, you ... You're back?" Academician Zhang was a little embarrassed to see Minister Lu. After all, he had complained to the leaders twice.

In the end, he seemed to have become a clown.

Their entire Department hadn't made any progress on the resin, but academician Qin had already succeeded.

This was a huge blow to them.

Minister Lu didn't waste any time. He was here to attack academician Zhang, so he directly handed a USB to academician Zhang and said, ""Academician Zhang, this is the polyethylene material developed by academician Qin junior. Take it back and understand it as soon as possible. Don't be so confused when academician Qin junior puts the ready-made technology in front of you."

His words were a little harsh.

However, academician Zhang didn't dare to refute it. After all, the truth was that they were far inferior to academician Qin.

At this moment, Minister Lu received a call and exclaimed, ""Really? The polyethylene material had been successfully tested, and boss Qin had also come up with the design. Alright, I'll be there right away ..."

After saying that, Minister Lu hung up the phone and left in a hurry.

Academician Zhang, who was holding the USB, looked even worse.

That academician Qin was already making big white.

Was he really that powerful?

After receiving the news, Minister Lu rushed back to Linlin's laboratory. When he arrived, he saw that the production line in the laboratory had already started running.

One by one, the parts were being produced on the production line.

Some of the parts could already be seen to be used to assemble big White's torso and outer body.

On the side, there were also researchers checking if the parts were up to standard.

"Head Part 01 is qualified."

"Torso part 07 qualified!"

the mechanical skeleton's sliding cover is qualified.

"The inflation device is asymmetrical."

All the parts were basically passable, but on his first try, there were still some parts that failed.

In addition, the inflatable device was a very important component in da Bai's production.

As everyone knew, in the movies, da Bai was usually kept in a box. When the box was opened, it would be inflated through the air-inflating device, and then it would become round and stupid.

Now that there was a problem with the parts of the inflatable device, he definitely could not do that.

Professor Lin immediately entered the production line and checked it. After a while, he found the problem. It's the mold. The person who polished it wasn't serious enough. One of the corners wasn't polished properly.

When Shen Li heard this, he immediately made a phone call and said, "Get over here."

It was no wonder he was angry that the mold Department had made a mistake in such a big experiment. After all, the mold Department was the least technical department in Linlin's laboratory.

A moment later, a middle-aged man ran over in a panic. After knowing what was going on, he immediately guaranteed it. Then, he angrily took out his phone and ordered his men to reshape the inflatable device's mold.

Because of this, the parts for the inflatable device were only completed.

Professor Lin immediately led the researchers into the production line and began to assemble the parts.

Not long after, a rectangular box appeared in front of everyone.

Other than the fact that the box did not have any materials to spit out, it was basically the same as the one in the movie.

"Chairman Qin, are you going to start it?" Professor Lin asked Qin Lin.

"Come on, Minister Lu," Qin Lin said, shaking his head.

Minister Lu didn't refuse. He walked directly to the rectangular box and pressed a button on it.

The next moment, a special sound rang out from the button. Then, the lid of the box opened, and a snow-white figure came out. It was quickly inflated and became round.

Following that, a silly and adorable da Bai appeared in front of everyone.

Unlike in the movie, da Bai didn't have artificial intelligence, so it couldn't greet people like in the movie.

"Pull it out," professor Lin immediately ordered.

Immediately, a special machine was operated and brought to the top of da Bai's head. It then wrapped da Bai in its arms and lifted him out of the box.

Without an AI system, da Bai couldn't activate many of its functions, nor could it display them.

After da Bai was taken out, professor Lin took out a remote control and began to control it.

The remote control was only usable without artificial intelligence. Although it wasn't as flexible as an artificial intelligence system, it would still be able to move da Bai.

After professor Lin took control of the remote control, da Bai began to move as well. Da Bai's joints began to move nimbly, and it began to walk forward.

"Amazing." Minister Lu immediately exclaimed.

The Chinese Academy was well-versed in the study of machines, so they naturally knew what level the robots were at. They could walk, but they definitely couldn't walk nimbly.

Even the most advanced country in robotics couldn't produce such a flexible robot.

Professor Lin pressed another button on the remote control, and da Bai's knees began to bend before it suddenly leaped high into the air.

There seemed to be some sort of movement within da Bai's body, and he suddenly flipped in mid-air before landing on the ground.

This was also da Bai's signature move in the movie.

Now, it had been realized in reality through Goblin technology.

This technology could definitely crush all the robot technology in the world. This was a revolutionary technology in robot research.

Da Bai's production team was here, so it was academician Guo Tao's turn to take action.

Da Bai was sent to the weapon service laboratory where the artificial intelligence system was built.

After da Bai arrived, Guo Tao began to adjust the artificial intelligence system for da Bai. This might be difficult for others, but it was a simple task for an academician like him.

This was because he was the most powerful person in this area.

Constructing an AI system for da Bai's use wasn't a very fast process. It required the AI system and da Bai's mechanical body to adapt to each other.

However, after a period of adjustment, a voice finally rang out in Linlin's laboratory. Hello, I'm da Bai. How may I be of service to you? "

Finally, the world-shocking da Bai was produced.

[Chapter 1578 726-Big White Against Big White? I Have To Be A Real Big White \(1\)](#)

Linlin's laboratory.

Qin Lin, Minister Lu, Shen Li, and professor Lin all looked at da Bai in shock.

At this moment, da Bai's eyes lit up. The artificial intelligence system had been activated.

"Do you need a physical examination? Da Bai will know what to do after you answer yes or no. " Da Bai asked Guo Tao.

This was a program designed by Guo Tao. As long as he met someone, da Bai would ask this question instinctively. Once a person had asked this question once, they wouldn't ask again for half a day.

Of course, this could be set. If you found it annoying, you could set this function.

This was one of the abilities of an artificial intelligence system, but it was far from the AI in the movie.

However, in the real world, the current artificial intelligence system could only do so much.

This was more than enough. The system and da Bai's functions were beyond the current era and were far ahead of the world.

"Yes!" Guo Tao immediately turned to da Bai.

Da Bai's head turned as he replied. A ray of light shot out from his body and fell on Guo Tao's body. He began to scan him.

"Boss Qin, is this medical scanning technology really useful?" Minister Lu asked curiously from outside.

"Well, we'll know when we see it." Qin Lin said with a smile.

A moment later, da Bai scanned it and said to Guo Tao, "Sir, your body is very weak, especially your kidneys. This is because you've been sitting for a long time. I don't have enough data here, so I can't recommend a treatment plan for you.

Guo Tao was embarrassed.

He's in the computer system Research field, isn't he just sitting there and facing computers all day?

The lack of information was naturally because the corresponding information had not been entered yet.

Da Bai's medical system and treatment effects were built on a large amount of data, so he needed to take out the data from the medical system and input it into it.

This information was not something that ordinary people could get their hands on.

Minister Lu was surprised. "This is really possible? It's amazing that this scan can detect a person's illness. This light has almost the same effect as an MRI scan."

This was indeed shocking.

Just this technology alone was already so many years ahead of the world's medical technology.

A single technology could shock the world.

Qin Lin smiled. there's still a lack of medical information. I can only judge some conditions. I'll have to trouble you for this, Minister Lu.

This was a very difficult task for ordinary people, but for Minister Lu, he only needed to make a phone call and he could get the information and data from any hospital.

Moreover, the medical research Department of the Chinese People's Hospital contained the most complete medical information in the country.

"Don't worry, it'll be transferred over soon." Minister Lu said and pulled Qin Lin inside. "Boss Qin, let's go and take a look too."

The two of them entered, and as soon as they got close, da Bai asked, ""Do you need a physical examination? Answer yes or no and da Bai will examine your body."

Minister Lu immediately said yes.

Da Bai's medical light immediately scanned his body, and a moment later, he said, ""Sir, you're in very bad health. You stay up late for a long time, so your liver is in very bad condition. There's also a problem with your gallbladder, and your nerve function is also somewhat chaotic ... Da Bai also found that there are many abnormalities in your body, but there's not enough information, so he can't make a judgment for you."

This made Minister Lu's expression turn ugly. After all, who would want to have so many problems with their body?

However, these judgments were very accurate because they had regular physical examinations, and he had this problem.

However, what could he do? the Department he was in charge of was sometimes very busy. Once he stopped, a lot of research could be delayed, which might affect the progress.

He had no other choice in this position.

"Do you need me to check your body? Answer yes or no and da Bai will examine your body." Da Bai asked Qin Lin again.

"Yes!" Qin Lin also tried to answer.

In the next moment, da Bai also began to scan his body.

It didn't take long before da Bai began to speak again, " Sir, you're very healthy. There's nothing wrong with your body. You're also very strong, stronger than an ordinary person.

This made Minister Lu look at Qin Lin.

His physical fitness was beyond that of ordinary people. It seemed that boss Qin had also taken the body-increasing potion.

However, when he thought about the strict requirements of the body-increasing potion, he couldn't help but admire boss Qin. Boss Qin was really awesome, he could even do that.

Guo Tao asked again,"Minister Lu, do you want to show off da Bai's combat power?" However, I don't have any karate information, so I only entered some domestic martial arts information."

"Yes, I'll take a look." Minister Lu nodded his head.

He also knew about da Bai's abilities. In the movie, da Bai had the ability to do karate, but that was something from a foreign country. Their country had their own martial arts, so naturally, they had to enter their own country's martial arts data.

Guo Tao started fiddling with da Bai's body, and he saw da Bai start to get into a fighting stance, followed by a variety of martial arts moves.

This martial arts routine was a bit like those martial arts performances, without any response and reaction.

There was no other way. After all, there was no real artificial intelligence, so it could only operate based on a set program.

Following that, Shen Li called two security guards over. The two security guards were holding knives.

[Chapter 1579 726-Big White Against Big White? I Want To Be A Real Big White \(2\)](#)

Shen Li immediately instructed the two of them to attack da Bai.

The two security guards were both retired soldiers, so they were quite good at fighting. They immediately picked up their knives and began to attack da Bai.

Da Bai's AI system was indeed not up to par. Even though there were martial arts routines, he was still struck by the blades of the two security guards.

However, da Bai's defense was extremely strong, so the blades were unable to harm him at all. All they could do was leave behind a series of scratches.

Besides, da Bai's martial arts techniques were all routine, but the two security guards were also in a lot of pain from just one hit.

It would be very difficult to destroy da Bai without the use of firearms or other powerful weapons.

Minister Lu couldn't hide the excitement on his face when he saw this.

"Amazing, amazing, this is a real robot." boss Qin, " Minister Lu couldn't help but ask, " after da Bai's technology is shared with the Chinese Academy of Sciences, can we display it to the public? "

technology in the field of robotics is now a way for countries to show off their technological strength, so I plan to hold a world auxiliary robot exhibition so that all countries can bring their auxiliary robot technology here to show.

when the time comes, we'll let da Bai slap them in the face. We'll let the whole world know that our technology is very advanced. Not only are machines like Transformers strong, but we also have high-tech support robots. This should be able to greatly boost the confidence of our people.

"That's no problem, Minister Lu," Qin Lin nodded.

It was necessary to boost morale sometimes.

Otherwise, why would every country announce to the world whenever they had any technology that was leading the world?

This was also why America loved to hold such conferences and expos!

It was because their skills were very strong, and they were confident that they were better than other countries. They simply showed their fists, and everyone was happy while the others were just a foil to them.

Their country had never held such an exhibition before. After all, there was no technology that could lead the world before this.

As for his transformer figurine, purification grass, and floating duckweed, the whole world already knew about them. Even if you held an exhibition related to these areas, people would not be willing to come.

After all, who would be so stupid to be slapped in the face?

Therefore, he had specially organized the auxiliary robot and excluded the Transformers.

Apart from Transformers, the technology of auxiliary robots was still the best in countries like America and ointment country.

That's right, the technology of the ointment nation's auxiliary robots was very strong, especially on the robots that simulated real people. Naturally, this robot was female, with a silicone skin and a very good feel ...

The technology of this type of auxiliary robot was the king when it was at its peak.

As for the beautiful country, they really had auxiliary industrial robots that were very useful. They were indeed ahead of other countries in this regard.

As for their country, in their eyes, they only wanted things like cleaning robots and xiaodu.

Many Western countries had also ridiculed their country's robot technology.

At this time, if they proposed to hold a World Exhibition, the other party would definitely agree. They might even have the idea of bringing robots to smash the place.

When the time came, he would bring out da Bai, and everyone would be dumbfounded.

Minister Lu was thinking about this, which was why he asked.

He was relieved after getting Qin Lin's approval.

Da Bai's experiment was almost complete.

The next step was to input the data.

In Minister Lu's eyes, da Bai was already perfect.

For the rest of the time, Shen Li asked the laboratory to start producing white. They had to produce at least a batch of white.

Minister Lu was going to hold a robot exhibition, so he needed a batch of white.

Moreover, the exhibition was confidential, and da Bai could be sent into the scenic Area to serve the tourists after it was over.

Not long after.

Department head Li left you city with a special escort vehicle, which was the first big white.

If they were going to hold a robot exhibition, they had to let the higher-ups know about da Bai.

Not long after, Minister Lu brought da Bai to Beijing and informed several leaders.

After the leaders saw da Bai's functions, they were immediately attracted by it.

In their eyes, da Bai's technology was already extremely terrifying and could crush the entire world, even if its intelligence was still barely satisfactory.

The leaders would definitely agree to the world robot exhibition proposed by Minister Lu immediately.

Therefore, not long after, an invitation to all the countries in the world appeared on the internet. The general meaning was that they were going to hold a robot exhibition and invite all the countries to participate.

In this case, as long as they had a little bit of auxiliary robot technology, they would have to come. It was a goading method, otherwise it meant that they didn't dare to participate.

After all, this was what the exhibition meant.

The United States naturally received the news very quickly.

Trump was also invited to a Department as soon as possible.

This Department was the mecha Research Department.

Once they arrived, the person in charge said respectfully, "Mr. Trang, have you seen the invitation on the internet? That country is holding a robot exhibition and even invited us."

"Yes, I see it." okay. Trang nodded.

He was actually a little helpless and even a little unwilling to do so. After all, he had always wanted to get some technology from that country. Unfortunately, he had never succeeded. Was it a waste of effort every time?

The person-in-charge immediately said, "Mr. Trang, you also know that other than the Transformers, our robot assistance technology is stronger than that of any other country in the world. That Eastern country must have developed some kind of robot assistance technology and wants to show it off. However, they don't know that we have also developed a kind of medical assistance robot.

this is probably because the Transformers gave them a lot of confidence, so they thought that they were the best in terms of auxiliary robots. This time, we've found a breath of air in this area.

after all, the Transformers movie is a huge blow to our people. So, we'll need Mr. Trump's transportation channel and sponsorship to attend the exhibition.

that's not a problem, " Tim immediately replied. he just likes to see the eastern country suffer.

thank you, Mr. Trang. The person in charge said.

Oh? " Tim asked curiously, " I wonder if I can take a look at your department's auxiliary medical robots? "

of course, " the person in charge nodded. Mr. Trang, please follow me.

Then, the person-in-charge brought Tim to the core of the Department and saw a white figure that surprised him.

"Da Bai?" Tim was surprised.

He naturally recognized the robot.

After all, the product of that movie was very famous in their country.

although this Great White is far worse than the movie in all aspects, we have found the corresponding replacement technology. after all, it's impossible to make resin and polyethylene in the real world, " the person in charge said. so, even if this replacement technology only has a small effect, it can crush everything.

"Yes." that's right! Tim nodded immediately. Even if the materials only had some of the effects in the movie, this product was still incredible.

.

At the same time, in the office of Linlin Manor, Qin Lin was looking at the game screen in his mind in surprise. He saw a figure appear on the ranch. It was Elba the GNOME.

He immediately understood that Elba was here to give him the designs of the great sage, the great sage equal to heaven, the bull Demon King, and other Transformers.

However, when he saw Elba, he was reminded of one thing, and that was to use the Hua Hua hospital's artificial intelligence system to the public.

Then, he could make a real da Bai at home, just like the one in the movie.

He didn't know much about Goblin rune technology, but he could ask Elba to give him one. After all, Elba's father would be able to make it.

A real big white was still very attractive, and he could get little Qin Feng to accompany him.

After all, apart from being a medical robot, da Bai was also a companion robot.

[Chapter 1580 Big White Against Big White, I'm Going To Throw! 1](#)

Qin Lin saw the image in his mind and immediately locked the office door. Then, he entered the game with a thought.

As soon as he entered the game, he saw Elba, who had been waiting for him.

"Hey, friend, you're finally back." Elba immediately ran up to Qin Lin when he saw him.

Qin Lin looked at Elba with a smile and said, ""Elba, it seems you've brought me good news."

Elba nodded, took out a stack of blueprints, and handed them to Qin Lin. these are the designs for the great sage, heaven's equal, the bull Demon King, and Erlang immortal master's transmogrification gold. My father has already made them all. Do you want to go and take a look? "

When Qin Lin heard this, he immediately nodded and said, "Yes, I'll go take a look."

"Let's go!" Elba immediately called out to Qin Lin and led him out of the ranch, heading towards Mount goddesses.

After passing through the dense forest, they quickly arrived at the wet forest.

This was the place where Elba had fun. As soon as he arrived, he saw three domineering mechas, which looked exactly like the great sage equal to heaven, the bull Demon King, and the Erlang immortal master.

In order to display it, Elba took out another sensory device and took control of it.

Although it had a brand new appearance, the operating system was still the same as the previous Transformers.

The only difference was that it looked cooler.

There was also his fighting style. The great sage, heaven's equal's cudgel-wielding was so powerful that it was far superior to Optimus Prime and awe-inspiring heavenly Marshal.

There was also true Lord Erlang, who was brandishing his Trident.

Qin Lin was stunned.

At this rate, even Optimus Prime and Wei zhentian would be completely crushed if they fought against them.

This was like a battle between an ordinary person and a martial arts expert. The ordinary person would definitely be completely crushed by the martial arts expert.

After the three Transformers were shown, they began to transform again, turning into three cars.

Qin Lin was sure that these three things would shock everyone if they were made. They would not only be the National-style Transformers, but also an upgraded version.

Combining martial arts with machinery, to be precise, it was an upgrade in technology. He was more powerful than before.

Soon, Qin Lin understood. After all, Elba had previously acknowledged the great sage, heaven's equal.

This was because the oldest version of the game was made by the country of plaster. The country of plaster owned Journey to the West and had even filmed it.

That was why there was a Journey to the West in this world.

If Elba's father knew about Sun Wukong, it was entirely possible that he had added some martial arts elements like sun Wukong's.

"Friend, how is it?" Elba asked.

"Yes, it's very powerful. It's much better than the original one," Qin Lin nodded.

"Then our deal is complete." Elba was clearly very happy, and didn't seem to want to owe anyone a favor.

Qin Lin thought of something and said to Elba, ""Elba, can I ask you for a favor?"

tell me, friend, " Elba asked, puzzled. I'll definitely help you if I can.

Qin Lin immediately explained, 'didn't you give me Great White's skills? We can create the appearance of big white, but we lack the technology to create intelligence. We can't figure out the artificial intelligence you Goblin runes create."

so, can you help me with an artificial intelligence system that you goblins made with runes? "

When Elba heard this, he said without hesitation, " of course. I can say that mine is bad and ask dad to make two more. I'll send them to you then.

When Qin Lin heard this, an indescribable joy appeared on his face. It seemed that it was very useful to talk to Elba. Now, Elba was simply a model of good friends.

Not long after, Qin Lin returned to the mountain path of goddess mountain and logged out of the game with a thought.

When he returned to the office, he received a phone call from Minister Lu.

He immediately answered the call.

Minister Lu's voice immediately came through, " boss Qin, the world robot assistant exhibition has been decided to start. It will be held in half a month at the International Museum in Beijing. Do you want to come? "

As da Bai's biggest contributor, Minister Lu informed Qin Lin as soon as possible.

"Minister Lu, you know I'm not interested in this kind of occasion." Qin Lin immediately refused Minister Lu's good intentions.

"Alright, I guess I guessed your answer." Minister Lu said with a sigh.

The two of them chatted for a while more before hanging up.

And in the next half a month.

The internet was also filled with news about the International robotics exhibition, and it was a hot topic every day.

This was naturally the higher-ups' intention. They wanted everyone to know about this so that when da Bai was finally brought out, everyone would be even more invigorated.

Moreover, it was very difficult for the netizens to not pay attention to this matter. Therefore, after half a month, this matter had become the focus of all the netizens.

Under such circumstances, the auxiliary robot exhibition began, and a Grand live broadcast was carried out.

In the live broadcast room, a large number of viewers poured in in a short time. The popularity was already great, and the people were also curious about the robot.

At the world Exhibition Museum in Beijing, Minister Lu arrived early in the morning with academician Guo Tao and academician Zhang from the special Department.

Academician Zhang's face was a little awkward, and he didn't say a word. He didn't fit in with Minister Lu and Guo Tao.
