

The Game 1641

[Chapter 1641 This Rice Cooker Is Too Incredible 2](#)

With the development of Linlin company, many branch companies had expanded their production lines. You city alone was not enough to provide the needed industrial land.

Therefore, it was inevitable that some factories would be expanded to other cities. They had to build new sub-factories in other cities.

After hanging up the phone, Deng Guang reported to Qin Lin. "Chairman Qin, I'll make this rice cooker as fast as possible and inform you."

"En!" Qin Lin nodded.

This was the current Linlin company's ability to carry out tasks. It was now on par with a super large corporation.

As long as there was new technology and tea farmers, the entire company could quickly build a new company and produce the products.

This was the power of capital.

This was also why Penguin and Ali had so many subsidiaries, sometimes even adding more than 20 subsidiaries in a day.

This was the power of capital.

Since Qin Lin had handed over the rice cooker technology to Deng Guang, he wouldn't care much about it. He nodded and handed the matter over to the other party.

Deng Guang also left immediately to deal with this matter.

The establishment of a subsidiary company required a lot of work. Just the new management was a headache. At the very least, the person-in-charge could not be randomly found.

When Deng Guang returned to the headquarters, a manager was waiting for him. director Deng, the rice cooker company has inspected 10 companies. After their analysis, three have already entered the inspection. They have already set off now. I believe the results will be out in two days.

"Yes." Deng Guang nodded his head. At least, he was satisfied with the group's elite's ability to carry out their tasks.

"Give me a copy of the information on the backup management and the backup talents in the group," he immediately ordered.

As a group developed, it was necessary to have a reserve of talents and management.

No matter if the company's senior executives left or retired, they must immediately have capable talents to replace them. Moreover, the newly opened subsidiary also needed capable management during the preparation time to quickly form a combat force.

The manager got the order and immediately nodded. He hurried out and then took out his mobile phone to make a phone call to gather his men to start working.

He was in charge of human resources, and he was in charge of all the Human Resources in the group.

Not long after, a stack of information was sent to Deng Guang's hands.

Deng Guang looked at it immediately. Not long after, he took out a piece of information.

Li Hong, Vice President of the pet food company, shortlisted 4 times, major involved: Business management,

Electrical appliance management, business planning management ...

Obviously, to become a top manager of a company like Linlin group, the management profession must be very extensive. Although it was not necessary, the more professional skills one had, the more competitive it would be.

For example, Li Hong had the ability to manage electrical appliances, which was one of the major majors in his University. Deng Guang had noticed it because of this.

It just so happened that the new product this time was a rice cooker, so this was his chance.

To the others, this was also a great fortune.

Not long after, Li Hong was called to Deng Guang.

Li Hong wasn't old, only in his early forties. To be able to become the Vice President of a subsidiary of the Linlin group at this age was obviously an achievement.

"Chief Deng." Li Hong immediately greeted Deng Guang respectfully when he saw him.

To be called to the office by this person, no matter what it was, it was definitely beneficial to him. At least, this person had noticed him.

Deng Guang did not waste any time and went straight to the point. Li Hong, there's an electrical appliance company in the headquarters that needs to inspect and purchase. You go and keep an eye on this. Also, get a production line to you city as soon as possible. We have a rice cooker technology here and we need to produce the finished product immediately.

Li Hong's eyes lit up when he heard this. He immediately promised, ""Don't worry, President Deng. I'll keep an eye on him seriously."

He was very clear that the headquarters would not set up a rice cooker production line for no reason. They even bought over an electrical appliance company. This meant that they were going to make a big move.

Now that CEO Deng had asked him to keep an eye on it, it would definitely be beneficial for him to keep an eye on it.

Li Hong quickly left the office. After understanding the situation, he got into the zone and started working.

Time passed. A week later, Qin Lin arrived at a factory in the Linlin industrial area.

Deng Guang had been waiting for a long time. When he saw Qin Lin, he immediately went up to him. Chairman Qin, the production line is ready. The first product is being produced, and the finished product should be out soon.

Qin Lin nodded and followed Deng Guang inside. A moment later, a middle-aged man came in. It was Li Hong.

"CEO Deng, Chairman Qin." When Li Hong saw Qin Lin, his face was full of restraint.

He was now one of the top executives of Linlin group, so he knew some things about the group and knew that this man was the boss.

Moreover, it was his first time meeting the boss, so he was under a lot of pressure.

He knew that if he could make the rice cooker, he would be the person in charge of the new electrical appliance company.

Now, he only hoped that the rice cooker technology was good. Otherwise, there would be a lot of competition in the electrical appliance industry.

Moreover, there were many types of rice cookers on the market now.

A technical person-in-charge quickly ran to Li Hong and reported, " boss Li, the first product has been produced. The testing team has tested it more than ten times and found no problems. They have also disinfected it.

Li Hong immediately turned to Qin Lin and Deng Guang and said, Chairman Qin, CEO Deng, the first batch of products is ready. Shall we go and take a look? "

Deng Guang nodded and invited Qin Lin to go to the production line together. Soon, they saw the rice cookers that had been produced.

Naturally, the exterior was a little rough. After all, it had not been carefully plated. It would be too rushed to do this later. The most important thing now was to confirm the performance.

Li Hong took the rice cooker and checked it, then ordered, " go get some rice. I want ordinary rice and rice of all grades. I also want a portion of Linlin rice.

Only by testing all kinds of rice together could he better know the effect of the rice cooker.

The comparison was also simple. Whether the rice tasted good or not, one would know once they ate it.

If the rice cooked by an electric rice cooker was mushy and had no taste at all, it was definitely not a qualified electric rice cooker.

Soon, all kinds of rice were brought over.

Li Hong immediately got someone to put the rice into the rice cooker and started cooking.

Not long after, a faint fragrance of rice wafted out from the surroundings. The rice was almost fully cooked.

Li Hong also immediately asked someone to bring two clean bowls and chopsticks. Then, he took out the rice from the rice cooker one by one.

"CEO Deng, CEO Qin, do you want to try some?" Li Hong immediately asked.

Deng Guang nodded and took a bowl of rice to taste.

Qin Lin was the same. After only two bites, his eyes lit up. The sweet taste, the texture, and the soft texture indicated that the rice cooker was a success.

However, he only knew the attributes of the rice cooker, so he was not too shocked.

However, to Li Hong and Deng Guang, it was too shocking.

They tasted two mouthfuls of rice and looked at the electric rice pots in disbelief.

The sweetness, texture, and softness were definitely not something that this rice could have, because they were only eating rice cooked with ordinary rice.

Only Linlin rice could have such a taste.

Then, the two of them went to the rice cooker and filled a bowl with the same rice.

After two bites, the two of them widened their eyes in surprise.

This was too unbelievable.

They had all eaten Linlin rice before and knew the taste of the Linlin rice. It was definitely not as good as this.

The taste and texture were simply elevated to another level.

They understood now that it was all because of the rice cooker. It was too magical.

[Chapter 1642 50 Million In Three Hours _1](#)

"Chairman Qin, the effect of this rice cooker is amazing." After Deng Guang finished the Linlin rice, his face was full of disbelief.

He had eaten a lot of Linlin rice. As a Senior Manager of Linlin company, it was easy for him to eat Linlin rice if he wanted to. He just had to make a phone call and the other side would send a lot over.

Now that he was eating the Linlin rice again, he immediately realized that the Linlin rice was not just a little bit delicious. It was on a whole new level.

He naturally knew that this was the effect of the rice cooker his boss had brought out.

He should have known from the start.

The things his boss brought out were not simple.

As expected.

However, it was really incredible that a rice cooker could have such an effect. It wasn't an exaggeration to say that it was black technology, right?

It could only be said that only Chairman Qin could do such a thing.

Deng Guang ate a little of the rice in the rice cookers.

The rice cooked by almost every rice cooker was very delicious.

Even if it was the simplest rice, the cooked rice was still very delicious. It was a level higher.

Deng Guang immediately turned to Li Hong and said, "director Li, please hurry up. We've already acquired the electrical appliance factory. We have to speed up the production.

Li Hong nodded and promised with a happy expression, "President Deng, don't worry. Our Linlin rice cooker will appear on the market as soon as possible.

He knew very well that the rice cooker had such an effect. Once it hit the market, it would definitely sweep the market.

Who wouldn't buy a rice cooker that could make cooking delicious?

Moreover, the effect of this delicious dish was so obvious.

He knew the price of rice cookers on the market. The most expensive one was the one launched by Mitsubishi. One cost nearly 10000 Yuan, and because of the brand's effect, it was still selling very well.

Their Linlin company's brand was much higher than the Mitsubishi's, and their rice cooker also had the same effect, so it would not be a problem to sell it for 10000.

The cost of the rice cooker was only 500 Yuan at most.

It could almost be said that the amount sold was the net profit.

Of course, the technical cost must be added to the cost. Just like Apple phones, the cost was low because the technical cost was added.

Their rice cooker had such an effect because their boss had spent a lot of money to develop it, okay?

The technical cost would definitely be added.

Moreover, if one rice cooker was 10000 Yuan, then selling 1000 of them would be 10 million Yuan. 10000 of them would be 100 million Yuan, and 100000 of them would be 1 billion Yuan.

If the Mitsubishi could sell hundreds of thousands of units a year, they could definitely sell more. This was a very big business.

Moreover, the future potential of this industry would exceed his imagination.

After Qin Lin checked the rice cooker, he returned to Linlin Manor.

After Deng Guang left, Li Hong also left you city.

Because the electrical factory he had acquired was not in you city, but in the industrial area in the provincial capital of min province, he had to work in min province in the future.

Li Hong went to the factory he bought and immediately called for a meeting with the factory's management. The finished product had already been produced in your city, so the production line here could be produced according to your city's process as long as the debugging was done.

It was a problem with the debugging of the template.

This was very simple. As long as a skilled and experienced mechanist could make the mold required by the process.

Therefore, in just a few days, the purchased factory began to produce at full capacity.

A week later, the entire factory had almost 5000 units in stock.

The selling price could reach 50 million.

Deng Guang was also the first to arrive at Linlin Manor to report to Qin Lin. Chairman Qin, the rice cooker company is ready, and there are more than 5000 products in stock. It's ready for sale. Do you want to be there? "

After all, this was the food company's first electrical product, and it was designed by Chairman Qin himself, so he naturally had to report it.

you can take care of the rest. You don't have to report to me. Qin Lin passed the items to Deng Guang and the rest. Naturally, he was no longer interested in these things.

"Alright, Chairman Qin." Deng Guang knew his boss's character, so he didn't say anything more.

After that, he gave Li Hong a call and left the rest to him.

After all, he was very busy and couldn't keep an eye on a subsidiary company. Naturally, Li Hong did a good job, so he didn't have to worry much.

However, he also gave Lin Lanzi a call.

The official account of the Linlin Scenic Area now had more than 250 million fans, which was the best publicity channel.

As long as Linlin Scenic Area could help with the publicity, it would have the best effect.

When Lin Lanzi received Deng Guang's call, she immediately answered it. Hello, CEO Deng. Why are you free to call me today? "

In terms of rank, she and Deng Guang were of the same rank, so she was very polite.

Deng Guang also explained his purpose, and Lin Lanzi naturally agreed. After all, they were both companies under Linlin. Sometimes, it was necessary for the business to help each other.

Therefore, it did not take long for Linlin Scenic Area to release a video.

When the video was released, it immediately attracted the attention of countless fans.

After many fans followed the Linlin Scenic Area, they would immediately follow the video posted by the scenic Area.

They already had the impression that the videos of Linlin Scenic Area were very popular and often caused trouble. They would be the first to watch the show, or the first to know if there was a new product in Linlin Scenic Area.

[Chapter 1643 50 Million In Three Hours \(2\)](#)

After all, Linlin's new products would be sold out in an instant every time, and the supply would not meet the demand.

Some people had already made a fortune by buying things like constant temperature grass and purifying grass.

However, the product mentioned in the video this time surprised everyone. It was a rice cooker.

Rice cooker?

These were just ordinary household appliances, and they didn't seem to be the high-end products of Linlin company.

However, to everyone's surprise, the Linlin rice cooker in the video cost 10000 Yuan.

This price left everyone speechless.

They didn't even need so much money to buy a computer, but now a rice cooker cost so much?

However, the moment many people saw the video, their first thought was to buy it.

After all, this was Linlin company's product, and its reputation was worth protecting. More importantly, if Linlin company dared to sell these things for 10000 Yuan each, it meant that these things were not simple.

Otherwise, why would Linlin company dare to sell a rice cooker for ten thousand Yuan? That would be destroying his own reputation.

Therefore, many people immediately commented and wanted to buy it:

"No matter what, we have to buy the products from Linlin!"

"I'm sure that this rice cooker is not simple."

10000 Yuan. If this rice cooker doesn't have a special effect, even Linlin company wouldn't dare to sell it at this price.

"Please give me the address."

"Please link!"

".."

Many people expressed that they wanted to buy it, but many people were surprised to find that there was no link to order this rice cooker, and they couldn't even find the address to order it.

This made many people anxious.

This situation explained one thing, which was that the function of the rice cooker was definitely not simple.

This kind of marketing indeed made many people more curious. You promoted the rice cooker, but not only did you not mention its function, but you also didn't even give the address of the order.

It was also because of this that the popularity on the internet spread quickly, and more and more people knew about the Linlin rice cooker.

Therefore, the publicity purpose had been achieved.

At this moment, Linlin Scenic Area released another video. This video gave everyone an address to buy rice cookers.

However, when many people were attracted to it, they realized that the address was actually a square in min province.

The Linlin rice cooker will be promoted here. People who want to buy it can go there and experience the effect of the rice cooker for themselves.

This was confidence. It was as if he was telling everyone that if they came to experience it, they would definitely buy it in the end. Therefore, they had to come personally and would not bring the ones they ordered online.

As soon as this news came out, it attracted a lot of people.

No matter what, they had to buy Linlin's new product and go to the venue.

This was the reputation that Linlin company had built for a long time.

Li Hong had set the location of the publicity at the central square of min province.

It was a well-known place in the provincial capital of min province. Many sports events in the province would start there before heading to the stadium.

Early in the morning, Li Hong arrived with the people from Linlin Electric Company. The entire square had been put up with banners and security.

Today, Linlin Electric Company had rented the entire square.

Similarly, the entire square was filled with many stages.

On these tables were electric rice cookers that were connected to an electric power source. Beside the electric rice cookers were bags of various kinds of rice.

The rice could be cooked with these rice cookers, and then the people who experienced it could taste it in person. This was the most intuitive publicity.

Only a company that had enough confidence in their own products could do such publicity.

Naturally, this attracted a lot of onlookers. Some came because of the news on the internet, while others were completely attracted by the commotion.

Chen Yong was one of the poor people who set up stalls in min province. He had been attracted here by the banner of Linlin company, so he came over to take a look.

He knew about Linlin company. There were very few people in min province who would not know about this company.

After all, this company had produced too many products, and there were too many products that were amazing. Ginseng that could treat myopia, hot spring that could grow hair, constant-temperature grass that could control temperature, pet food for people to eat, and Linlin leisure tea ...

It could be said that there were too many magical products.

Because the company was located in you city, which was part of min province, people in min province could get the benefits first and enjoy the products of the company the fastest.

For example, in min province, purification grass had been planted in many places. It could be said that the air in these places was very good, which made the living environment of the people in min province better.

Now that Linlin company was holding a promotional event in the square, he was naturally attracted to it, but he was more curious.

Soon, a person from Linlin Electric Co. Came out with a loudspeaker and said to the surrounding people, " as everyone can see, today our Linlin Electric Company will launch a new product, the rice cooker. In the square, we have prepared different types of rice, as well as our company's rice cooker. Everyone can come and experience the effect of our product for themselves, and you can decide whether this rice cooker is worth 10000 Yuan or not.

These words were also spread out through the loudspeakers around the square, so that everyone around could hear them.

Chen Yong finally understood what Linlin company's publicity was all about.

[Chapter 1644 50 Million In 3 Hours](#)

Therefore, when the alert bar was pulled open and everyone could go in to experience it, he entered the square at the first moment and came to a platform.

He definitely had to experience the 10000 Yuan rice cooker now that he was here. Otherwise, he would have watched the show for nothing.

Chen Yong walked to the platform and picked up an electric rice cooker to check.

To be honest, he couldn't tell what was different about the rice cooker from its appearance. He also saw that many people around him were doing the same thing, trying to see the difference from the outside.

Unfortunately, it seemed that everyone had failed, and nothing could be seen from the outside.

Chen Yong saw that someone was already washing the rice and putting it into the rice cooker to cook. He followed suit and began to wash and cook the rice.

The rice was just ordinary rice, no different from the ones he usually had at home.

As expected, there was an introduction to the rice at the side. It was a Volkswagen rice.

He washed the rice a little and put it into the electric rice cooker. He added water and turned it on.

It didn't take long for the rice to be cooked in the rice cooker. After a while, the fragrance of rice began to fill the air.

Chen Yong had been paying attention to the electric rice pot in front of him. After a while, the rice was ready. He turned on the electric rice pot, and as the steam dispersed, he saw the rice inside.

From the outside, the rice in the rice cooker was very full, which made people hungry.

Chen Yong looked at the bowl and chopsticks provided by the side and immediately filled a big bowl of rice for himself without hesitation. Then, he took the chopsticks and put two mouthfuls into his mouth.

However, after just two mouthfuls, his eyes revealed a look of disbelief.

The sweetness, texture, and softness of the rice were simply incredible.

He had never eaten such delicious rice before. Or was it really cooked with that ordinary rice?

He ate that rice every day, so it was impossible for it to be so delicious.

"This is unbelievable." A surprised voice was heard from the side.

that's right. This ordinary rice can actually be cooked so well.

you have to buy this rice cooker. It's totally worth the 10000 Yuan.

".."

After many people had tried it, they couldn't help but ask the people from Linlin Electric Company, wanting to get the rice cooker first.

Chen Yong was the same. Although he was a stall owner, he believed that as long as he bought this rice cooker to cook, the rice alone would attract a lot of customers. By then, he could easily earn back the 10000 Yuan.

Especially when this Linlin rice cooker was just released, the production should not be very high, and many people could not buy it.

Chen Yong saw that more and more people were asking the staff, so he immediately surrounded them to ask.

All of a sudden, the entire square was very lively. People were asking how to buy the rice cooker everywhere, forming a rush to buy it.

Fortunately, Li Hong had already arranged for a salesperson to sell the rice cookers, so they could pay for them on the spot. 5000 rice cookers were probably enough for a day's worth of advertising.

But obviously, he still underestimated the attraction of the rice cookers. 5000 rice cookers were sold out in less than half a day, or rather, they were sold out with only three.

The three sales figures had a sales figure of 50 million Yuan. This was not even an online order. They were all bought on the spot.

This was definitely a very magical thing. The effect of this marketing could make any company envious.

[Chapter 1645 760-Great Strength Recovery Potion](#)

The promotion of the Linlin rice cooker experience became a hot search on the same day.

It had to be on the hot search. He had sold 50 million Yuan in sales in three hours.

50 million in sales didn't seem like a lot to a company like Linlin company, but it wasn't strange for online orders to reach this amount. However, the on-site sales were astonishing.

Moreover, this meant that 5000 people had bought the rice cooker and experienced the magic of the Linlin rice cooker.

These people who had experienced it naturally knew the powerful function of the rice cooker and would promote it on the internet.

As there were only 5000 products, what would the first batch of people feel? That is, I have bought my pride, I have earned it.

At this time, these people would naturally try their best to promote themselves and make others envious of them.

Therefore, the internet was now full of topics about the Linlin rice cooker, and many people were showing off about it.

There were even people who posted a video of them using Linlin's rice cooker to cook rice, and they would get a lot of likes.

Therefore, Li Hong decisively opened the pre-sales of the Linlin rice cooker the next day.

What was even more incredible was that the orders for Linlin rice cookers had reached 300000 in a short time after the pre-sales were released.

This was even after Li Hong had ordered for the reserved passageways to be closed urgently. Otherwise, the number would have been even higher.

The factories they had purchased now could not bear too much production at all, and they had to work overtime to produce it.

However, even if there were only 300000 reservations, that would still be 3 billion.

They could use the money to buy a factory and increase the production of the rice cooker before the product was out.

Qin Lin naturally didn't pay any attention to this matter.

To him, it was meaningless. An additional subsidiary company would only increase the assets he could have by a little bit every minute and second.

However, to someone who had 100 billion in cash in his bank account, money was just a number.

He had never taken a single cent from Linlin company ever since it had been established.

If he needed it, whether it was Linlin company or Linlin's laboratory, they could transfer a large amount of cash to his account in an instant.

Linlin company and Linlin laboratory were cash-flow companies.

In the main hall of the manor.

Qin Lin looked at the four phoenixes helplessly.

Because of the binding, these four guys liked to be intimate with him, unlike red hair, little snow, little yang, and the others who had not broken away from their dependence on him.

The other little ones were also smart now. They would only call out to him when they needed it. Usually, they would run around freely, and the entire Manor alone was enough for them to play with.

Like wangcai, they could take xiaoxue around the entire Scenic Area. There were security guards everywhere, and no one dared to have any ideas about them.

Moreover, in the age of the internet, the quality of tourists was better. After all, no one wanted to be filmed and uploaded on the internet. They wanted to be well-known on the internet and embarrass their families in front of outsiders.

To give a simple example, in the past, some people went to a bar to drink and came out. Under the influence of alcohol, they dared to pee beside a tree.

If you try it now, there will be a few phones pointed at you and posted on the internet. When you take out something, you need to pee. When you see a phone, you'll be so shocked that you'll stuff it back.

Otherwise, he would be completely embarrassed in front of his family and friends the next day. His wife and children might also be embarrassed.

Qin Lin looked at the four phoenixes that were approaching him. He had no choice but to take a pack of pet food and feed them.

After the four phoenixes were full, they flew out of the hall and played. Qin Lin returned to his office to complete his daily tasks.

Fishing, cutting trees, and mining!

Unfortunately, he didn't find anything. They were all things he had seen before.

However, when he was in the middle of mining, he suddenly saw a prompt appear on the game screen. A short guy had appeared.

Who else could that short man be other than ah ni, whom he had not seen in a long time?

When Qin Lin saw this scene, he knew that this guy had brought something good to his door.

He immediately controlled his character to head to where ah ni was and clicked on him. This time, a row of ellipses appeared above ah ni's head.

This meant that it was another plot mission outside of the game's established program.

Qin Lin finally understood. This must be another private mission. It was not part of the game's plot that required him to personally talk to ah ni.

After locking the door, Qin Lin entered the game with a single thought. He soon saw ah ni waiting at the entrance of the farm.

This time, ah ni's image was completely different from before. He was wearing overalls and a fashionable suit, looking like a successful man.

It seemed that the dwarf had been living a good life recently.

"Hi, friend, we meet again. I'm really happy to see you." Ah ni immediately greeted Qin Lin with a smile.

ah ni, long time no see, " Qin Lin said with a smile. it seems like you've been living a good life recently.

because I'm the boss now, " ah ni said proudly. many dwarves have come to me to renovate their greenhouse trees. Friend, I need your help now. I need more greenhouse tree designs. By the way, I can exchange them with items. Can I get 20 greenhouse tree designs for these two formulas? "

As he spoke, he handed Qin Lin two sets of information.

Qin Lin took the two documents and immediately read the information.

[great recovery potion: special potion recipe]

[this is a special potion formula. After using it, you will obtain a special formula for the great rejuvenation potion!]

[Chapter 1646 760-Great Strength Recovery Potion](#)

[Great Awakening potion: special potion recipe]

[this is a special potion formula. After using it, you will obtain the special formula of the Great Awakening potion!]

Qin Lin's eyes lit up when he saw the two formulas.

The Great Awakening potion and great rejuvenation potion were special potions in the story of the farm. Many players would make a lot of these potions when they had the versions of these two potions.

In the game, the great rejuvenation potion could immediately recover stamina, while the Great Awakening potion could immediately recover fatigue.

This thing was very useful.

In the game, at least the character would not show signs of fatigue.

However, in the real world, it didn't seem to be very useful. After all, ordinary people didn't need to use it to recover their strength and fatigue.

Don't tell me you need this to move bricks?

Although he had yet to obtain the exact formula, he knew that it would not be cheap to produce it. It was impossible for an ordinary person to buy it just by carrying bricks.

This thing should be more useful in the Army.

When an Army was fighting or carrying out special missions, with this thing, not only would they not get tired, but they would also not be exhausted.

Special Forces soldiers could recover physical strength and fatigue at any time. If they could guard you for a month, no one would be able to escape if you let down your guard and they suddenly attacked.

It could be said that this thing was often a sharp weapon on the battlefield.

Even if the military war was not taken into account, the people sent to outer space to transform the small planet would still encounter a lot of problems on that small planet.

If they had these two things, they would definitely be able to help them solve a lot of problems.

Thinking of this, Qin Lin turned to ah ni and said, "Ah ni, I agree to your request. I'll give you the 20 greenhouse tree designs now."

As he spoke, he exited the game with a thought and went to the office. He took out the greenhouse tree design that he had printed and placed in the drawer before, and then counted 20 pieces from it.

Then, he brought the 20 greenhouse tree designs into the game. When he saw ah ni again, he handed the 20 greenhouse tree designs to him.

"Ah ni, I hope these designs won't disappoint you." Qin Lin said with a smile.

After ah ni received the 20 greenhouse tree designs, he looked at them with a face full of joy. After a while, he said happily, "Friend, your greenhouse tree design is amazing. It's exactly what I need. I won't disturb you any longer. I'll take my leave first."

Ah ni said as he left with the greenhouse tree design.

When Qin Lin got the two formulas, he immediately chose to use them.

In the next moment, the two formulas began to glow and turn into light spots before disappearing. Then, a stream of information began to flow into his mind.

The information was the data and information about the two formulas. The names of the medicinal herbs were also quickly imprinted in his mind.

It didn't take long for Qin Lin to get all the information about the two formulas.

Moreover, the great strength recovery potion and great Awakening potion could indeed restore physical strength and recover from fatigue.

Then, Qin Lin immediately logged out of the game and began to search for the names of the herbs required to make these two potions.

However, after comparing the names of those herbs, he frowned slightly.

This was because two of the materials needed to make these two potions were not available in the real world.

There was a medicinal ingredient for both the great rejuvenation potion and the great Awakening potion that could not be found in reality.

The herb that the great strength recovery agent lacked was called Big Green grass.

The herb that the Great Awakening potion lacked was called little green grass.

That's right, Big Green grass and little green grass were just two perfunctory names.

Although the names were perfunctory, they were two special medicinal herbs.

Qin Lin immediately looked at the screen in his mind and controlled his game character to go to the seed store in ore town. Then, he checked the inventory of the seed store.

He wanted to see if the store had the seeds of the two herbs, Big Green grass and small green grass. Otherwise, he would not be able to make the two potions.

Fortunately, after searching for half a day, he still found these two herbs in the seed shop. These were two herbs from Level 4 land.

[Big Green grass seed: special]

[this is a special medicinal material that can be used to make a special great rejuvenation potion. The planting requirements are very high. The seeds have very high environmental requirements, so it's very difficult to grow them!]

[little green grass seed: special]

[this is a special herb that can be used to make a special awakening potion. The requirements for the seeds are very high. The seeds have high environmental requirements and are difficult to grow!]

After Qin Lin found the two herbs, he didn't hesitate to buy the seeds of the two herbs. Then, he controlled his game character to return to the farm.

He had bought quite a few seeds.

After controlling his game character to return to the farm, he immediately entered the game and took out a portion of the seeds.

Qin Lin logged out of the game and planted the remaining seeds in the game into two level 4 plots of land.

Then, Qin Lin looked at the seeds that he had brought outside.

In the game's note, the big and small grass seeds had very high requirements for the planting environment. The seeds also had high requirements for the environment and were difficult to grow.

He didn't know if these two seeds could be planted successfully in the real world.

According to the remarks, planting it was a bit difficult.

Qin Lin opened the office door and walked out with the seeds. He asked Yu Shui to bring some flower pots for cultivating the seeds.

At the same time, he also took out some special soil from the warehouse to cultivate the seeds of the large and small green grass.

No matter how difficult it was to grow the seeds of the big and small green grass, it would be easier with the help of special soil.

Yu Shui had always been very efficient. It didn't take long for him to send some flower pots over. Then, according to Qin Lin's request, he mixed special soil with ordinary soil and filled the flower pots.

After the pot was filled with soil, Qin Lin also transplanted the big grass and small grass seeds he brought out into the pot, wanting to cultivate them.

If he didn't cultivate these two herbs in the real world, he wouldn't be able to make the great rejuvenation potion and great Awakening potion.

Academician Hao walked out of the hall and stretched his body. He happened to see Qin Lin planting the seeds.

"Boss Qin, what did you come up with this time?" Academician Hao subconsciously thought of this.

In his mind, if he didn't cultivate something new, boss Qin wouldn't grow anything himself.

So, he immediately took out his phone and took a video of Qin Lin, who was busy, and sent it to Minister Lu.

He seemed to have fully displayed his role as a Messenger.

Minister Lu would definitely be very happy to see this news. One must know that Minister Lu had always hoped that boss Qin would put his mind on research instead of wasting his time on work.

Beijing.

Minister Lu soon received the video from academician Hao and saw Qin Lin, who was busy.

"Boss Qin must have come up with something new." Minister Lu said subconsciously. Then, he took out his phone and dialed his Secretary's number. "Help me book a ticket to Ming city. I'm going to you city."

Minister Lu was curious about what boss Qin was researching this time.

He could have made a call to ask, but he gave up after thinking about it. If he made the call now, he wouldn't have any expectations. If it was really something too good, he was afraid that he wouldn't be able to control his excitement before he went to you city.

Time passed.

The night passed by quickly.

The next day, Qin Lin looked at the game screen in his mind as soon as he got up.

This was because the large and small grass planted in the game had matured and were harvested by the dwarves and put in the storage room.

When these two herbs were planted, he could make great strength-restoring potions and great Awakening potions.

Qin Lin washed up, ate something, and went out. He called Chen dabeï over and asked him to buy some other things.

In order to make the great rejuvenation potion and great Awakening potion, other than the Big Green grass and the small green grass, he also needed other medicinal materials.

[Chapter 1647 You Can Go Without Sleep For Ten Days To Half A Month](#)

Chen dabeï had rushed over as soon as he received Qin Lin's call.

He was probably the person who ran errands for his boss the most. Moreover, he had always thought that he was the most loyal employee of his boss and the closest subordinate to his boss.

But now, many people were copying him. For example, Yu Shui. Recently, the boss had asked her to run errands for him more often than he did.

Yu Shui must have learned from him, and she had learned all the essence of him running errands for the boss.

Therefore, there was even competition in running errands now, and the pressure of competition was extremely high. What kind of world was this?

"Boss, what's your order?" When Chen dabeï arrived at the manor, he immediately asked Qin Lin about it. He did not take a break or rest.

Qin Lin immediately wrote a list and handed it to Chen dabeï. "Buy some of the things on this list and report to mo Xiao from the finance department."

Big Green grass and little green grass couldn't be bought in the real world, but the other ingredients could be bought.

It was just that these things were still a little more expensive than ordinary medicinal herbs.

This was also why he believed that ordinary people would not buy this thing for no reason. Moving bricks did not need this thing to recover.

After all, no one would buy this thing just to exercise more at night with their girlfriend, right?

No one would be so bored, right? After all, using these two items would not only restore his physical strength but also recover his fatigue. He would not feel tired and could really fight until dawn.

Naturally, no ordinary person would buy it, right?

After all, it was really a little expensive.

So, this society was really unfair. In the future, even if you had money, you would have an advantage in this kind of sport. This would make many people who had the capital but didn't have money curse, right?

After Chen dabei left, Qin Lin locked the office door and entered the game. He took out two sacks from the ranch house, walked to the storage room, and put the big and small grass that the dwarves had harvested into the sacks.

When he was almost full, he took the two sacks and logged out of the game with a thought, leaving the two sacks in the office.

However, it was not enough to make potions with only the materials. He also needed special tools to extract the potions.

This included alcohol lamps, perforated filters, flasks, condensing tubes, conical flasks, and some other utensils.

He didn't need to buy these things. Linlin's laboratory had a lot of them.

He called Deng Guang directly and told him his request. It didn't take long for someone from the laboratory to send a whole set of pharmaceutical extraction tools over.

Qin Lin also quickly arranged the tools in the office, then took out the big grass and little grass to do the initial extraction.

The names of the Big Green grass and small green grass were a little casual, but the medicinal value was very high. After all, they were the main ingredients of the two potions. Moreover, it was a little difficult to extract.

After all, the roots and leaves were close to real green grass, and it was quite difficult to extract useful juice from them.

If a university student who had just started studying Pharmaceuticals were to extract it, it would be impossible to extract it perfectly.

In the future, when this thing was produced, it would also indirectly increase the value of these two potions.

However, Qin Lin obtained the two formulas directly from the formula information. The extraction method was also directly printed into his memory and muscle memory. It was as if he had operated the extraction process countless times.

Therefore, it didn't take long for Qin Lin to extract the medicinal liquid of the Big Green grass and the small green grass from two containers and mark both containers.

Now, they just had to wait for Chen dabei to buy all the other materials.

Chen dabei moved quickly. It did not take long for him to buy all the materials needed to make the great rejuvenation potion and the great Awakening potion.

But to Qin Lin's surprise, apart from Chen dabe, who was carrying a lot of things, there was also Minister Lu, who was covered in dust.

"Boss, I've bought the stuff. Where should I put it?" Chen dabe entered the office and immediately asked, ""I met Minister Lu when I came in."

"Put the things there first!" Qin Lin pointed to a corner of the office.

Then, he looked at Minister Lu in surprise, ""Minister Lu, why are you here?"

boss Qin, I heard you're planting something again. I have to come and see what you're planting this time, " Minister Lu explained immediately.

Qin Lin was surprised. Minister Lu, I just planted this thing. I didn't expect you to know about it. You even came here first.

He immediately guessed that it must be Big Green grass and little green grass.

These were the only two seeds he had planted recently.

Moreover, the three academicians of the Chinese Academy of Sciences and some staff members are in the manor. They should have seen it and reported it to Minister Lu, right?

Minister Lu didn't dwell on this question. He asked anxiously, ""Boss Qin, what are you training this time? Don't make me anxious."

Boss Qin pointed at Big Green grass and little green grass and said, ""These are the two herbs."

Then, he pointed at the liquid on the two containers. these were extracted from those two herbs. I was just about to use them to make a special potion.

Minister Lu immediately ran to the corner to check the Big Green grass and small green grass. When he saw the two things inside, he said in surprise, ""Why do these two things look like grass?"

[Chapter 1648 You Can Go Without Sleep For Ten Days To Half A Month](#)

Qin Lin nodded with a smile. it does look like grass, but it's a medicinal herb. It's specially cultivated. I saw this in two Chinese medicine recipes, so I tried to cultivate it.

The great rejuvenation potion and great Awakening potion were medicinal formulas, and they could be pushed to the level of Chinese medicine secret recipes.

what's the effect of this formula? " Minister Lu hurriedly asked.

Qin Lin smiled and said, "I'm making it now." Minister Lu will know when I'm done."

Minister Lu was speechless. Boss Qin was obviously trying to keep him in suspense.

But he didn't ask further. After all, boss Qin would know the effects of these two potions after he made them.

Qin Lin had also instructed Chen dabe to bring over the herbs he had just bought. Only after the medicinal liquid of these herbs had been extracted could the medicinal liquid be concocted.

Chen dabei immediately brought the things over. Under Qin Lin's instructions, he handed the herbs to Qin Lin in an orderly manner.

Qin Lin also spent some time extracting the medicinal liquids from those herbs and then put them into different vessels.

Naturally, after these medicinal liquids were extracted, it was not necessary to mix them together to complete the preparation. This was not possible.

After the extraction of the medicinal liquid was completed, it still needed to be prepared according to the order of the medicinal liquid and the proportion.

He could only concoct two potions if he followed every step correctly.

Qin Lin took a container and began to make the great strength-recovering potion. It took him about ten minutes to make a great strength-recovering potion.

However, this potion couldn't be used immediately. It had to be left to be fused for an hour.

The preparation of this potion was that troublesome.

Qin Lin put the potion aside and began to make the Great Awakening potion. He had to follow the order and proportion to make the potion.

Similarly, after spending more than ten minutes, he had also concocted a Great Awakening potion.

After the two potions were prepared, he put them aside to ferment and wait.

Naturally, the amount of two potions was not small, and it was not just one person's portion.

If it was used to divide one person's portion, it could be divided into many portions.

An hour passed by quickly.

He immediately checked the information of the two potions through the truth Jade.

[great recovery potion: special]

[this is a potion that can recover one's strength. The effect is very good after drinking it:[stamina recovery +3]

[Great Awakening potion: special]

[this is a potion that can recover fatigue. The effect is very good after drinking it:[fatigue recovery +3]

Just by relying on medicinal herbs, he was able to produce an attribute +3. It could only be said that the recipes of these two items were really magical.

Minister Lu saw that Qin Lin started to split the two types of medicine and immediately asked, ""Boss Qin, can you tell me now? What are the effects of these two potions?"

"Minister Lu, do a hundred push-ups first," Qin Lin said to him with a smile.

"What?" Minister Lu was immediately dumbfounded.

I asked you about the effects of the potion, and you want me to do push-ups?

And a hundred?

Who are you looking down on?

However, Minister Lu thought of a possibility. Boss Qin asked him to do this, which should be related to drugs.

Therefore, he decisively did push-ups.

Qin Lin and Chen dabeai were dumbfounded.

An average person would find it difficult to do more than 10 push-ups, but what they saw was that after Minister Lu did push-ups, he quickly did more than 10 push-ups, and it was the standard kind.

Just like that, one after another, Qin Lin even counted the number of push-ups for her. In the end, she actually did more than 40 standard push-ups.

This was not right.

A leader like Minister Lu did 40 standard push-ups? is he joking?

Chen dabeai subconsciously clenched his stomach, suddenly feeling a little ashamed.

It shouldn't have been like this. He was suddenly struck down.

"Minister Lu, you're amazing." Qin Lin couldn't help but give Minister Lu a thumbs up. please visit panda-:)NOVE1.co)m

"Without a strong body, how can you contribute to the country's scientific research?" Minister Lu said proudly.

Qin Lin really couldn't refute this. After all, he really did do 40 push-ups.

Qin Lin looked at Minister Lu's sweaty face and asked tentatively, ""Minister Lu, why don't you do another 40 push-ups?"

Minister Lu looked at Qin Lin with resentment and asked, ""Boss Qin, is my push-ups related to this medicine?"

Qin Lin nodded. it's a little related. It's fine if you don't do it.

"Do it!" Minister Lu said simply, then rolled up his sleeves and began to do push-ups.

This time, he didn't complete 40 push-ups, as the standard push-ups were too difficult.

However, he did another 20 or so, and finally fell to the ground.

After a long time, Minister Lu finally got up and asked, ""Boss Qin, can you tell me now? What is the effect of this potion?"

Qin Lin then handed a bottle of great strength-restoring agent to Minister Lu and said, ""Minister Lu, drink this and you'll know its effect."

Minister Lu had been waiting for this. He had already guessed it, but Qin Lin didn't say it, so he didn't dare to try it.

Now that he heard Qin Lin's words, he didn't hold back anymore. He directly took the great strength-recovering agent and poured it into his mouth.

Then, Minister Lu's face revealed a look of disbelief.

Almost as soon as the strength-recovering potion entered his stomach, he felt a very comfortable feeling in his body. Then, the energy he had used up in the push-ups was quickly recovering.

Moreover, the recovery speed was so fast that he couldn't believe it.

Minister Lu finally knew the effect of the medicine.

It was simply unbelievable.

This potion could recover stamina.

This wasn't the first time boss Qin had made this kind of stamina recovery medicine, right?

The Linlin leisure tea had such an effect, but the recovery effect of the tea was limited. The medicine recovered almost instantly.

This was simply an upgraded version of the Linlin leisure tea, or rather, an enhanced version of the upgraded version.

After all, the Linlin leisure tea only recovered +1 stamina, but the great strength recovery potion recovered +3 stamina.

The two items were not on the same level at all, and there was no way to compare them.

Minister Lu hurriedly asked Qin Lin, ""Boss Qin, this potion is amazing. There are many uses for it. Is there a way to mass produce it?"

Qin Lin smiled. as long as we can cultivate the materials, we can naturally produce it in batches. The seeds I planted are the materials for making this potion.

"Boss Qin, what's the other drug?" Minister Lu immediately asked.

Qin Lin immediately explained, " Minister Lu, this is another kind of medicine for recovery. It can help you recover from fatigue. Even if you don't sleep for a night, you can still recover your energy immediately after drinking this.

it actually has such an effect ... Minister Lu was completely shocked.

He even thought about how magical it would be if the two potions were mixed. He also knew what the potions could be used in, such as military Wars.

Then, he thought of Qin Lin's body-strengthening potion, special fiber fabric, and color-changing book.

This was already a combination of superheroes and super combat suits. How terrifying would it be with the help of this potion that could recover stamina and fatigue?

He couldn't believe it. If such a small team were to carry out a beheading operation, who could stop them?

This would be everyone's nightmare.

However, Minister Lu had not experienced the effect of the awakening potion yet. He wanted to experience it for himself.

So, when night fell, he decided not to sleep and stayed up all night.

Moreover, he stayed up all night until the next morning, and then he was in a state of extreme fatigue.

Minister Lu also drank the Great Awakening potion in this state. Then, he was completely shocked. He felt that the fatigue disappeared in an instant, and his whole head became very clear.

This was unbelievable.

With this Great Awakening potion, he could probably go without sleep for ten days to half a month.

[Chapter 1649 A Special Admission Ticket \(1\)](#)

After Minister Lu found out about the effect of the Great Awakening potion, he could no longer hide the joy on his face.

Really, he thought of the greatest use of these two things, which was the transformation of the planet.

This was the first time humans had ever done something like this on a planet. The planet's gravity and atmosphere were both problems.

Without these two things, it would be difficult for people to survive on that planet. Wearing a spacesuit was very physically taxing, and even sleep was a serious problem.

This was a challenge to the planet's transformation, especially to the operators who had to control the Transformers. It was tiring.

If he had these two potions, he would definitely be able to solve this problem and speed up the transformation of the planet.

Minister Lu thought about it, washed up a little, and hurried to see Qin Lin. "Boss Qin, is there any way to mass produce these two potions? This thing is too useful."

Qin Lin naturally knew the use of these two things. However, seeing how anxious Minister Lu was, he immediately said, "Minister Lu, the two main medicinal herbs for this thing still need to be cultivated. Only when these two medicinal herbs are cultivated and can be planted on a large scale will it be possible.

yes. Minister Lu nodded and asked again, "can you make a batch of these two drugs now?"

Qin Lin nodded. that won't be a problem. We can make a batch of the materials first. I'll get Linlin's people to make them later.

When Minister Lu heard this, he immediately said, ""Then I'll have to trouble you, boss Qin. This thing is very useful."

Qin Lin nodded. He called Shen Li and asked him to come to his office.

"Chairman Qin, do you have any orders?" Shen Li also arrived at the manor at the first moment.

He knew that if his boss called him personally, it must not be a small matter. When he saw Minister Lu in the office, he was even more certain.

Mr. Shen, I'll email you two formulas later, " Qin Lin said immediately. ask the people in the laboratory to prepare the two potions according to the formulas. You can bring back the main ingredients for the two potions later.

President Shen, " Minister Lu reminded him, " these two drugs are very important. Please keep them a secret.

"Yes, I know." Shen Li wasn't a fool. The boss had personally instructed him to do so. Even if Minister Lu didn't remind him, he knew to keep it a secret.

Not long after, when Shen Li heard the effects of the two potions, he couldn't stay calm anymore. He also knew why Minister Lu had specially reminded him.

The effects of this potion were too great. As long as one wasn't a fool, they could figure out the uses of this potion.

So, when he returned to Linlin's laboratory, he immediately gathered the relevant researchers and asked them to start preparing the potion.

In the following days, Minister Lu stayed in Linlin Manor. He had to wait for Qin Lin's progress in cultivating the Big Green grass and the little green grass.[please visit panda-: \)NOVE1.co\)m](http://www.panda-1.com)

The seeds of the Big Green grass and the small green grass had been planted, and they began to sprout in a week.

However, even with the help of the special soil, it was still very difficult for the big and small green grass seeds to germinate. More than half of the seeds did not germinate.

This was probably why the remark said that these two seeds were difficult to cultivate and grow.

Without the aid of special soil, not many would germinate.

However, it was a good thing that some of them had sprouted. After these had been selected and cultivated, if they were planted again, the survival rate should be higher. If they were planted in large quantities, there should not be a problem.

During this time, Linlin's laboratory had also prepared a batch of potions and handed them to Minister Lu.

After Minister Lu got the batch of potions, he rushed back to Beijing as soon as possible.

The Chinese Academy was about to launch another rocket to send a batch of supplies to the modified planet.

As soon as Minister Lu arrived at the Hua * Yuan, he went to a special Department immediately. This Department needed to go through layers of checks and verification before one could enter.

After being verified here, Minister Lu got into a special car and took the batch of potions to a mountain in Beijing. He entered an entrance excavated in the mountain.

There was a secret base here, and it was in charge of the planet's transformation.

One could see that the entire base had already produced a series of Transformers and then sent them to special launchers.

After that, these launchers would be sent into rockets and launched into space together.

These Transformers were completely different from the ones made by Linlin's laboratory. They were all made of Special Metals that could withstand space work.

Moreover, these Transformers were equipped with special weapons and even powerful self-destruction systems, which could carry out high-intensity space work.

Minister Lu went inside and saw a person-in-charge in military uniform walking out. "Minister Lu, since you're in such a hurry to come over, you must have some surprise for us, right?"

The person-in-charge's attitude was very good, and he felt like he was about to pull Minister Lu into his arms.

After all, everyone knew the importance of the project he was in charge of.

Right now, while all the countries were still fighting intensely within earth, and even the fight between the two bears was the most closely watched matter in the world, they were already focused on space and modifying a small planet.

[Chapter 1650 A Special Admission Ticket \(2\)](#)

If the transformation of this small planet was successful, they could use the small planet as radiation to transform the surrounding planets. At that time, to be honest, even if Earth's strategic weapons were all launched and destroyed the earth, they wouldn't care.

Trust him, when the time comes, their country's voice will be louder than anyone else's.

At the International Conference, if they had any opinions, they could just ask who agreed and who disagreed.

Of course, the premise was that the planet had to be modified first.

And this planet transformation really needed the help of Minister Lu's Chinese Academy of Sciences. Plus, this planet transformation could only be carried out because of the breakthrough in rocket technology by academician Hao and the other two.

Furthermore, the purification grass, bubble grass, and Transformers technology would also be of great help to the transformation of the planet. This was all thanks to the technology provided by the Chinese Academy.

It could be said that Minister Lu was his thigh.

Now that this thigh had come to his door and said that there was something important, it must be something good.

I've brought you two types of medicine, " Minister Lu explained. they were developed by boss Qin. They should be of great help to you.

Then, Minister Lu told the person in charge about the effects of the great rejuvenation agent and the great Awakening agent.

When the person in charge heard about the effects of the great strength recovery agent and great Awakening agent, he knew that these two things would be useful for the transformation of the planet.

When he heard boss Qin's name, he was also very emotional. To be honest, that person was the real thigh.

He was also the one who created the Transformers.

Now that he had these two potions, the help would be even greater. It could be said that in the future, if history books recorded it, this person could be considered the behind-the-scenes driving force behind the transformation of this planet.

It was because of the technology of the other party that their planet transformation could be carried out so quickly.

The person in charge thought of something and said to Minister Lu, " Minister Lu, we are now facing two problems in planet modification. One is the atmospheric modification. With your special modification technology and the help of the purification grass, we have simulated it and can theoretically modify the atmospheric state.

however, there is no way to solve the gravity problem. Even with the current technology, it is impossible to achieve it. If this problem is not solved, then the transformation of the planet will only be a slightly larger space Station. People can't just float on land, right? "

Minister Lu frowned when he heard this.

The gravity of a planet was a very complicated problem.

Take earth as an example. The reason why objects had gravity was because of the universal gravitational pull between objects. Universal gravitational pull was universal, but according to the law of universal gravitational pull, $F = G \cdot \frac{M_1 m_2}{R^2}$ ($G = 6.67 \times 10^{-11} \text{N} \cdot \text{m}^2 / \text{kg}^2$), the universal gravitational pull between ordinary objects would be very small, almost negligible. Only objects with a large mass like Earth would have a more obvious universal gravitational pull on other objects.

The key was that gravity was an indispensable factor for the survival of the creatures on a planet.

Moreover, for the objects on earth, the gravitational force from the earth could be divided into two forces. One was the gravity of the object, and the other was the centripetal force of the object's circular movement.

Of course, this was just a simple theory. To really explain it, even the problem of using gravity was a very complicated scientific problem.

It was not that there was no gravity technology at the current stage.

They even had anti-gravity technology.

However, this technology could only be used on a small area. It was still very difficult to transform a planet on a large scale.

Hence, gravity had become one of the most difficult problems in the planetary transformation.

we're still trying to experiment with the gravity problem, " Minister Lu said. I can't give you an answer in the short term.

The person-in-charge gave him a bad idea."Minister Lu, why don't we cooperate with Linlin laboratory on gravity research?"

"I've also heard that boss Qin is very talented. Should we ask him to investigate the problem of gravity? Maybe there will be some unexpected gains?"

When Minister Lu heard this, he frowned without thinking. He seemed to be thinking about this problem.[please visit panda-11.com](http://panda-11.com)

This was possible.

After all, he had previously asked the netizens to vote for him to research some things, and boss Qin had fallen into his trap and researched them.

The gravity problem was indeed very difficult. If Mr. Qin wanted to give it a try, he might be able to do it with his talent. After all, Mr. Qin had started from nothing. He had only learned for a short time, but he had already mastered the research of plant and animal genes to such a terrifying extent.

Who could compete with boss Qin in the field of genetic research? There was also animal gene research. The crocodile that boss Qin had developed could make all those who studied animal gene feel ashamed.

It was just that the gravity research was a bit too long, and he didn't know if boss Qin could handle it.

The key was whether boss Qin was interested in this.

Minister Lu quickly handed over the strength recovery agent and the awakening agent to the person in charge, then left in a hurry and went back to the Hua * Yuan.

As soon as he returned to his office, he took out a document and began to write an application. It was naturally about gravity research.

As long as the cooperation was handed over to Linlin laboratory, boss Qin might be interested once he found out.

In that case, boss Qin might be interested and come up with something. That would be great.

.

In the Linlin Manor, Qin Lin had no idea that Minister Lu was setting him up again. He had already completed his daily task. Seeing that there was no gain, he closed the door of the office and then entered the game world with a thought. He planned to explore the game town, and maybe there would be unexpected surprises.

After all, he had obtained the rice cooker technology while shopping.

Qin Lin, on the other hand, was suddenly interested in the processing machine experience Hall. He took a taxi to the processing machine experience Hall in ore town.

After the upgrade, he had never experienced a real processing machine.

Soon, Qin Lin arrived at the processing machine experience Hall in ore town. After entering the hall, he saw the various processing machines that could only be controlled by his game characters.

However, the processing machine in the real world was different from the one in the game. The control interface was very complicated. He was shocked to find that he didn't know how to control the processing machine at all.

This was a bit of a pain in the ass. After all, he could control the things that the game characters could control in the game. Now that he had come in personally, this thing was completely high-tech on the level of science fiction. He didn't know how to control it at all.

In the end, he had no choice but to leave the processing machine workshop experience. However, the moment he stepped out of the workshop, he discovered that there was a planetarium next to the workshop.

There was no such thing as a planetarium in the game. This was the difference between the real mine town and the mine town in the game after leveling up.

When Qin Lin looked at the planetarium, he was attracted by a slogan outside: "Do you want to listen to Dr. Gao's astronomical topic? If you get the admission ticket, you can participate. You might even have the opportunity to invest in professor Gao's research and obtain the corresponding technological results!"

When Qin Lin saw the notification, he was suddenly interested. He went forward to check and saw the information on this so-called doctor Gao.

This doctor Gao was the world's most powerful astrologer.

As for why no one invested in the world's best research expert and why people still had such an investment opportunity, it was probably a mechanism problem in the game world.

In the real world, as the most powerful astrologer, he was not afraid of not having enough funding for his research. As long as he was willing to work for any country, that country would fully support his research.

Seeing this, Qin Lin no longer hesitated. He directly entered the planetarium and chose to buy an entry ticket for professor Gao's astronomical project.

A moment later, he paid enough gold coins and received an entrance ticket. He also saw the information on the ticket:

[an astronomical professor's admission ticket for the astronomy project:Special]

[this is an admission ticket to a special high-tech project. You can listen to space radiation, space rays, planet gravity, planet life ... There will also be opportunities to invest in professor Gao's research, and you will get the corresponding technology.]
