

The Game 1651

[Chapter 1651 I'm F * Cking Speechless Because Of This 1](#)

After Qin Lin read the remarks of the admission ticket, he found that this thing really had a lot of room for manipulation.

First of all, doctor Gao had too many topics to talk about, and there were too many topics to listen to.

The key was to listen to these research topics and invest in high-ranked doctors to obtain the corresponding technology. In other words, he could use an admission ticket to listen to any technology he liked and then invest in high-ranked doctors to obtain the corresponding technology.

This was a f * cking selection of soldiers and generals. It all depended on which one he chose.

Then, Qin Lin realized that there seemed to be a BUG in this. The planetarium didn't say that one could only listen to one professor's research project, right?

It seemed to be so.

With that thought in mind, Qin Lin entered the planetarium again and carried out a series of operations.

When he came out of the planetarium again, he had a stack of admission tickets in his hand.

[astronomical professor's astronomical research project admission paper:[special!]

.

[an astronomical professor's admission ticket for the astronomy project:[special!]

Qin Lin looked at the remarks and felt that it was amazing!

Then, he was a little eager to try.

However, this was a new function, and he didn't know what it was like to listen to the topic. Therefore, he exited the game to check on the situation.

When he returned to reality, he looked at the game world again. Unfortunately, when he looked at the admission tickets again, they were all filled with question marks.

In other words, this entrance ticket could only be used when he entered the game. Otherwise, he could no longer use it to control the game character.

He was looking at the game screen when his phone rang. It was a call from Shen Li.

He immediately picked up the call and heard Shen Li's voice, " Chairman Qin, there's something I need to discuss with you. The Chinese Academy of Sciences has sent us another cooperation project document. It's about the research of planetary gravity technology. This time, the first batch of research funding from the Chinese Academy of Sciences has reached 100 billion!

but I've asked the experts in the laboratory, and none of them are good at this research. Even if they are good at this research, they don't have any confidence and dare not express their opinions.

so, I can only ask you if our laboratory can take on this Cooperative Research project.

Qin Lin was completely stunned when he heard this.

It was a research on the planet's gravity.

He had just received admission tickets to some of the professor's projects, and he didn't know what classes he would be attending.

The Chinese People's Hospital had actually offered such a research cooperation project and even invested 100 billion Yuan.

Wasn't this too much of a coincidence?

Qin Lin suddenly felt that he was being monitored by Minister Lu. Otherwise, how could he explain this?

Qin Lin thought for a while and said to Shen Li, "Promise the Chinese Academy that no one can do this research, so I'll do it myself."

What a joke.

It would be a waste not to accept the 100 billion. please visit panda-:~)NOVE1.co)m

Anyway, he didn't have to do the research himself. He could let professor Gao do the research later.

When he got the technology, he would be the middleman and sell it to the Chinese People's Hospital for 100 billion.

What's the big deal?

When Shen Li heard Qin Lin's words, he immediately said, ""Okay, Chairman Qin, I'll go and inform the Chinese Academy."

After that, he hung up the phone and began to contact Minister Lu from the Chinese hospital.

Minister Lu had been waiting for news from Linlin's laboratory.

After all, the study of the planet's gravity was a very big topic. Even with so many experts and academicians working together, they still couldn't make much progress.

He didn't know if Linlin's laboratory would work. Of course, the key was whether boss Qin would fall for it.

However, to him, that 100 billion was nothing.

This was a huge sum of money, but it was not a huge sum of money for a country.

If 100 billion could get him the planet's gravity technology, it would be worth it.

After all, they had already invested tens of billions in gravity-related research. Even if they spent another 100 billion, it would be impossible to get the planetary gravity technology.

If he could use this 100 billion to buy a planetary gravity technology from boss Qin, it would be completely worth it.

As Minister Lu thought about it, he suddenly had a strange feeling. Why did he feel like he was playing a game and opening boss Qin like a blind box?

It was just throwing money, and whether or not they could get good things depended on luck?

Minister Lu's phone rang. He picked up the call as soon as he saw the number.

Minister Lu, our Linlin laboratory has accepted this research cooperation, and Chairman Qin said that he will personally conduct the research. Shen Li's voice came from the phone.

Minister Lu almost jumped up when he heard the reply.

It seemed to be the best news for Chairman Qin to study these words personally.

In other words, the 100 billion blind box was successfully opened?

.

Linlin Manor.

When Qin Lin arrived at the manor's Hall, he saw his son, Qin Feng, surrounded by three academicians.

When Qin Lin got closer, he heard little Qin Feng say, ""Three grandpas, I've drawn it. Do you really not want to study? Mom won't keep her word."

Zhao mo felt embarrassed.

She felt that this son of hers would be useless sooner or later and would definitely not have his father's achievements. Wasn't it for his own good that she let him study? He had not even started school yet, but this kid had already learned all the primary school syllabus. It was all thanks to the tuition, okay?

Qin Lin shook his head. In fact, he didn't know what to say to Zhao mochen. He was a little obsessed with his son's tutoring.

[Chapter 1652 I'm F * Cking Speechless Because Of This 2](#)

She had already given up on having Qin Feng tutor her, but who knew that after a few days, she had the idea of finding a tutor for Qin Feng again.

It should be known that other people looked for tuition teachers because their children could not learn in school. Little Qin Feng had to make up for it before he even went to school.

This was a little weird.

Academician Hao immediately replied to little Qin Feng, " yes, as long as little Qin Feng can draw it, Grandpa will tell your mother that she doesn't need tuition anymore.

Little Qin Feng seemed to believe academician Hao. He immediately took a pen and started drawing on the paper.

Qin Lin came closer and saw little Qin Feng drawing the structure of a component.

What surprised him was that the structural lines of this part were very clear. It didn't look like it was drawn randomly. Moreover, the structure was even more precise.

This did not seem to be a blueprint that little Qin Feng could see.

But now, little Qin Feng had drawn it out, which was a little shocking.

A moment later, academician Hao looked at little Qin Feng's complete drawing and couldn't help but be surprised. the structure of these parts is really full of technological sense.

Academician Fei and academician Zhu also nodded.

it looks like a part of some kind of flying model!

no matter what it is, little Qin Feng seems to be very talented in machinery.

The three academicians all agreed.

Little Qin Feng naively said to academician Hao, " Grandpa, do I not need tuition anymore? "

director Zhao, don't let little Qin Feng take those pills in the future. It's a waste of his talent. I'll find time to tutor little Qin Feng in the future so that he can learn some scientific knowledge in advance.

academician Hao immediately said to Zhao mochen.

Academician Zhu and academician PEI also agreed.

"If I have time, I can bring little Qin Feng along!"

"Yeah, I can do it too."

At first, little Qin Feng was happy to hear academician Hao's words, but later on, his little face collapsed.

He looked at academician Yan and the other two as if they were demons.

His young heart had never thought that these three seemingly kind grandfathers would be so terrifying.

Qin Lin, on the other hand, was deep in thought.

Little Qin Feng was obviously acting a little strange, and it did not seem to be just because of the fetus-beneficial gene score.

As Qin Lin was thinking about this, little Qin Feng noticed him and hurriedly ran over to him. He hugged Qin Lin's legs and said, ""Daddy, they're all bullying me. I don't want to study."

Zhao moyin was anxious. The three old academicians wanted to tutor her son. She didn't even dare to think about it. She was really afraid that her husband would suddenly say something and make the three old academicians give up on this plan.

She knew that the three old academicians would give her husband face.

Therefore, she immediately stepped forward and pulled little Qin Feng over, not forgetting to say to Qin Lin in a sweet voice, ""Hubby, you still have things to do, don't you?"

Qin Lin felt the art of threat in Zhao moyin's simple words at that time, so he could only nod seriously. Then, he ignored little Qin Feng's pitiful look and went straight to his office.

So, son, for the sake of your father's sexual happiness, I can only let you suffer.

Qin Lin locked the office door and entered the game with a thought.

He once again appeared in front of the planetarium. This was the perfect time to experience the admission ticket to professor Gao's research project.

After taking out an entrance ticket, he decisively chose to use it.

The system notification also appeared immediately.

[you have used the admission ticket for professor Gao's research project. What kind of research project would you like to listen to?]

Then, there was a row of options.

Qin Lin selected the planet's gravity without hesitation. The system notification appeared again.

[congratulations, you have chosen to listen to professor Gao's planet gravity topic. The relevant topic listening session is starting ... [the opening of the site has been completed. Please enter the planetarium!]

Qin Lin was amazed when he got the hint. How did this work?

Using the entrance ticket, one could directly enter the planetarium and arrive at the scene?

It was not like he had never entered this planetarium before. It was clearly empty.

Wasn't this ore town a real world? It actually had such a function?

He could only sigh at the awesomeness of the system. Naturally, the game's mechanisms were also very awesomed.

Qin Lin opened the planetarium and entered it.

This time, he found something different. There were many people gathered in the hall, and there was a very solemn podium.

Qin Lin even saw a triangular icon that was commonly seen in games lit up on one of the seats. please visit panda-:~)NOVE1.co)m

In other words, that position was his.

Qin Lin immediately walked to that seat and sat down. The triangular icon disappeared as well, and there were whispers all around.

I'm so lucky to be able to listen to professor Gao's research project.

yeah, professor Gao's research project is a rare opportunity. It's worth it this time.

"Professor Gao is the most amazing astrologer."

".."

Qin Lin knew that doctor Gao was awesome. After all, it was a game BUG.

A moment later, an old man with a tuft of white beard walked out. As soon as this old man appeared, a loud applause rang out from the surroundings.

This was professor Gao.

As soon as professor Gao went up to the podium, he began his speech, " everyone knows that gravity is indispensable on the planet we live on. Therefore, in the study of planets, the gravity of a planet is also an unavoidable topic. Today, I will talk about the gravity of a planet ...

The moment professor Gao opened his mouth, he started to talk like a river. He kept on talking about the knowledge related to the gravity of the planet.

Qin Lin only felt that this doctor Gao was very arrogant. Although he didn't understand what he said at all, he just felt that he was very arrogant.

The talk on this topic took a long time, and Qin Lin almost fell asleep. Suddenly, he received a system notification.

[are you willing to invest in professor Gao's planet gravity research technology? after the investment, when professor Gao develops the technology, you will get the corresponding technology. You can bid for the investment now, yes, no?]

When Qin Lin heard this, he immediately became interested and checked the situation.

He found out that professor Gao still needed to bid for the investment, and the current bid had already reached 500000 game gold.

Five hundred thousand?

Qin Lin was f * cking stunned.

He found it unbelievable. The Chinese People's Hospital wanted this technology, and when they sent out the document, they even gave him 100 billion.

Someone was offering 500000 Yuan to invest in this game?

This was an insult to this technology. He immediately increased the price by 20 times and directly inputted 10 million game gold coins.

Damn it, these people were too much.

After that, no one else would bid for the 10 million gold coins.

The people around looked at Qin Lin with a strange gaze, as if they were looking at a fool.

"Eh!" Qin Lin was speechless.

He naturally noticed that there was something wrong with the way these people were looking at him.

However, he didn't care. It was worth it to exchange 10 million game gold for a planet's gravity technology. In short, he had exchanged 10 million game gold for 100 billion.

This kind of profit, even those who did illegal internet business didn't have such a big profit, right?

[congratulations on your successful investment in professor Gao's research on the gravity of the planet. He will work hard on the research, and when he has results, he will mail the technology to you as soon as possible!]

After Qin Lin got the hint, he saw doctor Gao leave the podium and go behind the curtains, out of everyone's sight.

Qin Lin also noticed that the people around him had gotten up and left, so he had to follow them out of the planetarium.

When he entered the planetarium again, it was empty, just like it was at the beginning.

The game's mechanics were really amazing. He had entered the ore town in person, and the ore town had become a real world, but it still maintained its magical state.

Then, he tried to use another entrance ticket. If it worked, it would be a BUG.

Could he invest in all of professor Gao's technologies at the same time?

Thinking about that scene, he decided to try it out.

[I'm sorry, professor Gao is already researching the planet's gravity. He doesn't have time to talk about the related topic now!]

Qin Lin could only sigh when he received the notification. It seemed that there was no such BUG.

He also exited the game with a single thought.

As soon as he returned to reality, his phone rang with a message notification. He took a look and saw that it was a message from the bank that he had received 100 billion.

It seemed that Shen Li was too embarrassed to accept the 100 billion. After all, the laboratory didn't have such a talent. Since Chairman Qin wanted to do his own research, it was better to transfer the money to the boss.

Naturally, if the boss had any arrangements, he would definitely tell him.

However, Qin Lin realized that he had 200 billion in his card.

Looking at the number, he felt distressed. He didn't know how to spend it or where to spend it.

[Chapter 1653 Mithril-03](#)

Time flew by, and in the blink of an eye, a month had passed.

During this period of time, Qin Lin spent his time doing daily quests in the game and strolling around in the game. After that, he spent his time mining in the game.

Unfortunately, his luck was very bad. Even though he restrained himself and only dug one layer a day, he still didn't find anything.

On the other hand, the smile on little Qin Feng's face had obviously decreased in this month. The child's naivety had also decreased a lot, and he only had the trouble of making up lessons every day.

The three old academicians 'tutoring was really special.

It was said that the recorder sent by the Chinese Academy of Sciences had recorded this scene. This would definitely be an amazing scientific research Record in the future.

It must be noted that the three old academicians 'Rocket Power Research could even be applied to future spacecraft research.

If the three old academicians could complete this experiment in their lifetime, it would be interesting for them to tutor the little boss of Linlin company.

This was like three people with two bullets and one star giving a little kid extra lessons. What an amazing record!

It would be even more interesting if the little boss of Linlin company had some achievements in scientific research in the future. This was the legacy story of scientific research.

At that time, those media accounts would definitely write crazily: The little boss of Linlin company had only achieved such high scientific research achievements because he had been influenced by the three seniors in scientific research since he was young.

In any case, there would definitely be many versions of touching stories circulating among the people.

While little Qin Feng was being tortured, on a small planet in space, a space base had already been built.

There were still many people on it, surrounded by transmitters that often appeared in movies, and a specially built reception square for aircraft to land.

The person in charge of this space base was a bald man with bubble grass on his head. He was currently directing some operators.

One must know that he still had thick hair half a year ago, but after working in this space base for half a year, he went bald, so he simply shaved his head.

This was because he had used up too much mental and physical energy. One had to know that the operators were not bald, because they only used physical energy.

At this moment, there were screens in front of the operators, showing all sorts of perspectives.

Naturally, they were operating the Transformers and doing development work.

Around the base, many Transformers could be clearly seen operating, carrying boulders or waving huge digging tools.

This was a very shocking scene.

If the other countries were to find out about this, they would be in big trouble. They might even be forced to share their technology.

Unfortunately, it would be impossible for the other party to find out in the next ten years.

Unless they could also produce senior researchers like academician Yan, academician PEI, and academician Zhu, it would be impossible for them to make a breakthrough in Rocket Power technology within the next ten years.

Naturally, they didn't know that it was all thanks to the moonstone.

Therefore, 'unlikely' should be changed to 'absolutely impossible'.

"Sir, another rocket has been launched from our side." One of them reported to the bald man in charge.

"Quick, get ready for landing," the bald man immediately said.

A moment later, the entire base began to move. In the sky, rocket launchers slowly appeared and landed on the receiving square.

Several people came down from inside, and there was also a warehouse with supplementary Transformers and specially sealed cargo boxes.

When the bald man in charge got the great rejuvenation potion and great Awakening potion from the container, his eyes widened.

He was not touched.

He had already spent so much effort that his hair was gone, so why would the higher-ups send these two potions?

Were the higher-ups not even giving him a break?

F*cking tired people could still rest for a while. Now that they had sent this kind of medicine, they could recover after drinking a tube of medicine. What was the point of resting?

He was treating them like livestock.

After all, the higher-ups had sent this kind of thing here. How could they still have the face to rest?

In the end, the bald man could only sigh silently. For the sake of the transformation of the country, he could only go all out and die.

Qin Lin naturally didn't know about this.

After all, when he heard Minister Lu talk about the small planet project, he just listened and didn't care.

Wouldn't he be exhausted to death if he worried about everything? It didn't match his happy and easy-going personality.

In the office.

After Qin Lin completed his daily mission without any rewards, he controlled his game character to go to the spring mine and start mining.

For the past month, the two mines had been digging one layer a day without any harvest.

The ranches that had opened up after the upgrade should be almost done with their excavation. Every layer dug was one layer less, but there would not be many items.

[congratulations, you have excavated a piece of gold ore!]

[congratulations, you have excavated a piece of silver ore!]

.

Such a reminder made Qin Lin feel helpless. There was really nothing good for him.

Qin Lin had no choice but to continue digging. Suddenly, he was given a huge surprise.

On the game screen, after the game characters suddenly dug out, an anime scene appeared.

There was a flash in the animation.

A piece of silver ore was dug out, and the silver ore was also flashing with a light screen.

Qin Lin's eyes lit up when he saw this.

The appearance of an anime scene meant that something good had appeared.

[Chapter 1654 Mithril-03](#)

A moment later, a notification appeared.

[congratulations, you have excavated a piece of special metal, Mithril!]

Mithril?

Qin Lin couldn't help but look surprised.

He was not unfamiliar with Mithril. It was a term that could be heard in many movies. In many Western fantasy movies, Mithril was even a material used to make some kind of magic props, Holy artifacts, and divine artifacts.

However, that was only something that appeared in movies. Moreover, Mithril was also made up. No one had ever discovered a substance like Mithril in reality.

But now, he had found a piece of Mithril while mining here, which was a little different.

Although this Mithril was still a product of the game, it could be taken out of the game. The only thing was, was this Mithril similar to the Mithril axes and hoes that were made in the previous games?

Mithril farm tools all had magical effects, such as a Mithril hoe, which could dig several pieces of land, and a Mithril axe, which could cut down several trees in the surroundings.

It wasn't a big deal to see this in the game, but wouldn't this scene be very shocking in reality?

You swing your axe and all the trees around you fall.

This was a martial arts expert.

However, he didn't know if the Mithril that was excavated was the same as the Mithril hoes and axes that were made of Mithril.

Thinking of this, Qin Lin controlled his game character to return to the farm, then locked the door and entered the game with a thought.

He immediately saw the note of the Mithril:

[special Mithril-03: special!]

[this is a special Mithril type 03. It has special effects and can be used for various scientific research and technology. Energy conductivity +3!]

Obviously, this Mithril was different from the ones used to make Mithril hoes and axes.

However, Qin Lin's eyes also lit up when he saw the remark.

This was because this Mithril had an energy conductivity attribute of +3.

Energy transmission was a very popular topic in modern science.

To put it simply, many high-tech strategic weapons required good energy-conducting materials.

Moreover, the energy-conducting material's performance would often affect the weapon's power to a certain extent.

The stronger the conductivity, the more powerful the weapon.

Another simple example would be a transmission cable with a loss of about 10%. Even if some places used inferior or mediocre cables, the loss could reach 20%.

As for why such a cable was used, it was up to him to decide. He might not believe it even if others explained.

This kind of loss was very serious.

However, there was no other way. After all, the energy transmission loss was the only thing that current cable technology could do.

Now, the Mithril-03 had an energy conduction property of +3, which meant that the conduction was very good.

If it could be used in electric cables, it would greatly reduce the loss. If it was used in weapons, it would greatly improve the level of those weapons.

At this thought, Qin Lin took the piece of Mithril and logged out of the game. He then opened the office door and called professor Lin.

"Chairman Qin, do you have any orders?" Professor Lin also picked up the phone immediately and asked Qin Lin.

He was also very busy now. After making Chairman Qin's Transformers, he still had to build a small one for Linlin Scenic Area.

professor Lin, " Qin Lin said, " come to the Linlin Manor. I have a task for you.

Hearing this, professor Lin agreed decisively and left Linlin's laboratory in a hurry.

Since Chairman Qin said that he would give him a task, he must have researched something again and wanted him to help him refine the research.

This also made him eager to try.

If he had a finished product, it would not be difficult to refine the research data. Instead, it would give him a strong sense of participation.

Professor Lin arrived at the manor's office. When he saw Qin Lin, he asked, ""Boss Qin, do you have any orders for me?"

Qin Lin handed the Mithril to professor Lin. professor Lin, this is a new silver material that I've just created. It has a strong energy conductivity. You can take it to experiment with it. For example, you can try to see how it works in the transmission of electricity. After that, you can help me organize a set of research data and theories.

When professor Lin heard this, he immediately agreed. "Alright, Chairman Qin."

He knew his boss's personality. He was lazy.

Therefore, he didn't like to do this kind of thing, so he handed it over to an assistant, and he was the lucky one to be the assistant of Chairman Qin.

He naturally didn't think that his boss wouldn't be able to produce a scientific research data and theoretical report since he had already made the finished product.

That was impossible.

If he wasn't sure, he wouldn't be able to do these experiments. This thing couldn't have appeared out of thin air, right?

That was why Qin Lin was lazy.

He was very happy to do this. After all, with this finished product, he could benefit a lot from the process of analysis and research.

Professor Lin quickly left with the Mithril and returned to Linlin's laboratory.

When he arrived at his own laboratory building, professor Lin immediately called for his assistant and gave him some instructions on how to test the silver material.

Then, he began to study the silver material.

Since he knew that this thing had a very strong energy conductivity, he specialized in this area.

However, even though he knew that the silver material had a very strong effect on the transmission of energy, he was still shocked after studying it.

How could this energy conduction be just strong?

He's extremely strong, alright?

It was unbelievably strong.

He immediately asked someone to find a machine that made cables.

He remembered that Linlin's laboratory had one of these. It seemed that an electrical energy Research team had applied to purchase it. He had seen it before.

There was no problem in using it now.

After receiving the order, the person immediately went out to deal with it. Not long after, a set of equipment and machines were sent to professor Lin.

Professor Lin also began to study it.

He directly used the silver material given by Chairman Qin to replace the energy transmission material of the cable and then made a 100-meter transmission cable.

In general, a 100-meter cable made of raw materials would lose 10% -12% of power transmission. Now, it was time to see how much power loss the cable made of this special silver material would lose.

connect this electric cable to a power source and try to transfer electricity! Professor Lin immediately ordered a researcher to carry out the experiment.

The researcher nodded and immediately connected the electric cable to the two ends of the power supply.

This was a piece of cake for a researcher of this level.

The researcher then installed a special device on the transmission cable.

This equipment was borrowed from another research team to test the loss of power during the transmission process.

Moreover, the method was very simple.

For example, the amount of electricity that was transmitted at the beginning was a certain amount. When the electricity was transmitted to the device, there would be another amount of electricity.

The value obtained by subtracting the two values was the loss of electrical energy.

By then, it would be the amount of power loss.

Soon, the researchers at the side had everything ready.

Professor Lin immediately got the researchers to start the experiment. In an instant, there were electric sparks at the joint.

This was a normal situation.

High-voltage electric shock cables would be like this at the beginning.

As the power was transferred, the data on the testing equipment quickly jumped.

After the transmission of electricity was completed, the researchers next to them began to calculate the value obtained from the equipment.

The calculation of power loss was also simple. It didn't take long for professor Lin to get the result.

When professor Lin saw the power loss caused by the silver material, his face was full of disbelief.

The normal cable loss was about 10%.

Now, he had used this silver material to make the cable. After the power was transmitted, the power loss detected was only 0.05%.

There was only such a small loss, not even 0.1%.

The conductivity was too terrifying.

However, there was only one kind of electrical conduction at the moment. He didn't know if all energy conduction was the same.

If the transmission of all energy was so terrifying, it would definitely set off a revolution in energy transmission technology if the outside world knew about it.

[Chapter 1655 This Is The First Time I've Taken It So Seriously 1](#)

Professor Lin didn't dare to hesitate. He immediately ordered the other researchers, " quick, simulate other types of energy for the experiment!

The researchers received the order and immediately began the simulation experiment.

He could use a lot of energy now, and the simulation would take a lot of time.

As time passed, the energy-simulating experiments of the researchers were carried out at a rapid pace, and the conclusions were quickly reported to him.

Moreover, the results of each energy simulation experiment were very shocking.

This was because the energy loss for each result was not more than 1%.

This was absolutely terrifying.

It must be known that a type of energy that could reduce energy loss from 25% to 1% was definitely not something that could be replaced by any modern material.

After professor Lin received the results, he knew how powerful the silver was.

Then, he immediately began to analyze the energy of the silver.

He had to completely analyze the data of the Silver's energy and analyze the factor structure. Only then could he make use of the silver on a large scale.

Although professor Lin didn't have much ability in innovative research, he was very good at cracking the finished product.

He had already done many of such things.

It was just that this time, without a design, it might be a little more difficult. It was also a test for him.

After about a month, professor Lin had deciphered the rough factor structure of the silver material.

Why did he say roughly?

Because there were some aspects that he was really unfamiliar with, he had to ask for help from others. Otherwise, he wouldn't be able to completely crack the analysis.

However, after he asked Shen Li for help, he realized that there was no one in Linlin's laboratory who could help him in this regard.

He had no choice but to explain the reason to Chen Li.

After Shen Li knew the whole story, he immediately took out his phone and called Minister Lu.

There must be someone from the Chinese Academy who could help professor Lin with this.

In the Hua hospital, after Minister Lu received Shen Li's call, he immediately answered it and asked, ""Chairman Shen, why are you so free to call me?"

Shen Li immediately said, " Minister Lu, professor Lin from our laboratory has something to ask your Chinese Academy for help. Do you have any experts in the research of energy and matter factors? "

"President Shen, is there a problem with your Linlin laboratory's research?" chief Lu asked, puzzled.

Shen Li said, " it's about a silver material. Professor Lin is not good at some of the factor structures, so he needs support. I heard from professor Lin that this silver material was developed by Chairman Qin. It can reduce energy transmission loss. The loss of a 100-meter cable can be reduced to about 0.05%. None of the other energy transmission losses exceed 1%.

"What?" When Minister Lu heard the news, he immediately exclaimed, ""How could there be such a material?"

"Of course it's true," Shen Li nodded,"or else we wouldn't have the face to ask for help from Minister Lu."

"I'll immediately bring the relevant experts over." Minister Lu immediately answered.

From this simple conversation, he knew how useful this material was. This kind of energy transmission loss was simply unbelievable.

If this loss alone could be applied to electricity all over the country, how much money could be saved in a year?

After Minister Lu hung up the phone, he hurriedly took out his mobile phone and called several relevant experts to contact them.

At the same time, he also took out a document and wrote a relevant application to the higher-ups.

With Linlin's laboratory producing such results, the higher-ups had to prepare the money as soon as possible to reach a cooperation with Linlin's laboratory.

Naturally, with Minister Lu's report, the higher-ups were clear about the use of this material.

Whether it was in terms of electricity or other forms of energy, this reduction in losses was a huge achievement for the entire country's huge project.

Soon, Minister Lu set off with the researchers and went to you city's Linlin laboratory.

Shen Li had been waiting for a long time. When he brought the experts to professor Lin's laboratory and saw the silver material, the experts were all in disbelief.

Or rather, they simply couldn't believe that someone could research such a material. It was simply too shocking.

At the very least, if they were to research it on their own, they might not be able to find this material even if they spent ten or twenty years.

However, if they worked with professor Lin to crack it, it would not be a problem for them.

Moreover, to be able to participate in the cracking of this material really made people eager to try.

Just as Minister Lu brought some people to Lin Lin's laboratory to help professor Lin crack the code, Qin Lin also looked at the game screen in his mind in surprise.

On the game screen, a courier appeared with a parcel and sent it to the mailbox of the ranch house.

Qin Lin immediately thought of something when he saw this scene. It must be the results of the gravity research on the planet at doctor Gao's side.

He immediately locked the office door and entered the game with a thought.

When he arrived in front of the mailbox, he saw an express delivery with the words:It was mailed by professor Gao's laboratory research Center.

Qin Lin knew that he had guessed right when he saw this scene. He immediately opened the email, which contained a stack of documents.

[Chapter 1656 This Is The First Time I've Paid So Much Attention To It _ 2](#)

He immediately saw the remark of the email:

[planetary gravity technology: special!]

[this is the information on the planet's gravity technology that professor Gao has researched. After using it, you will be able to obtain the technology to transform the planet's gravity!]

[do you wish to use this technique? Who was it? [no?]

Qin Lin immediately selected "yes" when he saw the note. In an instant, a dense stream of information poured into his mind.

The information was about the gravity technology.

Moreover, the information was very detailed and contained a huge amount of information. It actually took him a lot of time to finish receiving all the information.

In an instant, Qin Lin had a clear understanding of the gravity design of this planet. He was even very familiar with the related knowledge.

However, he still had a major flaw. He had never studied the gravity of a planet. He had no basic knowledge in this area.

It was weird that he could understand profound knowledge but could not understand simple basic knowledge.

For example, if a person understood college calculus but had no knowledge of the 99 - 99 multiplication table in primary school, it would be very strange.

Besides, Qin Lin was troubled. How could he develop the planetary gravity technology?

After all, he hadn't even done any research. It would be suspicious if he suddenly produced the technology.

He could think about it after this.

Then, he took out a ticket to listen to the professor's research. He wanted the professor to research a technology first, and he would worry about the rest later.

Qin Lin left the ranch and went to the planetarium in ore town again. He used one of the admission tickets to listen to a professor's research project. This time, he randomly chose a cosmic ray technology project.

Cosmic rays were definitely a technology that modern society had yet to master.

For example, the earth was constantly being attacked by outer space, and these invasive substances were the high-energy particles of cosmic rays.

Most of them were made up of hydrogen nuclei and helium nuclei. They were extremely fast and contained a large amount of energy.

When these cosmic rays approached earth, they would first be blocked by the Earth's magnetic field. The magnetic field would wrap around the earth and change the direction of the cosmic rays.

This was because the Earth's magnetic field was strong enough to protect the Earth.

If the magnetic field wasn't strong enough, or if the cosmic rays were controlled and became stronger, the cosmic rays could break through the protection of the Earth's magnetic field and enter the ground, causing terrifying damage.

The particle weapons that appeared in some science fiction movies were developed through the study of cosmic rays.

Another example would be the laser weapons. For example, the laser attack launched by Iron Man's palm was also a variant of the cosmic rays.

Therefore, this cosmic ray technology would definitely be of great use.

If this technology could be made into a weapon, then true Lord Erlang xiansheng's third eye could be equipped and launch a ray attack. That would be the power of the true heaven eye.

Qin Lin quickly entered the planetarium. Just like before, the planetarium was completely different.

There were still people listening to professor Gao's research.

Professor Gao also came out like before and stood on the podium to begin his lecture.

Qin Lin was a little confused. He had been here once and invested in doctor Gao, but the doctor didn't seem to know him at all. He was like a new doctor.

This game mechanism was a bit of a pain in the ass.

This way, he would not be able to slip away in vain like ah ni and Elba.

One had to know that Bai Ling, ah ni, and Elba had been together for a long time. It was not that he had never had any thoughts about professor Gao, but it seemed like the current situation was that professor Gao would not give him to Bai Ling at all.

This time, it was a long lecture.

Once again, Qin Lin almost fell asleep before he received a system prompt that he could bid for the investment in the professor Gao.

He did not hesitate and chose to invest in professor Gao.

When he left the planetarium, he took out the admission tickets again.

It's fine if he can't do it for free. Anyway, there are many admission tickets, and this doctor Gao is also a good Coolie.

Then, Qin Lin logged out of the game and continued to think about how to make the planetary gravity technology.

Otherwise, if he obtained this technique and could only hide it, what was the difference between that and hiding the edge of a sword? Wasn't this a waste?

He couldn't even hold it in.

In the blink of an eye, another half a month had passed.

In the past half a month, Linlin's laboratory had been very busy. The experts brought by Minister Lu and some researchers in Linlin's laboratory had to cooperate with professor Lin to crack the Mithril.

Moreover, Minister Lu had been staying at Linlin laboratory for the past half a month.

As they deciphered the Mithril, they found that it could be used in more and more ways. In other words, as long as it involved energy, it could be used in all aspects.

It was simply a super strategic resource.

Therefore, under Minister Lu's strong request, this thing was also strictly kept a secret.

Otherwise, if word of this thing got out, all the Western countries would think of ways to seize it.

This also made him feel that this technology could not be immediately applied to cable technology, as it was too undisclosed. This thing should be used in other aspects first, especially those weapons.

Naturally, professor Lin had also gained something. He finally deciphered the Mithril and obtained the complete research data.

He could finally give an explanation to Chairman Qin.

The experts were also full of emotion.

it's really unbelievable. Even with this finished product, we still took so long to crack it.

yeah, at first I thought it was just a material for making electric cables, and it wouldn't take much effort. I was wrong.

this academician Qin is really amazing. This kind of thing has nothing to do with plant genes research, but I didn't expect him to be able to develop this kind of thing.

".."

While the experts were sighing, Minister Lu turned to Shen Li and asked, ""President Shen, this Material Technology is amazing. I hope your Linlin laboratory can cooperate with the higher-ups."

When Shen Li heard this, he could only say immediately, " Minister Lu, I have to report this to Chairman Qin. We need to see what Chairman Qin's request is.

Minister Lu nodded.

Shen Li also took out his phone and was about to call Qin Lin's number. However, his phone rang first. It was Qin Lin.

When Chen Li saw this, he was stunned for a moment. This was too much of a coincidence.

Shen Li immediately answered the call and heard Qin Lin's voice, " Mr. Shen, please help me gather Linlin's research Center for gravity research and prepare a special laboratory for me. I've designed some theories about the gravity of planets and want to try to do some research.

This was Qin Lin's idea.

Instead of doing his own research, he would give his theories to the researchers to do their research. This way, he could maintain his monstrous talent and make the researchers do hard labor.

Moreover, these researchers didn't have the embarrassing thing of not knowing the basic knowledge.

He just had to be the mastermind behind the scenes. That way, who would doubt where he got his technology?

When Chen Li heard this, he immediately exclaimed,"Chairman Qin, you're going to conduct a planetary gravity research in Linlin's laboratory?"

After accepting the cooperation with the Chinese Academy, he didn't pay much attention to it anymore because Chairman Qin took over.

He didn't expect that this time, Chairman Qin would specially set up a Research Institute for inspection and acceptance, and also gather Linlin laboratory's gravity Research Institute.

This was the first time that Chairman Qin had been so serious.

Previously, Chairman Qin had been in Linlin Manor and had easily produced various research results.

When Minister Lu heard Shen Li's words, he didn't even care about the silver material and immediately asked, ""Boss Qin, you're going to study the planetary gravity technology?"

One had to know that although the transformation of the small planet was going smoothly in all aspects, the only problem that could not be solved was the gravity.

They had contacted the Linlin laboratory to get boss Qin to take action. What if boss Qin was interested?

The key was that boss Qin was really interested, and they felt as if they had opened a blind box to get good things.

Now, boss Qin actually wanted to conduct research in a laboratory alone. Listening to boss Shen, boss Qin even wanted to gather researchers to assist him.

This was the first time he had seen boss Qin so serious about researching a technique.

But didn't this prove that the problem of the planet's gravity technology was really difficult?

Otherwise, with boss Qin's monstrous talent, why would he need to go through so much trouble to gather researchers to assist him?

At the thought of this, Minister Lu immediately turned to Shen Li and said, "President Shen, if boss Qin needs it, the Research Institute of the Chinese Academy of Medicine can also do our best to help."

[Chapter 1657 Truly Worthy Of Being Academician Qin! 1](#)

Since Qin Lin had given the order, Shen Li naturally went to arrange it at the first moment.

Even Minister Lu was attracted. After all, boss Qin was going to study the planet's gravity technology, which required more attention than any silver Material Technology.

The silver material could at most reduce their electric energy loss and increase the power of their energy-related weapons.

The gravity technology could transform a planet. As long as the gravity and atmospheric problems were solved, the planet could be transformed into a planet suitable for human habitation.

At that time, their country would start a new era.

Therefore, Minister Lu no longer paid attention to Mithril. He directly called the Chinese hospital and made arrangements.

Soon, the entire Hua * Yuan was alarmed, and even the higher-ups were alarmed.

Those who knew the situation all knew how good academician Qin was in scientific research and how talented he was.

After all, there were some academicians in the Chinese People's Hospital who were not convinced at first, but these academicians seemed to be slapped in the face very quickly, and they were too ashamed to show their faces.

This was because academician Qin always solved problems that these academicians couldn't solve for a long time. They even spent a lot of scientific research experience to solve the problem, but they couldn't.

Even with academician Qin's ready-made technology, many academicians still took a long time to crack it.

Previously, they had doubted the ability of this academician Qin. This was very embarrassing. Perhaps, it was no longer just embarrassing.

The most important thing was that these technologies weren't just limited to one aspect. There were also various directions.

It was already very impressive for some people to be proficient in one type. If they could have some achievements, they could be written into scientific books.

However, this person was proficient in so many aspects and had even come up with technology that others could only look up to.

With this talent and ability, he was now publicly recognized as a monster in the Hua * Yuan Academy.

Naturally, the higher-ups knew this better.

After all, Minister Lu had to report to the higher-ups every time.

They knew very well how much technology came from Linlin laboratory and academician Qin, and how rare these technologies were.

Before this, their country had no progress in this area of technology, and they had wasted a lot of research funds.

But this boss Qin seemed to have solved it easily.

As leaders, they were in control of the overall situation, and they knew how important these technologies were to the country.

Thus, they knew even better how powerful this person was.

Furthermore, they also knew the importance of the planet's gravity technology.

In the beginning, when they knew that they were faced with this problem, the People's Hospital had reported to them that they would not see any results in ten years, and that they would probably see some results in twenty years.

If that was the case, they would have also retreated at that time, as if this matter of creating an era had nothing to do with them.

Although he knew that there was no other way, he still felt very sad.

But now, hearing that this academician Qin wanted to personally study the planet's gravity technology, he even specially arranged a laboratory for him.

It was the first time they had heard boss Qin being so serious.

Therefore, these leaders also issued some orders that were completely unknown to the outside world. This order would make a lot of forces revolve around boss Qin.

Naturally, in order not to disturb boss Qin and cause any disturbance, the order changed to revolve around you city.

You city was a place where countless tourists gathered. It was impossible for the tourists to know that you city had become the most heavily guarded city in the country.

This should not have happened in a small County.

But it happened.

Moreover, the you City Airport project had been issued by the higher-ups and began to accelerate. The higher-ups supported it at full speed.

What made Chen Li and sun Xian even more confused was that the higher-ups were actually sending an inspection team down to investigate.

As for what he was inspecting, it was naturally a matter of the city promotion.

This made the two very confused, because they were still in the competition for Sheng city. It was a sure thing to film an inspection team!

'This ...'

Anyway, they were very confused!

In Linlin's laboratory, Qin Lin was just as confused. He had only asked Shen Li to help prepare a laboratory and gather a few researchers who knew about dynamics research.

Who knew that Shen Li would actually prepare a brand new laboratory building for him?

Linlin's laboratory had previously built many laboratory buildings. Shen Li had planned for this. He knew that Linlin's laboratory would expand, so he had built a few more laboratory buildings.

It turned out that this was the right thing to do, because three of Linlin's laboratory buildings had already been activated, and there might be more in the future.

But what made Qin Lin even more speechless was that when he entered the laboratory building, a group of people had gathered in an orderly manner.

Most of them, including Shen Li and Minister Lu, were researchers, and many of them even had the symbol of the Chinese Academy of Sciences on them.

They were obviously from the Hua * Yuan. With Minister Lu here, he roughly understood what was going on.

He asked Shen Li to find some people, and when Minister Lu found out, he also sent people from the Hua * Yuan over, but wasn't this a little too big of a flag?

There were too many people in front of him.

To be honest, this was the first time Qin Lin had seen so many researchers.

However, these researchers were all looking at Qin Lin with anticipation.

They all knew academician Qin's ability and what he was going to research this time.

[Chapter 1658 As Expected Of Academician Qin! 2](#)

The planetary gravity technology was something they couldn't touch on yet. At least, they weren't confident that they could develop this technology.

But now, academician Qin was going to personally lead this research.

With this legend, it was really possible for him to develop this technology.

As participants, they naturally hoped to be able to research the technology with this person. Even if they were just assistants, they were willing to do so.

Once this technique was successful, even if he was just an assistant, he would also have a strong sense of participation.

"Hello, everyone." Qin Lin awkwardly greeted the researchers.

"Hello, academician Qin!"

"Good day, Chairman Qin!"

The researchers responded in unison and in a very serious manner, as if they were preparing for battle ...

"Boss Qin," Minister Lu also came forward at once and greeted Qin Lin, "these are the experts in gravity research from the Chinese Academy of Sciences. I'll leave them to you for the rest of the time. You can order them around.

Qin Lin could only nod helplessly.

Because of Minister Lu's actions, Shen Li had no choice but to hold another ceremony, which would cause a lot of trouble.

Therefore, after two days, Qin Lin finally had the time to study it.

Naturally, Shen Li had made ample preparations for other aspects. He did not lack any equipment.

"Chairman Qin, where should we start next?" A researcher asked Qin Lin.

This researcher was a representative of the Chinese Academy of Sciences and had made great achievements in the study of gravity technology.

Qin Lin handed him an experimental plan that he had prepared earlier and said, ""Leader Chu, you just need to lead them according to this plan. This is the first stage of the planet's gravity simulation ring technology research, the wall of creativity!"

Team leader Chu immediately took the information and read it.

He naturally knew that the first step of the planet's gravity was to create a force wall. As long as he could create a force wall, he could create a centripetal force in a place without any gravity and gravity. With this, it was possible to proceed to the second step of the research.

However, this force wall wasn't easy to create.

The Chinese Academy of Sciences and other countries 'research had also stopped at this first step, and they had no way of completing it.

Now, boss Qin already had a research plan in this direction.

Moreover, after looking at the research plan, he was even more shocked. There were already some formulas and even steps in it.

It was just that he could only understand some basic problems. He couldn't understand a lot of the connections of the knowledge at all because this academician Qin only wrote the profound problems and didn't describe the basic knowledge problems at all.

He really wanted to ask academician Qin.

However, Qin Lin was also afraid of being questioned, so he immediately asked, ""Leader Chu, with this research plan, you should know how to proceed, right?"

Leader Chu was at a loss for words.

He didn't quite understand and really wanted to ask.

But since academician Qin asked this question, how could he answer that he didn't understand?

That would be too embarrassing.

After all, they had already made the experimental plan, and you still didn't know how to do research. How could you still have the face to say that you were an elite of the Chinese Academy of Medicine?

So, in the end, team leader Chu could only bite the bullet and nod.

Anyway, they had so many people. It was impossible that they couldn't even come up with academician Qin's good experimental plan, right?

Then he really had to find a piece of tofu to smash himself to death.

Team leader Chu quickly left with the research plan.

Qin Lin heaved a sigh of relief. It was a good thing he had managed to get away with it. Otherwise, he might have been exposed if the other party had asked him some questions.

The next step was easy. He would just let these people be busy.

Anyway, the experiment plan he gave was based on the knowledge he had obtained, so there was no way it would be wrong.

As for whether or not they could develop it, it would depend on whether these people had the real ability.

Therefore, he simply entered his own office and sat on a chair. He crossed his legs and began to look at the game in his mind, controlling the game character to start his daily missions.

Soon, Minister Lu and Shen Li arrived. In order to keep the laboratory a secret, there were surveillance cameras all around the room. They could clearly see Qin Lin's situation in the office from the outside.

When the two of them saw Qin Lin, they knew that he was in a daze because all of his attention was on the game in his mind, and he was focused on controlling the game character.

If this was any other place and someone else saw this scene, they might say, "Look, this person was daydreaming in broad daylight. There might be something wrong with his brain.

However, when Minister Lu heard this, he said with a face full of emotion, " hey, boss Qin, you're probably thinking about scientific research again. You're so dedicated.

"Yup," yes. Shen Li nodded, " otherwise, Chairman Qin wouldn't have so many achievements.

The two of them stared at Qin Lin for a long time, but Qin Lin was also in a daze for a long time. There were still many daily tasks in the game, such as cutting trees.

, Fishing, mining, trying to touch the plot mission ...

In any case, she had been in a daze for a long time.

In the end, Minister Lu could only sigh. let's go. Don't disturb boss Qin. If the Research Institute of the Chinese Academy of Sciences is as dedicated as boss Qin, I don't know how much trouble I can save.

Chen Li actually nodded his head in agreement.

Then, Minister Lu and Shen Li went to see the research progress of team leader Chu and the others.

As soon as he entered, he saw the researchers working in full swing. Everyone's face was full of passion. High enthusiasm for work was obviously a necessary prerequisite for scientific research.

Minister Lu went directly to leader Chu and heard him say, " unbelievable, this is too unbelievable. Academician Qin is really as amazing as the rumors say.

It was no wonder he was surprised. After following academician Qin's research plan, he found out that the research formulas written by academician Qin were all correct.

They were actually very strict even after they did the reverse deduction.

They were currently deducing the first formula. It was just that they had so many people, and they still hadn't completely deduced the formula.

Moreover, according to the current trend, they only needed to follow academician Qin's research and completely carry out the theories written by academician Qin.

Then, their experimental research would naturally succeed.

However, could you believe that this plan was made by little Qin alone? even with so many researchers working together, they still couldn't keep up with academician Qin's pace.

Minister Lu heard leader Chu's words and asked, "Leader Chu, have you started the research?"

When team leader Chu saw that the leader had arrived, he immediately nodded and said, " Minister Lu, we've already started the research. It's academician Qin Little's plan, and his research plan is perfect. As long as we follow the research, I believe the first step of the research will be completed soon.

it's hard to believe that academician Qin can come up with such a detailed and perfect plan. We've never made such a smooth research plan before.

Minister Lu was even more emotional when he heard this. "Only someone as serious and hardworking as boss Qin can achieve such results. We just saw boss Qin concentrating on the experiment. Leader Chu, you should really learn from boss Qin. That way, you can go to the next level in scientific research."

When team leader Chu heard this, he immediately nodded seriously and said, " Minister Lu, don't worry. We will definitely learn from academician Qin's research spirit and won't let you and the leaders down.

In this way, team leader Chu and the others followed Qin Lin's research plan and completed it step by step quickly.

These people's passion for research also became higher and higher.

This was because high-level scientific researchers would be excited once their research was successful.

Therefore, in less than half a month, excited voices broke out in the laboratory building.

haha, I've succeeded. I've built the initial force wall!

the first step is about to succeed. I wonder if academician Qin has come up with the second step of the research plan.

"It's hard to believe that we created this force wall just like that."

"Academician Qin junior is too amazing."

"As expected of academician Qin!"

[Chapter 1659 The Magical Tech Park \(1\)](#)

In Linlin's laboratory, Qin Lin stared at the game screen in his mind and completed his daily task for the day.

However, he didn't get anything out of today's Daily mission, so Qin Lin had no choice but to come back to his senses.

Looking at the transparent glass of the office, Qin Lin couldn't do anything else but work on the computer.

He naturally planned to write down the second step of the experimental plan in his mind and then hand it over to leader Chu and the others to study.

Since he had already decided to develop the planetary gravity technology, he naturally had to put in more effort.

Because there was a record in his mind, he only needed to do it according to the knowledge in his mind. It was not difficult for Lu Feng. It could be said to be very simple.

Therefore, it didn't take long for Lu Feng to come up with the second step of the research plan.

At this time, team leader Chu rushed to the office and reported the good news, "academician Qin, I have good news for you. We have completed the first step of the plan. We have made the force wall. Do you want to go and see it?"

Qin Lin nodded when he heard this. Although the surreal technology that he had come up with was not fully completed, it was preliminarily completed. He was still very curious about the force wall.

After all, the gravity technology of a planet was really incredible.

Most importantly, he had an idea. If the initial stages of the planetary gravity technology were completed, it would be impossible to make a big project at the beginning. He would definitely have to do a small-scale experiment.

Isn't this a bit like the gravity room in the Dragon Ball?

It was the place where Sun Wukong, begitta, and the others often trained.

If the planetary gravity technology was completed, the gravity strength could be adjusted, and it would be no different from the gravity room in the Dragon Ball where the gravity could be adjusted.

Qin Lin also took the plan for the second step of the planetary gravity technology he had just developed and followed leader Chu out of the office.

Soon, he arrived at the core Laboratory, where a gravity chamber had already been built.

As soon as team leader Chu arrived, he instructed the researchers, "Quick, activate the gravity chamber, and then create the wall of creation!"

The researchers also saw Qin Lin and were eager to perform. They immediately took action after hearing the order.

A moment later, the gravity chamber was activated. Some things started to float up. There were cups, paper, and pliers ... Things like that.

These were all things that had been placed in the gravity chamber in advance.

Now that the gravity chamber was activated, the space inside was in a state of zero gravity, which simulated the situation of a planet without gravity.

When the gravity chamber was in zero gravity, a pillar immediately appeared in the middle.

After the pillar appeared, team leader Chu asked someone to press a button to activate the pillar's function. The next moment, the things around the pillar seemed to be affected by gravity and fell from their suspended state.

A force wall was created around the pillar, and the objects were affected by the gravity and fell down.

This was the general principle of force wall.

Of course, this was just a rough experiment. After the technology was completed, he could refine it and then control the gravity as he wished.

The second step of the experiment was the key, which was the study of gravity balance.

With the research on gravitational balance completed, the force produced by the strength Gu could be controlled to balance the area. Thus, this second step was also very important, while the third step was not as important.

"Chairman Qin, when will the second step of the plan be out?" team leader Chu asked immediately. We can't wait to move on to the next step of our research."

Qin Lin didn't say much and directly handed the prepared information to leader Chu.

Team leader Chu subconsciously took the plan and started reading it. Then, he was engrossed in it.

The plan for the second step was even more rigorous and profound than the first step.

There were actually many things that he was unfamiliar with and could not understand at all.

However, the more he looked at her, the more fascinated he became.

The more he didn't understand, the more he felt that boss Qin was amazing.

Team leader Chu immediately walked to the core research room with the plan for the second step. He immediately gathered the researchers and began the second step of the research.

Qin Lin left the laboratory immediately. He felt bored staying in the laboratory.

After leaving the laboratory, he went straight to the Linlin Scenic Area.

After entering the Linlin Scenic Area, Lu Feng was about to turn to the Linlin Manor when he saw a group of small black Stars rushing past the entrance of the community.

This scene attracted the attention of all the tourists, and they all took out their mobile phones to film it.

They all knew that she was the little demon of the great ventilation Saint in Linlin Scenic Area.

Now, the tourists had figured out the situation. They knew that in the science fiction Park of Linlin Scenic Area, the mechanical creatures, including the great sage equal to heaven and the great sage of ventilation, all had their own little demons.

Recently, many little Gremlins had entered the scenic Area from the outside and were seen by many tourists.

These tourists naturally started to take photos one after another. To them, this was also a very surprising thing.

Qin Lin also walked into the sci-fi Park.

It had been a long time since he last came to the science fiction Park.

Now that the technology Park had gradually opened, there were many tourists inside.

Naturally, the most popular areas were the great sage equal to heaven's area and Erlang xiansheng's area.

[Chapter 1660 The Magical Tech Park \(2\)](#)

After all, these two were the ones who caused havoc in the sky.

Some people even suggested creating a Nezha transformer so that the three-man team would be complete.

However, after Qin Lin entered the Linlin Scenic Area, he suddenly remembered that he still had a design of a special technology Park. He immediately went back to the manor and took out the design.

This thing had been in the office for so long that he had almost forgotten about it.

Immediately use the Jade of truth to investigate the information of the tech Park scroll:

[this is the design of the technology Park: special!]

[this is the architectural design designed by the game world's number one master builder. After designing according to the design, as long as the structure and design reach 80%, this design can be used to transform and give the entire Science and Technology Park special attributes: Technological sense +2, technological shock +2, science fiction +2, scientific researchers 'technological enlightenment +1, technological state +1, technological atmosphere +2

[this Technology Park has reached 80% of the blueprint's structure. You can now use this blueprint. Do you wish to use it?] Who was it? [no?]

Qin Lin's eyes lit up when he saw this.

He chose to use it without hesitation.

If he didn't use it soon, it would be forgotten.

However, a notification also sounded:

[not within the usable area!]

This meant that it could not be used in the office, but only in the Linlin Scenic Area.

Qin Lin walked into the Linlin Scenic Area and went to the technology Park again. He chose to use the technology Park scroll again.

This time, the technology Park scroll was successfully used.

The scroll suddenly glowed with a bright light, then turned into spots of Starlight, spreading in all directions.

Under the Starlight, the entire Technology Park seemed to be in a fantasy. Then, the Starlight integrated into the entire Technology Park.

The ordinary tourists couldn't see this, but it was happening quietly.

After some time, some of the tourists were stunned because they realized that the entire sci-fi Park seemed to have changed.

The difference was very strange. It was as if the entire Technology Park had changed.

This scene left everyone in disbelief.

A couple looked at the group of great sages equal to heaven in a daze. They clearly realized that they had changed.

"Honey, don't they look more sci-fi? It's even more technological." The woman asked.

"Yes, honey, you noticed it too?" it's not just more technological, " the man said. it's even more shocking. It's really strange.

The conversation between the two was filled with doubt.

If they had not been staring at the group of lesser great sages, they would have thought that their eyes were playing tricks on them.

it feels like a dream. Although the things in front of me haven't changed, the feeling is different.

yes, it was just for a moment. It was as if something else was attached to these things.

However, the sound from the side told them that they weren't seeing things. The technology Park had really changed.

This strange incident naturally spread quickly throughout the scenic Area, and many tourists even took videos and posted them on the internet.

However, the strange thing was that when the video was uploaded, there was no difference from before. Only when one was in it could one feel the difference.

This incident caused an uproar on the internet. Many tourists who had been to the Linlin science fiction Park did not believe it, and some came to the Linlin Scenic Area again.

But when they entered the science fiction Park, they were completely stunned.

It was unbelievable. The news on the internet was true.

As they walked in, they realized that this place was indeed different. Compared to before, it was even more shocking and had a more advanced feel.

This feeling could be easily discovered.

This was because it was impossible for him to have such a feeling before.

The feeling was intense.

After these people experienced it, they published articles and made the science fiction Park even more popular on the internet.

This also attracted the attention of academician Yan and the other two.

After all, the science fiction Park was related to technology, so old academicians like them were interested in it.

After the three of them entered the sci-fi Park, they also felt the shock of technology and the feeling of science fiction.

This feeling made the three of them even more interested in the science fiction Park.

As they moved forward, the three of them felt that something was wrong. It was as if they were surrounded by a special atmosphere.

This was the scroll's +2 attribute to the researcher's special atmosphere.

This kind of environment was incredible for the three old academicians. They even had a clearer understanding of some of the problems in their minds.

Suddenly, the three of them looked at each other and squatted down in unison. They picked up a piece of chalk and started writing on the ground.

They suddenly had an epiphany, and the state of this epiphany was extremely good.

This was amazing.

Obviously, this was the attribute of technology perception +1 and technology status +1. Therefore, they had some enlightenment.

The three of them started writing on the ground.

There were formulas on it, all about the propulsion equilibrium research of the second stage of rocket research.

Now that he'd finished researching the power system, the next step would naturally be to research the balance system.

As long as balance research could be done, the rocket would not only take a single route after launch, but it could also be twisted in the space control.

This would definitely be of great help to their exploration of the universe.

The three of them used chalks to write on the ground. More and more formulas appeared, and they were densely packed. Soon, they covered the entire ground.

It would probably take a long time for these formulas to shock everyone.

When Qin Lin passed by, he was stunned for a moment. He knew the information about the science and technology Park scroll, so he knew the situation here. These three old seniors had a breakthrough again.

He immediately made a phone call to Feima Hong.

A moment later, MA Hong arrived in a hurry. He looked at the three academicians who were busy on the ground, and he immediately ordered his men to spread out and protect the place.

Not long after, MA Hong and his men sealed the hole.

He didn't expect the three old academicians to have an epiphany here. After all, this wasn't the first time they had experienced this.

They didn't know how much time had passed, but after Qin Lin left, the three academicians slowly got up and woke up.

Then, the three of them looked at the formulas around them in surprise.

They hurriedly ran over to check the formula they had written down.

Then, their faces became more and more shocked.

This was really what they had just written down. This was the theoretical formula for the second step of deep space rocket research.

These problems had troubled them for so long, but they were solved just like that.

This was truly unbelievable.

They had solved this problem before they even understood what was going on. This was another era!

They didn't dare to hesitate, and immediately said, ""Captain MA, please get us a few computers. We need to record the data immediately."

MA Hong nodded and immediately left with the two.

He knew how important the research of the three old academicians was, so he didn't dare to neglect it.

Soon, a few computers were brought over, all of which came with power.

Academician Hao didn't dare to hesitate. He immediately took the two academicians to record it. They didn't dare to slack off.

If one of the symbols was wrong, it could be a huge loss.

The three old academicians were finally at ease after they recorded all the data and formulas.

Then, they hurriedly asked MA Hong to help them move the computer back. At the same time, they didn't forget to ask someone to wipe off the data and formulas on the ground.

Otherwise, if these data formulas were to be leaked out, it would definitely cause a huge uproar.

However, the three old academicians started to look around in a daze. They felt strange!

That feeling just now seemed a little familiar!

Wasn't it the same feeling as when they were at Jinglin Manor? but it seemed a little different. Anyway, they felt very strange!

Was the science fiction Technology Park also specially designed to stimulate people's thinking?

They seemed to have remembered something. It seemed that the sci-fi Science and Technology Park was designed by boss Qin himself.

How could a simple design have such an effect?

The three old academicians couldn't believe it, but they were also curious.

The more curious they were, the more they studied it, and then slowly, they were shocked.
