

The Game 1701

[Chapter 1701 Using Pig's Genes To Complete The Space Elevator](#)

At the thought of this, Minister Lu couldn't help but take out his mobile phone and record a video of the experiment box in Qin Lin's hand. Then, he sent the video to his leader with a note: boss Qin has extracted another dinosaur gene!

Beijing.

A leader was frowning at the group of people in front of him. They were the owner of the National Museum and a few well-known animal geneticists in the country.

These Animal Genetics experts didn't participate in academician Qin's research because they were disdainful. They thought that they were the best. No matter how talented academician Qin was, he had made breakthroughs in so many projects. It was absolutely impossible for him to be better than them in Animal Genetics.

Otherwise, he would be using his hobbies to smash their jobs.

So, why should they participate in each other's research and help each other? Even if the other party was rumored to be a God.

They were all proud and confident people.

The owner of the museum almost pleaded, " leader, there's no way to extract the genes from those dinosaur fossils. They're proof of the Jurassic era. If we study them recklessly, we'll be destroying them.

The experts who had been called over also said,

"Leader, we have to say this. Even if it's a scientific research, it has to be based on scientific evidence!"

yeah, we've tested those fossils before. There's really no possibility of extracting the genes.

we can't destroy historical evidence for the sake of scientific research!

".."

These words made the leader sigh. He knew that these words made sense to the general animal experts, and they were indeed true.

However, the key was that boss Qin had already extracted two types of dinosaur genes and had even successfully researched on dinosaur eggs.

So, this was different.

However, the research was still confidential, and outsiders had no way of knowing.

At this moment, the leader received a video. His eyes lit up when he saw the video and the saved message.

Boss Qin was different. These experts said it was impossible, but he extracted another one in a short time.

Seeing that the people in front of him still wanted to say something, he could only say, " guys, there's something you shouldn't know now, but there's something I need to tell you. The genes of one of the dinosaur fossils in your Museum have been extracted. Moreover, dinosaur research has more than one type of dinosaur gene. There are even dinosaur eggs that have been studied and are waiting to hatch.

These words shocked the animal Genetics experts.

"It's already been developed?"

"So fast?"

"There's such a thing?"

The few animal geneticists immediately had a bad feeling.

What kind of joke was this? they had just said so confidently that it was impossible, and the leader had told them this news?

Most importantly, they really felt that it was impossible. Furthermore, they had studied those fossils and confirmed that it was impossible to extract the genes. Now, the genes had been extracted.

This made him feel a little embarrassed. Didn't this mean that their ability was limited and they were not as good as academician Qin?

When the leader saw these people's expressions, he also said earnestly, "You guys should have heard some of the things that the netizens said on the internet? The TV series said, 'in the past, Xianxia dramas were about protecting the world as their responsibility. Now, it's about how if you dare to snatch my little junior sister, I'll turn evil for you to see.'

"This is very funny, but sometimes, it also speaks of a very sad truth."

These words seemed a little difficult to understand, but the club Masters seemed to understand and hurriedly took their leave.

The few animal geneticists were a little confused.

What did that mean?

They really didn't understand. They were most afraid of such roundabout words. They understood how difficult the academic world was. These were really brain-burning.

But they weren't stupid. If they didn't understand, they would just leave together awkwardly.

When the leader saw this, he could only shake his head.

It wasn't that these experts were good, but that boss Qin was too powerful. It was inevitable that he would be given special treatment. This was also the consensus that all the leaders had slowly reached.

.

When Qin Lin brought the giant Ford Rafal dragon's genes to his laboratory, the animal Genetics experts were immediately attracted and looked at him in surprise.

Especially the experimental box in his hand.

"Academician Qin, is this the gene of a new dinosaur?" one of the team leaders asked in surprise.

Qin Lin nodded and said, " yes, this is a new dinosaur gene. Thanks to the bone fossils sent by Minister Lu, another type of gene has been extracted. Put aside the sacyran gene for now and study this dinosaur gene first, especially to see if pig genes can be used to make up for the giant Ford Rafal gene. Then, we'll study the dinosaur egg first.

These words stunned the animal Genetics experts.

What the hell? Using the genes of pigs to make up for the dinosaur genes?

Do you want to eat this dinosaur like a pig?

The key was that the pig gene had to be able to supplement the dinosaur gene fragment.

However, Qin Lin had ordered that these animal geneticists would definitely carry out their research unconditionally. Therefore, these experts quickly began to study the genetic living fluid that was suitable for the giant barbarian Rafal Dragon.

After that, they started to complete the gene fragments of the giant barrafal Dragon. Furthermore, they actually used pig genes to complete the genes of the giant barrafal Dragon.

In fact, the method of using pigs to complete the genes was a little ridiculous.

Any animal geneticist with some ability would not do such a thing.

But after they heard academician Qin's words, they actually did it.

Something that shocked these animal geneticists happened. After they used the pig's genes to complete the giant barrafal dragon's genes, they discovered that the pig's genes could actually complete the giant barrafal dragon's genes.

Furthermore, the completed gene was actually extremely perfect.

" ? ? ? ? "Expert 1.

" ? ? ? ? "Expert 2.

" ? ? ? ? "Expert ...

When they saw the results, the experts were dumbfounded. They could see the shock in each other's eyes.

Pigs could actually do it.

What kind of joke was this?

Or perhaps academician Qin was too amazing to be able to think of this.

However, what would a dinosaur with pig's genes become when it grew up?

These animal geneticists were all eager to try and find out.

Therefore, they hurriedly entered the research of the giant Ford Rafal Dragon.

Qin Lin returned to Linlin Manor. When he arrived at the living room, he saw a screen hanging down and showing a movie.

This was a specially renovated private cinema.

Moreover, it was different from ordinary cinemas. In ordinary private cinemas, if one wanted to watch a new movie, they would have to wait until the cinema was closed.

However, in the private cinema in his Manor, he could directly watch the movies that were still on schedule.

Even academician Hao and the other two were watching a movie. It was a newly released sci-fi movie called " wandering little ball 2 "!

Suddenly, a movie scene caused the three academicians to start discussing. :

"This elevator is quite magical."

it's just a space elevator. It was proposed as early as the 20th century. It is to use a space elevator to connect to a permanent Space Station. The main reason is that the rope connecting the earth's surface is difficult to get. The current technology actually already has such technology.

I know, that technology is called carbon nano technology. Unfortunately, the current technology can only produce about one meter of carbon nano rope. Most importantly, the cost is huge, and no stock price can afford this cost.

In the movie, it was the classic trailer of " the little rascal 2, " which was the space elevator. In the movie, the team members directly went through the space elevator from the ground to the big space Station. The scene was too shocking and incredible.

Qin Lin was deep in thought when he heard the three academicians 'words. The space expert in the game, Dr. Gao, seemed to have a research topic related to space stations and space elevators.

At this time, the research that he had asked professor Gao to do had yet to come to a conclusion. Even if he had the admission ticket, he could not make new investments.

As Lu Feng was thinking, he suddenly looked at the game screen in surprise.

The system had given him the chance to get what he wanted?

[Chapter 1702 Particle Technology! Dinosaur Meat _1](#)

In the game, an express delivery was sent to the mailbox in front of the ranch house.

Qin Lin knew that the results of professor Gao's research had come out, so he had sent the cosmic particle ray technology to the ranch.

To put it simply, this technology was the particle ray technology.

More importantly, many of the weapons on earth should fail in space. Let's not talk about whether they could be launched or not. Even if they could be launched, there would be a huge problem.

In space, a weapon was like a vacuum flask. After firing a few shots, it would have to wait for a long time before it could be used again.

Another big problem was the recoil. After firing in space, if the bullet did not hit the target immediately and the speed of the bullet was reduced, then everyone, including the shooter himself, could become the target of the bullet. Therefore, firing in space was likely to be the beginning of suicide.

On the other hand, this particle beam technology could be used to attack in space without being affected by the space environment.

That was why it was said that it was still too difficult for humans to explore space.

Firstly, there were no means of transportation. Even if they developed a spaceship and could go into space, they would not have any weapons and could not attack.

If humans wanted to explore space, they could not do without transportation and weapons.

And these two humans were lacking.

Of course, the deep space exploration rocket that academician Hao and his team developed had already solved the initial problem. After all, it had already sent people into space to transform small planets.

However, it was still far from enough to transport troops, immigrants, and so on.

Unless academician Hao and the other two developed the follow-up technology.

Naturally, only their own country knew about this. The other countries were still in the dark. By the time they discovered it, it would be too late.

Now, the particle beam technology could be developed in the direction of particle weapons.

Qin Lin entered the game with a single thought and went straight to the mailbox in front of the farm. He took out the email and opened it. It was a technical document.

[particle ray technology: special!]

[this is a particle ray technology that can be used to research various particle-related technologies. It can also be used to develop particle ray weapons that can be used in space!]

It was indeed this technique.

Moreover, the particle beam technology could not be used as a weapon immediately. The particle beam itself was not as powerful as a weapon.

To turn particle rays into weapons, in-depth research was needed, and then the technology to condense and shoot them was needed.

This technology was probably enough for human research.

If there wasn't another global technological explosion, it would definitely be a long time.

Qin Lin chose to use the particle ray technology after he got it.

At the same time, countless relevant technical information and knowledge began to appear in his mind, and his understanding of space particles became more and more proficient.

After he received all the information, no one would be able to understand more about particles than him.

Then, he understood this technique.

He also remembered his business and immediately headed to ore town. Then, he took a taxi to the planetarium.

Once professor Gao's research was done, he could invest in another research.

After all, he had gotten so many tickets to the professor's seminars, and he could invest in a technology every time he went in.

After using the ticket, he once again entered the planetarium. As expected, it was the professor Gao's research Conference.

The people around him also sat up straight after he entered.

Professor Gao quickly began to talk about the space elevator, and then he talked about the few aspects needed to complete the space elevator.

It wasn't just the problem of ropes going deep into space, this carbon nanotechnology could solve it.

There was also the problem of lifting in space, which required the planet's gravity technology to prevent the speed and gravity of the lifting from causing harm to the human body.

There were also problems of balance, operation, and sitting ... And many other questions.

These questions involved many key points of knowledge.

Qin Lin didn't understand at all. He was drowsy from listening. It wasn't until the professor's lecture was over and the bidding began that he got up and immediately participated in the bidding.

Under the game's mechanics, he only had less than 2 million gold coins and had successfully invested. The investment Report of this kind of research was absolutely heaven-defying.

If there were no cheats, no one would have dared to imagine such a thing.

After Qin Lin's investment was successful, doctor Gao walked up to him as he had done before. Sir, I'm really grateful for your investment. I'll finish the research as soon as possible and won't let you down.

It was the same conversation as the previous few times. It was a system feature.

After professor Gao finished speaking, he walked forward. However, after walking for a while, he felt that something was wrong. He suddenly turned to Qin Lin and asked, " Sir, you give me a very familiar feeling. I feel like I've seen you somewhere before. We're like old friends. Maybe we can have a good chat when we have the chance.

"..Qin Lin was stunned when he heard this.

Hadn't he seen it before?

However, this doctor Gao seemed to be systematic every time, so she couldn't remember him at all. Why did she feel like she had seen him before?

This made him think of something.

Many people would sometimes feel that something was very familiar, as if it had happened before.

[Chapter 1703 Particle Technology! Dinosaur Meat! 2](#)

At this moment, many people would be stunned.

Now, seeing the scene of doctor Gao ...

Qin Lin shook his head and didn't want to think about it. It was too ridiculous.

Since he had invested in professor Gao's space elevator research, he directly exited the game and returned to Linlin Manor. Then, he began to study the space particle technology that he had just obtained in his mind.

Space particle technology was very profound. If one wanted to understand space particles, they had to first solve how to capture particles.

Particles are microscopic creatures. At every moment, there are countless subatomic particles passing through your body. Every second, about 100 billion microscopic particles from the sun pass through your body.

Even an inconspicuous banana would emit negative electrons, which were the antimatter counterpart of electrons. The entire particle universe exists. We have mostly forgotten about it, mainly because these particles are invisible.

Sometimes, the particles even seemed to have a life of their own. They could leave behind elegant bubble spirals, flashing light, and clear sparks.

Unfortunately, particles were difficult to capture and study. Otherwise, the research on particles would not only focus on rays but also on accelerators ... There were many other directions.

A lot of people should have heard of the term "particle accelerator. a single particle accelerator was the reason why so many superpowered people were produced in an American superhero drama.

Although the space particle beam was not in the same direction as the particle accelerator research, it was still a big problem.

Space particles were more difficult to study than the particles in the sphere. The particles in the sphere basically existed as a medium, while space particles were a vacuum with nothing, so the difficulty was much higher.

In other words, it would be difficult for earth, which had only just started to study the particles in the planet, to study the particles in space.

But in any case, the initial research of these problems had to be done without particles.

The particles were like mischievous sprites and were very difficult to capture. These particles were like a skill that could disappear in a flash when you were about to capture them, and then spread to your waist.

On the other hand, professor Gao's space particle beam technology had clearly recorded the technique to capture particles.

If this technology still couldn't capture particles, then he could just kill himself with a piece of tofu.

However, the particle-capturing equipment was very expensive and almost impossible to purchase in the outside world. Even Linlin laboratory did not have such equipment.

Therefore, he could only rely on Minister Lu again.

He immediately took out his phone and dialed Minister Lu's number. When the call was connected, Minister Lu's enthusiastic voice came through, ""Boss Qin, you're calling me again. That's great. So, you must be doing some research again, right?"

"Eh!" Qin Lin was stunned when he heard Minister Lu's words.

I'm just calling you, why are you so excited?

Minister Lu, " Qin Lin said with a smile, " I do need your help with some research. I want the equipment related to particle capture, as well as your research materials in this area. Also, there's the research on space elevators. I'd like to see your research materials in this area. I've been very interested in these two areas of research recently, and I don't know if I'm being presumptuous?"

He didn't have the equipment. Since he had asked Minister Lu, he decided to take some information about the space elevator. Although it was just for show, when the space technology came out, he would be prepared in advance.

By then, Minister Lu and the others would not find it strange or abrupt.

"No, how could I be presumptuous? how could I be?" Minister Lu said subconsciously.

Wasn't boss Qin joking?

They couldn't wait for boss Qin to be interested in any research. If he wanted any information, they would definitely give it to him immediately, because they would definitely get better technology in the end.

So, why not? Immediately!

Besides, what kind of technical information did boss Qin want this time? Particle and space technology.

The technology in these two areas was something that no country in the world had been able to research. They were also major scientific problems in the future.

Now, boss Qin actually wanted the research materials in these two areas, but he didn't want to give them the materials?

As long as boss Qin could research these two pieces of information, it would be a great thing for them.

"Boss Qin, just you wait." Minister Lu hung up the phone and immediately took out a document application. Then, he found a leader.

Even if he was in charge of the Chinese People's Hospital, he couldn't get the information on these two technical research materials out. He had to find a higher-ranking leader to sign it.

Minister Lu quickly arrived at a leader's office and handed the document to him.

how can the research materials in the field of particles and space elevators be taken out to the outside world?" The leader obviously knew the importance of these two research materials.

However, when he saw the recipient of the request, his attitude changed immediately. He hurriedly signed his name on the document and urged, ""Hurry up and send the technology to academician Qin. Don't waste time."

"."Minister Lu couldn't help but laugh in his heart. As expected, as long as boss Qin was involved, the higher-ups would always give the green light.

Now, boss Qin was also a precious treasure in the eyes of these leaders.

Seeing the leader sign, Minister Lu also hurried out. He then transferred the research materials of two directions, applied for an escort, bought a plane ticket, and went to you city.

He rushed to you City Airport and went to Linlin Manor immediately to see Qin Lin.

He gave Qin Lin all the research materials from the two directions he had brought and said excitedly, boss Qin, these two technologies are very important and very difficult. I hope you can develop them as soon as possible.

"You're so confident?" Qin Lin was stunned.

"Of course. Boss Qin, how could you not figure it out?" Minister Lu nodded.

This kind of self-confidence was even more so than his belief that he would live to 70 years old.

Qin Lin shook his head. He really couldn't figure it out on his own. He had to rely on the system.

However, after getting these two technologies, it could be considered as a precautionary measure.

He looked at the research on particles.

He was now very proficient in the study of particles, so he could completely understand the particle research materials in the Hua hospital.

However, the Hua hospital's research in this area was still very shallow.

It was even difficult to capture the particles within the sphere, let alone the space particles.

However, Qin Lin knew that with the technical information in his mind, it would be easy to accurately capture particles as long as he was given the particle capture instrument.

Therefore, he needed a particle capture device.

Thinking of this, Qin Lin said to Minister Lu, " Minister Lu, when will the particle-capturing device return? "

yes, " Minister Lu replied immediately. I've already arranged it before I came to you city. It will be sent to Linlin Manor in a few days.

Qin Lin nodded. It would be done soon.

It was also at this moment that his phone rang. It was a group leader in charge of dinosaur gene research.

He pressed the answer button and the other party immediately said, " academician Qin, the eggs of the giant paler Dragon have been developed. I've got a few.

"So fast?" Qin Lin said in surprise.

The team leader immediately said, " academician Qin, it's all thanks to you. You asked us to use pig genes to make up for the giant barrafal dragon's genes, and we did it. We actually succeeded in one try. It didn't take much time at all. After that, we used pig cells to express the giant barrafal dragon's DNA, and we also succeeded in one try. Do you want to come over? "

"Alright, I'll go take a look." Qin Lin was surprised.

He was just making a casual remark when he said 'pig'. Who knew that it would really work?

Furthermore, the most important thing was that he had managed to figure it out so quickly.

He was looking forward to eating dinosaur meat.

Thinking of this, he extended an invitation to Minister Lu. Minister Lu, another dinosaur egg has been developed in the laboratory. Do you want to go and take a look? "

"So fast?" Even Minister Lu was surprised.

He remembered that he had only just developed one pill.

[Chapter 1704 789-The Unlucky Eternal](#)

Although Minister Lu was surprised, he still chose to leave the villa area with Qin Lin at once. He urged Qin Lin to go to Linlin's laboratory.

To be honest, he was more anxious than boss Qin about dinosaur research.

If dinosaurs could be researched, they could change many things. If they could be controlled, they could even replace many things.

The two of them quickly drove to Linlin's laboratory.

When he entered the laboratory, the three Animal Genetics experts were already waiting.

"Academician Qin!"

A team leader came forward to greet him. Then, he saw Minister Lu and said in surprise, ""Minister Lu, you're here too."

"Where are the finished dinosaur eggs?" Minister Lu nodded and hurriedly asked.

"Academician Qin, Minister Lu, come with me!" The team leader immediately said.

Minister Lu nodded and followed the team leader inside. Wherever they passed, the animal geneticists looked very respectful.

However, he also realized that they were not being respectful to him, but to boss Qin who was beside him.

Obviously, these Animal Genetics experts were also convinced by boss Qin. This was probably boss Qin's personal charm. But to be honest, in scientific research, how could such a demonic genius not have personal charm? how could anyone not want to research with him?

The team leader brought Qin Lin and the warehouse manager to an experimental box. Inside were plate-sized dinosaur eggs, more than ten in total.

The team leader also immediately explained, "academician Qin, Minister Lu, this is the dinosaur egg of the giant prafal. This dinosaur is very special. The research process is surprisingly smooth.

"What's so special about this wuba Rafal Dragon?" Minister Lu asked curiously.

"The dinosaur genes can actually complement the pig's genes," the team leader explained, "and the pig's cells can also be used to express the dinosaur genes!"

"Pig? A dinosaur?" Minister Lu was stunned.

It was hard for him to connect these two things together.

Could it be that dinosaurs could be eaten like pigs?

At the thought of this, Minister Lu felt that it was ridiculous. He couldn't have researched dinosaurs just to eat them, right?

Minister Lu then began to observe the dinosaur eggs carefully.

Qin Lin looked at the eggs and was also looking forward to the taste of the dinosaur meat, so he said to the team leader, "Later on, take out one of these dinosaur eggs and give it to me. I plan to take it back and study it!"

It would take at least three to five years for the dinosaur to hatch and grow up. Hence, he could not wait. How could he wait that long?

He might as well take an egg and enter the game, relying on the ratio of the game time to let the dinosaur grow up. Then, he could eat dinosaur meat for the next few days.

"Okay, academician Qin junior." The team leader nodded.

After saying that, he arranged for someone to handle the egg. The egg was to be brought out and placed in a special experiment box. The temperature in the experiment box had to be adjusted.

When Qin Lin left, he brought the giant Rafal dragon's egg back to Linlin Manor.

Once he got back to the manor, he got someone to arrange for Minister Lu's living quarters. Then, he returned to the inner area with the dinosaur egg. As soon as he reached the inner work area, he put the giant ferrafal egg into the game with just a thought.

After that, he exited the game. This way, under the special game mechanics, the ratio of in-game time to real time was different, and the dinosaur egg would hatch very quickly.

Therefore, Qin Lin kept staring at the game screen. Not long after, he saw the dinosaur egg move, and then cracks appeared on the surface of the eggshell.

Immediately after, a small head emerged from the crack. The entire head was surprisingly pink toot cute.

However, when the little dinosaur cracked open the broken eggshell, it revealed a chubby lower body. It was as if its head and body were completely disproportionate.

Its four limbs were short and thick, and it had a long tail.

Seeing this, Qin Lin directly entered the game.

Since the dinosaur had hatched, it naturally could not be placed in the experimental box. After all, with the time ratio in the game, the dinosaur would grow up very quickly, and the experimental box could not fit it at all.

After taking out the small dinosaur, Qin Lin was surprised to find that there was no special label on it.

This should be related to the fact that it was brought in from the outside.

After all, all the animals produced by the ranch, whether they were cattle, sheep, horses, or other animals, would have a remark.

After the giant Ford Rafal Dragon came out of its egg, it immediately ran to the farm and started eating the dog tooth grass.

Obviously, the grade 2 Dogtooth grass was also popular with dinosaurs. After all, the mega fortrafal Dragon was also a herbivore.

Seeing this, Qin Lin didn't pay any more attention to the little dinosaur. After all, the dog's tooth grass grew extremely fast, and with the game's mechanics, there shouldn't be any problems.

He would just let this young Ford Rafal Dragon grow up on its own on this farm.

After that, Qin Lin also released the game on a whim.

The next day.

Qin Lin got up early in the morning and looked at the game screen.

In the game, the dinosaur had grown even bigger. The time ratio of the game allowed the dinosaur to grow very quickly.

Qin Lin got up and washed up. When he went out, he saw da Bai scanning little Qin Feng's physical condition. Xiao Feng, you're in good health. You have to keep it up.

[Chapter 1705 789-The Unlucky Eternal](#)

Little Qin Feng threw himself into Great White's arms happily. da Bai, you're amazing! When I grow up, I'll make you even more amazing!

The nearby little yang kept his eyes fixed on da Bai as the two of them embraced each other. There was a hint of killing intent in his eyes.

However, it didn't dare to attack da Bai after its previous lesson.

Zhao mochen brought out some breakfast from the kitchen and said, "honey, let's eat. Oh, I looked at the financial report. Linlin laboratory has set up a company that specializes in running big Bai. The shared big Bai scanning plan is going to be promoted nationwide. I'm afraid you'll be scolded to death by those hospitals and doctors. I don't know if you'll be cursed to death.

Zhao mochen said as he covered his mouth and laughed.

Qin Lin suddenly remembered that he had made big white a long time ago, but he hadn't paid much attention to it after giving it to Lin Lin in the laboratory.

There was indeed a plan to share Great White with everyone in the hospital because Great White was to be promoted in the hospital at the beginning.

However, everyone knew that the hospital had too many thoughts. Furthermore, every hospital thought that there was something wrong with da Bai. They could even find an excuse that it was too white and that it was not suitable for the patient's mental health under the light.

There was no need to think about what happened after that. Linlin's laboratory had also come up with a plan to attack da Bai in a fit of anger.

It had already been carried out in the provincial capital of min province. After all, the pavilion closest to the water enjoyed the moonlight first.

The provincial capital of jiangprovince.

On a certain Street, a black screen that had been unveiled had already attracted the attention of many people. They were all looking curiously at the building that had a sci-fi feel to it.

Inside, there was a large white machine that was very eye-catching.

the shared big white has finally been promoted to us.

"Yeah, I've been looking forward to it for a long time. I wonder when the home version will be released!"

"The hospitals in Jiang province are going to start crying."

"Hahaha, definitely!"

Eternal was also looking at the big Bai Hall in surprise. He had already seen it before in the provincial capital of min province.

Shared big white was first promoted in min province. After all, the pavilion closest to the water enjoyed the moonlight first. He had seen it when he went to min province to play with Wang Xiang.

Thinking of Wang Yan, he hadn't played with him for a long time. It felt really good every time he went to play with him. Everything was arranged properly, and the key was that he had to waste his waist.

However, he really wanted to cripple his waist these few days.

With the black screen revealed, it also meant that the big white sharing Hall could be put into use. Many onlookers rushed in to experience it.

Wangu naturally followed him in out of curiosity. Previously, he had only cared about the young ladies that Wang Yan had arranged for him in min province, so he had not experienced it before.

However, there were too many people who wanted to experience it. It was too crowded, so he had to line up.

When it was finally his turn, he couldn't wait to insert a coin into the machine next to him. As long as it was 1 Yuan, he could do a check.

This was actually a kind of compromise. After all, if Great White could find out everything for just one Yuan, what would the hospital eat?

The test usually costs 2000 Yuan, but you did it for 1 Yuan. Does the hospital still need to pay you your salary and eat?

Therefore, hospitals all over the country were making a fuss about their youngest son, and the higher-ups had no choice but to come forward to coordinate. The sharing with big white was greatly reduced, and it could only detect the basic condition of the patient. There might be a problem with your xxxxx. Please head to the nearby hospital for a more detailed investigation.

Anyway, this was very cowardly ...

However, the higher-ups had no choice. After all, Western medicine hospitals were still the mainstream. They could not make a scene.

Therefore, he could only wait for Chinese medicine to develop.

It was indeed impossible for one family to monopolize the world, but it would not be too late to settle the score.

After eternal threw in the money, da Bai, who was in front of him, also said, ""Sir, it's my pleasure to serve you."

Then, a scanning device appeared on da Bai's body and began to scan eternal.

After scanning it twice, a screen appeared on da Bai's belly with the words 'analysis in progress'. ...

A moment later, da Bai's voice sounded again. "Hello, Sir. Because you stay up late for a long time, you have some problems with your heart, liver, spleen, lung, and kidney ... Finally, I suggest you go to the hospital for a check-up. The probability of you dying from sudden death is very high."

".. "Eternal was speechless.

It felt like there was nothing good about him.

It would be a wonder if da Bai was accurate.

A moment later, the machine connected to da Bai next to him also printed out an examination report.

Eternal took the report out of the shared big white Hall and threw it into the trash can.

He didn't believe in these ghostly things. Sudden death, how could he suddenly die?

If he went to min province to look for Wang Yan, he could even ask Wang Yan to arrange for two girls.

As eternal thought about it, he walked out of the hall and suddenly felt a sharp pain in his chest. Beads of sweat appeared on his forehead.

The excruciating pain made his expression look a little sinister.

A moment later, he fell to the ground, clutching his chest.

This caused the pedestrians to exclaim in surprise, and a few people immediately surrounded him.

"Someone has fainted!"

"Hurry up and call 120!"

he's not breathing. Who knows how to give mouth-to-mouth resuscitation? give him mouth-to-mouth resuscitation!

"I will, move aside." A hot and beautiful woman walked through the crowd, her chest ... It was really big.

When she got closer, she faced eternal's mouth and performed artificial respiration!

At the Qin Lin Manor, Qin Lin was completing his daily tasks for the day when he saw Minister Lu running in a hurry. boss Qin, good news. The particle-capturing device has arrived. It's been sent to Linlin's laboratory.

When Qin Lin heard this news, MA Shan said, ""Let's go and take a look!"

He was very interested in particle capture devices. After all, he had not tried particle technology yet.

He also wanted to see how easy it was to solve a problem that was difficult to solve in other countries.

Minister Lu naturally followed. He was even more excited than boss Qin.

After all, this was particle research. Boss Qin only needed to move his fingers and he might be able to make history.

When Qin Lin arrived at Linlin's laboratory, Shen Li was already waiting for her. After all, the particle capture device was a high-level experimental product. It was not something that just anyone could accept.

Therefore, Chen Li personally came to receive it.

Chairman Qin, the item is already in the laboratory on the west side. When Shen Li saw Qin Lin coming, he immediately welcomed Qin Lin in.

Inside, there were already people from the Hua hospital debugging the particle capture instrument. This kind of instrument was not something that ordinary people could adjust and install. It required professional technical staff at the national level.

Minister Lu called someone over.

It was a young man. When the young man came close, Minister Lu smiled and introduced him, ""Boss Qin, this is Liu Tong. He's the most outstanding young man in our Department who's researching particle technology,"

As he spoke, Minister Lu gave the young man a hint.

The young man immediately understood and respectfully said to Qin Yang, ""Academician Qin, please give me your guidance."

Qin Lin nodded at him, as if he understood Minister Lu's meaning.

Minister Lu smiled embarrassedly. He had a purpose for letting Liu Tong come over, and that was to secretly learn from boss Qin. At least, it would be more effective to participate in the process than to understand and learn later.

This could be considered as sending Liu Tong to boss Qin's side to further his studies. As for how far Liu Tong could learn, it would depend on him.

After all, Liu Tong might not be able to keep up with boss Qin's mind.

Qin Lin didn't stay for long. After all, for the research of particle technology, even if there was already a ready-made technology in his mind, he still had to make a plan. After all, this was no ordinary research.

So, after knowing the condition of the equipment, he left Linlin's laboratory and returned to the Linlin Manor.

Then, he was also called to the hall by Zhao mochen. hubby, take a look at today's news. It's very interesting!

"What news?" Qin Lin was puzzled. Zhao moyin brought him to the screen in the hall and saw that he was watching today's hot news.

because I didn't believe that big White's scan would cause me to die, I fainted on the spot as soon as I stepped out of the experience Hall. Fortunately, I was saved by the mouth-to-mouth resuscitation of a beautiful woman.

The news video even showed the test report of da Bai.

Qin Lin, on the other hand, watched the news video in shock.

He found it strange. Was there someone with the surname Wan here? This was the first time he had heard of it.

However, in the video, Mr. Wan was slapped hard by the beautiful woman. The reason was simple. Mr. Wan was obviously awake, but he pretended not to wake up and took advantage of her mouth-to-mouth resuscitation. In the end, he was slapped hard.

Qin Lin was speechless. These were only scenes in novels and movies. He didn't expect such a strange person to exist in reality.

[Chapter 1706 Don't Be Surprised At The Speed Of Qin-Style Research](#)

The next day.

Qin Lin got up early in the morning and looked at Zhao Moxi, who was beside him, and smiled.

Zhao Moyu seemed to understand his husband's thoughts. He rolled his eyes and took the initiative to roll over.

There were times when one had to be sentimental between a married couple.

Moreover, sex life had to be carried out from time to time to increase their feelings for each other.

The next scene was ...

. (50,000 words were omitted).

Qin Lin washed up and went out of the room. He looked at the game screen. In the ranch, the huge Ford Rafal Dragon was eating the dog tooth grass.

Its body was bigger, but it was also uglier. Its head was a little long, like a giraffe, but its limbs were short and thick, and it also had a fat belly.

If this trend continued, wouldn't it be telling everyone that I'm fat and that they should come and eat me?

"Daddy, let's eat!" Little Qin Feng ran up to Qin Lin and shouted.

It was obvious that the little fellow was becoming more and more polite.

Qin Lin couldn't help but praise him, but then he heard little Qin Feng say, "'Dad, can you tell mom not to let me study anymore?"

"? ? ?" Qin Lin suddenly sighed.

Indeed, there was no love without reason.

Qin Lin couldn't be bothered to pay attention to her little thoughts, as if he had the right to make the decision.

Unless he didn't want his sexual happiness anymore.

Therefore, it was better for children to work harder and be more tired. Only then would they become successful in the future.

After breakfast, Qin Lin went into the lab and began to plan the experiment. The particle capture device had been delivered, so he could finally experience the curious thing of capturing particles.

However, the particle capture experiment was not a simple task. It could be said to be very difficult.

Therefore, the research of various countries was limited, but the investment in this area was huge.

Especially America.

It was their fault for producing particle accelerators in science fiction movies and TV series.

If they could really create something like that, the entire country would be completely different.

Qin Lin sorted out a research plan according to the information about the particle ray technology in his mind, then left the Linlin Manor and went to Linlin's laboratory.

The laboratory building on the west side of Linlin's laboratory was originally dedicated to the study of Transformers. However, as the technology and proficiency of making Transformers increased, and the equipment was improved, the space of the laboratory was no longer needed to be used in one building.

Therefore, a part of the remaining empty experiment rooms were used to install particle capture instruments for particle technology research.

When Qin Lin arrived, Liu Tong ran up to him respectfully, "Academician Qin, you're here!"

There were a few people behind him, who were in charge of assembling the particle capture device. They naturally had to stay behind to maintain the device. After all, the device was very expensive, and it was hard for ordinary people to imagine its value.

Naturally, there were two young people who had just graduated. They should be very outstanding and were recruited by the Chinese Academy of Medicine.

Don't think that the Chinese Academy of Medicine only had old researchers. Most of them were still young.

After all, society belonged to the younger generation, and they couldn't be lacking in talent. The Chinese People's Hospital still attached great importance to the cultivation of the younger generation.

Therefore, there were many young people in the Hua hospital.

The young people who could be recruited by the Chinese Academy were naturally very outstanding.

Qin Lin looked at the two young people and knew what Minister Lu was thinking. They were sent here to further their studies, right? He had the same purpose as Liu Tong.

Qin Lin didn't have any objections to this. He had the complete technology anyway, so he just needed someone to do it.

As for how much these people could learn and how much comprehension they could gain, that would depend on themselves.

"Academician Qin!"

"Academician Qin!"

The two young men also greeted Qin Lin respectfully when they saw him.

They were about the same age as Qin Lin, so they didn't dare to call Qin Lin young academician Qin like Liu Tong, who was in his early forties.

The older ones called him academician Qin. After all, he was an older man.

If they dared to call him that, it would be impolite.

Qin Lin also took out his experimental plan and handed it to Liu Tong. He said, "Professor Liu, please take a look at the experiment plan first, then we'll start!"

He had also read Liu Tong's information.

Since Minister Lu had arranged for Jean to stay here, he would naturally give him all the information.

This Liu Tong was not simple. He was very capable and was an outstanding researcher in the field of particles.

In other words, Liu Tong had the qualifications to be an academician, but now it was just a matter of qualifications that were in line.

Ten years later, he would definitely be a leader in particle research.

Liu Tong took the experimental plan and looked at it for a while. Then, his face revealed a surprised look.

Academician Qin's plan was very detailed. The key aspects involved were things that they had never thought of. It could be said that some aspects were a kind of wonderful idea.

In other words, scientific research sometimes required creative ideas. This was one of the reasons why academician Qin was so devilish.

His wondrous ideas were stronger than ordinary people's.

After Liu Tong finished reading, he said, "academician Qin, there's no problem with your plan. However, it's based on the premise that we can successfully capture particles.

at the current stage of particle research, there is no problem in capturing particles. However, it is very difficult to capture particles 100% or to a large extent. We can't find a few sets of completed parameters to capture particles.

It was difficult to capture particles, so there was a parameter setting on the particle instrument that allowed people to record the previous data and then continue to capture the particles according to the track of the data.

[Chapter 1707 Don't Be Surprised At The Speed Of Qin-Style Research](#)

However, if the sacrificial ritual was like this, then after the numerical system of the data, every piece of data would be in the hundreds of millions. How terrifying would the number be when a group of numbers was combined?

For example, if a number was a hundred million, what about a set of nine numbers?

That was quite terrifying, so no one could give an accurate and complete set of parameters.

Moreover, whether the current parameters were correct in the end and whether they could capture particles with certainty were also uncertain.

Basically, the research of every country was stuck in this area, and it was difficult to make any breakthroughs.

With that number, even with computer assistance, it would be useless if they couldn't capture the particle trajectory.

Therefore, whoever could find a set of perfect parameters could leave their name in history.

"Okay, I'll give you a few sets of parameters to try later." Qin Lin nodded and said lightly.

In the data in his mind, there were more than 20 sets of such particle capture parameters.

In other words, professor Gao in the game world had more than 20 plans for particle capture instruments, and they were all successful with perfect parameters.

If these parameters were made public, the whole world would be in an uproar, and the technology for particle capture could basically be perfected.

Also, these parameters could even be used as quantifies and directly written into particle technology scientific books, just like those mathematical formulas.

Upon hearing Qin Lin's words, Liu Tong's face was filled with surprise as he said, academician Qin, do you have perfect particle capture parameters? "

Qin Lin didn't say much. He wrote down a set of parameters and handed it to Liu Tong. not yet. You can adjust the device according to these parameters and see if it works.

He didn't show that he was sure it would work, but let Liu Tong and the others try.

After all, the particles in reality might be different from those in the game, so he couldn't be too sure.

Naturally, rang ye would immediately take out the complete parameters first, as that would be too freakish.

Otherwise, if the particle instrument arrived on the first day and the parameters were completed on the second day, the intuitive comparison would be that you started studying the atomic bomb from scratch today, and the next day you made the atomic bomb and released it, and it exploded.

This was too shocking.

Liu Tong had already started to operate with the set of parameters given by Qin Lin.

This set of parameters was obviously different from the parameters they had studied in the past. It could be said to be a fork in the road.

After he filled in the parameters on the particle capture instrument, he asked someone to start the particle capture.

A moment later, the particle capture device was activated and it began to search for the particles that existed on earth in the surrounding air.

When the particle was captured, the particle energy tank on the instrument would be activated.

Unfortunately, the number of times the energy bar lit up in this kind of particle research was countable, and it was only when he was extremely lucky.

If he could keep the energy tank lit up, he should be able to conduct research on particle beam weapons.

Liu Tong looked at the status of the particle capture device carefully, for fear of missing any detail. He also looked at the traces of the device.

eh, I've discovered particle energy. Liu Tong suddenly exclaimed in surprise.

This also made his face reveal a look of disbelief.

The discovery of particles was also an important process.

Their research stage also stopped at the particle parameters stage.

Moreover, he couldn't accurately find the particles every time.

Liu Tong looked at the particle capture device expectantly. Unfortunately, the parameters given by Qin Lin were not perfect on purpose, so the particle capture device failed.

Liu Tong immediately started the device again and continued the experiment. Soon, he found the particle energy again, but unfortunately, he failed to capture it again.

The third time, he activated the device again, and it was the same number.

In the end, he still failed.

Fourth time

The fifth attempt.

Liu Tong's repeated attempts had all ended in failure, but his face was still full of smiles, somewhat incredulous, and his excitement was difficult to hide.

Although academician Qin little failed to capture the parameters, the parameters could actually discover particles with 100% accuracy.

This was a huge improvement.

To be able to discover the particle energy with a 100% success rate also indirectly explained that the direction of academician Qin's parameters was absolutely correct.

Liu Tong couldn't help but say, "academician Qin, your parameters are too amazing. I'm afraid it's even better than the parameters discovered by other countries.

Minister Lu came in and saw the excited Liu Tong. He asked in confusion, "What's going on? why are you so happy? Are you guys going to start your research?"

Liu Tong immediately said, "Minister Lu, I'll tell you something. You won't believe it. Academician Qin has a set of particle capture parameters. These parameters can detect particle energy with 100% certainty. In other words, our particle research has taken another big step forward.

"What?" But Minister Lu was shocked and dumbfounded?

What did that mean?

It meant that the particle-capturing device had just arrived yesterday, and boss Qin had made progress today.

What kind of speed was this?

If it was someone else, he would definitely think that the other party was bragging, or that the experiment was not rigorous, and there must be a mistake.

But this was boss Qin.

That would definitely be different.

Moreover, because he paid attention to particle research, he had also read about particle research at home, so he knew how much progress it was to be able to discover the particle energy parameters with 100% certainty.

Just this alone was enough to leave the Western countries in the dust.

Minister Lu suddenly couldn't help but want to laugh. Fortunately, he agreed to give boss Qin the information and applied to the leader. Otherwise, how could he have done it so quickly?

Therefore, he also had a part to play in this distance.

This was definitely to his credit. This was his ability to judge people.

Thinking of this, he couldn't help but take out his phone and call the leader. Naturally, he wanted to tell him the good news and let him know that this decision was right.

Soon, the leader received a call from Minister Lu. After hearing the news from Minister Lu, he smiled and said, " little Lu, take a look. I immediately approved your application back then. I'm quite good at judging people ...

".. "Minister Lu was stunned.

These words were familiar.

After hanging up the phone, Minister Lu urged Liu Tong to take him to see the data.

Liu Tong, " Qin Lin said, " you should do more experiments according to these parameters and show me more data. I'll analyze it and make my own deductions. More than 100 times. Naturally, the more the better.

He was naturally looking for work for Liu Tong and the others. After all, they had to act more realistically so that these people would do more things and be more tired. This way, they wouldn't think too much about strange things. Perhaps they might even gain something.

After that, Qin Lin went back to Linlin Manor. When he returned to his office, he looked at the screen in his mind.

In the farm, the huge Ford Rafal Dragon had already grown to a very large size. From the images, it could be seen that if the dinosaur were to turn into meat, it would probably weigh tens of tons!

It was a little shocking.

And to Qin Lin's surprise, it had laid several eggs in the middle of the farm.

Since it could lay eggs, it meant that the giant Ford Rafal Dragon had already matured.

Qin Lin also entered the game with a thought. Then, he went to the eggs and picked up one. He saw the remark:

[giant ferrafal dragon egg:[special!]

[this is the egg of a giant Ford Rafal Dragon. It is extremely nutritious and delicious after cooking. Special effect:[nutrition +2, deliciousness +2, taste +2!]

When Qin Lin saw the remarks, he knew that the giant Ford Rafal Dragon deserved to be a meat product.

If this egg had three of these +2 attributes, wouldn't it make people drool?

One had to know that this dinosaur was brought in from the outside world, not native to the game.

In other words, if this giant Ford Rafal Dragon was raised in the real world, the eggs it laid would have the same attributes to a large extent.

What about the dinosaur itself?

Qin Lin subconsciously looked at the huge Ford Rafal Dragon, his eyes filled with the curiosity of a foodie.

The giant Ford Rafal Dragon clearly didn't notice anything. It didn't even care about anything else, only focusing on eating the grass on the ground.

[Chapter 1708 The Little Demon, Little Qin Feng? 1](#)

Qin Lin looked at the giant Ford Rafal Dragon, who was eating happily, and could only secretly praise its big heart.

But wasn't this personality like a pig, born to be eaten?

With a single thought, Qin Lin took the two huge Ford Raphael dragon eggs out of the game and returned to the inner area.

One of the eggs was directly placed in the workshop. This egg was used as a cover.

After all, he had brought an egg from Linlin's laboratory. He couldn't just lose it.

The fact that he had brought out an egg could naturally be covered up.

Furthermore, there were no flaws.

Qin Lin then took the other egg out of the workshop and went straight to the kitchen.

This was a dinosaur egg. He definitely had to try it. He would probably be the first person to eat a dinosaur egg.

Qin Lin entered the kitchen and took out some ingredients from the cabinet.

These ingredients were all used to make medicinal cuisines, and they could increase the taste, taste, and medicinal fragrance by 1.

Using these ingredients to make a steamed egg herbal dish, the taste and deliciousness of the dinosaur egg became +3.

Qin Lin took a bowl and cracked a hole in the dinosaur egg. Then, he beat the yolk out, keeping the yolk intact.

Moreover, the egg white of this dinosaur egg was completely different from that of chicken eggs and duck eggs. It was tougher and more flexible.

Qin Lin first put the dinosaur egg into the pot and steamed it a little.

After that, he took out some medicinal herbs.

He placed these herbs into another pot, then boiled them and added the seasoning.

After that, he placed the half-cooked egg into the pot and began to steam it.

A moment later, a unique medicinal fragrance wafted out.

The smell attracted Lin Fen and Zhao Moye.

When they smelled it, they knew that Qin Lin must be cooking. They couldn't help but look forward to it.

After all, they knew that Qin Lin's cooking was very delicious.

It didn't take long to steam the egg. Very soon, the dinosaur egg was completely cooked. At this time, it was time to season the ingredients. He poured the remaining ingredients into the egg.

Very quickly, a pot of steamed egg medicinal cuisine was ready.

Zhao mochen and Lin Fen couldn't help but come over and show off in the pot.

"Honey, what egg is this?" Zhao Moyu couldn't help but ask. He felt that the egg was very fragrant, and he really wanted to eat it.

"It's an ostrich egg!" Qin Lin made up an explanation.

Zhao mochen looked at the egg, gestured, and asked in confusion, ""Hubby, are you serious? Why do I feel that it doesn't look like it? It's bigger than an ostrich's egg. Besides, the egg white of an ostrich egg doesn't look like this, right?"

"How did you know?" Qin Lin asked curiously.

Zhao Moyu explained, " the eggs used to raise the Ducks were so big. They looked like ostrich eggs. I went to check. Ostrich eggs don't look like this at all.

Qin Lin laughed and made up a story. ostrich eggs aren't supposed to be like this. But I've cooked them and added so many ingredients. Of course, they look different.

Qin Lin made up the story very seriously.

It seemed that even he was about to deceive himself.

"Really?" Zhao Moyu asked in confusion.

"Of course it's true. What else do you think?" Qin Lin nodded.

"Alright then!" Zhao Moyu obviously believed him.

Naturally, she did not dwell on this.

What her husband said was true. Would her husband lie to her?

Qin Lin laughed. His wife was so easy to trick. Then, he said, "Mo Xiao, mom, try this egg."

"It's very fragrant," Lin Fen couldn't help but exaggerate.

Qin Lin also took out a bowl and got a bowl for each of them and another for himself.

The three of them then picked up their bowls and began to taste it.

With +3 texture and +3 deliciousness, it was needless to say whether the egg was delicious or not.

Moreover, the dinosaur egg had a special taste that was different from ordinary eggs. This taste was intoxicating.

If these dinosaur eggs were to become popular in the future, they could probably replace many other eggs.

After all, the egg-laying rate of this giant Ford Rafal Dragon was obviously not low. It could lay more than ten eggs at a time. If the egg-laying cycle was short, the production rate would be very high.

However, with the size of the giant Ford Rafal Dragon, its appetite was huge. No one would raise a group of such dinosaurs and use them to lay eggs, right?

The eggs they laid wouldn't even be enough to buy them food. They would be eaten until they became poor.

Therefore, meat products should have the same ending as meat products.

Qin Lin looked at the screen in his mind and controlled some of his characters to go to ore town to find butcher.

Since it was time to slaughter this giant Ford Rafal Dragon, it was time for it to face its fate.

The butcher from ore town quickly arrived at the farm. Just like how he slaughtered the cattle, he clicked on the giant Ford Rafal Dragon. The next moment, the butcher walked to the dinosaur and led the giant Ford Rafal Dragon out of the farm.

When it came back, it would become meat for all kinds of parts.

"This egg is really delicious." Lin Fen praised again.

She wasn't a person who had many requirements for food, so she could eat anything she wanted and wasn't greedy.

But today, he really wanted to eat another bowl.

"Grandma, mom, dad, what are you eating?" A curious voice was heard.

He saw little Qin Feng walk in. He seemed to have smelled the fragrance and quickly ran to the table.

[Chapter 1709 The Little Demon, Little Qin Feng?\(2\)](#)

egg, what a big egg! I want to eat an egg! Little Qin Feng saw the remaining half of the dinosaur egg and immediately shouted out.

Zhao mochen hurriedly got a bowl for little Qin Feng, and then cut out a piece of egg.

The egg was too big for him to put in the whole thing. He could only take a little bit out and put it in the bowl.

Little Qin Feng immediately took the bowl and tried a bite.

However, after this one bite, he began to gobble down the food while mumbling, " daddy, this egg is delicious. What kind of egg is this? "

"I'm afraid. An ostrich egg." Qin Lin blurted out almost subconsciously, but he almost let it slip.

Zhao Moyu seemed to have realized something and looked at Qin Lin in confusion.

Just now, her husband obviously wanted to say something else, but in the blink of an eye, he said 'ostrich egg'.

Scared?

A dinosaur egg?

That was what Zhao Moyu thought, but she quickly shook her head. How could it be a dinosaur egg? her husband was studying dinosaurs, so even if there were dinosaur eggs, he couldn't possibly eat them.

"There's still a lot of these eggs, you guys eat them all." Qin Lin immediately changed the topic.

At this moment, a phone call came in. It was Liu Tong.

Qin Lin pretended to answer a phone call and walked to the work room, not wanting to be entangled with Zhao moyin.

As soon as the call was connected, Liu Tong's voice came through, Academician Qin, I've done what you asked. I've sent the data to your email, you can check it.

Qin Lin naturally knew what data Liu Tong was talking about.

He had deliberately asked Liu Tong and the others to capture particles with those parameters, and the number had better be more than 100.

This was naturally his intention. His purpose was naturally to find an excuse for himself.

After all, he did not come up with a perfect set of parameters at once. Things had to be done gradually.

Therefore, by relying on the existing parameters, he let Liu Tong and the others capture the particles and obtain the data. Then, he used the data to analyze the next two parameters.

If they continued to capture particles with the previous parameters + these two parameters, Liu Tong and the others would find that they would be able to capture the trajectory of the particle energy.

At this time, he asked Liu Tong and the others to continue making data and he continued to analyze until he gave them a set of perfect parameters so that they could capture the particles 100%.

Qin Lin hung up the phone and opened his mailbox. There was indeed a new email in it.

Clicking it open, it was filled with dense data.

Qin Lin was a little surprised when he glanced at the data, because there were more than 100 sets of data. There were at least 500 sets.

This Liu Tong was really proactive.

He had casually asked for 100 sets, and he had done 500 sets.

However, the reason why their country was able to catch up with the West in scientific research was because there were many such researchers.

Qin Lin then looked at the data.

He had to at least have a rough understanding.

In the inner area, in the hall, after little Qin Feng finished eating, he ran to a small table at the side, then took a picture and began to draw.

He spent a lot of time on this drawing.

After Zhao Moyu finished washing the dishes, he curiously walked to his son's side and saw that his son had drawn a simple diagram of a toy.

However, she felt that something was wrong because the data on the note was too professional. It did not look like a toy at all, but more like a design plan.

She didn't understand these things, but she thought of her husband. After taking little Qin Feng's picture, she went to find Qin Lin.

"What's wrong?" Qin Lin opened the door and asked when he heard Zhao Moxi knocking on the door.

Zhao Moxi handed the picture to Qin Lin and asked, "Honey, take a look at this."

Qin Lin took the picture and looked at it. He asked in confusion, "this seems to be a blueprint, and it's related to a type of mechanical toy. There shouldn't be many such toys on the market. Where did you get it?"

"This was drawn by little Qin Feng," Zhao mochen said.

"He drew it?" Qin Lin was shocked. How old was little Qin Feng? Although he had been studying, he hadn't even started school yet. How could he draw this?

However, Zhao Moyu looked serious, and it was obvious that he was not just saying it casually.

Qin Lin immediately used the truth Jade to check the design.

[this is a design drawing of a mechanical toy drawn by a child. If you make it according to this design drawing, you can create a very popular mechanical toy for children!

[note: I have to say, the child who drew the mechanical toy must be a genius.]

Qin Lin was surprised to see the note.

Was it really drawn by little Qin Feng?

Could it be a factor that benefits the fetus?

This thing was so awesome?

It was unbelievable just thinking about it. Little Qin Feng was only a few years old, but he could actually design such a thing?

Moreover, it was very popular with children. If it was made into a toy, it would definitely be very popular.

"Could it be that academician Hao taught little Qin Feng this?" Qin Lin asked after some thought.

Zhao mo felt that it was possible. After all, little Qin Feng's drawing skills were not good before. For this reason, she even wanted to apply for drawing tuition for little Qin Feng.

But on this design, the level of painting was obviously very high. It didn't seem to be little Qin Feng's work, but more likely to be drawn by academician Hao and the other three old academicians.

The three old academicians really liked little Qin Feng. It was entirely possible that they would make this toy in order to coax this little guy.

However, if that was the case, little Qin Feng would have lied and said that he had drawn it himself. He had to be taught a lesson.

[Chapter 1710 The Little Demon, Little Qin Feng?\(3\)](#)

With this in mind, she hurriedly took the design and went out of the inner area to find academician Hao and the other two old academicians.

"Director Zhao, what's the matter? why are you in such a hurry?" Academician Hao saw Zhao Moye and asked.

Zhao Moyu handed the design to academician Hao and said, ""Academician Hao, take a look at this."

Academician Hao took the design and looked at it carefully. He then said in surprise, ""Although this is a design for a children's toy, the mechanical structure and the mechanical design are very impressive. What kind of toy are you going to make for little Qin Feng?"

When Zhao Moyu heard this, he asked in shock, "Fellow scholars, didn't you draw this? "

Academician Hao and the other two were stunned.

"We really didn't draw this. Could it be that boss Qin didn't draw it?" academician Hao immediately said.

At this time, Zhao Moyu said in embarrassment, ""Little Qin Feng said he drew it himself."

"How is that possible?" Academician Hao was shocked.

Little Qin Feng had yet to go to school. Although they often taught him about machinery, how could a child of his age know how to draw?

"President Zhao, do you want to take us to see little Qin Feng?" Academician Zhu suggested.

Zhao mochen nodded and brought the three old academicians back to the inner area. As soon as they entered, they saw little Qin Feng drawing there again.

The three of them hurried over and saw little Qin Feng drawing lines on the paper.

The key point was that the lines left the three of them in disbelief.

Because the lines were too straight and strong, it didn't look like it was drawn by a child at all.

The key was that after those lines were connected together, they actually formed the shape of a part of the design. The entire part of the design was not inferior to the one they had just seen.

In other words, the design just now was drawn by little Qin Feng.

"Heavens!" Academician Hao couldn't help but exclaim.

Academician Zhu and academician Zhu were also in disbelief.

"Genius, he's really a genius."

he has completely inherited boss Qin's freakishness, or rather, he might be even more freakish than boss Qin.

â€œ..â€œ

Academician Hao couldn't help but ask little Qin Feng, ""Little Qin Feng, how did you draw this picture?"

Little Qin Feng seemed to be confused as to why academician Hao would ask this question, so he turned on the TV and switched to a channel.

This channel was a channel that talked about the structure of mechanical facilities. It could be considered a very boring academic program.

"I looked at them, and then something shiny appeared, and then I drew it," little Qin Feng said.

Academician Hao and the other two were even more shocked.

They didn't know what little Qin Feng was talking about. It was probably something like a flash of inspiration, but it was a description that little Qin Feng didn't understand.

Anyway, little Qin Feng had drawn the design of the toy after watching the show.

But what kind of joke was this? you asked the teacher who explained machinery in that program to draw such a design and see if he could draw it, but little Qin Feng did.

He was truly a monster.

This definitely wasn't any worse than the childhood experience of the God of science.

I think it's because I've told little Qin Feng a lot about machinery before, " academician Hao said immediately. I've laid the foundation for him.

When academician Zhu and academician Zhu heard this, they looked at academician Hao in shock. This old man was shameless and wanted to claim credit.

The two of them immediately said, "

old Yan, can you speak more clearly? it's as if you're the only one who taught me.

that's right. I've taught him a lot too. Little Qin Feng, that little demon, has listened to everything I've taught him.
