

The Game 1721

[Chapter 1721 The Power Of The System! Jurassic Park! 2](#)

It really was another own goal.

The scene was boiling.

Naturally, there were also curses.

Many of them had bet on gentin's victory.

What's wrong with this team?

An injured mistake and two goal-scoring actually tied the score.

The netizens in China were even more incredulous.

They just wanted to score their own goal, but who knew that it would really come?

When the whistle sounded and the score was fixed at 3:3, the netizens in China thought that they were dreaming and that everything was so unreal.

"Don't tell me that this guenz team is fixing the ball?" Some netizens asked.

If not for the Argentina team, everyone would have thought so.

However, because it was the Argentina team, everyone thought it was impossible. They were the defending champions.

However, if it wasn't a match, there would be too many mistakes.

On the court, the king of football and the players of the Argentina team were dumbfounded. This was definitely not what they had expected.

They had never led by three goals before, and then equalized the score in such a short time.

This was an international joke.

Now, they were going into overtime. This was a godsend.

On the other hand, the Linlin Scenic Area soccer team members were also dumbfounded. They didn't even know that this would happen.

After all, they were all ready to pack up and go home to see if they had the chance to play again next year. After all, they couldn't represent the national team in the competition. It was up to the boss to deal with it.

Who knew that in the blink of an eye, they would get the chance to go into overtime.

Each and every one of them seemed to have been injected with chicken blood. Under such circumstances, they definitely had to take a gamble. Therefore, each and every one of them was in high spirits.

Very soon, the overtime began.

This time, the Argentina team clearly felt that the Linlin Scenic area's security team was different.

In the beginning, their opponents seemed to have taken stimulants, attacking fiercely.

It was just a difference in technique. In this overtime, the guendians scored a goal first. It was the king of football who scored a goal from the West.

This was expected by everyone. The Argentina team had never lost in overtime.

But soon, to everyone's surprise, the Linlin Scenic Area security soccer team scored another goal under their crazy and fierce attack.

Therefore, the score of overtime became 1:1.

Moreover, this ending continued until the end of overtime.

This made everyone fall silent.

If it had been the mistake of the Argentina team and their own goal, the Linlin Scenic Area security football team had really put in their best for this overtime.

After overtime, King Xi was a little confused.

He didn't understand why the competition that he was sure to win had become like this.

There was no clear winner in the overtime, and the advancement of the top 16 would require a penalty shootout.

Therefore, before the penalty shootout began, major websites around the world had already begun to place bets.

There were still many people who bet on Argentina winning.

After all, the Argentina team had never lost on penalty kicks.

Only the netizens in China had bet on the Linlin Scenic Area security team winning.

Soon, the penalty shootout began, but everyone was dumbfounded again.

After the penalty shot, neither the Argentina team nor the Linlin Scenic Area security football team won. It was still a draw.

It was almost as if the security team would score a goal for every goal that Argentina scored, and the security team would concede a goal for every goal that Argentina lost.

After the match ended, both teams scored 4:4 on penalty kicks.

The total score was now 8:8.

All the major websites in the world were taken over by Zhuang family.

Therefore, the penalty shootout was going to continue, and this time it was a one-on-one penalty shot.

This time, it was lively again. It could be said that the probability of both teams was 50%. After all, Saint Martin was off the field. The two goalkeepers were not that amazing, and it would depend on luck.

Naturally, for the first time, the Argentina team sent Wang Xi out for a one-on-one free kick, and they bet more on Wang Xi.

The king of football's West penalty kick was the best, and he would not lose.

Sure enough, after the ball King, West, went on for a penalty kick, he scored a goal.

However, the security team's penalty shot actually went in and killed off dust ball King in an instant.

What happened next stunned fans all over the world even more.

The players from both sides came out one by one to fight a penalty shootout.

However, one after another, the team members either all scored or none of them scored. Then, it continued to be a draw.

.

Time passed.

On the domestic internet, all the fans who were watching the live broadcast were dumbfounded. They looked at their computers and then at the time. Many of them had made appointments with their friends, but the time had already passed by a lot. There were also many people who had already skipped work.

Because they really did not want to leave, and then they became more and more shocked, because in the live broadcast, the score between the two teams had reached 33:33.

Can you believe that the Gundam team and Linlin security team begged the team to change the score from 3:After the 3 draws went into overtime, and then the penalty kicks continued until now?

The one-on-one dotting match had gone on for 25 rounds.

However, there was no clear winner in these 25 rounds. Either both sides made it in, or none made it in.

Both sides could even kick the ball in the same position on the crossbar.

Oh my God.

Not even the movies dared to act this way.

In the office of the Linlin Manor, Qin Lin entered the game world and walked around. After making sure that there were no new discoveries in the ore town, he logged out of the game.

He looked at the time and realized that he had been in the game world for two hours.

He opened the office door and walked out of the hall, only to find Master Lin, Zhao mochen, Lin Lanzi, and the others still watching the live broadcast of the World Cup. Even the waiters and waitresses had gathered around.

[Chapter 1722 The Power Of The System! Jurassic Park! 3](#)

"It's not over yet?" Qin Lin asked, puzzled.

It had been two hours. The match between the gentinian team and the Linlin Scenic Area security team should have ended by now.

Lin Lanzi immediately replied, " boss, the security guards are very capable. Although they said that they were lucky, it's still a draw now. Let's continue with the penalty kicks!

"The draw isn't over yet?" Qin Lin asked, puzzled.

Lin Lanzi immediately ended the match and said, " it's not the group stage. To advance to the top 16, we need to use penalty kicks to determine the winner. Otherwise, the one-on-one penalty kicks will continue. Now, the score between the two teams is already 33:33!

"Qin Lin's expression at that moment was very interesting.

He really did not know much about the World Cup. He really did not know that there was no draw in the advancement to the top 16 and that a winner had to be decided.

Then what if the winner and loser can't be determined?

He had used the book of victory.

All of a sudden, Qin Lin's face was filled with excitement.

Lin Lanzi saw his expression and said with a smile, "Boss, you're also shocked by the security guards" performance, right? It's unbelievable."

"..Qin Lin didn't want to answer. That wasn't the reason.

Why didn't anyone tell him not to draw?

With how powerful the system was, it shouldn't be that easy to determine the winner, right?

It was true. The Argentina team and the security team had been sending out players for penalty kicks one after another, but as the score increased, the two sides were evenly matched.

Fans from all over the world were attracted by the penalty shootout. It could be said that the global Ratings of the game were extremely high.

This was another Grand occasion of dozens of rounds of penalty kicks.

That's right, such a scene had happened before. The highest was 35 rounds of penalty shootout.

Now, if these two teams continued, it was likely that they would exceed this number.

Moreover, what was feared happened. The penalty kicks of both teams quickly exceeded 35 rounds. Moreover, it was as if both teams were cursed, and there was really no clear winner.

Finally, both sides reached the 50th round of penalty kicks. At this time, the players on both sides had a mental breakdown. The fans also had a mental breakdown.

However, no one knew that this was all caused by the ignorance of a cheater.

Only the organizers and the world Cup official organization were overjoyed because the viewership ratings were extremely high, which was good for their publicity and advertising.

Therefore, after seeing that the penalty kicks from both sides had reached 50 rounds, the officials urgently called for a halt.

It was obvious that he had his own plans.

Now that the popularity of both parties was at its peak, there was a lot of room for manipulation.

Moreover, on the second day, when everyone was in a hurry, the competition between both sides was suspended and the other groups' competition was carried out directly. This was obviously to keep everyone in suspense until a few days later, when both sides would have another competition. This was obviously to create traffic again.

In the past few days, the news had become more and more popular on the domestic internet. After all, it was the first time that their own country's team had been so brilliant.

Many people had specially come to the Linlin Scenic area's security team training ground to watch, even if none of the team members were present.

However, after these people finished watching the team's training ground, they found that there was a fleet of cars entering the mountain not far from the Linlin scenic science fiction Park.

This scene let everyone know that Linlin Scenic Area was about to develop a new project.

This also made many people look forward to it.

After all, the new projects at Linlin Scenic Area never disappointed people.

However, when a tourist took a photo of a stone tablet at the foot of the mountain and posted it online, it suddenly became a hot topic:

Linlin Scenic Area Dinosaur Park development Zone!

Dinosaur paradise?

Jurassic Park?

[Chapter 1723 797-Isn't This Looking For Abuse?](#)

At the mention of Dino-paradise, everyone would subconsciously think of Jurassic Park.

It couldn't be helped, this movie was too famous.

Naturally, the reason why he thought of Jurassic Park was because it was located at Linlin Scenic Area.

It would be difficult to make such an Association in other places.

After all, only the Linlin laboratory was located behind the Linlin Scenic Area.

Linlin's laboratory could produce anything. It shouldn't be a problem to create dinosaurs, right?

This was the subconscious thought of many netizens online.

After all, what did Linlin's laboratory produce?

Watermelons that grew in winter, plants that grew in the desert, plants that could purify the environment, plants that could control the temperature, white ginseng that could restore vision, Transformers ...

So, if Linlin's laboratory was able to develop dinosaurs, would that be strange?

It was not strange at all.

Therefore, news of the Jurassic Park incident quickly became a hot topic in Linlin Scenic Area. Moreover, this hot topic quickly spread all over the internet.

Everyone who saw the news was shocked.

After all, they were dinosaurs, animals that had gone extinct since ancient times.

Naturally, there were also people who doubted it. After all, it was just building a dinosaur paradise and could not prove that there were dinosaurs.

Moreover, there were so many dinosaur amusement parks in the country, but none of them really had dinosaurs.

The news even spread abroad very quickly.

In a particle Research Laboratory, Elson was in a very good mood.

Because of the apology from Liu Tong from the eastern country, his position in particle research was further established. The most important thing was that the United States also gave him tens of billions of dollars in research funds.

This made him very proud. He was confident that he would be able to develop the particle beam as soon as possible and make his country lead the world again.

As the number one person in the world, he always had this kind of confidence.

Just as Elson was sighing, a researcher ran over and reported, " professor Elson, there's big news in that Eastern country again.

This man had been specially ordered by Elson to keep an eye on the eastern country.

Although the other party had apologized and wanted to learn from him, he had also sent people to spread the news that he would not give the other party a chance to learn. Naturally, he wanted to see the other party's reaction. His expression should be very interesting.

It was just that the other party had not made any moves, but he believed that it was impossible for the other party to remain unmoved. After all, his research on particle rays was the best in the world. If the other party wanted to quickly make achievements in particle research, he would definitely want to learn from him.

When Elson heard the researcher's report, he immediately asked, ""What news is it this time?"

The researcher immediately explained, " professor Elson, it's the Linlin Scenic Area. They're building a Dinosaur Park. I think there's a rumor on the internet that they've already researched dinosaurs. They're going to build a Jurassic Park like the one in the movie.

"Jurassic Park? Are you kidding me?" Elson was stunned. He naturally knew about the movie.

Moreover, he also knew that the current technology was not enough to research dinosaurs.

This was what an old friend of his had told him.

The other party was the first animal genetic research expert in America, or perhaps the world.

When the movie 'Jurassic Park' was first released, he had questioned everything about the movie. It completely went against the common sense of genetics.

Moreover, many of America's animal genes research results were the result of his old friend's research. The other party was the famous professor Bob.

Now, the people from the eastern countries are saying that they have developed dinosaurs. How is this possible?

As Elson thought about it, he took out his phone and dialed Bob's number. As soon as the call went through, he said, ""My good friend, did you see the news? The people from the eastern country said that they've developed dinosaurs."

Bob's voice came out of the phone. old friend, I've already seen it. This must be fake news. How could they have developed dinosaurs? "

On the other side, Bob, who had a head full of white hair, also looked disdainful.

To be honest, even with the most advanced genetic technology and genetic research equipment he had, he still had no way to research dinosaur genes. Or rather, he had no way to research dinosaur genes at all.

What right did that person from the eastern Kingdom have?

As far as he knew, the people from the eastern country were at least 15 years behind them in the study of animal genes.

Just this difference alone was impossible for the other party to figure out.

One must know that scientific research was separated by a stage of ten years.

The other party was one stage behind them.

If the other party had been able to develop dinosaurs, he would have raised them and promoted them long ago. There might even be dinosaur meat that could replace the current meat.

Bob sneered as he thought about it.

Then, he thought of his old friend, Elson.

His old friend, Elson, had become famous recently, and everyone knew that he had made the people from the eastern country apologize.

It was because of this that the higher-ups knew he was really amazing and added tens of billions of dollars in research funds.

Therefore, if he wanted to be famous, it was best to trample on that Eastern country and embarrass them.

After all, everyone knew about the grudges between their country and the other country.

Of course, he could not just step on it blindly. He had to do it like his old buddy, Elson, and it had to be in his own profession.

Bob thought about it and said to a researcher next to him, "record a video for me about dinosaur research. After you're done, pass it to the newspapers. I hope that the video can be spread to the world as soon as possible.

[Chapter 1724 797-Isn't This Looking For Abuse? Can Anyone Step On Him?](#)

those gene companies all owe me favors. I'll get them to help me publicize this!

Since the other party had said that they had developed dinosaurs, which was his profession, and the other party had come to his door, he naturally had to seize the opportunity to make a name for himself.

Soon, the researcher prepared the recording equipment for Bob.

Bob also said to the video, "Hello, everyone. I'm Bob, an animal geneticist from America. Today, I saw a piece of news that makes me not know whether to laugh or cry. It's about dinosaurs.

as everyone knows, our country has produced a Jurassic Park film. However, everyone also knows that it's a science fiction film that is very lax in its scientific approach.

it's quite funny that someone is using this movie as a publicity stunt. I heard that the people from the eastern countries are actually using it for publicity.

"Actually, I'm very curious. Why don't they use Iron Man to promote it? After all, it's a product of science fiction movies. At least the Iron Man armor is easier to think than studying dinosaurs."

here, I'll tell everyone about dinosaur genes. According to the current stage of technology, it's impossible to realize dinosaur genes, because ...

πανδα Ἰβὲ| (còm) Bob continued to say a lot about dinosaur gene research. In the end, he concluded that there was no way to extract dinosaur gene, nor was there any way to realize it.

He concluded, "therefore, there is no way to research dinosaurs with the current technology. At least, with our world's number one expert in Animal Genetics and dinosaur genetics, there is no way to research dinosaurs.

"Unless the people in the eastern countries think that their genetic abilities are stronger than mine. But obviously, everyone knows my ability."

so, I really hope that the people from the eastern country don't use scientific research to please the public. Scientific research should still follow the most basic scientific principles and basic scientific logic. This kind of atmosphere is not desirable in scientific research ...

After a long explanation, Bob finally stopped and said to the researcher, " that's enough. Release this video and let all the researchers in the world see it as quickly as possible.

"Okay, professor Bob." The researcher nodded and immediately left with the recorded video.

It didn't take long for the video to spread all over America.

There were indeed many Animal Genetics companies in America, and these companies had more or less gotten help from Bob, an animal geneticist.

Therefore, at this time, they were also adding fuel to the fire to return the favor.

As soon as the video was released, the citizens of America were excited and their confidence and pride rose again.

The incident with professor Elson had already made them proud. They didn't expect professor Bob to make them proud again.

This was something to be happy about.

haha, look at that guy from the eastern Kingdom. He's too arrogant.

yeah, otherwise, why would our experts object to it twice? last time it was professor Elson, this time it was professor Bob.

I actually understood everything that professor Bob said. It's just that it's impossible to study dinosaurs at this stage. Those people from the eastern country are getting arrogant again.

haha, now I really want to know what expression that person from the eastern country has. I'm going to help repost this video.

"Same rotation, same rotation ..."

In a short period of time, everyone in America took action and began to spread the video to the internet all over the world.

It seemed that everyone in every country was the same. When they encountered such a moment of venting their anger, everyone hoped that this kind of thing would spread to the whole world. This was a display of pride.

With the help of some people, the video quickly spread on the domestic internet and became a hot search news.

After all, this was a topic about dinosaurs and was questioned by the world's top expert. It was hard for such a topic not to be on the hot search.

Therefore, it quickly caused an uproar on the internet in China.

f * ck, is there something wrong with this shop? why is it targeting us? "

sigh, you can't blame them. I don't know who posted a video of a Dinosaur Park at Linlin Scenic Area.

"There shouldn't be any problems with building a Dinosaur Park in Linlin Scenic Area, right? The one who should be scolded is the person who invented the dinosaur from Linlin's experiment."

"That's right, Linlin's laboratory hasn't even told us yet. They actually said it themselves. This isn't fake news?"

great, now I've been embarrassed overseas.

"Indeed, that kind of person really deserves to be scolded."

".."

Countless people on the internet sighed with emotion and were angry. Some people even wanted to hunt down those who had spread false news, scaring those who had posted the news and hurriedly deleted the news records.

They had originally thought that it would be fun to attract attention, but who knew that they would attract the world's top animal geneticist?

Was the other party so bored that he had nothing to do?

The news was soon received by the Chinese Academy of Sciences. Minister Lu was the first to know. When he saw the news, he cursed, "What the hell is this Bob? Was America also going to invest tens of billions of dollars in his research? You're actually so arrogant."

"But Minister Lu, he is indeed the world's most famous Animal Genetics expert," the Secretary said immediately.

"That's because boss Qin doesn't want to be famous." Minister Lu said in disdain.

The Secretary agreed with her. It was indeed so.

If boss Qin wanted to be famous, the world's most famous animal gene research expert wouldn't have anything to do with this abalone. He actually gave him the courage to provoke them?

Minister Lu didn't say much. He picked up his phone and dialed Qin Lin's number.

This man had to be taught a lesson. Without the corresponding conditions, he actually wanted to dance like this with Elson. Who did he think he was?

Linlin Manor.

When Qin Lin walked into the hall, he saw academician Hao and the other two.

As soon as the three seniors saw him, they asked, ""Boss Qin, did you see the news?"

"What news?" Qin Lin really didn't know.

Academician Hao immediately found a video and played it for Qin Lin. It was the video of Bob.

After Qin Lin watched the video, he said in surprise, ""Who is this guy? Why are you so arrogant?"

he's a very famous animal geneticist in America, " academician Hao explained. you can say that he's the most famous one in America, as long as you don't want to be famous.

"I'm not interested in that kind of fame," Qin Lin replied.

Just as he finished speaking, his phone rang. It was Minister Lu.

Since he didn't pick up the call, he could guess what Minister Lu was up to. It must be about Bobby.

As soon as the call was connected, Minister Lu's voice came through, ""Boss Qin, have you seen the news about Bob? That guy was too arrogant. He had to be taught a lesson. How's our dinosaur research going? This time, why don't you show your face?"

Qin Lin knew it was for this matter, but he shook his head and said, " Minister Lu, let the three team leaders of an animal geneticist come out. Those animal geneticists should also come out. I have no interest in this kind of thing.

"I knew it." Minister Lu sighed. He knew boss Qin's character, but it didn't matter. As long as they could promote and teach Bob a lesson, it didn't matter who came forward.

After hanging up the phone, Minister Lu immediately called one of the leaders of the animal Genetics experts.

At this moment, in Linlin's experiment, the animal geneticists were gathered together and watching a video. Then, they were all indignant.

"This Bob is too arrogant."

"Yeah, don't they know that we already have a dinosaur egg?"

"Even if he can't figure it out, can't academician Qin figure it out? The other party is too arrogant."

no, I have to talk to academician Qin. I have to teach Bob a lesson and let him know how high the sky is and how deep the earth is ...

".."

Just as these people were feeling indignant, the phone of one of the leaders in charge rang.

Seeing that the number was from Minister Lu, the team leader in charge hurriedly answered the call.

[Chapter 1725 Targeting By The World's Experts](#)

The team leader answered the call.

As soon as the call went through, he complained into the phone, ""Minister Lu, that Bob is too arrogant. He can't research dinosaurs, so what other reason does he have? He actually thinks that no one else can do it. Doesn't he know that we have academician Qin?"

Minister Lu laughed when he heard this. alright, group leader Lin. Don't be angry. Since the other party is so arrogant, let's just give them a good slap in the face.

"Minister Lu, can we release the dinosaur research results now?" Lin asked.

yes, " Minister Lu said. prepare some experimental data and materials. You should know what can be publicized and what can't be publicized.

okay, I understand, Minister Lu, " leader Lin promised. how should we cooperate with academician Qin's speech? "

They knew that the person in charge of the experiment had to speak at this conference.

Their experiment was led by academician Qin, so he naturally had to go up and speak.

you three team leaders, " Minister Lu said, " prepare your speeches. You will take turns to speak at the press conference.

"Ah!" When team leader Lin heard this, he was shocked and immediately said, " Minister Lu, you can't do this. This speech belongs to academician Qin. How are we going to rise up? don't make such a joke. We are very respectful to academician Qin.

Usually, in this case, if the leader of the experiment went on stage to speak, it would be suspicious of suppressing and snatching the credit.

They were not such people.

If they really did that, they would feel that it was a blasphemy against scientific research and themselves.

Minister Lu laughed when he heard this, " I've discussed it with boss Qin, and he doesn't like to attend such occasions, nor does he like to speak. You can ask the people in Linlin laboratory."

also, boss Qin said not to announce the name on the research list. He doesn't like to be in the limelight, so he'll let you three leaders speak. He also specifically asked all the researchers involved in the experiment to show up on stage. He's giving Yang Ming's chance to you.

"This ..." When leader Lin heard this, he opened his mouth and didn't know what to say. He could only say that he admired academician Qin's character even more.

If it was another person, it would be impossible to give this opportunity to others. Moreover, this academician Qin did not forget everyone and let everyone enjoy this honor.

He now knew why so many people who had worked with academician Qin wanted to work with him again, and they were not stingy with their praise for academician Qin.

Minister Lu also said, " alright, let's not worry about this. You know boss Qin's ability. It's not an exaggeration to call him a demon. It's good to let him hide behind the scenes, in case some people are afraid of boss Qin and want to cause trouble again. You guys can be boss Qin's shields.

Team leader Lin responded after hearing this.

He knew what Minister Lu meant. Some countries were getting more and more shameless.

Thinking about academician Qin's ability, those people might really be afraid and send some assassins to cause trouble.

Leader Lin hung up the phone and realized that the others were also looking at him. One by one, they said, "

"Leader Lin, what did Minister Lu say?"

yeah, Minister Lu asked us to release the experiment results? "

"I can't wait to see the faces of those people from America and that Bob!"

".."

Team leader Lin immediately said to these people, " Minister Lu and academician Qin asked us to prepare for the press conference. At that time, the three of us will be in charge of the team leaders 'speeches on stage. Everyone will also have to appear on stage. Go back and prepare!

These words surprised all the animal Genetics experts.

"Leader Lin, what about academician Qin?" another team leader immediately asked.

The others also said, "

"Yeah, where's academician Qin?"

"Academician Qin helped us complete this laboratory. Why isn't he here?"

"Academician Qin should be the one giving the speech."

Leader Lin immediately said, " academician Qin doesn't want to show his face in public. So, he doesn't want to come out this time. This is also academician Qin's intention. He gave this opportunity to gain face to everyone.

When the animal geneticists heard this, they couldn't help but feel touched.

He was really touched.

After all, it was already very rare for them to be able to participate in this game. They never thought that academician Qin would actually give this honor to them.

It could be said that this honor was very important to them.

Whether they went back to the Chinese Academy or their original laboratory, this would be a huge experience.

alright, everyone, don't think too much about it, " team leader Lin immediately said. just perform well when the time comes. Don't let academician Qin down.

Everyone nodded in agreement.

At this time, for them, not letting academician Qin down was their biggest task.

The image of academician Qin in their hearts was already infinite.

alright, prepare some materials for publicity. We'll hold a press conference later. Team leader Lin also gave the order.

"Let's get to work!" The other group leader also clapped his hands.

They were all experts, so they naturally knew what information could be released to the public and what could not be.

Therefore, with the help of these experts, they quickly sorted out information that could be promoted.

[Chapter 1726 Targeting By The World's Experts 2](#)

At the same time, Linlin laboratory also posted a piece of news on the internet: in three days, Linlin's laboratory and the Chinese Academy of Sciences will jointly release the dinosaur research report and display it!

As soon as the news was posted online, many netizens saw it.

After all, Bob's incident was still being discussed on the internet.

Many people felt embarrassed when they saw Bob's video. After all, they were insulted by foreign scientists. The key was that they had no way to refute it and could only let them scold them. It was an international embarrassment.

But who knew that such a piece of news would appear on the internet at this time?

the dinosaur research report showed that they had really developed dinosaurs.

This time, the hearts of those who saw it twitched.

Is this fake?

Many people cursed subconsciously, "

didn't you see? they all said that it's impossible to develop dinosaurs at this stage. Who's trying to please the crowd again? "

"This will only make me lose more face."

".."

But very quickly, someone tagged these people one by one: Can't you open the main pages of Linlin's laboratory and the Chinese People's Hospital? Let's see if this is true?

Not everyone expressed their opinions just by looking at it. Some people clicked into the homepage of Linlin laboratory and Hua hospital, and found that it was actually Linlin laboratory and Hua hospital.

In other words, this news was actually true?

The entire internet was in an uproar.

"Really? It's actually true?"

please forgive me for being shallow. I thought it was fake at first!

indeed, I also thought it was fake news. Fortunately, I clicked on it.

".."

When the news was confirmed to be true, the whole internet was in an uproar. When they found out that the news was released by Linlin's laboratory, everyone felt that their confidence and dignity had returned.

After all, Linlin laboratory had the credibility to make them believe in it.

This time, of course, he would take revenge.

Wasn't that person from the Western country mocking them happily? Didn't that beautiful country's Bob look at their faces?

Now, it was naturally time to retaliate.

What were the netizens in China Best at? Human wave tactics, and then he had to attack.

In a short time, the news released by Linlin's laboratory spread all over the internet. Countless netizens even went over the wall to spread the news abroad.

The foreign websites were also flooded with this news.

On the largest website in America, a title was even more glaring: Mr. Bob, it's your fault that you can't research dinosaurs, but it doesn't mean that others can't!

This headline was immediately seen by many netizens in America.

What?

Countless people were shocked.

After all, he had just treated Bob as a hero again.

Now, who knew that the hero would be dissed? did the people from the eastern country really develop dinosaurs?

Professor Bob said it was impossible.

Naturally, the news was quickly delivered to Bob.

Mr. Bob, please don't be angry after you see this news. The Secretary reminded him when he handed over the video.

"Do I look like someone who gets angry so easily?" Bob took the video in confusion. After watching the video, he said angrily, ""What do they mean? I've already made it so clear, and they're still trying to please the crowd? Didn't they see what I said? I'm the authority!"

Bob was a little depressed. He felt that something was wrong with the script.

After all, as soon as his old buddy, Elson, made trouble, the other party admitted defeat and apologized.

Why did the other party still go against him after he had made it so clear? he even dared to say that he was incapable?

If he didn't have the ability, who would?

At this moment, another assistant came in and reported to Bob, " professor Bob, that Eastern country released their first experimental data, saying that they have developed dinosaurs and that their dinosaur genes were extracted from dinosaur fossils.

"How is that possible? this is all nonsense." Bob said subconsciously.

What a joke. If dinosaur genes could be extracted from dinosaur fossils, they would have done so a long time ago. Why would they wait until now?

"I understand." they're really embarrassed this time, " Bob said coldly. they're going to hold a fake experimental conference, just like when our country used a fake spaceship project to attract that bear's crazy military competition. Now, they're using the same method to create a fake dinosaur research technology to make our Animal Genetics experimental world panic.

I think you're right, professor Bob, " the assistant said immediately. after all, it's impossible to extract the genes from dinosaur fossils.

"Record a video for me. I want to expose them step by step." Bob immediately ordered his assistant.

Bob was very serious when he recorded the video this time. He almost explained why it was impossible to extract genes from dinosaur fossils and provided various examples.

Not long after, Bob posted the video and it spread all over the internet.

Moreover, with some people adding fuel to the fire, this news quickly spread all over the world.

With the previous popularity, the news spread even faster all over the world.

At the same time, it also caused a sensation in the field of animal genetic research, attracting the attention of all animal genetic research experts. Many people even participated in it.

Many international experts expressed their support for Bob.

it's indeed impossible to extract genes from dinosaur fossils! An expert from Germany said.

scientific research isn't based on conjecture. It's a fossil. How can genes exist? " An animal expert from England said.

science has to pay attention to science. If science doesn't pay attention to science, then it's not science.

《..》

In an instant, animal geneticists from all over the world joined forces to target Linlin's laboratory.

In the Chinese hospital, Minister Lu was puzzled when he saw the news.

Why did this suddenly sound like a confrontation between Eastern and Western scientific research? was this a competition of scientific research?

Then I'm really sorry, these Westerners are bound to lose.

Just as Minister Lu was thinking about it, a call from a leader came in.

He quickly picked up the phone and heard the leader's voice. "Xiao Lu, what's going on? It's causing quite a stir on the International stage."

"Please wait a moment, leader. I'll go to your office now," Minister Lu said hurriedly.

Soon, he arrived at the leader's office. Without saying anything, he showed the leader a video.

This video was taken by Linlin's laboratory. It was a video of the hatching of the giant Ford Rafal dragon's baby.

This dinosaur had developed its dinosaur egg much later than the brachyponera, but it was clear that the fortrafal had hatched much faster than the brachyponera.

There were already Cubs coming out.

When the leader saw this, he understood. He smiled and said, "Have fun, but leave some face for the other party!"

As he said that, the leader laughed. After all, the other party wanted to throw his face out in five-card stud. Even if they wanted to save it for the other party, they might not be able to help him.

Minister Lu returned to his office and immediately called Linlin laboratory.

Not long after, Linlin's laboratory released the second experimental news: our dinosaur gene research uses pig genes to complete the dinosaur gene, and even uses pig cells to express dinosaur DNA~"

As soon as the research information was released, it caused a sensation on the domestic internet. All the netizens were in disbelief.

pig: I never thought I would have anything to do with dinosaurs!

they actually used pig genes. Who would have thought of this? "

I just realized that pigs have such noble genes. That's a dinosaur!

".."

Naturally, this research information quickly spread to all the Western countries.

Bob was the first to see it, and he didn't know whether to laugh or cry. "Do these people from the eastern countries really think that this is a science fiction movie? What were they thinking? How could a pig's genes complete a dinosaur's gene? Record another video for me. "

Bob was about to post another video to criticize people. Previously, so many Western experts had supported him, which made him more confident. He also felt that it was more necessary for him to expose those people from the eastern countries.

Bob's video was sent out very quickly. There was a serious statement stating that pigs could not be the conditions for dinosaur genes to be completed.

Following Bob's video, animal geneticists from various Western countries also recorded the video. Many of them even established Linlin laboratory under their real names.

That's a pig, are you kidding me?

Did the people from the eastern countries think that dinosaurs could be slaughtered and eaten like pigs after they were raised?

Even if they were to think blindly, they couldn't think of pigs.

They felt that their professional knowledge had been insulted. This was an opportunity to make a name for themselves. Moreover, they would be letting themselves down if they didn't criticize him.

[Chapter 1727 Thank You For Academician Qin's Guidance](#)

Indeed, that Eastern country had given them the best opportunity to attack them.

How could the animal geneticists of the Western countries give up such a good opportunity?

Furthermore, the other party had clearly made a huge mistake.

Everyone who studied dinosaurs knew that it was impossible to extract dinosaur genes from dinosaur fossils, and it was even more impossible for pig genes to make up for the complete dinosaur gene fragments.

Therefore, the people from the eastern countries were talking nonsense.

If he criticized them now, not only would he be able to maintain the dignity of scientific research, but he would also be able to embarrass the eastern country and make himself famous.

To them, there was no better chance to be famous than this.

For a time, animal geneticists from all over the world were criticizing Linlin laboratory. This undoubtedly became the hottest topic in the world.

If this matter wasn't handled well, it would definitely have a great impact on the state of domestic scientific research, and it might even hit the National confidence.

Minister Lu wasn't in a hurry.

Because there was no need to rush.

Especially since he already had the results, was there a need for him to talk nonsense because of these people who had not even entered the door?

Minister Lu saw that the animal geneticists from all over the world had started to make a fuss and knew that he couldn't spoil them too much. He called his Secretary and ordered, " make the press conference grander. See who the animal geneticists are and register them. Then, send out invitations to them one by one and have them come to the press conference.

"Alright, leader." The Secretary nodded and went out to make arrangements.

One after another, invitations were sent out to various countries around the world.

The people who received it were the world's most well-known Animal Genetics experts. They were also the fiercest people on the internet this time, including Bob.

The invitation letter sent by the Chinese Academy was also deliberately posted on the internet so that everyone could see it. It was to let these troublemakers come.

Naturally, the news spread quickly on the internet, especially in America.

After all, Bob was from America. The netizens in China were deliberately spreading the news to target America.

Bob naturally received the invitation very quickly.

In America's largest animal Genetics Laboratory, Bob held the invitation in his hand and frowned. why do you think the people from the eastern countries are so stubborn? they've been exposed by so many experts, yet they still want to continue? "

The Secretary and assistant looked at each other.

professor Bob, " one of the assistants said, " could it be that the eastern country really developed dinosaurs? "

Bob shook his head. that's impossible. If we could really extract genes from dinosaur fossils and use pig genes to complete dinosaur genes, we would have long developed dinosaurs.

That being said, Bob thought about how confident the other party was in sending an invitation to the press conference.

This actually made him a little worried.

He was just stubborn.

He sent his assistant and Secretary away, then took out his phone and made a call.

The caller was an English animal geneticist he had met when he was studying abroad. Although the other party was not as famous as him, he was more capable than him.

He was a little worried, so he naturally had to confirm it with others.

As soon as the call went through, Bob said, " Adams, you should have received the invitation from that Eastern country.

A laugh came from the other side. I received it. I didn't think that they would really dare to send an invitation.

Adams, " Bobby probed, " he's so confident. Do you think it's possible that he's really developed dinosaurs? "

Adams immediately retorted, " that's impossible. They must be playing some tricks. If they can really come up with dinosaurs like this, we'll just hang ourselves.

This made Bob more confident.

Indeed, the possibility of the other party being able to develop dinosaurs in such a way was too low.

Bob immediately contacted several famous animal geneticists in the world, and they all came to the same conclusion.

book me a ticket to that Eastern country, " he said to his Secretary. I'd like to see what kind of tricks those people have up their sleeves.

At the same time, Bob had also contacted several famous experts to go with him.

In China.

The entire internet was boiling.

After the Chinese Academy of Sciences announced the news of the dinosaur launch, everyone's eyes were on this matter.

No one had thought that there would really be a turn of events and that China would really develop dinosaurs.

It was indeed Linlin's laboratory.

This made all the TV stations frantically contact Linlin's laboratory and the hospital.

If they could get the broadcasting rights for this kind of press conference, how much profit would they get?

Therefore, they naturally wanted to get the rights to live stream.

Naturally, there were countless netizens asking if they could attend the press conference. Although they knew it was impossible, they were still looking forward to it.

In the end, this matter could only be decided by Minister Lu.

Qin Lin didn't pay any attention to this matter. He received a call from Liu Tong.

As soon as the call was connected, Liu Tong's resentful voice was heard, "Academician Qin, have you been paying attention to dinosaur genes recently? I forgot there's still our particle beam research. I'm still waiting for your analysis parameters!"

In Linlin's laboratory, Liu Tong was making a phone call while looking at a set of data in front of him.

This data was based on the parameters given by academician Qin.

[Chapter 1728 Thank You For Academician Qin's Guidance](#)

Previously, academician Qin told him to learn slowly and pay more attention to these data. He knew that academician Qin was guiding him.

Therefore, he had been studying it all this time and had really found a way.

He felt that there must be a special formula.

It was because of this discovery that he couldn't help but call academician Qin, hoping that academician Qin could analyze the following parameters.

In that case, he might be able to deduce this formula.

Although he was guided by academician Qin, he also felt a sense of accomplishment.

On the other side, Qin Lin had indeed forgotten about this matter. Seeing that Liu Tong had called to hurry him, he said into the phone, professor Liu, I did come up with a few more parameters. I'll send them to you later.

After hanging up the phone, he took out a piece of paper and wrote down a few parameters on it. Then, he left the Linlin Manor and went directly to the Linlin laboratory.

Since he knew the result, all he had to do was to copy down a few parameters.

Qin Lin soon arrived at Linlin's laboratory. When Liu Tong saw him, he immediately went up to him. "Academician Qin, you're finally here."

"Here you go!" Qin Lin also handed the paper with the parameters to Liu Tong.

Liu Tong took the parameters, looked at them, and then handed them to the researchers in the laboratory. As for him, he hurriedly pulled Qin Lin to the set of data he had produced.

"What is this?" Qin Lin asked curiously.

Liu Tong immediately said, "academician Qin, didn't you guide me before? you told me to look at the data and I might find something. So, I looked at the previous data and came to this conclusion. I might have a chance to sum up a formula. Academician Qin, thank you for your guidance.

"Qin Lin was dumbfounded. What guidance?

He didn't even know about this. He was just brushing it off, okay?

Who knew that Liu Tong would actually come up with something?

This was really ...

The researchers and technical staff quickly adjusted the particle capture instrument's parameters.

The particle capture device was also quickly activated and began to search and capture the particle energy.

Not long after, the particle capture device lit up with a green light.

It meant that they had discovered particle energy and were beginning to capture it.

As time passed, the particle energy was finally locked on.

At that moment, Liu Tong and the other researchers couldn't believe it. They immediately went forward.

That's right, the particle energy had really been captured.

Unfortunately, the parameters were not complete, and he could not lock onto the energy of this particle.

This was enough to surprise everyone.

After all, no one had ever heard of particle beams being able to lock onto particle energy.

"Quick, continue trying!" Liu Tong hastily ordered.

The researchers immediately got to work.

A moment later, another exclamation was heard.

Looking at the data, Liu Tong's eyes lit up, " I've locked onto it. I've actually locked onto it again. It's a pity that I didn't completely capture it. I'll continue trying.

In the following time, the researchers controlled the particle capture instrument and tried again and again.

To Liu Tong's surprise, he found that he could lock on to the particle energy every time he tried this experiment.

This was definitely a milestone in the research of particle beam.

"Academician Qin, you've taken another step forward. You'll be able to develop particle ray technology soon." Liu Tong couldn't help but ask.

Qin Lin said, " it's not done yet. So, I still need your data support. Bring more people to try it out. Give me more data.

This was naturally another form of deception.

"Okay, academician Qin." Liu Tong was naturally very motivated to do this.

Soon, he would be able to follow academician Qin to develop the particle ray technology, which would cause a sensation in the world.

After Qin Lin left, Liu Tong took out his hand and called Minister Lu.

professor Liu, I'm busy with the dinosaur Research Conference. Cut the long story short. Minister Lu's voice came.

Liu Tong immediately said, " Minister Lu, I have good news to tell you. Academician Qin has led us to research particle ray technology. We have made a leap in progress. Academician Qin's parameters can now lock onto the particle energy 100%.

as long as we follow academician Qin's direction, I believe we will be able to capture particle energy soon.

"Really?" Minister Lu let out a cry of surprise when he heard the news.

He knew very well that the research on particle energy rays was much more effective than the dinosaurs 'research.

If particle beam research could successfully avoid using the particle energy in the sphere, then it could also avoid using the energy of space particles.

As long as they could capture the energy of space particles, they could develop space weapons. Then the problem of Earth's weapons being difficult to use in space would be solved.

By then, it would be a new era of weapons.

Minister Lu said, "Liu Tong, you should also prepare a press conference for the particle ray research. Let's show the Western countries that we're way ahead of them. They shouldn't target us.

The research on particle beams was too important.

Under normal circumstances, it would be hidden. However, to be able to lock onto the particle energy 100%, a press conference of this level was no problem.

Not only would this make the Western countries nervous, but it would also intimidate them without provoking them too much.

Hearing Minister Lu's words, Liu Tong also asked, "Minister Lu, what about academician Qin?"

"Boss Qin won't attend this kind of press conference. You should be prepared!" Minister Lu said directly.

"Alright," he said. Liu Tong replied. In fact, he had also heard about academician Qin's matters in this aspect.

Academician Qin really didn't like to participate in this kind of event.

Time passed.

Half a month actually passed by very quickly.

Bob and a few famous Western animal geneticists also arrived in Beijing and were sent to you City Airport by a private plane.

The press conference was held in you city's Stadium.

Therefore, the entire airport was already very crowded. Countless people had come to the press conference.

After all, it was a dinosaur press conference, and ancient creatures had appeared again.

This was the first time someone had researched dinosaurs.

Didn't someone once say that whoever was able to research dinosaurs would have a certain level of mastery over the abilities of the creation God?

However, Bob and the others didn't believe that the people from the eastern country could develop dinosaurs. There would definitely be problems with this press conference.

Therefore, Bob immediately met up with a few famous animal geneticists in the West and began to discuss.

They only had one goal, and that was to expose the tricks of those people from the eastern countries.

The press conference started the next day.

Minister Lu had specially sent out a translator to invite Bob and the other experts. Naturally, there were also his grandfather's reporters.

These reporters definitely wanted to see them make a fool of themselves, but this time, they would be the best help for their publicity. They would also be able to give Bob and the other animal geneticists a slap in the face.

There was already a sea of people outside the stadium.

Many tourists had gathered here.

Although they couldn't enter the stadium to participate in the press conference, the open-air screen on the outer wall of the stadium was broadcasting the contents of the press conference live.

Therefore, these tourists naturally rushed over, wanting to know the results of the press conference as soon as possible and to see the dinosaurs as soon as possible.

Bob and the other animal geneticists were invited to the stadium. They entered from the back door and saw a large platform in the center.

Bob and the other animal geneticists had their own seats.

After they sat down, the foreign reporters were already in their seats, as were the local reporters.

Naturally, there were also quite a few Animal Genetics experts from China. After all, how could they miss such a scene?

Unlike foreign animal geneticists like Bob, they had more or less heard some rumors.

Therefore, they were here to watch the show. They wanted to see the expressions of these foreign animal geneticists.

The news they had received was that Linlin's laboratory had really developed dinosaurs.

Finally.

Group leader Lin and the other two group leaders walked out together with the animal experts who studied dinosaur genes, attracting everyone's attention.

[Chapter 1729 Knowledge Has Been Subverted](#)

The moment the three team leaders went on stage, everyone knew that they were the people in charge of the experiment.

After team leader Lin killed the three people and went on stage, he placed the information in his hand on the podium.

These materials were carefully selected by them to be used for publicity.

Not only could the information explain their research, but if the information was taken away, the other party would not be able to study anything.

After team leader Lin and the other two went up the stage, they first bowed to everyone.

good day to all the experts from China and overseas, " he announced. I'm Lin Feng. Welcome to our dinosaur Research Conference.

I'm sure everyone knows what happened during this period of time. The internet at home and abroad is abuzz with dinosaur research. Many people don't even believe that dinosaurs can be researched and have even shared a lot of scientific knowledge.

that's not unreasonable. After all, everyone is doing it for science. But sometimes, science is about creating possibilities from the impossible. It's precisely because you can create things that others think are impossible that it's scientific research.

I've said so much. Everyone should know what I'm going to say. That's right, we have indeed researched dinosaurs. What the internet says is not nonsense.

As soon as these words came out, the scene immediately became noisy.

It could be said that it was suddenly abuzz.

After all, most of them had come here with the intention of making a joke out of themselves because they knew that it was impossible to develop dinosaurs.

Who would have thought that Lin Feng would actually dare to say in front of everyone that he had really developed dinosaurs?

If they didn't find any dinosaurs, it would be a fraud. Moreover, it was an international fraud. With the current popularity, it would be a very big international scientific research event.

That would not only be embarrassing in front of him, but also the country's face. It would even be recorded in scientific research books all over the world, and then he would be ridiculed and laughed at.

It wasn't like this had never happened before. The most famous one was the archaeological incident in the plaster country.

Because of this, the entire plaster country lost face in the archeology world for decades.

Even now, they were still pulled out and flogged from time to time.

"Really? You're still being stubborn at this time?" One of the reporters pointed his camera at Lin Feng and mumbled, "

"Is there a possibility that it's true?" Another reporter said.

that's impossible, " the mumbling reporter said. didn't you see that Bob and the world's top Animal Genetics experts all said that it was impossible? "

if only one expert said so, then it might be the expert's fault. But with so many top experts saying so, there's no way they could be wrong.

no matter how much this person is saying now, he's just trying to cover up for himself. What do you mean by 'creating something is impossible'? how can there be so many impossible things? "

Not only were there differences between people and countries, but there were also differences between scientists and reporters.

The reason why these foreign reporters came to this press conference was not to help promote the greatness of researching dinosaurs. They simply couldn't do it. They came to watch the joke.

At this moment, a foreign expert immediately stood up.

The expert raised his hand, indicating that he wanted to speak.

Someone immediately handed a microphone over to the other party.

The foreign expert immediately took over the microphone and started speaking. "Professor Lin, since you said that you've already developed dinosaurs, you can't just keep talking. There must be results. You must show people the results so that they will believe that you've really developed dinosaurs."

As he spoke, the foreign expert had a cold smile on his face.

The best way to expose the other party was to let them produce results.

Bob looked at the foreign expert and gave him a thumbs up. This was also what the experts had discussed to directly expose the other party.

They knew very well that the other party would not be able to produce any results.

When Lin Feng heard this, the corner of his mouth revealed a hint of a smile. These people had no idea that Minister Lu had already guessed their thoughts.

As expected, these people would make things difficult for him.

It was a pity that they had the results.

Lin Feng smiled and said, "this professor is right. No matter how much you say about a research, it's just a matter of words. In the end, it still depends on the results. Therefore, we invited everyone here to show you the success.

As he spoke, Lin Feng nodded to a researcher beside him.

The researcher immediately walked to the side and pressed a button.

At the press conference, a light suddenly lit up in an open space. Then, the ground slid open, and a few transparent experimental boxes rose up.

As soon as the boxes were lifted up, the people at the scene were in an uproar. The reporters ran over one by one with their cameras on.

If it wasn't for the railing, they would have already gotten close.

Moreover, each of them had a look of disbelief on their faces.

In the first box, one could see a huge egg.

The second and third boxes also contained eggs, but they were much smaller.

Moreover, the eggs in the second box had some cracks, and some of the eggs in the third box even cracked, as if something was crawling out of them.

[Chapter 1730 Knowledge Has Been Subverted](#)

These were naturally the eggs of three different dinosaurs.

The reporters in China couldn't help but take pictures like crazy.

"Is this the dinosaur egg that Linlin's laboratory developed?"

"It should be. This dinosaur egg is huge."

"This is the first time I've seen a dinosaur egg."

I didn't expect that I would have the chance to see a dinosaur egg in my life.

".."

The local reporters knew how amazing Linlin's laboratory was, so they firmly believed that this was a dinosaur egg.

However, the foreign reporters were still skeptical.

The foreign expert also took the opportunity to say, "Professor Lin, you're probably trying to say that these are dinosaur eggs, right? You have to know that this kind of egg can't prove anything. Everyone is a researcher in Animal Genetics, and we all know that it's not difficult to make such an egg."

Lin Feng looked at the foreign expert with a smile and said, "Of course. We just wanted to show you the dinosaur egg. Next, we'll show you a real dinosaur."

As he said that, the ground slid open again, and an even bigger experiment box appeared.

There were a lot of fake mountains and rocks in the experiment box, as well as many plants.

This was an environment specially set up by Linlin's laboratory. The interior was set up with special technology.

Qin Lin knew that dinosaurs could survive in modern times without any problems. However, animal geneticists didn't know that and were always afraid that the hatched dinosaurs wouldn't be able to survive.

The environmental experiment box attracted everyone's attention as soon as it was taken out.

Then, something even more shocking happened. A small figure emerged from a cluster of plants.

The little figure's appearance attracted everyone's attention.

It was sneaky, but its body was a little toot, and its limbs were very short.

This was the youngling of a giant Ford Rafal Dragon.

It seemed that because of the fusion with the pig's gene, the giant Ford Rafal Dragon grew especially fast and hatched faster than other dinosaurs.

The brachiopod egg that he had researched first had yet to hatch.

Therefore, the appearance of this young Ford Rafal Dragon instantly caused a sensation.

Even a fool could tell that it was a young dinosaur from its appearance.

Therefore, exclamations of shock could be heard one after another.

"How is that possible?"

"Really ... They've really developed dinosaurs? how could they ..."

impossible. This must be fake.

When Bob saw the young Ford Rafal Dragon, he and a few of the world's top animal geneticists all stood up in shock. Their faces were ashen.

They were the ones who couldn't believe it.

It was clearly impossible to research dinosaurs, but now the other party had done so. Could it be that all the animal genetic knowledge they had learned was wrong?

Bob clenched his fists tightly. After all, he was the world's number one animal geneticist and the first person to study dinosaurs.

However, he could not even extract the most basic dinosaur gene.

Compared to the foreign experts, the domestic experts were much calmer. After all, they had more or less received some news.

In particular, there were a few people who had been called by the owners of the museums to talk to the leader about the genes that couldn't be extracted from dinosaur fossils. In the end, needless to say, they had been slapped in the face.

He had a very bad impression of the leaders.

Now that they saw the baby dinosaur, they could only sigh. If they had known earlier, they would not have embarrassed themselves by going to the leader's place.

One of them was so regretful that his intestines were turning green. Back then, the Hua Academy had also invited him, but he had refused.

If he had not refused, he could have been in the same position as Lin Feng and become one of the people in charge.

This was a chance for him to become famous.

It was a pity that he was too full of himself back then and did not care about this dinosaur gene research experiment.

As for the reporters in China, they were completely in an uproar. They were even not stingy with their mocking words.

"Haha, now you've seen a dinosaur? As expected, you can still extract genes from dinosaur fossils."

yeah, even pig genes are useful now. The facts have proven everything.

it's not that I can't extract it, and it's not that pigs are useless. It's just that I don't have enough abilities.

"Haha, we can finally tell who doesn't have the ability!"

the so-called world's number one is just so-so!

".."

The foreign reporters and even some of the foreign experts understood what was going on.

This also made their expressions very unsightly.

This was really embarrassing.

Especially those experts, they even dared to say that the researchers from the eastern countries were playing to the gallery, saying that it was absolutely impossible to study dinosaurs.

Those words were now telling the whole world that his ability was limited, that he just couldn't develop dinosaurs.

This was the logic. If you felt that something was impossible to do, you could question others. This was your right. However, when you questioned others and they did it, that would be the most embarrassing thing.

Outside the stadium.

The tourists who were watching the live broadcast on the open-air screen also made a lot of noise.

there really are dinosaurs. Linlin's laboratory is awesome.

haha, I didn't come this time. Although there's no Scenic Area, I've witnessed it.

yeah, I've witnessed the first dinosaur.

".."

What happened next was simple.

After that, Lin Feng and the other two team leaders spoke one after another, explaining the experiment. The animal Genetics experts also spoke one after another.

In any case, the process was inseparable from the extraction of dinosaur fossils and the pig gene to complete the giant Ford Rafal Dragon gene.

Naturally, these people had vaguely mentioned one person in their words, but no one had said who that person was, which made people puzzled.

At this moment, the reporters were not stingy with their film.

Even the foreign reporters were the same.

Only the foreign experts were dumbfounded. They felt as if the knowledge in their minds had been impacted.

If one had to describe this feeling, it was like the feeling of the scientists in the three-body system when they discovered that physics did not exist.

To them, didn't they feel that animal genetic knowledge didn't exist?

After all, it was common sense that it was impossible to extract genes from dinosaur fossils, and it was impossible to complete the dinosaur gene with pig genes.

But now, his common sense had been subverted.

"Impossible ... It was impossible ... How is that possible ..." One of the experts leaned back on a chair and mumbled to himself. He seemed to be in despair. As time passed, the press conference ended very quickly.

The dinosaur eggs and young dinosaurs were brought back. Lin Feng and the rest also left and returned to Linlin's laboratory.

As for Bob and the other experts, they took out their mobile phones and contacted each other after the press conference ended. They rushed back to China the next day.

They had already lost so much face here, and they didn't want to stay here any longer.

Especially Bob.

He was the one who caused all the attention and doubt on the internet.

At first, he wanted to learn from his old buddy, Elson, and trample on this Eastern country to get us dollars for investment.

Who knew that things would develop to this extent?

Now, he was like a clown in front of everyone.

He also returned to America as fast as he could. As soon as he returned, he made several phone calls to check the time.

"Mr. ***, You know, dinosaurs can be developed ... I need a dinosaur fossil ..."

"Mr. **, I need the support of your Department. Please approve my funds and dinosaur fossils ..."

Mr. **, You should know how much benefit it will bring to your group if the dinosaur research is successful. I need dinosaur fossils ...

Not long after, people all over America began to purchase dinosaur fossils, and many museums even had cases of dinosaur fossils being lost.

Such incidents did not only happen in America, but also in other countries around the world.

Some smart people knew where the dinosaur fossils had gone.

Since the people from the eastern country had already been able to extract dinosaur genes from dinosaur fossils, the top experts in this field would naturally not be idle.

Naturally, they wanted to use the same method to research dinosaurs as quickly as possible.
