

The Game 1731

[Chapter 1731 A Huge Mistake! Flower Garden Wall! 1](#)

In a Museum in America, a white-haired old man was looking at the display cabinet in front of him with anger.

Another type of dinosaur fossil had disappeared, stolen from the outside.

It must be those people. When the other party came to buy it, he didn't agree, so the other party actually used such a method.

The white-haired old man checked the news online. He had already guessed where the fossils had gone.

The eastern Kingdom had used dinosaur fossils to extract dinosaur genes and then researched dinosaurs.

Now, there must be someone who wanted to use the same method to study dinosaurs.

"Damn it." The white-haired old man cursed.

The other party seemed to think that an old man like him was easy to bully. Those dinosaur fossils were his life's work, and he had been collecting them since he was young.

Everyone had their own obsessions, and these dinosaur fossils were his obsessions.

This kind of obsession was sometimes very scary. It was like someone who had slept with his wife and girlfriend. He would fight to the death.

The white-haired old man entered his office and pulled open a board on the wall fiercely, revealing a small secret compartment. He could see that there were all kinds of guns and gunpowder inside, which could be used to make all kinds of explosive weapons.

He had been a ruthless man when he was young, but he didn't expect to be bullied after he retired and started working at the museum.

In a laboratory.

Bob led them to a storage room with boxes inside.

After making so many phone calls, those people and forces who were interested in dinosaurs began to run around for him and found dinosaur fossils for him.

professor Bob, there are a total of 43 dinosaur fossils here. There are fossils of all kinds of dinosaurs. The assistant at the side took stock of the dinosaur fossils and said.

Bob nodded. move these dinosaur fossils to the lab and soak them in the gene fluid. Let them warm up first. That way, it'll be more likely to extract the gene.

professor Bob, " the assistant said worriedly, " the dinosaur fossils might be useless if we soak them like this.

Everyone knew the special characteristics of experimental genetic potions. Even if the stone was placed there, it would be useless, let alone petrifying it.

Bob did not seem to mind. this is the most likely way to extract the gene. It's the only way. As long as we can extract the dinosaur gene, everything will be worth it.

Of course, the most important thing was that the gene fluid was specially prepared by him.

Ever since he had confirmed that he could really extract genes from dinosaur fossils, he had been thinking about this matter all the way here, thinking about how to make the gene fluid.

"Okay, professor Bob." The assistant nodded and immediately brought people to deal with it.

There was a time limit to soaking the dinosaur fossil. After a certain amount of time, Bob led the researchers in the laboratory to carry out the research.

However, as more and more dinosaur fossils were destroyed, they were unable to obtain even a single dinosaur gene.

In other words, these dinosaur fossils did not contain any dinosaur genes.

It seemed to prove that what the people from the eastern country had said was nonsense.

The key was that the other party had really developed dinosaurs. This was in front of everyone's eyes, everyone saw it. It couldn't be faked.

Therefore, dinosaur genes could definitely be extracted from dinosaur fossils.

"Ah, I've found something. I've found this fossil!" A researcher suddenly shouted in excitement.

Bob was shocked. He hurried over and asked, ""Which fossil have you found?"

The researcher pointed to a fossil under an instrument.

Bob also hurried over to the dinosaur fossil and looked at it. A moment later, he found that there were indeed traces of genetic activity in the dinosaur fossil.

In other words, there was no problem with the Geno fluid he had produced. This was definitely a huge achievement.

Thinking of this, he immediately gave an order, " quick, everyone get ready to extract the genes of this dinosaur fossil.

Since he had discovered the Gene's trajectory, it would be much easier to extract the gene. It was just that it would take a little more time.

When the researchers came in, Bob couldn't help but take out his phone and post a message on Facebook: so, genes can really be extracted from dinosaur fossils!

Naturally, he wanted to use this method to tell others that he could also extract dinosaur genes.

After all, he had embarrassed himself in front of the whole world, so he naturally wanted to get back his face.

Moreover, he was in a hurry.

Bob's news naturally attracted a lot of attention, especially some animal geneticists.

Animal geneticists from all over the world had started to take action. Naturally, they paid attention to each other's movements. They wanted to know if anyone else had extracted dinosaur genes.

Now that they saw Bob's news, the animal geneticists were shocked.

Bob had also extracted dinosaur genes?

All of a sudden, the animal geneticists from all over the world became anxious. Even those countries were anxious.

After all, even the United States had extracted dinosaur genes, so they had to do the same as well.

Moreover, Bob must have followed the eastern country's method, which meant that the eastern country's method was really feasible. He had to work harder.

Naturally, the Americans were completely excited. After all, they were dinosaurs. If the eastern countries had one, they must have one too.

[Chapter 1732 A Huge Mistake! Flower Garden Wall! 2](#)

professor Bob is still very good. He was just going in the wrong direction.

indeed. I hope that professor Bob can research more dinosaurs to surpass that Eastern country.

".."

The citizens were generous with their praises for Bob again.

When Bob saw the compliments, he was once again elated. He also dialed a number and immediately said, " Sir, we've already found the genes of a dinosaur fossil. We're extracting them now and we'll have the results soon ... Alright ... Alright ... Welcome to the team ..."

After hanging up the phone, Bob clenched his fists. This man was a big Shot. He was the one who had approved tens of billions of dollars for his old friend, Elson, to do research, and then added tens of billions of dollars.

Therefore, the first thing he did was to contact this Big Shot. His purpose was naturally to get tens of billions of dollars in investment.

Soon, the Big Shot arrived, and Bob went out to welcome him.

The other party was a middle-aged man with a sharp nose and golden hair.

"Mr. Kevin, you're here." When Bob saw him, he went up to him with a warm face.

professor Bob, you found the dinosaur gene that can be extracted. Naturally, I have to come and take a look. Kevin also said with enthusiasm.

He was in charge of this area. The recent dinosaur incident had caused such a big commotion. Naturally, he hoped that the United States could quickly research dinosaurs and not let the people from the eastern country monopolize it.

Bob was immediately excited. Mr. Kevin, don't worry. The dinosaur gene will be extracted soon. Let's go in and take a look.

"Yes, professor Bob, lead the way." Kevin immediately nodded.

Bob began to lead the way, bringing Kevin into the laboratory to the place where dinosaur genes were extracted.

However, as soon as he entered, Bob realized that the atmosphere was a little off.

The researchers inside all had ugly expressions and seemed to be very depressed.

This was not right.

"What's going on?" Bob immediately asked one of the researchers.

The researcher replied with an unsightly expression, " professor Bob, there are some problems with the gene extraction.

"What's going on? The gene hasn't been extracted?" Bob's expression changed as well.

This dinosaur fossil was the first fossil they had found that had traces of genes. If the gene extraction was not successful, it would be a waste of a once-in-a-thousand-years opportunity, which would definitely be a disaster.

"Mr. Bob, the gene has been extracted, but ..." The researcher said with an ugly expression. But ..."

The researcher looked at Kevin, who was next to him. He wanted to say something, but he hesitated, as if he found it difficult to speak.

"What's going on?" Bob immediately shouted. Why are you hemming and hawing? Hurry up and tell me!"

He was a little anxious. When Mr. Kevin came, there was a problem. If he didn't solve it immediately, how could he get the other party to approve the US dollars for his research?

The researcher saw Bob's anxiety and immediately explained, " Mr. Bob, we seem to have made a mistake. The fossil with genetic traces is not a dinosaur fossil, but a wild boar bone. Moreover, it is a man-made fossil. The other party's technique is very advanced, and they have deceived everyone.

Upon hearing this, Bob was stunned. "A boar fossil? How was that possible? How did this happen?"

His face immediately turned pale again.

After all, he had already posted on Facebook and even called Mr. Kevin over. Now, he was told that the dinosaur fossil was just a man-made boar fossil?

Wasn't this a huge joke?

Bob immediately looked at Kevin in extreme embarrassment. "Mr. Kevin, this ... That ..."

professor Bob, it's not your fault. It's the people who made the fake fossils. Kevin said indifferently. Although he didn't look angry, his tone told others that he was very unhappy.

After saying that, he turned around and left.

Bob was dejected. Was God joking with him?

Also, were those departments eating sh * t? He couldn't even tell that it was a fake fossil?

Bob did not know that there was a group of people doing business on the other side.

"Mr. Duron, we still need your Department to receive this batch of dinosaur fossils. We've paid a huge price to obtain them." One of them took out a stack of US dollars and handed it to the bald man in front of him.

the bald man took the US dollars, weighed it in his hand, and placed it in the car. As for the dinosaur fossil, he didn't check it too much and had it transported away.

That professor Bob's laboratory needed so many dinosaur fossils. That Mr. Kevin was also bragging that the number this time was finally enough, right?

This Bandit group was really powerful. They could steal so many at once. It was the museum's fault for not knowing what was good for them. Otherwise, he wouldn't have used this method.

After du long left, those people also drove away in a hurry.

In the car, they also started talking.

"Dean, did we go too far this time? We used wild boar bones to test it out before, but this time we're using boar bones. They should find out soon, right?"

"Sam, do you know that they won't find out if you use a wild boar bone? "They will definitely find out. So, it's better for us to make enough money in one go. Pig bones are much cheaper. Besides, we're going to the East. Let's go to other countries and deceive them again. Dulong and the others won't be deceived again."

On the other side.

In the laboratory.

Bob sat down in his chair dejectedly. His face looked worse and worse as he looked at the various praises on his Facebook.

He had not expected such a mishap to happen.

He had already lost a lot of face around the world. His fans and the people in the country were very disappointed in him. He had wanted to use this opportunity to regain his face, but who knew that it would turn out to be another mistake.

If they couldn't produce any results and were discovered to be a mistake, it would be a scientific research scam.

He had just lost so much face, and now there was a scientific research scam. His reputation should be completely ruined. He might as well die.

In the end, Bob left the laboratory in a daze. He planned to go home and have some peace and quiet. Otherwise, he was afraid that this kind of breakdown would really make him depressed and want to die.

When he arrived at the parking lot, he walked to his car. Just as he was about to get into his car, he suddenly realized that an old man had appeared in his car.

Before he could react, the other party took out a weapon and pointed it at him.

Bang!

In the parking lot, there was a loud explosion.

Bob fell to the ground with his eyes wide open. His eyes were filled with despair and unwillingness.

He just wanted to die. He didn't really want to die.

Did God misunderstand his meaning?

Darkness came, and Bob finally smiled. Perhaps he could have nothing to worry about.

.

In Linlin's laboratory, Qin Lin had been paying attention to the news on the internet. With the video of the dinosaur press conference spreading, the internet had completely blown up.

After all, it was an ancient dinosaur, and now it had been replicated. It could be said to be a miracle.

Qin Lin was watching the game and was suddenly attracted by the game screen.

A dwarf appeared at the entrance of the farm. It was none other than ah ni.

This little fellow's appearance meant that something good had come to his door.

It could be said that in the entire game, ah ni's plot rewards were the most abundant and the best.

He controlled the game character to face ah ni and clicked on it. However, a row of question marks appeared above ah ni's head.

This was another plot mission outside of the game's program, and he had to enter the game world to do it.

He quickly locked the office door and entered the game with a thought. He went straight to the entrance of the farm and saw ah ni.

"Good friend, we meet again. I'll have to trouble you again this time." Ah ni could not wait to meet Qin Lin.

He was obviously in a hurry. He was clearly telling others that he was a pig and that they had to slaughter him.

"Ah ni, why are you in such a hurry? you want the greenhouse tree design again?" Qin Lin wasn't in a hurry and asked with a smile.

you've guessed it, " ah ni said immediately. I do need the greenhouse tree design. I've managed to get my business into the hands of the goblins. They need a new design.

"This time, I can give you the seeds of the garden wall as an exchange. Furthermore, the seeds include all kinds of flowers! I only need 5 designs."

"What's a flower garden wall?" Qin Lin asked, puzzled.

[Chapter 1733 The Magical Flower Garden Wall! What A F * Cking Talent! 1](#)

This was the first time Qin Lin had heard of a flower garden wall. It seemed to have existed in reality, or perhaps it didn't.

He didn't know much about these flowers and plants.

"Here, this is it." When the dwarf Annie heard his words, she immediately handed over a handful of seeds. These seeds were actually divided into several colors.

Qin Lin took the seeds and immediately saw the remarks of the seeds:

[garden wall seed: special]

[this is a special mutated seed. After planting it, you can get a very beautiful garden wall. You can only know its specific attributes after planting it.

[special characteristics: grows very fast and can bloom quickly ...]

"How many greenhouse tree designs do you want to exchange?" Qin Lin immediately asked ah ni.

He was still very curious about things that he didn't know, so he didn't know about the garden wall. He also wanted to know what the garden wall was used for.

"My good friend, I only need five greenhouse tree designs. I'm counting on you." The dwarf ah ni said immediately.

"Ah ni, wait a moment." Qin Lin said as he logged out of the game. Then, he took out the remaining greenhouse tree design from the office drawer. He took out five of them and entered the game with a thought. When he entered the game, he gave the design to the dwarf ah ni.

thank you so much, friend. I hope we can have a good deal next time. The dwarf, ah ni, took the design and left in a hurry.

It was obvious that he was very busy with his business.

After Qin Lin got the garden wall seeds, he picked out some of the colorful seeds and brought them out of the game, but left most of them in the game?

When he returned to reality, he controlled his character to plant a few garden wall seeds.

These seeds didn't have a planting level requirement, so they could be planted by any courier.

After planting the ordinary Level 1 seeds of huaiyuan village in Jiangsu, Zhejiang, the only thing left to do was to wait for the seeds of huaiyuan Qian to grow.

Later that night, he said he wanted to find out what a garden wall was. To be honest, he was very curious about this thing. After all, it was the first time he had heard of it.

He also quickly searched for information about flower garden City on the internet.

There were two types of garden walls that were described on the internet. One of them was the art of wall carving, which was to carve various garden styles.

It was obviously different from the game, and it was not the same thing.

The second type was something similar to a fence. It was planted with various flowers and vines. When they grew up, they would become a natural wall that surrounded the park, courtyard, or garden.

This kind of natural flower garden wall was very beautiful and was used in many scenic resorts, parks, and other places.

Some people would also use this method to decorate the walls of their houses so that the entire wall would be covered with all kinds of flowers in full bloom, making it look very beautiful.

Naturally, very few people would use this method because it was cumbersome and troublesome to take care of.

Even in the summer, there would be all kinds of insects, and it was also possible to see snakes.

At the thought of this, 95% of the people would stop at the sight of it. Only some large-scale scenic spots were not afraid of trouble and would find people to clean up, so they would make flower garden walls for people to admire.

Qin Lin didn't know if this flower garden wall would be the same as the one in the game.

After all, this flower garden wall was artificially arranged and planted, and then such a special wall could be produced.

The dwarf, ah ni, only gave him seeds.

Could it be that the seeds would automatically transform into this flower garden wall after they were planted?

This seemed to be a little magical and unbelievable.

However, when he thought about it carefully, this was an in-game item.

This was a golden finger.

This was a cheat!

The greenhouse trees were like those that grew after the seeds were planted. The seeds sprouted and the vines began to form the shape of the greenhouse trees, which were both exquisite and beautiful.

Therefore, it wasn't strange that the flower garden wall's seed would automatically grow into a flower garden wall after he had planted it.

After all, this was what the dwarves were good at.

They would always plant these sci-fi plants, changing the growth state of plants in the world from their genes.

The garden wall seeds that the dwarf ah ni had given him were growing very quickly. The next morning, he was attracted by the game screen.

He saw that the garden wall seeds that he had planted the day before had ripened, and had automatically formed a fence-like flower wall.

The wall of flowers was covered with bright flowers, which looked very attractive and beautiful.

It was obvious that the seeds had grown into a flower wall on their own, and it was not just a small section. It quickly extended along the nails and formed a long flower wall.

As expected, the dwarf never let people down. When Qin Ling saw the screen, he also locked the door and entered the game at the first moment.

Then, Qin Lin walked to the front of the flower garden wall.

When he got closer, he found that the garden walls were very beautiful, very beautiful, and had a unique attractive magic. There was also a special fragrance that was very pleasant to smell.

Qin Lin reached out and grabbed one of the garden walls. Then, he saw the remark of the garden wall:

[flower garden wall: special!]

[this is a special plant. After it is planted, it can form a very beautiful flower wall. Moreover, it will fall off automatically after it Withers without any smell. Special effect:+2 aesthetic,+2 aesthetic,+2 enchanting floral fragrance,+2 mosquito repellent,+2 mollusk reptile repellent.]

[Chapter 1734 The Magical Flower Garden Wall! What A F * Cking Talent! 2](#)

When ting Lin saw these attributes, he instantly thought of the use of these seeds.

This could be used in all aspects of decoration and beauty, whether it was a Park, a resort, a jingqu, or a private building, especially a house with a courtyard.

Using it as a flower wall, the beauty could be clearly seen.

Moreover, this was done after planting the seed. There was no need to go through too much trouble.

An ordinary flower wall required specialized planting arrangements, which was very troublesome.

In addition, very few people would choose normal flower wall decorations.

After all, it would attract mosquitoes and even snakes. It was terrifying just thinking about it.

Moreover, the flower wall was very smelly after it rotted, and it was very troublesome to clean up the rotten leaves and branches.

After all, not every place had the geographical environment of the southernmost part of the country and new hilan, which could build such beautiful houses.

However, with this flower wall, it was completely different. After all, the flower wall seeds could be directly transformed into flower walls, and there was no need to specially design the planting.

More importantly, the flower wall could repel mosquitoes and mollusks.

Mollusks should be snakes or reptiles.

Without this influence, this flower wall decoration should be popular with many people.

The most important thing was that the flower wall could give off a mesmerizing fragrance, which was a perfect attribute.

With this attribute, countless girls would probably go crazy for this flower wall seed.

Really, if this thing were to be promoted, the country that relied on tourism to attract people would definitely be done for.

At the thought of this, Qin Lin was a little eager to try. The development of jinglin Scenic Area had actually entered a bottleneck.

Before the completion of dinosaur paradise, many of the other projects had already lost their sense of aesthetics.

No matter how influential the system's cheat was, some of the visitors had already come here many times.

Even with the system's influence, he would still feel a little tired after seeing the same scenery every time.

If the flower wall was used to transform the entire Scenic Area, it would be a different story.

There would be a romantic atmosphere in the economy, and the charming fragrance would fill the entire Scenic Area.

In this case, it would surely attract countless tourists and give those who had been here several times a new experience.

[do you wish to collect or reserve seeds?]

Qin Lin found that he also got a hint when he touched the flower garden wall. Obviously, he could directly harvest the flower garden wall, or use the flower garden wall to reserve the seeds.

In other words, he could use this flower garden wall to produce more seeds.

This should be a good thing.

After all, the seeds that the dwarf ah ni had given him were not enough for him to use, let alone to promote.

If he wanted to re-plant it outside and keep the seeds, it would take a very long cycle.

Now that he could directly reserve seeds in the game, he could get a lot of seeds.

If he wanted to renovate the jinglin Scenic Area, the time needed would be much shorter.

After all, the seed had another special characteristic, which was that it grew very fast.

Although he didn't know how fast this 'very fast' was for the time being, the system usually noted this as the growth speed wouldn't be very slow. It should be able to grow very quickly.

Thinking of this, Qin Lin chose to leave these flower walls as seeds, and then exited the game with another thought.

Then, he took out the seeds that he had brought out from the game.

After he left the office, he gave Yu Shui a call and asked her to bring some tools to jinglin Manor.

To plant things, it still needed to be done by professionals, and the people in the plantation Department were better at it.

The key was that if Yu Shui brought people over, he wouldn't have to take care of these seeds himself. Yu Shui would make good arrangements, including watering, weeding, and trimming the leaves.

Yu Shui soon arrived with the plantation Department. As soon as she saw him, she asked, "Qin Zhi, what do we need to do this time?"

Qin Lin immediately handed the garden wall seeds that the game had brought out to Yu Shui. plant these seeds around the sports field and build a fence around the sports field!

Yu Shui immediately turned around and said, "Alright, Qin Zhi!"

After that, Yu Shui led the plantation Department to the sports field.

At the same time, he sent someone to observe the bamboo forest and cut down some bamboo to build a fence!

Although he didn't know the reason for this, he knew that what Qin Zhi was researching was definitely not simple.

Moreover, it was not a big deal to cut down some of the bamboo forest for viewing, because bamboo shoots would grow out of the bamboo forest for viewing. It would become bamboo, and it would be a little too dense, so some of them had to be cut down.

Yu Shui's actions were very fast. Soon, she led people to plant the seeds around the sports field and then water them.

Qin Lin didn't care about these things after that.

Yu Shui was a very efficient person. He knew what to do.

Therefore, he would leave the seeds to Yu Shui. When the flowers bloomed and matured, Yu Shui would naturally tell him.

For the rest of the time, Qin Lin returned to the inner area and began to think about some problems.

It was about the particle beam.

To be honest, he, Liu Tong, and the other researchers had been working on the particle beam for a long time.

Therefore, it was time to reveal this technology to the world. He was also very curious about the effects and power of this technology.

Think about it, while people in all the countries on earth were still using bullets, they had already designed weapons that could use particle rays.

Of course, it was not easy to develop a particle beam weapon. After all, the technology he had obtained was only at the level of particle beam.

He didn't have the relevant knowledge to turn this particle beam into a weapon for research.

This was probably his limitation.

Although he could get the complete technology, he didn't have the ability to research and develop the technology. So, after the particle ray technology was developed, he would have to rely on Liu Tong and the others or the people from the Chinese Academy of Sciences to develop weapons.

He had no way at all.

He might have to tell Minister Lu that he had no interest in researching such weapons. It would be embarrassing if Minister Lu insisted on him continuing to research particle ray weapons.

He turned on his computer and began to input all kinds of data and theories about particle rays.

These data and theories were naturally correct, because he had copied them according to the complete information of the example ray.

If he gave this information and data to Liu Tong and his team, they would definitely be able to develop the particle beam.

If they still couldn't figure it out, then they would just have to take their own heads and stuff them into the latrine.

Naturally, Qin Lin thought about it and decided to give it to Liu Tong and his people in two batches. After all, it was quite shocking that he suddenly took out all the information.

Just as Qin Lin was thinking about this, his phone suddenly rang. It was Liu Tong's number, so he hurriedly answered the call.

As soon as the call was connected, Liu Tong's voice came through, "Academician Qin, let me tell you a piece of good news. We captured the particle energy, and it wasn't by chance. We tried several times in a row and we were able to capture it every time."

what? you've already captured the energy of the particles? " Qin Lin suddenly shouted in surprise.

This was really beyond his expectations, because he had not given the next data to Liu Tong yet!

Liu Tong and the others had actually managed to capture the particle energy.

Liu Tong said with some excitement, "academician Qin, didn't you guide me to study those data before?" I found the pattern and came up with a formula. By researching according to this formula, we were able to capture the energy of the particles!"

".. "Qin Lin was dumbfounded. He really didn't give Liu Tong any guidance!

Who knew that Liu Tong would actually come up with something?

This was a f * cking talent!

[Chapter 1735 This Is Academician Qin Jr. It's Our Fortune To Have Him](#)

Qin Lin was really surprised when he heard Liu Tong's news.

Previously, he only had the intention to fool Liu Tong so that he would not have to think about investigating his situation.

Minister Lu had arranged for the other party to stay here. He had never thought of giving the other party anything. After all, he would teach him if he did not understand.

He had also made up his mind to say that Liu Tong was slow-witted when he hadn't learned anything.

Who knew that after Liu Tong was duped, he actually managed to come up with something.

This was too unbelievable.

This was particle ray technology, not some simple technology.

Perhaps Liu Tong was a genius in the field of particle beam research.

In this case, if the technology of particle ray weapons was handed over to Liu Tong, perhaps there would be a particle ray weapon in China soon.

After Qin Lin hung up the phone, he looked at the two documents in his hand and decisively put one of them back into the drawer.

The information was about how to capture particle energy.

Now that Liu Tong had found a way to capture particle energy, this piece of information was no longer useful. He could just give Liu Tong the technology on how to materialize particle energy.

Then, he took out his phone and called Minister Lu. He had to share the good news with him.

Beijing.

Minister Lu was also in a meeting with several leaders. This meeting was of a very high level, and he was only qualified to sit at the end.

The higher-ups were already looking at the multimedia screen, and they started discussing.

we've reached a critical point in the asteroid transformation. Two gravity zones have been built there.

in these two areas, life can move normally, but the atmosphere still needs to be modified. We've accelerated the planting of purification grass.

the materials for the atmospheric modification have also been transported over. The atmospheric modification should be completed soon.

the most difficult problem, the gravity, has been solved. The atmospheric problem isn't that difficult either. However, it's not enough to only solve the regional gravity problem. We need to transform the entire asteroid.

yeah, this will take some time, but it's all thanks to academician Qin. If it wasn't for him, we wouldn't have dared to imagine the current situation.

it's not just us who can't imagine it. The other countries can't imagine it either. Otherwise, even if we created an illusion, it's impossible that they haven't noticed our movements yet.

that's true. Who would've thought that a country that was originally behind them would be ahead of them in this area by so many years just because of academician Qin? "

When it came to academician Qin, these people's faces all showed a special kind of expression, which was a kind of pride.

That's right, even these people were proud of the country for having people like academician Qin.

Which country would have a demon like academician Qin little, they would be proud, right?

Their country had only managed to catch up to the Western countries after several generations of influence. However, because of one person, they had quickly surpassed the Western countries.

As long as academician Qin showed more of his skills, it seemed that he could lead their country to completely leave the Western countries behind in Science and Technology.

Therefore, it was not unreasonable for some people to call academician Qin the God of science.

At this moment, a Secretary ran in hurriedly. It was Minister Lu's Secretary. She carefully walked up to him and handed him the phone that was on silent mode.

There was an incoming call on the screen.

If it was someone else's call, he definitely wouldn't pick up the phone in this kind of meeting. E

However, if it was boss Qin, it would be different.

He took his phone and waved it at the leaders.

The higher-ups had also instructed that some things could be given to boss Qin as special exceptions and privileges.

After all, if they didn't dote on such scientists, would they wait for people from other countries to dote on them?

That was impossible.

Besides, boss Qin had always been aloof from the world. He had no interest in power or money, and he was not interested in fighting with anyone.

If someone didn't provoke him, he wouldn't even want to bother with them. Even if he did, he would use scientific means to make something more powerful than you and make you despair.

Who could say anything about this?

Most importantly, boss Qin was very humble. If it were anyone else with this kind of achievement, they would have long been cocky. They would not be as low-key as boss Qin, who didn't want to be in the limelight at all. Every time, he would even think about helping others and giving the honor and credit to other researchers in the Chinese Academy of Sciences or Linlin laboratory.

He was definitely a state scholar, or perhaps a state scholar couldn't even be used to describe boss Qin. To a certain extent, it wouldn't be an exaggeration to call him a Saint.

Although boss Qin's ideology and culture could not be compared to those of Confucius and the other ancient Saints, in terms of contribution, those Saints were nothing compared to boss Qin.

The leaders also looked at Minister Lu.

When they saw Qin Lin's number, they all stopped talking and looked at Minister Lu quietly. The leader in the middle even made a gesture to pick up.

Minister Lu immediately pressed the hands-free button and answered the call. Qin Lin's words immediately came out of the phone and were heard by everyone in the conference room. Minister Lu, I have good news for you. There has been progress in the research of particle rays. The laboratory is able to capture the energy of particles.

"Really?" Minister Lu stood up subconsciously when he heard the news.

[Chapter 1736 This Is Academician Qin Jr. It's Our Fortune To Have Him 2](#)

The other leaders also stood up in surprise.

They naturally knew that the transformation of the asteroid was only the first step. This was only a natural way for them to change the living environment and the ability to migrate.

He didn't know how long it would take for this ability to be realized, but at the same time, he would need a special weapon that could be used in space.

Particle weapons were just a conjecture, but whether it would work or not would still depend on the scientists' research.

The most important thing about particle weapons was to create particle beams.

Therefore, when they heard that academician Qin was interested in particle beams and gathered people to research it, they were very excited and looked forward to it.

After all, they all knew how monstrous academician Qin's ability was. If he continued his research, it was really possible for him to develop particle rays.

At that time, they only felt that it was a possibility.

Who knew that academician Qin would be able to capture this particle energy so quickly? how long would it take for him to develop particle ray technology?

As long as the particle beam technology was developed, he could start the research on particle weapons, right?

Qin Lin's voice was heard again. Minister Lu, this time it really has nothing to do with me. I didn't capture the particle energy. It was Liu Tong who did it. I didn't participate in the research of the capture stage. Liu Tong completed it himself. He is really a talent. In the future, let him research the technology of particle energy, and there will definitely be great results.

Minister Lu and the other leaders looked at each other in dismay.

They all thought that this was Qin Lin's credit, but who knew that they would actually hear this.

After Minister Lu hung up the phone, a leader asked in surprise, ""Who is that Liu Tong?"

Minister Lu immediately explained, " leader, Liu Tong is an expert in the research of particle energy in the Chinese Academy of Sciences. He is qualified to be selected as an academician. This time, he also went to help boss Qin with his research. I didn't expect him to be so good.

When the leader heard this, he immediately nodded and said, " that's right, we can't treat this kind of talent badly. Since academician Qin recommended him so much, he must be a very capable researcher.

Minister Lu's phone rang again. He immediately said, ""It's that Liu Tong."

"Quickly answer it." The leader said immediately.

Right now, he also craved this Liu Tong to death.

After all, this person had also researched and captured the energy of particles. He was too amazing.

The call was connected, and it was still on speaker mode. Liu Tong's excited voice came through, Minister Lu, let me tell you some good news. Our particle experiment has captured particle energy.

"Liu Tong, boss Qin just told me that you've done a great job. I can't believe you can do this alone," Minister Lu said with a smile.

Liu Tong was obviously stunned for a moment. He asked tentatively, "Minister Lu, did academician Qin say that?"

"Yes, boss Qin has already told me," Minister Lu said with a smile.

Liu Tong's anxious voice was heard, Minister Lu, it's not like that. Why is academician Qin so humble? this is obviously not my credit, it's all his credit.

"Eh!" Minister Lu was stunned when he heard this.

When the leaders heard this, they were also stunned.

What was going on with the two of them?

"Liu Tong, what's going on?" Minister Lu also asked hurriedly.

Liu Tong immediately said, "Minister Lu, didn't you ask academician Qin to teach us?" Although academician Qin acted casually on the surface, he specifically guided me and asked me to check some data. He gave me directions, and the data and directions he gave me were all correct. He helped me find the rules and calculated the formula. Only by adding it in did I accurately capture the particle energy."

so, if it wasn't for academician Qin Junior's guidance, I wouldn't have been able to capture the particle energy at all. In other words, if academician Qin junior didn't guide me, even if he guided someone else, the other person would be able to do it.

"Of course, if academician Qin junior still can't do it after so much guidance, then you're really an idiot. Don't waste academician Qin Junior's time."

Minister Lu and the other leaders looked at each other in dismay.

They didn't expect things to turn out like this.

After hanging up the phone, one of the higher-ups said, ""This academician Qin junior is really humble." yeah, the researchers who study with him are really lucky. Another leader said.

"That's something boss Qin would do." that's why Liu Tong and the other researchers admire this young man, " Minister Lu added. it's a very lucky thing for the country to have such a young man.

All of a sudden, the entire meeting room was filled with praises for Qin Lin.

After Qin Lin called Minister Lu, he left the manor and went to Linlin's laboratory to see Liu Tong.

"Academician Qin, why are you giving me all the credit?" "You were the one who guided him. I've already explained it to Minister Lu," Liu Tong immediately said.

"..Qin Lin was stunned and didn't know what to say. He could only sigh helplessly. He felt that it was useless to explain this kind of thing.

He had no choice but to hand the document to Liu Tong and said, "This is the experimental theory I learned later. Do as you see fit. I'm leaving."

He had finally seen through it.

No matter what, these people would put the credit on him.

Those that really had nothing to do with him had actually become his mentored.

More importantly, no one believed him.

[Chapter 1737 This Is Academician Qin Jr. It's Our Fortune To Have Him](#)

Was there still justice?

·cóm After Qin Lin left, Liu Tong immediately looked at the information in his hand. Although academician Qin gave him the information casually, he knew very well that the information given by academician Qin was definitely not simple.

Sure enough, he fell for it the moment he saw it. Then, he said with a face full of disbelief, ""It's too shocking and unbelievable. Is this academician Qin's true ability? He had only just captured the particle energy, and the other party had already given him the next experimental steps and theory."

Liu Tong was suddenly stunned. that's not right. I just reported it to academician Qin. How could it be that academician Qin already knew the result? "

This conjecture made him feel that it was unbelievable.

However, he couldn't help but feel excited. He called Minister Lu again. Once the call went through, he said, " Minister Lu, let me tell you a piece of good news. It's really shocking. Academician Qin just gave me the next research step. According to this research step, our particle ray technology is about to be completed.

In the conference room in Beijing, Minister Lu stood up subconsciously when he heard the voice on the phone. He asked, ""Liu Tong, is what you said true?"

"Yes, how could I joke about this kind of problem?" Liu Tong said immediately.

The confirmation made Minister Lu and the other leaders look at each other.

This is unbelievable!

How long has it been?

Their meeting was not over yet, and there was another piece of good news?

From Liu Tong's call to this second phone call, it had been a full hour, right?

Their meeting was only halfway through, and there was good news?

The key was that academician little Qin's speed was really so fast?

"Leaders, I think I'd better make a trip to you city!" Minister Lu immediately said to the leaders.

The leaders immediately nodded and began to urge him.

With this news, they would definitely go to you city to keep an eye on it. Furthermore, they had to be the first to know if there was any news.

Minister Lu also left the meeting room immediately and asked his Secretary to arrange a plane to you city.

Qin Lin returned to the Linlin Manor. As soon as he entered the office, he looked at the game on the screen in his mind.

A notification appeared in the game farm.

The flower walls had already formed seeds, and they could be harvested immediately.

Moreover, a few dwarves had already started to move and were picking flowers from the wall.

A moment later, he received another notification from the system that he had harvested seeds. He entered the game and checked the seeds he had harvested. They were no different from the ones that the dwarf ah ni had brought.

[garden wall seed: special]

[this is a special mutated seed. After planting it, you can get a very beautiful garden wall. You can only know its specific attributes after planting it.

[special characteristics: grows very fast and can bloom quickly ...]

After reading the remarks, Qin Lin took these seeds out of the game and continued to sow them in the game, saving more seeds.

In the game, he only needed two days to obtain a large number of seeds. However, in reality, it would take a very long time to harvest seeds.

Two days later, Qin Lin received another batch of garden wall seeds. However, when he went to the garden to check on the seeds he had planted before, he was surprised.

Yu Shui, who was watering the plants, was surprised. Chairman Qin, you're here. I was just about to report to you. The growth rate of the seeds you gave is too incredible.

[Chapter 1738 What Is Jinglin Scenic Area Doing?](#)

Qin Lin followed Yu Shui to the side of the sports field and finally understood why she was so shocked.

Because the seeds on the flower garden wall had already sprouted and were very strong. They had already climbed up the bamboo and had begun to wrap themselves around it.

According to this trend, as long as the leaves grew and bloomed, the flower garden wall would be formed.

Although he knew that the flower garden wall had the attribute of rapid growth, he did not expect it to be so fast.

At this rate, the flower garden wall would be completed in a week.

If it wanted to fully mature, it would only take about 10 days. This speed was really shocking.

"Chairman Qin, is this a new seed that you've developed? It's amazing. It seems like there's no plant that you don't know how to study." Yu Shui said in shock.

With such a boss, one could really see magical things at all times.

Qin Lin didn't deny it. Instead, he said, they're considered newly researched seeds. Take care of these seeds yourself. I'll give you some more later. Go and discuss with Lin Lanzi about planting all these seeds in Linlin Scenic Area to build the entire Scenic Area.

okay, Chairman Qin, " Yu Shui replied.

Qin Lin ordered and headed back to the Linlin Manor. When he reached the inner area and entered the workshop, he took out all the seeds he had taken out from the game before. Then, he called Yu Shui and Yu Shui came with her people immediately.

Qin Zhi, " Yu Shui said respectfully.

"These are the seeds. Bring them to Lin Lanzi for discussion." Qin Lin also gave the seeds in his hand to Yu Shui for her to deal with.

Yu Shui didn't dare to hesitate after taking the seeds. He knew that the seeds developed by his boss must be very magical. After all, they matured so quickly.

He had to deal with these seeds.

Yu Shui hurriedly led her people to the office area of the Linlin Scenic Area and saw Lin Lanzi.

"Manager Yu, what brings you to my office today?" Lin Lanzi also asked Yu Shui the moment she saw him.

Yu Shui also took out the seeds and immediately replied, " President Lin, these are the seeds that Qin Zhi asked me to plant. He asked me to discuss with you how to use these seeds to transform the landscape of the scenic Area.

Lin Lanzi only heard Yu Shui's words and said in surprise, Chairman Qin, you've developed a new seed? "

Yu Shui immediately explained, " yes, Mr. Lin. I have tried to plant some seeds. Those seeds grow very fast. What's more amazing is that they can grow on their own and form unique shapes.

"Unique shape?" Lin Lanzi immediately thought of the crops that her boss had researched in the past. They seemed to have special shapes or special appearances. They were all very beautiful and very suitable to be used for scenic spots.[please visit panα-:~novel1.co\)m](http://panα-:~novel1.co)m)

Now that Yu Shui had said this, she knew that the product of her boss's research must be very beautiful.

Otherwise, he wouldn't have specifically instructed Yu Shui.

"Manager Yu, please take me to see those seeds." Lin Lanzi immediately said to Yu Shui.

"Okay, President Lin." Yu Shui said immediately. She brought Lin Lanzi out of Linlin Manor and headed directly to the sports field of Linlin Manor.

Lin Lanzi also saw the seeds planted in the garden wall. As expected, after the seeds sprouted, the branches automatically twisted around each other, forming a special shape.

Moreover, he realized that it seemed to be the shape of a flower wall. The more he looked at it, the more it looked like it. It was after it grew leaves and words.

"Manager Yu, you're saying that these shapes are formed by themselves after the plants germinate?" Lin Lanzi recalled Yu Shui's words and asked in surprise.

Yu Shui immediately nodded. yes, we just put some bamboo up for the flower wall seeds to use as a point of impact.

"It actually has such an effect." Lin Lanzi couldn't help but sigh.

She also immediately thought of where the scenic Area could be transformed with these seeds, such as landscape fences, roadside trails, and various decorations in the scenic Area ... This thing could be used for everything.

The most important thing was that these flower walls could actually form on their own. This was somewhat unbelievable, and it did not require much labor.

If these flower walls were still very beautiful and attractive, then he could imagine that the beauty of the entire Scenic Area would be raised by more than one level.

Thinking of this, Lin Lanzi immediately said to Yu Shui, "Manager Yu, let's go back and discuss it. We can also ask a designer to come over and help us design the location and shape of the seeds."

Since he was sure that the seeds developed by his boss were definitely amazing, he naturally had to carry it out immediately.

Not long after, a relevant designer was invited.

These designers were also brought to see the flower walls that had been planted, and then they began to draw the design drawings. Anyway, they had to design all the places in the scenic Area where the flower walls could be planted.

Yu Shui didn't stay idle either. While the designer was designing, he was planting the seeds. He tried to plant the seeds as fast as possible and then transform the entire Scenic Area.

After all, the seed grew very quickly, which would greatly speed up the transformation process.

In the following days, Lin Lanzi also went to Linlin Manor every day to check on the garden walls that had been planted.

[Chapter 1739 What Is Jinglin Scenic Area Doing?](#)

Lin Lanzi had a different experience almost every day.

Every day, the flower garden would take shape and grow more leaves.

In just four days, she saw the first flower grow. By this time, the branches and green leaves of the flower wall were already very dense.

Just this alone was already quite a sight to behold. If flowers were to fully grow, wouldn't the scenery be unimaginably beautiful?

Moreover, after these seeds grew out, they actually grew different flowers.

She immediately called Yu Shui and found out that the colors of the seeds were different. They could be divided into different types of flower walls.

This was even better. Different types would not be too monotonous, and it would have a more aesthetic effect.

A few days later, Lin Lanzi finished handling her documents early in the morning and headed to the Linlin Scenic Area. She found it very lively inside.

The attendants of the manor, as well as the seniors like academician Hao, were all attracted to the front of the flower wall.

"These flower walls have suddenly become beautiful."

"Yeah, she wasn't this pretty yesterday, but she looks different today."

you've suddenly become so attractive. I can't help but want to take a few more glances!

".."

When academician Hao and the other two heard the discussion of the waiters, they also touched their chins and thought about similar problems.

They had also seen these flower walls these days.

To tell the truth, they were already a little surprised. They could naturally notice the abnormal growth rate of these flower wall plants. They were definitely growing faster than normal plants.

Just from this point, he knew that this must be a new seed developed by academician Qin.

Therefore, these days, they would pay attention to these flower wall plants from time to time. Although they had thought that they were beautiful before, they were definitely not as shocking as today.

The feeling that these flower walls gave people today was that they would be shocked at first glance, making people subconsciously feel that this should be the most beautiful flower wall.

This feeling was very wondrous and mystical.

Linlang was very curious when she heard the waiters' conversation and immediately walked over to the spenders.

The waiters immediately greeted him when they saw him.

"Mr. Lin!"

"Mr. Lin."

".."

Lin Lanzi nodded to the waiters one by one while looking at the flower wall.

With just a glance, she was completely attracted to the flower wall, and she couldn't move her eyes away.

She finally knew why the waiters were so emotional.

Isn't she too beautiful?

Just as the service staff had said, she had come to check out these flower walls a few days ago. Although she felt that they were beautiful, she had not been shocked. However, today, she felt as if her soul had been directly impacted.

indeed, the things that Chairman Qin has researched are not simple. Lin Lanzi muttered to herself, her face full of emotion.

She was sure that such beautiful flower walls could only be seen in Linlin Manor.

After all, she had seen all kinds of videos and pictures on the wall.

Almost all the scenic spots had flower walls. As long as they were famous, she had checked their information.

However, the flower walls in those places, even if they had used filters, beautiful pictures, and edited the pictures, were still very different from the natural flower walls in front of them.

Thinking about it carefully, if the flower walls in front of him were edited, photoshopped, and filtered, the difference would be terrifying.

If an example had to be used, it would be the difference between an ugly woman using a filter and a goddess using a filter.

The filter wouldn't make the ugly woman close the distance with the goddess in the video. Instead, the goddess would use the filter to widen the distance.

After all, the more beautiful the person was, the better the effect would be.

Moreover, there was a floral fragrance around the flower wall.

The fragrance of the flowers seemed to be very light, but it could also be smelled very clearly. Most importantly, it was very pleasant to smell, and it was also very attractive and intoxicating.

This was even more mesmerizing than those carefully made perfumes, and this was the natural fragrance of flowers.

When Lin Lanzi saw the flower wall in front of her, she immediately made a phone call and instructed her Secretary, ""Help me gather all the management of the scenic Area. We're going to have a meeting about the renovation of the scenic Area for ten days."please visit [pan.dα-:.\)NOVE1.co\)m](http://pan.dα-:.)NOVE1.co)m)

Since the money was growing so fast, she might as well close the scenic Area during this period.

After all, there had been no such shocking impact during the growth of the flower wall. The tourists had not experienced it yet, so he had to give them the greatest experience.

Now that it was suddenly closed for renovation, it would instead arouse the curiosity of all the tourists and netizens.

Then, when the scenic Area reopened and the mature flowers were displayed in front of everyone, it would be a very shocking thing.

At that time, this money would definitely become the most popular and popular thing.

Since the scenic Area didn't care about the 10 days of revenue, it would be more meaningful to renovate it.

"Okay, President Lin." The Secretary's voice was immediately heard.

Not long after, the management of the scenic Area was all gathered together.

The managers were a little surprised.

After all, boss Lin had suddenly told them that the scenic Area would be closed for 10 days for renovation.

This was the first time a scenic spot had been developed.

After all, the renovation of the scenic Area could obviously be carried out in different areas.

It had always been like this in the past. Now that the business of the scenic Area was so good, if it was closed for 10 days, it would cause a huge loss.

When Lin Lanzi arrived, she also said to those managers, "everyone's here. Let's pass down the instructions. The scenic Area will be closed for 10 days. Chairman Qin has developed a new plant and has been planting it during this period. In 10 days, it will be almost fully mature. Then, the scenic Area will be completely opened.

The management of the scenic Area knew about the planting of seeds. After all, Yu Shui and the others were busy, and everyone was not stupid. They would pay attention to it.

They just didn't know what the seed was.

Now that he heard President Lin say this, he knew that the boss was the one who made the seeds.

Then the scenic Area would be closed for 10 days without a problem.

The more this happened, the more it showed that what the boss had made this time was not simple, which was why they needed to close the scenic Area.

The next day, Jinglin Scenic Area officially announced that it would be closed for ten days.

Those who had already bought tickets could continue to play. The ticket system and on-site ticket Windows would stop selling tickets and would only return to normal after 10 days.

This news attracted a lot of attention on the internet.

The tourists who were planning to visit Jinglin Scenic Area were stunned.

Especially those who had finally managed to get a date with their goddesses. They were already prepared, bought small umbrellas, and were just short of buying tickets.

But now, she was telling him that he couldn't get a ticket and couldn't go to the scenic Area. Wasn't this a joke?

He didn't even know how to tell his goddess.

Could it be that this was not fated? Was this a warning from the heavens that there was no result?

Anyway, someone suddenly got depressed.

If he had known earlier, his goddess would have wanted to go to Jinglin Scenic Area to play.

The key was to go to Jinglin Scenic Area to play. Fortunately, it was not easy to apply for leave from the company.

Now that she was told that she couldn't play after taking leave, wasn't this a blow to her mood?

She couldn't keep such an unreliable man. How could she not be depressed when she blocked and deleted him immediately?

Obviously, this wasn't the only male who had encountered this. There were many of them.

However, what made people very curious was why Jinglin Scenic Area was closed for 10 days.

This was really the first time?

Before this, there had never been such a situation in Jinglin Scenic Area.

Moreover, even if it was a renovation project or a development project, Jinglin Scenic Area had been in progress before. But the entire Scenic Area had not been closed.

However, some tourists said that they had seen workers planting something in Jinglin Scenic Area.

It was just that no one knew what to plant.

The more this was the case, the more curious the tourists were. Unfortunately, the specific reason could not be found on the internet.

Therefore, no matter how curious the netizens were, they had no way of finding out any information!

[Chapter 1740 There's Nothing Wrong With The Transformers Being A Toy, Right?](#)

Linlin Scenic Area.

After the scenic Area was closed, it was not like they did nothing, especially after the flower wall was formed. Lin Lanzi found Yu Shui and ordered, manager Yu, while we're closed, you should also be prepared to get rid of the bugs.

In a Scenic Area with a plant view like this, getting rid of insects was also of utmost importance. Otherwise, if the tourists suddenly discovered caterpillars or something soft crawling along the way, as well as the buzzing of mosquitoes, it would really affect their mood and make many tourists feel disgusted.

Therefore, pest control had always been the top priority of the scenic Area.

Yu Shui had already made preparations for this, and he also took this matter very seriously. So, as soon as Lin Lanzi gave the order, he immediately led the people from the plantation Department to start exterminating insects from the flowers and plants in the scenic Area.

This included the flower wall that he had just planted.

In fact, the other plants had been exterminated in the past, so it was not a big problem.

These flower walls had just been developed by Chairman Qin and had just been planted. There might be a lot of insects inside. Even if they hadn't been dewormed, they might still attract mosquitoes and ants.

The planting department's main task was to get rid of the insects on the flower wall.

After Yu Shui asked the people in the plantation Department to prepare the medicine, he personally led the people in the plantation Department to do this.

After all, it was the result of his boss's research, so he had to keep an eye on it himself to be at ease.

However, when he brought his men to the interior of the scenic Area and began to inspect the flower walls, all of them were shocked.

There were no insects on the flower wall, and no insects or mosquitoes approached.

What's going on? There doesn't seem to be a single insect. Yu Shui couldn't believe it and asked the people from the plantation Department to check it.

The plantation Department didn't dare to hesitate and immediately checked the flower wall.

As they checked, they were surprised to find that there were no mosquitoes at all.

"Manager Yu, there are no bugs on this wall."

That's right, there aren't any mosquitoes either. This isn't right. We didn't exterminate the insects on the flower wall.

"Yeah, don't tell me that this flower wall can also repel insects?"

His words reminded Yu Shui.

He knew that the things his boss made were not simple, and they even had special effects. Maybe the flower wall could really repel insects.

At the thought of this, Yu Shui immediately ordered the planting Department to stop. Then, she cut some branches and leaves herself and hurried to Linlin's laboratory. [please visit pan.d-alpha-1.com](http://pan.d-alpha-1.com)

Linlin's lab wasn't accessible to ordinary people, but he was an exception, because his plantation Department also helped Linlin grow some special plants. Chairman Qin would also ask for his seeds for new research.

He had directly contacted Chen Li.

Shen Li was already waiting for Yu Shui in the lobby. He was the person in charge of the laboratory, and Yu Shui was at least three ranks lower than him. However, it was always good to give Yu Shui some face.

President Shen, this is the plant. Can you help me test it to see if it has insect repellent properties? " Yu Shui immediately handed the cut flower wall branch to Shen Li.

"Let's go!" Shen Li nodded and brought Yu Shui to the Lab's Botanic testing department.

Then, he gave the branches cut by Yu Shui to the researchers in the Department.

With Linlin's laboratory's current strength, it was easy to test a branch, especially since Yu Shui had already given them the direction.

Therefore, it didn't take long for a Research Institute to send a test report to Shen Li and Yu Shui in surprise, ""President Shen, manager Yu, this branch is indeed very magical. It contains a special genetic material that can be mixed with the fragrance of flowers and let people smell it clearly. The key is that it's not harmful to the human body."

Moreover, the effect was very good. If this substance was detected and its composition was imitated, it could be made into mosquito fragrance or insect repellent cream. The effect would be very good, and it would definitely be able to crush all similar products.

This made Shen Li's eyes light up, and he immediately asked Yu Shui, ""Manager Yu, did Chairman Qin come up with this plant?"

"Yes." Yu Shui nodded.

Shen Li didn't hesitate. He pulled Yu Shui out of the Linlin laboratory and went straight to the Linlin Manor to see Qin Lin.

"Chairman Qin, I have something to report to you." Shen Li said impatiently as soon as he saw Qin Lin.

Yu Shui also couldn't help but say, "Chairman Qin, the new seed you developed is too amazing. That seed can not only wrap itself around the flower wall, but it can also emit a special fragrance. This kind of fragrance can repel insects and even mosquitoes and ants. The effect is very good. There are so many flower walls in the scenic Area, but there are no mosquitoes or ants. The key is that this thing is harmless.

Qin Lin naturally didn't feel strange when he heard this.

This was because he already knew that the garden wall seeds had the effect of repelling insects and mollusks +2.

So, there was nothing strange about it.

Shen Li immediately said, "Chairman Qin, the plant that you've developed is too amazing. Our laboratory is planning to analyze the composition of this plant. When the time comes, we can make products such as mosquito fragrance or insect repellent cream. It will definitely be popular by then.

"Eh!" Qin Lin was stunned when he heard this.

He really didn't think about you in this aspect.

It had to be said that Shen Li, the person in charge of the laboratory, was different. He could see that this was an extension of his business. Although he didn't care about money, he didn't have any objections.
