

## The Game 1741

### [Chapter 1741 There's Nothing Wrong With The Transformers Being A Toy, Right?](#)

He immediately turned to Shen Li. President Shen, you're in charge of this matter. You don't have to report to me.

"Okay, President Shen." President Shen immediately said.

He knew that Chairman Qin didn't care about these things, but whether he reported it or not made a difference.

After receiving the instructions, Chen Li also left.

Yu Shui also left and canceled the task of pest control in the plantation Department. What kind of pest control was this?

At the same time, he also reported this matter to Lin Lanzi.

Lin Lanzi's words 'quite big' were equally surprising. This could totally be used as one of the publicity points.

..

Ten days was a long time, but it was actually very short. It was just a matter of time.

However, the popularity of Jinglin Scenic Area on the internet did not decrease at all over the past 10 days. Instead, it became more and more popular.

Before the truth was revealed, the abnormal behavior of Jinglin Scenic Area would arouse people's curiosity even more!

Finally, ten days had passed. There were already many scenic spots and fans waiting to purchase tickets.

Naturally, they wanted to see if the Jinglin Scenic Area was open for purchase.

And when they clicked on it, they found that the emergency ticket system had indeed returned to normal, and they could now start buying tickets.

Zheng Jiali had also been waiting in front of the ticket system.

Seeing that the ticket system had returned to normal, she clicked "purchase" without any hesitation.

When the system prompted her to confirm her identity, she also pressed "confirm" at the first moment!

"I'm sorry, the tickets for that day are all sold out!"

Zheng Jiali was stunned when she saw the notification.

She had been looking at the ticket sales page all the time. How long had it been? It actually announced that it was sold out.

This speed was even faster than his disappointing ex-boyfriend!

Were these people crazy? They were just buying two tickets. Did they need to snatch them like this?

On the internet, many people were like Zheng Jiali and started scolding her. Wasn't she just making fun of her?

We've all waited for more than 10 days, and we've all grown two pairs of hands. Why are you all so fast?

In fact, because so many people complained, this simple matter of not being able to get a ticket even made it to the hot search news.

It had to be said that the flow of traffic to Linlin Scenic Area was really high.

Those who managed to get tickets suddenly felt a sense of accomplishment when they saw this hot search news. Many people couldn't help but come out to show off their tickets, making people unable to complain.

In addition, those who had managed to get tickets were naturally full of anticipation. They had also waited for more than 10 days, planning to go to the Linlin Scenic Area to explore.

This time, you city didn't have a traffic jam, because the Linlin Scenic Area had limited tickets, and there was 6th Ring Road, as well as the airport and Airport Express.

You city's officials heaved a sigh of relief.

At first, they saw that something was happening at Linlin Scenic Area again. Although they didn't know what was going on, they felt that there would be a traffic jam.

Therefore, when they saw that he was safe and sound, Chen Li and sun Xian's group also heaved a sigh of relief.

In the end, Zheng Jiali still arrived at you city.

Although she didn't manage to get a ticket, someone she knew managed to get a ticket and even posted it on her WeChat moments to show off.

Therefore, she bought it at a high price. When she offered double the price, the other party said that he didn't care about the money. She directly changed her offer to 20 times, and the other party was even more anxious than her.

People always said one thing but meant another. Didn't they not care about that little bit of money?

Zheng Jiali got down from the airport, hailed a taxi, and headed directly to Linlin Scenic Area.

Because it was a direct passage, she quickly arrived at the Linlin Scenic area's parking lot.

As soon as he got out of the car, there was a dense line of tourists at the entrance of the scenic Area. These were the tourists who had bought the tickets for the day and had rushed here early.

As soon as Zheng Jiali reached the door, she heard the tourists around her discussing, "

"The flower walls inside are really beautiful."

yeah, so the Linlin Scenic Area was sealed off because of these flower walls. But they're growing too fast. After all, they didn't grow to this extent before the sealing.

the poster even said that the flower wall can repel insects. It seems like there really isn't a single insect, not even an ant.

the flower walls are mainly beautiful and fascinating. The key is the scale of the renovation of the entire Scenic Area. It's very shocking and spectacular.

".."

When Zheng Jiali heard this conversation, she couldn't help but be curious. She had also hurriedly queued up. After checking the tickets with great difficulty, he was the first to enter the Linlin attraction.

They saw flower walls of various colors all over the scenic Area, and on the flower walls grew different clusters of bright flowers.

She was attracted to the flower wall with just one look.

It was really beautiful.

The +2 in aesthetics and the +2 in aesthetics were just like the triangle plum from before. It could penetrate straight into the soul, and the system's influence was definitely strong.

Zheng Jiali was so attracted that she couldn't look away.

Furthermore, that intoxicating fragrance also made her directly intoxicated.

The most important thing was that there were many flower walls. Flower walls had been planted everywhere, and they were very spectacular when they were connected.

Now, she finally knew why those tourists commented that way.

Not only Zheng Jiali, but the other tourists also felt the same way. Many of them posted the flower walls of Linlin Manor on the internet.

In an instant, the flower walls went viral on the internet. Moreover, someone used a drone to capture the image of the continuous flower walls. It was really spectacular.

This time, everyone knew why the Linlin Scenic Area was closed for 10 days. It was probably to wait for the flower wall to mature and bloom.

Everyone felt even more emotional. Linlin Scenic Area was really different.

There were a lot of scenic spots with flower walls, especially some resorts, which used flowers as the title and flower walls as the theme. But how could the flower walls of those places compare to the flower walls here?

He simply couldn't compare.

The products of Linlin's company were better than others, and so was the scenery of Linlin's Scenic Area.

Just as the internet was going viral, Qin Lin arrived at Linlin's laboratory again.

That was because Liu Tong's phone had been ringing non-stop, asking him to go to Linlin's laboratory as soon as possible, saying that there was a surprise.

When he arrived at the laboratory, Minister Lu was also there.

Minister Lu had arrived more than 10 days ago. He had been at Linlin laboratory and had been paying attention to Liu Tong's follow-up experiments.

When he arrived, Minister Lu greeted him, ""Boss Qin, you're here!"

Liu Tong also hurriedly came out and said, " academician Qin, the experimental plan you gave me was perfect. I followed the experimental plan you gave me. As expected, I successfully completed the particle ray technology.

Minister Lu also said to the other researchers with excitement, " quickly activate the particle beam and let boss Qin see his results.

It was no wonder he was like this. This was particle ray technology.

When he came to you city to supervise, he thought that he would have to stay here for a long time before the particle ray technology would come out. Who knew that Liu Tong had already come up with the results after only a few days.

However, he also knew that this was not Liu Tong's credit, but Qin Lin's.

He had already sent the news back to Beijing. He could even hear the shocked voice of the leader who had received his call.

Obviously, the leaders were shocked. Everyone knew that this technology had been around for many years.

If people from Western countries knew about this technology, some people would be so scared that they wouldn't be able to sleep.

The researchers immediately followed his instructions and began to operate a crude instrument.

After the device was activated, clusters of beautiful light rays shot out and projected onto the wall in front of them.

Minister Lu's eyes were filled with infatuation when he saw the Ray.

This was the particle beam.

However, the wall did not cause any damage, nor did it cause any harm.

This was because it was scattered.

When the particle beam scattered, it would not cause much harm under normal circumstances. It would even be fine if a person touched it with their hands for a short time.

However, when these scattered particle beams were concentrated, it was a different story. They would become very powerful beam weapons.

What they were going to do next was to study the particle beam technique and turn it into a weapon technique.

Minister Lu hurriedly said to Qin ran, " boss Qin, I'll have to trouble you with the research of particle ray weapons.

Qin Lin knew this would happen. He immediately said, "Minister Lu, as you know, I'm not interested in the research of weapons. I think Liu Tong can handle the research of particle ray weapons.

All he had was the particle ray technology. He had no information on how to develop weapons.

Therefore, he used the excuse he had thought of.

Minister Lu was stunned when he heard this. Why did he quit? He didn't study weapons? What was a transformer?

"Is there anything wrong with a transformer being a toy?" Qin Lin seemed to know what Minister Lu was thinking and immediately said.

"..Minister Lu.

#### [Chapter 1742 Holographic Virtual Reality Game \(1\)](#)

Qin Lin didn't give Minister Lu a chance to speak. He went straight out of the laboratory and went back to jinglin Manor.

When Minister Lu came back to his senses, Qin Lin was already gone. He could only look helpless.

It turned out that in boss Qin's eyes, Transformers were just toys.

However, when he thought about the various functions of the transformer and its effects on the battlefield, he really could not treat it as a toy.

After thinking about it carefully, it seemed that it was easy for someone like boss Qin to study this transformer.

After all, jinglin's laboratory already had many types of Transformers designed by boss Qin.

Even the sci-fi Park in jinglin Scenic Area had a special Transformers show to watch.

From the traditional car Transformers to the great sage Erlang true Lord, then to the animal-like Transformers, just like the gorilla general.

It was as if all kinds of Transformers were not a problem for boss Qin.

However, for others, it was very difficult. For example, the Chinese Academy of martial arts had gathered so many mechanical research experts, but they had not been able to crack and make a single transformer. They could not even solve the basic mechanical skeleton armor and configuration problems.

So, from another perspective, so what if Transformers could play a great role on the battlefield?

To boss Qin, it was easy to make. Wasn't it as simple as making a toy?

After Qin Lin left jinglin Manor, he returned to the manor's office.

He looked at the game screen and started his daily mission for the day.

In fact, fishing, cutting trees, and picking mountain products were also quite pleasant.

Wasn't the farming game about living a slow life?

It was just that when one's luck was bad and they didn't get anything, it was quite disappointing.

There hadn't been any new good things like cutting down trees, fishing, and mining for mountain goods for a long time. They were all things that they had obtained in the past.

Qin Lin controlled the game character and tried to touch the plot mission in the ore town and the map.

However, this year's luck was still not very good. After shopping for a long time, he still did not trigger any plot mission.

Therefore, Qin Lin locked the door of his office and entered the game.

He planned to take a stroll around ore town today.

After the game had leveled up again, he could enter ore town in the real world, and he had found many good things while wandering around.

For example, the admission ticket to professor Gao's research Conference could be used to invest in professor Gao's research.

This was how the particle ray technology came about.

After entering the game, Qin Lin left the farm and headed to ore town.

On the real map, the farm was quite a distance away from ore town.

He was actually considering whether he should get a car to enter the game. Otherwise, it would be quite a distance from the farm to ore town.

However, he didn't find anything in ore town today. He didn't encounter many interesting things like before, nor did he encounter any skills that he could bring out of the game.

However, when he passed by an internet café, he caught his attention.

(The internet café's title is "new world, new game, let you experience the most realistic game scenes."

The new virtual world is worth having, worth looking forward to, worth experiencing.)

Qin Lin's eyes were almost focused on the words "holographic virtual reality."

In the real world, this technology had been praised for many years.

However, the only thing that had been developed so far was the VR mirror glasses.

Although they could play virtual games through VR, the degree of realism was still limited.

Some people would even feel dizzy and uncomfortable when playing this game, which also showed the game's imperfection and technical flaws.

Since it was a brand new virtual world, there should be the most realistic feeling and experience when playing the game.

It was like walking on the ground, how could one feel dizzy? it was impossible to feel dizzy.

Now, an internet café was promoting a holographic virtual game. He was naturally surprised and wanted to check it out.

Qin Lin entered the internet café.

The interior design of the bar was different from that of an internet café in the real world. It looked very sci-fi, and there were advertisement pictures of helmets on the wall.

Naturally, it was not for selling helmets.

Through the introduction, Qin Lin knew that the helmet in the advertisement was a holographic virtual device, but the appearance was a bit old-fashioned. Why did it have to be in the shape of a helmet?

After all, the holographic virtual devices in the movies and novels in the real world were all helmet-like.

Qin Lin entered the internet café and searched for a long time, but he couldn't find the manager.

How was he going to experience surfing the internet?

How could such a high-end internet café make such a mistake? they couldn't even afford to hire a manager?

Or did he hire a Network Manager who would skip work? It seemed that the owner was only rich, but he didn't know how to manage an internet café.

Just as he was about to complain, two young men came in from outside and walked straight to the two computers.

The two young men went to the computer and pressed a button on the table. Then, a screen rose up on the table.

A voice rang out from above, and at the same time, a virtual shadow was projected. welcome to the internet café's self-service payment system. Please show me your id and bank card. I will register and pay for you.

#### [Chapter 1743 Holographic Virtual Reality Game \(2\)](#)

The two young men immediately did as they were told. They took out their ID cards and bank cards. After a few operations, the two sat in front of the computer. At the same time, the holographic virtual helmet rose on the table.

When Qin Lin saw this scene, he was immediately dumbfounded. He was the one who was OUT of date. Why did he still need a Network Manager?

He immediately walked to a computer and pressed the buttons on the table like the two people before him.

A similar screen rose up, projecting a virtual image to serve him.

This was also a type of full-dive virtual technology.

In Marvel, Iron Man had demonstrated this kind of technology.

Qin Lin also followed the instructions of the holographic virtual image and took out the ID card and the bank card.

"Please enter the time you need to go online."

"Five hours,"

Qin Lin paid and sat in front of the computer. A moment later, a holographic virtual helmet rose on the table.

At the same time, the computer screen also showed the operation options: Please choose the game you want to play, then click to open the game, and then put on the holographic virtual reality helmet to enter the holographic virtual game.

Qin Lin immediately moved the mouse and the first game popped up. "The story of the ranch!"

"??? "Qin Lin was immediately depressed.

Holographic simulation of the story of the farm?

Then what was he now?

Was this even more real than holographic simulation?

He immediately skipped over the holographic simulation of the story of the farm. What was so fun about it?

The second game was the hot-blooded legend!

"??? "Qin Lin was surprised. It turned out to be this game. He knew about this game. Zazha Hui, uncle da, Gu tianle ... These legendary wargods were too famous.

The third game was 'MU miracle'!

"??? "Qin Lin wanted to curse.

In the real world, the advertisements for miracle and legend of mir 2 would pop up from time to time when he was watching Short Video.

The key point was that this miracle had no moral integrity. They would find some beautiful female stars with good figures to COSPLAY as fairy sisters, which were both sexy and alluring.

For example, a certain bar, a certain Fey ...

Using this kind of beauty trap to attract people to play this game and pay for it was completely immoral.

The fourth game, the Legend of the Sword and fairy!

"F \* ck ..." When Qin Lin saw the game, he immediately cursed, his face full of surprise.

This was because he was a fan of the Legend of the Sword and fairy, not only in the game, but also in the TV series. Brother Hu had really amazed him, and there was also the role of Ling 'er, the little sister played by the fairy.

Without hesitation, Qin Lin clicked on the Legend of the Sword and fairy, and a prompt appeared on the computer screen. the game has been launched. Please put on the linked helmet and enter the game!

Qin Lin saw the notification and immediately picked up the full-dive virtual helmet and put it on.

[ the start of the holographic virtual reality device is ...

It was already connected to the nerves and five senses ...

You have already linked the game, the Legend of the Sword and fairy 1!

Logging in ...

Logging into the Legend of the Sword and fairy with the full-dive virtual reality device! [ success ... ]

The next moment, he opened his eyes, and the scene in front of him changed. It was no longer an internet café, but an old inn.

The hall of the inn was filled with people in ancient costumes.

Besides, he was very familiar with the inn. It was the one opened by aunt Li in the Legend of the Sword and fairy that he had played before.

Qin Lin immediately saw aunt Li coming out with a plate of food.

Aunt Li's appearance could be recognized at a glance. After all, she was the character of an iron pot hitting the main character. It was from this aunt Li that the plot of the movie had more intrepid women hitting men with an iron pot.

Qin Lin seemed to be too excited. He wanted to run up and take a closer look at aunt Li.

After all, this was a game. If he couldn't do such a wretched thing in real life, it would be different in the game.

However, he seemed to be too excited and didn't notice the fish scales on the ground. He slid over and pounced on aunt Li.

This f \* cking ...

Qin Lin didn't expect the game to be so realistic that he could slip and fall.

At this time, he found that aunt Li was looking at him with a murderous look on her face. Then, aunt Li hit him with her palm, and a white shadow of a palm came to him.

Qin Lin was hit by the palm, and he felt a sharp pain in his heart. Before his vision turned black, a thought came to his mind: Cloud piercing palm!

It was aunt Li's ultimate move.

But wasn't this too real? That excruciating pain!

[ sorry, your character has died. Do you want to restart the game?

[ sorry, I've sensed that your emotionless state is beyond the normal range. If you don't have masochistic tendencies, please readjust the ratio of your five senses! ]

" ? ? ? "Qin Lin was dumbfounded. Was the game over when he was killed by aunt Li?

He was playing a single-player game, how could he die so quickly and so aggrievedly?

However, his five senses were beyond the normal range, and he now knew why it hurt so much when playing a game.

According to the hint, his five senses ratio was 200%.

If this wasn't a masochist, then what was?

100% of five senses was normal perception, and this helmet was adjusted to twice that.

Qin Lin re-adjusted it and found that the lowest ratio could be adjusted to 20%. In order to make it more realistic, this was the lowest ratio.

It meant that after being slashed, the normal perception would be 100%, and 20% would only be 20%.

Qin Lin wasn't afraid of pain, but he didn't want to be tortured while playing a game. So, he directly adjusted the lowest percentage to 20%.

Then, he entered the game again.

It was still that antique Inn.

This time, Qin Lin carefully stepped forward.

Aunt Li didn't do anything this time. Instead, she said enthusiastically, ""Do you want to stay in the hotel or go to the roof?"

"Stay in the hotel!" Qin Lin saw the two options and chose to stay in the hotel. Then, he paid the silver that the game gave him.

After aunt Li received the money, she also shouted upstairs, ""Little brat, come down to receive the guest and bring the guest up!"

A moment later, a handsome young man ran down and said to Qin Lin, ""Customer, come with me."

Qin Lin was intrigued. He knew that this guy was Li Xiaoyao.

He followed Li Xiaoyao upstairs and entered a room.

At this moment, they heard aunt Li's voice from downstairs, " little brat, the Taoist priest at the entrance is here again. Let's get him out of here later.

Qin Lin was stunned when he heard the voice. Was that the liquor sword immortal?

Li Xiaoyao murmured, ""This Daoist priest is clinging on ... Ah ..."

With that, he screamed and fainted on the ground.

Behind them, Qin Lin took a chair and let out a breath.

This was a full-dive virtual game, so there shouldn't be a problem, right?

Qin Lin then found a rope and tied Li Xiaoyao up.

After that, he went downstairs and found a bottle of carved wine according to the game plot. He walked to the wine sword immortal and gave the wine to him. He even conversed with the wine sword immortal according to the game's dialogue.

kid, we're fated to come to the temple on shilipo mountain tonight ...

The liquor sword immortal said, then left.

Qin Lin laughed.

Is it all virtual reality to this extent?

Qin Yang started to play with great interest. When it was dark, he went to the mountain God temple on behalf of Li Xiaoyao to see the wine sword immortal and learn the sword control technique.

He was really immersed in the game, and the more he played, the more excited he became.

He was even a little curious about what little sister Ling 'er looked like.

It was not easy for him to reach the plot of the immortal Spirit Island. He went to the pool. According to the plot, he should be able to see sister Ling 'er bathing in the pool here, right?

Qin Lin could even hear Ling 'er's brisk figure. He was about to go to the pool to check it out when he saw a beautiful scene ... Then, everything went black ...

[ it's time for you to get online! ]

" ? ? ? "Qin Lin was dumbfounded. He was about to see it. He quickly paid again and logged into the game.

He went to the inn again.

"Customer, would you like to stay in the hotel or head to the hotel?" Aunt Li asked again.

"?????"Qin Lin was stunned. Did he forget to save?

He sighed and could only exit the game. He really didn't have the motivation to play it again just to see little sister Ling 'er take a bath.

After leaving the internet café, he also logged out of the game. However, he heard the game prompt:You have new mail!

Qin Lin's eyes lit up. In this situation, only professor Gao's space elevator technology and hover car technology could send mail.

#### [Chapter 1744 The Complete Hovercar Technology](#)

The full-dive virtual reality device was a very magical technology.

Unfortunately, Qin Lin could only play with it in the game. He couldn't bring out this technology.

However, the mail from the ranch made him even more curious.

He didn't know what kind of technology it was.

Qin Lin immediately controlled his character to return to the farm and took out the email. It was a technical package.

He opened the package and saw the technology inside. He knew what technology it was just by looking at the first few words.

the hovercar's hovercar technology ...

This was the technology of the hover car.

Previously, the hovercar's technology wasn't perfect, so it couldn't be balanced at all, and ordinary people couldn't even use it.

Now, the hover car technology had been perfected.

There was also a message in the mail: the first generation of the hover car has been perfected. There are basically no problems with the balancing system, and it can also float a certain height off the ground. The second generation technology will continue to strengthen the research on the magnetic force of the hover car. Do you want to continue investing in it? "

"Yes! No!"

This was another option that required money.

Qin Lin chose "yes" without hesitation.

It was impossible to stop here with this free technique. He had to get the follow-up technique.

"Please continue to pay 1 million gold coins!"

Qin Lin looked at the payment page that popped up and could only sigh at how cheap the technology was.

To be honest, he had a few hundred million gold coins in the game.

These were all accumulated over the years, and there was no place to use them. No one knew how to use them. No one could understand the pain of using money.

However, he didn't expect that the technology would be so cheap in the game.

If this technology was brought to the real world, let alone a million, even if it was ten billion, people would buy it.

[ first generation hovercar technology: special! ]

[ this is the first generation of hovercar technology. The problem of balance has been perfectly solved. We can make a hovercar that is beyond the standard and can be put into use. After using it, we will be able to obtain complete technical information. Do you want to use it immediately? Who was it? [ no? ]

Qin Lin didn't hesitate and chose yes.

In an instant, countless pieces of information rushed into his mind, all of which were related to the hovercar technology.

Moreover, the information was very detailed. There were even several models of the appearance and car. It could be seen that they had put in a lot of effort.

It didn't take long for Qin Lin to fully understand the floating technology and the entire technology.

Now, as long as he was given the corresponding production line, facilities, and instruments, he could make the hovercar.

Furthermore, the hovercar consisted of two-wheeled hovercars and four-wheeled hovercars.

After receiving the message, Qin Lin exited the game and returned to reality.

As soon as he returned to the real world and left the hall, he saw Minister Lu rushing in from outside. "Boss Qin, let's have a good talk. Regarding the technology of particle ray weapons, can you consider continuing this technology?"

He was really in a hurry. After all, the particle ray technology had already been invented.

Under such circumstances, if they could further develop particle ray weapons, they would be able to dominate the world.

However, boss Qin had suddenly quit, which made them very uncomfortable. Even the higher-ups were a little anxious, urging him to do some ideological work.

This technology is very important to the country!

Everyone hoped that boss Qin would continue his research!

However, boss Qin's identity was special and he had heaven-defying abilities. They could not order or force boss Qin to do research.

All they could do was to beg boss Qin!

Qin Lin was a little helpless when Minister Lu brought this up again.

Honestly, didn't he want to develop this particle ray weapon?

He also hoped to help his country trample on beautiful countries and destroy ointment countries.

However, he had to be able to figure it out first.

He was able to develop the particle ray technology so quickly because he had the complete technology.

Now, he had no technology at all in the follow-up weapon research. Did Minister Lu think that he would be able to develop it?

They were overestimating him.

Minister Lu, I'm really not in the mood to study weapons, " Qin Lin said helplessly. or maybe I'm not that passionate about this area of research for the time being.

Minister Lu said, " boss Qin, I know that. You said it before. But once the particle ray weapon is developed, your technology in this area will crush this era. The whole world will be shocked by you. Your name will be recorded in the history of scientific research.

Obviously, Minister Lu wanted to use things like reputation to attract Qin Lin.

Minister Lu, " Qin Lin said directly, " if I want these things, I can do it as long as the other party announces what I'm researching.

"Um." Minister Lu lost his temper after hearing this.

Boss Qin was telling the truth.

If boss Qin cared about these things, he could just announce the things he had developed and shock the world.

His title as the God of science would also be officially confirmed.

However, most of his research was strategic technology that transcended the era. The higher-ups did not want to announce it. After all, if they developed it silently, it would be too late for those countries to react when they were found out by outsiders after they had developed it well.

Therefore, the higher-ups had wronged boss Qin.

Most importantly, boss Qin didn't care about these things at all.

Now, he was powerless to persuade boss Qin with these.

"Boss Qin, please consider it!" Minister Lu could only sigh.

#### [Chapter 1745 The Complete Hovercar Technology \(2\)](#)

Qin Lin saw that Minister Lu had no intention of giving up, so he could only divert his attention. Minister Lu, I'm really not interested in the particle beam technology now. I really want to research the hovercraft technology. After all, hovercrafts are very fun. I have some ideas now, and I want to develop a hovercraft so that it won't be as unstable as before. So, Minister Lu, I don't want to be affected by other things.

"..Minister Lu was stunned. He understood that boss Qin really didn't want to study particle ray weapons anymore. But in the next moment, he immediately said, " Minister Lu, can the hover car you mentioned really be developed? "

One must know that hover cars were a technology that could transcend the era.

The hover car that boss Qin had made had already been sent to the Chinese Academy for decryption. Unfortunately, although the Chinese Academy had come up with a plan to crack the hover car, it was too slow. According to the plan, it would take at least two years.

This was only the extent to which boss Qin had cracked the original version. With the design plan still in place, it would take many years to improve or even further research.

After all, not everyone had boss Qin's ability to handle this level of research so easily.

Moreover, if the hover car were to be introduced, it would not only solve the terrible traffic situation in the country, but it would also have great strategic significance.

Although the country's oil resources were very abundant and ranked among the top in the world in terms of oil reserves, such oil reserves were completely inexhaustible in other countries.

However, for a country with such a large population, no matter how many resources there were per person, it would become very small.

In addition, it was the fastest growing country in the world and had a greater demand for energy.

Therefore, even if there was a large amount of oil resources, they still had to rely on imports.

Once the mouth was pulled, it was naturally inevitable that it would be clamped.

This was a very uncomfortable thing.

Therefore, with the emergence of hover cars, which used special magnetic energy, they would be able to get rid of the oil crisis. By then, oil could be used in other places, and the domestic reserves would be sufficient for use. They would also be very rich and could be exported to other countries.

He could even sell them at a lower price, so that those countries who wanted to control oil would suffer and beg him not to sell them at a lower price.

As he thought about it, he really wanted to see the faces of those people from the country.

So, when he heard Qin Lin's words, he also said, ""Boss Qin, if you need any help with the hovercar technology, you must let me know. The Hua Academy will do our best to help you."

"Yes, I'll also do my best." Qin Lin was relieved to see that Minister Lu was no longer concerned about the particle ray weapon.

After that, he left in a hurry, completely cutting off any chance for Minister Lu to speak.

Seeing this, Minister Lu was also very helpless. He could only take out an encrypted mobile phone and make a call.

It was a call from a leader.

Once the call went through, the leader's voice immediately came through, ""Minister Lu, how's the persuasion going on with boss Qin?"

Minister Lu immediately reported, " leader, you know boss Qin's personality. He still doesn't want to study particle ray weapons. We can't force him.

"Al!" When the leader heard this, he couldn't help but sigh.

Boss Qin's ability was amazing, but it was a pity that he was not able to put all his heart into research.

If he could focus on one type of research, the results would be hard to imagine.

Fortunately, boss Qin was still young, and he would change as he got older.

Moreover, if Mr. Qin could live to 70 years old, that would mean that he had more than 40 years left. In these 40 years, with Mr. Qin's evilness, he would probably be able to bring the technology of the entire country to a rapid rise, right?

however, boss Qin said that he's very interested in researching hover car technology, " Minister Lu continued. it seems like he's in high spirits, so I think we should make preparations. We should speed up the modification of the aerial roads. Maybe the hover car will be out soon.

When the leader heard this, he subconsciously said, ""Is this true? Then let's go in you city first and send experts to design an empty road there. After all, you city will be the first to use boss Qin's research."

also, you city's city promotion should speed up. Otherwise, if boss Qin uses all the things he's researched on you city and you city is still a County, it'll be a huge waste of boss Qin's research.

we have to at least promote you city first. We have to raise its status. Otherwise, all the cities in the country will be so jealous.

When Minister Lu heard this, he jokingly said, " now, all the cities in the country are upset that boss Qin was not born there. For you city to have a boss Qin, all the good things are happening in you city. It's the luckiest city in history.

The leaders were all emotional.

This was boss Qin.

One moment, you were disappointed, and the next moment, you were excited.

The key was that both the technology of the hover car and the particle beam weapon were extremely important.

This was good too. If they had both technologies in front of them, they really didn't know what to choose.

In the current situation, boss Qin had chosen for them, so they could only do this.

Although this was not a technical specialization, it was a more comprehensive way to surpass other countries.

After Minister Lu hung up the phone, he took out his phone and dialed another number.

It was his Secretary's number.

As soon as the call went through, he looked inside anxiously and said, " arrange plane tickets for all the levitating experts in the hospital to you city as soon as possible.

Since boss Qin wanted to research magnetic levitation vehicles, he would give him the greatest support and help.

Qin Lin returned to the office in the inner area and went to a special computer immediately.

This computer wasn't an ordinary computer. It was a scientific research computer that Minister Lu had specially gotten for him from the Chinese Academy of Sciences.

There was also a special software for creating scientific research designs. This kind of software could not be obtained in the outside world. It was a top secret software.

It was an exception for him to be able to use it.

Most of the information on the floating train technology was about the blueprint.

He had to redraw the drawings on the computer, so he had to use this computer.

Thanks to the hovercar technology, his brain and muscle memory were very familiar with the designs.

Therefore, after he opened the computer software, he drew out the design drawings very skillfully.

There was also the technical information and information on the hover car.

It was all imprinted in his mind.

.

After Minister Lu gave the order, the Hua hospital quickly gathered the suspended research experts and sent them to you city.

When Minister Lu contacted Shen Li, Shen Li went to welcome the experts with him.

When he saw the number of experts, Shen Li was a little dumbfounded.

There were many people.

Did he feel that something was wrong?

Think about it, how many people from the Hua hospital are there in your laboratory now? The genetic experts who studied dinosaurs, Liu Tong who studied particle energy, and now such a large group of people had come?

Did Linlin's laboratory change its name to the you City branch of the Chinese Academy?

However, when he heard from Minister Lu that Chairman Qin wanted to study hover cars, he didn't hesitate. He arranged accommodation for the experts and took them to visit Linlin's laboratory.

The experts in the hover car were also looking forward to it.

Or rather, people from various departments in the Chinese People's Hospital were looking forward to working with academician Qin.

Now, everyone knew that academician Qin little was a monster. Everyone knew that academician Qin little could research anything.

Especially after academician Qin little led those animal geneticists to research dinosaurs, this point was confirmed by everyone in the Chinese Academy of Medicine.

One had to know that at that time, Animal Genetics experts all over the world were refuting academician Qin's research. In the end, academician Qin developed dinosaurs using a method that the top geneticists who refuted felt was impossible.

Now that it was their turn to cooperate with academician Qin, how could they not look forward to it?

Especially since they had already begun to crack the code for the hoverbike that was sent to the Hua hospital.

They knew very well how good the hovercraft was.

They found it very difficult to crack it even when they had the finished product.

This was enough to show how amazing academician Qin was.

Now that academician Qin was going to continue his in-depth research on the hover car, they had to help him.

No matter if it was in 2010, they would help academician Qin develop a complete suspension car.

[Chapter 1746 The Correct Use Of Holographic Virtual Technology!](#)

Linlin Manor.

In the internal staff room, Qin Lin stretched his back.

He had finally finished the design drawings of the car models and the relevant information.

Next, he would look for Minister Lu and ask him to transfer some experts from the Chinese Academy to assist him in the suspended research.

Even if he had the complete technology, he didn't want to do something troublesome by himself. He definitely wouldn't waste his time on things that could be done by others.

But how was he supposed to tell Minister Lu? after all, he was the one who arranged for the odd jobs every time. He was treating the Hua Yuan as a labor place.

Qin Lin obviously didn't know that Minister Lu had already called the workers he needed from the Hua Yuan to you city.

After he got up, he stretched his waist and decided to walk around to stretch his muscles. He locked his work area and entered the game with a thought.

Since ore town had already become real, the area inside was no smaller than the entire you city, so he could walk around.

In fact, you could even buy a car as a means of transportation.

Qin Lin strolled around the town while thinking about this. Suddenly, he saw an advertisement for a car shop. The price of the latest special car model promotion, and the free car design, so that you can better modify your own car, and even participate in the special car race.

What?

Special car types running around?

This was the first time he had heard of such a competition.

It sounded a little awesome.

The key was that he had passed by this place a few times before, but there didn't seem to be such a car shop.

This shop is new?

Not a coincidence?

Qin Lin was still thinking about the matter of the car. In a real world mine town, with such a large area and distance, it was indeed inconvenient to travel.

With that thought in mind, Qin Lin also walked towards the car shop.

When he entered, he was dumbfounded. There was no exhibition hall at all, and there was not a single car. It was very empty, and he only saw a few beautiful women in professional suits waiting for the arrival of guests.

That row of idiotic long legs was really a little dazzling.

One of the beautiful women saw that there was a guest and immediately went up to greet him. She asked with a smile, "Sir, what kind of car do you want to buy? Or if it's your first time buying a special car model, I can also introduce it to you."

"Why don't you introduce him to me?" Qin Lin said, embarrassed.

How are you going to introduce it if you don't even have this car?

Don't tell me you can't let people see the car you're introducing?

"Alright, Sir, I'll introduce them to you!" The beauty smiled and nodded.

As she spoke, the pretty girl pressed a button on the remote control. Then, an area in the lobby actually dimmed.

An incredible scene appeared in Qin Lin's eyes. Light began to appear in that area, and then a picture was formed. There was a black car on it.

"Holographic virtual image!" Qin Lin was shocked. This scene was the same as Iron Man's display of skills in the US team 3.

This thing was different from a full-dive virtual game.

When he was playing the full-dive virtual reality game the Legend of the Sword and fairy, It was like a real scene. The helmet facilities were connected to the brain nerves to achieve the most realistic simulation.

This was also a real simulation, but it was a visual effect. It was no different from the real thing, as long as one didn't touch it.

If he could have a virtual influence like Iron Man, he could even use his hands to control the virtual influence.

It was just that this game had recently introduced this kind of full-dive virtual technology. The fucking buildings tempted him, but they didn't give him this technology.

Qin Lin was curious if he would have a chance to get this technology.

Although this technology wasn't as advanced as particle beams or planetary gravity, it was still a super-technology that could completely change an industry.

If you still don't understand, then I'll give you an example.

In the past, you could only watch the National Teachers' educational movies on your small computer screens or cell phone screens.

That feeling was always very different.

However, what if he could use this holographic simulation to make a movie?

The projection could cover the entire room. If you watched it, it would be like watching a live broadcast.

If the furniture in your room was placed in the same position as in the movies, think about it. What would that be like?

If they could use the full-dive virtual reality helmet facility to make movies like they made games, what would happen if they wore the helmet and watched the movie?

After all, the full-dive virtual reality helmet gave him a real feeling, just like how he was sent flying by Aunt Li in the Legend of the Sword and Fairy 1.

If it was for the production of movies, they could tear, tear, tear clothes and fly all over the place.

When Qin Lin thought about this, he complained. In the past, in online games novels, this technology was always produced by the game first. He simply couldn't understand it.

If he wanted to make money quickly, he had to make a movie first. He had to feel the real world and move freely ...

There was probably no need to say more. He already understood what he knew.

Who could reject such a movie?

The men couldn't refuse, and the women couldn't refuse either.

Now, let me introduce you to the first car model. The beauty had already arrived next to the virtual image and introduced, "This special car is the car of S.H.I.E.L.D. Director Fury in the movie. We have done a one to one restoration ...

"Fu Rui?" Qin Lin's mind turned and he immediately thought of the movie. It was the episode in Marvel where Team America was wanted.

It seemed like Hydra had already hidden in S.H.I.E.L.D. And occupied many high positions.

At that time, Fu Rui was being hunted down in this game. He was hiding in his specially made car and was shot by several heavy machine guns without any injuries.

#### [Chapter 1747 The Correct Use Of Holographic Virtual Technology!](#)

The car was extremely bulletproof. It was also equipped with a super machine gun, the kind that could shoot through the car.

Seeing this, Qin Lin roughly understood that this special car model should be the model of the cars that appeared in the movies.

This made him lose interest.

After all, many car factories in the real world had produced such a car, the most famous one being the Batmobile.

Many rich young Masters would customize Batmobile as their own car.

It couldn't be helped. In reality, the Batmobile was too famous because of Batman movies and comics.

Just as Qin Lin was thinking about it, the beautiful woman pressed the remote control, and the virtual image changed. A second car appeared, and it was the Batmobile. Wasn't this too much of a coincidence?

The beauty also introduced, "Sir, the second car is a Batmobile. It's also the Batmobile used during the rise of the Batman Knight. Our company has also restored this car one by one. If you want to order it, you can order it immediately. This car is very popular and is often out of stock!

Qin Lin didn't hesitate to place the order.

The Batmobile was also a car he liked a lot when he was in college. He had bought a model of this car and put it on his desk.

Now that he could buy a one-to-one model, how could he miss it?

The key was that he didn't lack in-game gold.

A single carriage was only 5000 gold coins.

And so on, the equipment forging design cost 500000 gold coins.

What was going on?

A car was only 5000 Yuan, and a picture was 500000 Yuan?

Qin Lin only reacted after he clicked and placed the order.

However, he clicked on it too quickly and the gold coins were already deducted. The option to fill in the address appeared again.

[ optional address: Ranch ]

This game producer was wasting people's expressions. There was only one address in the game, and he even asked people to fill it out.

After the transaction was completed, the saleswoman smiled and said, " Sir, our head office has received your order and sent it to the factory. We will complete it as soon as possible.

Qin Lin could only say that the car was sold very easily. The point was that after the car was sold, the beautiful woman went back to her seat and ignored him.

This attitude of selling cars was not good!

However, the deal was already completed, and their relationship had changed from Party B's market to party A's market.

When they were buying a car, they begged you to buy it. After paying, it was your turn to urge them to deliver the goods, and their enthusiasm was no longer there.

Some rich second generations had once said that buying a Lamborghini was to accompany you to play with everything, the kind that would go deep into the game.

However, once they were sold out, they would be completely heartless. They would change from being the elder brother to a respectful Sir.

Because she had a new brother.

Qin Lin was too lazy to argue with an NPC.

He left after placing the order.

When the Batmobile arrived, it would also be sent to the ranch.

The delivery service of the factory was worth encouraging.

After Qin Lin returned to the farm, he also logged out of the game. He went back to his office and took out his phone to check the news for that day.

The hot search for Short Video on the internet was still Linlin Scenic Area.

The flower garden wall had indeed improved the scenery of the entire Scenic Area by more than one level.

The tourists who arrived at the scenic Area were all attracted. They took videos and uploaded them on the internet. Although they did not enter the country, there were too many fans in the Linlin Scenic Area now, especially with the support of fans from the Linlin company and Linlin laboratory. The heat was terrifying.

Therefore, the flower garden wall itself was very beautiful. With this kind of traffic, it was hard not to become popular.

Moreover, as more and more tourists went to the Linlin Scenic Area, the popularity continued to increase and showed no signs of declining.

After watching the news for a while, Qin Lin thought of something, which was about finding laborers for the Chinese hospital.

Although he knew that Minister Lu would definitely agree if he asked, he still had this thought in his heart, which made it difficult for him to say it.

Just as Qin Lin was thinking about this, there was a knock on the door. Minister Lu's voice came from outside.

When he opened the door, it was indeed this person.

As soon as Minister Lu entered the door, he said with some difficulty, ""Boss Qin, didn't you say you wanted to research hovercar technology? We have a lot of experts in hovercraft in the Hua \* Yuan hospital, and they want to learn from you, so they applied to come to you city. I saw how enthusiastic they were, so I didn't ask you first, but I agreed to their application and let them come."

The more he spoke, the more Minister Lu felt his face burn.

The Chinese Academy seemed to have the intention of relying on boss Qin.

However, Liu Tong had learned from boss Qin and had actually achieved such an achievement. He could discover the formula just by relying on boss Qin's knowledge.

Under normal circumstances, it would have been impossible for Liu Tong to discover the formula with his ability alone. Even with the help of all the people in the Hua hospital, it would still be very difficult.

However, under boss Qin's guidance, Liu Tong managed to sit down.

This was enough to show that one could really learn a lot from boss Qin.

Therefore, if the other students in the Hua Academy also learned from boss Qin, they would definitely learn a lot, and maybe even Liu Tong.

"Eh!" Qin Lin was stunned when he heard Minister Lu's words.

What was this situation?

He was just about to ask Minister Lu for free labor, and Minister Lu came to him on his own accord?

Could it be that Minister Lu knew what he was thinking? She knew that he was embarrassed, so she took the initiative to do it first?

Naturally, this was impossible. It could only be said that it was a coincidence.

Qin Lin pretended to be in a difficult position and said, Minister Lu, the hovercraft technology isn't that difficult. I already have an idea, and I don't need too many people to help.

Minister Lu immediately said, " boss Qin, don't think about helping. Just think of it as letting them do the work. Even if it's just doing odd jobs, it's fine.

When Qin Lin heard this, he pretended not to be able to refuse and said, " alright, since Minister Lu has made such an arrangement, I can only listen to him. When the time comes, let them study it together!

He felt that his acting skills should be good enough.

At least, Minister Lu didn't notice it.

"Alright," he said. Minister Lu's face was full of joy when he saw Qin Lin agree. He felt a sense of accomplishment because he had convinced boss Qin.

boss Qin, " he said, " why don't we do this? we're free now. Let's go see the experts and meet them.

"Alright then!" Qin Lin didn't refuse this kind of thing.

In any case, it was only right to meet free labor.

Then, he and Minister Lu left Linlin Manor and went straight to Linlin's laboratory.

As soon as they arrived at Linlin's laboratory, they went to the laboratory that Deng Guang had arranged for the experts in the hovercraft research. They found Liu Tong and team leader Lin there.

They were talking to a lady in her 50s. They seemed to be reminiscing about the past and were having a good time.

When they saw Qin Lin coming in, the group of people was immediately attracted. Team leader Lin and Liu Tong immediately went to Qin Lin and greeted him respectfully, ""Academician Qin!"

The lady also walked to Qin Lin uneasily and greeted him somewhat cautiously."Academician Qin."

boss Qin, this lady is the person in charge of the suspension research project in the Chinese Academy of Sciences. Her name is Luo Hua, professor Luo! Minister Lu also came forward to introduce.

"Professor Luo!" When Qin Lin saw the lady, he greeted her with a smile and a trace of admiration on his face.

Women had no advantage in research and belonged to the disadvantageous group. It was even more impressive to be in charge of a kind of research.

That was why he admired this person in the game.

"Professor Luo, I'll need you to cooperate with boss Qin in the future research of the hover car technology," Minister Lu also said to Luo Hua.

Luo Hua immediately smiled and nodded. don't worry, Minister Lu. I'll cooperate with boss Qin.

Her attitude was very humble. She had heard of academician Qin Little's amazing abilities, and she knew more from Liu Tong and the others, so she naturally respected him.

She had always respected people like academician Qin in scientific research.

Luo Hua then asked,"academician Qin, How do I cooperate with your research?" We can enter the research state immediately."

Qin Lin directly took out a few design drawings and handed them to Luo Hua, saying, professor Luo, please get the parts of this design out first!

Luo Hua took the design and was obviously stunned for a moment because he felt that something was wrong.

[Chapter 1748 This Is The Complete Technology, Right?](#)

Luo Hua was surprised as he held the designs in his hands.

She thought that even if they were only here to assist academician Qin, shouldn't they have a meeting together to determine the research plan and research direction?

At least, this was the case for all the experimental research she had participated in before.

What was the situation now? academician Qin directly gave her a design and asked her to do it. Why did this look a bit like ordering his own apprentice?

Or perhaps, he could not even be considered an apprentice?

While Luo Hua was struggling, Qin Lin had already said to Minister Lu, " Minister Lu, I've seen her. I'll go back first and wait for professor Luo's good news.

"Okay, boss Qin!" Minister Lu nodded.

Qin Lin left.

Luo Hua wanted to say something, but she felt that something was wrong. She had just arrived and didn't know much about the situation. She wanted to say something, but she didn't. She felt a little distressed.

Liu Tong seemed to have noticed Luo Hua's abnormality. He walked forward with a smile and said, "Professor Luo, are you a little troubled? It's like this when you're doing research at academician Qin Junior's place, you have to get used to it. "

it's not a good thing if he really wants to have a Research Meeting with you, because you can't keep up with his thinking and wisdom.

that's for the best. If he gives you the information directly, it means that he has a plan in mind, and it also means that the research can be completed easily.

so, don't come here with the idea of helping academician Qin. Just come here with the idea of learning from him. Now, you should look at the information that academician Qin gave you. You might be surprised.

Hearing the words of the experienced Liu Tong, Luo Hua immediately picked up the designs given by Qin Lin and started reading them.

However, as she looked at the designs, her face began to show shock.

Because these were actually design drawings, and it was a complete design drawing of the hovercar model.

Not only that, but there were also some special component designs, especially those related to the suspension aspect. It was simply unbelievable.

"This ... What else do we need to do other than research on the suspension and balance principles?" Luo Hua finally exclaimed.

"Professor Luo, what's wrong?" Minister Lu asked curiously.

Luo Hua immediately said, " it seems that academician Qin doesn't need us to participate in his research. It's just the suspension and balancing facilities. I suspect that academician Qin already has the suspension and balancing facilities. He just didn't take them out.

that's because, as a whole, several parts need to be connected to the floating and balancing facilities. Without the technology in these two areas, it's impossible to make other parts, or at least the parts won't match.

"Unless the parts of the design plan given by academician Qin don't match, and we need to run in and adjust them!"

"That's impossible ... So that's how it is!" Minister Lu sighed and looked a little embarrassed.

He recalled boss Qin's strange behavior from before. The other party had said that he didn't need anyone's help with the research.

Now it seemed that he really didn't need any help, because boss Qin had already developed the technology for hover cars.

By removing two parts of the equipment, boss Qin probably saw that he had already called everyone over, so he had no choice but to be sophisticated.

This made him even more embarrassed.

He could only look at Luo Hua in embarrassment. professor Luo, then you can bring some people to get these things out. This process can be considered as learning while understanding.

"..Luo Hua was even more confused when he heard this.

This was completely different from what she had imagined.

Minister Lu sighed silently.

Boss Qin had already completed the hovercraft technology, but he was still using it as an excuse. It seemed like he really didn't want to research particle ray weapons anymore.

Now that he knew the situation, should he go and talk to boss Qin?

Minister Lu thought of this, but he immediately shook his head.

Since boss Qin had already put it off like this, it meant that he was really unwilling. If he insisted on it, it would be a little annoying.

So, it was better to pretend that he didn't know!

professor Luo, please make the thing according to the design plan first! In the end, Minister Lu could only give Luo some instructions and leave the laboratory.

Luo Hua took the blueprints and helplessly gathered the other researchers.

Looking at these design drawings, she only hoped that she had guessed wrong. In fact, these design drawings had not been perfected by academician little Qin. They still needed her and those researchers to revise them.

That way, they would have a sense of participation in the subsequent research. Otherwise, they would have to model the parts according to the design drawings. What was the difference between them and bench workers? or rather, they would be more suitable as labor.

Obviously, she didn't know that researchers like her were just like laborers to Qin Lin.

Linlin's laboratory was now very powerful.

Luo Hua also had the detailed design from Qin Lin, so it was easy to build a model according to the design.

In just a few days, Luo Hua and the others had completed the relevant molds required for making the hover car.

Luo Hua didn't waste any time. He immediately brought people to Polish the molds. When the molds were polished, he began to make them.

.

In Linlin's laboratory.

Team leader Lin was relatively free now.

After all, they only needed to look after the eggs and the babies.

[Chapter 1749 This Is The Complete Technology, Right?](#)

As for studying other dinosaurs?

They had tried to extract some dinosaur fossils but found nothing. These dinosaur fossils were sent over by Minister Lu.

Minister Lu also gave it to academician Qin.

It was a pity that academician Qin could extract the genes, but they couldn't. This was the difference in ability.

However, he heard that Minister Lu owed a lot of favors in order to get more dinosaur fossils.

After all, it was very difficult to get dinosaur fossils from dinosaur-themed museums. They were food for them.

However, they were no longer so stubborn now. At least they were willing to give them some. They just had a request. In the future, when dinosaurs were promoted steadily, could they approve one for breeding?

It was a Dinosaur Museum. How could dinosaur fossils be better than real dinosaurs?

Minister Lu didn't care about a small Dinosaur Museum, but two National dinosaur museums, he still agreed.

However, they did not need to worry about that. After all, it was still too early to send a dinosaur over.

After checking on the condition of the young dinosaurs as usual, leader Lin left the laboratory and headed to the laboratory of the hovering Department.

Luo Hua was an old acquaintance of his. They had known each other since they were studying at the National scientific research university.

When he entered the hovering Department, he saw Luo Hua assembling the parts with some people. She and the other researchers all had a look of shock on their faces.

He was very familiar with this expression.

After all, he had experienced it before.

In this Linlin laboratory, as long as they could follow Minister Lu's research, including them, including Liu Tong and the others, they all had this expression on their faces. Then, after doing this again and again, they finally became the disciples of academician Qin.

They firmly believed that if academician Qin was willing, he could really take the research they were responsible for to a terrifying height, to the extent that the whole world would flinch.

Although it was already like this, this was the result of academician Qin's laziness.

As the dinosaur was studying it, it went to study the particle beam. When the particle beam had some results, it went back to studying the hover car.

This was academician Qin.

The key was that he could still succeed in this way and make them feel like they had lived for nothing.

It was really hard to imagine what kind of situation academician Qin would be like if he specialized in one research.

"Professor Luo, it seems that you have gained something?" Team leader Lin walked up to Luo Hua's side with a smile.

"Elder Lin, it's you." When Luo Hua saw team leader Lin, his face was full of emotion. "I didn't gain anything, but I was surprised. I wasn't just surprised, I was shocked."

That was indeed the case. She originally had an unrealistic idea, thinking that the molds made by academician Qin's designs couldn't make perfect parts.

In this case, they could still be of use and help academician Qin complete these parts.

However, who knew that after the mold was completed, the parts that were produced were actually perfectly compatible. She could totally bring people to assemble these parts according to the design plan.

They had really become hard laborers.

To be honest, other than forging molds, which required some time and effort, the other work didn't need experts like them at all. It could be done by the skilled operators in the factory.

The only thing that comforted her was that the design materials given by academician little Qin also had research materials, which allowed her to learn a little, which increased her knowledge.

However, the more she read this information, the more certain she was that academician Qin little definitely had the complete hovercar technology.

A moment later, a researcher came over and reported, ""Professor Luo, the finished product has been assembled."

Luo Hua immediately went over.

Leader Lin also followed. He knew that Luo Hua and the others were helping academician Qin to research the hovercar.

When they saw the assembled hovercar, not only was Luo Hua stunned, but so was team leader Lin.

The shape of the hover car could be seen now. The only thing missing was a part in the middle, which should be the key to the hover technology.

"It can't be that fast, right?" Team leader Lin asked in disbelief.

After all, he felt that his research on dinosaurs had been surprisingly smooth and fast.

The hover car came out as soon as the research team arrived?

Luo Hua sighed. it should be so soon. I suspect that academician Qin already has the complete hovercar technology. No, I have to see academician Qin!

Ignoring team leader Lin, she left the laboratory and went to Linlin's driver's Department.

Linlin laboratory had developed to this point, and various functional departments had been perfected, and there was a special driving Department.

In this Department, any staff or researcher could apply for a driver to drive the company's cars out.

The driver was also a security guard and a bodyguard.

Naturally, once they reached a certain level, they didn't need to apply. There was a special driver waiting for them, and they could set off at any time.

Luo Hua was at this level.

As soon as she arrived at Linlin's laboratory, Deng Guang had handled the procedures and information for her.

Luo Hua called for a driver and immediately left Linlin's laboratory for Linlin Manor.

After being checked by the security guards at the gate of the manor, she was let into the manor. She also saw Qin Lin in the hall.

Qin Lin was accompanying little Qin Feng at this time.

This was because little Qin Feng had given him another design. This design was actually another mechanical toy. It was a police officer, surrounded by flexible mechanical bone armor, and the whole body was also a special mechanical armor.

These mechanical bone armors and mechanical battle armors were transformed from the motorcycles that the police sat on.

It was probably the police patrolling on motorcycles. When they encountered danger or critical moments, the motorcycles would turn into mechanical armor and be worn by the police.

This toy is awesome. It's a little like the Transformers toy from before. I'll get Liu Hao from the toy company to produce it, then build some special effects videos from the National style sci-fi, or simply invest in an animation. It'll definitely be a hit.

Although Liu Hao had set up the toy company, he only produced the mechanical toy that little Qin Feng drew last time. He had no other toys.

In the video of the meeting between the managers of each company in Linlin group that Deng Guang had sent him, Liu Hao had also mentioned this problem.

Now, he could give the toy robot police to Liu Hao.

As for the video or animation, Liu Hao could just get in touch with the National style sci-fi team.

"Daddy, is my drawing good?" Little Qin Feng looked at his father expectantly, his little face clearly indicating that he wanted his father to praise him.

Qin Lin naturally understood the little guy's thoughts. He smiled and said, "it's a really nice drawing. As a reward, daddy has decided to ask an uncle to make this toy for you to play with.

"Good, good!" Little Qin Feng seemed to be even more excited.

"But remember, you can't tell anyone else when you draw something in the future. You can only show it to dad, or you'll have extra tuition!" Qin Lin said seriously.

"Yes, yes!" When little Qin Feng heard this, he nodded his head frantically.

I don't want tuition classes!

As the father and son were chatting, Luo Hua came in,

"Professor Luo, how come you're free to come here today?" Qin Lin immediately greeted the female professor.

academician Qin, "Luo Hua replied, "the designs you gave us have been completed. What are we going to do next?"

She no longer wanted to study with academician Qin, and she understood Liu Tong's feelings.

All she wanted to do now was to get the hover car out as soon as possible.

"Professor Luo, come to my office with me!" Qin Lin invited him and took Luo Hua to his office.

Inside, he took out a stack of documents and handed them to Luo Hua.

Luo Hua took the information and looked at it. He was stunned. It was a design for a hover car again. It was the same as the previous one, but the difference this time was that the previous one was a two-person bike. This time, it was a car model.

She quickly read through the information and found that the design did not have any suspension or balancing facilities.

Seeing this, she was even more certain that academician little Qin had the complete technology. She couldn't help but say, ""Academician Qin, do you have the complete technology? Just take out the complete technology and don't worry about us. We scientific researchers don't care about the ways of the world."

"..Qin Lin was stunned.

#### [Chapter 1750 The Batmobile Has Arrived Because Of Boss Qin](#)

Qin Lin was a little surprised. It was good that he had a complete hovercar technology, but how could he be so sophisticated?

He didn't take out the technology and information of the two facilities because he didn't have such thoughts. It was just that the technology of these two areas was more difficult, and it also required a kind of magnet and a special metal that stored magnetic forces.

Therefore, he asked professor Luo and the others to solve the other parts first, then deal with these two things.

To prevent these people from getting distracted, it was better to follow these steps.

However, since professor Luo Hua brought it up, he had no choice but to walk to his desk.

Professor Luo Hua looked at Qin Lin expectantly. She hoped that Qin Lin would tell her that there was no complete technology. That way, she and the researchers could get rid of their labor status and participate in the research.

She was the top expert in levitation research in the Hua \* Yuan hospital, but she could only do labor work, which was quite uncomfortable.

However, she was completely stunned when she saw Qin Lin take out more documents from the drawer and pass them to her.

this is the complete hovercar technology, " Qin Lin said at the same time. I've asked professor Luo to bring people to realize this technology.

"..Luo Hua took the information in a daze.

There really was one?

But this ... In the drawer?

Isn't academician Qin's heart too big?

How could this kind of technology be put in the drawer?

If it were any other country, this technology would have long been strictly protected, and even sent troops to guard it.

After a long time, Luo Hua finally came back to his senses. He left the office in a daze and returned to the car. He then remembered to call Minister Lu.

If he really had the complete technology, he would have to report it to the leader.

"Professor Luo, is there any progress in the hovercraft technology?" Minister Lu's voice was heard as soon as the call was connected.

He had already returned to Beijing to escort the complete data of the particle beam back. He was sealing the data in the Hua hospital's database and reporting it to his leader.

He didn't expect Luo Hua to call him. He didn't need to think to know that it was about the hover car.

Luo Hua reported, "Minister Lu, academician Qin really has the complete hovercar technology. I've already gotten the technology. I'm going back to Linlin laboratory now.

however, there's one thing I have to report. Academician Qin actually put such important information directly in the drawer of the manor office.

"I'm not going to Sue academician Qin, I just feel that it's too dangerous. After all, it's such important information. If someone finds out, it'll be giving the other party a chance."

Minister Lu laughed when he heard this. professor Luo, you don't have to worry about this. There's no place safer than Linlin Manor. Even the defense of most areas in the Hua hospital is not as good as Linlin Manor.

He was very confident in his words. After all, MA Hong and his men were protecting the Linlin Manor.

MA Hong and the rest had also taken turns to consume the elixir, and could be considered super soldiers.

Other than MA Hong and the others inside the manor, there were also people hiding outside the scenic Area. You city had people as well, and there were people at the various entrances to you city.

This was all because of boss Qin. This kind of treatment was only given to the higher-ups.

Then, Minister Lu suddenly realized something and immediately reminded, "professor Luo, now that you've taken the data out of Linlin Manor, it's even more dangerous. Tell the driver to go back to the laboratory quickly.

These words stunned Luo Hua. He looked at the information in his hand and couldn't help but feel nervous.

Only then did she remember that under normal circumstances, these documents would need to be escorted by a car, and they even needed to be escorted by the military. She had brought them out just like that.

'This ...'

"Hurry back to the laboratory!" Professor Luo was a little nervous.

Fortunately, they arrived at Linlin's laboratory safely after a while.

As soon as she returned to the laboratory, she gathered all the researchers and gave them the information she got from Qin Lin.

When the researchers saw the information, they were just as shocked. If the technology was really complete, then why were they still here? Was he really just going to be free labor?

Even though he didn't want to admit it, it seemed to be the truth.

Luo Hua clearly knew what these people were thinking, so he urged, ""Why are you all so conflicted about this? Even if we're just participating, to be able to complete this technology and make a hovercar is already an extremely glorious thing. You have to know that there are so many hovercar researchers in the world, but how many of them have the opportunity to do so?"

These words made the researchers feel better.

That's right, there are so many peers in the world, but how many of them have such an opportunity?

All of a sudden, the researchers were full of energy again.

Then, they also discovered that the two most important technologies required special magnetic stones and special magnetic metals.

Looking at the information, Luo Hua knew that he had to ask for help from Minister Lu and the mining Bureau.

.

You city.

Chen Li and sun Xian looked at the documents in their hands as they exchanged glances.

It was a document about traffic reform.

The higher-ups actually wanted to send a group of experts and specialists to improve you city's traffic conditions, and they even specially approved a large sum of money.

The two of them wanted to curse.

Why didn't you guys come to improve the traffic conditions of you city when they were stuck in a jam?

Now that you city's traffic problem is basically solved, there's the 6th Ring Road and an Airport Express, but you suddenly say you're going to help fix the traffic ...
