

## The Game 1751

### [Chapter 1751 The Batmobile Has Arrived Because Of Boss Qin](#)

Was he going to build a subway for you city?

Although the two of them had many thoughts in their minds, they still had to carry out the arrangements made by the higher-ups.

Therefore, the two of them immediately made arrangements and got people to be prepared to welcome the expert group. Even if they were unwilling, they had to put on a show.

Not long after, the specialists and specialists from the capital arrived. Chen Li and sun Xian personally brought people to welcome them.

The team leader in charge was called MA su. When he saw Chen Li and sun Xian, he said,"County Chen, County sun. No, it should be called Sun City soon."

"No, no, the organization is still investigating!" Sun Xian immediately said humbly.

Although this matter was set in stone, he couldn't say or admit it to outsiders.

The inspection of you city had basically come to an end. You city's facilities were basically complete, and they even surpassed many city-level facilities.

Moreover, the number of people, popularity, and economy had already surpassed many city-level cities.

Just last year's tax revenue and per capita income alone were enough to make it into the list of first-tier cities. How many cities would be embarrassed if the name of a County was on it?

Now, the higher-ups had to consider whether you city would be promoted to a normal city or a special municipality.

After all, you city was too special and could not be replicated.

You city was very famous in the world now, and there were videos of you city on all kinds of foreign websites.

Beautiful things were generally common and would be loved by everyone. The videos of Linlin Scenic Area were naturally irresistible to foreigners.

It could be said that you city occupied one of the most popular cities in the world.

This was definitely a very good window for the country to promote its own culture to the outside world.

There were many tourists who wanted to visit you city.

However, you city was special. There was academician Qin junior, a Linlin laboratory, and other academicians there. Therefore, the number of foreign tourists was controlled. Only those who lived in the country could stay. Those with Chinese nationality were not restricted.

The others had to apply for an assessment before they could go to you city.

However, this didn't make the foreign tourists feel disgusted. Instead, it increased the expectations of the foreign tourists. It made them feel that this was the right thing to do. It was more impressive and made them want to go even more.

As for you city's promotion, those who contributed greatly to the city's development naturally had to be promoted accordingly.

At that time, you City County would become you city.

You city's development of sun County naturally couldn't go without him. He handled many things, approved the documents, contacted the higher-ups, and operated with connections.

Therefore, he had enough achievements to be promoted to a Deputy city. He was only in charge of tourism, not the top.

After all, it was impossible for a County to be promoted to a main city.

However, even if it was just a Deputy city that was in charge of tourism, it was still a tourist city like you city. The meaning was very different. It was a leap in level.

This would at least save him a few years of time.

For people like them, time was the key. The later they got, the younger and stronger they were. If they had connections, they would go further.

Sun County was like this. You Cheng was really lucky.

Therefore, the other person in you city wasn't so lucky. It didn't matter. He didn't participate much in the tourism development of fayou city. He only took a small step forward.

Naturally, Chen Li was not part of sun County's plans. If it wasn't for boss Qin, you Cheng wouldn't have developed to this extent and he wouldn't have had much interaction with Chen Li.

When he was transferred away, Chen Li would muddle along for the rest of his life. That was all.

However, Chen Li had discovered boss Qin and had supported him from the beginning. He had a very good relationship with boss Qin.

This was all thanks to Chen Li. Therefore, he returned the favor and helped Chen Li to make some arrangements.

When you city was promoted, Chen Li would also become the director of you city's Tourism Bureau. He would still be in charge of tourism. Under him, he and Chen Li were used to cooperating.

This was also a leap for Chen Li.

Chen Li was naturally very grateful to sun County for this.

MA kui naturally knew the intricacies of the matter, so he only mentioned it briefly and did not elaborate further. He immediately said, ""I really need your cooperation this time. Please call the transportation Bureau over."

also, we need a traffic map of your city. We also need your help to close the roads for us to conduct experiments.

"Academician Qin's research results are out. We have to speed up the modification process. We can't let our hunger hold us back."

"? ? ?" Chen Li.

"? ? ?" Sun County.

They understood MA kui's earlier words. This was what traffic modifications were meant to do.

But he didn't understand what happened after that.

What did boss Qin find out? How did the traffic Reformation have anything to do with boss Qin?

"Team leader MA, you're saying that boss Qin came up with something about this traffic transformation?" At this moment, Sun Xian also reacted.

This time, the expert team was not sent down to simply modify the traffic, but because boss Qin had found out what needed to be modified.

Your city was once again in a favorable position and was about to get some benefits.

However, they had no idea what boss Qin had discovered.

This also meant that the level of confidentiality was very high, and they had no way of knowing.

MA kui did not hide the matter and immediately explained, "Academician Qin has developed a hovercar, so we have to modify the air road so that the hovercar can travel on it.

"A hover car? a road in the sky?" Chen Li immediately exclaimed.

He naturally knew how magical and sci-fi this was.

That was a scene that would only appear in movies. Now, boss Qin had actually come up with such technology without a sound.

This was too awesome, right?

MA kui continued, "Actually, when we found out that Academician Qin was researching this technology, the higher-ups planned to set up the experiment site in Beijing."

You guys should have seen the news. Many roads in Beijing have been blocked and special measurements are being carried out. Some people are even questioning what we're doing and whether there's something fishy about us. We're doing this for nothing to earn money for our political achievements.

Originally, we thought that if we rushed the work, we would be able to complete the aerial road transformation before Academician Qin improves the hovercar technology.

It's just a pity that we had a wrong understanding of Academician Qin's ability. Academician Qin's research speed was beyond our expectations.

that's why we didn't have the time to modify the city. We can only know its feasibility after the technology is out and the important experiments are done. The higher-ups arranged for us to come to you city.

this place is close to Linlin's laboratory. Academician Qin and the experts are also in you city, so it's a good opportunity for us to conduct experiments and adjust our equipment.

at this stage, we don't need to transform too many streets. We only need to transform two dedicated floating roads. We can slowly promote it later.

"Team leader MA, I'll make the arrangements." Sun Xian knew that this would have a huge impact on you Cheng, so he hurriedly took out his phone and made arrangements.

Boss Qin had actually developed such a thing.

If this hovercar was promoted in you city, just the scenery alone would attract countless tourists. Who had ever seen a real hovercar?

Now that the things in the movie had come true in you city, there were more tourists and it would bring about a huge economy.

There was another point. You city was the first city to promote hover cars, so it would be recorded in human history.

It didn't take long for the big and small leaders of you city's Traffic Department to be called to the county for a meeting.

When these people saw this, they immediately guessed that an earthquake was going to happen in you city's traffic.

To be honest, it was the first time he had called so many people for a meeting in such a hurry.

Just as the traffic in you city started to move for the hover car, Qin Lin was already looking at the game screen in his mind.

A notification appeared in the game:

[ the special Batmobile you ordered has been delivered. I wish you a pleasant experience! ]

Qin Lin looked at the game screen and saw a cool Batmobile parked at the entrance of the ranch!

The dark black color and the metallic texture were even more attractive!

### [Chapter 1752 Something That Can Change Society](#)

Qin Lin saw the notification and immediately looked at the game screen. When he saw the cool Batmobile at the entrance of the ranch, he fell in love with it at first sight.

Apart from women, men also had a common interest in cars.

Perhaps many people would say that cars were only for use, and that it was good as long as it could be used as a means of transportation.

Unfortunately, the person who said this was either really thrifty or his ability didn't allow it.

As long as his ability allowed it and it didn't affect his quality of life, no man could refuse a better car. It would be even better if he could ride a beautiful bike in the car.

If they were powerful enough, some people would even buy all kinds of cars for collection.

It didn't matter if he drove the car or not. He could just leave it there and look at it. He just had to prove that he had bought it before. For example, a rich man, a young master, or a principal.

Qin Lin immediately locked the office door and entered the game with a thought. He went straight to the entrance of the farm.

A few dwarves were walking around the Batmobile, looking back and forth. They were obviously very curious about the car.

Qin Lin walked up to the Batmobile and touched it. Then, he immediately saw the remark:

[ Batmobile: special! ]

[ this is a one-to-one replica of the Batman car in the movie. It means one-to-one literally. You can explore the specific functions yourself. ]

" ? ? ? "Qin Lin felt a little incredulous when he saw the note.

One to one copy, what was the literal meaning?

Qin Lin was surprised and immediately got into the car. The next moment, an electronic voice was heard. welcome, Sir. The smart system is now activated for you. Binding information, scanning facial features ...

A scan appeared in the car and scanned his face. Then, some of his information began to move on the screen outside the car.

This surprised Qin Lin!

He looked at the stack of information beside him, which was related to the Batmobile's technology.

He picked it up and saw the remark:

[ Batmobile technology: special! ]

[ this is a Batmobile technical data. We can make Batmobile! [ after using it, you will be able to obtain specific information! ]

The remarks were simple. Qin Lin directly chose to use the technical information. The next moment, a dense stream of information appeared in his mind and was engraved in the depths of his memory.

However, Qin Lin was a little dumbfounded after he received the information.

[ special Noether Steel ]

It was bulletproof, anti-rocket, anti-heavy machine gun, and anti-armor bullet!

What the hell was this?

Even a bulletproof car couldn't defend against a rocket, but the Batmobile could?

Could it be that this was not a model Batmobile?

The weapon Launch System ...

Charging the hovercraft system ...

..

" ? ? ? "Qin Lin looked at the technology and was stunned. This was not a model but a real Batmobile!

Heavens!

It had to be said that this was very terrifying.

Those who had watched movies and anime should know how powerful the Batmobile was.

He had thought that he was buying a model, but who knew that he would buy a real one?

This made Qin Lin eager to try. Which man didn't have a Batmobile dream?

He immediately started the Batmobile, and a bunch of functions immediately popped up on the screen!

The autopilot system!

The acceleration system!

Weapon system!

The defense system!

The hovercraft system!

..

Other than the hover flight system, which was similar to a hover car, the other systems were simply too awesome!

He found the one-button auto-pilot button, and the next moment, the auxiliary voice system sounded again, " Sir, please fasten your seat belt. I've already activated the automatic driving function for you!

The next moment, the Batmobile started moving on its own and quickly darted out of the ranch!

It was really unmanned!

Qin Lin stared at the steering wheel like an onlooker. The Batmobile was driving on autopilot, and it was more stable than a human.

Moreover, the autopilot had a positioning function that allowed him to position himself with a locator!

No matter where the owner was, as long as he pressed the locator, the car would start the automatic driving function and drive automatically to the owner's side.

In the movie, Batman used this function to summon the Batmobile.

It could be said that this function also provided a great help to Batman!

In battle, Batman often relied on this function to chase his enemies or escape.

However, this was the first time he had ever encountered such a self-driving vehicle. Qin Lin was still a little nervous, especially after entering the ore town. There were many cars coming and going, and he was really worried that he would bump into other cars.

However, the Batmobile disappointed him. It kept increasing its speed, but it did not hit any car, even at a traffic light intersection ... The Batmobile was moving perfectly!

It could be said that the Batmobile's autopilot was better than an ordinary driver's.

After Qin Lin drove the Batmobile around ore town on autopilot for two rounds, he lost interest and set the navigation to Mount goddesses. Then, he started the hovering mode.

The next moment, the Batmobile began to shoot out energy and left the ground. Then, it retracted its four tires and flew in the direction of Mount goddesses.

This scene attracted the attention of the surrounding residents of ore town. Many of them exclaimed, "

"Is this a Batmobile?"

it's a Batmobile. I think there's a new car shop in the town that sells this special car model. They have Batmobile.

#### [Chapter 1753 Something That Can Change Society \\_ 2](#)

it's not the same. The Batmobile sold in the store doesn't have this function. It can't fly!

yes, my neighbor is a rich man. He bought a Batmobile. It's just a model car. It can be driven and has the functions of a normal car. It definitely doesn't have this kind of function.

".."

Obviously, everyone who saw it was shocked. From these people's words, it could be seen that the car sold in the special car Store in ore town was only a model, which was different from Qin Lin's. Only the Batmobile he bought was like that.

The Batmobile had already flown out of ore town at a very fast speed. However, just like in the movie, it could not fly high. This was also a limitation. Otherwise, it would not be suspended in the air. It could even be used as a spaceship.

Soon, the Batmobile stopped at the goddess mountain. Qin Lin started the car manually and drove it up the mountain road.

When he reached an open space, he aimed the two barrels at a big tree.

Then, the Batmobile's two barrels opened fire, sending sparks flying.

After a while, the smell of smoke dispersed.

With the impact of the bullets, the big tree not far away was hit by the bullets and broke in half.

Moreover, the tree was as thick as two adults holding hands and hugging each other.

It was enough to show how weak the Batmobile's shooting was.

If it had no power, it would not have become Batman's car.

The special car manufacturing company was really amazing. They actually simulated the Batmobile. However, wasn't it against the rules to produce Batmobile with such a powerful weapon?

It was definitely against the rules in the real world.

He wondered if he would be caught if he built such a Batmobile. Would he eat peanuts?

If he didn't want to come, he could discuss it with Minister Lu. Maybe the other party would beg him to make it.

With that in mind, Qin Lin started the auto-pilot again and set the destination to the farm. After a while, the Batmobile returned to the farm.

Then, Qin Lin also got out of the car, logged out of the game with a thought, and returned to his office.

He picked up his phone and gave Chen Li a call.

Previously, Linlin's laboratory had opened an automobile company. The exterior of the cars was made according to the Transformers he had brought out. Moreover, they were very popular and sold very well.

At least in China, BBA-grade cars were slowly being replaced by Qingfeng cars.

Therefore, Qingfeng car had many car production lines.

Although the Batmobile was powerful, there was no way to take it out of the game world directly. He could only produce it outside.

The call from victory Street's tinglin was naturally picked up immediately. "Do you have any instructions?"

President Shen, help me prepare a car production line. It has to be closed. I plan to build a car myself. Qin Lin immediately said into the phone.

"Alright, Chairman Qin." When Chen Li received the order, he naturally replied immediately.

He didn't ask why Chairman Qin wanted a production line and built his own car.

He just had to make the arrangements.

After Qin Lin hung up the phone, he began to sort out the technical information he had obtained about the Batmobile.

The Batmobile was not only a simple car structure information, but also a lot of technical information.

Those technologies were all very profound and perfect.

After all, the DC Universe, like the Marvel Universe and the Transformers universe, was a world of science fiction.

At the same time, two streets in you city attracted the attention of many tourists.

The tourists found that the two streets were sealed off by a group of people in uniform, not allowing pedestrians or vehicles to pass.

This naturally attracted the attention of many people.

Many people took out their phones to take videos and posted them on the internet, wanting to ask if anyone on the internet knew what had happened in you city.

After the video was posted on the internet, it was naturally seen by the netizens and many people were curious.

You city had too much traffic.

Therefore, once there was any sign of trouble in you city, it would easily cause a commotion on the internet.

Especially since someone had sealed off two streets like this. It was obvious that they had some purpose.

There was no need to modify the roads. After all, the roads in you city had been very smooth recently.

According to you city's hope Dao, it was impossible to renovate the roads in the city center. They would also renovate the roads outside.

Not long after, some tourists discovered that there were many people with measuring tools on the two streets.

The way these people measured was also very strange.

According to logic, the measurement of the street should be done on the surface of the street or on both sides of the street, and then the modification should be done.

However, these people were different. They actually measured the sky above the road with the long delay or line delay.

He even took out an elevator and drew something on it.

Moreover, they started discussing one by one and gestured at Kong very seriously. This scene was very strange, and it made people surprised and curious.

When this scene was posted on the internet, some netizens suddenly thought of something.

This was because there was a period of time when such things happened on the streets of Beijing, and many people had even recorded it.

It was also spread on the internet. At that time, no one knew what was going on in the streets of Beijing, and there was no official announcement or notification.

Now, someone had come in and discovered the situation.

After this point was brought up, the internet was in an uproar.

After all, the past few years had been abnormal.

Besides, it had happened in the capital. In the end, everyone knew that you Cheng might be up to something.

In the next few days, these two streets were constantly crowded with tourists.

Many people even enjoyed the first-hand news.

After a full week, the two streets were reopened.

In your city, Sun Xian and Chen Li had also gathered the various leaders who had convenient transportation to the meeting room for a meeting.

At the same time, experts and specialists from Beijing also attended the meeting.

When the multimedia screen was turned on, everyone's attention was focused on the screen, their faces full of anticipation.

After all, the show was about to broadcast the results of their hard work during this period.

Then, the situation of two streets appeared on the screen.

However, unlike the two streets in real life, there were clearly colored lines above the two streets in the video.

The lines formed a tunnel-like object, which was the path that the hovercar could take.

Naturally, it was impossible to mark the path with lines after opening the path in the air.

At that time, a special ray would be constructed on the roadside or the buildings on both sides of the road in a special way.

The special ray was shot by a special device installed in the hover car. Professor Luo had already produced the device and sent two of them to them.

Furthermore, the Rays were transparent, just like sunlight, and did not cause any harm.

Only the screen of the hover car could show the route map of the tunnel.

When the time came, the hover car would just have to follow the route.

It didn't affect the road at all, nor did it affect the air.

After the path in the sky appeared, the people in the meeting room began to perform a series of tests on the route.

This map could only be put into use and modified after it passed the test.

Otherwise, it would be a waste of time to rebuild the laboratory after half of the renovation. It would also hold Jinglin Laboratory back.

Finally, after a series of tests, he was certain that there were no problems with these routes.

After these passages could be built immediately, Minister Lu, the commissioners, and experts all smiled.

There was basically no problem with the route now.

By the time the laboratory finished building the first hovercar, the street they were on would have been completely renovated as well.

When the hover car was introduced, it would shock the world.

It would even be more shocking than the Transformers.

After all, no matter how powerful the Transformers are, it's forbidden to promote it to the public. Now, only Jinglin Scenic Area has it for viewing and military use.

They hadn't sold a single transformer to the public yet, but this hover car was different. It could be promoted to the public and could change the entire society.

#### [Chapter 1754 That's Actually A Hover Car](#)

In Jinglin's laboratory, Shen Li personally brought Qin Lin into a laboratory building.

This laboratory building had been in use for a long time.

From the start, it was specially designed for the Transformers experiment group.

Until now, many models of Transformers had been tested.

Although this was all researched by Chairman Qin, it was made in their laboratory.

For them, this was very meaningful. Therefore, the entire laboratory in this building was decorated in a sci-fi style, which was very iconic.

Behind them, Jinglin's laboratory produced Jinglin's car.

The experimental production line was also in this experimental building.

As long as you had the relevant information and data of the design plan, you could make any car model here.

Therefore, as soon as Qin Lin arrived, Shen Li brought him to a production line and called all the technicians in that line over.

The technicians naturally recognized Qin Lin. After all, this was the famous academician Qin.

If he couldn't even recognize this person, then he really didn't care about what was happening outside.

"President Qin, President Shen, why are you here?" A technical person in charge immediately came to the two and asked respectfully.

Leader Ma, "Shen Li immediately explained, "Chairman Qin wants to make a car. You'll cooperate with Chairman Qin when the time comes.

Leader MA immediately said, " President Shen, don't worry. We'll definitely cooperate with President Qin and not let you down.

What a joke. The boss wanted to come to the production line to make his own car. How could the employees not cooperate? how could they not perform well?

He would be an idiot if he still had any problems at this time.

"Chairman Qin, what kind of car do you need?" leader MA asked immediately. Is it our jinglin series of cars, domestic cars, or those Volkswagen brands overseas?"

if you want to make jinglin series cars, we have a ready-made production line and mold, so you can make them directly. We can also help you customize the car model and paint you want.

if you want to make domestic or foreign brands of cars, we need the corresponding technical drawings and information.

it'll take some time, and it might involve copyright issues.

Qin Lin immediately said, " it's not the design of any of the existing cars. It's not the cars that jinglin series has. I'll give you the design drawings. You just have to build the production line according to the models in the design drawings.

Qin Lin said as he took out a stack of design drawings and handed them to leader MA.

These designs were the design data and data for the shape of the Batmobile.

As for the internal equipment and weapon systems, there was no way to solve them.

He needed team leader MA and the others to get the mold production line ready first.

After that, he went to the metal Research Department of jinglin's laboratory to produce the special Noether steel.

The Norde steel was the key.

Only this kind of steel could withstand the properties of the Batmobile and have the effect of being bulletproof and rocket-proof!

When Qin Lin and the technicians began to produce the Batmobile mold production line, the reconstruction of you city's air road had also begun quickly.

At the same time, Luo Hua had also begun the production of the first hovercar.

However, due to the lack of special magnetic stones and magnetic metals, he had no choice but to ask for help from Minister Lu. After all, he was not good at the research of metals.

Furthermore, the special magnetic stone required all kinds of magnetic ores to be combined together to form a new magnetic structure.

When Minister Lu received Luo Hua's request for help, he naturally contacted the leaders of the mining industry as soon as possible. Then, he handed over the information of the magnetic ores that Luo Hua needed to the other party and asked them to help find the ores.

The leader of the mining department naturally didn't dare to hesitate, nor did he dare to waste any time. After all, this was what the Chinese Academy of Sciences needed, and the other party had the approval of the leader.

The higher-ups had clearly stated in their instructions that they must fully cooperate with the needs of Minister Lu and the others.

Therefore, at the request of the leader of the mining industry, the mining industry all over the country carried out a comprehensive inspection and review, then found all kinds of ores and sent them to Qin Lin.

After all, the local mining industry didn't know which magnetic ores were needed by the Chinese Academy of Sciences, so they could only think that they might have to send more to the capital for the Chinese Academy of Sciences to distinguish.

Minister Lu was naturally well prepared.

He was very experienced in this area. He had already organized some ore experts to review these magnetic fossils. He quickly found out which ores were needed by Luohua.

This was the case with scientific experiments. In an unknown situation, one would need to explore from scratch, which would require a very cumbersome process and a lot of time.

Perhaps it was because one possibility required one to try combining thousands of materials, and the key was that one might not be able to find a suitable combination.

However, with complete technical information and knowing the results in advance, it would be different. As long as one followed the technical information and formulas, it would be very fast.

To give a very simple example, even primary school students could understand the principles behind the electric light. They could even make a simple light bulb by themselves.

#### [Chapter 1755 That's Actually A Hover Car](#)

However, before this thing was born, Edison had done research, from electric current splitting to photovoltaic lamp experiments ... It took them 31 years to complete the electric light research.

To give another common example,  $1+1=2$  was a math problem that all kindergarten students knew, but who knew that Goldbach's conjecture proved  $1+1=2$ , which took almost hundreds of pages, and there was still no result.

Also, there was a mathematician in China who won a world-class mathematics award for his research on why  $1+1$  was equal to 2.

Even though Minister Lu and the others had found the magnetic ores that the hovercar needed so easily, they were still not satisfied.

If there was no technical information, and they did not even know that these magnetic ores could be used, they would have to choose from the thousands of magnetic ores, and the combination would be huge.

The probability of the numerical system between one blade and nine was much smaller than the lottery. However, if one wanted to slowly explore from scratch, it would take years. It could be ten years, twenty years, or even longer.

When these magnetic ores were confirmed, Minister Lu also personally took these ores to you city's Linlin laboratory. At the same time, he also asked the mining industry to send a batch of selected ores to you city at the fastest speed.

With the materials, Luo Hua's speed of analysis and research was naturally very fast. He quickly brought people to research and assemble the magnetic stones they needed.

Now that the magnetic stone had been developed, the next problem was the magnetic metal.

With the combination of these magnetic stones and special magnetic metals, the hover car could achieve the purpose of floating on the ground.

Minister Lu had already made arrangements for this. He had already gathered the metal research experts in the Chinese Academy of Sciences.

At the Hua hospital, the Secretary had already taken a stack of documents to the office of the higher-ups in the Hua hospital. Under normal circumstances, it was Minister Lu who contacted this Secretary, but now that Minister Lu was in you city, the Secretary had to do it on his behalf.

After all, this Secretary also had a relationship with a big leader. In the future, she would be involved in the management of the Chinese hospital, and maybe she could take over the position of Minister.

The leader looked at the application materials handed in by Minister Lu's Secretary and sighed silently, ""Are you gathering people to you city again? How many batches was this already? If this continues, I might as well move the entire Hua \* Yuan to you city."

Although he said that, the leader's face was full of smiles.

After all, he knew that the more it was like this, the more important the research in you city was and the more progress they made.

Once the hover car was introduced to the world, it would shock the world and completely overturn an era, or rather, it would transcend an era.

The special metal researchers also rushed to you city as fast as they could, to jinglin's laboratory.

These experts were the first to get to work. They cooperated with Luo Hua and began to study the special female metal. It was also because of the complete technical information and the perfect synthesis of magnetic stones that the research progress of magnetic metals was very fast.

Apart from Qin Lin's research, the domestic scientific research was still far behind that of the Western countries. However, the ability of the domestic scientists was not weak. They were even stronger than those abroad.

The reason for the lack of research was probably due to the social system.

After all, there were still many restrictions in the research, and many researchers' enthusiasm would be affected.

Especially for the younger generation of researchers. However, researchers at Luo Hua's level were all very powerful.

Therefore, under his leadership, the special Metals research team arrived and carried out their research on the special Metals very quickly.

Within a short 10 days, a suitable special building was developed.

Now that the magnetic stones had been synthesized and the special Metals had been researched and synthesized, it was time to make a real hover car.

At this time, after Minister Lu sent the news back to Beijing, a leader from Beijing also rushed over.

At this critical moment, this epoch-making research was about to produce results, so a Big Shot was definitely going to come.

The entire jinglin laboratory was in an uproar. Everyone's eyes were focused on the experimental Department of the hovercar.

Even the researchers and the research department of jinglin laboratory were the same.

They weren't in this field of research, but they could still get information.

Moreover, with such a big leader here, it was hard not to pay attention, especially when Minister Lu had recruited so many researchers recently.

Under the gazes of the entire laboratory, Luo Hua also led the researchers to conduct crazy experiments. They quickly made the necessary parts and facilities to learn how to fly a hover car, and then assembled them.

In a short period of time, a hover car was formed, and it could enter the testing stage.

After Luo Hua reported the news to Minister Lu and the leader, the two of them quickly contacted Chen Li and sun Xian of you city to make arrangements.

Chen Li and sun Xian naturally made arrangements at the first moment. They got the people from the traffic Department to seal off the two streets again.

Moreover, there was no delay at all. After all, such a big leader had come down to personally supervise.

They weren't fools. They couldn't make any mistakes at this time, otherwise, they would be slapping their own faces and letting you Cheng leave a bad impression on the higher-ups.

The two streets of you city were once again sealed off, so naturally, many tourists were attracted. This time, many people also uploaded the videos they had taken.

The video caused a huge sensation on the internet again.

A day of such a Festival had passed.

Finally, one morning, a car arrived at one of the closed streets. The car was still covered with canvas, and it was obvious that it had brought something.

This mysterious situation naturally attracted a lot of people, even a lot of reporters.

The reporters knew very well that it would be strange if there wasn't any news about this situation. You Cheng was obviously going to do something big. If they didn't come earlier, they would be letting down their profession.

This time, the leader and Minister Lu didn't intend to hide it.

Therefore, even if the reporters came, they were allowed to shoot freely at the side. In any case, the magnetic levitation vehicle was going to be promoted, and there was no way to stop it unless it was hidden and not released to the public.

But what was the difference between this and a dusty sword?

It was obviously something that could be promoted to change society and change people's lives. If it was not used, it would be a waste of God's gift.

They would naturally not do such a thing.

Soon, the canvas of the car was pulled open, revealing a special car inside.

The structure of this car was a little strange because it had no wheels. There was a flat frame at the bottom that could be used to extend and retract.

Very quickly, the cars were all moved down and placed in front of the street.

This attracted everyone's attention. The reporters immediately pointed their cameras at the car, and the tourists who were attracted also began to take videos of it.

The car was no different from a bicycle, except that it had no wheels.

The front, handlebars, and seat cushions were exactly the same as a normal bicycle.

Everyone also knew that the reason why the two streets of your city were closed was definitely related to this special car.

In other words, they were about to find out why the two streets were closed.

When the workers pushed the special car down the street, everyone was dumbfounded.

That's right, that person had pushed the cart away.

She was pushing a cart.

But that car didn't have wheels!

This instantly attracted everyone's attention!

"What's wrong with that car? it doesn't have wheels!"

"Yeah, how can you push it without wheels?"

"The car seems to be floating!"

it's true. That car is floating. Is that a floating car? "

The words 'hover car' immediately attracted everyone's attention. Everyone looked over.

Then, a clamor was heard.

That's a hovercar! That's something that only exists in movies. Now, it's actually going to be realized in you city?

#### [Chapter 1756 A New Era Has Been Created](#)

When they saw the hover car being pushed out, the surrounding tourists and reporters were shocked.

The reporters couldn't help but take pictures of the hover car.

The tourists were the same. They took videos like crazy and uploaded them on the internet.

In front of the sealed entrance, Luo Hua had already brought his men to the hover car. He took out his notebook and was ready to record the data.

At the same time, he had a technician approach the hover car and said, " let's begin. Start the hovercraft and conduct the on-site experiment!

"Okay, professor Luo!" The technician nodded and began to put on protective measures.

After all, this was the first time a hover car was being tested. Everyone had to be careful. Otherwise, with so many people watching, if an accident happened, it would be a joke.

At this moment, in another building, Chen Li, sun Xian, the leader from Beijing, and Minister Lu had already been arranged to be inside.

The house belonged to a civil servant in you city, and he had temporarily borrowed it.

The Civil servant didn't expect such a good thing to happen to him. Although he was guarded, he was still happy. Although he could only show his face once, it was something he couldn't ask for.

At this moment, Chen Li, sun Xian, Minister Lu, and the leader were a little nervous when they saw the scene of the street being closed.

Even if they trusted Qin Lin very much, who could be 100% sure that this kind of technology was beyond the era?

They only hoped that they could succeed on their first try without any accidents.

On the street, the technician was already on the hoverbike.

The floating bicycle didn't sink to the ground after receiving the power of another person. It was still floating steadily, which was obviously very magical.

This scene was also captured by the tourists and reporters.

There were even reporters who had started applying for livestreaming.

Moreover, after the TV station knew about the situation, it also immediately broadcasted live, and it was a live broadcast on the TV and Internet at the same time.

Your city had created a hovercar and was still experimenting with it.

They also knew why your city had sealed off the streets and even made those strange measurements.

Previously, no one knew what was going on, but now that they were connected to the hover car, it seemed like everything was clear.

After all, the hover car needed to be used in the air.

Therefore, if such a big event was not broadcasted live, it would mean that there was a hole in his head.

That television station also requested for you through a live broadcast.

The technician was a little nervous. After all, he was surrounded by so many tourists and reporters.

However, he also knew that this was his moment of glory, just like the first time the man landed on the moon. This would be recorded in the history books.

Perhaps his video would still be circulating for many years.

Moreover, not everyone could participate in this experiment. He had to compete with others and spend a lot of effort to train to get this opportunity. He couldn't drop the ball at this critical moment.

The technician immediately pressed a button on the hovercar, and a moment later, the hovercar made a soft sound.

He was starting to exercise.

It was just that the engine of a hover car was different from a conventional engine, or rather, it was not the same thing at all. It was a structure formed by the mutual supply of magnets and special equipment.

Immediately after, the technician pressed another button on the hovercar.

Then, the hover car seemed to gain another driving force and rose up into the air.

The technician also grabbed the hovercar's handle tightly, controlling the hovercar's balance.

It was mainly because he was too nervous.

This was because the hovercar's balancing system was already very good, so he didn't need to use too much strength.

However, riding such a bike for the first time would always make one very nervous, especially when it was suspended in the air, it would always make people feel a sense of weightlessness.

A moment later, the hover car was already a few meters above the ground.

On the screen of the hover car, a special symbol began to appear.

He could clearly see the path in the sky ahead of him through the marker.

The air road was very special. It couldn't be seen with the naked eye and could only be seen clearly through the screen of the hover car.

This was caused by the reaction between the special rays installed on both sides of the road and the internal structure of the hover car.

Therefore, the special radiation equipment would not affect ordinary cars and pedestrians.

Seeing the hovercar really float up so high, those people were even more shocked. The things in the movie really appeared.

There had been a lot of information about the technology of hover cars on the internet, and some people in foreign countries had even said that the hover car had been manufactured. They had even taken videos of it and posted them on the internet.

However, everyone knew whether the video was real or fake. They also knew the background of the hovercar. It couldn't be a real hovercar. If there was really a hovercar made, those countries would be eagerly promoting it and then announce to the public that they had made a hovercar and were leading the world.

Therefore, most of the information was fake. Some people deliberately made it up to confuse the public. It was a scientific research war to let the other party get false information, or to let the other party know something that they wanted to be anxious about, so that they would invest more research and slow down the other party's research.

#### [Chapter 1757 A New Era Has Been Created \(2\)](#)

This was a very despicable way of saying things, but unfortunately, all countries were using this method. Even China often released similar news to confuse people in Western countries.

If it was just floating in the air, it would have only shocked them, but the following words were not as simple as being serious.

The technician pressed another button, and the floating object began to fly out.

At that moment, the clamor could no longer be held back, and the surrounding people burst into exclamations.

f \* ck, that's too awesome. He's really flying.

this is what a real hover car looks like. I feel like I'm already in the movie world.

I've dreamed of this before. I've been flying in the sky on a hovercar. I didn't expect to see it in real life.

I can only say that they're too awesome in the future, or that academician Qin and the Linlin laboratory are too awesome.

".."

Who could control their shock and excitement at this moment?

They were witnessing a historical moment. There was probably no one more lucky than them today.

They kept this video and photo, perhaps it would become a historical moment in the future.

At the same time, the internet was in a complete shock.

As the videos were released, the live broadcasts began to broadcast at the same time. Countless people watched and stared at both sides.

As an author, eternal was usually very boring and did not have any entertainment of his own.

If it was before, he could go to the provincial capital of min province to look for Wang Yan and ask her to arrange some entertainment for him, such as a young lady or a young lady who was dressed very lightly.

However, after the previous incident, he no longer had this ability.

He hadn't believed the checkup that Great White had given him before, but who knew that he would be slapped in the face so quickly? he had only just stepped out of Great White's experience Hall when he collapsed to the ground.

At that time, he didn't grab the opportunity. Why didn't he hold back and let that beautiful lady misunderstand? if he didn't slap her, he might have had the chance to pursue her.

Now, he was completely treated as a hooligan by the other party. It was a pity that he had missed his luck with women.

Of course, this wasn't the most important thing. The important thing was that after he went to the hospital for a check-up, he realized that he had been too happy at Wang Yan's place and had some problems in some places. Now, he could only rest.

Therefore, other than writing and eating, he could only browse through videos and read the news.

Today, after he finished writing his novel and took a break, he picked up his phone to check the popular videos of the day.

Who knew that as soon as he turned on his phone, he would see a live news broadcast. When he saw the title of the live news broadcast, he was stunned.

you city's hover car experiment live broadcast ...

When eternal saw the title, he could not believe it.

Is this fake news?

There were no hover cars these days.

That was something that only existed in movies.

He would also write about hover cars in his novels.

Sometimes, when he wrote a Science and Technology article, he would specifically write about hover cars as a gold finger technique. Then, after using hover cars to defeat modern cars and earn a lot of money for the protagonist, he would act cool, hit girls in the face, buy a car, buy a house, and become an influential figure.

It was precisely because he had written so much about this plot that he had also investigated the hover car.

Therefore, he knew that it was impossible to create a hovercar with the current technology.

It would take at least ten years for a hovercar to appear. Even if it did, the price would be extremely high.

As for popularization, it might not be possible even after 20 years.

However, eternal was still very curious and clicked into the news Live broadcast room.

However, when he saw the video, he lost his calm.

There was really a car floating in the video.

There was even a person riding on the floating car. The car was floating in the air, without any support.

"This ..."

Eternal lost his cool completely. He felt as if his knowledge had been impacted.

But thinking about it, this was you city.

It seemed that academician Qin and jinglin laboratory were also in you city.

This was different. You city had always been accompanied by legends, impossible things, shocking news, and unbelievable technology.

Eternal was completely attracted by this live news broadcast, and he watched the situation in the video without blinking.

After the person in the video rode the hover car into the air, he accelerated and flew up very quickly in the air.

It was just like the scene in the movie.

Only the hover cars in the movies could do this.

Then, something even more unbelievable happened. The hover car started to turn in the air.

The people in the car were not thrown out at all. They were very stable.

This meant that the hover car's balancing system was incredible. It was not a product of this era.

The technician was also having fun. Because there was a special chain around his waist, he wouldn't fall.

The technician was actually controlling the hovercar in the air. It did a 360-degree flip and then stopped steadily in the air.

This scene made Aeon's jaw drop, and his jaw almost fell off.

this is unbelievable. Have we entered the era of science fiction? " Eternal muttered to himself. Even if he were to write a novel, he would not dare to write something like this.

It wasn't just eternal kingdom who saw the news.

When the news was broadcast live, countless people on the internet saw it.

Countless netizens saw the news and were shocked.

No one could believe that this was real.

Many people were worried about where to earn the down payment for a car.

Even his future mother-in-law had to prepare a car for him.

They had already gone through such a difficult stage. Who knew that a hovercar would appear now?

Wasn't this asking for their lives?

However, when the hover car became popular, his future mother-in-law's request would probably become a condition of having a hover car.

Naturally, this was only the worry of a portion of the youths.

For many people who had the means, after seeing the news, they were filled with anticipation.

He even stood up in shock when he saw the news.

That's a hovercar.

Now that they had the conditions, they really wanted to own one.

Who wouldn't want to ride a bicycle and fly around in the air, enjoying the feeling of freedom?

Moreover, they knew very well that once the hover car was born, the future era would be replaced by hover cars.

Therefore, all of them wanted to be the first to try the crab.

When cars first came out, they weren't even born, so they couldn't experience the first batch of cars. But now, it was different.

This was their era.

Following the live broadcast of the hover car, especially after the technician showed off his skills, all kinds of hot topics appeared on the internet. More and more shocking topics were posted:

it's true. I've never thought that I'd be able to see a hovercar like the one in the movies in my lifetime.

haha, when Linlin's laboratory developed the Transformers, I was wondering if there would be a technology that could allow humans to fly freely in the air. At first, I was thinking about the Iron Man battle armor, but I didn't expect it to be a hovercar.

I just want to know how much this bike costs. I've saved up 5000 Yuan in three months and I wanted to buy an Aiur bike. Now that I've seen this hoverbike, I plan to save the money and buy it directly.

this is the beginning of a new era. You city and Gao Lin laboratory!

".."

You city.

On the closed Street, as the technician showed off his technology, the tourists and reporters at the scene were even more shocked. They even felt like they were in the air riding their own bikes.

When Chen Li, sun Xian, Minister Lu, and that leader saw this scene, they trembled all over and their blood rushed. They were all clearly aware of what this scene meant.

#### [Chapter 1758 This News Is Definitely Fake \\_1](#)

While the people online were still in shock over the hovercar incident, Luo Hua had already brought the other technicians to check out the various instruments and test the hovercar's data. It wasn't just to see how the technicians drove the hovercar in the air, but also to see the various performance data.

The researchers beside Luo Hua also began to report.

the mechanical performance is normal, and the acceleration and various propulsion forces have exceeded the performance of ordinary cars.

the braking force is also normal. It works perfectly with the power system, and the operation is very smooth. There are no abnormal data.

the fastest speed test is up to standard, and the brake test is 15 meters between 100 kilometers and 0 kilometers, which is far beyond the safety of normal cars.

its extreme speed performance is also far better than ordinary car models, and its magnetic performance is very powerful.

".."

As the test data was reported one by one, Luo Hua's face couldn't help but reveal a wider and wider smile.

Every test result was perfect.

As expected of academician Qian Jr. 'S technology.

They had really become free labor for once.

Even so, she still felt very honored to be able to achieve this technology.

At this moment, a researcher came over and said, ""Professor Luo Hua, there are some problems with the air route planning. Academician Qin's plan is to install rays on the streets, but in our country, this method has its limitations."

there's still a certain level of danger. After all, if there's an accident on the roofs on both sides, or if there's a collision between the laser facilities, it will also cause the air road to be exposed. So, we have to think of other ways.

Another researcher also said, " professor Luo Hua, this is indeed a problem. I think we should use other methods to display the air roads. Or we can use the air road method to plan the hovercar's road method.

When Luo Hua heard this, he went over to look at the relevant data and then nodded.

That was indeed the case.

There was a technical limitation to this.

It wasn't that academician Qin's technology was flawed or bad.

It was for the road safety in China. Academician Qin's facilities might be feasible in other countries, but in China, he really had to think of other ways.

This made him suddenly look forward to it.

After all, if such a thing could happen, they would be useful.

They also sighed with emotion that no one was perfect.

Even a person like academician Qin can't be there.

At least, academician Qin didn't know the situation of the road.

air route planning, re-plan the plan. We'll use the method of air route planning. Luo Hua asked the researcher to record this, and then she reported to the leader.

He then looked at the other test results and said, " there's one more thing. The height of the roads in the air is limited. We have to take into account the different types of cars. We also have to seriously consider the plans for the slow and fast lanes.

She believed that after the hover car was promoted, it would be impossible for everyone to follow the traffic rules on the air and roads.

Some people would even race cars.

Wasn't air racing even more exciting than car racing on the road?

Therefore, the planning of different levels of the roads was very important.

Those who liked to race could plan their roads to higher areas. If it was not for humanitarian or legal regulations, they could even open up a special racing Lane.

At the bottom was the slow lane.

The middle area was the normal speed Lane.

If they each went their own way, then there would be no problem.

However, they needed to plan carefully.

After a while, the technician also controlled the hovercar to stop. When it landed, Luo Hua got on the hovercar and asked the technician, ""How does it feel to ride in the air? Tell me how you feel."

The technician immediately reported, " professor Luo Hua's ride on the hovercar is very good, and it's very stable. However, there's one big problem. It's a little dangerous to watch the road conditions on the screen. After all, you have to lower your head to watch the road. If you go fast, if an accident happens, ordinary people might not be able to react in time.

I think we can replace the screen with something similar to VR glasses or virtual helmets. That would be safer.

Luo Hua nodded. He thought for a while and said, " I'll definitely have to wear a helmet when I ride a hovercar. The wind shield in front of the helmet can be modified into something like a VR headset, which can be used to indicate the road and observe the situation on the road.

As Luo Hua spoke, the researcher who was responsible for recording the information had already written it down.

On the other hand, Luo Hua and the others began to look very motivated.

If everything was perfect, they wouldn't be able to play any role and would only be able to work as laborers. However, there were still various flaws that needed to be improved in the current situation.

They would be able to improve these flaws to perfection.

They were also useful.

This feeling was really good.

After all, researchers like them didn't want to be idle fish. They could help their son wash the dishes.

Luo Hua and the others discussed and recorded all the problems that occurred in the hovercar experiment.

If natural hovercars were to be promoted, not only did they need to be improved, but the traffic lights in the sky also needed to be improved.

#### [Chapter 1759 This News Is Definitely Fake 2](#)

The traffic lights on the road could be directly erected on the ground. As for the traffic lights on the sky road, he had to find another way.

The best way was to add an instruction system to the virtual path.

Additionally, the road instruction system should be integrated with the road system of the air plane.

They couldn't do all this on their own. They needed to cooperate with people who had convenient transportation.

While Luo Hua and the other researchers were discussing, the reporters were all focused on the hoverbike.

At this moment, the focus of the entire internet was on the hoverbike.

The news in China was so popular that it naturally attracted the attention of some people abroad.

Those people also immediately forwarded the news video to foreign websites.

Just like some people in China, once an amazing video or shocking thing was posted abroad, they would share it and post it on the domestic internet.

Perhaps these people did not have any bad intentions. They simply felt that they had discovered a shocking video and discovered something amazing. They felt that others had lowered their standards. After all, they did not know about this.

Therefore, these people had the mentality of getting attention.

They wouldn't care if the video was real or not, or if the foreign forces wanted the domestic forces to see it.

They were only in charge of reposting and didn't care about anything else.

Naturally, there were people like this overseas as well. Therefore, when the news about the hover car was released, their first consideration was not whether it was real or fake. Instead, they sent the video to the country to attract the attention of the people in the country and to attract their attention to cheat traffic and views.

This was the twisted mentality of some netizens in the age of the internet, so the news about the hover car spread almost all over the world very quickly.

Once again, the world's scientific community was shocked and shocked.

The matter of hatching the dinosaurs had not yet passed.

Animal geneticists from all over the world were still using the dinosaur experimental data announced by Linlin's laboratory for research. They were still using dinosaur fossils to extract genes and using pig genes to see if they could construct dinosaur-like gene strands.

It was just that they had never succeeded, not even seeing the slightest possibility.

They were all wondering if the eastern countries had set up a scientific research scam.

As soon as he thought of this, the image of the baby dinosaur appeared in his mind.

The other party had indeed developed dinosaurs.

That could not be faked.

Animal geneticists from all over the world were there to witness it.

If he could still lie in front of so many geneticists, then all the animal geneticists in the world could jump into the Pacific Ocean.

He didn't expect that before the dinosaur gene issue was over, the eastern country had already developed a hovercar.

Although this kind of epoch-making technology wasn't as shocking as dinosaur genes, it was also unanimously agreed by experts in the world's suspension research that it would be impossible for such

technology to appear within 10 years, and it would be impossible to popularize this technology within 20 years.

Everyone was well aware of the hovercar video released by a certain country. It was just a matter of which country would be fooled into spending all their energy on the hovercar research to catch up with the progress and then delay other scientific progress.

This kind of trick was also often played by that country. In the past, there was a country that was accidentally deceived, causing the entire country to be divided.

It must be known that this country was the biggest enemy of a certain country in the past, and they used this method to weaken the strength of their biggest enemy by a great deal.

Therefore, after tasting the sweetness of this, that country often did this kind of thing, often sending out some shocking fake news that transcended the era to fool people.

Unfortunately, after that country disintegrated, everyone realized that no other country would be stupid enough to believe them.

If they really saw this kind of news, they would think about it carefully. For example, that country had already released the technology for hover cars. If they had really developed it, they would have had a finished product many years ago.

Even if it couldn't be Fully Promoted, at least there would be rich people who would buy such a hover car.

There was no doubt that as long as there were high-tech products in that country, even if they could not be promoted, there would definitely be some rich people who could buy those products through means.

After all, that country had such a social system. Wasn't it capitalist?

Therefore, the fact that there were no hover cars in that country until now meant that the news about the hover car was also a news scam. It might have been done casually.

She might have forgotten about the news by now.

But now, it was different. This was distributed by that Eastern country, and it was a live news broadcast. Furthermore, it was spoken in front of so many reporters. It couldn't be fake, right? although he still couldn't believe it.

There was a Department in America called the International scientific research strategy Department.

The reason why this Department existed was because of the research scam that led to the formation of a country.

This Department often released fake scientific research news, so that other countries could not tell the truth and delay or disrupt the scientific research plans of other countries.

It was just that the role of this Department was getting smaller and smaller, and it had not been of any use for a long time.

However, it was different today. When it was still late at night in America, a few people came out of the White Palace and rushed to the Department.

### [Chapter 1760 This News Is Definitely Fake](#) 3

As soon as he entered the Department, the person-in-charge was called over.

The person in charge of this Department was called grace. She was a woman with rough facial pores and looked like a difficult person to get along with.

When Alice saw the arrival of those people, her face immediately showed a smile and flattery, which part of her was not easy to get along with?

"Gentlemen, how did you find the time to come out of the White Palace?" what's wrong? " asked grace immediately.

One of them immediately said, " Alice, let's not talk nonsense. You should have seen the news video we sent you. Can you analyze whether this news is true or false? "

yes, this is very important, " another person added. after all, the other party has already developed dinosaur genes. There's also something like the Transformers and the mechanical bone armor technology, which is also beyond the era.

Hearing this, grace immediately said, ""Gentlemen, our Department has been analyzing these technologies for a while. We've even contacted animal geneticists to collect data."

the most important thing about Transformers is the technology of the mechanical bone armor. Although this technology is difficult, it is not completely impossible to achieve. In addition to the video that the pirate posted, it shows that this technology is real.

however, dinosaur gene technology is different. Although the other party took out a young dinosaur for people to admire in public, it was in front of all the animal geneticists.

but it's not impossible to fake it. As long as you use some magic and let the reporters at the scene cooperate with you, you can totally create the scene that the other party is showing.

so, the dinosaur research may be fake. Moreover, I've discussed and collected data with animal geneticists from China and even around the world. All of them said that it's impossible to extract dinosaur genes according to the method released by the eastern country.

if this method is difficult, it's normal that one expert can't do it. It's normal that ten experts can't do it. But if all the experts can't do it, it's not normal.

moreover, there is a consensus in the animal Genetics community that dinosaur genes can not be extracted at the current stage. The research of that Eastern country has violated the common sense of scientific research. therefore, we concluded that this was fake news. It was because of this fake news that the animal genetic research of various countries was in a mess. All the countries have invested a lot in this research.

"Gentlemen, think about it, isn't this scene very familiar? That Eastern country actually learned our tricks. Unfortunately, their methods are too obvious, unlike us who directly disintegrated a country. Now, they're only slightly disrupting the scientific research of various countries."

She was very confident in her words. This was what she had spent a month collecting data and analyzing with people.

When those few people heard this, they actually felt that it was very reasonable.

One of them added, " in other words, the other party has tried the same thing and is planning to use the same trick again. So, as long as we can figure out how the other party is doing this research scam and how they are doing that hovercar, we can just release the same scenario again and make them lose face? "

This actually got everyone's approval, and the others immediately nodded.

"Gentlemen, please leave the peace to our scientific research strategy Department!" Alice said with great confidence.

At this moment, a golden-haired man ran over in a hurry. Clearly, something new had happened!
