

## **The Game 1791**

### [Chapter 1791 This Fish Lives On That Alien Planet, Right?](#)

Beijing had changed a lot in the past two to three years.

First of all, the roadside greenery had basically been replaced with purifying grass. This also made the air in Beijing very good. There was almost no smog most of the time.

This also made the people in Beijing very grateful to Academician Qin.

Therefore, on the streets of Beijing, some places where purification grass was planted would put up a sign to introduce the purification grass. At the same time, as a purification grass researcher, Academician Qin's photo would also be printed on the sign.

Other than the purification grass, some places, such as parks, bus stops, waiting areas ... In places like this, there would also be a lot of warm-keeping grass planted.

These thermostats grass could make the surrounding temperature very suitable. It provided convenience and help to many people in winter and summer, which was also appreciated by many people.

At the same time, there were many places where Da Bai's shared hall could be seen. Many citizens came out of the shared hall with test results.

Because of Da Bai's shared hall, the citizens only needed to spend 50 yuan to get a full-body checkup. Moreover, it was very convenient, and they didn't have to go to the hospital to queue up for a full-body checkup. Doing this and that would cost them thousands of yuan.

30 yuan was the price increase for Da Bai's shared hall.

Regarding the price increase, the public did not blame Qinglin Company. Someone had already revealed that the medical system had used various connections to put pressure on Qinglin Company.

That was why Da Bai's shared health check-up was increased from 1 yuan to 30 yuan.

It seemed that the medical system was still unwilling to give up because of this victory. They were still pressuring Qinglin Company to continue raising their prices. Only then would they consider recruiting Great White into the hospital.

Clearly, this was his stubborn nature.

But no matter what, Da Bai had helped countless people.

Therefore, as these two products were promoted, Academician Little Qin was also praised by many people.

The people were actually very simple. They welcomed research that would bring help to everyone, and then worshipped and admired him.

Nowadays, many parents in Beijing used Academician Qin as a role model when educating their children.

This made many children admire Academician Qin.

The escort vehicle soon arrived at the special department and met Academician Liu.

"Mr. Lu, thank you for your hard work." Academician Liu welcomed Mr. Lu very politely. After all, Mr. Lu had been in charge of them.

If it weren't for Mr. Lu and Academician Qin, they wouldn't have known that this special fish could help them out.

Mr. Lu smiled and said, "Academician Liu, there's no need for small talk. I've already brought the fish back. Hurry up and test it out. See if it's useful to you."

Academician Liu nodded. They didn't want to waste time, so they immediately sent the fish that Mr. Lu brought back to the laboratory.

The researchers inside were already prepared. As soon as the fish came in, they started to take action. The first thing they did was to conduct various tests on the fish.

It didn't take long for the researchers to enter the experimental state. They were naturally the elites in the relevant research since they were transferred to this laboratory.

However, as they carried out the test, all of their faces revealed disbelief.

They found Academician Liu in disbelief.

"What was the result?" Academician Liu asked.

A researcher said in shock, "Academician Liu, you won't believe it. These fish are unbelievable. They have very strong vitality. It can be said that they have strong survivability even in high-temperature environments. Their vitality is even more terrifying than the healing fish that Academician Little Qin studied."

This surprised Academician Liu.

He naturally knew about Academician Qin's research on the fish that could cure AIDS.

Moreover, the fish's vitality was very strong. It could also be lively in the high temperature of 40 or 50 degrees.

Therefore, Academician Little Qin was well-known in the fish research community.

However, no one expected that the new fish developed by Academician Qin would have even stronger vitality.

When Academician Liu saw the data, he was even more emotional. This kind of vitality was really terrifying.

"Take out all the fish. Let's try the experiment. Let's see if the fish can survive in the water of the alien planet." He immediately ordered.

This was because the fish was studied by Academician Little Qin, and there were definitely not many of them. The test just now was just to be safe.

Now that they really knew the survival ability of the fish, there was no need to do any other tests. All they needed to do now was to put the fish into the water and see if it could survive.

It was that simple.

Under Academician Liu's lead, the researchers quickly caught three environmental fish and put them into the water brought back from the alien planet.

Academician Liu and the others were very careful and didn't put too many fish in at once.

If there were only three of them, it would be enough. They could also compare them.

Soon, Academician Liu and the others looked at the three fish nervously and held their breaths.

After all, after they put the other fish into the water, they all died in a moment.

Therefore, they were naturally nervous when the fish was placed inside.

A moment later, the three fish were put into the water brought back from the alien planet and began to swim happily.

It was as if the special alien water pollution had no effect on them at all.

They even wagged their tails in the water to show their satisfaction.

This scene made everyone's eyes widen.

Although they knew that these fish had very strong vitality, they did not expect it to be so strong.

If one wanted to make a comparison, it would be like throwing a person directly into a space with volcanic ash, smoke, sandstorm, and no air.

If a person could still breathe comfortably in such an environment, or even happily give himself a 666, it would be really terrifying.

This was how the fish felt in the water. If they didn't know that Academician Qin had developed this, they would have thought that the fish came from an alien planet.

This was a fish that lived in this kind of water. Otherwise, how could this happen?

" Awesome! Awesome! As expected of a fish created by my little lover's research! "

" It's hard to believe. If these fish can survive in such an environment, then what water on Earth can't they survive in? "

" I've never admired anyone in my life, but I really admire Academician Qin. I really can't imagine how he developed such a fish with such vitality. "

After observing for a while, they confirmed that the fish could live in the water. Academician Liu and the others were amazed, but they didn't forget about the main matter.

Academician Liu quickly said, " Quick, quick. Prepare a water tank and draw some of the extraterrestrial water here. We need to do a detailed test. "

" Okay, okay. Academician Liu, I'll prepare it right away. " A researcher immediately replied.

Since the fish could really live in this kind of water, it was time to test the other function Academician Qin mentioned.

That was to purify the water environment and build an underwater ecosystem.

If these two functions could also be realized, then it could really transform the water quality of this alien planet. It would be a huge benefit to the transformation of this alien planet.

A moment later, a water tank was ready, and a portion of the water was introduced into the water tank!

All kinds of instruments were installed on the water tank.

These were all used to detect various kinds of polluting substances in the water. If these fish really had the effect of purifying the water, the detection values of those instruments would decrease with the purification of these fish. Therefore, it was easy to know whether there was any effect at a glance.

Academician Liu immediately put the fish into the water tank, but after a while, they were all shocked.

After the fish were placed in the water tank, the values of the equipment and instruments began to decrease rapidly.

#### [Chapter 1792 Hovering Car Driver's License! Special Fire Extinguishing!](#)

When Academician Liu and the others looked at the testing equipment, they were more and more shocked.

As soon as the fish were released, they saw the data on the testing equipment installed on the water tank begin to drop.

The researchers were dumbfounded.

Even if he knew that these fish had a strong purifying effect, wasn't this too powerful?

It was simply unbelievable.

Academician Liu, isn't the effect of this fish too strong? " A researcher shouted in shock.

"That's right. The fish has only been in the water for a short period of time, but it's already effective." another researcher said.

Academician Liu was also very shocked, but as the person in charge, he couldn't be as shocked as the other researchers.

Therefore, he instructed the researchers, "" Yes, the effect of this fish is very strong. However, we'll have to wait and see if it can completely purify the alien water. "

The other researchers nodded immediately.

However, they did not dare to relax their monitoring of the water quality.

The next day, Academician Liu brought people to the water tank early in the morning to check the data of the various equipment on the water tank.

However, when they saw the data displayed on it, they were shocked again.

Compared to the previous data, it had actually decreased by 15% after a day.

That's right, 15% of the pollution in the water had been purified. This purification effect was unbelievable.

The third day, the fourth day, the fifth day...The tenth day!

The further they went, the more shocked Academician Liu and the others were. In a short period of time, the fish had completely purified the water.

Can you believe this?

Before this, they had used countless methods, but none of them had any effect.

It could be said that the results of their research on purifying sewage were completely inferior to these fish.

One could imagine how emotional they were.

" Academician Liu, " one of the researchers muttered. " Look at the data. The water seems to be completely purified! "

" Not bad. From the data, the water quality has been completely purified. " another researcher said immediately.

Academician Liu also hurriedly ordered, "Hurry!" Quickly test the water quality. I want to know the specific condition of the water."

The researchers didn't waste any time. They immediately took water from the tank and began to re-examine the water.

After all, the test data could only detect pollution. They also had to check to what extent the water had been purified.

However, Academician Liu and the others were shocked again.

Now, the water had been purified to the point where it was no different from ordinary water on Earth. As long as it was processed and boiled, it could basically be drunk.

Can you believe this?

Thinking about the pollution level of the alien water and seeing the water again, they suspected that the water had been replaced.

They even cautiously checked the surveillance cameras.

There was no doubt that the water had not been replaced in the surveillance camera.

Thinking about it, who could come in and secretly change the water in their laboratory?

In other words, the purifying effect of the fish was really that strong. The alien water was really purified.

"Quick, quick, test the vital signs of these fish and see if there are any abnormalities. Then, give me the water quality test data. I want to report the good news to the leader!" Academician Liu immediately urged the researchers.

The researchers nodded and immediately began to examine the fish.

The conclusion was equally shocking.

The life characteristics of these fish were completely normal. They were not affected by the purification of the alien planet's pollution.

This was not magical, but terrifying.

It could be said that even a small amount of that terrifying polluting substance would be life-threatening.

Now, this little fish was actually living in it without any problems.

After confirming that the fish was fine, the researchers began to summarize the data for Academician Liu.

Not long after, Academician Liu brought the information to a leader.

The leader immediately said, ""Academician Liu, how was it? Did Academician Qin's fish work?"

Academician Liu immediately handed the documents to the leader and said, ""Leader, the problem of purifying the water quality of that planet has been solved. The fish that Academician Little Qin gave us are too powerful."

The leader couldn't understand the data in his hands, but he could still understand the comparison of the water quality test results. It was the comparison of the water quality of the planet after purification with the water quality of Earth.

When the leader saw the results of the comparison, he was also shocked and said, " Sure enough, it's never wrong to trust Academician Qin. Great. "

" Academician Liu, " he asked, " does that mean your research is successful? "

Academician Liu shook his head and said, " We still have to see if these fish can really build an underwater ecosystem. If it really works, then there's a point in modifying it. In that case, we just have to focus on cultivating those fish. We can even use special hormones. As long as there are enough fish, modifying the water quality will be easier than other modifications. "

While they were talking, Academician Liu's phone rang. It was a call from a researcher in the laboratory.

He immediately answered the call.

The researcher's voice was heard. ""Academician Liu, I have good news for you. The fish that Academician Qin gave us is incredible. We tested the purified water twice and found something new."

[Chapter 1793 Hovering Car Driver's License! Special Fire Extinguishing!](#)

"We discovered that there are some special fungi in this water. These fungi can actually construct a special state of mind."

" Moreover, we didn't just find one type of underwater ecological bacteria in the water. There were three types, and each type was constructed from several types of ecological bacteria. "

" This is unbelievable. These ecological bacteria seem to have been born out of thin air. Although these ecological bacteria are not real living organisms, as long as there are enough of them, we can put in other living organisms and rely on these ecological bacteria to survive! "

"Ah, this..." When Academician Liu heard this news, he couldn't help but be excited. "" In other words, the technology to modify the water quality of this alien planet has been completed? "

"Theoretically, yes." the researcher reported.

Academician Liu muttered to the leader, ""Leader, perhaps the technology to modify the planet's water quality has been completely completed. Just now, they reported that there really is an underwater ecosystem in the purified water."

When the leader heard this, he nodded calmly. After a long time, he said,"As expected of Academician Qin!"

Academician Liu nodded and said, ""As expected of Academician Qin!"

As expected of Academician Qin!

..

You City, as the city with the greatest development and change in the country, had always been the focus of attention in the country. Many people had their eyes set on this place.

The outside world didn't know about the Batmobile and the environmental fish. They only knew about the hover car.

Therefore, after the launch of the hover car experience, everyone's eyes were on You City, especially many car dealers and those who liked cars.

Car dealers were wondering if they could sell hover cars on their behalf, while people who liked cars only wanted to buy a hover car.

However, after the hover car experience conference ended, there was no news of the hover car in You City.

These people didn't know how to find out even if they wanted to.

Wan Gu was one of these people.

Previously, he didn't believe Da Bai's test report, which led to him being hospitalized. Because of this, his functions were also affected in some aspects.

For this, he had to recuperate for a long time.

During this period of time, he had written another book called " Carrying a Game World on Your Body. " However, he lacked inspiration, so he came to You City again, planning to play Qinglin Scenic Area to relax his mood.

The Qinglin scenic area was indeed not bad. It made him feel much more relaxed and relaxed. Therefore, he also paid attention to the hover car.

However, he also realized that there was indeed no news about the hover car in You City.

Just as he was thinking about it, he noticed an advertisement appearing on the open-air screen on the streets of You City.

This advertisement attracted a lot of attention.

When Wan Gu saw this advertisement, he became a little restless. Many people around could not help but take out their phones and shoot the advertisement on the outdoor screen.

" You City's hover car training school has been opened. The first batch of students will be recruited. Here, you can obtain a hover car driver's license and obtain the right to purchase the first batch of hover cars! "

The moment the advertisement came out, the people around them immediately went into an uproar.

After all, they had been paying attention to the news of the hover car. They did not expect that there would be such a shocking news after such a long time.

That's right, everyone had always wanted to buy a hover car, but they never thought that in reality, you needed a driver's license to drive a car. Was it okay to buy a hover car without a driver's license?

Therefore, even if he bought a hover car, he could only leave it there without a driver's license.

"Idiot, don't post it on your Moments. If you post it, won't more and more people see this advertisement? At that time, won't there be many people competing for it? No one knows now. We're the only ones who can see it. Hurry up and seize the opportunity."

One of them immediately reminded his friend.

At the side, someone immediately scolded his friend,"So what if I posted it? Why would I delete it from my Moments? Do you think this is the only outdoor screen in You City? Who knows how many people have seen it in other places? Hurry up and look for it according to the address."

These words immediately made the person who had lectured his friend feel awkward.

His friend looked at him with a scrutinizing gaze, as if asking, are you also an idiot?

When Wang Gu heard this conversation, he only smiled and hurriedly hailed a taxi.

I'll take my leave first.

Only a fool would be chattering at this time.

Wang Gu rushed to the location mentioned in the advertisement as fast as he could.

However, after arriving here, he was a little dumbfounded.

Because there was already a long queue here, almost endless.

"F \* ck..." Wan Gu cursed.

He was really dumbfounded.

He had already rushed over as fast as he could, but he did not expect this to happen.

How could these people be so fast? Did they all fly here?

Wang Gu didn't dare to hesitate and immediately went to line up.

He had waited in line for a long time before it was finally his turn.

There was a table inside, and someone was sitting on it, handing out information. He asked those people to fill in the information and hand it in.

Wang Gu heard the conversation between the people who had filled in the information and knew that it was the driving school registration form.

After filling in the registration form and stamping it, it proved that the registration was successful. After that, they could wait for the notice to enter the special hover car driving school.

Moreover, this registration form was bound to one's personal identification card, which could also prevent people from taking advantage of the situation.

Even if these people obtained their driver's license and obtained the qualifications to buy a hover car, even if someone bought it at a high price, they would not be able to get on the road.

When the time came, the higher-ups would cooperate and issue a rule. If anyone was caught driving a hover car without a hover car license, they would be banned from taking the exam for life.

This was a very strict rule.

After all, if a hover car got into an accident, the traffic would be worse than ordinary cars.

Finally, there were still two more to go.

After the two people in front of him went up to collect the registration form, he was about to go forward when the staff blocked him. "Sir, I'm very sorry. The open slots have been distributed, so we will not be recruiting new students for the time being."

"? ? ?" When Wang Gu saw this scene, he could not help but curse.

Was he playing with him?

He was the only one left?

Since it was already his turn, why wouldn't he open up another spot?

However, he also sighed. He was just a nobody. Why would they open up an extra quota for him?

On the other side, Qin Lin was also paying attention to the matter of the hover car's license.

After all, he was the one who created the hover car. This car was really going to completely change the way of life in this society.

Therefore, when he found out that the hover car driving school was open, he also looked through the relevant information.

However, he only looked at the information and did not pay too much attention to it.

After that, he had nothing to do and did not get anything from the daily mission in the game. He locked the office door and entered the game again.

He planned to go to the ore town again. After all, he had encountered the hover car technology when he was wandering around the ore town.

Sometimes, it wasn't just about triggering the plot.

Moreover, the things they encountered while wandering around were not necessarily bad. After all, Professor Gao also encountered them while wandering around, and the technology he obtained from him was also very awesome.

As Qin Lin thought about it, he drove the Batmobile into the ore town. Moreover, he directly drove the hover car to hover in the sky and fly around the ore town.

Not long after flying, Qin Lin was attracted by a place. There was actually a thick smoke coming from there.

When the hover car flew closer, it realized that someone was conducting a fire drill.

It could be seen that several barrels of gasoline were burning, and there were people explaining at the side.

As the man explained, he threw a bottle in his hand onto the burning gasoline barrels.

At that moment, a blue light appeared.

"F \* ck..." Qin Lin then saw an unbelievable scene and could not help but curse.

[Chapter 1794 Electromagnetic Vibrobomb!](#)

Qin Lin couldn't help but drive the Batmobile over.

When he got closer, he could see even more clearly.

Several barrels of gasoline were ignited below. Clearly, the experiment had been seen and they were going to demonstrate it again.

However, Qin Lin felt that it was very unreasonable.

No one noticed him driving the Batmobile.

He had already driven the Batmobile. Shouldn't it be more surprising than the fire extinguishing experiment? More attractive?

Although the fire extinguishing experiment was also very magical.

It could only be said that this damned game mechanism.

Perhaps the people in this place were all focused on the fire extinguishing experiment.

This damned game mechanism.

"Once again, I would like to welcome everyone to watch our experiment on the electromagnetic shock wave fire extinguishing equipment. Now, everyone can see that five barrels of gasoline are filled with gasoline and ignited. The ignited flames have a very high burning point. It is very difficult for ordinary fire extinguisher to extinguish them."

One of the commentators explained seriously and took out an oval-shaped object the size of a goose egg.

That thing was transparent, and some of the facilities inside could be seen very clearly.

"Our fire extinguishing device uses a special electromagnetic shock technology. This shock wave won't have much of an impact on people, but it can shock the fire elements in the air and eliminate the oxygen in the fire, causing the flame to lack oxygen and instantly extinguish it."

"This technology is the most advanced in the world. Many countries are even researching electromagnetic waves?"

"However, in order to promote this electromagnetic shock wave technology, our laboratory will provide relevant technical information in addition to selling the product."

The commentator was still explaining seriously. Qian Neng wanted to complain when he heard this.

Did the game's mechanics treat people like fools?

Who would sell products and give technology?

Was there such a good person in reality?

If there were, please let him encounter more of them.

However, there was no other way. This was the game's mechanism. The system had already decided. Moreover, why did he have to complain?

This was obviously good for him. As long as he bought the product, he could get the technology.

Only a fool would not buy it.

Just as Qin Lin was thinking about it, the shoutcaster had already taken the shock bomb in his hand, pressed a switch, and threw it into the five burning gasoline barrels.

Almost at the next moment, everyone watching could hear a dull explosion.

Then, something that surprised everyone happened.

A transparent ripple visible to the naked eye appeared in the air that was scorched by the flames.

The transparent ripples rushed towards the burning barrels of gasoline.

Immediately after, the surrounding people were surprised to see that the originally fierce fire actually disappeared at a speed visible to the naked eye in an instant.

Qin Lin was also shocked when he saw this scene again.

This was also why he drove the Batmobile down.

If one had to describe it in one sentence, it would be that it disappeared in an instant.

Such fire-extinguishing technology was absolutely terrifying in reality.

It could even be said that it could completely free the firefighter profession and reduce unnecessary sacrifices.

" Alright, everyone has seen the effect of the electromagnetic shock wave bomb. Are you willing to buy this product? "

The shoutcasters continued.

There were already onlookers who were eager to give it a try. After all, this thing was safer, more effective, more convenient, and more practical than a fire extinguisher at home.

Qin Lin didn't hesitate. He walked up to the commentator and chose to buy it.

"Sir, do you want to buy electromagnetic vibration bombs?" The commentator said to Qin Lin with a smile.

Then, an option appeared in front of him.

It was still a notification asking him if he wanted to buy it.

He didn't even need to choose.

He immediately chose yes.

If he didn't buy it at this time, he would be a fool.

Of course, he had to buy these things first.

[Congratulations on successfully purchasing the Electromagnetic Shock Bomb!]

[Congratulations on obtaining the Electromagnetic Shock Bomb technology!]

Following the two notifications, related items appeared in Qin Lin's hand. He also saw the remarks of the two items:

[Electromagnetic Shock Bomb: Special!]

[This is a special electromagnetic shock bomb. After exploding, it can produce a special shock wave that can easily extinguish the burning flames:Fire Extinguishing +3!]

[Electromagnetic Bomb Technology: Special!]

[This is a special type of electromagnetic shock bomb technical information. You can use this technical information to create a special electromagnetic shock bomb! [Do you wish to use the technical information?]

Of course, Qin Lin chose yes.

In the next moment, as the technical information disappeared, it turned into specks of starlight and entered his mind.

The surrounding onlookers did not seem to see this scene as they continued to scramble to buy the electromagnetic vibration bomb.

However, what surprised Qin Lin was that the other spectating NPCs did not pay for the skill when they bought the Vibroblast Bullet. It was as if the skill would only be given to him alone.

This seemed to be the game's mechanism or the system's credit.

Soon, countless information surged into Qin Lin's mind. It was the technical information about the electromagnetic wave bomb.

The technical information was directly imprinted in his mind.

After Qin Lin received the technical information, he also logged out of the game with the electromagnetic vibration bomb and returned to his office.

#### [Chapter 1795 Electromagnetic Vibrobomb!](#)

Looking at the electromagnetic bombs in his hands, he was thinking about how to experiment or how to use them.

He went online to check.

Maybe he could just use a gas can like the commentator.

But the key was that he wanted to promote this technology.

After all, the electromagnetic pulse bomb could save countless lives. Fires were merciless, but people had feelings. He had seen many tragedies of heroes who put out fires, and he had also seen many fires that destroyed people's families.

Thinking about the "Hero of the Fire", although it was made into a movie, the fire fighting in reality was even more tragic.

These heroes were willing to put out the fire and protect the people's property. He was just doing what he could.

After all, he did not need money. Money was just a number to him.

Not to mention the market value of Qin Lin's company, just the balance in his card had already exceeded 100 billion after the higher-ups had transferred money repeatedly.

Just this amount of money alone was enough for him to be on the rich list, and it was the kind that was very close to the top.

Therefore, money meant nothing to him. As for honor? He didn't care even more. He didn't lack these things. When some things were suitable, the higher-ups would publish them. He didn't have to worry about glory at all.

Moreover, the higher-ups were lenient with him. After all, he had sent so many experts from the Chinese Academy of Sciences to work as coolies with just a word.

After looking at it online for a while, Qin Lin was surprised to see a competition:

" Youth Fire Suppression Technology Research Competition! "

When Qin Lin saw the title, he clicked on it subconsciously and found that it was a competition organized by the Chinese Academy of Sciences to support young researchers.

Most of the participants in this competition were young people with ungraduated master's and doctor's degrees.

This kind of competition could also be used to discover young talents that could be nurtured.

Naturally, the youth champion who won the competition would also receive a million yuan in research funding.

One million yuan in research funding was a huge temptation for those who wanted to get a master's or PhD. It was also a huge honor for them.

As for the research project of this competition, it was all random. This time, it might be a fire extinguishing project, but the next moment, it might be a plant research project.

Therefore, outstanding master's and PhD students from all over the country would choose to participate in the competition.

When Qin Lin saw this competition, he immediately chose to participate and filled in his information. He was also a youth, right?

After all, he didn't say that people from the school couldn't participate, right?

Qin Lin quickly filled in his information and sent it over.

The Youth Fire Fighting Technology Research Competition was held in Beijing.

As long as the contestants were successful in their registration, they could conduct experiments in their respective schools to create fire-extinguishing technology. After producing the finished product, they could go to the capital and display it at the exhibition site.

And this time limit was half a month.

Everyone only had half a month.

Beijing.

In a venue prepared by the Chinese Academy of Sciences, there were already many people reviewing the information. Some of them were staff of the Chinese Academy of Sciences, while others were professors from various universities.

They were naturally reviewing the information of the master's and PhD students. There were also many applications from the scientific researchers.

However, they really didn't care about these people.

Because of the popularity of Short videos, many migrant workers and researchers had a platform to showcase their skills. However, these people's skills were really not good. For example, Handmade X could develop some seemingly magical things, but they were really not very useful.

To be honest, he had a master's degree and a PhD, and he was an elite taught by a professor. Why should he lose to you?

I've seen national scientific research projects. Which large-scale research project was done by researchers from the Department of Labor?

It could be said that none of them were.

Therefore, most of their attention was on the young researchers who were already very famous among students.

"Eh?"

Suddenly, a staff member of the Chinese Academy of Sciences, who was reviewing the information, exclaimed, "Take a look at this information."

These words immediately attracted the attention of the others, and they all looked over.

"Qin Lin?"

Another staff member from the Chinese Academy of Sciences mumbled, "Quick, let's see which university she's from."

Obviously, this name seemed somewhat inconceivable to them.

After all, it was that person's name.

But that person couldn't possibly participate in such a competition, right?

If he really participated, wouldn't that be bullying?

Wasn't this a blow to the confidence of those youths?

Everyone took action and searched for the name Qin Lin. Soon, many Qin Lins jumped out.

These Qin Lins were all students from various universities, but none of them were researchers.

There was no one called Qin Lin who was good at research in society.

Therefore, this Qin Lin could really be that person. But why was that person here to join in the fun?

"It seems like it might really be that person." A staff member from the Chinese Academy of Sciences said.

"Yes." "Should we report something to Mr. Lu?" Another person asked.

"Yes, we should report this to Mr Lu!" Another person said.

This made the university professors a little confused. They asked,

"Everyone, who is this Qin Lin?"

"Yeah, it looks like you guys are taking it very seriously."

"Well, can you tell me?"

The people from the Chinese Academy exchanged glances.

"Who is the most amazing young scientist in our country?" one of them asked.

Just this notification alone stunned the professors. Then, they exclaimed in unison, "How is that possible?"

They naturally knew who he was talking about. It was Academician Qin.

Academician Qin's knowledge was already starting to appear in high school and university textbooks. This was because the higher-ups had restrained him. Otherwise, Academician Qin would have been even more deeply imprinted in the textbooks.

Academician Qin's surname was Qin, and the other party was also a young man. It seemed that the other party's participation in this competition was within the rules.

But why would someone like him participate in this competition? This was not a nuclear bomb hitting a mosquito.

The researchers didn't hesitate and immediately took out their phones to contact Mr. Lu. Not long after, Mr. Lu answered the phone and asked, "" What's going on? Is there a problem with the youth competition? "

"Mr. Lu," the researcher immediately replied, "it seems that Academician Qin has participated in this competition and has sent out the application materials."

"Academician Qin, if you participate..." Mr Lu said subconsciously. Suddenly, he was stunned and exclaimed, "Why is he participating in this competition? What's the point of him bullying a child?"

" Mr. Lu, " the researcher said subconsciously, " it seems that many of the contestants are about the same age as Academician Qin! "

"That's true." "I'll be right there," said Mr Lu, stunned.

Not long after, Mr. Lu arrived at the place where the review was held and saw the application materials of Qin Lin.

" Electromagnetic vibration wave fire extinguishing technology! " Mr Lu muttered as he looked at the application documents.

Just by looking at the name, one could tell that this technique was amazing.

He immediately took out his phone and called Qin Lin. After the call went through, he asked directly, "Boss Qin, did you participate in the fire extinguishing competition?"

"Oh, you know? I'm bored and interested in fire extinguishing technology." Qin Lin made it up. Anyway, his acting skills were already very good now. He couldn't say that he suddenly got this skill, right?

"Got it." After confirming that it was Qin Lin, Mr. Lu did not say much. He hung up the phone and said to those people, "It's Academician Qin!"

This shocked everyone.

"Academician Qin is here to participate in the competition. This time, those young people will be completely defeated," said a university professor.

When Mr Lu heard this, he immediately said, "Why would I be shocked?" Instead of being motivated? If Boss Qin wants to participate, why should we treat him as a contestant? We won't let him be our special tutor? With Academician Qin's power, even if it's just his name, it's enough to make those young people excited. Do you know how many young people regard Academician Qin as their idol?"

" Besides, Mr. Qin is definitely going to come up with some kind of technology if he takes part in this competition. It will definitely be a very magical fire-extinguishing technology. I don't believe that Mr. Qin is bored and wants to bully talents to participate in this competition, let alone for the prize money. He must be looking for an excuse to hand over the technology to the higher-ups. "

The people around him nodded. With Academician Qin's reputation, it must be the case.

After all, there was no one in the scientific research community who had a better reputation than Academician Qin.

Everyone who had worked with Academician Qin praised, admired, and respected him.

#### [Chapter 1796 Extinguishing The Fire Like This, A Divine Method!](#)

After confirming that it was Qin Lin, Mr Lu did not hesitate and directly ordered those people, "" Hurry up and change the slogan. Tell them that Academician Qin will participate as a special mentor to encourage the young people participating in the competition. He will also specially research a technique to encourage everyone! "

Everyone nodded.

It was indeed as Mr Lu had said.

If Academician Qin were to compete with those young people, it would definitely hurt their confidence.

However, if Academician Qin became a special tutor, it would be different.

Academician Qin was very famous now. When professors from universities attended various symposiums, they would mention Academician Qin many times.

Those professors would often mention Academician Qin when they taught their students.

It could be said that Academician Little Qin was the benchmark of the scientific research community. Everyone believed in him.

It didn't take long for the Youth Fire Suppression Research Competition to release new news:

"Academician Qin will participate in the competition as a special instructor..."

When this news came out, the outside world was in an uproar.

The people who were paying attention to the Youth Fire-extinguishing Competition were all looking forward to which young researcher would come out this time.

He didn't expect to be assigned a special mentor.

Those who were familiar with the scientific research world knew that such a mentor was very important.

But who was Academician Qin? Never heard of it.

Many people did not react in time.

When they found out that it was Academician Qin, they were shocked.

Academician Qin's reputation in China was unparalleled.

No academician in China or international experts could compare to Academician Little Qin.

Similarly, the young researchers were also excited. They had obviously heard of Academician Qin, even if they hadn't heard everything.

However, this didn't stop Academician Qin from becoming their idol.

It could be said that the young people now admired the Little Qin Courtyard very much.

Just like what Mr Lu said, the young researchers who participated were also very motivated.

They also knew that this research competition would definitely attract more attention than before.

They also wanted to obtain this honor.

It was a great honor to have his research results appear on the same platform as Academician Qin.

All of a sudden, all the famous professors realized that their student council members had become more enthusiastic.

With this motivation, it was as if their potential had exploded, and all their research became faster.

Naturally, their professors and instructors were happy to see this.

This matter quickly spread online and attracted the attention of many netizens.

After that, the Youth Fire Fighting Technology Research Competition went viral on the internet and became a hot search.

Originally, even if this competition had some attention, the exposure would definitely not be able to make it onto the trending searches.

But now, because of Academician Qin, it was trending.

Everyone knew that Academician Qin was Academician Little Qin.

That was Academician Qin.

How many of the things they were enjoying now were developed by Qinglin's laboratory?

Qinglin's laboratory had already changed their lives.

Many of the products in Qinglin's laboratory were developed by Academician Little Qin.

Like Da Bai, like a hover car that had just been driven out.

Who would have thought that Academician Qin was the one who developed this technology?

Perhaps he should call him Academician Qin now. After all, that would be more respectful.

Academician Qin was a god of scientific research and deserved their respect.

It was also because of Qin Lin that this youth fire extinguishing technology research competition received the attention of the entire Internet.

With this kind of attention, some officials even began to release the information of the contestants for everyone to discuss.

These contestants were basically the proud sons of heaven from various universities. They were almost famous people in university before the postgraduate entrance examination.

Therefore, under such attention, the first to discuss it was the students of various universities.

These students quickly joined in the fun and started to post the information of these contestants on the Internet for everyone to discuss.

Among them were the awards they had won, the number of girlfriends they had, and the big things they had done.

The identity of a researcher who was a super rich kid was discovered. All of a sudden, this contestant received a lot of attention.

After all, this kind of talented person who understood scientific research and was a super rich second-generation doctor would definitely be the goal of many girls.

The key was that this super rich second generation was very handsome.

This was unreasonable.

Not only was he handsome, but he was also a super rich second-generation heir. It was simply unreasonable.

More importantly, why was he still working so hard? To make others feel that there was no need for them to work hard and that it was good to be a useless fish?

However, some lives were just that good.

They were born lying on the finishing line that ordinary people could not reach. The key was that they were still active. With a little rolling, they would roll further away from the finishing line.

In Qinglin Manor, Qin Lin received Mr Lu's message and felt very helpless.

He just wanted to join in the fun, and Mr Lu actually came up with all this for him.

To be honest, he really didn't want to attract so much attention. But thinking about it, Mr Lu was right. He had learned sci-fi technology from the game, so it was a little bullying to bully the technology of some young people in school.

This was not an adult bullying a child, but a human bullying an ant.

This was a lot. Since what was done was done, this was the only way.

[Chapter 1797 Extinguishing The Fire Like This, A Divine Method!](#)

When the time came, he would just send the electromagnetic bomb over.

Time passed.

As the Internet paid more and more attention to the Youth Fire Suppression Technology Research Competition, the young masters and PhD students who participated in the competition were also doing their research quickly.

Moreover, when half a month was up, they had all finished their research and began to take transportation to the exhibition site in Beijing.

Naturally, there were countless reporters waiting in the capital. There were even television stations broadcasting it.

After all, the competition was already so popular. No television station was stupid.

They naturally knew that this represented the viewership ratings.

Therefore, with such popularity, this competition was almost turned into a variety show. Even the contestants were very popular.

When they shared their reading and research videos, there were actually many fans watching.

This seemed to be something the higher-ups were happy to see, so they began to add fuel to the fire.

Outside Qinglin Manor, an escort vehicle was already waiting for them. There was also a team of specialized escorts.

Mr. Lu got out of the car and rushed into the manor. He saw Qin Lin and said, "Boss Qin, where is it?"

"Mr. Lu, do you have to come personally for such a small thing?" Qin Lin was stunned.

"Boss Qin, do you have any gadgets?" Mr. Lu asked immediately.

Qin Lin smiled and didn't say anything else. He handed the few electromagnetic shock ammunitions that he had bought previously to Mr. Lu.

Mr Lu also immediately brought people to transport the items out of the manor and then loaded them into the escort vehicle.

The escort team immediately got ready.

Usually, the things that they could transport were very important.

Mr. Lu also got into the car and went to the airport to transport the electromagnetic vibration bombs to the capital.

Along the way, he also checked the introduction of the Electromagnetic Vibrobomb that Mr. Qin gave him.

When he saw the introduction and knew the effects of this thing, his face was filled with disbelief.

"As expected, it's not a small thing." Mr Lu sighed.

What was even more unbelievable was that Boss Qin had spent half a month to develop this technology?

Oh my god.

This fire extinguishing technology could change the current situation of fire protection, okay?

Generally speaking, forest fires were very difficult to put out, and there were even some firefighters who died in forest fires.

However, with this thing, the forest fire could be easily extinguished.

This made him even more curious. He wanted to see the effects of this technology as soon as possible.

.

Finally, the youth fire extinguishing technology research competition began.

The exhibition was held at the Beijing Fire Department Headquarters. Other than the contestants and school representatives, many reporters entered.

They would be broadcasting the entire process.

Naturally, they had also donated money to the fire department to get the opportunity. This was their support for the fire department.

Soon, the contestants received their numbers one by one.

They would start to display their research results in the order of these numbers.

The first team to participate in the competition was led by a PhD student from Da Bei University. His research was a dry ice extinguishing technology.

Their demonstration was very smooth, even a little unexpected.

This dry ice extinguishing technology was superior to the current fire extinguisher to a certain extent.

Naturally, there were many restrictions.

Therefore, only when they solved this restriction could the dry ice fire extinguishing technology be implemented.

After that, the participating teams took out their research results and began to show them.

The way they demonstrated it was also very simple. The fire department would simulate the fire situation in the daily training ground and then let these teams use their own research results to extinguish the fire.

Obviously, the research results of many research teams were very good.

The results of their research made the people from the Fire Bureau applaud.

In the end, another research team from Da Bei University won the championship.

This research team was not simple because they had developed a magnetic wave fire extinguishing technology.

Mr. Lu was surprised when he saw the technical result, because the technical concept was very similar to Mr. Qin's electromagnetic vibration bomb.

However, the power of this technology was far from the power of the electromagnetic wave bomb described by Mr. Qin. It could only extinguish the fire in a small area.

However, Mr. Lu, the Chinese Academy of Sciences, and the judges and professors agreed with his idea.

Mr Lu even personally went up on stage and said to the team, "Everyone, first of all, congratulations on winning the championship. This shows that your research is very impressive."

"Also, let me tell you another piece of good news. Your research philosophy has caught up with a scientific expert. If he sees your research technology, he will definitely be very proud."

These words surprised the members of the team.

"Sir, may I ask who has the same idea as us?" asked one of them.

Mr Lu smiled. "What do you think? Take a good look at that person's research. You'll be proud."

As he spoke, Mr Lu arranged for an escort vehicle to drive in.

Seeing this scene, that team might have understood something.

The people watching and the reporters seemed to have realized something when they saw the escort vehicle.

After all, they knew that Academician Qin would participate in the competition and become a special instructor.

However, they still hadn't seen Academician Qin.

Now that an escort vehicle suddenly appeared, the things inside must have something to do with Academician Qin's research, right?

This must be Academician Qin's research. "

"It must be. Otherwise, there would be no need for such a strict escort."

"I'm looking forward to what's inside."

".."

Many people around were very certain.

Very soon, the escort vehicle heard him. Mr Lu waved his hand and led the people from the fire department to the escort vehicle to take out a few electromagnetic bombs.

"Mr Lu, how do I use this thing?" A leader of the Fire Bureau asked.

" It's actually very simple, " Mr Lu explained with a smile. " You just need to throw the electromagnetic bomb into the fire after it's activated. After it explodes, it can extinguish the fire. "

He said it lightly, but in fact, he did not understand it himself.

After all, he had never seen the power of this thing before, so he was also looking forward to it.

Soon, the fire simulation of the fire department was activated again.

Perhaps it was because they were going to test Academician Qin's product this time, but everyone could see that the fire was several times stronger than before.

The fire in front of him had probably reached an extremely large level.

Academician Qin's treatment was indeed different.

At this moment, everyone looked over.

Just now, everyone had seen the finished product of the young contestants 'research, but most of them had only looked at it with the intention of adding ingredients.

Academician Qin's research was the main ingredient now.

Many people were also here for his research.

Finally, when the flames burned to the extreme, a soldier from the fire department came out with an electromagnetic pulse.

They held the electromagnetic vibration bomb that was not too big and threw it into the fire.

Then, they pressed a remote control in their hands.

In the next instant, the Electromagnetic Vibrobomb exploded, producing terrifying shockwaves that spread in all directions.

Everyone could see that in the fire, a special vibration ripple appeared and quickly spread in all directions.

Under the shockwave, an even more unbelievable scene happened. The raging flames actually disappeared without a trace in an instant.

The flames seemed to have disappeared into thin air in an instant.

This scene shocked everyone.

The people who saw it all stood up in unison. They looked at the empty fire in front of them in horror and even felt a little suffocated.

At that moment, it was as if an immortal had sucked away the flames with a gourd. This scene could only be seen in mythological movies, right?

Academician Qin was able to do such a terrifying thing with just a small ball.

This was no different from the methods of the gods.

#### [Chapter 1798 Falcon Flying Device!](#)

Seeing the fire extinguishing effect of the electromagnetic shock wave, almost everyone was boiling.

The reporters and cameramen from the television station were also staring blankly at the screen they were filming.

They were afraid that they had missed something.

In that case, if others took a photo but they didn't, others would definitely have a chance to add eggs.

They might have to deduct their wages. It was only when they realized that they had filmed the entire process that they heaved a sigh of relief.

This kind of technology was really too shocking.

Only in movies or Xianxia TV series could one see such a scene of instantly extinguishing the fire.

When the people from the fire department saw this, they were so excited that they were about to tremble.

They were in this industry, so they naturally knew what this technology represented.

If they had this technology earlier, many tragedies could have been avoided. Some fires could not be extinguished by firefighters alone.

Even with the support of modern technology, so many firefighters were sacrificed and so many heroic families were killed.

In fact, when they found out that Academician Qin was going to be a special teacher and personally develop a technology, they were also looking forward to it.

After all, Academician Qin was famous.

Everyone knew that if Academician Qin was interested in a project, he would definitely be able to come up with a top-notch technology.

Academician Qin had even invented the thermostats grass to eliminate the air-conditioning system because the air-conditioning company was courting death.

However, they didn't expect Academician Qin to come up with such shocking technology.

This kind of technology was only produced in half a month.

They could even imagine that in the future, if they encountered a fire, their firefighters would not even have to rush into the sea of fire. They would just have to throw the electromagnetic shock wave ball into the sea of fire from outside the sea of fire and instantly destroy the sea of fire.

This was definitely a milestone in the history of fire protection!

They even rushed into the fire to check on the situation, and then they were even more shocked.

The electromagnetic shock wave completely extinguished the flames, even the source of the fire.

"How's the situation?" Mr. Lu stepped forward and asked a leader of the fire department.

The leader of the fire department immediately said, "Mr Lu, this technology is simply incredible. With this fire protection technology, our country's fire protection situation will completely change, and all countries will be shocked by this."

"Mr. Lu, how can we get this technology from Academician Qin? You know, our pension is quite tight. We have the families of heroes to take care of, and the injured firefighters also need to be taken care of."

Mr Lu nodded. He naturally knew about this, so he also said to the leader of the fire department, "Don't worry, this technology doesn't cost much. It's a free gift from Boss Qin."

"What? Free gift?" The leader of the fire department found it unbelievable.

In his impression, it was impossible for this kind of technology not to cost a huge price. Now, Mr. Lu actually said that Boss Qin gave it to him directly?

When Mr Lu saw the surprised look on the leader's face, he smiled and said, "" You'll get used to it. This technology is very shocking to us, but it's nothing to Boss Qin. You know that he developed it in half a month. "

The leader of the fire department nodded and said, "" Yes, that's true. Academician Qin is really amazing. There shouldn't be any other scientist in the world who's better than him, right? "

"You can say that!" Mr Lu said with a smile.

This was naturally what he thought, but he felt that this was the truth.

Not to mention the fire extinguishing technique.

The Batmobile's previous experiment was already very shocking. It shocked them and the leaders.

Moreover, there were already several Batmobiles on it, so they were naturally painted red and had five stars.

The only regret was that after obtaining the Batmobile technology, the Chinese Academy of Sciences couldn't develop a new model in a short period of time.

They couldn't ask Boss Qin to change the car model.

He couldn't push his luck.

If that happened, they would feel embarrassed.

Furthermore, after the Batmobiles were put into use, the effects were surprisingly good.

After hearing Mr. Lu's confirmation, the leader of the Fire Bureau heaved a sigh of relief.

That was good.

"Thank you so much, Academician Qin." The leader of the General Firefighting Service Bureau couldn't help but ask.

Mr Lu immediately said, " Alright, I'll arrange for more people to make some electromagnetic waves. When the time comes, you can arrange for the rescue to take a look at the situation. "

"Yes, we will definitely cooperate." the leader of the fire department said immediately.

After Mr. Lu finished speaking, he also made a call and asked his secretary to arrange it. When he came to Beijing, he had already obtained the complete technology of the electromagnetic vibration bomb from Mr. Qin. He had already sent it to the Chinese Academy of Sciences and immediately arranged for production.

Soon, the news of the electromagnetic wave bomb spread online. The scene of the fire extinguishing in an instant shocked everyone.

How could that raging fire be extinguished in such an instant?

The most important thing was that the shockwave was too unbelievable.

Everyone knew that Academician Qin would definitely come up with something amazing if he participated in the research, but they didn't expect him to come up with such an amazing fire extinguishing technology.

#### [Chapter 1799 Falcon Flying Device!](#)

Anyone could tell that if there was such a thing, why would they be afraid of a fire? He could throw a ball into the fire.

.

Qinglin Manor.

When Qin Lin came out of the inner area, he saw Zhao Moqing and Lin Fen surrounding a few cars.

He knew at a glance that this was a hover bike produced by Qinglin Car Company.

He passed the technical information to Qinglin's laboratory. After the mold was completed and the hover car could be produced, the technology was handed over to Qinglin's car department for production.

This was the first batch of hover cars produced and sent to the manor.

After all, when a new product was released, it would definitely be for his boss or someone close to the company to experience it first.

If they didn't even understand this, the people from Qinglin Car Company would be made to suffer.

"Hubby, come and teach me how to drive this hover car." Zhao Moqing immediately greeted Qin Lin when she saw him.

She had already seen a lot of news about hover cars, so she was naturally looking forward to this hover car. She had long wanted to try it out.

"Yes." Qin Lin smiled and went forward to teach Zhao Moqing how to use it. At the same time, he brought her up in the air to let her learn how to drive a hover car.

To be honest, driving a hover car was very simple, as long as there were no traffic rules and they could fly freely in their own sky.

Zhao Moqing had this condition. After all, they could fly freely in the manor.

Therefore, it didn't take long for Zhao Moqing to be able to drive a hover car by herself. This experience was very novel to her.

As the hover car landed, Qin Lin asked his mother, ""Mom, you should learn too."

Lin Fen immediately shook her head and said, "I don't have to. I'm already old."

"Come on!" Qin Lin smiled and said.

He could naturally tell that his mother was eager to try.

Sure enough, after he pulled his mother into the car and taught him how to drive, his mother was very excited to learn until she could drive the hover car.

Qin Lin had just finished teaching Zhao Moqing and Lin Fen how to drive the hover car when he saw Mr. Lu come again.

As soon as he entered, he greeted him with a smile, "Boss Qin, has the hover car been produced? That way, it should be able to be promoted soon, right?"

"I don't know the details," Qin Lin explained. "This was sent over by Qinglin Car Company."

"I'm here to deliver something to you." Mr Lu nodded.

As he spoke, he took out a certificate and a badge and handed them to Qin Lin.

"What is this?" Qin Lin held two things in his hands in confusion.

Mr. Lu explained, "Boss Qin, this is a gift from the fire department. It's for the electromagnetic vibration bomb technology. Although this is just an insignificant honor and it's nothing to you, this is the fire department's kind intention. I brought it for you."

"Then I'll accept it." Qin Lin nodded with a smile and took the things.

He had been looking for an excuse to give the electromagnetic pulse bomb to the higher-ups. It could help the fire department and reduce the sacrifice of the fire protection industry. That was what he wanted to see.

Mr Lu did not stay long this time and left very quickly.

Qin Lin also took the certificate of honor and medal into the inner area of the manor. After putting them away, Qin Lin was attracted by the game screen.

On the game screen, a figure appeared in the ranch.

If this figure wasn't the Gnome Elba, who could it be?

Why was this guy at the ranch? How surprising.

Most importantly, Elba actually had a pair of special wings on his back this time.

Seeing this scene, his eyes lit up. He roughly knew what it was.

With a thought, he entered the game. When he appeared at the ranch, he saw Elba and was shocked."F\* ck..."

The wings on Elba's back spread out, and he actually flew up instantly before landing behind him. His movements were as smooth as flowing water, as if he really had a pair of wings.

Qin Lin naturally recognized what it was at a glance.

It was one of the two videos he had given Elba previously.

Falcon Aeroglider.

This was the thing on Elba's back. Therefore, he could fly freely. This was truly the dream of humans.

After all, the sky was the eternal fantasy of humans.

Moreover, the Falcon Aeroglider was a magical piece of equipment in the game. Although it could not be compared to Iron Man, it was definitely a terrifying piece of black technology in the real world.

Anyone who had watched a Marvel movie would have a deep impression of the scene.

That was the image of Falcon wearing a flying device flying quickly in front of two aircraft carriers. The two aircraft carriers fired countless shells, but they did not hit him. Instead, Falcon landed on the aircraft carrier and began to kill.

Therefore, if this thing could be made and used with the Batmobile, it would definitely be a perfect match. On any battlefield, as long as these two things were used, they could crush the other party and make the other party despair.

"This is for you!" Elba handed a document to Qin Lin and said,"This is what I promised you. As long as my father can produce this technology, I'll steal the information and share it with you."

[Congratulations, you have obtained special flying device-Falcon Aeroglider technical information! [Do you want to use it?]

When Qin Lin received the document, he received a notification in his mind.

There was also a hint on whether to use it.

This made his eyes light up. Elba was still reliable.

"Friend, I'll go back first. I'll look for you again when my father finishes making another thing." As Elba spoke, the Falcon device on his back was activated again. He flew up and quickly rushed in the direction of Mount Goddess.

This scene really made Qin Lin envious. He also wanted to fly.

This kind of flying was not the kind of flying in the Batmobile, but the kind of flying that was really free to fly into the sky.

Qin Lin did not hesitate and chose to use the Falcon's technical information.

In the next moment, the technical information turned into specks of starlight and entered his mind. Then, dense information streams began to appear in his mind.

This information flow was related to the Falcon flying device.

After getting all the information about this technology, he logged out of the game and took out his phone to call Shen Li.

Now that he had this thing, he couldn't wait to make it. Therefore, he had to ask Qinglin's laboratory to help him prepare it. If Qinglin's laboratory couldn't do anything, he would have to ask the Chinese Academy for help again.

The most important thing about the Falcon was its power. If the power was not enough, there was no way to fly.

The Falcon Device was not even the size of a schoolbag.

A facility of this size not only needed to carry weapons, but it also needed to carry wings and carry people into the sky. It would definitely not work without sufficient power.

However, when he saw the power of the Falcon Aeroglider, he was dumbfounded.

Semi-cold nuclear fusion power?

It was actually this thing.

Was this a joke?

Those who had watched Marvel movies should know about Iron Man, and they also knew what kind of power Iron Man used. It was the nuclear reactor that was smaller than a bowl on his chest.

Don't underestimate that battery. It was so small, but its power could almost propel a super aircraft carrier.

The Falcon Flying Device was not used for this.

However, semi-cold nuclear fusion power was the prerequisite for successful research on nuclear fusion.

For example, if true nuclear fusion was a level 10 technology, then this semi-cold nuclear fusion power would be a level 3 technology. However, in order to produce this level 10 nuclear fusion, he would first have to solve the level 3 semi-cold nuclear fusion power.

No wonder the Falcon Flight Device could fly like that. That was the power behind it.

Qin Lin was even more surprised. Academician Chu and the others were researching rocket propulsion technology, right?

If there was such a thing, what was the point of studying it? This technology was definitely much better than what they had researched.

#### [Chapter 1800 Give Me Whatever You Want!](#)

Qin Lin sorted out the information on the semi-cold nuclear fusion power and contacted Shen Li. He asked, "President Shen, does Qinglin's laboratory have the equipment to study semi-cold nuclear fusion power? "

"What? What kind of technology is this?" Shen Li was stunned when he heard this.

Obviously, although he was a manager in the scientific research field, he was not proficient in all research. He might not know about some unorthodox ones.

Qin Lin frowned slightly when he heard what he said.

Shen Li had never heard of it before. It seemed that this semi-cold nuclear fusion power might not be famous in reality. There was no such experimental project.

After all, this was the technology in Marvel movies. It was just the imagination of the mangaka and had no scientific basis.

In the end, Qin Lin could only hang up and call Mr. Lu.

Beijing.

Mr. Lu had already arrived at the office of a leader. He handed a document to the leader.

"Xiao Lu, what is it now?" When the leader saw Mr. Lu, he immediately put down the document in his hand.

There was a hint of anticipation in his eyes.

After all, Xiao Lu usually didn't come looking for him. Once he came looking for him, he would definitely have a surprise for him.

Moreover, in the past two to three years, this trend had become more and more obvious.

"Leader, take a look at this information!" Mr Lu handed the documents in his hand to the leader.

After the leader received the information, he looked at it and became serious. His face was filled with disbelief. Academician Qin just made this? "

"Yes, Boss Qin spent 15 days on the youth fire extinguishing technology." Mr. Lu nodded.

"Academician Qin, why are you interested in this young man's fire extinguishing technology?" The leader asked in confusion.

"Leader, is this important?" Mr. Lu asked with a smile.

"Eh! It doesn't seem important!" The leader nodded and smiled. The important thing was that in 15 days, they had this incredible fire extinguishing technology.

Mr. Lu continued, "Boss Qin is giving us this technology for free. Otherwise, we wouldn't have to go around in circles. The news is all over the Internet now. The video of the fire extinguishing scene is really shocking."

"Yes." The leader nodded again and said, "We're really lucky to have someone like Academician Qin."

This matter was publicly acknowledged.

At this moment, Mr. Lu's phone rang. Seeing that it was Qin Lin's number, he immediately handed the phone to the leader.

When the leader saw the number, he immediately gestured for him to answer it.

What a joke. If Academician Qin didn't pick up his call, what if he had something important to say or had some important research that required their cooperation?

Mr Lu hurriedly picked up the phone and said, "Boss Qin, is there another surprise waiting for me?"

"Mr. Lu, "Qin Lin went straight to the point. "Is there any research on semi-cold nuclear fusion power at the Chinese Academy of Sciences?"

"Semi-cold nuclear fusion power?" Mr Lu was stunned when he heard the name.

At the very least, he couldn't remember if the Chinese Academy of Sciences had such a program.

If there was, it was obviously related to nuclear fusion research. He should have remembered it.

"Boss Qin, wait a moment, I'll check!" Mr Lu immediately took out another phone and logged into the intranet.

This phone was specially encrypted. He could log into the backstage of the Chinese Academy of Sciences and access it.

A moment later, he checked the information related to semi-cold nuclear fusion power, but there was no information on this.

In other words, the Chinese Academy of Sciences didn't have such research.

"Boss Qin, we don't have any research in this area. Do we need to conduct this kind of research?" Is this about motivation?"

He was obviously anxious.

Once Boss Qin took the initiative to research a project, he would be serious. The things he developed would definitely not be simple. It could be products like purifying grass, thermostats grass, Transformers, or Big White.

And such products could definitely change some industries or situations.

" It can be considered a kind of motivation research. " Qin Lin also replied.

He was surprised that even the Chinese Academy of Sciences didn't have such research.

This also meant that there was definitely no such research in the real world. That meant that there was no ready-made mold and equipment, so they had to make it themselves.

However, the related equipment required materials that could isolate and store nuclear energy.

This kind of material was not available in the outside world. Only the Chinese Academy had this kind of material.

Boss Qin, do you need our help with your research? " Mr. Lu immediately asked when he realized that Boss Qin was serious again.

Qin Lin didn't hide anything. " Mr. Lu, I need materials for nuclear isolation and nuclear capacity. I wonder if it's convenient for you to help me transport a batch to Qinglin's laboratory? "

Mr. Lu immediately looked at the leader. Seeing that the leader nodded, he immediately said, "It's convenient. How can it be inconvenient? Boss Qin, I'll definitely send you what you want as soon as possible."

What a joke, that was what Boss Qin wanted.

If it was someone else, it would be absolutely impossible for the other party to want this kind of thing because it was a strategic material.

However, Boss Qin was different. The higher-ups would definitely give him whatever he wanted.

After hanging up the phone, Leader Ma immediately signaled Mr. Lu to make the arrangements.

Mr. Lu also hurried back to the Chinese Academy and began to fill in the information. After all, it was a strategic material, and he couldn't send it to Boss Qin as he wished.
