

## The Game 921

### [Chapter 921 Absolutely Impossible! Even Li Kai Himself Was Dumbfounded](#)

On the internet.

When the news of the seeds being punished came out, the entire internet was in an uproar.

before this, there should be very few people who paid attention to this problem. They thought that we were a big agricultural country, so how could we have such problems?

However, now that the news had appeared on the internet, they realized that a lot of the vegetables they were eating were actually imported from foreign seeds.

many people were even a little dumbfounded because they had been calling for a boycott of foreign products and were determined not to use foreign products. who knew that the vegetables they had been eating were imported from abroad?

However, this was a very realistic problem, and it made people feel helpless.

Moreover, with the appearance of this news, more and more videos analyzing this matter appeared on the internet. In addition, more and more people knew about the predicament that our country's seeds were facing, and more and more people knew how big of an impact this wave of seed sanctions would have on us.

This was a huge blow to everyone.

Qin Lin felt very uncomfortable.

It was as if they were the only ones with seeds.

What's the big deal about the higher production of imported seeds?

He still had the seed processing machine.

As long as it was processed, the production of all kinds of seeds could be increased.

At the thought of this, he called Lin Lanzi. The other party was so arrogant. He couldn't just sit back and do nothing, and he was not allowed to do nothing.

As soon as the call went through, he ordered, " manager Lin, use the official account of the villa to send me a message. Tell me that professor Li Kai has developed a technology that can increase the production of seeds, which is at least twice as high as the production of foreign seeds. He is now testing the gene fragments and is about to apply for a patent.

He didn't know what the results were from old brother Li's test, but he wasn't worried since he had the processing machine. He would send out the message first.

Even if the gene fragments of the White radish and cilantro were the same as the patent that the other party had applied for, he had modified so many seeds previously, so there would definitely be some differences.

Moreover, he could always produce different gene fragments from thousands of vegetable seeds.

He didn't need much. As long as he processed one and sold it at the base price, the seed companies would panic.

It was true that the combined sales of domestic seed companies were not even one-third of Meng Sandu company's, but this also meant that they also relied on this market to make money.

This market was also the other party's biggest money tree.

Even though they seemed to be in a good mood, they would be the first to be nervous if something like that happened.

However, Qin Lin had decided that if the gene fragments of the processed seed were different from the original, he would not be polite and directly apply for a patent.

At that time, the price would be completely covered. He had no other purpose but to make these seed companies lose everything and have no way to make any money in the country.

It didn't matter whether he made money or not. He was happy to do so.

...

beijing.

Minister Lu had already met a blond foreigner in the living room with a man from the police force.

When the people from the police side saw Minister Lu, they immediately jogged up to him and said, "Minister Lu, Barus has been waiting for you."

Minister Lu nodded with a gloomy face.

Barus was the representative of those seed companies.

He knew very well that rather than calling him the representative of the seed companies, it would be better to call him the representative of the government of the Starstreak Kingdom.

He had been very vexed during this period of time.

He had used all sorts of delaying methods and even proposed anti-sanctions to the leader.

After all, they could also use other raw materials to punish the other party.

They had also done this before. Once such a war broke out, there were many farmers, factories, and trading companies in the Starchief state who went bankrupt.

However, the key issue this time was the issue of seeds. They could not afford to drag this out for a long time.

Moreover, the other party was a capitalist country, which was different from them. They would not have so many scruples.

As long as they could get enough benefits, they wouldn't mind the survival of the farmers and factories.

And it just so happened that this time, the other party's goal was big enough to make an issue of the seeds. As long as this goal was achieved, the capital behind them would not mind sacrificing these people.

This was the most shameless part of the other party.

When Barus saw Minister Lu, he immediately smiled and said, " "mr lu, i'm very sorry. our seed company seemed to have been waiting too anxiously, so they did something."

This was obviously a warning from the beginning.

"Mr. Barus, you also need a lot of things from us!" Minister Lu said with a frown.

This was also a reminder to the other party that they could also punish some things.

" mr lu, " barus laughed. " you can do whatever you want. sometimes, sacrifices are necessary. "

Minister Lu's face turned gloomy and thought to himself that these people were indeed shameless.

" that's why i think we should have a good talk about the linlin leisure tea and purification grass, " barus said proudly.

That's right, they came here for the Linlin leisure tea and purification grass.

Although they had been punished by Linlin company, they also knew the effect of the Linlin leisure tea. It could be used more than just on the sports field.

This thing's greatest use was on soldiers.

Moreover, the transformation of several areas in the capital had already shocked them, let alone the purification grass.

as a major industrial country, the starstreak nation had the most serious air quality problem, and this was something they needed.

## [Chapter 922 Absolutely Impossible! Li Kai Himself Is Dumbfounded 2](#)

But now, the other party was punishing them and not allowing Linlin leisure tea and purification grass to enter their country.

Therefore, they could only use this method.

Naturally, they also knew that the other party would not give them the technology of the purification grass and Linlin leisure tea if they only made an issue of the seeds.

Therefore, their ultimate goal was to get the retail opportunity and let these two products enter the market of the Seijo.

This way, they would have enough time to slowly study and crack these two things.

as for talking about the technology at the beginning, it was naturally to give the other party room to bargain.

Minister Lu naturally understood this, but the Linlin leisure tea and purification grass were too important. The Linlin leisure tea they ordered had already been used in the Army.

Moreover, the purification grass's effect could also be seen through the transformation of the capital.

In a sense, this could be considered a strategic thing.

This was not only because boss Qin wanted to sanction the starfish Kingdom, but also because they did not want these two products to enter the Western market.

Even if it was just a proxy.

Minister Lu was in a dilemma when his assistant rushed to his side and reported, " Minister Lu, look at the official account of Linlin villa. Boss Qin has released an announcement. Professor Li Kai has a new research on increasing the production of seeds.

Minister Lu's eyes lit up when he heard this.

When professor Li Kai and the seed production increase research were put together, he immediately guessed a possibility.

He hurriedly grabbed his phone and searched for the official account of Linlin Manor. The first thing he saw was the video Qin Lin had Lin Lanzi post.

I'm Lin Lanzi from Linlin Manor. The boss wants me to tell everyone some good news. Professor Li Kai has developed a technique to increase the production of seeds, and the increase in production is at least twice that of foreign seeds. He's now testing the gene fragments and preparing to apply for a patent.

When Minister Lu saw the video, his face suddenly showed joy. He just wanted to shout in his heart, " professor Li Kai is indeed worthy of his reputation.

Barus looked at Minister Lu in confusion and asked with a frown, " "Mr Lu, perhaps it's time to continue our discussion."

" mr. barus, i would like to share a piece of good news with you. a professor from our country has developed a technology to increase the production of seeds, and it is twice the production of your largest seed company, meng sandu company. isn't this good news? "

When Barus heard this news, he didn't believe it at all. "Mr Lu, you know that's impossible. You're not thinking of using this method to solve this problem, are you?"

Minister Lu laughed. Mr. Barus, I forgot to tell you. This professor is the one who developed the purification grass. Do you think it's difficult to increase the production of seeds if he can develop something like purification grass? "

as he said that, minister lu raised his head and walked out. he smiled and said, " Mr. Barus, I'm sorry, but I need to understand the technique to increase the production of seeds first.

Outside, Minister Lu took out his phone and was about to report this to the leader. However, his phone rang first. It was the leader.

Once the call went through, the leader's voice came through, "Hurry up and go to Linlin's laboratory to understand the situation!"

The voice was very urgent.

Minister Lu hung up the phone and laughed. How could he not be anxious?

If professor Li Kai's technology was real, not only would it solve this problem, but it would also completely free the seed from the other party's grasp.

There would be no more problems in this area in the future.

As long as it wasn't a matter of seeds, they would be able to do something if the other party wanted to play such tricks.

Barus's expression turned ugly. The other party's posture didn't seem fake.

It would be terrible if the other party had really developed such technology.

Not only would this matter fail, but it might also implicate seed companies like Meng San du.

Once these seed companies had problems, they would lose a trump card.

Barus didn't dare to waste any time and left in a hurry. When he arrived at the Embassy, he immediately held a video conference.

A few people appeared in the video conference. Opposite them were a few white men, old and young.

At this moment, the few of them also asked with some ugly expressions, "

Barus, I've received news that Linlin's laboratory has the technology to increase the production of seeds. Is it true? "

"Linlin's laboratory is the place where the purification grass was developed. How did they suddenly have the technology to increase the production of seeds?"

"Barus, you said there wouldn't be any problems. After we get the agent for the Linlin Leisure Tea and Purification Grass, we will distribute the profits. "

It's different from what you said, Barus. If something goes wrong, we won't let you off either.

These people were obviously questioning him.

They were earning money from the seeds, but Barus and the other B \* stars came to their door, so they agreed to impose sanctions on the seeds.

Moreover, Barus and the others guaranteed that there would be no problems.

Now, things were clearly different from what he had expected. It seemed that something was going to go wrong.

They knew very well what it would mean if the other party had the technology to increase the production of seeds, or twice the production of their seeds.

Even if this double was fake and only equal to their seed production, it would be disastrous for them.

Barus was a little annoyed. These guys agreed to cooperate with him for the profit of Linlin leisure tea and purification grass.

Now, he had actually revealed such a face when he felt that something was wrong.

### [Chapter 923 Absolutely Impossible! Even Li Kai Himself Is Dumbfounded 3](#)

However, there was nothing he could do. These people not only had seed companies, but they also had other capital behind them. In the xingjue Kingdom, capital was everything. If something really went wrong, even if he was in his current position, he would still be in great trouble.

barus could only say, " guys, don't be anxious. this is most likely a smokescreen by the other party. they're trying to use psychological warfare against us. "

You should know better than me how difficult it is to increase the production of seeds. After all, how much money have you spent to continue increasing the production of seeds? "

"And they haven't made any progress in the research on increasing the production of seeds. Why did they suddenly have the technology this time? And it just had to be at this time."

His words also made the others 'attitudes become much gentler.

indeed, we've spent so much money, but it's still difficult to increase the production of seeds. Their seeds have always been behind us, so it's impossible for them to suddenly have the technology.

"Yes, they're very good at setting up smokescreens like this."

they even created a term for this scene called 'bluffing'!

"Then, should we talk about the distribution of benefits after we get the Linlin leisure tea and purification grass?"

"Indeed, we should talk!"

All of a sudden, the few of them seemed to be on guard against each other.

After all, they only agreed to do this because they knew how much profit these two products could bring.

Otherwise, they wouldn't have let go of their stable income and taken the risk of offending the biggest customer of their seed company.

On the internet.

Originally, because of the sanctions imposed by the seed companies, everyone was furious and even furious.

After all, who would be willing to be threatened by someone?

Once their necks were grabbed, as part of the cells in this body, they would feel uncomfortable without oxygen.

But now, after the official account of Linlin villa released a piece of news that professor Li Kai had developed a technique to increase the production of seeds, everyone was excited again. This time, the boiling point was even higher, and they even felt relieved.

"We still have to depend on professor Li Kai!"

"Professor Li, you're awesome!"

"You're going to be dumbfounded, right? We have professor Li Kai."

"Professor Li has never disappointed us."

"....."

In an instant, in this atmosphere, Li Kai seemed to have ascended to godhood. The internet was filled with praises and shouts for Li Kai.

Time passed.

After an unknown amount of time, Li Kai walked out of the laboratory with a few of his assistants, looking a little tired.

However, despite his exhaustion, he looked a little excited, because the gene fragments of the White radish, eggplant, and coriander he had tested were basically different from those of foreign seeds.

That was to say, in the process of increasing production, even if these seeds were improved from foreign seeds, they would have nothing to do with foreign seeds.

Their laboratory could apply for a new patent.

When Li Kai came out of the laboratory, he sharply noticed that all the researchers in the laboratory were looking at him with a strange gaze, as if they were all looking at him with admiration.

He wasn't very handsome, and although he had some charm, there was no need to look at him like that, right?

"Professor Li, you're amazing!" A researcher said in admiration.

"Professor Li, this is so satisfying!" Another researcher said.

"Professor Li!"

"Ran ran, professor Li!"

The researchers were all talking at once, full of reverence and respect, which made Li Kai a little confused. He asked, "Can you guys be normal? What's happening?"

"Professor Li, don't you know?" one of the researchers asked, puzzled. It's already all over the internet!"

Li Kai was puzzled. He immediately took out his phone and went online. In a moment, he saw a video on the internet.

on the achievements of professor Li from an aristocratic family "

professor Li's seed production increase technique has given the other party a tight slap in the face!

'No matter what means you have, in terms of crops, professor Li Kai said: No!'

"Another day of idolizing professor Li Kai!"

Li Kai was dumbfounded when he saw the entire internet discussing him.

What was going on?

Inexplicably, he felt his body Hunchback a little, and his back was as heavy as a Hunchback.

#### [Chapter 924 A Sudden Backstab! 1](#)

Linlin Manor.

Qin Lin had also been paying attention to the news on the internet. After all, he was the one who started the fire, so he had to pay attention.

As the initiator, he could also see that the netizens on the internet were very excited. It was a feeling of venting their anger, which could be seen from the comments.

Qin Lin also knew that now that the matter had been settled, he had to do the next thing. So, he went online and began to order all kinds of seeds.

Your city's seed store only sold limited types of seeds.

He ordered more seeds. The processing machine could always process some high-yield seeds.

Then, he would find an excuse to say that he had made some potions and soaked the seeds in them. Then, he would give them to brother Li.

Qin Lin ordered all kinds of seeds online in one go. After placing the order, he turned off his computer and the office door opened.

Li Kai rushed in from the outside and said to Qin Yang with a bitter face, "Brother Qin, what's going on online? I don't even know what's going on with these seeds. You were the one who concocted the potion!"

Qin Lin knew that Li Kai would react this way. He smiled and said, "Old brother Li, there's no other way. Those foreign companies are too much. You know that the seeds are caused by the special soil and the medicine, but there's no way to explain those two things. In a hurry, you can only step in, old brother Li."

Li Kai's face was full of bitterness. It was as if he could explain it, but he didn't know how to explain it.

"Brother Li, how's the test on the vegetables?" Qin Lin quickly changed the topic. Are the gene fragments the same as those of foreign companies?"

After reading the news on the internet, he also knew what the patent for vegetable seeds was about.

In the past, he didn't understand how this seed was patented. Now he understood. It was based on gene fragments. If you used someone else's seed and infringed on it, you could also use it to test the gene fragments after the plant grew.

This also gave him a reminder.

After all, he had a lot of crops here, and he had always been worried about the source.

Now, he could apply for the patent of the gene fragment. Even if someone managed to crack it, the other party's gene fragment would be the same as his. He could also Sue the other party for patent infringement.

When Li Kai heard about the matter, he immediately smiled and said, "Brother Qin, I was just about to tell you the good news. Although the seeds were grown from foreign seeds, after the production increased, the gene fragments also changed. They are different from the original gene fragments and have completely met the conditions for applying for a new patent."

"That's good. They're done for," Qin Lin heaved a sigh of relief.

before, he was afraid that the gene fragments of the seeds processed by those foreign seeds would be the same as the original seeds, which would cause copyright infringement.

Now that he had heard old brother Li's words, he was relieved. If that was the case, the other party would really be in trouble.

With his processing machine, he could produce as many seeds as he wanted.

it was unknown who would be punished from now on.

"Old brother li, prepare the documents and apply for the patent first," Qin Lin said decisively.

I've already asked my assistants to prepare, " Li Kai replied. the materials will be ready soon.

Just then, Qin Lin's phone rang. It was Lin Lanzi.

He immediately pressed the answer button, and Lin Lanzi's complaining voice came out of the phone, Chairman Qin, our multimedia department's phone is going to explode from the calls. It's from the seed companies in the country. They keep asking about the seed and we don't know how to answer.

send another video, " Qin Lin said. tell them that professor Li Kai has developed the seeds of white radish and cilantro, and the production is twice that of foreign seeds. Any domestic seed companies that are interested in cooperation can come to Linlin laboratory to cooperate.

Since the eggplant seed was a Grade 1 seed, he couldn't take it out. He could only take out the ordinary radish and coriander seeds.

"Okay, boss!" Lin Lanzi answered and hung up the phone.

Li Kai looked at Qin Lin, who had put down his phone, and sighed silently.

This pot was really locked tight.

He could only leave the manor in a hurry and return to Linlin's laboratory. He had to make last-minute preparations and learn more about these seeds, otherwise, he would be easily exposed.

As soon as Li Kai left, Qin Lin's phone rang. It was Minister Lu.

He thought that Minister Lu would also ask about the seed. Who knew that as soon as he answered the phone, Minister Lu said, "Boss Qin, in the office. I'm at your Manor."

"Ah Ling is here." Qin Lin replied in surprise. Why did the Minister come here again?

After hanging up the phone, Qin Lin walked out of the office and saw Minister Lu walking toward him.

He hurried forward and welcomed Minister Lu into his office.

As soon as he sat down, Minister Lu asked anxiously, "Boss Qin, let's cut to the chase. Is the seed real?"

"Minister Lu, how can this be fake?" Qin Lin explained with a smile, "now we already have the seeds of white radish and cilantro. the output is twice that of the foreign seeds. the laboratory is preparing to apply for patents. first, we apply for domestic patents, then we apply for international patents."

"That's great." Minister Lu's face was instantly filled with smiles. Mr. Qin, ask professor Li Kai to prepare the patent information for these two vegetables and give it to me. I'll help you through the special patent channel, and I'll help you quickly apply for an international patent. This time, those guys' plans will be in vain.

#### [Chapter 925 The Gene Fragments Are Completely Different! A Sudden Backstab! 2](#)

"En!" Qin Lin nodded.

Even if the Patent Office gave them the green light, it would still take some time for them to apply for their own patents.

Handing it over to Minister Lu was equivalent to the higher-ups helping you with this matter. It was no longer a matter of whether they gave the green light or not, but a direct result.

Qin Lin asked curiously, "Minister Lu, I wonder what the other party's purpose is for doing this?"

The problem of the seed was so big, and the other party's purpose for doing this was definitely not simple. It was hard not to be curious.

Now that Minister Lu was here, it was a good time to ask.

Minister Lu was surprised. boss Qin, you don't know yet. The other party did this for the Linlin leisure tea and purification grass. They want to use this method to make us talk to you and authorize the distribution of these two products to them.

"in their dreams, kill them." Qin Lin stood up immediately when he heard this.

she was still targeting him when it came to relationships.

without any hesitation, he called lin lanzi's number again. once the call went through, he asked, "manager lin, how's the video production going?"

lin lanzi immediately replied, "chairman qin, it's still in production. it will be released soon."

I'll add another line to the video, " Qin Lin said. a domestic seed company is here to cooperate with us. They'll produce twice as many seeds as the foreign companies, and the price is only one-twentieth of the foreign seeds.

He hung up the phone after giving his instructions. He could even imagine the expression on the other party's face when he saw the video. Just thinking about it was enough to vent his anger.

As for the price, it really didn't matter. After all, he didn't have to worry about research and development funding.

Minister Lu also realized what Qin Lin was going to do. He asked subconsciously, "Boss Qin, you're not making any money at 1/20 of the price."

"I'm happy to!" Qin Lin said with a smile.

eh?! Minister Lu didn't know what to say. He suddenly felt that boss Qin was a little willful.

However, boss Qin was happy to do so. What else could he say? he could only change the topic. boss Qin, when professor Li Kai is preparing the patent documents, he should also prepare some experimental materials. This kind of thing is so exciting. I'll ask the official news to release it.

"Yes." Qin Lin took out his phone, called Li Kai, and told him what Minister Lu wanted.

In Linlin's laboratory.

After Li Kai hung up Qin Lin's call, the first thing he did was to prepare the materials for the experiment.

But he didn't have any experimental materials, so he could only rely on the existing test data to make up a story and hand it to Minister Lu.

Moreover, the information that was released in the news could not be given to real experimental data. It was usually some vague experimental data, or even some information that was related to the data.

After all, the news was just to let everyone know about the technology, not to let the public understand the information.

Therefore, no one would suspect anything.

The information was quickly compiled, but when it came to filling in the name of the experimenter, he hesitated.

Because this skill really had nothing to do with him.

this black pot was a little bottomless.

He printed out some information sheets and made a few calls.

A moment later, a few people came in from outside.

These people were Li Kai's research assistants. Although they didn't have many results in Crop Research, they were all talents, or they wouldn't have become Li Kai's assistants.

After all, Li Kai's reputation was very big now, and there were definitely a lot of people who wanted to be his experimental assistant. If he wanted to recruit people, he would have to squeeze his way through.

And those who could be his assistant were definitely talents.

These people had been of great help in Li Kai's low-temperature genetic experiment.

The few of them entered and naturally looked at Li Kai with respect.

They naturally knew about the seed incident that had caused an uproar on the internet.

They had been busy helping professor Li Kai with the low-temperature genetic experiment, so they didn't know anything about this.

in other words, while professor Li Kai took them to do low-temperature genetic experiments, he also came up with the technology to increase the production of seeds.

When Li Kai saw them come in, he handed them the information sheet and said, "Fill in this information and pass it to me."

the few of them took the information sheet in confusion. when they saw the contents, they were stunned. professor Li Kai was going to add their names to the seed production technology experiment.

This Kasaya

"Professor Li Kai, we didn't participate in this experiment at all!"

"Yeah, we didn't even know about this experiment."

"....."

the few of them were a little terrified.

However, Li Kai said, "the low-temperature genetic experiment isn't that fast. As for the follow-up analysis and testing of this seed production increase experiment, as well as the breakthrough, I will need your help. So, it's fine to write down your names first. Just do the experiment properly later. Also, don't talk nonsense with me. Quickly write it down.

the few of them opened their mouths but didn't know what to say. then, they looked at Li Kai gratefully as he started writing the information sheet.

At this moment, they felt that they had decided on professor Li Kai.

In scientific research, there were selfish people and great people.

Selfish people took all the credit for scientific research, and even stole and occupied the research results of their subordinates.

A great person would use his own ability to lead others to overcome difficulties. He was willing to give his subordinates opportunities and lead everyone to improve. He was also willing to share opportunities and achievements with everyone.

there was no doubt that professor Li Kai was the latter. moreover, there were very few people in the current scientific research world who had professor Li Kai's breadth of mind.

People in scientific research were most willing to follow this kind of person in charge, and they admired this kind of person the most.

Following that, the few of them secretly expressed their loyalty and filled out the information sheet, then handed it to Li Kai.

This information form was also required for the signature of the experimental data.

Li Kai took the information sheet and added their names to the name of the experimenter.

He didn't know why, but after adding these names, he felt the weight on his back relax a lot.

Looking at the name list, Li Kai thought for a while and suddenly typed on the keyboard again, adding another name: Qin Lin!

"It's much more comfortable with the addition of old Brother Qin's name." Li Kai smiled as he printed the information and straightened his back for some reason.

After he was done printing the information, he went out to look for his assistant to get the materials for applying for the patent of the gene fragment. Then, he headed to the manor.

Qin Lin and Minister Lu were making tea when he arrived at Qin Lin's office.

Minister Lu saw him and stood up immediately. He went up to him and said, "Professor Li Kai, you're finally here. Let me take a look at the information.

Li Kai nodded and handed over the patent and experimental data to Minister Lu.

Minister Lu was in charge of the Chinese Academy of Sciences, so he naturally understood these things. After reading the patent application for the gene fragment, he looked at another experimental data on the increase in seed production.

The content that Li Kai made up at the beginning was nothing, but when he saw the name of the experimenter, his eyes widened and he looked stunned.

He could still understand the other names.

No matter how powerful Professor Li Kai was, he still needed someone to help him.

To be able to write the name of the experimental assistant on it showed that Professor Li Kai had a great personality, was selfless, and had a broad mind.

But Qin Lin?

Boss Qin?

What the hell?

Minister Lu looked at Li Kai in confusion and asked, "Professor Li Kai, is the name of the experiment wrong? Why is Boss Qin's name on it?"

"What?" Qin Lin was also stunned when he heard this.

What was he experimenting with?

There's no mistake, Minister Lu, "Li Kai said. Brother Qin also contributed to the seed production increase experiment. You may not know this, but Brother Qin is a genius.

If he learns cooking, he can become the best Chef. If he learns brewing, he can become the best winemaker. If he studies Chinese medicine, he's only that good.

he's in charge of a villa and has always been interested in Crop Research. He's been reading related books for a long time, and I've been guiding him. So, you can't look at him like an ordinary person.

old Brother Qin has been around for this crop production increase research. He's also been a great help.

Minister Lu looked at Qin Lin in surprise. It seemed that boss Qin was really that powerful.

The things he did alone weren't that shocking, but when all of them were put together, it seemed to be really shocking.

or rather, he was a monster.

He didn't doubt Li Kai's words. After all, Li Kai was the head of the crop Research in his heart. He was like a sweeping monk, and he wouldn't joke about this experiment.

" ? ? ? "Qin Lin's mouth was wide open.

What was old brother Li talking about?

Why didn't he know about this?

For some reason, he felt like he was being stabbed in the back.

[Chapter 926 420! Little Qin Is Well-Versed In Both Literature And Martial Arts!](#)

Qin Lin was suddenly a little confused.

In order to keep a low profile, he had been putting the blame on old brother Li. How did he suddenly become the scapegoat again?

Could it be that his long-term shirking of responsibility had been noticed by old brother Li?

That was impossible.

After Minister Lu got the information, he didn't hesitate too much. He took out his mobile phone and took a picture of the experimental data. Then, he sent it to his assistant's WeChat and made arrangements.

this matter had to be announced on the official news to boost his morale. he was not in Beijing himself, so he had to ask his assistant to contact him.

Minister Lu then looked at Qin Lin and said, " "Boss Qin, you're really too unexpected."

Qin Lin opened his mouth again, obviously not having reacted to the sudden change.

He wanted to tell Minister Lu to remove his name, but he didn't know where to start. He was even more afraid of being exposed.

He was so conflicted.

When he saw Minister Lu and Li Kai go out and talk about patent-related issues, he sat in front of the computer and searched for books on Crop Research.

However, after reading two pages, he realized that he couldn't understand it at all. So, he immediately went to look for University Books.

But,

finally.

Lin Lin could only let out a sigh. It had been so long since he graduated, and he still had to face such a situation.

Qin Lin wasn't the only one in a dilemma. The seed companies in the country were also in a dilemma.

Tianfang seed company was the largest seed company in the country, and the boss was called Xie Yuan.

xie yuan was in a dilemma. the reason was naturally because of a video released by linlin manor.

Although his tianfang seeds was the largest seed company in the country and had multiple seed patents, it was only in the country.

With the problem of seeds in China, any foreign seed company was better than his company. Because of the problem of seed production, his company's seeds were not competitive at all.

Now that he knew that professor Li Kai from Linlin's laboratory had developed a seed production technology, and the yield was twice that of foreign seeds, he felt that this was an opportunity.

So, as long as he could get on Linlin's good side and get the seed agent, his seed company could crush foreign seed companies.

He knew very well that the seeds of foreign seed companies could run rampant in the country because of their high production of seeds.

The farmers and gardeners worked hard to plant so that they could get a higher harvest.

Therefore, in this matter, commercial means were not very useful. The best means that could be used was the production of seeds.

our country is a big agricultural country, and the farmers have their own scales.

As long as the production of the seeds was higher than these foreign seeds, everyone would voluntarily abandon the foreign seeds, let alone double the production.

However, Xie Yuan also knew that although his company was the top company in the country, it was too small compared to Linlin company.

Even a subsidiary company of Linlin company could crush them.

So, even if he wanted to suck up to someone, he might not be qualified. Why should Linlin laboratory let him be the agent?

If they were not strong enough, they would not have the chance to seek cooperation.

While Xie Yuan was at a loss, he could only check the information and movements of Linlin's laboratory on the internet to see if he could find any opportunities.

However, at that moment, he saw a Short Video that had just been released by Linlin villa.

Lin Lanzi had made this Short Video to promote Qin Lin's movie according to Qin Lin's request.

Xie Yuan's eyes lit up when he saw the video. He had been worried about how to cozy up to Linlin's laboratory.

Now that Linlin's company had released this video, wasn't this his chance?

Although the video stated that they would cooperate at the lowest price in the country, even so, they could still make a lot of money. Moreover, the price was obviously for the foreign seed companies to see.

As for the lowest price in the country, it was up to Linlin company to decide. Anyway, as long as Linlin laboratory offered a lower price than the foreign seed companies, they could help say it was the lowest price.

A higher output, a lower price, and a direct suppression.

xie yuan didn't hesitate at all. he hurriedly called his secretary over and instructed, " go and prepare all the information about our company. Also, get people to make the most detailed PowerPoint presentation on our company's advantages.

"Alright, director Xie!" The Secretary nodded and went out to make arrangements immediately.

Xie Yuan, on the other hand, continued to watch the news about Linlin's laboratory and the seed production technology.

now that he had the opportunity to cozy up to linlin's laboratory, how could he not make proper preparations?

Not only Xie Yuan, but all the bosses of the domestic seed companies were excited after seeing the new video posted by the official account of Linlin villa.

Anyone could see that this was an opportunity. As long as they could get the support of Linlin laboratory, they could crazily seize the foreign seed market and make the company rise.

Therefore, he had to get the cooperation of Linlin laboratory no matter what, even if he had to give up his own company's shares.

The video released by the Linlin villa account wasn't too shocking to the netizens. After all, they had always believed in the Linlin laboratory and professor Li Kai.

Since they already knew about the technology, they only knew that it was better than the foreign seeds. To them, it was still better than the foreign seeds.

However, an official piece of news attracted everyone's attention.

The official news was arranged by Minister Lu, and it was about Linlin laboratory and the seed technology, including professor Li Kai's experimental data.

[Chapter 927 420-All-Rounded Little Qin! They Must Be Putting On A Show!](#)

Therefore, it was hard not to attract attention. That was professor Li Kai's experimental data.

However, what attracted the most attention was not the information, but the name of the experiment.

Before this, everyone knew that professor Li Kai was a genius, a publicly acknowledged genius in Crop Research. Moreover, every time he came up with something, it was very shocking.

but this time, it was different. in addition to professor li kai's experimental data, there were many other people's names.

Everyone was attracted by these names.

everyone knew that many scientific research experiments could not be completed by one person. after all, not everyone was professor li kai.

Therefore, a lot of scientific research was completed by a research team. The larger the research experiment, the more it was so.

Now that they saw these names, everyone understood that even someone as powerful as professor Li Kai needed help. This was probably the principle of " one hero, three helpers.

Therefore, this seed production increase technique was completed with the help of these people.

To be able to become a member of professor Li Kai's team, there was no doubt that these people were also very powerful people. Otherwise, they would not be qualified to be professor Li Kai's helpers.

Li Kai's experimental assistants suddenly became famous and received a lot of attention.

This made these people a little embarrassed.

After all, they really didn't do anything about this technology. Now, they had to bear the honor. This made them feel a little guilty.

This also made them secretly swear that they would assist professor Li Kai in his experiments in the future.

they still understood the words 'return the favor' and 'deeply grateful'.

Naturally, other than these people, a name was even more abrupt.

That was the name Qin Lin.

Moreover, with a video, Qin Lin's name went viral on the internet.

I didn't notice it at first, but later on, I felt that Qin Lin's name was very familiar. After checking, isn't Qin Lin the internet celebrity, little Qin, from Linlin villa? little qin will be called qin lin!"

When the video was released, countless people were in an uproar. It was true.

The internet celebrity little Qin was called Qin Lin, and now there was a Qin Lin in professor Li Kai's team.

There can't be two Qin Lins with the same name in Linlin's company, right?

However, Linlin villa's internet celebrity, little Qin, was clearly a horse tamer. His horse-riding posture and handsomeness had always been regarded as a classic by everyone.

It was said that many directors wanted to invite little Qin to the crew to shoot a riding video, but he didn't go at all.

Qin Lin, who was in professor Li's team, was obviously a scientific researcher. He must have made great contributions to the technique of increasing the yield of seeds.

It could be said that one was a martial artist, while the other was a scholar. They could not be the same person.

It was just that both of them were so excellent in literature and martial arts, and they had the same name, so it was hard not to be discussed. Therefore, in the following time, the discussion about Qin Lin on the internet continued to heat up.

Qin Lin was very distressed when he heard these discussions. After all, he had always wanted to keep a low profile. What was going on now?

However, something vexing happened. Someone was trying to undermine him. A video about him immediately appeared on the internet:

"Qin Lin from Linlin laboratory is the internet celebrity little Qin from Linlin villa!"

When the video was released, everyone was stunned.

Was this for real?

When Qin Lin saw the video, he wanted to curse. However, when he saw that the video was posted by the official account of Linlin's laboratory, he was so depressed that he lost his temper.

This must be old brother Li's doing.

Naturally, people on the internet also realized that the video was posted by the official account of Linlin's laboratory, so the news that the two Qin Lins were one and the same was true.

Oh my God!

Countless netizens started exclaiming in shock.

Then this wouldn't just be one scholar and one martial artist, but a master of both.

In addition, little Qin was very handsome to begin with. How could he let his peers live?

In an instant, the video blew up and the comments section was flooded with comments.

"Isn't this better than those young hunks?"

"Martial artists can Mount their horses and carry their Spears, while scholars can dismount and do research! I admit that this Qin Lin is a bit better than me. "

"If there's someone my age that I admire, Qin Lin is one of them."

no wonder little Qin doesn't like to show his face. It turns out that being an internet celebrity is just his secondary career.

"Haha, how many people who want to be an internet celebrity will die from anger? She's in the research field and can become an internet celebrity just by showing her face occasionally."

"....."

qin lin's popularity exploded on the internet. in lin lin's laboratory, li kai's face was already full of smiles as he read the news.

it's good to hide behind people like this.

Finally, he didn't have to feel guilty like before when he was alone and being discussed online. It was great to see Brother Qin attracting the firepower at the front.

That feeling of guilt disappeared immediately.

He even got up and did some chest-expanding exercises, which really made him feel comfortable.

While Li Kai was happy, someone else was very unhappy. His expression was even a little grave. It was Barus and the bosses of the foreign seed companies.

After they received the latest news, they had another video conference.

It could be seen that the bosses of the companies in the video were not looking good.

From the moment Linlin company announced that they had the seed production technology, he knew that they were bluffing.

However, this method was useless.

This time, it wasn't just Linlin company. Even the other party's official website had released such a video and had even publicized it so widely. This made them uncertain.

### [Chapter 928 420-All-Rounded Little Qin! They Must Be Putting On A Show! 3](#)

The other party had made such a big fuss. If they didn't have this thing, it would be very embarrassing in the end. If they had it, then they would be in trouble.

"Did they really develop seeds that produce twice as much as us?"

"That's impossible. How did they do it? Even our research can't achieve this kind of production."

but the other party's momentum doesn't seem fake. Also, that professor Li Kai is indeed very powerful.

" that's right. the other party has also developed the purification grass. also, i've received news that the other party is applying for a patent for the gene fragment! "

applying for gene fragments doesn't necessarily mean that there is such a technology. It might be a Bluff. If there is really such a technology, then it would be terrible.

Barus, you can't just keep quiet. If something like that really happened, you should know how angry we are.

yes, we need to know the specific situation. We can't just sit here and wait for death.

When Barus heard this threat, his face turned even uglier. He could only take a deep breath and say, "Aren't those seed companies going to Linlin laboratory to seek cooperation? I'll find a way to get someone to help us confirm the authenticity of the news."

As he spoke, Barus took out his phone and dialed a number.

There were so many seed companies in their country that it was not difficult to find one or two greedy ones.

A few days passed in the blink of an eye.

Your city's Zhong min hotel was once again bustling with activity. This time, it was the people from the country's seed companies who had gathered here.

There were more than 5000 seed companies in the country. How many of them would want to suck up to the Linlin laboratory after seeing the video on the official account of Linlin villa?

however, most of the seed companies did not know that linlin's laboratory had already inspected some of the top seed companies before they came.

The applications of these companies had been reviewed by Linlin's laboratory. The reason for the review was to see if there were one or two quality companies. They could also observe them later.

He couldn't just find all the top seed companies.

Xie Yuan's tianfang seed company was one of the companies under inspection. They were taken to Linlin villa by the people from Linlin laboratory.

The person who received them was Shen Li from Linlin's laboratory. When Xie Yuan and the others came, they naturally knew the situation in Linlin's laboratory. They knew who Shen Li was, so they were all very respectful.

What they were most curious about now was whether the seeds could really produce that kind of yield.

However, they didn't dare to ask. Whoever asked would be equivalent to questioning. Wouldn't they be courting death if they were remembered?

Shen Li naturally knew what these people were thinking. After receiving the bosses of these seed companies, he directly brought them to the planting area of Linlin Manor.

The best way to tell these people about the yield of seeds was to let them see it with their own eyes.

And now, manager Yu said that one of the crops had matured.

These people were also in the field of seeds, so they naturally knew the yield of the seeds. Once they harvested the seeds, they roughly knew the yield.

what shen li didn't know was that when he brought his men to the plantation area, the boss of a seed company subconsciously moved his clothes. there was a miniature camera hidden in his clothes!

At the same time, Barus was also having a video conference with the bosses of the foreign seed companies.

In front of them was a live broadcast of a scene in a villa.

Barus and the others looked grave as they watched the video.

"It seems like they really have that kind of seed!"

no, he must be bluffing. He's doing this for us to see ...

"They don't know that we're peeking at them, but if they really have that kind of seed Kasaya ..."

These people all looked at Barus with hostility.

Barus hurriedly said, " don't worry, they definitely don't have such seeds. They're used to putting on a show. Tomorrow, their news will be that Linlin's laboratory has such seeds and has reached a cooperation with these companies. They think we'll give up just like that.

#### [Chapter 929 421-I'm Finished!](#)

As soon as Barus finished speaking, the bosses of the foreign seed companies did not agree with him this time.

The more they thought about it, the more they felt that the other party might really have the technology to increase the production of seeds, or they were afraid that the other party might have the technology to increase the production of seeds.

They were different from Barus. To Barus, this matter was just a political failure, but to them, it was related to the huge interests of their seed company.

"Don't worry, it's definitely a show." Barus said firmly.

Moreover, as long as they could film the other party's show and upload it to the other party's internet, not only would the other party lose face, but they would also lose their autonomy in the negotiation.

But Barus did not know that Chen dabei and Captain Hong had already arrived at Linlin Manor's security room to welcome Qin Lin and Ma Hong.

Academician Zhu and the others went back, but Ma Hong didn't, which meant that Minister Lu would still arrange for other academicians to come.

As soon as Qin Lin entered the security room, he asked, "You're sure? Are they from Linlin's laboratory?"

indeed, " Captain Hong explained. the signal fluctuation is among that group of people.

As it was easy for cameras to be installed in the bridal room area, Linlin villa had already purchased a lot of detection equipment, and every security guard had brought it with them.

Previously, someone had tried to install a miniature camera in the nuptial chamber for the sake of beauty duck and was finally caught on the spot.

Basically, anyone who brought these things into Linlin Manor would be caught.

The security guards didn't have the right to enforce the law, so they would only report it to Captain Hong and the others to deal with it.

However, the situation this time was a little special.

The security guard found the micro camera, but it was in Linlin's laboratory team. So when the security guard reported to Captain Hong, he didn't know whether it was on someone in Linlin's laboratory, or if President Shen had made special arrangements.

Therefore, he could only inform Chairman Qin to come over.

Qin Lin naturally knew that Shen Li did not have such arrangements. So, it could only be the bosses of those seed companies.

There were two possibilities.

The first was that the boss had a purpose for bringing these, and the second was to find out the truth about his place for others.

But no matter what it was, it would still violate one point, and that was the crime of commercial espionage.

Therefore, when Qin Lin heard about the situation, he brought Ma Hong with him. He felt that there was a possibility that this matter had something to do with those foreign companies.

If they released the news that they had the seed production technology, the other party would find a way to find out the truth. They might even think that they were bluffing.

"Boss Qin, do we need to control the other party first?" Captain Hong asked immediately.

Qin Lin shook his head. there's no need for that now. We'll wait until Shen Li is done with his work.

The other party had done this to find out if the production of his seeds was real or fake.

Then, he would just let the other party watch.

If it was really related to foreign seed companies, then he would tell them clearly that it was true and let them wait for their death.

Since Qin Lin had given his orders, the others naturally did not object. However, since they were not making a move for the time being, they had already started to make preparations. Once President Shen was done with his work, they would make a move.

On the other side, Shen Li also brought Xie Yuan and the bosses of the seed companies into the planting area.

Looking at the boundless and lush crops in front of them, Xie Yuan and the others had already started to look around.

As someone in the seed industry, he naturally knew about crops. The production posture and leaves of these crops were obviously not ordinary.

They guessed that these should be grown from the seeds that increased production.

Otherwise, President Shen would not have brought them here.

Just as expected, Shen Li said, " alright, everyone. The purpose of bringing you to this planting area today is to let you all witness the increase in the yield of our new seeds. Please follow me.

Very quickly, Xie Yuan and the others followed Shen Li to a plantation. Everyone could see that this plantation was filled with beans.

As for beans, they were naturally no strangers to them. They were also the most common crop.

On the other side.

Barus and the people from the foreign seed companies were no strangers to beans. Moreover, their companies all had beans.

The yield of their bean seeds was 1.7 times higher than that of the other country's.

Sometimes, they would find it funny when they saw other people's online posts about boycotting their country's products and supporting their domestic products.

This was because these people who were shouting slogans had no idea that the food they were eating every day was not made in China.

However, they couldn't laugh at this time because they saw that something was wrong. The densely packed beans on the vines were far beyond their expectations.

in the plantation area, xie yuan and the bosses of the seed companies also saw the beans.

There were too many beans on the vine.

It was a number that could be clearly seen.

For example, if there was a beauty with a plain A and a beauty with 3D in front of you, how could you not tell which one had the material?

Shen Li saw the shock of Xie Yuan and the others and said, "everyone, you can also personally inspect the actual condition of these beans. look at the planting distance and the growth state of the beans."

The bosses of seed companies like Xie Yuan did not hesitate and immediately brought people up.

Judging from the results of the vines, the beans definitely had a high yield. However, the yield per mu was not determined by the number of each vine, but by the total yield.

#### [Chapter 930 421-I'm Done For!](#)

There were many beans on the horn bean vine, but it also depended on the planting distance. If the planting distance was the same, then the more beans there were, the more beans there were.

In addition, it also depended on the growth of the beans. In the past, a bean company had researched a type of bean seed, and the number of beans condensed was amazing.

But in the end, he found that they were air bubble beans.

It meant that there were many fruits growing in the shape of beans, but there was only one small fruit inside. What was the use of a man who was big and thick but small in a room?

Moreover, the skin of the bubble beans was very old and hard to chew. No one ate it.

Only when these aspects were normal and the quantity was high could it be increased.

Xie Yuan quickly brought his technician to the beans area for testing. The first thing he did was to test the planting space.

After the technician finished checking, he reported to Xie Yuan, "director Xie, the planting distance of these beans is normal. So, the number of beans planted in one mu is the same as normal seeds.

"Yes." When Xie Yuan heard this news, his face revealed a trace of joy.

in other words, these beans were really high in production and had nothing to do with the distance between them. this made him immediately go forward and pick some beans, then peel or break them to check the situation.

The beans inside the skin were very plump, and the skin was also very crisp and fresh. One look and one could tell that they were good fruits.

At this time, the other planting companies also got the results, which were accompanied by some surprise.

"These beans are growing really well."

that's right. The distance between them is normal. There are a lot of them.

"The beans in Linlin's laboratory are growing very well, even better than the ones from the seed companies abroad."

"....."

The bosses of seed companies like Xie Yuan could not help but show joy on their faces.

Now, it all depended on the statistics of the true output of the beans. There were no problems in other aspects, but looking at the number of growing beans, the output was obviously higher than that of the seeds abroad.

after all, it wasn't their first time seeing the production of foreign beans.

At this moment.

The boss, who was wearing a miniature camera, had deliberately adjusted the angle so that the beans in his hand could be captured.

He still looked a little nervous ...

after all, he knew what he was doing. but what could he do? his daughter was studying abroad and had even founded her own company.

His daughter's company was developing better than his subsidiary company. The other party had said that as long as they did this, they would inject capital into his daughter's company.

Isn't it good to earn US dollars?

Barus and the bosses of the seed companies had also seen the growth of the beans.

These people's faces turned even uglier.

everything was developing in the direction they didn't want.

...

In the plantation area, Shen Li also smiled and asked, "Everyone, how's the investigation going?"

"President Shen, your beans are growing very well. They're very full," Xie Yuan said hurriedly.

The bosses of the other seed companies also quickly echoed.

Now, as long as the production of these beans was out, they could determine the specific production of these beans. Moreover, there was no doubt that the production of these beans was definitely very high.

In other words, if they could ride on the coattail of Linlin's experiment, their company would take off.

The reason was simple. If Linlin's experimental technology could produce one seed like the beans, then it could produce more seeds.

With these seeds, they could snatch back the market from foreign seed companies. As long as Linlin's laboratory didn't authorize the seeds, they could sell the seeds abroad and seize the market from those seed companies.

the people of their country were so patriotic that they would choose foreign seeds for the production of seeds, not to mention the people of the capitalist countries.

now, the only question was whether linlin's laboratory would be authorized to a foreign seed company.

manager Yu, "Shen Li called Yu Shui over and said, "bring some people to pick these beans and calculate the yield per mu in front of everyone.

"okay, president shen." Yu Shui quickly nodded and began to take action with the staff of the plantation Department.

The bosses of seed companies like Xie Yuan also focused their attention.

This was the problem they were most concerned about, and now that they had seen it with their own eyes, they could prove that Linlin's laboratory had not tampered with it. This was the most authentic production.

at the same time, barus and the others also saw this scene through the micro camera, and they were extremely nervous.

Although they had already guessed the outcome, they still hoped for a miracle.

Very quickly, Yu Shui's side had calculated the yield per mu and said to Shen Li, Xie Yuan and the others, "The yield per mu of beans is out. It's about 13600 catties,"

Of course, the harvest was not really the harvest of one mu of beans, but calculated by the conversion formula. However, the specific amount would not be wrong.

However, this weight completely shocked Xie Yuan and the others. This figure was completely twice that of the foreign seeds.

The news released by Linlin's laboratory was completely confirmed.

At this moment, Xie Yuan and the others' faces were full of joy because they had the opportunity to cooperate with Linlin laboratory. They could have the opportunity to ride on Linlin laboratory's coattail here.

"President Shen, how are we going to work together?" Xie Yuan hurriedly asked.

The bosses of the other seed companies also asked in a hurry.

This was the most important thing for him now. Whoever didn't cling to the Linlin laboratory this time would be destined to be eliminated from the market in the future.

everyone, we'll discuss the cooperation at Linlin villa. They've prepared a special meeting room for us. The restaurant in the villa has also prepared a banquet for everyone. Shen Li said as he led his men out of the farm.

On the other side.

Barus and those foreign seed companies' representatives were also pale after receiving the results of the beans.

Linlin laboratory's seed production increasing technology was real. In addition to the radish and coriander seeds that the other party had applied for before, they already had three kinds of seed production increasing technology.

Moreover, the other party's planting area had so many types of crops. How many types were there?

If these were all seeds that could increase production, it would definitely be God's will to kill them. This meant that the other party could produce more types of seeds that could increase production at any time.

"Barus, this is all your fault!" The boss of a seed company realized that something was wrong and shouted angrily.

that's right, Barus, " another person said. if it wasn't for you, we wouldn't have imposed the seed punishment on them.

The others also chimed in, "

that's right, it's all your fault. You have to give us an explanation for this.

"Do you know how much of a loss this will cause us?"

When Barus heard these people's questions, his face naturally turned pale.

He knew how much capital these people had. They had more than just seed companies.

If these people wanted to deal with him, his future would definitely be over.

He was a little regretful now. Why was he so eager to make a contribution to increase his capital, and instead aimed the contradiction at the Linlin leisure tea and purification grass?

Although it was a great contribution to get the agency for these two products and let them appear in the xingjue Kingdom, now that something had happened, it was a big problem.

But now, Barus could only defend himself, "everyone, Linlin's laboratory already has this technology. Whether we punish them or not, they will still publish this technology.

He was obviously trying to defend himself. He couldn't have everything good.

these words immediately made the bosses of the seed companies even angrier. "

Barus, if it wasn't for you, at least we wouldn't have punished the other party. We could have even gotten their agency.

that's right. We won't offend the other party without your urging.

originally, the other party would have given us the authorization to be the agent, but it was all because of your sanctions. Now, that might not be the case.

"....."

Obviously, these people were trying to shift the blame to Barus. They were all angry at Barus. This was how capital was. They had to prove that it wasn't their fault, even if they were tempted by benefits at the beginning.

At this moment, Barus and the rest noticed that the video recording of the villa in front of them was shaking. Then, there were exclamations.

The cameraman was pressed to the ground, and then they saw a hand take down the miniature camera and point it at a man who had been caught.

"You've been looking at it for a long time, have you seen the results?"

Barus and the bosses of the seed companies looked at each other in dismay!
