

The Game 931

[Chapter 931 Isn't It Just! Punishment? I'm Already Not A Good NPC](#)

The sudden change made Barus and the others stop arguing.

Barus clearly knew that the person he had ordered to find had been discovered.

But what surprised Barus and the others was that the video in front of them was not cut off. It was still recording the scene of Linlin's laboratory and the seed companies.

However, they had already left the plantation and were on their way back.

Barus and the others were even more puzzled.

what was the other party doing?

He had clearly discovered it.

did the other party not care at all? Was he deliberately showing it to them and mocking them in such a way?

Barus and the others felt that they had guessed correctly, but they were helpless.

since the other party was letting him see, he couldn't just stubbornly choose to be unyielding, right?

They really wanted to know the specifics of their future cooperation.

Chen dabei had already taken out the mini camera and was recording the population of the Linlin villa's plantation area.

qin lin and his people followed behind.

He did want the people behind the micro-camera to watch and let them know the result of this cooperation.

It would be great if it was one of those foreign seed companies behind this.

he would let these people see how they would deal with them when they discussed the cooperation, but they couldn't do anything about it.

At the back, Captain Hong was also holding a middle-aged man. It was inevitable that the middle-aged man would have to go to the security room of Linlin villa.

"Blame your bad luck. There's a ruthless person targeting you today." Captain Hong looked at Ma Hong as he spoke.

The incident with the two international thieves was still vivid in her mind.

even the two international thieves were scared out of their wits. what was this middle-aged man?

Shen Li brought the seed company's bosses to Linlin villa and went straight to a meeting room. Chen dabei was busy filming.

Barus and the bosses of the seed companies watched the video broadcast without saying a word.

The atmosphere was very heavy.

In the conference room.

After Shen Li invited the bosses of the seed companies to sit down, he also said, " I'm sure everyone knows that our Linlin laboratory has invited you here to discuss the cooperation of increasing the production of seeds.

" as for the authorization and cooperation, we need to talk about it first. "

The Linlin laboratory had already held a meeting regarding the cooperation. The discussion was just a notice.

If you're willing to accept the terms, stay. If you're not, please leave.

After all, in terms of cooperation, it was the seed companies who begged the laboratory, not the companies.

Moreover, Chairman Qin had made it clear that he wanted to teach those foreign companies who launched the sanctions a lesson, and these domestic seed companies were the best knives to teach them a lesson.

With a knife in his hand, it would be more painful to hurt someone.

Before that, all they had to do was to hold the knife firmly in their hands.

But just as Shen Li finished speaking, the boss of a seed company suddenly said, " President Shen, our glorious star seeds Company is very sincere in cooperating with Linlin laboratory. To show our sincerity, we are willing to have Linlin laboratory invest in us.

Xie Yuan and the others were stunned when they heard this.

How could they cooperate? Linlin laboratory hadn't even stated their conditions, and someone had already turned the table over.

If Linlin laboratory invested, wouldn't it be the same as giving Linlin laboratory shares?

how could they negotiate with such conditions? They could either leave, or they could ask Linlin laboratory to invest.

Most importantly, they had to rely on the support of the Holy See's laboratory, so they couldn't leave.

Therefore, they only had one option left, and that was to accept the investment from Linlin laboratory.

This kind of person who flipped the table at the drop of a hat and made everyone lose interest was too annoying.

"I can also ask Linlin laboratory to invest in our tianfang seed company." Xie Yuan was also the second to express his position.

He was actually a little remorseful.

Because when he had come, his bottom line was that even if he had to give Linlin some shares of the laboratory, he had to cling to this big thigh.

Who knew that at this time, someone would take the initiative to express their position.

therefore, he could not miss the second opportunity to express his stance.

Moreover, this was also a very easy score to settle.

The combined sales of so many companies in their country could not even compare to one-third of the sales of the Star-Spangled nation's Meng san's company in China.

How big would the entire market be if they included the sales of other foreign seeds? how big would the market be for their respective companies?

So, even if he gave Linlin some shares in the laboratory, as long as he could get a hold of the foreign companies 'markets, how much could the company grow? The scale was far from what it was now.

Sometimes, you have to give up to gain.

Shen Li was a little surprised when he heard the conversation between the two.

Although Chairman Qin chose to authorize the seed company to the domestic seed companies, he had to consider how to do it.

Since Chairman Qin had given him the direction, he had to do the details well.

He naturally wanted to fight for more benefits for the laboratory and add more restrictions on these seed companies.

What he didn't expect was that before he even stated his conditions, someone had already used this method to express their sincerity.

Moreover, there was no better way to directly get the shares of these companies and then send a director representative to control them.

Of course, shares were shares. As for the benefits of the seed authorization, the two sides still had to continue to discuss.

In other words, the basic condition for this cooperation had now become giving Linlin a share of the laboratory. Only when these basic conditions were met would they be qualified to continue the discussion.

[Chapter 932 Isn't It Just! Punishment? I'm Already Not A Good NPC](#)

Shen Li immediately remembered the two seed companies, Xie Yuan and Tian Fang and Hui Xing.

In the future, they could cooperate and take care of each other.

Then, the invited seed companies expressed their willingness to accept the investment of Linlin laboratory one after another.

Naturally, there were also those who held onto the shares and refused to let go.

A young man stood up and said, " President Shen, my father worked hard to build the company. We're not willing to accept any external capital injection.

Then, he deliberately added another sentence, " I believe there are many bosses who have the same idea as me. If we have to, we can choose not to talk.

Clearly, he was trying to get a few more people to support him and then put pressure on Linlin's laboratory.

Shen Li looked at the young man with a smile that was not a smile, Sir, cooperation is based on the principle of voluntary cooperation. If you are not willing to cooperate, there is no need to participate in the subsequent negotiations. Naturally, those who have the same thoughts as this gentleman can leave now.

the young man immediately looked at the bosses around him, obviously hoping that these people would make a stand. he knew that the majority of people would not be willing to accept the investment.

However, the young man was going to be disappointed. None of the people from the seed companies around him agreed with him, so he could only leave awkwardly.

Not long after, there was a topic that people had been talking about in the seed industry. That was, after a rich second generation went back from Linlin company on behalf of his company, he angered his father, who was hospitalized, and his father even broke his leg and sent him to the hospital.

In the meeting room, the cooperation still had to be discussed.

since you're all here, " Shen Li said, " that means you're willing to accept the investment. We'll talk about the details later.

now, let's talk about the most important requirement of our cooperation, and that is the price of the seeds. The seeds produced by Linlin's laboratory must be cheaper than the price of similar seeds overseas.

This was also Chairman Qin's hard request.

Chairman Qin had originally wanted to promote these seeds at the lowest price in the country, but he was persuaded by him.

After all, he only wanted to teach those foreign seed companies a lesson. There was no need to sacrifice so many interests. It would be too much of an honor for those foreign seed companies.

If the production was twice as high as the other party, even if the price was the same, the other party would lose everything. If the price was lower, the other party could be declared dead.

we, tianfang seed company, will completely follow the arrangements of Linlin's laboratory.

"The same goes for us radiant star seeds!"

"Let's benefit the people!"

"Our ran ran"

"....."

One by one, the bosses of the seed companies expressed their opinions. Previously, many foreign seeds were sold at more than ten times the price of their own.

This condition was completely acceptable to them.

However, on the other side of the WeChat camera, the bosses of the foreign seed companies looked extremely serious.

Barus's face was also very ugly. He naturally knew what Linlin's condition meant. Based on the seed production of Linlin's laboratory, the seeds of the seed companies in the Western dream three capital would all be driven out of the country's market.

Furthermore, if these seeds were to flow to the Western market, then Meng San du and the other seed companies would be exterminated.

It was originally a sharp blade that could stop the other party's agriculture, but in the blink of an eye, it was going to become scrap iron.

At this moment, the video from the miniature camera was cut off. It was obvious that the other party did not want them to see the details of the negotiation and cooperation.

But the price set by Linlin's laboratory had already made the bosses of these seed companies panic.

Their seed production was higher than the other country's, so even if their seed price was more than ten times higher than the other country's, the other country's seed companies would still be unable to raise their heads.

now, the other party's seed production was obviously twice as high as theirs, but he wanted to promote it at a lower price than theirs. this was simply asking them to die.

The bosses of these foreign seed companies once again launched an attack on Barus.

" barus, you have to give us an explanation on how to deal with this. "

no, we can't let them use this price to promote it. They're trying to kill us!

you have to get the authorization of the other party's seed. Barus, you have to get this done.

Barus, you know what you'll face if you can't get the technical license.

"....."

A moment later, the video conference ended. Barus had no choice but to take out his phone with an unsightly expression and said, " "Contact Minister Lu again and tell him that I want to continue the discussion."

...

Linlin Manor.

Shen Li also quickly discussed with the bosses of the domestic seed companies about the cooperation of seed licensing.

Qin Lin went to the security room to see Ma Hong.

Ma Hong said as soon as he saw him. boss Qin, I've asked him. He founded a company in Starstreak because of his daughter. So, this matter must be backed by those foreign seed companies. It might even be related to Starstreak.

"Mm, I know!" Qin Lin nodded. It was true.

He took out his phone and gave Lin Lanzi a call, ordering, " then, use the official account of Linlin villa to post a video. Say that Linlin laboratory's seeds will not be authorized to be sold to any seed company abroad.

Clearly, this was another punishment.

Didn't the other party like to punish?

If he didn't punish the other party, wouldn't he be letting down the other party's efforts?

[Chapter 933 Isn't It Just! Punishment? I'm Already Not A Good NPC](#)

Besides, wouldn't it be better to let these domestic seed companies break into the other party's market, occupy the other party's market, and then seize the neck of the other party's agriculture industry?

In the past, the yield of the other party's seeds was less than twice that of the domestic seeds, but they could already strangle the neck of their agriculture. Now, his seeds were twice that of the other party's.

If they couldn't do the same thing, they couldn't only blame the incapability of the domestic seed companies. They would have to consider whether to continue to authorize these seed companies.

Qin Lin returned to Linlin Manor. As soon as he returned to his office, he searched for a book on Crop research on the internet.

Since old brother Li had suddenly thrown half of the pot at him, he had no choice but to look at the relevant knowledge.

Damn it, he couldn't possibly be unable to say anything when he really encountered a situation in the future, right?

Now that old brother Li was in front of him, he really wanted to say, " MMP!

Moreover, it would be really painful to read these books after graduation.

Unfortunately, the game in his mind was the farm game, not the academic genius game. Otherwise, he would be able to read the book easily.

As he thought about it, Qin Lin realized that the game in his mind had suddenly moved.

Thomas, the village chief, had appeared again.

Because of Thomas's lagging behavior last time, his expectations of the village chief had plummeted.

This Thomas already knew how to trick people into doing free work. He was no longer a good NPC with rich rewards.

However, Thomas's appearance here also meant that there was a plot quest. He controlled his character to go to the entrance of the farm and clicked on Thomas.

Thomas immediately replied, "

[Hi!] [nice to meet you again. Your Ranch has been doing very well recently. You're the pride of ore town. So, the town is going to build a library. Are you willing to make a contribution to the library by donating?]

"Ran ran." Qin Lin's mind was filled with black lines as he read the content of the conversation.

this time, they didn't even talk about the reward and directly called it a donation.

However, when he saw the words 'library', he was filled with memories.

This was because there was a shy girl named Mary who wore glasses in the library. The first version of the story of the farm that he had played was Mary.

Moreover, the library would have a guessing game at any time. If one won the guessing game, they would get some unexpected gifts.

Therefore, even if it was a free donation without a gift, he would accept it for the sake of this. He clicked to confirm the donation.

His character's gold coins dropped rapidly.

[thank you so much for your contribution. I'll let you know when the library opens. There will be a guessing game then, and the winner will get an unexpected gift!]

After Thomas finished speaking, he fled as if he was flying.

Seeing this, Qin Lin once again looked down on Thomas.

Not long after, in the capital.

Minister Lu also saw Barus again.

However, this time, his mood was different because he already had the initiative. If the other party wanted to punish him, they had to have the ability to do so.

When Barus saw Minister Lu, the first thing he did was to say anxiously: Mr Lu, let's continue our previous topic. We were too impulsive with the punishment of seeds. We are very sorry about this.

"Hehe!" When Minister Lu heard this, he looked at Barus with a faint smile.

He apologized and gave in as soon as he went on stage, and he was full of smiles. He was really able to adapt to circumstances.

Barus's face was full of embarrassment, but he didn't dare to show it.

[Chapter 934 Linlin Company Is Too Despicable! Li Kai Is Going To Teach A Textbook! 1](#)

At this moment, Barus was truly embarrassed. After all, anyone who thought that their items were good and wanted to threaten the other party, only to suddenly find out that the other party's items were even better than theirs and that they needed the other party's items, would be so embarrassed that they would want to find a hole to hide in.

Minister Lu looked at Barus for a while and said, " Mr. Barus, we didn't really care about the seed punishment, and you don't need to apologize. So, I think we should end this discussion.

Mr. Lu, there's one more thing I want to talk to you about, " Barus said hurriedly. you see, Linlin's laboratory has a seed production technology. You know, food has always been a big international problem. So, can you build a bridge with Linlin's laboratory? our seed company would like to talk to them about the licensing of the agent.

When Minister Lu heard this, he looked at Barus with a playful look.

This capitalist's skin was indeed thicker than he had imagined.

But thinking about it carefully, if it were them, they would also have to be thick-skinned and negotiate in this situation. They could only say that Linlin laboratory was too awesome.

The only difference between them and these capitalists was that they would not impose sanctions on the other party for no reason, then turn around and beg the other party, making things so awkward.

"Minister Lu, please help me with this," Barus said again.

Minister Lu could only shake his head helplessly and said, " Mr. Barus, I'm afraid we can't help you with this. Take a look at the news first.

As he spoke, Minister Lu ordered someone to play a piece of news on the screen in the conference room.

The news was a new announcement from the official account of Linlin Manor:

Yingluo thanks everyone for paying attention to our Linlin laboratory. The seed incident has been causing an uproar on the internet recently. Now, our laboratory has reached an licensing cooperation agreement with a domestic seed company. I believe that new seeds will be sold on the market soon!

in addition, our Linlin laboratory also makes an announcement. Just like Linlin food company's Linlin leisure tea and the purification grass, we will not consider licensing the new production of seeds to any foreign seed companies for the time being.

When Barus saw the video, his face turned pale. The video said that he would not consider it for the time being, which meant that he would not give the authorization to the agent.

This was another sanction.

That company actually tried to sanction them again.

Again and again, what did the other party take their country for? However, they were the only ones who punished others.

The key point was that Linlin company's sanctions had made their domestic companies unable to find any substitute products, which made them very helpless.

" mr. barus, i'm really sorry. you know that our country respects the opinions of companies and will not force companies to do things they are not willing to do. " so, i'm really sorry, " Minister Lu said with a smile. I still have some things to deal with here, so I won't waste Mr. Barus 'time.

after saying that, minister lu left without saying a word to barus. when he was outside, he was full of smiles.

The other party's expression really made him feel good.

Compared to Minister Lu's good mood, Barus's heart had fallen to the bottom. He did not expect that the other party would not even want to talk about it in detail.

He had originally thought that things could be discussed, even if the other party had some conditions for exchange.

Barus left helplessly. Just as he returned to his car, he received a call. When he saw the number, his face turned ugly.

It was a call from Meng San DU's boss, who was one of the directors of Luo Heng Financial Group.

He could only answer the call, and an angry voice came from the other side, " "Barus, what's wrong with you, you bastard? This is the result of your negotiation? They'll directly punish us when we reach a negotiation? You're finished, we won't let you go."

Barus felt wronged.

The sanctions really had nothing to do with his negotiations. He hadn't even started negotiating with the other party and the news of the sanctions had already come out.

Just as Barus was about to explain, he heard the other party hang up the phone, causing him to fall back into his chair.

Ming City Airport.

Xie Yuan was already waiting to board the plane with the contract. After signing the investment, equity distribution, and authorization contract with Linlin laboratory, he rushed back to the company.

although the first batch of seeds that linlin's laboratory would give them were only radishes, beans, and coriander, if they wanted to deal with the related matters well, even if they cultivated these three seeds first, they could still grab the market first.

The foreign seed company occupied a huge market.

"Director Xie, look at the announcement from Linlin villa." The assistant next to him handed the phone to Xie Yuan. On it was a trending video. It was the video of Linlin villa's sanctions against Western countries.

When Xie Yuan saw the video, a smile appeared at the corner of his mouth.

He had learned from Linlin's laboratory that the seeds would not be authorized to be sold to foreign companies.

On the other hand, the seed companies that they were cooperating with not only had to seize the domestic market of the foreign seed companies, but they also had to break into the other party's market and seize the other party's foreign market.

This was the task given to them by Linlin's laboratory.

Moreover, this mission made his blood boil for some reason.

Perhaps the domestic seeds had been suppressed for too long, and these seed companies had not had a good breath for too long.

now, the punishment announcement from the linlin laboratory would be their best help.

[Chapter 935 Linlin Company Is Too Despicable! Li Kai Is Going To Teach A Textbook! 2](#)

At the same time, the internet was already very lively because of the sanctions imposed by Linlin's laboratory.

It must be known that the foreign seed companies had sanctioned them and let them know that 80% of the seeds in the country were imported. It was very humiliating and even angry that their daily crops were stuck in their throats.

Now, Linlin company had released a new product to increase production seeds, and its production was higher than those foreign companies. It directly told those foreign companies how ridiculous the other party's sanctions were. Now, they even directly turned the tables and launched another anti-sanction.

This was as satisfying as it could get.

In their hearts, Linlin's laboratory was no different from a hero.

Moreover, only Linlin's laboratory and Linlin company had the ability to sanction Western countries in such a way. In a way, Linlin company had become the pride of everyone.

Therefore, for the next week, all the hot Searches were about Linlin's laboratory and the seeds of the new product.

The domestic seeds that had cooperated with Linlin's laboratory had also become the target of coverage. It was difficult for reporters to obtain the information of Linlin's laboratory, but it was not difficult to obtain the information of these companies.

As a result, the first batch of seeds that Linlin's laboratory handed over to these domestic seed companies were exposed one after another.

This news also made the foreign seed companies panic and come up with countermeasures. The simplest way was to reduce prices, hoping to dump a wave of seeds before the release of Linlin laboratory.

A week passed in the blink of an eye.

In the Linlin Manor, Qin Lin was also seriously looking at the data on the computer.

"Modern Crop Research includes genetic engineering Research, cell engineering Research, and so on.

plant multi-diversity gene mutation "

After reading for a while, Qin Lin felt a headache. When he was still studying, his grades were excellent, and he could read quietly.

He didn't know why, but he couldn't read it for a while. If only he had the ability to quickly remember what he read like the main characters in novels.

In the end, Qin Lin could only rub his head, look at the game in his mind, and then control the game character to complete the daily tasks.

On the other hand, Mayor Thomas had asked him to donate money, but it had been a long time since he had come to inform him that the library was completed.

This guy couldn't have pocketed his donation, right?

However, he was just complaining. It was impossible for a game NPC to do such a thing.

Qin Lin first went to Mount goddesses to cut down the trees that had spawned today. Then, he went to look at the mountain products and found that the Golden Cherry and the Golden peach sprite had spawned.

He had a lot of these things now, so he stored them in the storage room first. There was no need to immediately soak them into medicinal wine.

Then, he controlled his character to take out a fishing rod and began to fish.

[congratulations, you have obtained a wild grade 2 silver carp!]

Qin Lin was stunned by the fish he caught today.

He had caught a lot of fish in the past, but there was no such species as silver carp or silver carp. This was a new species of fish that had suddenly appeared.

silver carps and armors were the most common species in reservoirs and deep rivers. many fishing enthusiasts often caught silver carps and armors.

Qin Lin didn't care about the silver carp or the giant carp, but the new species of fish that would appear would not be the same. He might catch more fish in the future.

there was also the possibility of a surprise.

After some time, Qin Lin completed his daily tasks without any special gains.

just as he came back to his senses from the game, he received a call from minister lu.

After the call was connected, Minister Lu's voice came through in a good mood. boss Qin, I'm going to Linlin Manor tomorrow. I'm calling you this time, so please arrange two more rooms for me. I'll bring someone with me. Qin Lin hung up the phone and complained.

This Minister Lu finally knew how to make a phone call. He didn't come to his door without a sound.

However, this also meant that the person that Minister Lu had mentioned was definitely not an ordinary person. Hence, he gave Gao Yaoyao a call and asked her to make preparations.

the next day.

Qin Lin welcomed Minister Lu at the Linlin Manor. As expected, there was an old man beside Minister Lu.

The old man was full of energy and had an indescribable spirit. He even exuded a scholarly air.

This was a very surprising feeling. At a glance, one could tell that he was a cultured person.

Even professor Zhu and professor Li, who were in the field of scientific research, didn't give him this feeling.

But now, this old man gave people such a feeling that he was definitely someone who loved books and had feelings for books.

"Boss Qin, let me introduce you." Minister Lu said as soon as he saw Qin Lin, "This is professor Fu Shu, he specializes in culture."

this was another professor who specialized in culture. this also explained why he had a scholarly air about him.

"Professor Fu Shu, it's a pleasure to meet you." "Minister Lu, is professor Fu Shu going to recuperate in the manor this time?" Qin Lin immediately shook hands with the old man and asked.

Minister Lu shook his head and said helplessly, "I do hope that professor Fu can have time to recuperate at your place, but he might be very busy for a while. Besides, he's here for professor Li Kai. i'll go back after i'm done."

"For old brother Li?" Qin Lin was a little confused.

although old brother Li was in the field of research, it was still different from cultural research. the two sides should not be in the same field.

Minister Lu nodded and said, "Brother Qin, there's another news on the internet. You should have noticed it too. It's about the textbooks. These people should be grateful for the news about your Linlin laboratory. It has suppressed their popularity.

"I've seen it!" Qin Lin nodded.

this hot news was able to make it to the hot search while linlin's laboratory was on fire. it was called the poisonous teaching material incident.

Anyway, he was quite speechless when he saw the news.

He didn't expect that someone would try to distort a child's aesthetics in such a way.

All kinds of content that were not good for children's physical and mental health appeared in the illustrations.

It was no wonder that children nowadays seemed to mature very early in this area. Perhaps it had something to do with this.

the most disgusting thing was that there were many contents that distorted history and beautified the stargazing kingdom and the little jiutian kingdom.

Someone had recently revealed that the illustrations in the textbooks were actually in the style of Xiaoji nation's a-Yan comics.

What was the a-Xyan comic style? It's a kind of children's lecherous comic that is forbidden even in the small Japan. Now, it has appeared in our children's textbooks.

This was definitely a very serious matter.

Moreover, it was also exposed on the internet that the family background of the editor-in-chief of this textbook and the illustrator was actually close to the xingtiao Kingdom and the small Japan Kingdom.

there might be some secret that couldn't be revealed.

However, this matter was still under investigation, and no conclusion had been reached yet.

professor Fu is here for this, " Minister Lu said * he has to compile a new set of teaching materials as soon as possible.

at the same time, he also removed a lot of inappropriate content from the original teaching materials and added some content that kept up with the times.

of course, the content that professor Fu wants to add to keep up with the times isn't those celebrities or internet celebrities. Professor Fu intends to remove all of these content. Even if he wants to keep up with the times, he wants to write meaningful content.

" therefore, the content of the seniors like mr. yuan and mr. zhong will be included in the new textbooks. professor li kai is also one of the people chosen by professor fu to be a new generation of textbooks. "

" ? ? Old brother li is going to go to class?" Qin Lin was surprised.

Although there were already people on the internet saying that old brother li would definitely be a figure in the textbooks in the future, he didn't expect it to happen so soon.

Professor Fu nodded and said, " that's right. He would rather do research in the mud than live a luxurious life. Also, he solved the Sima disease, developed the purification grass, and this time, he increased the production of crops. He is worth learning from all the children.

[Chapter 936 Is This An Insult To The Players?](#)

"Boss Qin, can I see professor Li Kai first?" Professor Fu was also very kind to Qin Lin.

Before he came, he had already learned a lot about boss Qin from Minister Lu. He had also seen a lot of news about Linlin company on the internet.

Especially the sanctions that those products imposed on Western countries, he felt relieved.

Even he had to admire such an entrepreneur.

More importantly, the other party was still so young. He was truly an outstanding talent that people admired.

"Professor Fu, I'll give brother Li a call." Qin Lin said as he took out his phone and called Li Kai.

Li Kai arrived at Linlin Manor as fast as he could. When he saw Minister Lu, he said in surprise, "Minister Lu, you're here. Did Brother Qin call me over for something important?"

"Professor Li Kai, it's a very important thing about education," Minister Lu said with a smile.

Then, he pointed at Professor Fu and said, "This is Professor Fu. He's the editor-in-chief of the new textbook. He wants to write a chapter for you to be in the fifth grade textbook."

"Ah!" When Li Kai heard this news, he was shocked.

He had never thought about this.

When she suddenly heard that she wanted her textbooks, she couldn't react for a moment.

"Professor Fu, I'm not qualified to study in the textbooks," he said anxiously. Are you kidding me?"

Professor Li Kai, "Professor Fu said hurriedly, "We're going to add some new generation figures for our children to learn. If you're not qualified, do you think those celebrities and internet celebrities are?"

As he said this, he looked at Minister Lu, obviously asking for help and asking for Minister Lu to persuade him.

Minister Lu also tried to persuade him. Professor Li Kai, the relevant departments had a meeting to decide on your choice. You also know that this teaching material incident is very serious. The relevant departments have carefully considered your choice.

"Besides, as you know, after Linlin's laboratory's popularity began to drop, the popularity of this textbook incident has gone out of control. All kinds of demons and monsters have appeared."

Some of them did find the problems in the textbooks, but some of them were just trying to make trouble. If you cooperate with Professor Fu, he can complete his task in advance so that the children can learn the new textbooks that are healthy.

"Brother Li, Minister Lu and Professor Fu are right. It's good to solve this online issue as soon as possible." Qin Lin also tried to persuade her.

It was true that there were problems with the teaching materials, but not everyone could point fingers at them.

There were indeed many people on the internet who were trying their best to find out the problems in the teaching materials, but there were even more who were trying to ride on the popularity. Some of them even interpreted the teaching materials too much in order to ride on the popularity.

This was chaos.

There was a problem with the teaching materials, but it wasn't that there were mistakes everywhere. Most of the content was still good.

Many of the comments in the videos clearly showed that there was a problem with the people, not with the contents of the textbooks.

For example, a woman who was trying to ride on popularity posted a poem, "singing the goose". There was a line, "white hair floating on green water, red palm rips the waves!"

The woman was holding the child and talking about the 'green water' in all seriousness. She even sent a text message saying that the child knew that there was no green water.

What could people say about this?

What did he need to say?

Although green water referred to the state of water at that time, it did not mean that the water itself was green.

Moreover, there was nothing wrong with this poem, including the two words "green water."

It was chaotic to freeload on popularity to this extent.

Of course, he wanted Old Brother Li to study in the textbooks for another purpose, which was to let Old Brother Li take the blame.

After all, he was already in the textbooks.

"Then I'll support you!" Li Kai could only nod helplessly after hearing Qin Lin's words.

The next day.

A few more people arrived at Linlin Manor. They were Professor Fu's assistants.

Some of them helped Li Kai take pictures, some of them gathered information about his life, and some of them listened to him explain the experiment process.

After that, they would summarize the information and write a text for the fifth grade, which they would then hand over to Professor Fu for review.

Qin Lin had thought that it wouldn't be difficult to write a text. After all, it only took him half an hour to write an essay.

However, things didn't seem to go as he had expected. It took them a full day to draft several pages before Professor Fu approved them.

The next day, a text about Professor Li Kai was born.

Qin Lin and Li Kai also saw the text.

In the middle of the text was a picture of Li Kai kneeling in the mud and studying crops.

Qin Lin found the photo familiar.

It was a photo taken when Minister Lu brought people to check the condition of the roots of adonaxi.

He didn't expect that this photo would be used now.

" professor li kai was born in ming city. he has been interested in scientific research and crops since he was young. even if he saw a blade of grass at the door of the classroom stairs, he would be curious about how the grass grows. professor li kai is our role model. "

Qin Lin was a little stunned when he read the text. Why did all the texts about famous people start with " how is it "?

Li Kai's face turned red.

There were many unrealistic parts in the text. It was too beautified.

It was the f * cking sentence about wanting to learn from him.

Learn what from him? to learn how to take the blame?

"Professor li, what do you think of the text?" Professor Fu asked with a smile.

professor Fu, I'm not that good, " Li Kai said awkwardly. also, I never thought about these things when I was young. I was running around with a group of my childhood friends and even skipped a lot of classes.

"Professor li, we can't say that you were running around in the yard and skipping class when you were young, can we?" professor Fu asked. If that elementary school student learns this text, wouldn't he feel that he doesn't study? how can he become a scientist by running around and skipping classes?"

this isn't what a textbook should be like. It's just embellishingly so. After a primary school student learns the textbook, they will know that only by being thoughtful, studious, and studying well from a young age can one become a scientist like you.

after all, not everyone has your talent, professor li. Even if you skip classes and run around, you can still become a scientist when you grow up. Most children are still ordinary people, and they still have to rely on their hard work from a young age.

Li Kai couldn't refute this.

even qin lin felt that this was very reasonable.

Indeed, as long as you were successful and could become a role model for the students, it didn't matter what you did when you were young.

The most important thing was to let the students know that only by doing what the text said and studying hard could they become scientists. This was the most important thing.

Therefore, this was probably why the texts of the big shots would include 'how to do things from childhood'.

As for whether these people were like this when they were young, it was not important. What was important was that their achievements were real and they could teach the children some principles. This was the most important thing.

This was the positive meaning, the meaning of education.

in the end, Li Kai had no choice but to accept the text.

"Congratulations, old brother Li. You're about to understand the characters in the text." Qin Lin congratulated Li Kai with a smile. He was thinking about how many different skins he could get when he started teaching the students in the future.

It wasn't just the characters in the game that had skins now. The most common skins were characters like Li Bai and Du Fu.

Who didn't have skins for these characters in their books? their school days would be a waste.

Li Bai, the DJ, Li Bai, the swordsman, Li Bai, the motorcycle, and so on.

What sunglasses, smoking, guitar, Dufu

Somehow, he was looking forward to brother Li's skin in the future.

Professor Fu suddenly said, "boss Qin, you'll be included in the new generation too. After all, you're skilled in both literature and martial arts. You've also made many contributions to the Linlin company that you founded, helping the people of our country vent their anger time and time again. So, you can still take an elective class first.

"Please don't. I don't want the outside world to know my identity." Qin Lin was dumbfounded and hurriedly said.

What kind of joke was this? putting him in the textbook, was he going to compete with old brother Li on who had more skins?

"Professor Fu, look at how you scared boss Qin," Minister Lu said with a smile.

professor fu also laughed.

He felt that boss Qin was suitable to be a textbook character in the new era. However, Minister Lu had already informed the higher-ups, and even if boss Qin wanted to keep a low profile, it was not appropriate to put him on the list.

If he really wanted to release the other party, he would have to wait until the other party's identity was exposed to the public.

At that time, everyone would be shocked. This young man would surpass the two Boss Ma, Ren, Liu, and San Shi.

After confirming Li Kai's text, professor Fu left with his students.

Professor Li Kai was not the only one who had to be taught. There were other things to be written.

Minister Lu also went back to Beijing. He was also very busy.

This time, Linlin's laboratory's crop production increase technology not only made the other party's sanctions go down the drain, but it could also change many things in domestic agriculture.

There were many things that they could do, and he had to cooperate with the other departments to do many things.

Linlin villa once again regained its peace. The problem of increasing the production of crops was handed over to Linlin's laboratory, and Qin Lin was also free for the time being.

as for the processing of new seeds, there was no rush. after all, there were still many seeds that had not matured.

When the crops of these seeds matured and were successfully promoted by those seed companies, he would find an excuse to process new seeds.

A new day had arrived.

Qin Lin got up from the manor, ate something, and was about to go out when he noticed the game in his mind.

Thomas, the mayor, came again.

He knew that the library must have done something. He immediately controlled his character to go forward, and Thomas's conversation appeared.

[that's great! You're at the ranch! I'm just informing you that the library is open. As one of the donors, you have to come. There'll be a very fun guessing game!]

Thomas left in a hurry after informing them.

When Qin Lin heard the news, he immediately went to the library.

The original location of the library was a closed building, but now the building's door was open, and the words " mine Town Library " were added outside.

He controlled his character to enter the library. There were already many NPCs in the town gathered there, celebrating the opening of the library.

Qin Lin controlled his character to walk around the library. Sure enough, he saw the shy NPC Mary, who was wearing glasses.

The new version of Mary was more beautiful than the old version. She was more gentle and quiet, and it was hard to avoid reminiscing.

After all, in the first version of the story of the farm, the player who had conquered it was Mary.

he controlled his game character to step forward and tap on mary, and the conversation appeared:

[i'm the librarian of ore town's library. we have a guessing game event today. do you want to join? There will be a special gift if you win!]

Qin Lin naturally clicked to participate.

The so-called guessing game was actually a multi-choice question in the knowledge quiz. One question had four answers, a, B, C, and D.

mary's conversation reappeared.

[really? [then you have to answer properly and try to get the gift. Now, let's start the riddles!]

[Question 1:1+1=?]

【a:1、 b:2、 c:3、 d:4!】

" ? ? ? ? "When Qin Lin saw the question, he cursed in his heart. He didn't know if he should say it.

Was this game's lousy game designer insulting the players by asking such a question?

[Chapter 937 The Mysterious Stone Book Is Impossible](#)

After Qin Lin complained about the game designer, he directly controlled the game character to choose the answer B. This $1+1=2$ was also understood by kindergarteners.

[congratulations, you got the first question right. You're so smart. Let's move on to the second question!]

[what's 8 divided by 4?]

【a:0.5、 b:2、 c、 1.5、 d:4】

ran ran. Qin Lin was speechless. This game producer was really a dog. Couldn't he have given him more difficult questions?

He decisively chose B.

[it's such a pity, you called the wrong number!]

" ? ? ? "Qin Lin was dumbfounded.

Wasn't it 2?

then, he smacked his head. it should be 0.5.

It had been too long since she graduated, so she didn't pay attention to the contents of her primary school and had forgotten about it.

Qin Lin had no choice but to start all over again. He then answered the same two questions. After he got them right, Mary gave him the third question.

[your daughter is my daughter's mother. May I know who I am to you?]

[a: mother, B: daughter, C: mother-in-law, d: son-in-law]

Qin Lin decisively chose D as his son-in-law.

[I'm very sorry, you answered wrong!]

ran ran. Qin Lin only felt that he had been too shallow.

He wanted to apologize to the game producer.

It turned out that the first question was a consolation question, in case the players got it wrong and got hurt.

He could only continue to control his game character and start answering questions.

There were 10 questions in total.

Only those who answered 10 questions correctly would get a gift.

The following questions were all weird, so weird that they were not in Qin Lin's knowledge. He got them wrong frequently and had to start all over again.

Therefore, it took him a long time to answer the last annoying question.

[congratulations on getting all the questions right. You're so smart. This is for you!]

As they spoke, Mary had already left and went to the front desk of the library.

this meant that she had returned to her normal role as an NPC, the library's front desk. only when she came down from the library's front desk would there be guessing games.

A gift bag with a question mark on it appeared in his game character's backpack. This was the riddle gift bag.

Qin Lin immediately controlled his game character to open the gift bag. As the gift bag disappeared, a stone tablet that looked like a book appeared in the game character's backpack. the mysterious stone book.

This was something that wasn't in the original version, and it was obviously something added in the new version.

He was curious about what it was, so he immediately controlled his game character to go back to the farm, locked the office door, and entered the game with a thought.

[mysterious stone Book: mysterious!]

[this is a magical stone Book. It came from some ruins on the goddess mountain. After the mayor of the ore town obtained it on the goddess mountain, he used it as a prize for a guessing game. It can copy the contents of any book and produce skill books!]

Qin Lin smiled when he saw the content. He had been forced to read the books on Crop Research by brother Li's sudden backstabbing, and his head was hurting.

Now that such a thing had appeared, wasn't it like a pillow when you were sleepy?

He immediately logged out of the game and called Li Kai, "Brother li, do you have any books on Crop Research?"

"Brother Qin, what do you want these books for?" Li Kai asked teasingly. There's an electronic version of it on the internet!"

He could roughly guess why Brother Qin wanted these books. The names of the books had been written as experimental signatures. He must be as flustered as he was before and had no choice but to prepare to learn some knowledge.

It was just like how he had to desperately learn the knowledge and content of related experiments every time he was made the scapegoat.

It wasn't that easy to take the blame.

Qin Lin could hear Li Kai's teasing tone and said fiercely, "I'm tired of reading the electronic version, so I want to read a book."

Li Kai immediately laughed and said, "sure!" I have books on this, but I have an experiment to do right away. I'll have someone send it to you."

not long after, a security guard entered his office with a stack of books in his hands.

When the security guard saw Qin Lin, he said respectfully, "Chairman Qin, professor Li Kai said that these books are arranged in order. The knowledge at the top is more general, and the knowledge at the bottom is more profound. You can read from the top to the bottom.

f * ck. when Qin Lin heard this, he only wanted to curse at old brother li. This arrangement was very good for him.

"I know, you can go back to work!" Qin Lin ordered the security guard. After the guard left, he took the data and read it. Then, he took out the book at the bottom.

If he wanted to use the mysterious stone Book, he would have to use it on the most profound book. As long as he learned the most profound book, he could slowly fill in the gaps in his Foundation.

Moreover, when he really had no choice, he would bring out the most profound content. Then, who would be stupid enough to explore the basics with him?

this book was "the research encyclopedia of crop genetic engineering!"

The content was about the research of various crop genes. Some genetic research operations were very difficult, and only doctors could say that they had completed it perfectly.

Qin Lin locked the door again and entered the game with a thought. He then took out the mysterious stone Book.

[do you want to use The Stone Book on the book before you?]

Qin Lin chose "yes" decisively.

In the next moment, the mysterious stone slab began to glow and disappear. The light then slowly seeped into the 'crop genetic engineering Research Encyclopedia' that he had brought in.

A moment later, when the light from the mysterious slate completely shone on the crop genetic engineering Research Encyclopedia, a shadow appeared next to the book. An identical crop genetic engineering Research Encyclopedia appeared.

[Chapter 938 The Mysterious Stone Book Is Impossible](#)

[Encyclopedia of genetic engineering: normal]

...

[crop gene research engineering encyclopedia: Mysterious]

[this is a book transformed from a mysterious stone Book. After using it, you can learn the knowledge recorded in the book! Do you wish to use it?]

Qin Lin chose to use it without hesitation.

the book transformed from the mysterious stone slab also turned into a light screen and surged into his mind. then, a stream of information was deeply imprinted in his memory.

The information was all from the book, and it was unforgettable to him. Moreover, it involved various experimental information, and he seemed to have done it many times. The muscle memory also contained the memory of the operation.

this was a very magical thing, and the feeling was also very wonderful.

qin lin picked up the 'complete collection of crop genetic engineering research' that he brought in. he could clearly remember all the information in the book, including what information was recorded on each page and what words were in each line.

It was really amazing to have such fantasy-like things in the game.

And this meant that he could become a top student.

With this thought, Qin Lin logged out of the game.

The next day.

qin lin controlled his character to go to the library again and saw mary at the front desk.

Mary didn't come out, which meant that there was no guessing game today. Besides, it wasn't like there was a guessing game every day.

Otherwise, he would not only have the hope of becoming a top student, but also a genius of knowledge.

After eating something, he looked at the game in his mind. He began to control the game character to complete the daily tasks for the day. Then, he left the manor and went directly to Linlin's laboratory.

This 'crop genetic engineering Research Encyclopedia' recorded the most research on all kinds of crops.

Although this kind of research was not new, it was already proven and belonged to existing knowledge research. However, the research was also divided into levels.

It was impossible for college students majoring in agriculture to do some experiments.

Some of the experimental research could only be completed by the doctor.

now, he had directly obtained the knowledge from the mysterious stone book. even the experimental research in it had a deep muscle memory, so he naturally wanted to try it out.

it was just like when he first got his cooking skills.

After parking his car in the parking lot of Linlin's laboratory, Qin Lin entered the inner area and was immediately inspected by security.

"Chairman Qin, I'll inform professor li." After the security check and making sure that there were no problems, they respectfully welcomed Qin Lin into the internal experimental area.

Li Kai quickly came out in a white lab coat. "Brother Qin, why did you suddenly come to the laboratory? I'm doing a gene extraction experiment to increase the production of seeds."

Qin Lin smiled and explained, " last night, I saw a very interesting genetic experiment in a book. So, I came here to try and see if I can do the experiment myself. I want to see if it's really that interesting.

"what?" Li Kai didn't know how to react to Qin Lin's words. Was he saying that he wanted to conduct genetic experiments?

This Kasaya

"Old brother li, please prepare an experiment table for me!" Qin Lin said with a smile.

well, Brother Qin, you should change into a lab coat and disinfect it first. This is the rule of the laboratory. In the end, Li Kai could only say helplessly.

He didn't believe that Brother Qin would do any genetic experiments.

The other party didn't even study this major.

even if he had added brother qin's name before, and the other party had to learn about crop research in case he needed to deal with the situation, how long had it been?

How could they possibly conduct genetic experiments in such a short period of time?

Those college students who specialized in certain fields might not even be able to do genetic experiments even after mixing around with the students for two to three years.

However, old Brother Qin was the boss. What could he do? He could only make arrangements and watch from the side to prevent anything from happening.

Qin Lin changed into his lab coat and went through the cleaning and disinfection process. Then, he and Li Kai entered an ordinary laboratory.

There were already many researchers doing experiments inside, but they were all ordinary researchers who were doing some regular crop experiments.

Naturally, he couldn't bring Qin Lin into the special laboratory. Li Kai was also worried that there would be problems with the experiment and affect the researchers inside.

The researchers outside also saw Qin Lin. They knew who he was, so they were all curious.

Previously, professor Li Kai's seed production technique had added the boss's name to the experimental signature.

they were very surprised. they didn't know that their boss was also a researcher.

Li Kai brought Qin Lin to an experiment table. old Brother Qin, you can use this experimental platform. All the experimental tools related to genetic research are placed here.

after saying that, he looked at qin lin expectantly. he really wanted to see how this little brother qin would conduct the genetic experiment, although he felt that it would be difficult for him to complete it to a large extent.

Qin Lin nodded, then walked to the experimental table and began to fiddle with the tools seriously. His movements were very familiar, just like an old researcher.

Li Kai was surprised by this move. The other researchers also looked over and gave Qin Lin sidelong glances as he adjusted the data.

If it were them, they might not have been able to do so well.

li kai couldn't help but take out his phone and take pictures of qin lin's actions.

Mobile phones were not allowed in the laboratory, but Li Kai, the person in charge of the laboratory, was an exception. Moreover, the entire laboratory was blocked from the internet. Other than the internal local area network, nothing could be sent out.

Qin Lin took the White radish that was prepared for the experiment and began to experiment.

In a genetic experiment, the first thing to do was to strip off the genes and then start the experiment.

This was a very complicated process, which required a very solid experimental skill and a grasp of related knowledge.

Naturally, Qin Lin relied on external hacks.

However, Li Kai was quickly shocked because Qin Lin's technique of extracting genes did not seem like he had never studied this major. Even many outstanding college students in this major could not extract genes so smoothly.

However, when he saw the experiment Qin Lin was going to do next, he was even more dumbfounded and asked, "Brother Qin, do you want to do an experiment on the fusion of genetic skipping?"

"Yeah!" qin lin nodded.

"F * ck!" Li Kai couldn't help but curse, feeling a little unsettled.

This genetic experiment was indeed a very interesting experiment. It was also a very attractive experiment.

However, this experiment could not be completed by ordinary people. Even a master's student might not be able to complete it perfectly. Only those PhD students could.

brother qin actually wants to do this experiment.

He couldn't have really succeeded, right?

[Chapter 939 426-He Xia's Cool Dream](#)

Qin Lin did not know that his experiment had shocked Li Kai.

After he entered the experiment, he operated according to the memory in his mind and muscle. He was fully focused.

This was probably the charm of doing experimental research.

Without this ability, not to mention doing research, even watching others do research would be very tiring.

but now that qin lin had discovered this ability, it was different. he would be immersed in it.

He now knew that the researchers were soon immersed in their research and knowledge.

Wasn't there a popular math genius on the internet, GodV?

Many people said that he was slovenly, only eating steamed buns with plain water, and dealing with mathematics all day long. What was the meaning of life?

Obviously, the person who said this had no idea how happy it was to be immersed in the sea of mathematics knowledge.

This kind of happiness was not something ordinary people could understand.

Qin Lin followed the experiment and operated on several utensils in succession. Then, he put them under several microscopes to check.

Li Kai walked in front of a microscope to take a look. The shock on his face was even more difficult to hide. Under the microscope, the regeneration and combination of the genetic cells could be clearly seen.

In other words, Brother Qin's experiment was almost half successful. As long as he could get accurate data, it would be considered a success.

This Kasaya

Li Kai was in disbelief.

Can you imagine how shocking it would be for a person who studied in the tourism industry to do a genetic experiment that could only be completed by a PhD in crop production?

No one would believe this.

The researchers around them subconsciously stopped and looked at their boss.

Now they knew why professor Li Kai had such a good relationship with the boss. Not only was the boss rich, but he could also develop the company well.

After an unknown amount of time, Qin Lin handed a data report to Li Kai and said, " "Old brother li, help me take a look at the data. Is the experiment completed?"

Li Kai took the experimental data with a stunned expression, then turned on the computer and began to compare.

There was a fixed data for the fusion experiment of the gene jumps of radish. The specific data could be found on the domestic experimental network. As long as the deviation was not more than 5%, it meant that the experiment was successful.

Li Kai quickly finished comparing the data and said in shock, "Brother Qin, the error is only 1%. Most doctors can't achieve this experimental data."

The other researchers also knew about the genetic recovery experiment, but they didn't dare to say that they could achieve 1%.

This boss was really amazing. At least, most PhD students couldn't compare to him.

Of course, these people didn't know that Qin Lin could only do the experiments in the book. He didn't even know what the experiments were about, the principles, or anything else.

It was all thanks to external hacks that he could make it.

If he were to take the exam, he wouldn't even be able to pass the College's crop major exam paper, let alone the Ph.D. and master's exam papers.

Qin Lin also smiled when he heard the result.

It's good to cheat.

After confirming that the experiment was a success, he was looking forward to the library in Ore Town.

So, when he got up the next day and went to the office, the first thing he did was to look at the game on the screen in his mind. Then, he controlled the game character to go to the library in Ore Town to see if there were any guessing games.

He had tasted the sweetness and was thinking about it.

Unfortunately, there were still no guessing games today. It could be seen that these guessing games didn't appear often.

However, this did not affect him.

Even if this guessing game wasn't available all the time, he was still young. After ten or twenty years, he should be able to get a lot of mysterious stone books, right?

Then, he might really become a very smart scientist.

Suddenly, someone knocked on the door. Academician Li walked in with a smile on his face and said, "Boss Qin, did you go to Linlin's laboratory to do an experiment yesterday? Why didn't you ask me to come along?"

"Academician Li, how did you know?" Qin Lin was stunned.

"The people on the internet already know about it, so naturally, I know about it too." Academician Li immediately smiled.

He had been a little confused when he saw boss Qin's name on the list of names for the seed production technology experiment.

Now he understood that this boss Qin really knew how to do research. The video of the genetic transition combination experiment on the internet had already explained everything.

When Qin Lin heard academician Li's words, he immediately took out his phone and checked it. Soon, he wanted to curse again.

He looked at what one of the hot Searches was:

"I'll let you see little Qin doing experiments seriously!"

He clicked on it and saw that the video was about his experiment yesterday. The account that posted the video was from Linlin laboratory.

MMP!

It must be old brother li again.

But he really didn't want to have such a name.

Most importantly, the video was already on the hot search, and it was too late to delete it.

This video had indeed caused a great sensation on the internet. After all, the popularity of Linlin villa was high to begin with, and the popularity of the Linlin laboratory's seed production increase had not passed for long.

Moreover, little Qin, who had both cultural relics and artifacts, was a hot topic. It was hard not to attract attention when this video was released.

previously, I saw little Qin riding the horse so naturally, and brandishing the spear so fiercely. Now, little Qin is doing research, and he looks so handsome when he is fully focused.

I have to say, this is what an idol should be like. A strong body and a smart brain. Doesn't this crush all the young hunks? "

haha, I used to think that the math genius, GodV, was amazing. Now, I think that little Qin is not bad either. He seems to be even better because he's more handsome.

"....."

these were naturally the comments of ordinary internet celebrities. these were also the netizens 'fixed impressions of little qin.

Of course, many crop researchers saw the video and published it.

little Qin is doing an experiment on the combination of genetic jumps. This is an experiment that only a doctor can do.

many researchers can't achieve such a perfect result with a 1% error in the genetic transition combination experiment. Little Qin is very good.

"..."

In the end, Qin Lin could only helplessly put down his phone. It was already a hot search, so he could only wait for the popularity to pass by itself.

As expected, the popularity of this incident only lasted for a week before it passed.

...

A new day had arrived.

Qin Lin woke up early in the morning and looked at Zhao Moyin, who had already woken up. He then said in a soft voice, "Why are you up so early? Don't you want to sleep a little more?"

Zhao Mochen's stomach was already getting bigger and bigger. Pregnant women at this stage of their pregnancy would become more and more anxious and sensitive.

Qin Lin almost always spoke to her in a soft voice, not daring to speak too loudly.

Many pregnant women's depression was actually caused by their husbands.

After waking up and washing up with Zhao Moyan, Qin Lin took Zhao Moyan out of the room. When they arrived at the dining room, Lin Fen had already prepared a sumptuous breakfast and soup.

The soup was for pregnant women.

Qin Lin ate some porridge and took care of Zhao Moyi for a while before leaving the inner area of the manor and heading to the office.

After that, he controlled his game character to do his daily missions as usual.

But now, the first place he controlled his character to go was the library to check on Mary's status.

Mary was still at the front desk.

Mary hadn't come out from the front desk since the riddles at the library's opening, and he didn't know when she would trigger the riddles again.

Qin Lin controlled his character to go to the goddess behind the ore town.

Today, it was raining on the trees of goddess mountain, and the rain was quite heavy.

If it was in reality, he would definitely run home. However, this was a game. No matter how heavy the rain was, he had to control his game character to go there.

Under normal circumstances, there might be unexpected gains in a scene with different weather conditions.

Today, a few oak trees had respawned on the goddess mountain. Other than that, there were only ordinary trees.

Then, he went to the area where the mountain products were spawned. As soon as he entered the area, he saw that several plants had been spawned.

As expected, special weather often brought special gains.

These plants were all covered in fruits, and the fruits were almost hanging down.

Moreover, as he controlled his character to get closer, he also noticed that these plants were different. Under these plants were small puddles and muddy soil.

In the past, the mountain products had grown in the soil. Now, the circle of puddles and muddy soil seemed to have a special meaning.

When Qin Lin controlled the game character to stand in front of the plant, he found that the plant was much taller than the game character. It was in the shape of a 2D animated character and seemed to be a rice seedling.

This wasn't right.

How could the rice seedlings be so tall?

However, he was also very curious about what it was.

Qin Lin thought about it and controlled his game character to collect the plants. He immediately received a message.

congratulations, you have collected 10 catties of mutated rice seeds!

congratulations, you have collected a mutated rice seed!

" ? ? ? "Qin Lin was really surprised when he saw the notification.

Is this really f * cking rice?

But the rice had grown so tall?

So, this was why it rained, and why there were puddles and muddy soil?

Wouldn't the game producers just put the seeds in the seed store if they wanted to do this?

Creating such a scene was a waste of money and manpower.

Therefore, the game producers still needed to complain.

Qin Lin immediately controlled his game character to go to the next mutated rice plant and pick it!

[congratulations, you have collected 12 catties of mutated rice!]

[congratulations, you have collected 2 mutated rice seeds!]

This time, there were two seeds.

Qin Lin continued to control the game in the mountain goods area and picked all the mutated rice plants.

[congratulations, you have collected 15 catties of mutated rice!]

[congratulations, you have obtained 1 mutated rice grain!]

...

[congratulations, you have obtained 1 mutated rice grain!]

Qin Lin spent some time collecting all the mutated rice that had been refreshed in the mountain goods area. In the end, he got seven mutated rice seeds and 75 catties of mutated rice.

moreover, the seeds were different. due to the game's characteristics, the mutated rice was actually removed from its shell after being collected.

he was also very curious about the situation with the mutated rice.

He controlled his game character to return to the farm, and the first thing he did was enter the game. Then, he saw the note:

[mutated rice: normal!]

[this is a rice seed that someone dropped on Mount goddess. It's a mutated rice that was created by the special climate and environment of Mount goddess!]

mutated rice seed: normal!

[this is a special type of mutated rice seed that can be used to grow special mutated rice. It can grow as tall as sorghum and produce seeds the size of peanuts!]

These were all ordinary items.

It was Qin Lin's first time collecting mountain products, and he always got ordinary things.

However, when he saw the remark, he suddenly thought of a sentence: He Xia's cool dream!

[Chapter 940 The Significance Of The Mutated Seed! Li Kai As A Father! 1](#)

Qin Lin finally understood why the mutated rice plant was taller than the game character.

After all, it was a crop that could grow as tall as sorghum.

Moreover, not only did it grow taller, but the rice grains were also very large, the size of peanut kernels.

With all of these added together, even if the seeds were just ordinary, they were still very shocking. Moreover, they were big and had extremely high production attributes.

What is our country's biggest dream in Rice Research? Wasn't it just to develop this kind of rice?

Moreover, countless property scientists were working hard to achieve this dream.

Now, because of this game, he seemed to have obtained the seed to fulfill his dream.

There were no special requirements for the note of this seed, which meant that it could be planted like a normal rice seed. The key was that it had an attribute of extremely high yield.

Although the seeds were only of normal quality, 99% of the people eating rice were of normal quality too.

With that thought in mind, Qin Lin looked at the harvested mutant rice. The rice grains were crystal clear, each like a peanut, and there was a rice fragrance.

just this alone would be considered very good even among ordinary rice.

Qin Lin thought of something and logged out of the game. He then took a bag and re-entered the game, holding a small bag of mutant rice.

The appearance and aroma of the rice could determine that it was a good type of rice, but to truly determine whether the rice was good or not, one had to personally cook it and eat it.

After exiting the game, Qin Lin carried the rice out of the office and went to the inner area.

At this time, Lin Fen was accompanying Zhao Moyu on a walk in the manor. Pregnant women should often take a walk during their pregnancy, which would be good for the fetus.

This would make it easier for him to deal with it.

Otherwise, it would be hard to explain why he suddenly took out rice the size of a grain.

After returning to the inner area, Qin Lin went into the kitchen and took out a pot. He then washed the mutated rice and put it into the pot to cook.

After a while, the fragrance of rice wafted out from the pot.

The fragrance of the rice was not as strong as that of the grade 1 and 2 Xiangshui Gong rice. It was just like the fragrance of ordinary rice, but it was much more fragrant.

Therefore, the rice had an advantage over ordinary rice in this regard.

Not long after, the rice was ready.

Because the rice grains were bigger, the rice was distributed in a more layered manner. The rice grains expanded after cooking and were even bigger than the peanut grains.

Qin Lin took a bowl of rice and tasted it.

The taste and texture didn't surprise him too much. After all, he ate quality 2 Xiangshui Gong rice every day, so ordinary quality rice didn't really make him feel much.

However, he had to admit that the taste and texture of the rice would definitely be better than the rice that 99% of people ate daily.

That was enough.

After all, the planting conditions of Xiangshui tribute rice were too harsh, and the yield was not high. Not everyone could eat it often.

On the other hand, the mutated rice could be promoted all over the country so that all ordinary people could eat it. A better taste and texture would be an improvement.

With a higher yield, it could replace the current rice. After all, the remarks of the seeds and the high yield were very good.

At that time, our country will no longer need to import food from foreign countries.

at this stage, there were so many people who had nothing to do. in addition to the credit of elder yuan's research on rice, it was also related to the country's annual import of food from abroad.

Moreover, the country imported a lot of food from abroad every year.

Qin Lin seemed to have thought of something again. He looked at the game in his mind again and controlled his game character to go to the processing machine Experience Store.

There was a seed processing machine in the experience Hall.

Aren't you going to play with these seven Seeds? Maybe it would increase the production by two times.

At that time, not only would they not need to import food, but they would also completely change the world's food structure.

Moreover, if the food distribution changed, the other distribution would also change.

There was a saying that food was the most important thing to the people. Everyone in the world had to eat, and in many places, people could not afford to eat.

naturally, the processing machine had a chance of failure. if it failed, the few seeds would be gone.

However, if the mutated rice could appear once in the mountain cargo area, there would be a second mutated rice. Even if the processing of the seeds failed this time, there was still a chance to harvest the seeds.

Therefore, it would be better to get it all at once.

moreover, he could process the seven seeds separately. he couldn't possibly fail all seven times, right?

Qin Lin controlled his game character to the front of the seed processing machine in ore town and started operating it directly. Then, he put all the seeds into the processing frame.

[do you want to process the seeds?]

Qin Lin chose "yes" decisively.

[the seed is being processed. Sorry, the processing of the seed has failed!]

The first processing failed.

He immediately put in the second seed for processing.

[the seed is being processed. congratulations on your success. you have gained a 40% increase in mutant rice production!]

.....

[the seed is being processed. Congratulations on your success in processing the mutant rice seed. You have obtained a mutant rice seed that has doubled production!]

Qin Lin processed seven mutant rice seeds in a row. When he saw the final result, he clenched his fist.

in the end, he still got a seed that could double the yield.

Qin Lin immediately controlled his game character to return to the farm. Then, he entered the game with a thought and took out the seven Seeds.
