

The Amazing Son In Law Chapter 6796

By / May 25, 2024

Homula nodded and said, "These are all very valuable suggestions. We will definitely consider them seriously and try to implement them as soon as possible."

As he spoke, Homula looked at hank and asked, "Professor hank, since you have such in-depth research on new energy, are you interested in working with us on this project?"

Without charlie Wade's signal, Homula had already seen the great value of hank.

He and the An family had already made the decision when they acquired Gao Heng. After all, it was a multi-billion dollar project with a very high professional threshold. They had to find a real expert to run the project. Otherwise, if they just relied on money and impulsiveness to undertake such a large project, the result would definitely be a complete failure.

Even if he hadn't met hank today, he would still have to arrange for a headhunter to look for a suitable trader across the country. However, he didn't expect that charlie Wade would send a top candidate as soon as they returned to Jinling.

hank smiled and declined, "To be honest with you, Mr. An, my mind is now focused on teaching and educating people. Besides, I have been away from practical operations for too long, and all I can talk about are theoretical matters. If I really have to manage the business, I don't have the ability to do so."

Mr. An, who had been silent, waved his hand and said seriously: "Professor hank, don't underestimate yourself. I think you are definitely qualified for this position. The key is whether you want to do it;"

"If you really only want to teach and educate, then no matter what we say, you may not agree;"

"But if you still have a little interest and expectation in managing such a large project, you must consider it carefully;"

"We have invested 3 billion US dollars in Gaoheng Automobile. If we include the power battery, we have invested over 10 billion US dollars. But for this matter, we can invest another 30 billion US dollars. In that case, it will be 40 billion US dollars. This scale may not be available in any new car company in the world. Even the world's top dancers may not be able to show their grace on a 40 billion US dollar stage. This opportunity may only come once in a lifetime!"

The Amazing Son In Law Chapter 6797

“The most advanced AI model?!”

When hank heard this, his brain exploded instantly!

He has been on Wall Street for many years. When he worked in an investment bank, he invested in a large number of innovative technology companies and helped many technology companies to ring the bell on the Nasdaq. Therefore, he has a very keen sense of high-tech development around the world.

The popularity of AI was unprecedented some time ago. Although he had left the venture capital circle for a long time at that time, he still kept a close eye on AI while teaching in Aurous Hill.

He knew too well what kind of application prospects the real AI model had, but he never expected that charlie Wade actually had the AI model that all the Internet companies in China were sighing about!

He asked charlie Wade excitedly: “charlie Wade, can Rothschild help you solve all the software and hardware problems? High-computing graphics cards are hard to come by now. Many domestic companies are trying to buy them one by one around the world. The demand for this hardware is too great!”

charlie Wade smiled and said, “I don’t have to worry about these. The Rothschild family will help me solve all the software and hardware problems. Even the data center was purchased from Microsoft by them. It will probably be officially operational in more than half a month.”

“Oh my God!” hank exclaimed, “This is such a big surprise! If it can really be applied to cars, I think there must be a lot of room for development!”

Then he asked charlie Wade: “Are you sure that the Rothschild family can obtain the authorization for the application of this AI in the automotive field?”

charlie Wade said: “It’s not a big problem. I can solve it. If they don’t want to grant the license, we can still mediate with them. At worst, we can use it ourselves and not use their name. But Uncle Hank still needs to analyze how much practical application value AI has in the automotive field.”

The Amazing Son In Law Chapter 6798

By [_](#) / May 26, 2024

“Once car sales continue to grow, every car owner will provide valuable big data for the smart driving database every day. With the support of AI, this big data has great potential for imagination;”

“If I’m driving past a certain location on a certain road and my car is jolted significantly, the sensor will immediately upload the sensor data and the road scene taken at that time to the processing center via the cloud after capturing the shock absorption anomaly. The AI model in the processing center can determine in a very short time that the road surface at this location is damaged to a certain extent. It can immediately mark this problem on the high-precision map used by the car computer and send it to the vehicles in the real-time location nearby. When other car owners drive close to this location, the car computer will be able to issue a reminder to inform them that the road ahead is undulating and recommend how much they should slow down to pass safely. “

“If it is smarter, our car computer may be able to make a direct judgment when my car approaches an abnormal road surface, reminding me to slow down, and upload the situation to the cloud to remind all vehicles passing by to slow down;”

“If I’m driving on a highway section and the left lane of the highway section is closed for maintenance, my vehicle will immediately upload the situation while avoiding it, and a few seconds later, the situation will be delivered to the vehicle behind me;”

“If the repair is completed a few hours later and another of our vehicles passes by here, the AI will compare the cloud information with the real-time road information and find that the road has been unblocked, and will immediately upload it to the cloud, so that the following vehicles will not receive the road repair reminder;”

“If our computing power is strong enough, we can warn the vehicles behind us within a few seconds even if there is a foreign object spilled on a certain lane on a certain road section, or even let the intelligent driving system directly help the vehicles behind us change lanes to avoid the collision. Then our vehicles will be able to avoid traffic accidents greatly.

“If there is enough big data on the road, when users use our car computers for autonomous driving, they will find that our vehicles can autonomously foresee many road conditions and autonomously adjust the driving of the vehicle. In this way, the intelligence of our vehicles will far exceed that of our peers;”

hank said a lot, and finally couldn’t help but continue excitedly: “In short, I personally feel that AI has endless application possibilities in the automotive field. There is nothing AI can’t do as long as we can’t think of it. If this thing can really be put into use, it will become an absolute king bomb in the field of new energy.”

The old man at the side smiled and asked, “Professor hank, look, the An family and charlie have set up a platform for you. Not only can they provide the best hardware and financial foundation, but even the most advanced AI models can be integrated into it. You are so passionate about this, why don’t you take this opportunity to do the big business you have always dreamed of?”

hank was also a little excited at this time.

The Amazing Son In Law Chapter 6799

By / May 26, 2024

But right now, isn't this a perfect opportunity tailor-made for you?

Seeing that hank was obviously moved, charlie Wade immediately said to Homula: "Second uncle, Professor hank is about to get married. After marriage, he may not want to be separated from his lover often. Is it possible for us to set up our future headquarters in Aurous Hill?"

Homula said without hesitation: "Of course there is no problem! Since the An family has publicly returned to China, and everyone is very clear about the marriage relationship between us and the wade family, why not let the An family and the wade family jointly invest in a company with its headquarters in Aurous Hill, and then merge Gao Heng's assets into the name of this company."

As he spoke, Homula said to hank, "By the way, Professor hank, Gao Heng's production line is in this province, only more than 200 kilometers away from Aurous Hill, and it only takes about three hours to drive there. If you join us, you can work in Aurous Hill and go to the production line occasionally, which won't be very troublesome. Moreover, I think Gao Heng's current production line, technology and automation level are obviously a bit behind compared to Remi, and upgrading is imperative. Since we have set up our headquarters in Aurous Hill, we might as well acquire land in Aurous Hill and build a most advanced production base. This won't take long. Tesla's super factory in China started construction and went into production in the same year. I believe we can also do this in Aurous Hill!"

hank was stunned and asked: "Are we really going to build a super factory in Aurous Hill?"

Homula said with a smile: "Tesla's first phase investment in China's super factory is less than 20 billion yuan. We will directly invest 50 billion yuan. Let's do something big!"

After that, he asked charlie Wade: "charlie, what do you think?"

charlie Wade smiled and said, "Since it is a joint venture between the An family and the wade family, let's take 20 billion US dollars in cash as the first phase of investment. While establishing the headquarters and building a team in Aurous Hill, we will also acquire land to build our own office building and production base, and proceed simultaneously."

After that, he asked hank: "What do you think, Uncle Hank?"

hank subconsciously said: "I don't think the factory needs to be built in Aurous Hill."

The Amazing Son In Law Chapter 6800

By / May 27, 2024

Although Charlie Wade was not a native of Aurous Hill, he had lived in this city since he was eight years old, and his feelings for this place had already surpassed those for Eastcliff.

For him, since he was going to invest in cars with the An family, it was natural to choose Aurous Hill.

Not only could it create a large number of high-quality jobs for Aurous Hill, but it could also bring a lot of fiscal revenue to Aurous Hill.

After listening to his idea, Hank also agreed and said, "If the first super factory is to cover the domestic market, then it is indeed unnecessary to build a factory by the sea. Aurous Hill is located at the junction of the north and the south, and land transportation is still very convenient. Moreover, Charlie Wade is grateful to Aurous Hill, so choosing here is killing two birds with one stone."

Charlie Wade also nodded and said, "To be honest with you, Uncle Hank, the city of Aurous Hill has treated me well. I also hope to do my best to do something practical for Aurous Hill. If I can contribute to the development of Aurous Hill, it would be great."

Hank said, "If you want to contribute to Aurous Hill, investing in high-end manufacturing is the best choice. It can not only solve a large number of jobs, but also promote the city's income, consumption and real estate growth. It is all good, and the higher the manufacturing. The more industries there are, the less pollution there is to the environment, and it does not need to consume too many natural resources in Aurous Hill."

Then Hank said, "Oh, yes, if our investment is large enough and the development is good enough, it can even drive the development of education in Aurous Hill to a large extent. On a smaller scale, we can cooperate with local vocational and technical colleges to set up disciplines for positions related to automobile manufacturing. A factory with more than 10,000 people cannot require all of them to have undergraduate degrees. Many positions require professionally trained skilled workers, and technical secondary schools and junior colleges are very suitable. At that time, we can help these vocational and technical schools to open relevant majors, learn basic knowledge for one or two years, and then intern on our production line for a period of time. After graduation, they can start work, which is also very attractive to many young people."

"Moreover, there are many universities in Aurous Hill, which can be ranked in the top four in the country. Southeast University, University of Science and Technology, University of Science and Technology, and University of Technology all have majors related to mechanical engineering, and a large number of high-end talents are output every year. Once we reach an investment scale of tens of billions of RMB, we can have

in-depth cooperation with these universities. They can adjust the teaching direction to be closer to the requirements of our job practice, and we can also provide them with top internships and working environments, and even fund them to conduct automobile-related scientific research and share scientific research patents with them. This is an absolute win-win cooperation, and everyone can benefit greatly from it!"

charlie Wade praised: "Uncle Hank has considered it very comprehensively. Cooperating with secondary technical schools and colleges to train technical workers, and cooperating with universities to train high-end talents and incubate scientific research projects, this will comprehensively solve our future talent reserve problem. In the future, there will be a steady stream of outstanding young people joining our company. To a certain extent, it can also increase the attractiveness of Aurous Hill universities to outstanding candidates across the country."

"Yes!" hank nodded and said, "The development of a city is like this, with the continuous accumulation of benefits and progress layer by layer. This is why all places are trying their best to attract investment, and the bigger the company they attract, the more resources the city can provide. The educational cooperation I just mentioned will be implemented very quickly once the city helps to make connections. It is very likely that the relevant majors will be able to complete preparations this year and directly open for enrollment next year."
