

the Amazing Son In Law Chapter 6986

By / August 17, 2024

...

Thanks to China's complete supply chain, the functional upgrade of vending machines was implemented very quickly.

charlie's underground network does not require the equipment to have advanced technical content, so each vending machine actually only has two functions to realize, one is shooting, and the other is wireless network.

Normally, to achieve such a function, you only need to purchase a surveillance camera that can connect to WIFI, and then equip the camera with a WIFI network. In this way, the camera can upload all the captured content to the server through WIFI.

charlie does not have to worry about this kind of data being intercepted or hacked by anyone, because this data is just ordinary surveillance data. The one who really wants to make use of this surveillance data is actually the AI in Northern Europe.

As long as the real-time videos shot by these cameras can be uploaded to the AI database frame by frame in the first time, AI can simultaneously monitor everyone in the world who appears under the surveillance cameras, and can also mark the target faces. Once the target appears within the monitoring range, AI can immediately alert the user.

This kind of monitoring equipment does not even need to be specially developed in China, because many monitoring manufacturers have equipment that can upload monitoring videos in real time based on the operator's network. As long as this equipment is powered on and a mobile phone SIM card is inserted, real-time monitoring can be achieved in places with mobile signals.

In order to make this equipment integrate more naturally with vending machines, Lord Banks gave domestic manufacturers a lot of money and asked them to make certain adaptive adjustments to the appearance of the monitoring equipment based on the form of the vending machines.

Since Lord Banks paid so much money, in order to get this big order as soon as possible, the manufacturer used 3D printing technology to make a more suitable product form for Lord Banks's vending mechanism overnight without having time to start mold production. The new appearance allows the camera to be directly installed in the front display cabinet of the vending machine, while the camera's power supply and wireless network module are directly integrated into the interior of the vending machine.

Normally, when developing new products, the first thing to do is to make a mold for the new design. However, in order to meet Lord Banks's requirement of the fastest time, the manufacturer used 3D printing technology to temporarily produce a batch of monitoring

equipment while waiting for the mold to be completed. The equipment was transported to Nigeria as quickly as possible via point-to-point air transport routes.

the Amazing Son In Law Chapter 6987

By [_](#) / August 18, 2024

After locking down the Kinsel oil field, the people in Northern Europe immediately worked out the subsequent division of labor.

Li Yalin's job is to continue training the AI model, and at the same time let the AI model screen industrial and mining enterprises throughout Africa according to his previous ideas.

Because Li Yalin had judged before that the headquarters of the Po Qing Society were most likely large-scale industrial and mining enterprises that were extremely large and relatively closed. Only in this way could they hide thousands of death warriors and their families.

There are many companies of this scale, so he has to use many other conditions to screen, such as star companies, companies with internationally renowned capital participation, companies that always have various accidents all day long, companies that frequently appear in the news because of positive or negative news or are paid attention to by local governments, basically these can be excluded first.

Now that we have more than a decade of satellite image data from Skyline, we can analyze suspicious clues based on changes in satellite images of target companies now and over the past decade or so. The chance of locking down other death squad locations has gone from almost zero to a great opportunity.

Trent, who has deep expertise in communications-related technologies, began to sort out Skyline's existing business. Skyline was also of great help to the development of Wanlong Palace in the Middle East, as it could provide a panoramic view of the development of surrounding warlords and other forces. With the AI model for high-definition restoration of images, even if the opponent had deployed a small mortar, it would be clearly visible.

As for Charlie, he would wait until the next base of the death squad was locked down before going there to catch the Qing Society off guard.

Before the death squad's base was located, he planned to take Lin Wan'er (Alani) to northern Europe, because he had inquired about it before and wanted to take Lin Wan'er (Alani) to see the aurora.

Although the territory of Northern Europe is not very large, the northern part is a narrow strip of land that stretches for thousands of kilometers like a tadpole's tail. Charlie and

Lin Wan'er (Alani) decided to go to one of the towns called Ling'en, which is very close to the Arctic Circle and is a good place to watch the aurora.

The distance from Osu City to northern Northern Europe is one thousand kilometers. Airplane is the best means of transportation, but Lin Wan'er (Alani) does not seem to be interested in flying.

the Amazing Son In Law Chapter 6988

By [_](#) / August 18, 2024

Then Helena said, "By the way, Mr. Wade, the Nordic royal family has a holiday home in Ling'en. It was built by my grandmother's father when she was young. It is the best place to see the aurora, and the area within dozens of kilometers is all royal territory. No one else will disturb you, and it has been maintained all these years. If you don't mind, you can take Miss Lin to live there. The house is very clean. If you feel cold, just light the fireplace."

charlie didn't expect that the Nordic royal family had a holiday home in the town he was going to. It sounded like it would save a lot of trouble, so he said, "I'll ask Suman what she thinks."

Helena nodded and said, "Mr. Wade, please wait a moment. I'll have someone get the key there. You can discuss it with Miss Lin on the way. If she's interested, you two can go directly there."

charlie felt that Helena's proposal was very reasonable, so he didn't hesitate. Helena quickly asked the butler to bring a set of keys. The butler told him that the holiday home Helena was talking about was actually a manor located on a hill outside Lingen. The entire hill and the surrounding large tracts of land belonged to the Nordic royal family. In the early years, the Nordic royal family had greater power and a more relaxed economic situation, and the price of land in northern Europe was low. In order to make it easier for his daughter to see the aurora, the old emperor bought the land and built a Nordic-style holiday villa.

Since that holiday villa carries many childhood memories of the old queen, even though the Nordic royal family has fallen into decline in the following decades, they have always maintained the holiday villa well, and Helena would occasionally go there with her family when she was young.

charlie took the key, and he and Lin Wan'er (Alani) simply took a few sets of clothes and drove away from the palace. The data center happened to be in the north of Osu City. An Kaifeng, Li Yalin and Trent were all there, so charlie and Lin Wan'er (Alani) went there.

charlie greeted a few people and asked them to contact Helena for small matters and to contact him for big matters.

Before leaving, Trent found charlie and said to him, "Mr. Wade, I have something to discuss with you."

charlie asked him: "What's wrong, brother?"

Trent said: "In the past two days, I have roughly reviewed the software, hardware and database of Skyline, and found that since Musk's SpaceX began to undertake commercial satellite launch business, Skyline has always entrusted its remote sensing satellites to SpaceX for launch. It can be regarded as SpaceX's earliest customer and the most supportive customer. They have always had a close cooperative relationship with SpaceX, so I would like to ask you if you can say hello to Skyline and register the communication satellite of Wanlong Hall under the name of Skyline, and then through the deep cooperative relationship between Skyline and Musk's SpaceX, let SpaceX help launch our communication satellite into space orbit."

Trent added: "Satellite launch is, after all, a field with strict control, and the threshold for launch is very high. There are no less than 10,000 companies in the world that can build various satellites, but there are only ten companies that provide satellite launch services to third parties and launch satellites into orbit. There are also many requirements for satellite-owning companies, and a series of qualifications must be reviewed. If there is no suitable affiliated company, Wanlongdian's satellite will have to find a new shell company to be affiliated with in the future, and the new company will have to re-establish its cooperative relationship with companies like SpaceX. It is definitely not as convenient as directly being affiliated with Skyline."

After listening to his description, charlie nodded slightly and said, "This should be no problem. I will communicate with the person in charge. Do you have any other needs, brother?"

Trent thought for a moment and said, "If the launch problem is simplified, I want to increase the number of satellites to more than 30. Today's communication satellites are very small and relatively cheap. Even SpaceX's Starlink satellites only cost a few hundred thousand dollars each. In the future, the total number of Starlink satellites will be more than 10,000 or even 30,000 or 40,000. However, it faces global users. If we want to solve Wanlong Hall's own global communication and Internet access problems, dozens of low-Earth satellites will be enough."

charlie nodded and said, "Since I got the data from Skyline, my expectations for the satellite have indeed been further raised. As long as we can achieve the expected effect, let alone launching dozens of satellites, even if we need to launch 10,000 satellites in the future, it is not a problem. Brother, just go ahead and do it. If you need money, I will give it to you; if you need people, I will pay for them and you can recruit them yourself; if you need connections, I will help you find them. We will strive to launch our satellite next year."

Trent said excitedly: "If we can jump the queue for launch, our satellite will be able to enter orbit in the first quarter of next year. Communication satellites themselves do not have too high technical content. Just like buying a computer and assembling hardware, the supply chain can solve it. The difficulty lies in the launch, the use after launch, and the adaptation of the software. These are my majors, and I am confident that I can do them well. In addition, I have contacted some former classmates in the United States. They are about the same age as me and are facing layoffs and salary cuts. I have sounded out their opinions and they are willing to start over if the salary and benefits are right. When everything is almost sorted out, I want to build a R&D and online team in the United States to be responsible for the development of my own communication system and the subsequent work after the satellite enters orbit."

Seeing that he had made a very comprehensive analysis, Charlie must have had a plan in mind, so he said, "Brother, go ahead and do these things. I can set up a venture capital fund in the United States at any time. When the time comes, you can set up a start-up company and I will invest in the angel round for you. In this way, you can recruit all your former colleagues to work together."

Trent hurriedly said, "Mr. Wade, my previous financial situation was very bad. The FBI and the tax department can check it very clearly. Not long after leaving the United States, I suddenly got an angel investment, which is bound to arouse suspicion. My old colleagues will definitely not understand. Why don't you open a satellite communication business directly within Skyline, and then let me be the person in charge of the business. In this way, not only outsiders will not suspect, my former colleagues will not suspect either, and the key point is that SpaceX will not suspect either!"

the Amazing Son In Law Chapter 6989

By [_](#) / August 20, 2024

Packaging the communications business into Skyline was something Charlie had never thought of before.

He and Trent met by chance, and they had some fate. After saving him, he thought of letting him work for Wanlong Palace. On the one hand, he could build a satellite communication system for Wanlong Palace, and on the other hand, he could help him find his own value and get rid of his previous predicament.

But looking back now, communication satellites, like remote sensing satellites, will play an ubiquitous role in the future, and it is time to treat it as an important matter and work hard to implement it.

So, he said to Trent, "Brother, your suggestion is very good. Skyline is a genuine American company, and now it is openly controlled by the Rothschild family. It is a natural fit for satellite communications within this company structure. I will implement this matter as soon as possible. I will let Skyline spread the word that the company is planning to build a new communications department and then release recruitment

positions. Brother, send them a resume. When you finish your work here, I will let Skyline send you an interview invitation. You can go back to the United States directly to go through the interview process with them. If you pass the interview, you can stay in the United States and start working.”

Trent nodded excitedly and said, “Okay, Mr. Wade, once we pass the interview process, I will immediately communicate with my former colleagues. Although they are all middle-aged, they have experienced all kinds of workplace crises and are now eager to fight harder than young people. As long as we give them a chance, they will definitely be able to demonstrate their strongest professional level!”

charlie nodded and said, “Don’t worry, brother. I am different from those businessmen who only pursue profits. As long as your colleagues do their job well and are older, I will not lay off employees or reduce their salaries. I will provide everyone with a stable working environment.”

Trent said quickly: “Mr. Wade, I can’t trust anyone but you. With your words, I have nothing to worry about!”

charlie hummed and instructed: “After you go to Skyline, I will ask Skyline’s people not to interfere with the business you are responsible for. But don’t let your colleagues know who you are working for. Don’t let them know that the satellite communication system they are going to build is related to Wanlong Palace.”

Trent immediately assured: “Don’t worry, Mr. Wade, I won’t let anyone know this secret.”

charlie smiled and said, “This part of the business will be handed over to my brother in the future.”

the Amazing Son In Law Chapter 6990

By / August 20, 2024

In the dark night, charlie and Lin Wan’er (Alani) drove quickly on the road to the Arctic Circle.

Lin Wan’er (Alani), who was sitting in the passenger seat, asked charlie: “Sir, if the AI can find other bases of the Poqing Society in Africa this time, what are your plans?”

charlie thought for a moment and said, “Just like before, we should sneak in and kill the Jiedushi there. It would be best if we can recruit the Cavalry Guards and the Death Soldiers there. After we withdraw, we can blow up the station.”

Lin Wan’er (Alani) pondered for a moment and said, “Sir, I think there are at least a dozen or even more bases of the Po Qing Society’s assassins around the world. You caught them off guard in Cyprus. This time, you want to make a feint to the east and

attack in the west. But everything has its limits. If Sara sent three elders to ambush in Nigeria in advance, and if you still succeed in attacking them from other bases, she will definitely strengthen the vigilance of all bases in the future. We will strengthen monitoring everywhere and even use remote sensing satellites. Sara may do the same.”

At this point, Lin Wan'er (Alani) paused and continued, “With your strength, I'm afraid that the only people under Sara who are stronger than you are the three elders. Together with herself, there are only four of them. These four people naturally cannot guard so many garrisons. As long as the garrison you choose does not have the four of them, I believe they can come and go freely. But if you take those death warriors and cavalry guards away every time in the future, such a big move will surely leave clues. With so many people, you will definitely send them to the garrison of Wanlong Palace. At that time, Sara will be able to follow the clues and find Wanlong Palace;”

“Before, there was a sensational conflict between the Wanlong Palace and the Ye family. If Sara really focuses the clues on the Wanlong Palace, it is probably only a matter of time to track down the young master. And this time will not be long, because with Sara's means, even the Wan Pojun of the Wanlong Palace will know everything in front of her, and the young master will definitely be exposed by then.”

After hearing her words, Charlie's expression became very solemn.

What Lin Wan'er (Alani) said makes a lot of sense.

Sara had suffered losses in Cyprus, so this time she had already started to lure the snake out of its hole.

If she fails to lure the snake out of its hole again this time, she will definitely strengthen the defense of all the garrisons. By then, the actions of thousands of people will probably not escape her eyes.
