

the Amazing Son In Law Chapter 7001

By / August 25, 2024

“Any discovery?”

charlie was delighted when he heard this, and asked her quickly: “Did Inspector Li tell you what the discovery was? Have you confirmed that a new death squad base has been found?”

“Yes!” Lin Wan’er nodded and said: “Inspector Li said that AI has locked onto a phosphate mine in Morocco, and said that he will discuss the details with you in person after you return.”

charlie thought for a moment and asked her: “If I remember correctly, Morocco should be an African country, right?”

“Yes, sir.” Lin Wan’er said, “Morocco is in the northwest of Africa, across the sea from the Iberian Peninsula where Spain and Portugal are located. This country is rich in phosphate, accounting for about 70% of the world’s reserves.”

charlie nodded slightly and said, “Since this country is rich in phosphate, there should be many phosphate mines in the country. The Qing Dynasty will station its death squad there, which is relatively hidden. It seems that it

is almost certain.”

Lin Wan’er asked him, “Sir, since it is a serious matter, let’s hurry back now.”

charlie said, “Don’t worry, don’t you still want to see the aurora? I also want to see if there will be any other changes in the aurora tonight. If there is no other abnormality, let’s drive back overnight.”

Lin Wan’er nodded slightly: “I will listen to your arrangements.”

Before it got dark, charlie and Lin Wan’er drove out together and had a simple meal. After returning, he couldn’t wait to continue meditating and practicing spiritual energy with hand seals.

After continuous practice last night, charlie was already very familiar with this set of hand seals, and he was able to operate it with ease.

After a few hours, the spiritual energy in his body had increased significantly, which made him more confident in this set of hand seals. He

continued to meditate and practice until night, when the aurora appeared again.

charlie and Lin Wan'er went out together, walked over a hill, and came to the place closest to the aurora.

The two stood under the aurora for a long time. The aurora in the sky swayed slowly like waves, but the strange scene yesterday did not happen again.

After waiting for a long time without seeing anything unusual, charlie said to Lin Wan'er, "Miss Lin, I guess this aurora won't give me any new clues. Let's pack up and go back to Osu City."

"Okay." Lin Wan'er agreed and said, "Sir, let me drive on the way back. While I drive, you can concentrate on meditating and practicing in the car."

charlie asked hurriedly, "It's only a dozen hours' drive, can you do it?"

"No problem." Lin Wan'er smiled and said, "Although my physical fitness is not as strong as that of a cultivator, it is definitely not comparable to that of ordinary people. Driving for more than ten hours in a row is no problem for me. You can rest assured, sir."

charlie thought so too, so he nodded and said, "Okay, then Miss Lin, please drive this long distance."

To charlie, he is now like a loser who has just mastered the way to make a fortune. Seeing that he has finally found a track to make money, he can't wait to run on this track without stopping for a moment.

the Amazing Son In Law Chapter 7002

By [/](#) August 25, 2024

What's more, Lin Wan'er (Alani) is not an ordinary girl. She has lived for three or four hundred years and can even fly a helicopter, so a long-distance trip is no problem for her. "

So, on the way back, Lin Wan'er (Alani) was responsible for driving, and charlie sat in the back seat to continue practicing.

When the two were about to arrive at Osu City, the overall spiritual energy in charlie's body had increased by nearly 20%. He said to Lin Wan'er (Alani) beside him: "Since this handprint can continuously generate spiritual energy, after I go back, I will try every possible way and at all costs to stimulate the hidden function of the ring.

Since I passed by the AI model factory when I came here, charlie called Li Yalin, who happened to be here, so charlie went straight here.

When they met, Li Yalin couldn't wait to say to charlie: "The model has locked on a very suspicious target. According to the model's own words, it can basically be confirmed by 99.99%."

charlie said: "Then I'll trouble Inspector Li to briefly introduce what the AI model has discovered this time and its thinking logic."

Li Yalin immediately turned on the monitor, clicked on some photos, and opened a satellite image of an area, and said to charlie: "Mr. charlie, this mining area is located in the central mining area of Morocco. This is one

of the four major phosphate mining areas in Morocco."

charlie asked him: "How many companies are there mining phosphate mines in this mining area?"

Li Yalin replied: "Mr. charlie, according to our investigation, there are a total of 8 mining companies in this mining area."

As he said, he clicked on a satellite image, which clearly showed that in this almost desert-like mining area, there were many mining companies scattered around. Even through the satellite images enhanced by AI, you can see the general situation of vehicles and personnel operating in the mining area.

Li Yalin pointed to one of the areas and said to charlie, "Mr. charlie, this is a phosphate mining company that AI seriously suspects. The name of this company is Duke Mining. This company has been established for 35 years. In the past 35 years, its scale has expanded several times."

charlie nodded and asked him, "Why did AI determine that it was the base of the Poqing Society's death soldiers?"

Li Yalin said, "First, AI ran a long list and searched for about 80,000 companies around the world that were capable of bearing the requirements of the Poqing Society's death soldiers. Then, combined with a large amount of massive data and the information of the skyline, it conducted a multi-faceted system analysis."

After speaking, Li Yalin paused slightly and opened the second picture, and said to charlie, "Mr. charlie, AI found that this company meets our judgment of the death soldiers' base in all aspects, and this company also has In order to solve the problem of high energy consumption, they applied for a license for wind power investment ten years ago and built six wind turbines in the mining area. In addition, they quietly renovated all the roofs ten years ago and replaced them with photovoltaic panels. They thought that it was because their energy gap was relatively large, but this place was not as rich in oil as Nigeria and could be used to generate electricity at any time, so they thought of wind and solar energy. "

charlie said, "These factors sound like suspicions, but it is not certain that the other party is really the base of the Qing Society's death squad. "

Li Yalin smiled and said, "So the most critical information is here. The Moroccan government banned the underground mining of phosphate mines 20 years ago. All the underground mining shafts and equipment were scrapped and sealed for large-scale surface mining, that is, underground mines were transformed into open-pit mines. "

"However, in the satellite data of the past fifteen years, this mining company was photographed entering a large transport convoy at least a dozen times, and the convoy was photographed transporting a large amount of materials. The unloading area was at the entrance of the underground mine that should have been abandoned long ago. In addition, the skyline also captured several trucks carrying a large amount of waste such as earth from the old underground mine to the open-pit mine area for dumping."

Li Yalin said, "If the other party is still secretly using underground mines for mining, then it is absolutely impossible to dump the mined phosphate ore back into the open-pit mine. This is completely a waste of effort;"

"And AI has analyzed that due to the advancement of technology and the development of industrial and mining equipment, shallow mining is higher than underground mining in terms of mining difficulty, mining cost and mining efficiency. Now if we continue to mine from underground, it will only be laborious and thankless, so most of the mines have closed the previous underground mines;"

"From the pictures on the skyline, we can see that the underground mines of other mines have not been activated in the past few years. Only Duke Mining has this one. After analyzing the satellite data, AI concluded that the Poqing Society transformed this mine and used its underground facilities that should have been completely sealed as a base for death soldiers. This base is also constantly expanding, so waste such as rocks and earth are constantly being transported out of it. Those convoys filled with supplies must be transporting supplies to the base!

By [_](#) / August 26, 2024

After listening to Li Yalin's analysis, charlie asked him: "Inspector Li, as an old inspector with so many years of experience in criminal investigation, do you think AI's analysis is reliable?"

"Reliable." Li Yalin nodded and said: "Although it does not have any direct evidence to prove that this is the base of the Qing Society's death squad, it has proved too many abnormalities here in multiple dimensions. Other suspects may have only one or two abnormalities. In that case, it can only be regarded as a high suspicion, but if many situations are abnormal, then its suspicion will increase exponentially, especially some key factors;"

Li Yalin said: “AI analyzed the database of the skyline. There is no regular mining company in Morocco that is still mining underground phosphates. There is not even any stealing. After all, open-pit mining is cheaper. Their underground mines have not shown any signs of being reactivated in all the databases in the past ten years. Locke Mining is the only company that was discovered by AI and is quietly working on underground mines. Relevant evidence shows that they did activate underground mines, but did not mine phosphates. This alone is extremely difficult to explain. “

charlie nodded and said, “The core of capital is profit-seeking. If something is unprofitable or even requires high costs, capital will never do it. This Duke Mining quietly activated a huge underground mine. The activation cost is high but it does not create any value. I think only the Broken Qing Society will have such a strong demand for a mine. “

Li Yalin said: “The area where Duke Mining is located is the largest mining area in Morocco. Although this mining area is not close to the sea, it has a very developed transportation thanks to the development of the phosphate industry;”

”The best road in Morocco is the road from here to the port, and there is also a dedicated phosphate transportation railway that goes directly to the port. Each train can load thousands or tens of thousands of tons of phosphate to the port for shipment to all parts of the world, and can also bring back a large amount of imported materials;”

”And Morocco’s geographical location is unique for the Po Qing Society. It is very close to southern Europe. Establishing a base here can cover the northwest of the entire African continent and the southern part of Europe. If you look at the map, the death base in Cyprus can just cover the Mediterranean region and northeastern Africa;”

Li Yalin opened the map and said to charlie: “We now know that there is also a death base of the Po Qing Society in Nigeria. This base in Nigeria can just cover the central region of Africa. AI uses Morocco, Cyprus and Nigeria as key points to produce a heat map. Take a look.”

Li Yalin tapped on the keyboard, and three red circles appeared on the original world map. The centers of the three red circles were Morocco, Cyprus and Nigeria, respectively, and the radius of the three circles, converted to actual distances, was about two thousand kilometers.

It can be seen that these three circles can cover part of Africa, but after the three circles are combined, no circle can cover southern Africa and Madagascar.

By [_](#) / August 26, 2024

"This..." Li Yalin said with some concern: "The movement of several thousand people is too big, and this mining area is not on the coast. It is really impossible to leave no clues..."

Then, Li Yalin said: "In my opinion, this matter is indeed very difficult, and it is very likely that the only way is railway. After all, it is the transportation of several thousand people. There is no ship, and the carrying capacity of cars and airplanes is not enough. Maybe only trains have a chance."

charlie asked: "If I ask you to transport these thousands of people, what will you do?"

Li Yalin thought for a while and said: "I will first find a way to find out the operation of the railway from here to the port, the loading and unloading process of railway freight, and the export procedures, approval process and loading process of phosphate ore exported from the port;"

"Since the railway is a dedicated line for transporting phosphate, it should be available to all mining areas. Either the mining area has its own freight train and pays the government for the use of the railway, or the railway is operated by the government and the mining area pays the government for transportation. In any case, it must be ensured that the individual mining area can run point-to-point freight trains. If Duke Mining often has its own trains to the port, the probability of transporting people out will be greater;"

"Assuming there is no problem with the special train, people may be transported to the port in batches through the special train, and then the loopholes in the port must be opened to ensure that people can be safely and secretly sent to the ship during the unloading and loading process. As long as people are on board, the probability of success will be much greater."

charlie murmured: "If the load of a freight car is 50 tons, a 5,000-ton special train will require 100 cars, and each car can hide ten people. A train can hide a thousand people. The efficiency is indeed very high. If the dead soldiers and their families are evacuated first, it is estimated that a few special trains can be done. The key issue is how to get the people hiding on the train safely on board without leaving any traces."

Li Yalin asked charlie: "Mr. Wade, are you going to Duke Mining for an on-site inspection? If you go, we can go together and observe this transportation line at that time to see the transportation and sea export process of Moroccan phosphate. Only by seeing it on the spot can we have a chance to find loopholes."

charlie Nodding, he said: "Since we plan to make a feint to the east and attack the west of the Po Qing Society, we must go to Morocco. Now the Po Qing Society should not expect that we have turned our target to Morocco. We can go there and observe carefully and then slowly formulate a follow-up plan."

After that, charlie said to Li Yalin: "If we go, it's best if only the two of us go, and don't bring anyone else. In addition, both of us have to change our identities and disguise ourselves. We have now begun to monitor all airports in Nigeria. Once something happens to the death squad base in Morocco again, the Po Qing Society will definitely get all the surveillance videos they can find in Morocco and eliminate them one by one. You are very famous in the Chinese circles in Europe and the United States, so it's better not to be noticed by them."

The Amazing Son In Law Chapter 7005

By / August 27, 2024

The next day, charlie and Li Yalin used the new identities Helena prepared for them and flew directly from Northern Europe to Lisbon, the capital of Portugal.

The destination of the two this time was Casablanca, the largest city and the largest port in Morocco.

More people know this city because of a classic movie with the same name as this city. This city is also one of the few modern cities in Africa, and it can at least be ranked in the top 10 in Africa.

On the plane to Lisbon, charlie sat in a semi-private compartment in the first-class cabin, covered himself with a blanket, and continued to make the hand seals he learned under the aurora to continue to improve his spiritual energy.

After arriving in Lisbon, charlie felt that his spiritual energy had increased significantly again, so he secretly decided that after the spiritual energy in his body increased a little more, he would start to transfer spiritual energy to the ring given to him by Lin Wan'er. Since the ring may have a greater use, he might as well fill it with spiritual energy and see what happens.

If it were in the past, charlie might not be willing to try to feed this bottomless pit with spiritual energy.

But now he has confidence in his heart. The handprints can continuously create more spiritual energy. In this way, he will have a continuous source of spiritual energy, and naturally he will not feel sorry for this little spiritual energy.

After arriving in Lisbon, in order not to leave traces that could be traced in the future, charlie and Li Yalin disguised themselves and used another set of fake identities. They took a small plane of an airline from Lisbon, flew over the Strait of Gibraltar, and arrived in Casablanca.

After arriving in Casablanca, the two of them used the identities of Portuguese Chinese businessmen to travel to Casablanca

They booked two rooms at the best hotel near the port.
