

The Amazing son in law

The Amazing son in law Chapter 7821

charlie wade had originally thought that he might as well find a comfortable hotel in Ushuaia and stay for a few days before going to the port to board the ship before it departed.

But then she thought, although Wu Feiyan's plane had never been to Ushuaia and had always traveled between Buenos Aires and other parts of the world, this place was not far from Buenos Aires and was close to the territory of the Breaking Qing Society. Whether it was herself, Lin Wan'er, or Yun Ruguo and Song Ruyu, they were all people that the Breaking Qing Society was eager to find, so it was not appropriate to be too conspicuous. Moreover, Asian faces were not common here, and four Asian faces together would be even more eye-catching.

So charlie wade agreed to the other party's suggestion. After they had all the luggage, the four of them boarded the minibus he had driven and headed straight for Ushuaia Port.

The four of them brought a total of ten suitcases, most of which were prepared by Helena at Lin Wan'er's request. She knew that charlie wade, Yun Ruguo, and Song Ruyu would spend most of their time cultivating, and time would pass in the blink of an eye for the three of them, while she would have to spend several months in the bitter cold of the polar night, so she naturally prepared more luggage.

March in Ushuaia is autumn, with relatively pleasant temperatures. charlie wade saw many backpackers on the road, each carrying huge and professional backpacks. Most of their outdoor gear was in very bright colors, making the streets quite distinctive.

charlie wade asked the middle-aged man who was picking him up at the airport curiously, "Are all these backpackers tourists going to Antarctica?"

The middle-aged man smiled and said, "These backpackers are tourists who just came down from Antarctica and the South Shetland Islands before winter. The

annual tourist season in Antarctica is from November to March. Only during these four months can commercial expedition cruise ships go to Antarctica. After this season, all commercial expedition cruise ships cannot enter the Drake Passage. It is already late March, which is almost the last window for withdrawal. After these tourists return to Ushuaia, some will fly directly out of Argentina, while others will choose to stay in Argentina for a while before leaving.”

Then, he introduced to Charlie Wade: “Ushuaia is the most important springboard to Antarctica, and it serves as a transit point for more than 90% of Antarctic tourists. Therefore, the tourism industry here is very developed, accounting for 40% of the local GDP. Half of the city’s jobs are used to serve ships and tourists traveling to and from Antarctica. Every year, at least 100,000 people go to Antarctica from here.”

As he spoke, he smiled and said, “However, it is not the peak tourist season in this small town right now, because Antarctica is about to enter the polar night of winter. Ordinary tourists will gradually leave Antarctica in the next half month, and many professionals from summer research stations have also begun to leave. We will also have to rush back from Antarctica in early April, so the four of you may only have three days to process the equipment, at most five days.”

Charlie Wade asked him, “If the ship departs from Ushuaia, how many days will it take to reach our research station?”

The other party thought for a moment and said, “If it goes quickly, it might take two and a half days; if it goes slowly, it might take three and a half days.”

Charlie Wade then asked, “Are the other research stations around our station summer stations or year-round stations?”

The other party said, “The research station we are going to is close to the Antarctic interior. Within a radius of tens of kilometers, there are almost all European research stations, and they are all summer stations. This is because the closer to the interior of Antarctica, the harsher the environment becomes. Therefore, most of the year-round stations are built on the Antarctic Peninsula and the surrounding islands.”

Charlie Wade felt a little relieved. Before coming here, he had researched the Antarctic winter climate and knew that the Antarctic climate was very strange. After entering the polar night, the winter here is so cold that even the air movement is greatly restricted. Therefore, during the polar night, the Antarctic continent rarely has wind and snow. It is almost all long, cold, and clear nights. On the contrary, Antarctica is windy and snowy in summer.

Winter nights in Antarctica are the kind of nights with temperatures below -80 degrees Celsius, no wind or snow, a sky full of stars and the aurora borealis, and an extreme tranquility.

In such a cold and clear environment, the visibility would certainly not be too bad. Under the stars and the aurora, the visibility would be at least several kilometers. If there were other countries' permanent stations nearby, it would probably not be so convenient for those people to come and go. If there were only the four of them left within a radius of tens of kilometers, then everything would be much simpler.
