

# The Amazing son in law Chapter 7846

The driver instinctively asked in Japanese, “Anada...”

Before the Japanese man could finish speaking, Wu Bolin (Bick) scanned the crowd with a sharp gaze and said coldly, “Who can speak Chinese? Come out and speak!”

As soon as he said that, the eyes of the dozen or so people present were momentarily stunned.

For Wu Bolin (Bick), calming these people down was just a matter of a single thought.

However, calming others down does not mean controlling them. Only those who can understand his commands will obey him and be controlled by him. Those who cannot understand his commands are now as if they have lost consciousness and can only stand still.

Soon, a young man stepped out from among those who had been restrained. He took a few steps forward, stood in front of Wu Bolin (Bick), and said in fluent Chinese, “I can speak Chinese. I studied at a university in China.”

Wu Bolin (Bick) nodded in satisfaction and asked him, “What’s your name?”

The other person respectfully replied, “My name is Matsushita Heikichi.”

Wu Bolin (Bick) waved his hand dismissively: “What Matsushita and Matsushita? From now on, you’re a lackey. Do whatever I tell you to do, and address me as ‘this humble one,’ understand?”

Matsushita Heikichi immediately replied with utmost devotion, “I obey your command.”

Wu Bolin (Bick) grunted and asked him, “Hey you lackey, how many people are on your ship in total?”

Matsushita Heikichi said, “There are 26 crew members on board, as well as 22 members of the scientific expedition team.”

Wu Bolin (Bick) frowned and asked, “I just had someone shout for help from the fishing boat, why didn’t you help?”

Matsushita Heikichi quickly replied, “It’s not that I’m unwilling to help, but the captain ordered us to go full speed ahead, and I had no choice but to comply.”

“Captain...” Wu Bolin (Bick) snorted coldly, then opened his right hand, and powerful spiritual energy spread from his palm, invisibly surrounding the entire research vessel.

In that instant, he completely captivated the attention of everyone on the ship.

Then, he looked at Matsushita Heikichi and said coldly, “Now you can shout in Japanese and make everyone on the ship obey your orders and follow your lead!”

Matsushita Heikichi immediately complied, picked up the microphone on the walkie-talkie, switched the channel to shipwide broadcast, and rattled off a string of words in Japanese, the gist of which was that everyone must strictly obey his orders from now on.

After he finished speaking, Wu Bolin (Bick) added, “Tell everyone to carry out their work as usual, and to maintain contact with the outside world as usual, without revealing any clues.”

These people were like robots waiting for orders, just waiting for a command to be given, and then instinctively obeying. So when Matsushita Heikichi gave them the command in Japanese, everyone immediately threw themselves into their original work, as if nothing had happened. However, once Matsushita Heikichi gave the command, they would do their best to carry it out.

Matsushita Heikichi only obeys Wu Bolin (Bick)’s orders, so Wu Bolin (Bick) can control everyone at will by simply using Matsushita Heikichi’s Chinese and Japanese language skills.

Immediately afterwards, he said to Matsushita Heikichi, “Lackey, use the walkie-talkie to call your captain over here!”

Matsushita Heikichi bowed respectfully, then immediately picked up his microphone and gave orders to the captain.

Soon, the gray-haired captain rushed over.

Upon seeing him enter, Matsushita Heikichi said to Wu Bolin (Bick), “This is our captain.”

Wu Bolin (Bick) stared at him with piercing eyes, initially wanting to smash him to dust with one blow, but then he thought that since this guy was the captain, his professional skills must be up to par, and he would need these people to do things for him in the future, so he couldn’t kill the most senior and experienced captain.

However, thinking about how that bastard had just “failed to save me,” Wu Bolin (Bick) still felt a bit resentful. So he coldly said to Matsushita Heikichi, “Tell that bastard to take off his clothes and stand at the bow of the ship as punishment!”

## The Amazing son in law Chapter 7847

Under the influence of psychological suggestion, the somewhat elderly Captain Sato willingly stripped naked and walked to the bow deck in full view of everyone.

The research vessel was venturing deeper into the strait into the night. The temperature was dropping lower and lower. Although the captain was frozen stiff and his body was turning purple, he still stood there hunched over like a grotesque, borderline statue.

Seeing that he was about to die from hypothermia in the cold wind, Wu Bolin (Bick) ordered Matsushita Heikichi to carry him back.

When the captain was carried back, he was already stiff, but fortunately he was still breathing. Once his body warmed up, he wouldn’t die.

Wu Bolin (Bick) found him annoying, so he simply had someone throw him back into his cabin to rest. Then he called Matsushita Heikichi over and asked him, “How many days will it take to reach the Antarctic continent?”

Matsushita Heikichi respectfully replied, “It will probably take another three and a half days.”

Wu Bolin (Bick) said coldly, “Find a way to compress it to three days. I don’t have that much time to waste at sea.”

“Yes, sir!” Matsushita Heikichi agreed without hesitation. The research vessel’s original voyage and prescribed speed had a safety margin, so the speed could be increased appropriately. Reducing three and a half days to two days was basically impossible, but reducing it to three days wouldn’t be a problem.

So the ship immediately sped up and headed towards the Antarctic continent.

At this moment, on the Antarctic continent, Charlie Wade was driving a snowmobile, carrying three people towards a gentle hill south of the Nordic research station.

The magnificent aurora borealis has appeared, and Charlie Wade plans to go up the hill to get a closer look at it.

Upon reaching the top of the hill, he took a Qi-Nourishing Pill, intending to once again circulate the earliest set of hand seals to exchange the spiritual energy within his body with the mysterious entity within. The remaining five pills were a safety net he set for himself; no matter what, he had to ensure that he had five pills on hand for emergencies.

This time, the Four Directions Treasure Banner once again imparted sixteen hand seals to Charlie Wade through the aurora. This set of Great Sun Tathagata hand seals now has a total of eighty seals.

The eighty hand seals of the Great Sun Tathagata significantly improved the overall efficiency of spiritual energy acquisition. After returning to the research station, Charlie Wade planned to go into seclusion for a period of time and exchange the remaining hand seals when he had accumulated enough spiritual energy in his body.

Once you enter a state of seclusion, time seems to cease to exist; a few days pass in the blink of an eye.

Three days later, the Japanese research vessel docked at the edge of the Antarctic continent.

Its docking point is about 200 kilometers away from where the Iliad previously docked.

The Japanese research team was also waiting there. Similar to the process on the Iliad, they would first deliver the supplies and then complete the personnel exchange.

When Wu Bolin (Bick) first came to Antarctica, he was amazed to see the aurora borealis in the long night sky.

Upon seeing this desolate continent, he became even more convinced of the story he had heard more than a hundred years ago: perhaps the Gate to Ascension really was in this endless desolation.

However, he underestimated the size of the Antarctic continent. Its coastline alone stretches for 20,000 kilometers, and its interior extends for thousands of kilometers. Searching for relics in such a place would be as difficult as climbing to heaven.

## The Amazing son in law Chapter 7848

For a moment, he didn't even know where to begin.

Not knowing where to start, he simply began with what was in front of him, and these Japanese research team members became his ideal lackeys.

So they simply gave everyone psychological suggestions, and coincidentally, they found someone among the team members who stayed behind who was fluent in Chinese, so they kept him and Matsushita Heikichi as their two henchmen.

Originally, the Japanese scientific expedition team that came with the ship was tasked with replacing the team members who stayed behind and then returning to Japan. These people had been in Antarctica for half a year and were all extremely homesick. In addition, the journey back would take more than a month, so they were all eager to go home.

But Wu Bolin (Bick) had no intention of letting them leave, not even those scientific expedition members who had already worked and lived in Antarctica for a summer and were now preparing to return home to rest.

This is because, to him, these scientific expedition team members were nothing more than cattle and slaves.

He had easily gained control of everyone, and from then on, these people would obey his every command, becoming his helpers and laborers in his exploration of Antarctica.

What's even more valuable is that these research team members are the most knowledgeable about Antarctica. With them on duty, our plans can be twice as effective, so losing even one of them would feel like a huge loss.

Since he was going to leave the ship behind, he might as well leave everyone behind as well. He needed more lackeys to obey his orders, so that he could become a local tyrant in the vast, frigid Antarctic.

On the other hand, he could not let the Japanese research vessel leave Antarctica. Otherwise, if he needed to leave before winter arrived and could not find a ship that could break through the ice and cross the devilish Roaring Forties, wouldn't that be awkward?

So he called Matsushita Heikichi over and asked him, “How long can your ship stay here at most?”

Matsushita Heikichi said, “Boating is not a problem. Our supplies can last for at least half a year, and our fuel can last for more than half a year if we don’t make long voyages. However, if the ship stays here, as the temperature gets colder and the ice-covered area along the coastline gets larger and the ice layer gets thicker, once the ice layer thickness exceeds our icebreaking limit, the ship may not be able to move. If we want to move again, we can only wait for the weather to warm up and the ice layer to melt.”

Wu Bolin (Bick) frowned and said, “That won’t do. I need you to be on standby at the Antarctic coastline at any time, in case I need you. You better think of a way to meet my requirements.”

Matsushita Heikichi said obsequiously, “That’s simple. I can have the ship move outwards every day as the ice expands, always staying within a controllable ice thickness. This way, we can respond whenever you need the ship. In this way, we only need to move a few kilometers at most each day, and the fuel consumption is not much, so we can still go on for a long time.”

Wu Bolin (Bick) nodded in satisfaction, then asked, “Let me ask you, if I asked you to change your plans and not return to Japan for the entire winter, would the Japanese side contact you immediately?”

Matsushita Heikichi said, “The research vessel we are piloting is national property. If we refuse to comply with the order to return home, the country will definitely come after us, and may even send in the army. We will certainly be accused of treason.”

Wu Bolin (Bick) stroked his beard and clicked his tongue, saying, “This is a problem. You need to think carefully about how to reasonably keep all these people and the ship in Antarctica.”

Matsushita Heikichi thought for a moment and said, “Well... I can’t think of any good solution either. It would be easy to say that we’re leaving a few days later due to some unforeseen circumstances, but if we don’t go back for the entire Antarctic winter, no reason will hold water.”

## The Amazing son in law Chapter 7849

Wu Bolin (Bick) asked him, “What if the boat breaks down? What if the boat freezes and can’t get out?”

“Well...” Matsushita Heikichi said respectfully, “The country can monitor the location of the research vessel in real time through positioning. If we report to them that the ship is frozen, but in fact we are moving slowly every day to prevent the ship from freezing, the country will realize that we are lying after detecting it, and will definitely send troops to investigate.”

Wu Bolin (Bick) asked, “If the ship is really frozen, is your army capable of coming to Antarctica for a rescue?”

Matsushita Heikichi shook his head: “Our ship is the only heavy icebreaker in the country. If our ship is really frozen, the country can’t send any ships to rescue us. Even if we ask the United States for help, it will be too late. By the time their icebreaker arrives after a journey of several dozen days, the ice will probably be hundreds of kilometers thick. Even the best heavy icebreaker in the United States can’t get in. At most, it can only dock on the outer edge of the ice layer and help evacuate the personnel.”

Wu Bolin (Bick) nodded and said, “That makes things easier. You can report back to China that the ship has a mechanical problem and needs repairs. Then just keep delaying until the ice freezes over. When the ship can’t leave, have the research team consult with China. Let’s all be generous and not let your country waste resources coming to rescue it. Let’s all stay here and work hard, and take this opportunity to speed up Japan’s exploration of Antarctica.”

Matsushita Heikichi naturally obeyed his every command, but this lackey was also very dutiful, saying respectfully, “You just said that the research vessel should be on standby at all times, but if we really freeze the ship, I’m afraid your need for the ship will not be met.”

Wu Bolin (Bick) sneered: “A mere ice blockage might be a problem for your icebreakers, but it’s nothing to me. Your ships are just sitting here. If you really need to move them, I can break the ice myself!”

Wu Bolin (Bick)’s strength was such that it wasn’t difficult for him to cleave a crack in the ice; the difficulty lay in crossing the devilish Westerlies alone without any supporting force.

In that kind of environment where one can neither fly above nor step on the water, and one can only float on the surface of the water by relying entirely on spiritual energy, coupled with towering waves and gale-force winds of level 11 or higher, even Wu Feiyang would not be able to withstand it.

Therefore, Wu Bolin (Bick) must remain on this ship in Antarctica.

Therefore, he immediately ordered Matsushita Heikichi to deliberately delay the loading and unloading of supplies and postpone the departure time as much as possible. When the departure time could not be delayed any longer, and if it was certain that the ship could be repaired, he should deliberately sabotage the ship’s propulsion system. By then, the ice would have frozen for several kilometers or even more than ten kilometers, with the ice layer being more than two meters thick. Even if the ship was repaired, it would be grounded.

Fortunately, the ship has plenty of fuel and supplies, so staying here ensures uninterrupted power, heating, and water supply.

There’s no need to worry about the research station either. It has a safety margin in terms of supplies, and a large number of new supplies have been added this time. Although there are more people, it can definitely handle the workload.

Even if supplies run out later, we can ask Japan to find a way to airdrop supplies using military aircraft.

If all else fails, we can just make these research team members cut back on food and clothing. As long as they don’t die and can still work, that’s fine. Anyway, Wu Bolin (Bick) himself doesn’t need to eat.

Having made up his mind, Wu Bolin (Bick) instructed Matsushita Heikichi to stay on the ship and carry out his orders. Then he called over Kikuchi Kohei, another member of the expedition team who was fluent in Chinese, and instructed him: “Kikuchi, you are responsible for arranging for all the expedition members to return to the research station. Also, starting today, spend three hours every day teaching them Chinese. Make sure they study with all their might, so that I won’t have to give orders to you alone in the future. Do you understand?”

Polar scientist Kohei Kikuchi bowed deeply at a ninety-degree angle and said respectfully, “Please rest assured, I will definitely complete the mission!”

## The Amazing son in law Chapter 7850

When Wu Bolin (Bick) arrived at the Japanese Antarctic research station, the straight-line distance between him and Charlie Wade was about 400 kilometers.

Like the Nordic research stations, the Japanese research station is surrounded by desolate landscapes and has few neighbors.

The problem is that Antarctica is such a vast place that when a limited number of countries come to build a limited number of research stations, they all leave some room for their own and other countries’ future development. If they are too close to other countries’ research stations, it will not only hinder their own future development, but may also affect the secrecy of some of their missions.

After all, Antarctic scientific expeditions are not simply about studying the local human environment and flora and fauna.

Antarctic scientific expeditions, like space exploration, are not only about science, but also about a country’s strategic planning and even the development of certain strategic technologies.

For example, both the United States and China have tested their Mars rovers in Antarctica. This is because Mars is a planet with an average temperature of only around -60 degrees Celsius, and Antarctica is the closest place on Earth to this environment. Moreover, Antarctica has many glaciers and hills, which are quite similar to the terrain of Mars to some extent.

Because Antarctic scientific expeditions from various countries involve a wide range of cutting-edge technologies, they rarely choose to crowd together.

The Japanese research station is much larger than those in Northern Europe, but even so, Wu Bolin (Bick) couldn’t hide his disdain as he looked at the low-rise buildings under the starlight of the polar night.

Especially when he saw the characters “Showa” written in Chinese characters outside the research station, his face was full of disdain and he was extremely unhappy.

Suddenly, he conjured a tiny sword the size of a palm from his wrist, infused it with spiritual energy, and activated the array within. The tiny sword, less than a foot long, suddenly seemed to

be enchanted, instantly growing larger and longer into a cold, gleaming sword a full 1.3 or 1.4 meters long.

This sword didn't actually grow to this length; rather, spiritual energy was injected into it to activate the array within, which then conjured up this sword body. With the sword body conjured by spiritual energy, it can cut through iron like mud and split mountains and shatter rocks.

Wu Bolin (Bick) held a long sword and gently swung it at the stone tablet inscribed with the words "Showa Station". The entire side of the stone tablet with the inscription was instantly flattened. Then, with a flick of his sword, he left three elegant and unrestrained cursive characters on the stone tablet: "Wu Hangong".

Wu Bolin (Bick) wasn't well-educated and couldn't think of any sophisticated or grand name for it. He just felt that if there really was a legendary Guanghan Palace on the moon, it would probably look like this: freezing cold and dark.

However, since there was no Chang'e here, and it was to become his palace for a period of time in the future, he simply changed one character in a vulgar way, and it became Wu Han Palace.

He pondered to himself that "Wu" represented the Wu family, "Han" was self-explanatory, being the most fitting word for this godforsaken place, and "Gong" was meant to highlight his extraordinary status.

After the name was changed, the research station looks much better now.

So he secretly pondered, now that Wu Han Palace is here, it is his own place of practice, and he should naturally have a Taoist name.

After much thought, he decided to use Wu Han Palace as the name of his Taoist temple and Guanghan Zhenren as his Taoist name, which sounded majestic, ethereal, and full of artistic conception.
