

The Amazing son in law - The Amazing son in law

Chapter 7969

4-4 minutes

When people debate whether the chicken or the egg came first, they instinctively limit their thinking to the chicken species itself.

But in reality, chickens didn't appear out of thin air.

Their emergence required a long process of species iteration.

Just as chickens went through this process, humans naturally couldn't escape it either.

Human civilization began in Mesopotamia, only about five thousand years ago.

But the history of Homo sapiens is over three hundred thousand years old.

If we trace back further to ape-men, we can trace it back to at least two million years ago.

This line of thinking suddenly broadened charlie wade's perspective. He suddenly realized that the cultivators who built the underground city in Antarctica should be completely unrelated to current human civilization.

As charlie wade and Lin Wan'er (Alani) walked through the forests of western Sichuan at the turn of spring and summer, they talked back and forth, like unraveling a suspect's profile, gradually outlining the path of cultivation.

charlie wade sighed: "In the timeline of five thousand years of human civilization, the average lifespan of ordinary people has increased from the initial twenty or thirty years to the present day. Even after five thousand years, they are only a little over seventy years old. The five thousand years of civilization have been passed down and carried on by at least a hundred generations."

"Of the two key parameters, five thousand years and over a hundred generations, the truly important one is not five thousand years, but over a hundred generations."

“If a generation lives for five thousand years, their capacity for innovation must be extremely poor. Only through the continuous replacement of younger generations, bringing new thinking, new perspectives, and new concepts, can civilization develop rapidly.”

“A technologically advanced modern civilization requires five thousand years and over a hundred generations to nurture it. What about a highly developed cultivation civilization? It would probably require dozens or even hundreds of generations to reach its peak.”

Lin Wan'er (Alani) nodded in agreement, her expression grave as she sighed, “Then the question arises: as you said, the average lifespan of a cultivator's generation is probably at least ten times that of an ordinary person, or even more. If we calculate the development of cultivation civilization according to this parameter, the timeline would probably be at least tens of thousands of years. In other words, if our deduction is correct, then in the billions of years of Earth's development, there once existed a cultivation civilization that lasted for at least tens of thousands of years.”

charlie wade He said seriously, “We've only calculated the timeline after this civilization truly formed, that is, the time when chickens actually became chickens. What about the generations before chickens? Did those cultivators also need millions of years of continuous iterative evolution from ancient ape-men to hominids, and then to Homo sapiens?”

Lin Wan'er (Alani) suddenly frowned and said very seriously, “I suddenly realized a mistake.”

charlie wade pressed, “What mistake?”

Lin Wan'er (Alani) explained, “From the perspective of civilization, it is almost impossible for human-made objects to slowly dissolve over a very long period of time, but from a biological perspective, the traces left by humans are extremely difficult to erase over time. Fossils are the best example.”

The Amazing son in law - The Amazing son in law Chapter 7970

5-6 minutes

After a pause, Lin Wan'er (Alani) continued, “I studied at Harvard many, many years ago. Evolutionary biology was just emerging then, and scientists worldwide were researching it. Countless people were obsessed with excavating fossils of various ancient creatures; the

craze was comparable to the gold rush. Harvard was one of the leading universities in pioneering this discipline.”

“Scholars at that time already possessed ample and complete biological evidence to prove the existence of evolution. From Cambrian trilobite fossils to Cretaceous dinosaur fossils, and even fossils of ancient apes from millions of years ago, these are all biological evidence. In modern times, scientists have also discovered microbial fossils from over three billion years ago. This biological evidence fully reveals the entire process from the birth of life on Earth to the emergence of humankind.”

“In recent decades, although I am no longer actively involved in worldly affairs, many of the companies and institutions I invested in back then are conducting related research, further confirming the uniqueness of evolution through fossil excavation and gene sequencing.”

charlie wade listened with a puzzled expression, looking at Lin Wan'er (Alani), awaiting her final conclusion.

Lin Wan'er (Alani) took a deep breath and said seriously, “Young Master, the core point I've been trying to make is that we, the modern civilized humans, have an orderly and unique evolutionary lineage. All biological evidence proves that we evolved step by step, but there is no evidence to prove that there was another human evolutionary history during the evolution of life on Earth. If the cultivation civilization we previously deduced truly exists, then the real contradiction is that they have no biological evidence in terms of evolution.”

At this point, Lin Wan'er (Alani) murmured in shock, “This also means that they are not native to Earth!”

charlie wade suddenly gasped!

Lin Wan'er (Alani)'s ability to unravel complexities was indeed extremely powerful.

In the time it takes to drink a cup of tea, she had completely peeled back the core contradiction.

Modern humans, with verifiable historical records, are an orderly and native inhabitant of Earth. However, these cultivators with great supernatural powers have no lineage whatsoever. Microorganisms, dinosaurs, monkeys, apes, ancient hominids, and Homo sapiens on Earth are all unrelated to them. For the past two or three hundred years, countless scientists and

biologists have excavated the Earth to the extreme, yet have found no clues linking them to their lineage.

This is rather chilling to contemplate.

charlie wade asked in astonishment, "If what we're discussing is true, then they must have come to Earth from other planets and then left?"

Lin Wan'er (Alani) nodded slightly, unable to hide her surprise, and said, "To put it another way, they might be like interstellar colonists or interstellar raiders from science fiction novels. They exhausted the resources of their home planet for cultivation, and to sustain themselves, they began searching for other planets in the universe with cultivation resources. Earth might just be one of them."

At this point, Lin Wan'er (Alani) sighed, "So, young master, consider this: why is there a Dharma-ending Age where the world no longer possesses spiritual energy? Before that Dharma-ending Age, did it mean that the world was filled with spiritual energy nurtured by Earth over billions of years? Perhaps there are even spirit stone mines all over the world, but what about the spiritual energy and spirit stones scattered throughout the Earth?"

charlie wade exclaimed, "Then these people must have come and..." "After the Earth's spiritual stones were exhausted, they left, artificially turning Earth into the Age of Dharma Decline."

Having said this, charlie wade frowned and murmured, "If this deduction is true, then it means that their arrival artificially cut off the opportunity for Earth to evolve into a cultivation civilization."

Lin Wan'er (Alani) nodded, "That should be the case. However, I don't think this is necessarily a bad thing. From their migration, plundering, and then migration again, we can see that they consumed too much spiritual energy, to the point that they couldn't form a healthy cycle of development. It was precisely because they drained Earth's spiritual energy that we, the later humans, adapted and embarked on the path of technological development. Although the individual strength of humans today is far inferior to theirs, their overall strength is not necessarily weaker. Moreover, I believe that technological development is the healthiest and most reasonable model!"
