The Amazing son in law Chapter 8056

While Yun Rugo and Song Ruyu dawdled over preparing the ingredients, charlie wade had already moved the table onto the vast, icy plain.

The biting wind was icy cold, but it didn't bother him much. On the contrary, he liked this apocalyptic environment and its rugged, sharp feel.

The delicate Lin Wan'er (Alani) followed beside him with the hot pot broth. charlie wade didn't bring fresh water from the research station; instead, he used his spiritual energy to cut a deep pit in the ice, then scooped out a pure, almost transparent block of ice and placed it in the pot.

He then gathered his spiritual energy in his palm and gently pressed it against the pot's side. The large block of ice immediately began to melt into water, which boiled in a very short time.

Lin Wan'er (Alani) watched in amazement, adding hot pot broth to the boiling water while remarking to charlie wade, "Young Master, spiritual energy is so precious, isn't it a bit wasteful to use it for hot pot?"

charlie wade smiled and said, "It's alright, but ultimately, it feels like using diamonds to cook hot pot. Luckily, I have tons of diamonds."

Lin Wan'er (Alani) smiled knowingly and nodded gently. It was only then that she realized that charlie wade, this calm and composed man, actually had a touch of romance.

charlie wade saying that using spiritual energy to cook hot pot was equivalent to using diamonds wasn't an exaggeration at all.

Diamonds are also carbon, and their calorific value might be similar to that of an equal weight of coal, but their price could be hundreds of millions of times higher.

A hot pot meal that can be cooked with just a few kilowatt-hours of electricity, even in Antarctica using an expensive diesel generator, wouldn't cost more than one dollar per kilowatt-hour, including the transportation cost of diesel.

However, the spiritual energy charlie wade used to cook the hot pot was invaluable.

Spiritual energy is very much like electricity in a technological society.

Electricity can be converted into various forms of energy: power, heat, light, and even computing power.

As for spiritual energy, in charlie wade's view, aside from the fact that it couldn't be converted into computing power, it was almost indistinguishable from electricity.

However, in terms of value, the price per unit of energy consumption of spiritual energy was far too high. Electricity came from wind, water, light, and heat, but spiritual energy could only be reliably obtained from pills and spirit stones.

It was at this moment that charlie wade understood even more clearly that the so-called Dharma-ending Age was actually an age of depletion in the cultivation world.

They had exhausted all the energy sources on which this planet depended for cultivation; to them, this place was a dead planet.

Refining a Rejuvenation Pill didn't consume much spiritual energy, but it was worth hundreds of billions of dollars to the wealthy. This was, in fact, the value of spiritual energy.

The spiritual energy charlie wade used to cook a hot pot, if directly injected into an ordinary person's body, could at least extend their lifespan by three to five years, or completely cure a terminal cancer patient whose cancer had spread throughout their body.

Using it to cook hot pot now was indeed somewhat wasteful.

charlie wade didn't care. Lin Wan'er (Alani) wanted hot pot, and he wanted to eat hot pot in the freezing cold. Isn't life about doing what makes you happy?

Yun Rugo and Song Ruyu happened to arrive with ingredients at that moment. Seeing charlie wade use his spiritual energy to boil the water, they couldn't help but feel a pang of regret.

When the four of them sat down in the snow, charlie wade used several small arrays to keep their dipping sauce bowls warm, preventing them from freezing due to the extreme cold. Despite the howling wind, the food remained piping hot.

charlie wade had never imagined that eating open-air hot pot under the polar night and aurora borealis of minus sixty degrees Celsius in Antarctica would be so enjoyable.

The distant aurora was dreamlike and ethereal. charlie wade gazed at it, somewhat lost in thought. Today, the aurora seemed to have received no guidance, nor did it display any strange patterns; it seemed the mysterious entity within him had begun to hibernate.
