The Amazing son in law Chapter 8059

Steve chuckled, "That's right. If there were a few more girls like that, Europe might be overtaken by Africa in no time."

charlie smiled, then remembered something and said, "By the way, China has abundant power. I might as well go back to China and set up a computing center."

Steve sighed, "Yes, China's power is indeed number one in the world, but the key is that those high-end computing cards are banned from sale in China. If you want to get a lot of computing cards, it's just a matter of money overseas, but in China, it's more than just a matter of money."

charlie nodded slightly. He seemed to have heard about the ban in the news before. As a Chinese person, he felt quite annoyed. But thinking about it on the other hand, sometimes there's nothing you can do about it. He himself had blocked the entry of the Nine Profound Rebirth Pill into the American market. Sometimes, if key technologies are in the hands of others, and they want to block you, there's really no way to deal with it.

However, charlie also planted a seed in his heart: sooner or later, he would find a way to break through this blockade.

Seeing that charlie remained silent, Steve quickly said, "Mr. Wade, if you're interested in renting out computing power, I can help you make connections. A hundred billion US dollars a year—honestly, it's free money!"

charlie hummed in agreement and said, "Okay, but I have a question I need you to answer."

Steve hurriedly replied, "Please go ahead, Mr. Wade."

charlie asked curiously, "With everyone spending so much money to grab computing power, is computing power inherently profitable?"

“Make money!” Steve said, “Computing power is now high-quality productivity, especially for internet companies and high-tech enterprises. You can think of it as a kind of super energy. An electric truck that used to be able to haul 100 tons can now haul 1,000 tons or even 10,000 tons with this super energy. Companies are naturally willing to invest heavily in purchasing this super energy to bring themselves exponentially increased output. If they don't use computing power, they will be left far behind by their competitors. Therefore, companies will spend a lot of money to buy computing power. The main customers of those large-scale models are also enterprise customers. Some customers burn through tens of millions of dollars worth of tokens every day. Part of this money is earned by the companies providing the large-scale models, and part is earned by the hardware companies that provide computing power to the large-scale model companies, as well as computing power leasing companies. Like Musk's SpaceX, it can earn tens of billions of dollars a year by leasing computing power.” "The large-scale models here in the US are also very willing to spend money. With the scale of your Nordic computing center, tens of billions of US dollars a year is a certainty, and it may even increase further."

charlie said thoughtfully, "If that's the case, I'd rather rent the computing power to our domestic companies at a low price than to those companies that block us."

Steve said in surprise, "Mr. Wade, why go to such lengths? You'd definitely rent to whoever pays the most."

charlie chuckled and said, "Steve, that's certainly true for you, but not for me. Money is never the most important thing."

After saying that, charlie smiled and said, "Alright, Steve, I'll reconsider the computing power rental later. You keep a close eye on the cryptocurrency, and let me know as soon as the other party cashes out and leaves."

Steve had no choice but to give up trying to persuade him and respectfully said, "Yes, Mr. Wade, I will keep a close eye on this matter and notify you as soon as possible!"
