Chapter 114 - Part 1: Killed

After that, they all surrounded the Monster. Ms. Norma was not about to spend any more time. She employed her wind element attack strategy. She raised her palms in the air. As a result, the surrounding twisting elements were abruptly drawn to her palms.

When there was enough wind energy around her palms. Then she fashioned a massive, colourless wind blade. That's long enough to rip the Monster apart.

The wind blade had developed. She pointed to the body of a Level 4 Monster. The wind blade buzzes through the air, cutting through it at breakneck speed. The wind blade collided with the Monster's wriggling body in the blink of an eye.

Ms. Norma used her Elite strength at the Peak level. She didn't hold back. She also told her teammates to use all of their strength.

One of the humans was detected by the Level 4 Monster. Getting ready for an attack. As a result, the Monster chose to attack as well. The level 4 Monster ate a lot of soil in a short length of time. This isn't meant to be cultivated. It's going to launch a counter-offensive.

When the wind blade made contact with the Monster's body. There was no sound, and the wind blade pierced deep inside the Monster's body. Ms. Norma was the one who initiated the action. In no time, the rest of them undertake the identical attack.

In the air, four long wind blades formed. One by one, it approaches the Monster. They didn't go over various parts of the monster's body.

The strikes were all directed at the same site. Ms. Norma's wind blade had already entered this area.

The level 4 Monster was getting ready to attack. It began to move its huge body in an attempt to adjust. But, in the meantime, Humans attacked it one by one, penetrating its body one by one. It made a deep incision, and it felt like the first attack had more energy than the rest.

Since then, it has developed a gigantic body. Even for Peak Elite, numerous efforts are required to completely mutilate it. As it became angry. It started to feel as if the humans might fire a few more attacks. It would perish. As it felt threatened. It instantly, without wasting any time. It spits a tonne of soil at them from its huge mouth.

The attack was swift, and the land is littered with a variety of boulders of varying sizes. It was also dangerous because of its speed. A massive tonne of the soil was hurled towards them. It was directed at the team's weakest link.

Those who were at the beginning of the Elite level. The level 4 Monster had previously detected their energies. As a result, it chose to focus on the pests before tackling the primary foe.

Ms. Norma was well aware that this heinous Monster would prey on her most vulnerable member. She genuinely prepares for this attack, and the teams have a delicate understanding.

Everyone was ready to help when they saw her move. They're all lineage fighters, after all. They noticed the level 4 Monster. Preparing for a "Soil Barrage assault" with their ocular abilities.

They had been anticipating this attack. The Monster then unleashed his attack. The team leader would then take advantage of the situation and slaughter the Monster. The monster employed "Soil Barrage" as planned.

And the Early level Elite Members were ready. Seeing the onslaught approaching at warp speed. They completely avoided the "Soil Barrage" onslaught. It's common for people with the Eagle bloodline to fly at breakneck speeds.

The level 4 attacks of the monster miss their intended target. It was successful in striking neighboring terrains. More harm was caused, and the area was entirely turned over. In the Soil barrage attack, there are several massive rocks hiding.

When it came into contact with the land's surface. There were massive earthquakes as a result of it. If one examines the situation closely. They will land in an area that is prone to many earthquakes at the same time.

The attack was initiated by a Level 4 Monster. It waited for enemies to get buried with this strike forever. However, if the strike misses the intended target. It became even more enraged. It didn't spare any time-consuming, any more subsurface soil.

But who is willing to take a chance? Ms. Norma had already vanished from her previous location. And she appeared from behind the creature's head. She was aware of the current situation.

She used both of her hands to summon a massive wind sword. Using a wind element to create a form. Controlling the attack at the perfection level is required.

This is the level Zack aspires to reach in order to learn more about the synchronization level. The winds began to blow, and the wind element gathered around her. And then there was the final form of the sword.

Meanwhile, Arlene and her colleagues. Attacked the previous location in order to mutilate its huge physique. This all happened in a matter of seconds. And the Monster then attempted to ingest soil with its massive mouth once more. Ms. Norma held the Wind sword tightly in her fingers. With her Peak Elite Strength, she sliced it down.

A cut in the air was formed by the wind energy blade. It made touch with the neck at that point. Its neck was sliced by a wind blade that made no sound. Its gigantic jaws slammed shut.

The level 4 Monster specialises in soil consumption. However, it was unaware of the incident. Ms. Norma quickly dispatched the level 4 Monster. Her abilities of speed, eyesight, and wind are all executed. She took out the Monster by herself.

All she has to do is use her teammates to divert the Monster's attention away from her. She was also chosen for the final cut. This isn't the first time they've encountered the Worm Monster.

On the other hand, level 4 Monster has no battle experience. To remove the weak link, it merely needed to perform a basic computation. However, it was unaware of our wind-related skills.

This is the distinction between Monsters and Humans in terms of intelligence.. When up against battle-hardened soldiers, newly improved intelligence isn't enough.
