

## D. School 351

### Chapter 351 - World Club Cup

Despite the absence of Lu Qiujiang's participation, Bayern Munich easily defeated the Central American and Caribbean champion Saprissa to enter the final. In the final, they will face them with the giant Sao Paulo from Brazil.

Lu Qiujiang also ended his romantic date with Xia Xiao the day before the game and came to the hotel where Bayern Munich stayed to meet the team.

The São Paulo team was the 2005 Libertadores Cup champion. Prior to that, they had defeated the European Champions Cup Barcelona and Milan in 1992 and 93 consecutively, winning the Toyota Cup twice in succession, and Argentina's Boca Juniors, Portugal's Porto, Spain's Real Madrid and Italy's Milan tied for the club's most intercontinental championship. If they can win this match, they will have the exclusive honor.

And Bayern Munich once defeated the Boca Juniors in 2001 to win the Toyota Cup, both Kahn and Lizarazu had participated in that game.

São Paulo also has no shortage of stars. In his history, the World Cup Golden Boot Leonidas was born, and Maradona led Napoli to win the striker Carreira, the World Cup winner Lai, the talented young Kaka Such a star.

Now they also have the most goalkeepers in the history of goalkeeper Rogerio Seni, genius guard Sisinho, ace striker Amoroso and other stars, the strength should not be underestimated.

In addition, in order for them to successfully enter Europe and get rich income, they will undoubtedly play a skill of twelve points in this game. If they are not careful, they will cause great trouble for Bayern Munich. This is also Lu Qiu. The reason why Jian returned one day earlier.

At the start of the competition, Lu Qiujiang saw many Chinese students in the stands holding up his large portraits to cheer for him, which made him quite touched. Tokyo has more Chinese students than Munich!

The same Xia Xiao also came to the game. However, because she did not like the disturbed personality, she did not choose to sit in the stands, but stayed in the box with Bayern executives such as Hennes.

“Ms. Xia. Munich is a very charming city! Since you plan to stay in Munich for a while, then be the master. Bayern is obliged to provide you and Dr. Lu with all kinds of conveniences! I have a small building on the shore of King’s Lake Where you can live with Dr. Lu. “Hernes played a very clear role in the transfer from Beckham to Real Madrid from Victoria. He also wanted to use Xia Xiao to stay in Luqiu Jian in Munich.

“Thank you for your kindness, but my life in Munich is arranged by Xiao Lv, so I do n’t have to cause you trouble!” As long as Lu Qiuqian can stay by his side, there is no big difference between an apartment and a villa.

“Lu has made so many contributions to Bayern Munich. We should provide a little convenience for you and his life.” Rummenigge also came to help,

“Ah, the game has started!” Fortunately, Lu Qiuqian’s appearance allowed Xia Xiao to stay away from the noise of several of them. She picked up the telescope and watched Lu Qiuqian’s game intently. To be honest, this was her first time in Watch the game live!

The director at the scene will of course not forget to point the camera at the Bayern high-level box, but when they see the beautiful cartoonist Xia Xiao, who is a reader’s favorite, also appears in Bayern’s box.

Fortunately, someone soon revealed the answer. The goddess in the hearts of countless neon young people had already been Lu Qiuqian’s girlfriend in Bayern Munich! This makes countless otaku heartbroken.

Whether he looks like he is wearing a jersey. I used to watch live broadcasts on TV. Xia Xiao soon discovered that Lu Qiuqian is different now.

In daily life, Lu Qiuqian has a gentle and gentle temperament, and treats people peacefully; but now he appears full of passion, and his whole body is full of fighting spirit.

“The biggest highlight of this game is the confrontation between São Paulo’s number one star Seni and Lu Qiuqian!” Because of Lu Qiuqian’s reasons. The court also bought the broadcast rights for this game, and Huang Daxian’s narration was brilliant.

“Everyone may be more familiar with Paraguay’s legendary goalkeeper Chilavert’s free kick technique, but Seni’s free kick scoring rate is not lower than him!” Huang Daxian introduced the highlights of the game. “Of course, Lu Qiuqian’s free-kick goal rate is higher than that of both of them, so whether Lu Qiuqian breaks Seni’s goal first or Seni breaks Kahn’s gate in this game, let us wait and see!”

The game has just started. It may be that the Sao Paulo team from Brazil is not familiar with the threat of Lv Qiuqian. Sincinho put Lam, who was assisting at 35 meters, and was awarded a free kick.

“Opportunity of Bayern Munich! Let us see if Lu Qiuqian can continue his miracle!” Huang Daxian excited.

Looked up at Seni’s position, reached over Pizarro, who was about to pick up the leak in the penalty area, and got a hair from his head.

“Hi! Lu, what are you doing!” Pizarro grinned painfully.

“Measure the wind speed!” Lv Qiuqian let go of his hair and let his hair fall Who made Ma Kai and Ram both have short hair, who didn’t pull you? “

Depressed Pizarro went to the restricted area to fight soy sauce. Lu Qiuqian used a erratic s-shaped free kick to break through Seni ’s gate, and Seni did not respond at all.

When Bayern players are preparing to celebrate. The referee from Mexico indicated that the goal was invalid, on the grounds that Ma Kai suspected of hitting the goalkeeper.

Is really interesting! Lv Qiuqian stopped Ma Kai, who was preparing to step forward, and the game had just started.

Soon Seni also got a chance, but his free kick was also blocked by Kahn. Unfortunately, Kahn directly put the ball out of the beam for safety reasons, leaving Bayern with no chance to fight back.

Now that the referee has some ideas, let him shut up with an uncontested goal! At the end of the corner, Lu Qiuqian led the ball in the middle and drove straight in. He and Barak evaded the interception of São Paulo’s midfielder and vigorously shot at the front of the penalty area to the next city!

In the following game, although the Mexican referee blew a goal from Bayern, he eventually defeated São Paulo with a long shot by Lu Qiu Jian and his assists 2-0 in the second half, winning the first World Club Cup. champion! After the game, Lu Qiu Jian drove away the Toyota car representing the best player.

Well, I opened it to Xia Xiao, but she did n't seem to need to go out often.

Chapter 352 - Dongda Speech

"Lv, then you go back to China! We will meet again after the winter break!" After a short celebration, Henes said thoughtfully that Bayern is now ranked first in the Bundesliga, in the European Championship and German Cup At the same time, the promotion is very repeating the momentum of last year's miracle.

"I should go back to Munich when I shouldn't be there!" Hey, I still can't spend Chinese New Year this year! Although the follow-up experiments of Cern can not be used to supervise themselves, the efficiency of coming out can always be higher.

"Tell us in advance when you come back, you and Ms. Xia will be packaged for our trip in Europe!" Henes still has not given up his intention to influence Lu Qiu Jian through Xia Xiao, if Xia Xiao likes life in Munich Then, the probability of Lu Qiu Jian staying here after graduation will not be much greater!

"Thank you for your invitation, but I believe he will help me arrange it!" Xia Xiaoyi snuggled beside Lu Qiu Jian and replied politely.

Hey, it doesn't seem to be attracted by my proposal! Henes was a little disappointed, but he was more firm in his thoughts. After returning, he must call in professionals and serve them well!

Bayern returned to Europe with a charter flight with their sixth championship this year, and Lu Qiu Jian did not leave immediately; because Mochizuki called, "Lv Jun, congratulations on winning the championship again!"

"Mr. Mochizuki is polite!" Although his achievements in cracking the conjecture have not been recognized by the mathematics, his ability shown before has proved that he is an excellent mathematician, "You want to ask about the speech What? "

“Yes! President Sasaki please invite me to invite you. Although it would be rude to say so, I still want to say that Kyoto University also welcomes you to give a speech at the school! Kyoto University is not weaker than Tokyo University in terms of mathematics alone! Maybe you can give two lectures? Lecture physics at the University of Tokyo and mathematics at the Kyoto University?” Mochizuki Shinichi was a little embarrassed, and Sasaki gave him an invitation, but he also wanted Lu Qiuqian to go to Kyoto University.

If you only look at the number of winners of the highest science and technology awards, Kyoto University and Tokyo University are indeed comparable. The University of Tokyo has trained one Fields Prize winner, 6 Wolf Prize winners, and 8 Nobel Prize winners; Kyoto University was born 9 Nobel Prize winners, 2 Fields Prize winners, 1 Wolf Prize winner, 4 Lasker Prize winners (as of 14 years)!

The University of Tokyo has Kohira Kohiko in the mathematics world. Kyoto University also has Morige Fumio and Hiroaka Hiroshi; at the Kyoto University of Physics, there is the first Neon physicist who won the Nobel Prize, Yukawa Yuki, and Asagai Ichiro who studied under the gate of Heisenberg, and the University of Tokyo also has string theory One of the founders was Yoichiro Nanami, Yui Nai, who discovered the quantum tunneling effect of electrons, and Chang Jun Xiaochai, who met a few days ago.

“Although I also want to appreciate the styles of two famous universities, Kyoto University and Tokyo University, I hope Mr. Wang Yue also knows. I will go back to the awards ceremony soon! I’m afraid I can only choose one!” Kyoto University in Kyoto, Lu Qiuqian obviously had no time to catch up.

“The award set by Lu Jun has benefited the entire mathematics community! It is a pity that neon has not won a mathematician so far!” Mochizuki Shinichi first complimented a few words and said, “It seems that I can only go to the University of Tokyo Now! Who asked Mr. Sasaki to speak before me! But the neon mathematics community is also preparing to host a welcome banquet for you, please enjoy the light! “

“I will return to China the day after tomorrow, and there will be another day tomorrow. If the time does not conflict, I am very happy to participate!” Such prestige things Lu Qiuqian will not refuse.

“Then I will pick you up at the place where you stay tomorrow morning!” After discussing the time and the place to pick up, Lu Qiuqian hung up the phone. It seems Mochizuki Shinichi has negotiated with the University of Tokyo.

The next day, according to the agreed time, Lu Qiu Jian went downstairs five minutes in advance, but found that Mochizuki New One was already waiting downstairs. After getting on the bus, the two of them naturally chatted about Princeton. What a fate! From 1985 to 1992, I spent seven good years in Princeton! Coincidentally, my tutor Professor Faltings in Princeton happened to graduate from the University of Munich you are studying now! “

“For those who are interested in mathematics, there is really no better place than Princeton!” Lu Qiu Jian echoed, “Professor Faltings has also helped me a lot!” So the two of them were happy on this topic. discussion.

The car drove slowly to a hotel near the University of Tokyo. Just after the meeting, you can go directly to the University of Tokyo to give a speech.

On the scene, Lu Qiu Jian discovered that nominally the mathematics community welcomed Lu Qiu Jian, but the guests present were not only representatives of the mathematics, but many scholars in the physics community also participated.

Mochizuki’s new generation of neon mathematics circles gave a welcome speech to Lu Qiu Jian. Lu Qiu Jian also came to the stage to express his thanks. Because he will give a speech at the University of Tokyo in a while, he did not. The academic lecture was started, just holding a wine glass and these neon academic elites to start a wild discussion.

The party lasted for more than two hours. After lunch, Lu Qiu Jian and Xia Xiao went to the hotel suite upstairs for a short break. In the afternoon, he entered the University of Tokyo with Yi Sasaki who was welcoming him. Ready to start speaking.

Amount, why the eyes of these students are so weird! Lu Qiu Jian stood on the rostrum in front of the auditorium and looked at the Eastern University students below. Many boys and girls showed jealous expressions! The difference is that the jealousy of girls is against Xia Xiao, while the jealousy of boys is against themselves.

Lu Qiu Jian has a great figure. The appearance is also in the middle, plus the double aura of his football star and scientist, it should be the object of admiration for Dongda girls, and Xia Xiao as a new beauty cartoonist has also been loved by many otaku; the two of them. The combination obviously breaks the dreams of countless people!

“Zhu Jun, I am honoured to announce! The University of Tokyo is honoured to invite the Poincaré conjecture that once solved one of the seven thousand-year problems, make outstanding contributions in the research of the Langlands program, and assist the European Nuclear Research

Center Dr. Lu Qiu Jian, who discovered the Higgs boson, proposed a new dark matter model, and confirmed the existence of dark matter with the Large Hadron Collider not long ago, gave a special lecture for you! Dr. Lu Qiu Jian studied in Hua Hua Guojing Normal University .. “Sasaki Takeshi formally introduced Lu Qiu Jian to the students of Dongdae University, and the applause was heard.

Chapter 353 - Out of the cradle

“So, let’s formally invite Dr. Lv Qiu Jian to give us a speech!” After Sasaki Takeshi retreated, Lv Qiu Jian stood in front of the lecture platform.

“Dear fellow neon colleagues, classmates of the University of Tokyo and other guests present, I am very happy to have such an opportunity to chat with the outstanding students of neon!” Although Lu Qiu Jian can proficiently use neon language , But he still chose to speak in Chinese.

The University of Tokyo is currently ranked as the No. 1 university in Asia, which makes Lu Qiu Jian a bit regretful. Perhaps after his accumulation and development after returning to China, Beijing Normal University will occupy this throne.

“Today I do n’t want to talk to you about Poincaré ’s conjecture, the Langlands program, nor to say the Higgs boson and dark matter! Because that ’s all a thing of the past!” Lu Qiu Jian looked around and the students under the stage His eyes were full of curiosity, since he did n’t want to talk about it, what did he want to say?

“The topic of my speech is” Out of the Cradle-The Future of Human Science and Technology “!” Lv Qiu Jian quickly revealed the answer. “You are lucky to be able to give birth to life and wisdom in the universe! If the sun is closer or further away, then the earth will be unable to give birth due to overheating and coldness! “

“Earth is like a cradle, caring for human growth! We live in the cradle, do n’t worry about the damage of various cosmic rays, the sun provides energy for us, and the moon shields meteorites ..” Described the superior environment of the earth, and then remarked, “But Tsiolkovsky, the father of world aerospace, once said that the earth is the cradle of mankind, but mankind will never lie in it forever.”

“In the 21st century, the level of human science and technology has been unprecedentedly developed. The rapid breakthrough of science and technology has made our world more colorful! The Human Genome Project has solved the password of about 25,000 genes in the human body. Open, mankind’s understanding of itself has reached an unprecedented level! “

“Breakthroughs in the fields of quantum computers, biological computers, and supercomputers have given mankind more powerful tools! The development of information technology and network technology has made our lives more exciting!”

“The discovery of the Higgs boson completes the merits of the standard model; the interception of neutrinos opens a very important window in astrophysics!” Speaking of this, there was a slight commotion from the stage, because the research of neutrinos was Xiaochai Chang Jun ’s achievements, as a student of the University of Tokyo, they are with Rong Yan.

“A number of major achievements have been achieved in the field of nanotechnology; superconducting temperature has been pushed to a higher level by scientists, and humans are steadily advancing on the road to achieve zero resistance current at room temperature; cancer, AIDS and other diseases that have plagued humans for many years are gradually seeing the dawn of cracking . “

“Scientists have measured gravitational velocity for the first time. This experiment once again confirmed Einstein’s theory is correct. Scientists are convinced that the speed of gravitational propagation is equal to the speed of light; the gravitational wave detector is being updated. I believe it can bring greater to humanity. Surprise! “

“The development of new technologies for space photography, the successful shooting of cosmic infant photos, the launch of the Mars rover, the Mars rover landing on Mars and found evidence of water, the Cassini spacecraft successfully entered Saturn ’s orbit, and astronomers discovered the most distant solar system Big celestial bodies ... The pace of human exploration of the universe has never stopped! “

One after another, the scientific breakthroughs made by mankind in the 21st century were brought forward by Lu Qiujian. Among them, there are many achievements by Chinese and neon scientists, and the scholars and students under the stage have heard the surge of emotions and deeply Feeling lucky and proud to live in such a great time.

“But is this enough?” Just as everyone’s emotions are rising. Lu Qiujian splashed a head of cold water on his head. He pressed his hands on the podium, stretched his neck to watch the audience under the stage, and repeated his own words again, “But is this enough? We should be satisfied with what we are now. Has it been achieved? Can human wisdom only reach its current level? “

The audience under the stage gradually calmed down from the excitement. “According to Professor Freeman-Dyson of the Princeton Institute for Advanced Studies, we can divide civilization into three levels. Type I civilization can develop and utilize the natural resources of the world in which it

inhabits; Type II civilization can be built like the Dyson ball. And can handle the full energy output of their star; Type III civilizations have mastered the technology of using all the resources of their galaxies. “

“Comparing this standard, we will find that the scientific achievements that make us feel very proud and proud have not reached the standard of Type I civilization!” According to Dyson’s division method, humans are currently only at the level of 0.7 civilization.

“In 1969, Neil Alden Armstrong, Buzz Aldrin, and Michael Collins drove the Apollo 11 spacecraft across a 380,000-kilometer journey, bearing the dream of all mankind on the surface of the moon. , This is the first step for mankind to take the cradle! “

“However, only three years have passed. After the last survey of the moon by the Apollo 17 spacecraft in 1972, mankind shrank back again. Since then, no cradle has ever been taken!”

Speaking here, Lu Qiuqian shrugged, “Maybe space is too cold, or it’s warmer in the cradle!”

This caused a lot of laughter from the students of the University of Tokyo, but after the laughter, a deep regret gradually spread out, yes, it has been 33 years since Apollo 17 landed on the moon! Mankind has not yet taken the second step.

“Armstrong, Aldrin, Conrad, Bin, Shepard, Mitchell, Scott, Elvin, Yang, Duke, Selnan, Smit!” Lu Qiuqian reported in one breath Names of twelve astronauts who successfully landed on the moon, “Among the trillions of people in human history, these twelve lucky people have stepped out of the cradle! This proportion is too few!”

“Humans are going out of the cradle after all!” Lu Qiuqian remembered the picture on the wall of Professor Dietrich’s office, “The universe is so beautiful We have been curled up in the cradle. This is really What a pity!”

Speaking of which, the lyricism came to an end, and Lu Qiuqian began to talk about his thoughts on the exploration of the universe. “In my opinion, the current level of human science and technology is not far away from the real universe Tasso. This requires more A common breakthrough in this field, I have pointed out the direction of the field of mathematics two years ago, and in the field of physics I think ... in the field of chemistry ... “

Lu Qiu Jian talked about his expectations for the development of human science, and the speech came to an end. “Finally, please allow me to end this speech with a famous quote from a neon writer—our journey is the sea of stars!”

#### Chapter 354 - Mingxiu Trail

Lü Qiu Jian’s words made the atmosphere on the spot burn quickly. Those students were enthusiastic about the magnificent prospects described by Lü Qiu Jian. Those senior professors were thinking about the breakthroughs and their own Are there conflicts in research directions?

It took a full minute for Lu Qiu Jian to speak, and the audience on the scene woke up and turned around. The thunderous applause refused to stop for a long time. Until Lu Qiu Jian bowed again and again to thank, he gradually returned to silence.

Then he answered some students’ questions. Influenced by his speech just now, those lucky winners gave up their previous plans one by one and asked about the prospects of cosmic exploration. To answer with the description of some science fiction novels, or to make a cautious guess based on the existing findings, let them all sit down satisfactorily, consciously gain a lot today.

Throughout his speech, Xia Xiao’s eyes stayed on his face, and he was deeply captivated by his romantic fantasy that day.

After the speech, he had dinner with the first-class people in the neon science community. Until nine o’clock in the evening, he and Xia Xiaocai were sent back to the apartment by a special car from the University of Tokyo.

“Ah, I can finally go home!” Back in the apartment, Lu Qiu Jian suddenly recovered his lazy look, kicked off his slippers and lay on the sofa.

“Are you tired today?” Xia Xiao walked gently behind him, hands on his sides, gently massaged the sun, and seemed to want to help him relieve his fatigue in this way.

“It’s okay! Until recently, I was so lazy that I was too lazy to be serious again!” Lu Qiu Jian pulled her little hand to her chest and rubbed it gently.

Xia Xiao saw that he was not tired and stopped the massage. He walked to the front and sat next to him. “Are you talking about your future goals today? Do you plan to start a space program after returning to China?”

Ha ha, is it possible to swell! I just need a more ambitious project to cover up the true purpose of controlled nuclear fusion. If there is no justifiable reason, how can we explain the whereabouts of such large-scale funding to the people of the country and other countries? A better way to cover up a big plan is to throw out a bigger plan! Speaking of cases in the art of war, this trick is called Mingxiu Road Darkness Chen Cang.

Of course, all this has to be implemented after the country has recognized its ability and decided to start a research project of controlled nuclear fusion. He just released a bit of wind in advance today; Qin Feng has already called him. Point out that the elder will be very interested in his plan, and it is estimated that he will receive an interview when he returns home! How to impress those high-level personnel at that time?

I drove a few more times. Lu Qiujian slept with Xia Xiaoshen sleeping; the next morning, the two of them rushed to Haneda International Airport with their luggage. After four hours of flight, Lu Qiujian finally returned to the long-lost capital.

Because his itinerary was not disclosed this time, he did not see any reporters who chased and blocked him when he came out. In addition to Professor Zhang, Director Guo of the Beijing Normal University, three of his students, and Director Chen of the High Energy Institute of Beijing, Qin Feng's secretary Wang Yang was greeted at the exit!

Taking the opportunity of shaking hands, Wang Yang whispered in his ear, "Spend the time tomorrow afternoon. There will be important things!"

"Well, I know!" Lu Qiu was calm on the face, but his heart was ups and downs, and finally it was the most critical time for the plan! Presumably tomorrow will be a meeting with senior officials?

After the greeting, a group of people came to the car outside. Professor Zhang and Lu Qiujian and Xia Xiao were in the same car, while the others got into another car.

"The house of Peking University can be kept for you! Someone cleans it every week. When I know that you are going to come back, Director Zhang of the logistics department takes the person to clean up all day!" Professor Zhang returned from the position of co-pilot Said over.

Well, a house with one room and one hall has been packed all day? Isn't it even the floor and wallpaper changed? Lu Qiujian secretly said, "In fact, I don't need such trouble. I stayed in Beijing for a few days and waited for the award ceremony to end. I wanted to go home and see; hey, I haven't been back for almost two years."

“It’s good to graduate after the defense is finished!” At this point, Professor Zhang’s tone was clearly solemn, and he asked slightly nervously, “Xiao Lu! What do you plan to do after graduation? Will you come back or stay in Europe? Or go America?”

“Of course it’s back! My research work in ern is coming to an end!” Lu Qiuqian replied without hesitation. Wasn’t he making such a big move in Europe just to be able to come back in a beautiful scenery!

“Good to come back! Good to come back!” Professor Zhang heard the red light, although his young student became a popular field and Nobel Prize, Poincaré’s conjecture was cracked in Princeton. Completed, the discovery of dark matter was completed in ern, when he studied at the University of Munich. Slightly missed!

But Lu Qiuqian is so young, and he will certainly be able to achieve the same level of results in the future. If he can be left at Beijing Normal University, he will be more confident when he wins the award later. “Where did you go after coming back? As long as you are willing to go back to our Peking University, whether it is the application fee or the construction of the laboratory, the school will give you a green light!”

“Uh, I have been busy with the experiment recently, plus there is more than a year before graduation, I haven’t thought so far for the time being!” Lu Qiuqian was a little embarrassed. I am afraid that Beijing Normal University is going to be disappointed, but he is not good at exposing his plans.

“Now the experiment is over! It’s time to think about it! If you plan ahead Our school should be prepared in advance, isn’t it? The establishment of the laboratory, the application of funds, and the allocation of personnel are all necessary. Time! If you decide earlier, our school can directly carry out these tasks. When you come back, you can start research immediately! “Professor Zhang seriously told,” This can save a lot of time for research! For us There is nothing more valuable to these people who are engaged in research! Time to start one day earlier and hope to win the scientific research competition! “

“If I intend to enter the university in the future, our first choice must be our school!” Lu Qiuqian had to answer vaguely when the sentiment was difficult.

“That’s right! Do you plan to continue dark matter research or selective fields in the future? You need to be clear, and I will discuss with the principal what to prepare for you!” Professor Zhang said on the thigh.

Hey, bury yourself in the pit! Lu Qiuqian was very entangled in the back seat. How should he refuse the good intentions of Professor Zhang and Beijing Normal University?

Chapter 355 - Accept consultation

“When I get my Ph.D., will I tell you your plan first?” Lv Qiuqian didn’t reveal his true plan.

“As long as you return to your country, Beijing Normal University is your strongest backing!” Although Professor Zhang regrets, he also knows that it is not appropriate to force Lu Qiuqian too tightly.

After a while, the car drove into Beijing Normal University. Professor Zhang turned around and asked again, “Xiao Lu, are you tired now, do you want to go back to rest first?”

“Yeah, what other arrangements do you have for the school? Just tell me! I will try my best to cooperate!”

“Oh, then I’m welcome!” Looking at Lu Qiuqian’s spirit, Professor Zhang announced the arrangement of Peking University. Tonight, the president of Peking University wanted a script banquet to entertain Lu Qiuqian.

After learning the time of the banquet, Lu Qiuqian nodded and said, “Yes, I will definitely attend on time!”

“I heard that you have a girlfriend. A lot of old guys who are going to introduce you to them are regrettable. Can you bring Xiaoxia together today! Let those old guys open their eyes. Who can find such a good girl? “Professor Zhang is in a good mood at this time, joking by the way, and the shy Xia Xiao buried his face in Lu Qiuqian’s arms again.

The car drove down to the building assigned to Lv Qiuqian by Beijing Normal University. Professor Zhang Guo and his students took the lead. They also saw that Xia Xiao was tired, so let them take a good rest first!

Feel the key that has not been used for a long time to open the room door. It seems to be the same as when Lv Qiuqian left. The window is clear and the floor can almost be used as a mirror! A variety of fruit snacks were placed on the coffee table, and vegetables and fish were all in the refrigerator. Lu Qiuqian closed the refrigerator and said, “Look at you, I’ll cook some porridge for you!”

Well, Xia Xiao said softly, the skill of cooking is a scarce product for her! In the neon days, they all rely on takeout to spend their lives. This year it is rare to be able to appreciate Lu Qiuqian's cooking again, and she is extremely happy.

After a simple lunch, the two watched TV for a while; after the nap, Xia Xiao also regained his spirit, and attended the evening banquet together with Lu Qiuqian.

“It is the pride of the entire Peking University to be able to give birth to such outstanding students as Xiao Lu!” Today's principal completely lost the serious expression of the past. The mouth that laughed open did not close completely, and in eight months it was the awarding time of the Fields Prize! Ten months later is the moment when the Nobel Prize winner list is announced! Even if only one of them can be found, it is the most glorious moment in the entire century of history of Beijing Normal University!

And unlike other winners, Lu Qiuqian is now 22 years old, and his academic career is still very long, if he can stay in Beijing Normal University. It will certainly attract countless geniuses to join our school; why is Shuimu University favoring Yang Zhenning so much that he wants to use his appeal to attract high-quality students and funds? With the help of Yang Zhenning, the Physics Department of Mizuki University has made rapid progress

However, after all, Yang Zhenning is already older. I am afraid that the pointing students may be unable to do so; Lu Qiuqian is different. According to the principal's estimate, he has at least 20 years of prosperity, and can produce countless major results. Countless talents have been cultivated, so he must be retained anyway!

“Xiao Lu, the school has left you with a nine-figure cost budget when making the budget for next year! As long as you are willing to come back. This cost will be fully controlled by you! In addition, our Beijing Normal University is still in the process of construction There is a big say, if you have any ideas, we can also help you fight! “After the third tour of the liquor, the principal threw a sugar-coated cannonball.

Really spared no effort! If you are not thinking about the plan, but a simple scholar, Lu Qiuqian will be moved by it! But now he can only politely decline the principal's kindness. He will say it again to Professor Zhang. Although the principal regrets, it can only do so!

Tomorrow I will go to the most critical consultation, plus the school also considers the fatigue of Lv Qiuqian's long-distance flight. So the banquet did not last long and long and ended.

Woke up early the next morning, and Xia Xiao finished their own breakfast; Lv Qiuqian finally had time to do his own thing, he called his three students and called to see them How is the learning situation in the recent period.

After receiving the call, Wang Wenxiang and Ye Chu rushed to his residence. “Don’t be nervous, just sit casually!” Lu Qiuqian greeted them to sit down, and Xia Xiao poured tea for them.

“Thank you teacher, thank you. Mother!” Ye Chu shouted for a while, but still shouted like this, although Xia Xiao was only a little older than himself. But others are also the girlfriends of their teachers.

This mother-in-law called Lu Qiuqian almost squirted out the tea in her mouth, and people are better than you three or four years old! However, this is not the point. After a few chats, Lu Qiuqian began to study their progress during the inspection period Only Ye Chu looked a little trance, and many knowledge points that should have been mastered were not mastered, which made Lu Qiuqian frown slightly.

“Er, teacher, Ye Ge recently fell in love with someone else, so the spirit is a little trance! Everyone is young, you should also understand! I believe it will be fine in a while!” The most mature of the three, Xiang Zhen, quickly went round.

“Oh? What kind of girl? If you want the teacher to teach you both hands?” Lu Qiuqian’s cell phone alarm rang during the real talk. He took it out and saw that it was almost time to go to Wang Yang’s appointment, so he paused On this topic, “Okay, I still have something to go out. Let’s talk later when we have time!”

Going downstairs and calling Wang Yang’s phone, a humble Audi car drove in front of him. After getting on the car, Wang Yang casually chatted with him a few words, and did not dare to disclose today’s destination and what he wanted to see. What are people?

The car detoured slowly in the capital, and finally drove into a small courtyard that looked unremarkable. Although there were only two guards standing at the doorway, Lu Qiuqian was keenly aware that there were still a few hidden in the courtyard. The person who is more powerful than the military attache of the Munich consulate in general is on guard.

“Here we are, Dr. Lu, go in yourself!” Wang Yang pointed to the room in front.

“Well, I got it!” Lu Qiuqian took a deep breath and walked out of the car door. Whether his own plan can achieve this depends on it!

#### Chapter 356 - Plan to preach

“Dr. Xiaolu, we will meet again!” Into the house, in addition to Qin Feng, there are several elders of this year and several scholars, and the elders are not all members. A few people related to the plan were here, but these people Lu Qiuqian met at the last National Optional Technology Recognition Conference; the elders stood up and shook hands with Lu Qiuqian cordially, “I thought I wanted to I will meet you again in August this year, but I didn’t expect the plan but it was advanced! “

At the science and technology commendation conference, the elder once said that if Lu Qiuqian won the Fields Medal, he would build a feast for Lu Qiu in Haizi, so he would say so.

Qin Feng on the side also came over. If it was not because he was the first to contact Lu Qiuqian, and that he was the next generation elder who was favored by many people, I am afraid he would not be qualified to stand here; The two pieces of information previously sent by Dr. Lu have provided great help to our current research on controlled nuclear fusion! But these two pieces of information are too specific. The invitation to come over this time is to find out if you are more macroscopic. plan!”

“This is natural!” Lu Qiuqian seemed confident. Even though the elders in the room did not have a deep understanding of the field of controllable fusion, they are elites in the political arena, and they are capable of observing people. Yes, from the subtle changes in Lu Qiuqian’s eyes, tone and expression, he can be seen that he has great confidence in this.

“I will talk about this later, and I haven’t congratulated Dr. Lu for his breakthrough achievements in the dark matter field recently!” The Prime Minister also approached and asked, his tone was eager, “Excuse me to ask a layman, Dr. Lu. What is the chance of winning the Nobel Prize with this achievement? “

Hearing this question from him, the other elders did not feel upright. They deeply knew how much impact Lu Qiuqian could win on China’s scientific and technological career.

“If subsequent experiments confirm my theory again, the chances of winning will be very high!” Lu Qiuqian said cautiously, although in his opinion this achievement can almost lock Nobel, but out of the Chinese tradition, A little humble is better. First of all, when these people choose the leader of the controllable fusion program, I hope he can be more stable?

“That’s good! Since then, there must be more teenagers interested in scientific research?” The Prime Minister couldn’t help but praise, and felt a little regret, “Hey, if Dr. Lu completed this result in a domestic laboratory Just better! “

“At present, only the European Nuclear Research Center has the ability to make this discovery in the world! But we will wait for our large-scale ring-shaped electron-positron collider to complete. There will definitely be more breakthroughs in our country!” Lu Qiuqian suddenly flashed, “But is it not impossible to spend less money to complete the breakthrough of the same level?”

“Oh? What did Dr. Lu say?” The Prime Minister was immediately interested. If a Nobel-level achievement can be attributed to someone’s talent, then the second item should always explain the country’s accumulation of wealth. Is that right?

“MIT and California Institute of Technology have jointly built a laser interference gravitational wave observatory for the detection of gravitational waves; at that time, Professor Yang Zhenning also suggested that China ’s Sun Yat-sen University carry out research in this field. Compared to the Hadron Collider, the laser interference gravitational wave observatory, which cost only US \$ 350 million, is indeed a project with a small investment! “Lv Qiuqian said slowly,” I remember Professor Yang ’s suggestion at Sun Yat-sen University The research was carried out for a period of time, and then it was stopped because of various problems! If we can continue to invest in the construction of a more advanced detection facility than the laser interference gravitational wave observatory, then it is very likely to achieve a breakthrough in this field! This is also a Nobel Level achievement! “

Hearing Lu Qiuqian ’s words, the Prime Minister frowned and fell into deep thought. It seemed to be wondering whether it was cost-effective to spend more than \$ 400 million to win a Nobel Prize.

“In fact, this research is not just a Nobel Prize issue! In the process of research, China’s laser technology, material technology, fine detection technology, computer technology, etc. can be improved!” Lu Qiuqian then explained, “This is the above Any breakthrough in any field can bring great economic benefits, so this investment is still very cost-effective. “

“If you say that, are you willing to return to China to lead this research?” The Prime Minister nodded and understood what he meant. Asked immediately.

“Premier, I think Dr. Lu may have some avatars, right? After all, there is controllable nuclear fusion work!” Qin Feng couldn’t help but remind that controllable nuclear fusion and gravitational waves, in the time of 50 years Here, the former is obviously more important.

“Haha, I was negligent!” The prime minister smiled and dismissed the topic, and then took the initiative to introduce the people in the room to Lu Qiuqian. The elders Lu Qiuqian knew that there was no need to say more, “This is Shang Yang of the Academy of Sciences Academician, Academician Shangyang is the authority of Tokamak device in China; this is Academician Liang Wenchao. He is an expert in laser field.

There are not many experts, but they are all people who are closely related to the controlled nuclear fusion. After the introduction, they will go directly to the topic. “Dr. Lu, you may wish to talk to your experts about your plan.”

“Well, okay, my plan is ...” Lu Qiuqian didn’t prepare a speech, and began his own exposition directly with empty hands. Those experts were still somewhat dissatisfied at first. However, as Lu Qiuqian spit out one by one data, their faces became more and more dignified. These methods that Lu Qiuqian said were not considered, but they did not go into this step for various reasons, and he revealed It seems that the number 7 can solve the problem that has troubled them for a long time Lv Qiuqian’s exposition has lasted for more than two hours, and the experts are all absorbed in it. Although the elders and Qin Feng do not understand, they also There was no trace of impatience.

“Well, that’s my initial plan! What are your questions?” Lu Qiuqian said habitually after his speech.

“Dr. Lu, about the laser ignition device ...”

“Dr. Lu, what you just said about plasma confinement ..”

The voice just fell. Those experts forgot to have the elders present. They immediately asked questions enthusiastically, and Lu Qiuqian did not rest. They answered their questions meticulously, and it ended after more than an hour.

“Okay, since everyone can’t think of anything at the moment, then today’s meeting will come here!” The elder elders said, and then the elders dispersed separately. Such an important thing is obviously not a single meeting can have results.

Chapter 357 - Nobel nomination

“It must take some time to make such a big decision!” Qin Feng comforted after he came out. Hey, and Lu Qiuqian’s age is still a big problem, even if he is given the highest authority for his research. Right.

Qin Feng grew up in Beijing when he was young. He was familiar with the specialty snacks around Beijing. He took Lu Qiu Jian into an old shop while eating his signature dishes while talking about his speech in neon some time ago.

“That’s just a blinding way. If the elders really decide to hand over the controllable nuclear fusion plan to me, then it will inevitably involve a lot of capital and resources. Let’s always have an explanation to the outside world?” Lu Qiu Jian He said, “Although the space exploration program is relatively sensitive, there is no such thing as a controllable nuclear fusion that is so eye-catching, so that foreign countries’ vigilance against us can be relaxed!”

What’s more, the growth of space exploration technology is also very good for the plan after the controlled fusion of his sight! But this will be many years later.

“Well, this is indeed a good way! I think that the wind can be properly released from now on!” Qin Feng agreed, of course, this still requires the elders to nod.

At the end of the meal, Wang Yang drove Lu Qiu Jian back to Beijing Normal University. The first thing Lu Qiu Jian got on the train was to switch on the phone. The phone was naturally turned off when meeting with the elder group. To a lot of text messages and missed call reminders.

After reading the text messages one by one, Lu Qiu Jian smiled slightly, and the good news for himself finally came! It’s a pity that it’s a little late for a long time, if I received this news before going to meet with the elder group, I’m afraid it would be better!

“Dr. Lu, what kind of good things have you encountered?” Wang Yang asked interestingly.

“Oh, a message from Dr. Evans of the European Nuclear Center, he told me that this year’s Nobel Prize winner Professor Peter Higgs nominated me as a candidate for the 2006 Nobel Prize in Physics!” Lu Qiu Jian Ji said.

“Oh, it’s a pity! It would be good if the news came a long time ago!” Wang Yang also expressed the same emotion as him, “but it is not too late now.”

Wang Yang still pays great attention to the principle of secrecy. Although he and Lu Qiu Jian are the only two in the car, he did not continue to talk about this topic. Congratulations to Lu Qiu Jian with a little emotion. “Dr. Lu, congratulations!”

“Thank you! But now it is only nominated, and it is not known if you can win the prize!” Although she said so, Lu Qiuqian knew that unless the subsequent experiment overturned the results of the previous experiment. Otherwise, the chances of winning are still great.

When the car drove to the door of Jingshi University, Lu Qiuqian found that there were a large number of reporters gathered at the door. The staff of Jingshi University was hanging the banner congratulating Lu Qiuqian on the Nobel Prize in Physics in the most prominent position. This news has gradually spread.

Hey, it seems that my leisurely vacation is going to take a break! Lu Qiuqian sighed slightly in his heart. Waved goodbye to Wang Yang and walked to the gate of Beijing Normal University.

“Dr. Lu, congratulations! Congratulations!” Minister Zhang, who is directing the staff to install the banner, immediately spotted Lu Qiuqian’s figure and hurried forward to congratulate him.

“If it weren’t for the cultivation of the alma mater, how could there be my today!” Lu Qiuqian said with a smile.

Minister Zhang still wanted to say something, but with the effort of this sentence, the reporters gathered around gathered up and asked questions all over the mouth.

“Dr. Lu, can you talk about your current mood?”

“Dr. Lu, how much are you sure about winning the Nobel Prize?”

“Dr. Lu. What do you think made you nominate Professor Higgs?”

Minister Zhang’s embarrassed smile, if he had just stepped forward to congratulate, I’m afraid Lu Qiuqian had already entered the gate already! He quickly greeted the staff to rescue Lu Qiuqian from the crowd. “My friends in the media, I am really embarrassed. Dr. Lu is now a little tired and needs to go back to rest; everyone can submit the interview application to Beijing Normal University, and then we will pass it on. To Dr. Lu! “

“Just a question! Let’s ask a question!” How can these tried-and-true journalists be so easily dismissed.

“Thank you friends from the media, then I will simply say a few words!” Lv Qiujian sees that the current situation is showing signs of being out of control. It is not enough to know that he does not say a few words.

This move really worked. The reporters quickly took out a recording pen, a small book, etc. to prepare the record; Lu Qiujian cleared his throat and reported a series of thanks, “First of all, I am very honored to be favored by Professor Higgs and nominate me as the Nobel Prize Candidate; Secondly, I would like to thank the Beijing Normal University, Princeton University, Munich University and other schools that have provided great help in my growth. Thanks to the European Nuclear Research Center for giving me the opportunity to verify the theory with experiments. Thanks to the Beijing Institute of High Energy A cooperative institution that made a lot of contributions during my experiment .. “

“Similarly I think this nomination is not only my personal honor, but also a testimony of the rapid growth of China’s technological level. I believe that more Chinese scholars will be awarded Nobel in the future Nomination of the award .. “

“I hope this nomination will attract more talented young people to join the scientific research team ...”

“Okay, I have n’t thanked Professor Higgs yet! I ’m going back to call now! Thank you for your media friends’ support. If you still have an interview plan, apply to Minister Zhang! If I have time, Do your best to meet your requirements! “It just happens that you can use them to build your own momentum, so that you have more control over your controllable nuclear fusion plan.

Back at the residence, Xia Xiao was drawing a cartoon quietly in front of the computer. After Lu Qiujian cared about her, he immediately dialed Professor Higgs ‘phone. Through Professor Higgs’ words, Lu Qiujian knew that he was the only one nominating him There are also Professors Engeler and Braut, as well as several experts who are equally optimistic about him.

Called one by one to thank him, and shared his joy with Dr. Evans, Professor Xuft, etc., Lu Qiujian was considered idle.

Amount, when I return to the University of Munich to meet Professor Theodor-Hensch, I always feel a little embarrassed! Higgs jumped in this year and next year, because of his own reasons, this elder has been delayed for two years!

What else will happen in the next few days? At the awards ceremony, I was interviewed by reporters and went home to visit my parents. Oh, yes, and the students, what happened to Ye Chu?

## Chapter 358 - Exercise Math

Hey, this is a good seedling, so he can't be so degraded! Or call him tomorrow and talk! Lu Qiujuan made up his mind. 『

After finishing breakfast the next morning, patting Xia Xiao, who was still asleep, "Get up to eat!"; The habit of drawing and sleeping late after a long time painting is not so good!

"Yeah, it's nine o'clock!" Xia Xiao blushed slightly, and he was still sleeping while he was making breakfast every day, which is a bit embarrassing!

When tasting the breakfast made by Lu Qiujuan, she said Nono, "Call me when you make breakfast tomorrow, I can fight for you!"

"Yes, but are you sure you can get up?" Lu Qiujuan joked; after breakfast, when cleaning up the tableware and handing over to Xia Xiao, Lu Qiujuan dialed Ye Chu's phone.

"What's going on recently? Are there any problems in life? Tell me if I can help you?" Lu Qiujuan asked when Ye Chu came in and sat down on the sofa.

Hearing this, Ye Chu's eyes lit up, he stopped talking, and his head flushed with blush, and he twitched for a long time before asking a seemingly irrelevant question, "Teacher, your basketball and football are playing so well, yes Do you have any special skills in sports? "

"Oh? What do you ask about this?" Lu Qiujuan felt vaguely guessing something. "But I did apply a lot of mathematics and physics knowledge in sports!"

"The teacher, can you teach me these things!" Ye Chu seemed to see hope, his eyes flickered and made a pitiful look.

"Yeah, are you in love with that athlete's sister?" Lu Qiujuan couldn't help but laugh, "Then you have to talk about the other party's sports! The knowledge required for each sport is different!"

"Huh? Teacher, how did you guess it?" Ye Chu's mind was suddenly revealed, leaving him at a loss for a while.

Junior, your eyes and expression have already betrayed your heart! Lu Qiuqian glanced at Xia Xiao next to him. “You are always me and a young man. What can young people think about one day?”

“I. When I returned to school last summer vacation, I met a female triple jumper on the train who came to Beijing to participate in the competition. She is about the same age as me. Good looking! “Ye Chu blushed about his first love.” We talked all the way. When I got off the train, I exchanged phone numbers! When I came back to school, I found out that my head was full of her, and I felt myself I’m afraid I like her! “

“Go after it if you like it! It stands to reason that your conditions are not bad!” The students of Beijing Normal University are also the best in his age.

“I go to her as soon as I have time! She seems to have a good impression on me, but we are usually busy, and there are not many opportunities to meet! But this is nothing. Both of us want to make some achievements in our youth. Come! It’s just that she lost a lot in the competition some time ago, but I can’t help you much! So I was in a trance and delayed learning this! “

“No wonder you asked me about this knowledge!” Young people will inevitably encounter this kind of thing. Lv Qiuqian has no intention of preventing it. It is better to conduct counseling than to block it. “In the 1970s, a new branch was born in the mathematics circle-the applied mathematician j-b-Keller of the United States created a new method for studying sports using modern mathematical methods!”

“He used mathematical knowledge to establish a new running theory and used it for the training of long-distance runners, and achieved good results! At the same time, the American computer scientist Esther used the knowledge of mathematics and mechanics and studied the time with the help of computers. The popular discus throwing technique puts forward his own training theory. “

“He modified the discus throwing technique based on his own theory. Let the athletes under his guidance improve the performance by four meters in a short period of time, and break the world record three times in a row in the next Olympic Games. Examples like this There are many more! You can find a few books and papers on this topic to take a look! “

“Wait for you to have an understanding of the field. It can help her improve her technical movements and training methods to create better results!”

This passage heard Ye Chu extremely fascinated. After asking Lu Qiuqian to get to the book list, he could n’t wait to run to the library; he just got out and got a cell phone to call the person he admired, “Mei Mei, tell you a Good news, today my teacher said that you can use mathematics to

help you improve your grades ... don't believe it. My teacher is just a Nobleman who has just been nominated for the Nobel Prize. Just wait for my good news! Even if I do n't sleep, I 'll help you find a way out! “

Ye Chu's problem is solved! New questions came to the door again. Minister Zhang of the Propaganda Department told him that Chaoting Station planned to follow up his life and make a special program, “They want to bring your life to the general audience, the audience Friends also want to know what scientists look like in their daily lives? “

“You don't know what our usual life is like? Are you always going to eat and sleep?” Lu Qiuqian quipped The problem is you know. I know, but the audience friends do n't know! “Minister Zhang said with his hands spread out, and he was afraid that Lv Qiuqian wouldn't agree to explain quickly,” they said, and they will definitely not interfere with your normal research and life. “

“I can't stay in Beijing for a few days?” Lv Qiuqian's tone was loosened.

“It's okay! Just a few days is enough! Isn't it just another two days that you set up the Mathematics New Discovery Awards ceremony? We took advantage of this opportunity to gain popularity!” Minister Zhang is worthy of being an expert in publicity. Quickly found a way to convince Lu Qiuqian.

“So okay! I discussed with Xia Xia, if she didn't object, I would have no opinion!” Lu Qiuqian nodded and responded, but Xia Xia didn't like exposure, so I had to solve this problem first!

Discussed with Xia Xia, and finally determined that as long as they did not shoot Xia Xia's face, they could accept the shooting plan of the court, and the time will start from tomorrow until Lv Qiuqian leaves Beijing.

The news was sent back to the stage, and the members of the column group immediately started the final preparations. They turned over the videos of the previous interviews with the scientists on the Imperial Court and the materials interviewed by Lu Qiuqian before they were carefully studied.

Early in the morning of the next day, the crew of the program boarded the interview vehicle and went to Beijing Normal University to start recording the program.

Chapter 359 - Non-mainstream scientist (28/40)

“Eh, what kind of person do you think this Dr. Lu is? Will you deal with it?” Lu Rui, the female reporter who was the main force in this interview, asked.

“I think it should be similar to those of the old scientists?” Xiao Yue, a photographer who watched the video for a night, speculated, “The room is filled with a lot of professional books, and the simple life does not pay much attention to material enjoyment. I put all my energy into scientific research. “

“Simple is probably not right? Dr. Lu played in Bayern Munich! I heard that his annual salary is 6 million euros, not including bonuses! Unfortunately, he hasn’t received ads yet, otherwise I am afraid More! Even it is possible to become the highest-paid athlete in the world! “Said Wang Qiju, who was driving.

“If you don’t accept the advertising department, it just shows that people don’t care about material? If you pursue your personal life, isn’t it the more money, the better?” Xiao Yue couldn’t help but refute.

“I think so, if he put all his energy on enjoyment, how could there be the results today?” Lu Rui remembered the deeds of the old Chinese scientists when watching the video yesterday.

“Humble character and gentle talk! Enthusiastic to those who are interested in scientific research ...” Xiao Yue regained his brain, and the whole group debated arrogantly, and it didn’t take long to reach Lu Qiuqian’s downstairs, Lu Ruixian I made a phone call and confirmed that I could start the interview. I took the team upstairs and rang the doorbell. 【×】

“Oh, are you reporters at the court station? Please come in. No need to change shoes! The room is a bit small. I’m embarrassed.” Lu Qiuqian opened the door and greeted them. The one-bedroom, one-room house was crowded The five people who came in did not look so spacious, especially since they were still carrying various equipment.

“This is Ms. Xia! I’ve been chasing your comics!” Lu Rui couldn’t help but see Xia Xiao for a while, hey, I’m about the same age as others, but on the face of it, I’m older than others. She remembered Lv Qiuqian’s request, instead of letting the photographer point the camera at Xia Xiao, but letting him shoot the breakfast on the table, “I did n’t expect you to do a good job of drawing except for comics. The cooking is also so good!”

“Well, I didn’t do this!” Xia Xiao’s face was flushed, so loud, so shameful! Everyone knows that they can’t cook now. “It’s all his craft!”

Eh, Lu Rui was embarrassed for a while, and slapped on the horse's legs. Fortunately, Xiao Yue was experienced and quickly came out to play the round. "What we are going to shoot this time is the real life scene of Dr. Lu, so what do you usually do, and how will you continue now! Xiao Lu, do n't disturb Dr. Lu first."

"Have you eaten breakfast? I'll help you make some porridge too!" Xia Xiao felt that a group of people looked at themselves and Lu Qiuqian a bit overwhelmed, and was ready to get up and go to the kitchen.

"Don't use it, we have all eaten it! You eat yours!" Everyone quickly refused, and asked repeatedly, Xia Xiao and Lu Qiuqian finally continued their breakfast under the camera. After breakfast, Xia Xiao went to the kitchen to wash dishes, Lu Qiu Jian planned to go to Professor Zhang's office to discuss matters related to the award ceremony.

"I usually go by bike! Do you take your car now or as usual?" Lu Qiuqian asked when he was leaving.

"It's still the same as usual, our program is to reflect your real life!" Xiao Yue couldn't help but glance at Wang Qiju. Look, I said that Dr. Lu's life is very simple. You don't believe it. The annual salary is so high. I still ride a bicycle to work. Isn't that simple?

"That's OK, I'll push the bike!" Find out the bike that hasn't been used for a long time. The people who can see Minister Zhang are very attentive. They even wiped the bike clean, saying goodbye to Xia Xiao. Come downstairs. 【×】

He rode slowly toward the office building of the Department of Mathematics, and the people at Chao Tingtai followed him slowly in the car. Xiao Yue was responsible for the shooting. Lu Rui started a new round of communication, "Dr. Lu, your income is so high that you do n't even buy a car, but work on a bicycle. It 's really frugal and frugal!"

"Thrift and thrift? I'm afraid it's not a good one?" Lu Qiuqian turned back and smiled. "The reason why I ride a bicycle is that it's more convenient to ride a bicycle in Beijing Normal University than a car, and I'm just doing something here temporarily. You must buy a car when you start working in the future! Besides, my bike is not cheap! "

Is this the inherent humility of scientists? Lu Rui didn't take his answer seriously. How expensive can a bicycle go there? "How much is your car?"

“When I bought it, I spent 128,000 dollars.” Lv Qiuqian said lightly. But this number still surprised the three court staff.

Wang Qiju twisted the steering wheel like a reflex, farther away from Lu Qiuqian; Xiao Yue shook his hand, and the shooting in a few seconds was considered invalid; Lu Rui didn't know what to say, just praised others' hard work and frugality. Now a million-dollar bike pops up, how should I respond?

This is really different from the average scientist! The three looked at each other and smiled bitterly at the same time, which was completely different from what they thought before they came!

I went to Professor Zhang's office and talked about the awards ceremony for a while. The venue of the meeting has been set up and can be checked in the afternoon. The invited guests have almost arrived in Beijing and are staying in the hotel of Beijing Normal University. In the evening To greet them, all the publicity work is also ready, the pre-warming has already started on the Beijing Normal University and the official website of the award, and the news of the award ceremony has also appeared on the print media, online media and TV. .

Well, this looks pretty normal! Like the scientist he imagined, the three at Chao Tingtai thought while shooting.

At the end of the discussion, I refused Professor Zhang's invitation to have lunch with Xia Xiao at his house, and took the three reporters downstairs, “I am going to buy food to prepare lunch, so I don't need to shoot this? “

“I want it! Is this real life!”

“That line, I'll buy more. You can also try my craft at noon!” Lu Qiu built a bicycle and went to the West Gate of Beijing Normal University outside the West Gate, the three court staff Suddenly attracted by a man holding a large sign across the road, the sign reads “To raise funds for a project that has the strength to fight for the Nobel Prize in Physics, and I especially seek the help of teachers and students of Beijing Normal University!”

Hey, this is a good thing! I don't know how Dr. Lu will treat it? Who knows that Lu Qiuqian glanced away and took back his gaze, driving forward without stopping.

Chapter 360 - Scientific delusion

“Dr. Lu!” Lu Rui felt that this was a very attractive point for the audience. Shouldn’t an accomplished scientist like Lu Qiuqian support those science enthusiasts who are still outside the door? So she called out to Lv Qiuqian.

“What’s the matter?” Lu Qiuqian stopped the car, and Wang Qiju quickly stepped on the brakes. Lu Rui opened the door and waited for the car to stop.

She took two quick steps to catch up with Lu Qiuqian, “Dr. Lu, you seem to need someone to help over there! Are you not going to talk to him?” Lu Rui was afraid that Lu Qiuqian didn’t see it, but also pointed to the opposite side. A person holding a sign.

“Well, I saw that he claimed to be able to use gravitational waves, which will greatly improve human life!” Lu Qiuqian repeated the main points of the article on his brand, “I think there is nothing to say!”

“Why?” In Lu Rui’s opinion, it would not take much time to walk over and talk. It would be too cost-effective to find a talented scientist by spending a trivial event.

“From his article, it can be speculated that he has not received formal science education, so these things don’t matter!” Lv Qiuqian frowned slightly, which reminded him of the claims he had encountered in the mathematics of the Chinese Academy of Sciences. With the Goldbach conjecture and the Riemann conjecture, he is no different from those.

“Hua Guo is so big! There will always be talents missed? Maybe he didn’t enter the university because of partial subjects?” Lu Rui still stubbornly refused to let this topic go. She emphasized again, “You used to be with him Doesn’t he know his level after a few chats? “

Hey, really hard! What I mean by not receiving science education on the right track does not mean not going to college! Ramanuqiang also did not have a high degree of formal education, but he received science education through self-study, so he will have what later achievements, and he will write his own achievements to find peers for testing, only to be discovered by Hardy; Rather than writing something that looks dazzling but actually illogical like this to attract attention.

Looking at her stubborn look, Lu Qiuqian knew that it would be impossible not to say a few words, so she pushed the bicycle to the man and looked at the article. Lu Qiuqian asked, “Mr. Guo. As far as I know, There is no conclusive evidence that gravitational waves have been discovered. How did you make a plan to use gravitational waves? “

“Want to discuss gravitational waves? Do you have the ability to do this?” Which Mr. Guo looked at Lu Qiuqian and estimated his age, some disdainfully said.

“Dr. Lu is a graduate of Peking University. He is currently working at the European Nuclear Research Center. He has a profound knowledge in physics!” Lu Rui hurriedly named him for fear of being angry.

“What’s wrong with the doctor? The physical knowledge you are learning is wrong now. The more you learn, the farther you go on the wrong path!” The man murmured a few words, but perhaps considering that he was waiting here It’s been so long. Someone finally came out to speak. Although not a professor or an academician in his imagination, a doctor also made up, “I invented a physical system of acceleration system + gravitational wave + matter wave, which can be solved ...”

Hearing so many tall nouns in his mouth, Lu Rui suddenly apologized, secretly smirking in his heart, maybe this one in front of him is a real physical genius!

“Please stop for a while!” After only a few minutes of listening, Lu Qiuqian couldn’t stand it, and the other party’s theory was full of speculations. It is just to mix and match some inscrutable academic terms with metaphysical terms such as “Tai Chi” and “Bagua”. The theory lacks a rigorous derivation process and does not meet the existing physical specifications. I’m leaving my sleeves and leaving!

Suppressing his depression, Lu Qiuqian continued to ask, “So can you show me the mathematical formula of the theory you proposed? Or is it your derivation process?” Do you know if you look at this?

“I am talking about physics now! What does it have to do with math! You can listen to my conclusion now, what derivation process do you want?” The man stubbornly retorts his neck, and Lu Rui reveals his heart.

Get ready to leave! All laws of physics are inseparable from mathematical derivation. Since he said that physics and mathematics are not related. Then there is no need to continue talking.

After glancing at Lu Rui, Lu Qiuqian decided to help him for the last time, “Since you are confident in your invention, you may as well submit it. If it is really valuable, it will definitely be discovered! If there is no one at all, Accept your manuscript, then I still advise you to go home and find a job to live a good life! “

“You are discriminating against our folk scientists!” Perhaps he heard the meaning of Lu Qiuqian’s words, he became blushed and his neck was thick, “The journals are controlled by those of you in the circle, how many times have I submitted the manuscript Alright. There is no echo! “

“The Dean of the Chinese Academy of Sciences has said that the Chinese Nobel Prize winners will be born in the private sector, because now the official research can not get the Nobel Prize!” The man added again.

Yes, finally the morality of these journals is still there, it is right not to send you! However, this person apparently knew the strategy of the struggle, and it immediately came down to the opposition between the civil scientist and the official scientist, and also pulled out President Lu to make a tiger skin.

“President Lu has never said such a thing!” Lu Qiuqian said firmly President Lu just said that the Chinese Academy of Sciences will introduce private scientists such as enterprises and companies to join the Chinese Academy of Sciences! And IMHO, the scientists of those companies and companies are also formal and systematically studied, and they are researched according to scientific laws. It seems that you are not the same as you! “

For people like him, perhaps it should not be called a folk scientist, because the term is relatively neutral, and it is a waste of him, and it is easy to provoke the confrontation between the civil and the official, so that some people who do not know the truth and lack the ability to distinguish Produce unnecessary sympathy.

Perhaps it is more accurate to call these people pseudo-scientific delusions. Their common feature is that their education is generally not high, or they are highly educated but lack professional training in related fields, but they think they have made the most significant scientific discovery. , Unable to obtain the approval of the scientific community. Even the students of the major can find out the loopholes, but they think they are suppressed by academic authority, and they use the contemporary Copernicus and Galileo to self-proclaim and promote themselves everywhere.

These people are either psychologically flawed and fall into a lonely fantasy and unable to extricate themselves; or they cherish a deeper purpose and attempt to gain fame and fortune in this way!

The sympathy and support of these people is the sorrow of the national science work.
