

Hammer God 586

Chapter 586 Atoms

Kyle lost himself in Law Comprehension.

It had been a while since he had been able to just focus on comprehending a Law.

The last time this had happened was when he had been immersed in the Yin-Fire.

However, there was a difference between that time and this time.

Back then, Kyle had still been plagued by visions of what he had done and the pain of the Sin Flames.

Right now, he was not affected by them.

This made Law Comprehension so much easier.

The concepts of the Yin-Wind came to him quickly.

His Momentum had improved drastically after the brutal battle on the last planet.

That had been his first True Battle as a Transcendent, and the first True Battle in a Realm was always the one that brought the most benefits.

His Momentum affected the Energy around him, and it unveiled the deeper workings of the Laws.

'The massive weight of Yin-Wind is so strange,' he thought. 'It doesn't seem to be solid, but it feels like it's solid. I should be able to easily pass through it, but it feels more like a solid wall is pushing me forward.'

'It's like I'm constantly fighting against some kind of force. In a way, it feels a bit like gravity.'

'It has always been proven true that the extra aspect of the Yin-Elements is the Base Fragment of the Law. Most likely, the weight of Yin-Wind is the Base Fragment of the Law of Yin-Wind, which makes it the most complex one.'

'I should focus on the other aspects first.'

'First, I should take a look at its composition. That always makes the other parts easier to understand.'

Kyle looked more closely at the composition.

Yet, the more he looked at it, the weirder it seemed.

Usually, comprehending an Element's composition was always straightforward.

He generally just experimented with the Element.

Squishing it, cutting it, destroying it, splitting it, recreating it, and so on.

However, the way Yin-Wind acted was very unusual.

It was like it immediately turned into something else as soon as Kyle did something to it.

The Energy representing Yin-Wind randomly turned into Fire Energy, Water Energy, Earth Energy, and so on.

And yet, it wasn't made of these types of Energy.

It was so strange.

Eventually, Kyle got an idea.

'If I think back to Earth, aren't particles like that? You just add a proton and an electron to something, and the result is suddenly something completely different. '

The Cult of Final Fate also had several books about physics on Earth to make it easier for people from Earth to draw parallels.

Naturally, Kyle had taken a look at them as well.

The difficult concepts and the math behind the subject had been so complex when he had still been on Earth, but with his strengthened mind, everything seemed so simple now.

'If I take helium and simply split it in two, I get two deuterium, which are very different from helium. One gas doesn't do jack-shit, while the other one fucking loves oxygen and easily goes boom.'

'Can't do shit with helium, but just dump some hydrogen somewhere, and it's bound to combine with something at some point. Don't remember random clouds of hydrogen just floating around on Earth.'

'If I expand on this concept and relate it to Yin-Wind, I can see some similarities. I take Yin-Wind, do something to it, and it immediately turns into something else.'

'In a way, it's almost like Yin-Wind is not stable at all. Although which of the Yin-Elements are?'

'Yin-Fire just uses all of its Energy to freeze shit. Yin-Metal uses all of its Energy in different forms of physical force. Yin-Earth just corrodes almost everything it touches and denatures as a process. Even Yin-Water turns back into normal water after releasing its heating Energy.'

'The only thing that seems to keep Yin-Wind stable and contained is the Metal-Earth Stone that's surrounding it. I wonder why that is.'

Kyle decided to surface a bit from the stream and looked at the Metal-Earth Stone.

After experimenting with it for a while, Kyle realized one thing.

'This thing really doesn't want to do anything. It's kinda like a noble gas on Earth.'

'It has an insanely high resistance to heat. Even though it's not that hard, it needs more heat to become liquid than almost all Rank S Metals I know.'

'It doesn't like to vibrate or deform. In terms of elasticity, it's even worse than fucking glass.'

'It just doesn't give a shit.'

'So, why can this thing contain Yin-Wind? Is it some kind of resonance thing?'

'It's like Yin-Wind is the most social and agreeable guy imaginable. He can make anyone his friend. Meanwhile, Metal-Earth Stone is the ultimate introvert. He's such a stoic and serious loner that even Yin-Wind is helpless in front of him.'

'He can't make him do anything.'

'It's like Yin-Wind is hydrogen, while Metal-Earth Stone is helium.'

'There's something there,' Kyle thought, 'I mean, Yin-Wind combines with almost everything to make something new.'

'It's like it's the closest thing to Neutral Energy.'

'Neutral Energy literally combines with fucking everything, even Metal-Earth Stone.'

'Wait, I have a thought! What if-'

At that moment, Kyle's surroundings vanished.

"Huh, what?" Kyle asked in confusion as he found himself in front of a huge pillar of Yin-Fire.

He looked around and noticed Swamp Dragon opening his eyes.

Right now, Swamp Dragon was inside the pillar of Yin-Fire.

"I see," someone to Kyle's left said.

He looked over and saw...

"Ah, I see," Kyle repeated as he saw Warp Space.

Swamp Dragon narrowed his eyes as he took out his bow.

Warp Space also quickly farted took out her staff as she warily looked around.

Kyle also looked around, but he couldn't see anyone else.

"Hey, does your fancy Karmic Luck have any guesses as to where the other team is?" Kyle asked.

"It doesn't work like that," Swamp Dragon answered.

There was only one explanation why they had all been summoned to this place.

An enemy team had declared battle.

After a battle was declared, the opposing team had ten seconds to regroup and ready themselves before the battle started.

And these ten seconds were now up.
