

Infinite 1061

Chapter 1061: Creation Machine!

Just at the moment Su Yu was about to be engulfed by Death, he successfully created the Creation Machine!

In Su Yu's Manifestation Space, the Creation Machine, which he had just manifested using the blueprint, silently hovered.

Strictly speaking, this is not a real Creation Machine, but rather a fake manifested by Su Yu using the blueprint he had conceived in his mind, aided by the Manifestation Ability of the Number God Mechanic.

Previously, by observing the Cosmic Rules and collecting data, Su Yu had gained a lot of design inspiration for the Creation Machine.

Finally, at the instant of the destruction of the Azure Star System, Su Yu saw deeper layers of rules.

At that moment, Su Yu truly completed the blueprint of the Creation Machine!

Having the powerful manifestation strength of the Number God Mechanic made it almost equivalent to having the finished product for Su Yu, as long as there was a blueprint.

The Manifestation Ability is just that convenient.

Although the manifested creation, compared to a true finished product, would undoubtedly have a huge performance gap.

Especially for an inconceivable creation like the Creation Machine, relying solely on manifestation can't possibly achieve true Creation.

But using it temporarily is not an issue, it can even test whether the blueprint has problems.

And the blueprint set by Su Yu had no issues, so in that final moment, Su Yu manifested the Creation Machine!

The Creation Machine was forged from some unknown metallic-like material.

It constantly switched between two states: solid and Nihility, exhibiting a trait similar to a "Paradox".

Its shape is a four-dimensional hypercube, unobservable in its entirety in three-dimensional space, showing only its ever-changing three-dimensional projections.

On its projections, each side is inlaid with various complex mathematical symbols, recording the data of the Universe's underlying rules observed by Su Yu, evolving and changing spontaneously over time.

Eight layers of dynamic light wheels surround it, representing the manifestation of eight cosmic forces: Strong Nuclear Force, Weak Nuclear Force, Electromagnetic Force, Gravity, Dark Matter, Dark Energy, Information Entropy, and the Causality Chain.

These eight layers of dynamic light wheels orbit with a special frequency and trajectory around the Creation Machine.

Its operation seems unstable, fiercely changing every moment, with those rule data colliding, annihilating, and fusing.

The eight layers of dynamic light wheels also devour, convert, seeming to merge into one.

During this process, the energy level of the entire Creation Machine escalated rapidly, becoming increasingly intense, as if it could explode or be destroyed at any moment.

However, the Creation Machine's Time presents a "Reincarnation" state, and upon reaching a limit in its energy accumulation during operation, Time restarts, returning to the beginning.

Su Yu recorded all his knowledge of the Universe's fundamental rules and time-space knowledge onto it, even including the basic understanding of Time Loop and Space Dimension he mastered.

This Creation Machine encompasses almost all knowledge of the Cosmic Rules known by Su Yu.

Except for knowledge related to Subspace, Su Yu has already given his all.

The essential nature of this Creation Machine is a "simulated Universe" manually crafted by Su Yu.

It possesses nearly all the Cosmic Rules known to Su Yu, functioning according to the rules of the Universe.

However, compared to the Real Universe, its operation process is much more intense, greatly unstable.

The Real Universe has existed for unknown billions of years, while this Creation Machine is on the verge of demise in an instant.

Were it not for the Power of Time enabling constant restarts, it might instantly explode with a bang.

But this instability is precisely what Su Yu needs!

The essential nature of this Creation Machine is akin to an "Earth Globe," simulating the operation of the Universe through appearance and mechanical structure, yet fundamentally differing from the actual Universe.

The current Creation Machine is just a semi-finished product.

So, upon manifesting this Creation Machine, Su Yu immediately began the next step of his plan: locating the Time-Space Origin!

The Time-Space Origin is an essential component for completing the Creation Machine.

Previously, Su Yu had used a Paradox to seize the Time-Space Origin from Qi Chen.

However, because the Time-Space Origin is a true "point," Su Yu cannot see nor touch it, only stare blankly.

Fortunately, the power of the Paradox is formidable, though Su Yu cannot see or touch the Time-Space Origin, it is always with him.

Later, Su Yu acquired the method to "measure" the Time-Space Origin from Qi Chen, and now is the time to use it.

"There really is a problem with this method..."

Su Yu slightly recalled the method shown to him by Qi Chen for measuring the Time-Space Origin, secretly shaking his head.

The method Qi Chen told him was half true and half false, and if Su Yu fully believed it, he would be deceived and suffer greatly.

Fortunately, at this moment, Su Yu already mastered a lot of knowledge of the Universe's fundamental rules and had enough understanding of the Time-Space Origin to independently refine the measurement method.

So, Su Yu immediately began "measuring".

The Time-Space Origin is a "point" with no volume or size, hence cannot be found using normal methods.

Even if Su Yu's mental thoughts can delve into the micro level to observe Basic Particles, it is useless.

Su Yu thought about finding it, so he needs to change space, perform some "Dimension Reduction," reverting three-dimensional space-time back to two-dimensional and then further to one-dimensional, zero-dimensional.

Chapter 1062: Creation Machine!_2

The Time-Space Origin is inherently a zero-dimensional point. If Su Yu reduces the space he inhabits to zero dimensions, it would also become just a "point," making the Time-Space Origin naturally exposed.

Previously, Qi Chen taught Su Yu a ritual that utilizes the special nature of subspace to reduce the dimensionality of a certain area of space, thereby locating the Time-Space Origin.

But there's a huge pitfall in this process: the practitioner of this ritual also undergoes dimension reduction, transforming into a zero-dimensional point.

At that moment, the Time-Space Origin was found, but Su Yu inadvertently trapped himself.

Although with Su Yu's strength, even if reduced to zero dimensions, he wouldn't die, he would certainly face severe limitations during zero-dimensional status, preventing normal actions and thinking.

It might be a state of neither being able to live nor die, being sealed within a zero-dimensional point and unable to move.

That would leave him at Qi Chen's mercy.

Therefore, Su Yu has not previously attempted to locate the Time-Space Origin, aware that it's a significant pitfall.

Su Yu lacks extensive knowledge about space dimensions.

It's estimated that it requires a fifth-order or even sixth-order level space profession to access the power of space dimensions.

In Su Yu's professions, both the Pain Evil God and Nihilism Walker can open independent spaces, but they simply leverage the special essence of the Power of Pain and Power of Nihilism to open special spaces and don't count as true space professions.

If any profession comes closer to being a space profession, it's the Number God Mechanic.

The Number God Mechanic has the data manifestation ability to manifest space.

Data manifestation requires a certain understanding of the manifested object to be successful.

The deeper and more detailed the understanding, the more realistic the manifested result.

For instance, to manifest a mechanical creation, one must understand its internal structure and operation principles to succeed; otherwise, it can only manifest an appearance that's visible but not usable.

The same applies to manifesting space.

Theoretically, if Su Yu fully mastered knowledge of space, he could manifest a nearly real space.

Previously, the space manifested by Su Yu was already realistic enough, but it had yet to touch upon the domain of dimensions.

Now, however, after observing the underlying rules of the universe, Su Yu has acquired some knowledge about space dimensions.

So... he can now use the manifestation power of the Number God Mechanic to simulate dimension reduction on the data level!

In other words, Su Yu won't directly reduce the dimensions of real space but rather reduce the dimensions of the manifested space.

Moreover, the manifested space is entirely created and controlled by Su Yu, making it naturally much safer.

Consequently, Su Yu's silhouette appeared in the manifested space at this moment.

This manifested space is a small independent space Su Yu just developed, specifically for dimension reduction.

In the next instant, this independent small space, along with Su Yu himself, vanished; not truly vanished but became a "drawing."

The three-dimensional manifested space turned into a two-dimensional plane space.

A two-dimensional space has no thickness, being an infinitely thin "sheet of paper." At first glance, it indeed appears to have disappeared.

"Is this what it feels like to be reduced to two dimensions..."

At this moment, within the two-dimensional manifested space, Su Yu also transformed into a two-dimensional state. In this state, each of his cells, even each molecule, was unfolded into two dimensions, making his overall state exceedingly peculiar.

It's like a person being flattened under a heavy object, and each cell, each molecule, was flattened before ultimately becoming an infinitely thin "pancake."

The humanoid shape is certainly gone; even Su Yu himself couldn't recognize this as himself upon seeing his current self.

It essentially looks like an abstract, utterly incomprehensible "drawing" of flesh and blood.

Any ordinary transcendent being, even a fourth-order strong person, would surely die in such a state.

But Su Yu quickly adapted, even daring to move his body slightly, discovering that his bodily functions could still operate normally in this state. Truly, fifth-order experts are remarkable.

Time is pressing, so after a brief adaptation, Su Yu promptly initiated the next round of dimension reduction.

In the next instant, the dimensionality of the entire manifested space reduced again, transforming into a one-dimensional "line."

In reality, Su Yu now isn't a continuous line but a string of characters formed by segments of lines and dots.

It looks similar to Morse code, with this "Morse code" containing all of Su Yu's information.

"This feeling is truly peculiar..."

Similarly transformed into a line, Su Yu thought somewhat gloomily to himself.

Even as a fifth-order expert, it's extremely uncomfortable to be in such a state.

However, Su Yu could still control his body, resembling Morse code, to squirm slightly.

Then, Su Yu's mind steadied, deciding to proceed with the final dimension reduction—zero dimensions!

At this point, Su Yu had already become a string of char sequences composed of points and lines; the initially elusive Time-Space Origin also turned into a point within this "string."

Given enough time, it is possible to locate the Time-Space Origin among these points.

However, this string contains all of Su Yu's information, with too much information and too many "points." Finding them one by one would take forever.

Su Yu now doesn't have that kind of time and must reduce further to zero dimensions.

Reducing to zero dimensions incurs risks, even while reducing dimensions within the manifested space.

But at this stage, the risk must be taken; Su Yu is certainly not like that cowardly Brutal Evil God.

Thus, the final dimension reduction was initiated!

The one-dimensional line vanished as well, transforming into a "point" without size or volume.

The manifested space, including Su Yu himself, exists within this point.

However, a point lacks any internal structure, so how can it store so much information?

Su Yu doesn't know.

Consequently, he had lost the ability to think.

A point without any internal structure evidently can't maintain normal life activities.

Thus, Su Yu lost his ability to think, becoming essentially sealed by himself, sealed within a zero-dimensional point.

Fortunately...

[Gained Professional Experience]...

A familiar prompt materialized out of thin air, awakening Su Yu from that thoughtless and sensationless state.

Indeed, it's the Profession Panel.

Even within a zero-dimensional point, this thing can operate normally, directly awakening Su Yu.

Before conducting the final dimension reduction, Su Yu had already employed Power of Nihilism and Power of Pain for offsetting in order to gain professional experience. The intent was to use the experience prompt from the Profession Panel to awaken himself within zero dimensions.

Clearly, he succeeded.

This method had been used by Su Yu before; Evil God Undying was achieved using this approach, and this time merely seeks to replicate that success.

The risk here is: What if the Profession Panel doesn't function in the zero-dimensional state?

Although the Profession Panel can awaken even deceased individuals, within the state of neither life nor death in zero dimensions, Su Yu was uncertain if it would still function.

Fortunately, the Profession Panel proves to be as reliable as ever, akin to the world's strongest "alarm clock." It can awaken Su Yu from any situation—utterly incredible.

"What exactly is the Profession Panel?"

The first thought to emerge in Su Yu's mind upon awakening was this.

Still, there's no time for in-depth exploration now; the priority is locating the Time-Space Origin.

Yet, Su Yu doesn't need to purposely search for it. He merely senses a bit and can perceive the position of the Time-Space Origin.

Currently, the Time-Space Origin and Su Yu both reside within the zero-dimensional point.

This exceedingly peculiar state defies description. Despite Su Yu being reduced to a point—with absolutely no internal structure—the point nevertheless contains all his information.

All the information, energy, and matter compacted into a point with no volume, overlapping and coinciding positions.

In this limit state, some activity is preserved that lets him remain alive.

At the same time, Su Yu perceives another point brimming with information overlapping with him.

It is precisely the Time-Space Origin!

Chapter 1063: Kong Creation!

At this moment, the time-space origin and Su Yu are both at the zero-dimensional point, naturally having nowhere to hide, easily found by him.

But oddly, although Su Yu has already overlapped with the location of the time-space origin, both being a single point, theoretically, they should be indistinguishable from each other, fused into one.

Yet Su Yu can clearly distinguish "each other," not truly fused with the time-space origin.

The zero-dimensional point is obviously without any internal structure, yet it can distinguish "you and me," as if there is space within the zero-dimensional point.

All the strange aspects of this are very worthy of in-depth study.

Naturally, Su Yu would not miss the opportunity for research, quickly collecting various data of the moment.

Simultaneously, using his telekinesis to lock onto the time-space origin, which is the most important task.

"Finally found it!"

Su Yu senses the time-space origin, secretly says to himself.

This time-space origin is hidden inside Su Yu's body, and to locate it, he needs to go through dimension reduction with himself, which is extremely difficult and involves great risk.

Actually, Su Yu has one last paradox left, originally intending to use the paradox to locate the time-space origin.

However, since there's only one paradox left, he keeps it for future use.

Moreover, the last use of the paradox to gain the time-space origin resulted in a trick; although he successfully obtained it, he couldn't see or touch it.

Naturally, Su Yu doesn't want to fall for the same trick again.

Otherwise, even if he uses the paradox to gain precise spatial coordinates, it might still be unseen and untouchable, merely staring blankly.

Now Su Yu has reduced himself to zero-dimensional, overlapping with the time-space origin, both in the same dimension, precisely locking onto its position with spiritual telekinesis, which is a safer approach.

At this moment, Su Yu not only spiritually locked the position of the time-space origin but faintly senses the vast universe information contained within the origin.

Su Yu even has a feeling that he could use spiritual telekinesis to manipulate and move this origin.

Theoretically, the time-space origin contains all the energy and information of a universe, which certainly isn't something Su Yu's current power can move.

But when the Azure Universe's destruction caused an accident, resulting in the time-space origin being incomplete, losing much of its energy and information.

Furthermore, Su Yu suspects that the current time-space origin is not all of the remaining Azure Universe, perhaps just a small part of the true time-space origin.

After all, the Azure Star System has time-space reincarnation and parallel time-spaces.

Su Yu estimates there exists such a time-space origin in each time-space reincarnation and parallel time-space.

Only when all these time-space origins are combined would they form the true Azure Universe origin.

Therefore, the origin Su Yu obtained at this moment is merely a tiny part of the Azure Universe, extremely negligible, allowing Su Yu to move it via spiritual telekinesis.

Despite the time-space origin being too incomplete and lacking many parts,

both the creation machine has even less, devoid of any real body, entirely data manifested.

Really, neither should be dissatisfied with the other; just make do.

"The next step is to merge the time-space origin with the creation machine!"

Having just locked onto the time-space origin, Su Yu immediately activates the ability of the Number God Mechanic, beginning "dimension ascension," restoring from the zero-dimensional point to three-dimensional space.

Whether normal space can be elevated again after dimension reduction, Su Yu isn't sure.

However, the space he currently inhabits is a manifested virtual space, its various parameters controlled by him, making dimension ascension not difficult.

Quickly, the manifestation space and Su Yu within it, transform from zero-dimensional to one-dimensional, one-dimensional to two-dimensional, then two-dimensional to three-dimensional, restoring normalcy.

Throughout this process, there was enormous harm to Su Yu's body, even mind and memory.

Like a person crushed into a patty, piecing him back to his original form—is he still the same living person?

Su Yu's current dimension ascension is experiencing this piecing-back process.

Fortunately, being a Fifth-Order strongman, possessing great power and vitality, he's able to endure.

In this process, Su Yu constantly uses spiritual telekinesis to lock onto the time-space origin.

As dimension ascension progresses, Su Yu becomes increasingly "far" from the time-space origin, which isn't a distance in the conventional sense but rather a dimensional gap.

The time-space origin is zero-dimensional, yet Su Yu resides in three dimensions, separated by several dimensional distances; locking onto a zero-dimensional point from a three-dimensional space is exceedingly difficult.

This is akin to an ordinary person attempting to observe microscopic particles with naked eyes—essentially impossible, and even if achievable, would impose immense burden.

Su Yu almost couldn't hold on in the instant of restoring three dimensions.

Fortunately, he doesn't need to hold on for long, as he promptly summons the creation machine from another independent manifestation space.

The creation machine remains in the form of a four-dimensional hypercube; when designing it, Su Yu already integrated spatial dimension power.

However, this wasn't dimension reduction but dimension ascension.

It was elevating three-dimensional space into a four-dimensional hypercube.

After summoning this hypercube creation machine, Su Yu promptly excavates the time-space origin hidden within his body.

The time-space origin is barely visible, but Su Yu can lock onto it and move it using spiritual telekinesis.

Then, Su Yu sends this time-space origin into the creation machine.

Finally, this step is completed.

The creation machine and the time-space origin eventually meet.

Only with the time-space origin can the creation machine be termed a true creation machine.

Chapter 1064: Void Creation! (Part 2)

However, although it has already merged with the Time-Space Origin, the Creation Machine appears unchanged.

"Dimension Reduction!"

Thus, Su Yu initiated the next step and began dimensional reduction on the Creation Machine.

In an instant, the once enigmatic four-dimensional hypercube Creation Machine transformed into a large pile of three-dimensional cubes, nearly filling the space beside Su Yu.

At this moment, Su Yu temporarily paused, reached out, and grabbed a mechanical sphere from the void.

"Master! Nuonuo is here! ୧' ୩' ୧!"

The surface of the sphere displayed emoticons.

This was none other than Su Yu's earliest Mechanical Apostle: Nuonuo!

As soon as Nuonuo appeared, it emitted a powerful aura at the Fourth-Order Top level.

Having followed Su Yu for so long, it possessed the ability to advance in tandem with him.

It had already ascended to the Fourth-Order Top.

However, it did not ascend to the fifth order along with Su Yu.

On one hand, ascending to the fifth order is extremely challenging, requiring prolonged sleep for upgrading.

On the other hand, Su Yu has recently experienced various events, such as the Chaotic Evil God Dream and the Time-Space Reincarnation.

Under such circumstances, Nuonuo's original body had long been destroyed.

In the Chaotic Evil God Dream, Nuonuo even reverted to its original dumb machine assistant form, devoid of any strength.

Not long ago, as Qi Chen initiated a Time Retrospection, restoring Azure Star to its original state, Su Yu managed to recover Nuonuo's body and power.

Then, Su Yu enacted a plan to place the entire Azure Star within the Manifestation Space and began the destruction of the Azure Star System.

Under these circumstances, there was no time to allow Nuonuo to sleep for upgrading.

Therefore, Su Yu decided to create a new, powerful body for Nuonuo, which was... the Creation Machine!

"Nuonuo, help me control the Creation Machine and become its intelligence!"

Su Yu conveyed a thought to Nuonuo.

"Yes! Master! ($\nabla \cong \nabla$)!"

Upon hearing the master's command, Nuoli was extremely excited, without any hesitation.

Its consciousness origin was controlled by Su Yu and directed towards the pile of cubes that had transformed from the Creation Machine.

The Creation Machine possesses vast computing power to accommodate Nuonuo's consciousness naturally without issue.

Moreover, the dimensional power inherent in the Creation Machine is sufficient to protect Nuonuo's consciousness from harm during dimension reduction.

Once Nuonuo was housed within the Creation Machine, Su Yu continued the dimensional reduction.

Then, the pile of cubes became an abstract painting.

Afterward, it transformed into a single line.

Finally, it became a point with no volume whatsoever.

However, unlike the Time-Space Origin, the Creation Machine is Su Yu's creation, so even as it transforms into a zero-dimensional point, Su Yu retains the ability to sense it.

Although, this sensing ability is extremely faint.

"Nuonuo!"

Su Yu attempted to call out to Nuonuo.

However, once Nuonuo descended into zero-dimensionality, its thoughts stagnated, as it lacks a Profession Panel.

Su Yu slightly shook his head, refraining from further calls, and proceeded with the next plan.

Now the Creation Machine, Nuonuo, and the Time-Space Origin have all diminished to zero-dimensionality, stacking together.

Nevertheless, Su Yu's previous experience with dimension reduction showed that such spacetime stacking does not imply true fusion; they remain distinct, and once dimensions ascend, they will separate.

Therefore, Su Yu must continue dimension reduction!

But as they are already zero-dimensional points, how to reduce them further?

This was the true key Su Yu comprehended during the Azure Star System's destruction!

After the Time-Space Origin reaches zero-dimensionality and continues dimension reduction, even the "point" ceases to exist, becoming the actual "Nothing."

This, too, represents Qi Chen's so-called "Death."

When a universe undergoes destruction, all energy and information collapse into the Time-Space Origin.

Subsequently, the Time-Space Origin further collapses into true "Nothing."

In this state, all "Information" becomes unified, serving as the nutrients for birthing a new universe, then explosively creating a new universe.

Now, Su Yu is replicating this process!

Causing the Creation Machine, Nuonuo, and Time-Space Origin to all return to "Nothing," then replicating true universe creation!

Thus, at the next moment in Su Yu's perception, the Creation Machine disappeared, the Time-Space Origin vanished, Nuonuo also ceased to exist...

All of this seems intricate, but was actually what Su Yu did in the instant before his death during the Azure Star System's destruction.

Su Yu's speed had long surpassed light speed, coupled with possessing the Power of Time, capable of achieving many things in an instant.

However, regardless of his speed, as he completed everything, his life had already reached its end.

The Azure Star System has been destroyed!

Time and space no longer exist, nor does subspace.

Nothing exists to preserve Su Yu, only death, returning to nihility.

Moreover, the four billion people on Azure Star within the Manifestation Space will perish alongside him!

The effort Su Yu just exerted to reduce the Creation Machine to dimensions ultimately seemed futile.

It seems that the Creation Machine, Nuonuo, and the Time-Space Origin were all abandoned, disappearing into oblivion.

Then, Su Yu disappeared as well!

He was consumed by death, truly passed away.

Theoretically, Su Yu's "Information" was already documented by the Azure Universe, and he would be resurrected in the next cycle, during which Qi Chen would inevitably intervene, modifying and adjusting Su Yu's information.

Then, Su Yu might forget even his last name.

However, a year later, when Qi Chen restarted the Azure Star System, he was astonished to find that Su Yu was not resurrected!

The reason was simple; after Su Yu's death, his "Information" was not absorbed and documented by the Azure Universe, but by... the Creation Machine!

The Creation Machine was not lost but succeeded!

When Su Yu reduced the Creation Machine's zero-dimensionality to "Nothing," the astonishing machine was completed!

Thereafter, driven by preset programming, the machine commenced "Creation."

Using the Time-Space Origin as its foundation, and the various information, knowledge, and rules it documented as its framework, it created a new universe within the void!

This new universe is distinct from the Manifestation Space.

Manifestation Space, fundamentally, remains rooted within the Real Universe, part of the Real Universe.

The new universe, however, is entirely independent.

Time, space, cause, dimension... everything is autonomous and completely new.

Therefore, at that moment, Su Yu lost the ability to sense the Creation Machine.

Because, as powerful as Su Yu is, he cannot perceive information from another universe; this lies far beyond his capabilities.

Under such circumstances, Su Yu is wholly unable to determine whether the plan succeeded or failed.

But Su Yu harbors no doubt, firmly believing it succeeded, that the Creation Machine surely completed its task!

This is not blind confidence but trust based on the knowledge, technology, and abilities he possesses.

If he cannot trust his own knowledge and technology, then what else can he trust?

Thus, after completing the Creation Machine, Su Yu resolutely chose to die, allowing Qi Chen's "Death" to consume him.

Originally, with the Azure Star System's destruction and Su Yu's death, no spacetime would endure him, even the Evil God Undying could not revive him.

But now, with the Creation Machine, per the preset programming, Su Yu will be revived in the universe the Creation Machine creates after his death!

The condition, of course, is that the Creation Machine indeed succeeded.

Otherwise, should he perish, he would truly be dead.

Though he could be resurrected, relying on Qi Chen to reboot the Azure Star System, he would forever be manipulated by Qi Chen.

Yet Su Yu remains without doubt or hesitation, feeling even relaxed.

Before dying, he whimsically muses, "Tsk tsk, I'm dead again..."

Why say "again"? Because Su Yu has "died" many times before.

Su Yu differs from the Brutal Evil God.

Brutality harbors fear of a universe's pre-death, fear of dying, refusing to allow himself to endure danger.

But Su Yu is accustomed to facing desperate situations, seeking life through death.

Experiencing "deaths" like this numerous times before, dying and reviving until he was habituated to it.

"With this success, possessing Evil God Undying, plus the Creation Machine as a 'Resurrection Point,' I shouldn't have to die all the time anymore, right?"

With such thoughts in his heart, Su Yu's consciousness descended into darkness.

And then, he woke up.

"Is this... the new universe created by the Creation Machine?"

Chapter 1065: Su Yu's Little Universe! Creator Nono!

"What a lousy place..."

Su Yu saw the new universe created by the Creation Machine, and his first reaction was: Shabby! So shabby!

Small and shabby!

The so-called new universe is actually very small, the space is only slightly larger than Azure Star, basically equivalent to Su Yu's previous Manifestation Space.

And its appearance is even less than the Manifestation Space.

The Manifestation Space is very stable and sturdy, able to support billions of people to live.

But this so-called new universe has an incredibly harsh environment.

In this space, the space is distorted, and there are space black holes everywhere, connecting to Nihility. Even if a Fourth-Order Strong Person falls in, they face certain death. A Fifth-Order Expert would lose a layer of skin.

Even where there are no black holes, space is incredibly distorted. Su Yu had just been revived and his body was twisted into a pretzel by the warped space.

This twisting didn't kill him, but it certainly annoyed him. So Su Yu pushed his energy, trying to restore normalcy.

But he quickly found this was pretty much futile because there's no place in this space that's normal. Even if he recovered normalcy, there was nowhere normal for him to stay.

No choice but to accept the pretzel.

Actually, the twisting of space here is still minor. The time here is even more chaotic.

Su Yu can feel that the time flow rate in various parts of his body is different, and even the direction of time is different: some flow forward, some flow backward, and some flow diagonally in a very abstract way...

Also, the underlying "cause and effect" of the universe, which even involves the universe's foundation, has been twisted.

Cause and effect are foundational rules of the universe, leading from cause to effect—this is the logic behind the development of all things.

Without this rule, nothing would be traceable, equivalent to nothing existing, and everything equally possible.

For something to happen, there must be a "cause" in order to have a "result."

The saying "plant melons, get melons; plant beans, get beans" is based on this logic.

But now, with causality twisted, an event can happen without a cause, occurring out of thin air. Without planting melons, melons can be obtained, and without planting beans, beans can be acquired.

It's also possible to have a cause, but there is no result, or another result occurs. Planting melons and getting beans, planting beans and getting rice, planting rice and getting meat...

This is the manifestation of causality chaos.

In fact, with Su Yu's ability, if he so chose, he could easily achieve "plant melons and get beans, plant beans and get melons," but this is realized by Su Yu's ability, and its inherent logic still follows causality.

However, now the causality chaos in this new universe is utterly irrational, without rhyme or reason.

This causality chaos is happening within Su Yu!

His body, Spiritual Energy, even his thinking and memory, are undergoing such causal twisting.

This twisting is very abstract, and various physiological activities are undergoing inexplicable changes.

For example, even though Su Yu did not issue any commands to his left hand, it started to move inexplicably.

This is not a muscle twitch; even if Su Yu withdraws the energy supply for the left hand to move, the left hand will still move out of thin air without energy.

There is no "cause," yet there is the "effect" of the left hand moving.

Other parts of the body also experience varying degrees of causality chaos.

Upon discovering this, Su Yu immediately focused his spirit on it, studying it.

Because this is a domain Su Yu had never really delved into before.

"Causality twisting, I see, the wish-making ability of a 'paradox' and the so-called inevitable 'destiny' are effects of causality."

Su Yu thought to himself.

Previously, Su Yu never quite understood why a paradox could make wishes out of thin air.

Now, after experiencing causality chaos firsthand, Su Yu understood. This is essentially another form of causality twisting.

Under normal circumstances, to achieve a "wish," one must proceed step-by-step, fulfilling various conditions of the wish.

That is, using "cause" to achieve "effect."

But a "paradox" can make a wish come true without a cause, just like Su Yu's left hand—moving without an energy supply or neural signal drive, it's just moving.

This is an instance of causality twisting.

The cost of using a paradox is that the related causality will be forever twisted.

If a matter is completed using a paradox, it can never be completed in a normal way again—the causality chain has been destroyed.

And the so-called inevitable "destiny" can also be explained by causality.

The so-called destiny determines the "effect" first, and then backtracks to the "cause."

The effect has already been decided, so it will inevitably occur, regardless of what cause it is based on.

No one knows what force causes this so-called destiny, or what the cost might be.

Previously, Su Yu used Data Truth to observe causality but never understood the specific mechanism of causality.

After experiencing it firsthand, Su Yu finally understood.

"So, why is this Mechanical City so blue..."

"Wait, what am I thinking? Not good! The causality in my thoughts is starting to become chaotic!"

As Su Yu was thinking, he suddenly realized that his thoughts were becoming a bit confused.

He instantly understood that causality chaos was starting to interfere with his thinking.

Thought consciousness also strictly follows causal logic; without causal logic, thinking is just a mess.

If this continues, Su Yu fears he won't be able to think normally. With causality logic all mixed up, how could he think normally?

"Data Truth!"

Immediately, Su Yu activated his Data Truth ability, transforming himself into data, adjusting his values.

Chapter 1066: Su Yu's Little Universe! Creator Nono! (Part 2)

He needed to adjust his own "Cause and Effect," using the ability of Data Truth to stabilize his causality and prevent it from becoming completely chaotic.

In fact, the first time Su Yu used Data Truth, he was able to see the underlying "Cause and Effect" of the universe, but it was only a glimpse. In terms of the details of the Causality Domain, he was just slightly better than clueless.

Fortunately, the power of Data Truth was mighty. Since he could see Cause and Effect, he could somewhat adjust it.

Data Truth's actual influence on causality was very limited and could not reach the level of a "Paradox" or "Fate."

However, it was still something. Under the power of Data Truth, Su Yu's state finally stabilized. At least his mental state was no longer chaotic, and he wouldn't think of random things.

Once stabilized, Su Yu looked at the new universe before him and couldn't help but shake his head. He had been a bit hopeful about what the new universe would be like, but this? He wondered.

But Su Yu knew this wasn't a problem with his plan, but rather normal.

Because the Creation Machine had not truly been completed.

"It seems like, in the end, the manifested Creation Machine, combined with the broken Time-Space Origin, ended up creating this..."

Su Yu thought.

His Creation Machine didn't have any real material; it was entirely a blueprint combined with Manifestation Ability, crafting a fake object out of thin air.

The Time-Space Origin was also broken to the extreme.

In such circumstances, having created anything at all was already quite an achievement. One couldn't be too demanding.

Regardless, the universe before him was at least a true independent universe. It didn't belong to the Azure Star System or the Real Universe but solely to Su Yu himself.

Here, Qi Chen could not affect him, and most beings in the Real Universe should be unable to find or influence him.

Here, Su Yu could safely use Evil God Undying for resurrection, making it a safe Resurrection Point without worrying about being "Corpse Guarded."

Thinking of this, Su Yu's mood instantly improved.

However, his mood improved only for a moment.

The next instant, boom!

The time-space of the entire new universe suddenly collapsed, and the original distortion of time-space and causality suddenly intensified a hundredfold.

"This is..."

Before Su Yu could finish his thought, he found himself blinded again; he was dead once more.

"The universe has been destroyed? That was too quick, not even lasting a billionth of a second..."

In the moment before dying, Su Yu thought helplessly.

This newborn universe didn't even last a billionth of a second before falling into destruction again.

In the next instant, Su Yu regained consciousness; he was revived once more.

Along with his resurrection came the newborn universe, and the Creation Machine completed creation once again.

Though death came quickly, so did life, meaning there was essentially no effect on Su Yu.

However, the impact on others was significant.

The so-called others naturally referred to the humans on Azure Star.

During Su Yu's previous death, Azure Star within his Manifestation Space, along with the billions of humans on it, all perished.

However, all information about these people had been recorded by the Creation Machine, so as long as Su Yu wished, he could instantly resurrect them, allowing Azure Star to reappear in this new universe.

But this universe was too chaotic and fragile, unable to last a billionth of a second. Those people would die again before even opening their eyes, so it was better to let them remain honestly dead.

"Initially, I thought about releasing Azure Star to attempt to complete the remaining ceremony, but now it seems hopeless..."

The Time-Space Mechanic's ceremony didn't solely involve the Creation Machine; it required cultivating a civilization of billions within the newly created universe, allowing this universe to give birth to Subspace, thus completing it.

And now, it was clear that Su Yu couldn't proceed with this step, as the newly created universe was immediately destroyed. No one from Azure Star except Su Yu could survive here.

Let alone cultivate a civilization.

Boom!

Su Yu had barely been pondering for a moment when his vision went black again.

The new universe was destroyed once more.

A moment later, Su Yu awakened again.

Upon waking, he frowned slightly.

"Why was it faster than the last time?"

Su Yu keenly noticed the intervals between destruction were shortening.

"It seems the instability of this universe is worsening. If it keeps being destroyed thousands of times, the new universe might not even be generated, and that would mean total destruction!"

"It seems reinforcement is needed for this universe..."

"Nuonuo!"

Su Yu quickly changed gears and summoned Nuonuo.

"Yes, Master (◡ ◡)..."

Nuonuo appeared before Su Yu in the form of a hypercube.

Each face of its hypercube showcased an emoticon; it seemed its condition was not well.

Su Yu smiled slightly, understanding that the twists of various time-space and causality from creation and destruction had exhausted Nuonuo.

Even Su Yu struggled against the causality twists, let alone Nuonuo.

It was fortunate that it was the Mechanical Apostle, connected to Su Yu's life; as long as Su Yu lived, Nuonuo remained undying; otherwise, it would have perished long ago.

Su Yu extended his hand, touching Nuonuo's frame in the void, offering some comfort, and its displayed emoticon immediately changed to <(◡ ◡)>.

Clearly, it regained its spirit.

This creature now possessed extremely high intelligence, but it always followed Su Yu closely; its personality remained very simple without much cunning.

After pacifying Nuonuo's emotions, Su Yu conjured up Nuonuo's Attribute Panel in his mind.

[First Mechanical Apostle · Creator Nono (Incomplete)]

[Creator: Su Yu]

[Species: Mechanical Life Form]

[Core Ability: Mechanical Evolution (As the mechanical life form you created, Nuonuo possesses infinite growth potential, its strength linked to your own Spiritual Energy)...]

At this point, Nuonuo had already fused with the Creation Machine, equating to the intelligence of the Creation Machine.

Nuonuo's name had changed to [Creator Nono], which sounded rather formidable, though regrettably, there were the three words (Incomplete) following it.

After all, the Creation Machine was not complete; it was merely a false object manifested, and so Creator Nono was also incomplete.

Hence, Nuonuo's Attribute Panel was not fully filled, only containing the first several lines, with the rest "To Be Continued."

"Nuonuo, try to stabilize this universe!"

Su Yu skimmed Nuonuo's Attribute Panel and then issued the command.

"Yes! Master! $n(*\geq\nabla\leq*)n!$ "

Nuonuo immediately set to work energetically.

Being the intelligence of the Creation Machine, it naturally possessed energy to adjust and repair Cosmic Rules.

But shortly afterward, its emoticon switched to a distressed face as it realized the universe couldn't be stabilized.

Fortunately, Su Yu was nearby to assist, using Data Truth's abilities to help Nuonuo stabilize the universe.

Yet, even with Su Yu's aid, the new universe soon fell into destruction again.

However, Su Yu and Nuonuo collected data from the moment of destruction, and with that experience, they managed to let the universe persist a bit longer the next time.

This way, one person and one Mechanical Apostle, within the cycle of destruction and rebirth, continued to patch up and repair this dilapidated Little Universe.

...

Unknown time later...

"Finally, it can exist stably for a second!"

Su Yu let out a long breath.

After prolonged efforts, he successfully stabilized this Little Universe, allowing it to exist stably for a second before it would be destroyed.

Although a second is still insufficient to cultivate civilization, each rebirth of the Little Universe would persist longer than the previous time.

By now, Su Yu didn't need to interfere much anymore; simply waiting for its self-development would eventually see it stabilize for a longer period, at which point he could release Azure Star and the others!

Nonetheless, this was destined to be a lengthy process.

"Speaking of which, how is the Azure Star System now? Am I now equivalent to having left the Azure Star System?"

"If I return to the Real Universe now, am I entirely free, able to traverse the Star River Universe?"

Chapter 1067: The Way Back

After stabilizing the Little Universe, Su Yu immediately wanted to return to the Real Universe.

After all, this Little Universe currently has nothing, it's really meaningless, only holding promise for the future.

The most important thing is, in this Little Universe, all energy and information are limited.

Although it's possible to realize endless cycles through the destruction and rebirth of the Universe, without worrying about running out of energy, this is the only extent.

Su Yu's strength cannot be enhanced here; unable to increase energy, unable to upgrade.

To continue to improve, one can only return to the Real Universe.

In the Real Universe, some abilities seem like "Perpetual Motion Machines", seemingly requiring no external energy, able to infinitely sustain and enhance through self-looping.

Just like the Power of Radiance, Power of Pain, etc., relying on invisible emotions and will, powerful energy can be continuously generated.

But now it seems, this kind of "Infinite" is merely an illusion, still dependent on the environment of the Real Universe.

Once away from the Real Universe, one can only "live off past gains", without that infinite quality.

Upon reflection, anything associated with the term "Infinite" is extremely terrifying.

If powers like the Power of Radiance and the Power of Pain can truly gain infinite energy from thin air, theoretically Su Yu could spend a great deal of time sustaining an entire universe himself.

Until this broken Little Universe is raised to the scale of the Real Universe.

He could accumulate energy here, endlessly upgrade, until able to overpower the Real Universe upon return...

Thinking about it seems impossible.

And to return to the Real Universe, and even the Azure Star System, requires exiting this Little Universe, heading outside the Universe.

"Outside the Universe..."

Su Yu began researching how to safely venture outside the Universe.

Wanting to escape the Universe, and go outside it, is not an easy task.

The spacetime of this Little Universe is closed, although it looks small in scope, as one approaches the Boundary, the spacetime curvature will become increasingly large, never reaching the Boundary location.

Even if reaching the Boundary was possible, the cause and effect at the Boundary are closed off.

Any actions there would fail to achieve any normal "results".

Even with actions trying to break through boundaries, with cause but no "effect", any action would fail to break through.

Cause and effect closure is more thorough than spacetime closure.

All matter, energy, and information cannot escape from the Universe.

This should be a trait and instinct of every normal universe.

Even with Su Yu creating this broken Little Universe, the boundaries of the Real Universe are certainly harder to break through, likely locking everything, energy and matter.

Were it not for Su Yu's earlier presence in the Azure Star System, which was a special circumstance, he might not have been able to leave the Real Universe at all.

"It seems, if the Azure Star System is not inherently another universe and is severely broken, I wouldn't simply succeed, the Creation Machine couldn't operate properly..."

After closely studying the boundaries of the Little Universe, Su Yu secretly counted his blessings.

The Creation Machine's goal of opening a new independent universe requires escaping the original Universe's confinement, taking away energy and information from it.

In essence, this means breaking the Universe's Boundary, leaving the Universe.

The difficulty of this speaks for itself.

Only within the Azure Star System could Su Yu succeed, if leaving the Azure Star System prematurely and then attempting creation, it would be extremely difficult, almost impossible.

Previously Qi Chen used Time-Space Reincarnation to prevent Su Yu from leaving, which unwittingly helped him out, though Su Yu certainly wouldn't thank him for it.

"Time-Space Mechanic, it seems there is only a possibility of employment in a place like the Azure Star System, anywhere else, even with a Creation Machine, it can't be operated."

"The professions unlocked by the Profession Panel recently are all 'customized', estimating that it took even the slightest things into account."

Su Yu thought to himself.

The professions unlocked by the Profession Panel recently are custom-made, incredibly powerful.

The basis is depending on the environmental conditions around Su Yu, stripping away these conditions, almost no chance of employment, exceedingly limited.

Because of the great limitations, it is why they are strong.

Looking at it this way, the Profession Panel really is "considerate."

Except its a bit mute, doesn't tell Su Yu anything, essentially relying on him to explore.

However, Su Yu estimates that the Profession Panel might not even know these details itself.

The principle behind the unlocking of professions by the Profession Panel is not yet established.

But Su Yu leans towards it being a peculiar "phenomenon" triggered by the Profession Panel.

Just like earthquakes, volcanoes, storms, these are all natural phenomena on planets.

Planets can bring about these phenomena, but the planets themselves don't know the principle, merely functioning by natural rules.

The Profession Panel might be the same.

So it's not that the Profession Panel doesn't tell Su Yu, it might not even know itself.

After pondering the Profession Panel for a while, Su Yu focused back on the Little Universe.

Although the spacetime closure and cause-effect closure in the Little Universe are formidable, for Su Yu, it isn't hard to break through.

This Little Universe, after all, was created by Su Yu, he can completely manipulate the Creation Machine to open a slit for himself to exit.

More importantly, this Little Universe is incredibly broken, leaking everywhere, full of Space Black Holes, leading to the Nihility outside the Universe.

Were it not for Su Yu and Nuonuo continuously repairing, the matter and energy in this Little Universe would have leaked dry long ago.

Now Su Yu doesn't need any Boundary, he can just find a random black hole to jump into and that counts as leaving the Universe.

Chapter 1068: The Way Back (2)

But the real challenge came after leaving.

Su Yu arrived at a black hole, and instead of jumping in recklessly, he first tried probing with his spiritual power.

And then, it was futile.

Outside the Little Universe, there was absolute nihility, nothing at all.

No time and space, no cause and effect, no matter, no energy.

Once Su Yu's spiritual power reached out, it too fell into nihility, and nothing returned.

Even a part of his power was lost.

Su Yu's strength permanently diminished a bit.

This is the terror of that absolute nihility; Su Yu had actually perished in this void before.

"Tsk tsk, this counts as inter-universal travel; it's normal to face difficulty."

Su Yu wasn't surprised.

Now that he wanted to return to the real universe, he had to traverse the distance between universes, which wasn't easy.

If he kept attempting this way, he might end up losing all energy.

Then, Su Yu might lose all his power and revert to being an ordinary person.

If he were in the real universe, Su Yu could immediately replenish any energy lost.

But here, there's no energy replenishment; lost energy is simply lost.

Fortunately, the Creation Machine operates to immediately absorb information about the lost energy into the universe, storing it.

When the Little Universe undergoes its next destruction and rebirth, the lost energy will return to Su Yu.

The universe's instinct is to absorb energy and information from nihility to replenish itself.

Even if this Little Universe is newly established and incomplete, it functions the same.

So Su Yu doesn't need to worry about truly becoming ordinary; lost energy will circulate back.

It's only because this Little Universe is his own creation that he can maintain himself using the cycle of universe destruction and rebirth.

Otherwise, any ordinary Fifth-Order Expert trapped in this Little Universe would surely be doomed.

"Tsk tsk, it's so dark..."

Su Yu lamented at the "beyond the universe" within the space black hole.

Light, spiritual power, spiritual energy, time and space... there's nothing at all, absolute darkness.

For beings living in normal spacetime, it's hard to imagine a nihility devoid of "space" and "time," let alone surviving within it.

Even for someone like Su Yu, the Planet-Level expert, this absolute nihility is extremely dangerous.

The Deep Layer of Subspace is also said to be devoid of time and space.

But it actually contains abundant concepts and information, allowing a Fifth-Order Planet-Level being to create dimensions for survival.

But the nihility beyond the universe doesn't have such conveniences; there's truly nothing there.

However, this nihility isn't entirely impenetrable, and Su Yu is quite confident about it.

"Let's try the Power of Nihility."

After his spiritual power exploration failed, Su Yu began to harness the Nihility Walker's power.

The Power of Nihility is invisible and formless, much like the nihilism beyond the universe.

This time it improved significantly; the Power of Nihility extended beyond the universe without disappearing immediately, maintaining for a while.

Su Yu attempted to wrap himself with the Power of Nihility and extended a hand into the black hole.

With the protection of the Power of Nihility, his arm safely extended beyond the universe.

A moment later, the Power of Nihility surrounding his arm was depleted, and Su Yu's arm vanished, leaving him with one arm.

Even with his regenerative power, he couldn't restore the lost arm, and would have to wait for the next universe destruction and rebirth to recover.

Su Yu wasn't bothered by his lost arm; he nodded in satisfaction: "It seems using the Nihility Walker's power can indeed allow me to leave this universe."

"However, solely using the Power of Nihility isn't sufficient, as it still depletes, making it unsustainable."

"I must give it my all..."

In an instant, Su Yu activated his core ability as a Nihilism Walker, [Nihilism Embodiment], and his whole being vanished.

He didn't truly disappear but transformed into nihilism, making most detection methods ineffective against him.

Then, he leaped into the black hole ahead.

The ability of Nihilism Embodiment can transform oneself into nihilism, traversing beyond space-time and life-death.

And the area beyond the universe fittingly matches the description of "beyond time, space, and life-death."

"Is this beyond the universe?"

Once Su Yu jumped into the space black hole, everything turned pitch black before his eyes, and he knew he had left the Little Universe.

If he were in his ordinary state, all his energy would be devoured by this nihilism in an instant, leading to complete death only to be reborn in the Little Universe.

Luckily, he had the protection of the Nihilism Embodiment.

In this state, his energy wasn't swallowed.

However, the Nihilism Embodiment state is fraught with danger.

Transforming into nihility could also lead to being devoured by nihility.

Thus, Su Yu hadn't tried this method before, but now he had no other choice but to risk it.

Upon entering the Nihility Embodiment state, Su Yu felt all his thoughts, memories, emotions, and desires gradually returning to nihility.

Even when he exerted the Power of Pain to counter it, it didn't have much effect.

This was something he had never experienced before.

"It seems that in this absolute nihility beyond the universe, my Nihility Embodiment ability has improved, and the Power of Pain finds it hard to suppress..."

All of Su Yu's emotions and desires were dissipating.

The extreme pain from the Power of Pain felt like a distant memory, unimportant.

Moreover, because of fully activating the Nihility Embodiment ability, Su Yu's Power of Nihility kept enhancing relentlessly!

"How is this happening? Clearly, there's no energy replenishment here, yet my Power of Nihility increases?"

Su Yu found it peculiar.

It seemed that after embodying nihility, in the universe beyond, his Power of Nihility wouldn't deplete but rather increase out of nowhere.

Where was this extra energy coming from?

Though puzzled, Su Yu had no inclination to investigate further.

His "curiosity" had already been devoured by the Power of Nihilism, transforming him into someone without curiosity.

"Not good..."

Su Yu darkly muttered to himself.

In the next moment, Su Yu exerted all his powers, causing a massive self-explosion.

A moment later, Su Yu's vision cleared, and he was reborn in the Little Universe.

"Thank goodness..."

Su Yu breathed a sigh of relief.

He had killed himself to come back to life.

Before his rebirth, Su Yu had already lost his curiosity.

The next phase would likely see the loss of all emotions, even the desire for survival, ultimately leading to complete nihilism assimilation.

Such assimilation differs from being devoured by nihilism; in essence, one remains "alive", thus rendering rebirth impossible, which would be truly disastrous.

Unsure of when he'd awaken, perhaps never.

"It seems the Power of Nihilism isn't reliable either..."

Su Yu shook his head inwardly.

The Nihilism Embodiment state allows travel beyond the universe, but the risk of assimilation makes it unsafe.

"Wait, maybe not necessarily."

"Initially, when using [Nihilism Embodiment], the Power of Nihilism inexplicably increased..."

An inspiration hit Su Yu, spurring a new idea.

Though the [Nihilism Embodiment] state risks nihilism assimilation, simply wrapping oneself in the Power of Nihilism doesn't have this problem.

However, using only the Power of Nihilism to wrap himself depletes rapidly, making it unsustainable.

Yet, during the [Nihilism Embodiment] state earlier, the Power of Nihilism oddly increased spontaneously.

If he could use [Nihilism Embodiment] to replenish the Power of Nihilism after it depletes...

Then, it would be possible to achieve sustained "endurance" in nihilism beyond the universe.

Excited by this thought, Su Yu felt a slight thrill.

He had finally found a way to partially clear the path back to the real universe!

Without delay, Su Yu wrapped himself in the Power of Nihilism once more, and again leaped into the black hole.

Inside the black hole, the Power of Nihilty enveloping Su Yu quickly diminished.

Calculating the depletion, Su Yu sensed he was almost ready and activated [Nihilty Embodiment] again.

Consequently, the recently depleted Power of Nihilty swiftly replenished.

A moment later, before his emotions could be assimilated by nihilty, Su Yu exited the [Nihilty Embodiment], relying solely on the Power of Nihilty to cloak himself.

Without [Nihilty Embodiment], the Power of Nihilty rapidly depleted.

Then Su Yu reactivated [Nihilty Embodiment]...

"It really works!"

Chapter 1069: Mechanics of Cause and Effect!

Su Yu, at this moment, was clearly detached from the environment of the real universe. Energy could not be replenished, making it impossible to possess unlimited energy anymore.

But relying on the special trait of the Nihilty Walker profession, he surprisingly achieved a kind of "perpetual motion" effect, with energy endless and boundless.

With this, Su Yu could survive long-term in the nihilty outside the universe, with hopes of returning to the real universe.

Moreover, if feasible, he could use this trait of unlimited energy to continuously "charge" the little universe.

Letting the little universe continuously absorb energy, supplement and refine, eventually becoming a complete material universe.

"In that case, wouldn't I fundamentally not need to return to the real universe?"

Su Yu's heart stirred, he did not immediately set off to return, but rather went back to the little universe.

If it really was possible to generate energy and information out of thin air to nourish the little universe.

Then there was no need to hurry back to the real universe; he could stay in the little universe first.

"Let's give it a try..."

Su Yu, this time, tried using the [Nihility Embodiment] in the little universe to see if the Power of Nihility could be enhanced within it.

As expected, in the state of Nihility Embodiment, the Power of Nihility continued to grow out of thin air.

Moreover, without the loss caused by the outside of the universe, this time it was purely an increase, without any reduction.

The professional experience of the Nihility Walker was also continuously increasing.

The profession of Nihility Walker upgrades very simply, just by operating the Power of Nihility, it keeps getting stronger.

The premise is being able to withstand the erosion brought by the Power of Nihility.

Previously, Su Yu used the Power of Pain to counteract the nihility erosion.

However, this time, the Power of Pain he used to combat the nihility, despite his efforts to drive it, showed no progress.

In the Azure Star System, Su Yu simultaneously stimulated the powers of the Pain Evil God and Nihilism Walker professions.

The two professions complemented each other, able to rapidly upgrade as a result.

But now, here, only the Nihilism Walker is upgrading, while the Pain Evil God made no movement.

In this situation of reciprocally diminishing effect, Su Yu soon felt somewhat unable to withstand the erosion of the Power of Nihilism.

And at this time, coincidentally, the little universe's one-second "lifespan" reached its end.

Thus the little universe started its cycle of destruction and restart, with Su Yu following suit in death and rebirth.

Before his death and rebirth, Su Yu proactively scattered a portion of the Power of Nihilism, to avoid it becoming too strong and eroding his spirit.

Simultaneously, integrating this portion of energy into the little universe.

This would make the little universe possess more energy and become more refined in its next rebirth.

This is the method Su Yu came up with to use the Power of Nihilism to "nourish" the little universe.

However, when the little universe and Su Yu revived once more, the Creation Machine precisely logged the entire universe's energy; the little universe's energy had not increased.

On the contrary, it even directly decreased!

Even those Space Black Holes increased by one, making the little universe even more broken.

"How could this be?"

Su Yu was puzzled in his heart, this indicated his plan had already failed.

The endeavor to use the Power of Nihilicity to nourish the little universe was fundamentally unfeasible.

It might even cause the little universe to lose energy, leading to its ultimate collapse and destruction.

Su Yu couldn't help but fall into deep thought, after a long while, he seemed to have gained an insight in his heart:

"It appears, I've misunderstood the essence of the Power of Nihilicity."

"It might not be considered normal energy at all, but rather...negative energy?"

The essence of the Power of Nihilicity is indeed very special.

Like the Power of Pain, Power of Brutal, these can actually be converted into normal kinetic energy, thermal energy, and other energies for use in attack, defense, or driving mechanics, etc.

Su Yu's previous Brutal Battle Armor was leveraging the energy converted from the Power of Brutal.

But the Power of Nihilicity doesn't work.

Its trait is reducing everything to nihilicity, unable to be directly converted into kinetic energy or similar forms of energy.

Previously in the Azure Star System, it wasn't evident, merely a trait of this Power of Nihilicity.

But now, with the precise calculations of the Creation Machine, Su Yu discovered that after the little universe absorbed his Power of Nihilicity, the energy actually decreased.

Thus, Su Yu believed, the Power of Nihilicity doesn't count as real energy at all, but is a form of negative energy.

Normal energy is "positive," whereas the Power of Nihilicity is "negative."

"How could such a thing exist."

"That being said, if there were a large number of Nihilicity Walkers in the real universe, wouldn't it drain the entire universe dry?"

"How could the real universe permit such a profession and energy to exist?"

Su Yu mused inwardly.

He believed, given the universe's emphasis on energy and information, it couldn't possibly allow the existence of a force like the Power of Nihilicity.

This power would reduce the universe's energy to nihilicity, leaving nothing behind eventually, rendering even destruction and rebirth impossible.

The universe shouldn't allow such energy to exist!

As far as Su Yu knew, the Power of Nihilicity originated from the subspace entity [Nihilicity], which apparently is a mighty Evil God nurtured by the subspace.

But Su Yu now highly doubted, would the subspace really nurture such a thing?

"Unless, this energy...is external! Originating from outside the universe!"

"Could it be that the subspace entity [Nihility] derives from beyond the universe? Is it an 'invader' from outside the universe? No wonder it eventually broke into fragments..."

Su Yu was shocked within his heart, he abruptly looked at those space black holes spread throughout the little universe.

The insides of the black holes were blank spaces belonging to the nihility outside the universe, where nothing should exist.

But now, Su Yu discovered, in that nihility, something unknown seemed to be brewing.

Chapter 1070: Mechanics of Cause and Effect!_2

If the 'Nihility' originates from outside of the Universe, then besides 'Nihility', could there exist other things?

Su Yu wants to return to the Real Universe; on the way, might he encounter these things?

Su Yu even wonders, in those black holes, could there be some unknown entities hiding, watching this Little Universe, watching him...

"It seems that earlier, I was thinking too simply."

"This time, trying to return is more difficult than imagined."

"Moreover, if I go back, as a Nihility Walker, will I be rejected by the Real Universe? Leading to an inability to return?"

This time, Su Yu pondered for a long time, long enough for the Little Universe to be destroyed and reborn thousands of times.

Finally, Su Yu decisively jumped into another black hole once again.

Even though he understands that returning is more difficult than imagined, Su Yu will not back down.

In theory, Su Yu could directly propel the Little Universe to move, treating it as a "ship" that can navigate through this Nihility.

The Little Universe is a creation of Su Yu, theoretically capable of movement.

In this way, it would be much safer than relying solely on himself.

However, Su Yu is unwilling to do so.

If he propels the Little Universe to move, even if returning to the Real Universe, the "independence" of the Little Universe may disappear as a result, or even be directly swallowed by the Real Universe.

At that time, the Little Universe created by Su Yu with great difficulty would be gone.

To create another new Little Universe wouldn't be so simple; he would need to find a new Time-Space Origin, requiring the special environment of the Azure Star System.

Next time, it might not be successful.

So Su Yu still plans to go on his own, leaving the Little Universe in that piece of Nihility.

After leaving the Little Universe, Su Yu activated the Nihility Embodiment state again to survive outside of the Universe.

Then, he began heading towards the "deep" outside of the Universe.

This is actually somewhat difficult to understand.

Outside of the Universe, time and space do not exist, nor is there spatial or temporal distance, theoretically, there is fundamentally no "depth."

However, Su Yu found that there is still "distance" outside of the Universe.

This distance is "cause and effect."

Outside of the Universe, although time and space do not exist, cause and effect actually do exist.

The fact Su Yu can survive and think here is proof of the existence of cause and effect.

If even cause and effect do not exist, Su Yu wouldn't be able to think and would perpetually stagnate the moment he leaves the Little Universe.

However, Su Yu can feel that cause and effect outside of the Universe are not stable, but constantly weakening.

Although time and space do not exist outside of the Universe, there seems to be a "space-time dimension" composed of cause and effect, in this dimension, there is no normal time-space, but distances are marked by cause and effect.

To move in this causal dimension is very simple, just think about it.

The thought of wanting to move is the "cause," thus achieving the "effect" of movement.

The closer the distance to the Little Universe, the stronger the effect of cause and effect.

One "cause" corresponds to one "effect."

Farther away, cause and effect weaken.

Thus, two "causes" are needed to correspond to one "effect."

The farther away, the larger this ratio becomes.

Su Yu tried to move a distance outside of the Universe, here the causal ratio has already reached nine to one.

That is, nine "causes" are required to achieve one "effect."

Su Yu needs nine thoughts of movement to move one unit of distance.

This not only makes it difficult for Su Yu to move, but also makes his thinking difficult.

The effect of causality weakening affects all of Su Yu's actions; his every thought and action requires nine "causes" to achieve one effect.

Each thought costs nine times the spirit and nine times the computing power.

This level of consumption, actually Su Yu can completely endure, but he has to worry, if this weakening of cause and effect continues, it might become billions of "causes" to achieve one "effect."

At that time, the consumption would become unbearably heavy, reaching a level Su Yu cannot endure.

Even if cause and effect weaken to the limit and completely disappear, any "cause" couldn't achieve "effect," then what?

Although Su Yu is worried, he has not stopped moving and still continues moving towards the deep Nihilism outside the Universe "step by step."

Thus causality weakening becomes more serious, the causal ratio changes from nine to one, to one hundred to one, one thousand to one, ten thousand to one...

...

Outside the Universe, time has no meaning; the so-called time is just Su Yu's unit for measuring his own thought operation.

After an unknown duration, Su Yu suddenly wakes, at this moment the causal ratio has expanded to an immeasurable degree.

Every thought operation requires almost endless spirit expenditure.

Su Yu spent almost endless thoughts and finally calculated, at this moment the causal ratio has reached an astonishing ten million trillion to one!

Ten million trillion "causes" are needed to achieve one "effect."

Causality weakening to this extent is already incredible, Su Yu needs to pay a cost of ten million trillion times for normal thinking.

He no longer has the energy to think, slightly calculating the causal ratio, then continues heading towards the depths of Nihilism.

According to Su Yu's calculations, this weakening will not continue infinitely, but will reach a limit.

Not that at the limit, causality doesn't weaken.

But at the limit, causality becomes non-existent, the ratio reaches infinite to zero.

At that point, causality, space-time, do not exist, Su Yu is considered to have truly entered Nihility.

If that happens, Su Yu will be trapped in absolute Nihilism forever, unable to think, unable to act, eternally extinguished.

But Su Yu still resolutely continues forward.

Finally, after an unknown amount of time, Su Yu suddenly stops.

Although he doesn't calculate, and cannot calculate, Su Yu knows, this is the limit, with one more "step" forward, causality will become non-existent.

But after stopping for a moment, Su Yu continues forward.

In the state of death, the Profession Panel can awaken Su Yu, but in the state of non-existent causality, can it still awaken him? Su Yu does not know.

He doesn't need to know.

Because this time, Su Yu does not plan to rely on the Profession Panel, but on himself.

Throughout the journey, Su Yu is not only moving but also analyzing and understanding the secrets of causality.

At this point, Su Yu has already gained insight.

He has created a new Transcendent Profession: [Causality Mechanic]!

[Available Career Direction: Fifth-Order Profession: Causality Mechanic]

[Giant God Soldier Mechanic (Main) + Nihilism Walker + Number God Mechanic + Causality Meditation Method Lv max... = Causality Mechanic]

[Introduction: The Creator uses the Nihilism environment outside the Universe, experiences the effect of causality weakening personally, successfully comprehends part of the mystery of causality. Can use the Mechanic's capabilities to manufacture a "Causality Generator," using the "Causality Generator," can create "Causality Radiation" in absolute Nihilism outside the Universe, thus maintaining a causal environment.]

[Career Ceremony: Fully master and control one "Causality Radiation Source," and referencing this Causality Radiation Source, manufacture a new "Causality Generator," and through the Causality Generator, successfully survive in absolute Nihilism where causality is non-existent!]

This is the profession Su Yu has just created, the Causality Mechanic!

According to Su Yu's observations and speculation, outside the Universe, in absolute Nihilism, is absolute Nihilism where causality does not exist.

However, the Little Universe is a "Causality Radiation Source."

It can continuously radiate causality outward, forming a causal radiation zone around the Little Universe, allowing Su Yu to act in this area.

However, causality radiation diminishes with distance; the farther from the Little Universe, the weaker the causality.

The Little Universe is like a Constant Star emitting light and heat, using its causality radiation to "illuminate" an area in absolute Nihilism where causality doesn't exist.

And now, Su Yu is about to walk out of this radiation area and enter the real causal darkness.

So, Su Yu needs to manufacture another causality radiation source.

This new causality radiation source is now in Su Yu's hand!
